Während sich ziviler Ungehorsam gegen lokalisierbare Machtzentren und Institutionen (zum Beispiel Regierungseinrichtungen, Ministerien, Unternehmenszentralen) richtet, deren leistungsloses Funktionieren er durch Blockade des Zugangs temporär stört, reicht, so die These des CAE Mitte der 1990er Jahre, diese gewaltlose Strategie heute nicht mehr aus. Unternehmen sind zu transnationalen, global agierenden Korporationen geworden, die sich zunehmend von konkreten Orten in den Cyberspace verlagern. Diese Korporationen

können
 Provokationen des zivilen Ungehorsams ausweichen, da sich ihre Existenz zunehmend
 in
 einen nomadischen elektronischen Datenstrom
 verlagert:

[A] major change in the representation of power [has] occurred over the past
 twenty
 years. Power once represented itself as a visible sedentary force through
 various
 types of spectacle (media, architecture, etc.), but it has instead retreated into cyber-
 space where it can nomadically wander the globe, always absent to
 counterforces,
 always present whenever and wherever opportunity knocks. ¹³

¹² Critical Art Ensemble, *Electronic Civil Disobedience and other Unpopular Ideas*, New York 1996, S.

¹³ CAE 1996, S. 29. Und an anderer Stelle: "Blocking the entrance to a building, or to some other resistant ac-
 tion in physical space, can prevent reoccupation (the flow of personnel), but this is of little consequence so long
 as information-capital continues to flow." (CAE 1996,
 9).

Um unter diesen Umständen noch wirksam zu sein, sollte sich ziviler Ungehorsam nicht län-
 ger nur der Blockade physischer Orte widmen, ¹⁴ sondern vielmehr den Fluss von Informatio-
 nen selbst
 hemmen:

Blocking information access is the best means to disrupt any institution, whether it
 is
 military, corporate, or governmental. When such action is successfully carried out,
 all
 segments of the institution are damaged. ¹⁵

Der strategische Ort des Widerstandes erweitert sich also, folgt man dem CAE, von
 den
 Straßen in das Internet,
 denn:

To fight a decentralized power requires the use of a decentralized means. ¹⁶

Einige Netzaktivisten bezeichnen diese Form des elektronischen Protestes im Netz
 als
 „Hacktivismus“. Zurückgeführt werden kann dieser Begriff, der sich aus den Worten
 „Hacken“
 und „Aktivismus“ zusammensetzt, auf Aktionen des Electronic Disturbance Theatre
 (EDT),
 das 1998 eine Serie von Protestaktionen gegen Webseiten der mexikanischen

Regierung organisierte und mit globaler Unterstützung durchführte („FloodNet“, siehe unten). Diese Art von „Hacktivismus“ zielt in den meisten Fällen auf eine Unterbrechung der Kommunikationsfähigkeit des „Gegners“ ab und steht somit in eklatantem Widerspruch zum „Hacker“-Primat des „möglichst optimalen, ungehinderten Datenflusses“.

Einen ihrer spektakulärsten Erfolge konnte die internationale Netz-Community in dem bekannten Fall *etoy vs. EToys* (1999-2000) für sich verbuchen. Diese zeitgenössische Version von David gegen Goliath ist ein Beispiel dafür, wie sich eine „Temporäre Autonome Zone“, in diesem Fall *Toywar*, spontan aus verteilt agierenden Individuen bildete, einen „Realitätshack“ ausführte und danach wieder verschwand. Wenn keine Gegenkräfte dies verhin-

dern, werde sich jedoch in Zukunft der ursprünglich freie Raum des Internet in einen Raum perfekter Kontrolle verwandeln, so die These des amerikanischen Juristen Lawrence

Lessig, die er 1999 in „Code and other Laws of Cyberspace“¹⁸ aufstellte. Der aggressive Kampf um Domainnamen im Rahmen der Kommerzialisierung des Internet ist nur ein erstes Symptom

¹⁴ “[A]s capital has increasingly become decentralized, breaking through national boundaries and the cities, street action has become increasingly useless.” (CAE 1996, S.

¹⁵ CAE 1996, S.

¹⁶ CAE 1996, S.

¹⁷ An dem Streit, der sich 1998 an den „virtuellen Sit-Ins“ des EDT entzündete, wurde das immer wieder auf-

brechende „Hacker / Aktivisten-Schisma“ (CAE) deutlich, in dem sich ‚alte‘ und ‚neue‘ Netzkulturen (man könnte auch sagen: das „Technik“- und das „Politikprimat“) unversöhnlich gegenüberstehen: “Here are two groups that are motivated to accomplish similar anti-authoritarian ends, but which cannot seem to find a point of convergence. While the [hackers] live on-line, the [activists] live in the street, and both are unknowingly defeated by a communication gap for which neither is responsible. The schism between the knowledge and technical skill has to be closed, to eliminate the prejudices held by each side (hacker intolerance for the technologically unskilled, and activist intolerance for those who are not politically correct).” (CAE 1996, S. 11)

¹⁸ Lawrence Lessig, *Code and other Laws of Cyberspace*, New York 1999 (<http://www.code-is-law.org/>).

auf dem Weg dorthin. Die „Zonen“ und „Grenzen der Freiheit“ im Netz werden auch in Zu-

kunft aufs Neue bedrängt werden und sich dementsprechend verschieben – die

eingangs skizzierte technische Struktur des Internet wird jedoch (hoffentlich) verhindern, dass sie

ganz verschwinden. Die „Temporäre Autonome Zone“ ist erfinderisch und flink und sucht

sich neue Räume, wenn die angestammten Plätze bedroht sind. Die „TAZ“ ist nicht utopisch,

in der unmittelbaren Bedeutung des Wortes, denn sie ist kein Nicht-Ort. Im Gegenteil: „Die

TAZ ist irgendwo.“ Sie liegt an der Schnittstelle vieler Kräfte, sie bildet sich dort, wo viele

Vektoren sich überschneiden. Dies können relative, instabile und dezentrale Nicht-Orte sein, ein „Ge-

gen-Netz“ oder eine Art Netz-Untergrund. Der Theoretiker und lustvolle Praktiker der „Tem-

porären Autonomen Zone“ ist sich sicher, „dass das offizielle Netz es niemals schaffen

wird das Spinnengewebe oder das Gegenetz auszuschalten – Datenpiraterie, ungenehmigte Transmissionen und der freie Informationsfluss können nicht eingefroren werden.“ (Bey 1994, S. 123) Die Tatsache, dass das Internet schon allein aufgrund seiner dezentralen Struktur nie komplett beherrschbar, homogenisierbar oder kontrollierbar sein wird, scheint dieser Hoffnung Recht zu geben.

FORMEN DES WIDERSTANDS IN DER ELEKTRONISCHEN ÖFFENTLICHKEIT

Technische Strukturen sind jedoch jederzeit veränderbar. Ob der freie Fluss von Informatio-

nen wirklich nicht kanalisiert, kontrolliert und gegebenenfalls „eingefroren“ werden kann, wird angesichts der Entwicklungen der letzten Jahre immer fraglicher. Der (öffentliche?)

Raum des Internet ist längst nicht mehr so offen, wie noch vor ein paar Jahren. Seit dem Einsetzen des Netzbooms Anfang der 1990er Jahre wird die Architektur des Internet, so wie wir sie bislang kannten, zunehmend durch Partikularinteressen bedroht. Vor allem die (Unterhal-

tungs-)Industrie arbeitet massiv an der Schließung des offenen Raums Internet

(Stichwort Digital Rights Management Systeme, DRM). Im juristischen Bereich bedeutet dies zum Beispiel, dass die Urheberrechtsgesetze „nicht im Sinne der Urheber, sondern der sich zentralisierenden Content-Industrie auf die erwartete Internet-Distribution neu konzipiert“¹⁹ werden.

So soll zum Beispiel der Gesetzesentwurf der Bundesregierung zur Novellierung des Urheberrechts, der seit August 2002 vorliegt, das Recht zum privaten Vervielfältigen, das in der analogen Welt jedem in begrenztem Umfang offen steht und zum festen Bestandteil des Alltags der Nutzer in der Informationsgesellschaft geworden ist, im digitalen Raum einschränken. Dies würde zu einer massiven Einschränkung der Informationsfreiheit in der vielbeschworenen Informationsgesellschaft führen. Die Initiative privatkopie.net fordert dagegen für die demokratische Informationsgesellschaft ein Urheberrecht, das die Teilhabe aller am kulturellen Leben sowie die Informations- und Meinungsfreiheit garantiert. Es geht dabei, wie Pit

¹⁹ Pit Schultz, „Internet: A Public Domain? Hybride Öffentlichkeiten: Netz-Aktivismus gegen Content-Industrie“, in: Marius Babias, Achim Könnecke, *Die Kunst des Öffentlichen*, Dresden 1998, S. 132-147, hier: S. 146.

Schultz bereits 1998 schrieb, nicht mehr um Utopien, sondern darum, „lediglich das Mindestmaß an frei verfügbaren Wissensgrundlagen für eine funktionierende Demokratie im Zeitalter ihrer elektronischen Vernetzung einzufordern.“ (Schultz 1998, S.

146f. Wir haben es, ganz allgemein formuliert, mit unterschiedlichen Formen der Schließung elektronischer Öffentlichkeiten zu tun, gegen die KünstlerInnen und NetzaktivistInnen verschiedene Formen des Widerstands entwickeln. Neben einem eher „klassischen“ aufklärerischen Medienaktivismus (wie ihn zum Beispiel privatkopie.net, odem.org und der CCC vertreten) hat sich in den letzten Jahren eine Vielfalt hybrider künstlerisch-aktivistischer Netz-Praktiken herausgebildet, die – angesichts der sich potenzierenden „Gesellschaft des Spektakels“ – über reine Informationskampagnen oder Unterschriftensammlungen hinausgehen. In Anlehnung an das 1998 von der autonomen a.f.r.i.k.a.-Gruppe, Luther Blissett und Sonja Brünzels herausgegebene *Handbuch der Kommunikationsguerilla* lassen sich folgende subversiv-künstlerische Verfahren nennen, die im Netz neue Aktualisierung erfahren: Camouflage, Überidentifizierung, Fake und Fälschung, subversive Affirmation, Collage / Montage sowie Entwendung und Umdeutung (Détournement). Darüber hinaus kam es zu verschiedenen Umsetzungen des Konzeptes des „elektronischen zivilen Ungehorsams“, zu diversen kreativen Détournements von (Gesellschafts-)Technologien und zur (zumindest konzeptuellen) Entwicklung radikal-autonomer Kommunikationssysteme. Auf unterschiedliche Weise werden Fragen nach der „Natur“ des digitalen Eigentums gestellt (vgl. gw bush.com, dow-chemical.com, textz.com, etoy / toywar) und Machtstrukturen in Räumen elektronischer Kommunikation sichtbar gemacht (vgl. makrolab). Im Folgenden sollen Projekte und Aktivitäten von Gruppen und Individuen (KünstlerInnen, AktivistInnen) vorgestellt werden.

ELEKTRONISCHER ZIVILER UNGEHORSAM

Critical Art Ensemble

(CAE)

<http://www.critical-art.net>

net

Das CAE ist ein Kollektiv von fünf KünstlerInnen aus unterschiedlichen Bereichen,

„exploring

the intersections between art, technology, radical politics and critical theory” (vgl.

Website).

Neben der wichtigen Publikation von *Electronic Civil Disobedience and other Unpopular Ideas*

(New York, 1996), in der das Konzept des „elektronischen zivilen Ungehorsams“ entwickelt wird, hat das CAE in den letzten Jahren Projekte vor allem in den Bereichen

Biotech

und Tactical Media durchgeführt. Biotech Projekte seit 1996: *Flesh Machine*, *Society for Reproductive Anachronisms*, *Cult of the New Eve*, *GenTerra*, *Contestational Biology*,

Molecular

Invasion. Zum Themenkomplex Tactical Media schreibt CAE: “Tactical Media is

situational,

ephemeral, and self-determinating. It encourages the use of any media that will engage

a particular, socio-political context in order to create molecular interventions and semiotic shocks that contribute to the negation of the rising intensity of authoritarian culture.”

Tactical Media-Projekte seit 1992: *The Therapeutic State* (1992), *Radio Commercials* (1993), *Use-*

less Technology (1994), *Diseases of Consciousness* (1997), *International Campaign for Free Alcohol and Tobacco for the Unemployed* (Sheffield, 1998), *Radio Bikes* (Graz, 2000), *Tactical Gizmology Workshop* (Eyebeam, New York, 2002).

Electronic Disturbance Theatre

(EDT)

<http://www.thing.net/rdom/ecd/ecd.html>

html

Das Konzept des elektronischen zivilen Ungehorsams entstand aus dem seit 1994 betriebe-

nen globalen Internetaktivismus der mexikanischen Zapatistas und ihrer Anhänger.

Zwei

ihrer Unterstützer, Stefan Wray und Ricardo Dominguez, sind wichtige Vertreter des elektro-

nischen zivilen Ungehorsams. Wray unterhält eine Website zu Theorie und Praxis des elekt-

ronischen zivilen Ungehorsams, und Dominguez, der als Mitglied des Critical Art

Ensemble

einer der Co-Autoren von *Electronic Civil Disobedience* ist, arbeitet als Redakteur bei

The

Thing, einem unabhängigen, aus einer Kunstmailbox hervorgegangenen Internet

Service

Provider in New York. Wray und Dominguez sind außerdem Mitglieder der Gruppe

Electronic

Disturbance Theatre ²⁰ (EDT), die für ihre Software „FloodNet“ (FlutNetz) bekannt

geworden

ist. Seit April 1998 hat das EDT unter anderem die Webseite der mexikanischen

Regierung

wegen ihres Vorgehens gegen die Zapatistas gezielt mit ihrer FloodNet-Software angegrif-

fen. FloodNet ist ein verteiltes, auf Massenbeteiligung basierendes System, das

automatisch

die anzugreifende Website aufruft. Beteiligen sich genügend Leute an einem solchen Flood-

Net-Angriff, wird der Server mit einer Welle von Anfragen überflutet, die er nicht mehr abar-

beiten kann. ²¹ Die Webseite ist für alle weiteren Anfragen blockiert und vorübergehend

nicht

mehr erreichbar. Bei einem FloodNet-Angriff handelt es sich also um ein virtuelles Sit-In.

[22](#)

Neben dem simplen Blockade-Effekt gibt es auch subtilere Vorgehensweisen;

beispielsweise

suchten automatisierte Anfragen nach der Seite mit dem Dateinamen „human_rights“. Da

es

diese Seite auf dem Server nicht gab, erschien in der (allerdings nur für den Systemadminist-

rator einzusehenden) Log-Datei des Servers die Meldung „human_rights not found on

this

server“. Während der *Ars Electronica* 1998 in Linz wurde FloodNet außerordentlich

scharf

von der Organisation Hackers for Electronic Art (HEART) kritisiert. Hacker lehnen

solche

Angriffe generell ab, da diese a) nicht kunstvoll genug sind, um als genuines Hacken zu gel-

²⁰ Den Begriff Electronic Disturbance prägte das Critical Art Ensemble. Vgl. Critical Art Ensemble, *The Electronic Disturbance*, New York

²¹ 1994 öffentlich durchgeführtes virtuelles Sit-In blockiert also den Zugang zu bestimmten Websites für eine begrenzte Zeit und ist daher, so Reinhold Grether, „einem Lohnrunden-Warnstreik vergleichbar, ein Mittel zum Eingehorsams, das der Gegenseite Un- und Kampfesmut signalisiert.“ (Reinhold Grether, „Wie die Etoy-Kampagne geführt wurde. Ein Agentenbericht“, in: *Telepolis*, 9.2.2000 (<http://www.heise.de/tp/>) für die Diskussion über die FloodNet-Software auf Nettime vgl. Nettime-Archiv, Juni-November 1998.

ten und b) weil die empfindliche Netzinfrastruktur generell, so die Hacker-Ethik, nicht durch „undifferenzierte“ Angriffe gestört werden dürfe. Die Aktivisten des EDT ihrerseits hielten dagegen, dass ihre Taktik sehr zielgerichtet und vor allem nicht (wie die typischen, von „Skript-Kiddies“ ²³ ausgeführten Distributed Denial of Service (DDoS)-Angriffe) anonym sei. FloodNet wurde jedoch auch von anderen Netzaktivisten kritisiert. Unter anderem wurde EDT vorgeworfen, eine zu kurzsichtige Strategie zu verfolgen. Geert Lovink, holländischer Medientheoretiker und Netzaktivist, schrieb dazu: “Hacktivism should [...] not just temporarily shoot down enemy servers. We need to be much more careful, flexible, remain under cover. FloodNet originates from an actual public space lost and gone. Perhaps it is trying to reconstruct the loss in a much too easy way. In our experience, here in Amsterdam, the digital public sphere is a long term project, with thousands of people involved. In part, our work is invisible, and contains many random elements. Activists, by nature, are hasty. They want to get things done. Yet protection and restructuring of the public sphere is not a simple problem to solve. So let us come up with many models and examine which ones work, and which don't. That's hacktivism for me.” ²⁴

etoy – “the first streetgang on the information super highway”

<http://www.etoy.com>

1999 stürzte sich der neu gegründete US-amerikanische Internet-Spielzeugversand eToys ²⁵

darán, dass die Schweizer Künstlergruppe etoy ²⁶ eine ganz ähnliche Internetadresse hatte, die potenzielle Kunden verwirren könnte. etoy waren seit Mitte der 1990er Jahre unter anderem durch ihr Projekt „Digital Hijack“ ²⁷ und durch ihre perfekte Firmensimulationsstrategie bekannt. Die Spielzeugfirma bot der Künstlergruppe (so die Künstler) 500.000 US\$ für den Verkauf der Domain an. etoy lehnte die „feindliche Übernahme“ jedoch ab. Obwohl die Künstler ihre URL schon ein paar Jahre länger besaßen als die Spielzeugfirma ihre Adresse, erließ im November 1999 ein Richter am Los Angeles Superior Court auf Antrag von eToys.com eine einstweilige Verfügung („temporary injunction“) gegen die Verwendung

des Domainnamens etoy.com durch die Künstlergruppe. Die Künstlergruppe lenkte ein und nahm bis zur endgültigen Entscheidung durch das Gericht ihre Website freiwillig vom Netz. Was

²³ „Skript-Kiddies“ (Skript-Kinder), abschätzig Bezeichnung von Hackern für Jugendliche, denen die Fähigkeit zum „genügenden“ Hacken abgeht und die sich daher bei fertigen Skripten bedienen und aus diesen ihre DDoS-Software zusammenstellen, ohne jedoch ein tieferes Verständnis dessen zu haben, was diese anrichten

²⁴ Gert Lovink, Gespräch mit A. Galloway, „Hacking Activism. An Email Dialogue between Alex Galloway und Gert Lovink“, in: Nettime, 10.2.1999, <http://www.nettime.org/nettime.w3archive/199902/msg00058.html>.

²⁵ eToys (<http://www.eToys.com>).

²⁶ etoy (<http://www.etoy.com>).

²⁷ etoy: „Digital Hijack“ (<http://www.hijack.org/>, 1996). „For a period of four months in 1996, the etoy gang legally hacked into five major search engines devising a trap for net travellers and technology tourists of the time. With twilight zone of the medium forming the place of action, search engines were transformed into a stage, designed as a merger between a Hollywood action movie script and a real life airplane hijacking. This was a shocking experience and a violent attack on the innocent Internet user of the time. It became known as the digital hijack – and the members of etoy as the first street gang on the information super highway.“ (Nicolas Prich, „Gesamtkunstwerk“, in: *Rohrpost*, 17.12.2002 (http://www.hansbernhard.com/publications_about/2002/Gesamtkunstwerk.doc)).

12

dann jedoch folgte, versetzte zunächst etoy und dann die internationale Netz-Community in Rage: Die Firma Network Solutions, die für die Vergabe und die Eintragungen von Domains in das Hauptverzeichnis zuständig war, löschte Anfang Dezember 1999 die URL etoy.com aus eben jenem Hauptverzeichnis, ein Schritt, der nicht durch die einstweilige Verfügung gedeckt war. etoy war nun auch nicht mehr per E-Mail erreichbar. Die Netz-Existenz der Gruppe war gelöscht worden. Als Antwort auf das Verhalten von Network Solutions und e-

Toys entwickelte eine Community von Netzaktivisten um die US-amerikanische Künstler- und Aktivistengruppe RTMark (siehe unten) den etoy-Solidaritäts-Fond und die *Toywar-*

Plattform, deren erklärtes Ziel es war, die Firma eToys zu zerstören. Weniger pathetisch ausgedrückt: Es ging darum, den Wert der eToys-Aktien mit allen zur Verfügung stehenden Mitteln so weit wie möglich nach unten zu drücken. In den folgenden Wochen griffen Aktivis-

ten die Website von eToys mit verschiedenen Mitteln (zum Beispiel virtuelle Sit-Ins) an, die, so las man in einer augenzwinkernd bis ernst gemeinten Pressemitteilung von RTMark,

[28](#) für

den darauffolgenden 70-prozentigen Wertverlust der eToys-Aktien in der Nasdaq-Notierung verantwortlich gemacht wurden. Wie Reinhold Grether, Internet-Forscher und Mitentwickler der *Toywar*-Kampagne, schrieb, nutzte man dabei den sowieso im Abstieg begriffenen Trend der eToys-Aktie und münzte diese Marktwertverluste in der Außendarstellung geschickt in einen Erfolg für etoy um. etoy-Unterstützer waren in sämtlichen mit eToys befassten Investorenforen kontinuierlich präsent und streuten dort entsprechende Negativ-Nachrichten. Für die „virtuellen Sit-Ins“ wurde eine neue Version der FloodNet-Software eingesetzt, die von

der Gruppe Electronic Disturbance Theatre (EDT) ursprünglich zur Unterstützung der mexikanischen Zapatistas entwickelt worden war. Das raffinierteste Skript war wahrscheinlich „killer-toy.html“, ein nicht-lineares Skript, das die Warenkörbe auf eToys.com unablässig füllte, ohne jemals einen Kauf zu tätigen. Es handelte sich dabei um automatisierte Anfragen, die bildlich gesprochen – mit ihren virtuellen Einkaufswagen über die eToys.com-Seiten zogen, Kinderspielzeug tausendfach in diesen Einkaufswagen stapelten – und natürlich nie zur Kasse gingen. Das „virtuelle Shop-In“ hatte einzig und allein den Zweck, den eToys-Server zur Abarbeitung von Routinen anzuhalten und letztendlich zu überlasten. Auch wenn von Seiten der Aktivisten betont wurde, dass man darauf achtete, den Server nur kurzfristig anzugreifen und unter keinen Umständen völlig außer Gefecht zu setzen (weil es, so Grether, um den „symbolischen Ausdruck der Breite des Protests und nicht um einen Terroranschlag“ ging), führte das virtuelle Sit-In zehn Tage in der Vorweihnachtszeit 1999 doch zur fast kompletten Blockade des eToys-Servers.

²⁸ Pressemitteilung von RTMark: “Finally, total victory for etoy (rtmark press release)”, in: *rohrpost*, (http://www.mikro.org/26.1.2000).
²⁹ Vgl. CNN-Bericht (http://cnn.com/TRANSCRIPTS/9912/17/mlld.00.html).
³⁰ *Toywar* (http://www.toywar.com/).

Die *Toywar*-Website ³⁰ war ein symbolisches „Schlachtfeld“, ein Online-Solidaritäts-Spiel, in dem die UnterstützerInnen von etoy in Form von playmobilitigen, mit virtuellen Waffen ausgerüsteten Avataren aufmarschierten. Die Spielankündigung

las sich folgendermaßen: “On your team, thousands of players. Your opponents: eToys and its shareholders—as long as they still own shares. The stakes: art, free expression and life on the Internet.” Die Pro-etoy-Community wurde auf dem Höhepunkt der Kampagne durch 1798 Avatare visualisiert, die auf der Website demonstrativ Stellung bezogen. etoy und RTMark setzten mit der *Toywar*-Plattform der normalerweise bilderlosen, strukturellen Gewalt(strategie) der Ökonomie im Netz eine eben diese bilderlose Gewalt visualisierende Strategie entgegen. Birgit Richard schreibt dazu: „Die [mediale] Gewalt ist bilderlos, deshalb muss das Imaginäre Futter bekommen: etoy nutzen die Symbole ökonomischer Bildermacht und die Kriegsmetapher in spielerischer Form. Sie bebildern ihren [...] Kampf gegen eine Spielzeugfirma, um die abstrakten Vorgänge der Gewalt zu zeigen, die für Nicht-Eingeweihte nur schwer nachvollziehbar sind und erreich[t]en [so] den Support einer großen Webcommunity.“ (Richard 2001, S. 205). ³¹ Nach drei Monaten ließ eToys.com Ende Januar 2000 die Klage gegen die Künstlergruppe fallen – nicht zuletzt auch wohl wegen der heftigen Gegen-

reaktionen, die die Firma zu spüren bekommen hatte.

³² Dieser spektakuläre Erfolg hat ge-

zeigt, dass das Internet beziehungsweise die Nutzung kleiner oder taktischer Medien durch eine globale Netzgemeinschaft von Aktivisten in günstigen Fällen, so Reinhold Grether, die Selbstorganisation einer „Gegen-Macht“ erlaubt, die einen gut organisierten Gegner an die Wand spielen kann.

RTMark

<http://www.rtmark.com>

com

Eine der Hauptaufgaben der Künstler- und Aktivistengruppe RTMark (sprich: „arty mark“, ein Wortspiel mit „trademark“ und „arty“) besteht darin, subversive Aktivitäten zu finanzieren.

Die

US-amerikanische Gruppe unterstützt Leute finanziell, die zum Beispiel großen

Konzernen

kleine Streiche spielen wollen. Auf der Website von RTMark befindet sich eine öffentlich ein-

sehbare Datenbank („The Mutual Funds“) mit verschiedenen „Fördertöpfen“ für

subversive

Aktivitäten. RTMark sieht die Aufgabe der „Mutual Funds“ darin, Auftraggeber und Auftrag-

nehmer zusammenzuführen. Ähnlich wie an der Börse können Geldgeber in

verschiedene

Unternehmungen investieren. Die „Dividende“ ist nicht finanzieller Natur, sondern besteht

in

der Aufmerksamkeit in den Massenmedien und in persönlicher Genugtuung. So wurde

die

Barbie Liberation Organisation (BLO) über die „Mutual Funds“ finanziell unterstützt. Die Akti-

on bestand darin, in einem Supermarkt die Sound-Chips von Barbie- und G.I.-Joe-

Puppen

auszutauschen. Danach sagten die G.I.-Joes „Wanna go shopping?“ und die Barbies

„Dead

³¹ Zur strukturellen Gewalt im Netz, zur performativen Eigenschaft von Domainnamen im Netz und zu

aktuelle Formen des Netzaktivismus (unter anderem etoy, RTMark) vgl. auch Birgit Richard, „Am Anfang war das Wort: Domain war's! Zur Gewalt des Eigennamens in virtuellen Welten“, in: *Kunstforum International*, Bd. 153, Januar-März 2001, S.202-

³² etoy.AGENT027: "VICTORY*VICTORY*VICTORY*VICTORY*VICTORY!", in: Nettime,

(<http://www.nettime.org/nettime.w3archive/200001/msg00143.html>).

25.1.2000

men tell no lies“. In einem anderen Projekt versteckte ein Computerprogrammierer im Auftrag von RTMark zwei schwule Polizisten in dem Videospiel SimCopter. Desweiteren unterstützte RTMark die Schweizer Netzkunstgruppe etoy bei ihrer juristischen Auseinandersetzung mit dem amerikanischen Spielzeugversand Etoys. Auch die Website **vote-auction.com** der Gruppe Übermorgen.com, auf der zur amerikanischen Präsidentenwahl 2000 Wählerstimmen meistbietend versteigert wurden, wurde von RTMark

unterstützt. Immer wieder irritiert die Gruppe Internetbenutzer durch ‚gefakte‘ Webseiten, die den offiziellen Seiten von Politikern und Unternehmen zum Verwechseln ähnlich sehen. Ziel solcher Fakes wurde unter anderem schon George W. Bush, dessen angeblichen Kokain-Erfahrungen unter der Adressen GWBush.com in Erinnerung gerufen wurden. In einer Pressekonzferenz forderte Bush daraufhin vor laufender Fernsehkamera, dass „die Freiheit ihre Grenzen“ haben müsse und stellte sich so selbst bloß. Weitere gefakte Websites waren unter anderem die der internationalen Organisationen GATT (Global Agreement on Tariffs and Trade) www.gatt.org und die der World Trade Organisation WTO.org (beide 2001). Über Anfragen, die von anderen Handelsorganisationen an die gefakte WTO-Website gerichtet wurden, nahm RTMark im Namen der WTO Kontakt mit Interessenten auf. In ihrer Aktion „The Yes Men“ (2001-2002) schickte die Gruppe einen gewissen Andy Bichelbaum als einen offiziellen Vertreter der WTO zu internationalen Konferenzen (unter anderem in Salzburg), wo er Erstaunliches zur Lage der Weltwirtschaft berichtete, die „Faulheit der Italiener“ verurteilte und das Ende der WTO verkündete (vgl. das Dokument-Video auf der Website). Aus einer Selbstdarstellung der Yes Men:

The Yes Men sind die Töchter einer Website: www.gatt.org. Geboren zu einem Zeitpunkt, als das alte „General Agreement on Tariffs and Trade“ (GATT) bereits durch die Welthandelsorganisation (WTO / World Trade Organisation) ersetzt worden war, hat gatt.org die Aufmerksamkeit von CEOs, JuristInnen, JournalistInnen und anderen Splittergruppen der westlichen herrschenden Klassen auf sich konzentriert. Die Leute hinter der Website haben in den vergangenen zwei Jahren mit großem Vergnügen Einladungen zu internationalen Tagungen (<http://theyesmen.org/wto/>, <http://theyesmen.org/finland/>) und etablierten Fernsehsendungen angenommen (<http://theyesmen.org/tv.html>), und zwar als Vertreter der WTO. Ihre berühmt-berüchtigten PowerPoint-Präsentationen werden gerne als „Naked Lunch der Globalisierung“ bezeichnet (siehe besonders www.theyesmen.org/hamburger). In allen Fällen wurden The Yes Men von Personen eingeladen, die die Parodie (<http://gatt.org/>) für die offizielle Website der WTO (<http://www.wto.org/>) hielten. Kürzlich, am 21. Mai, kündigte ein Vertreter der Welthandelsorganisation einem schockierten, aber Anteil nehmenden Publikum in Sydney die Auflösung seiner Organisa-

tion an (<http://theyesmen.org/tro/disband.rtf>, <http://theyesmen.org/tro/cpa.html>). Er gab bekannt, dass sich die WTO als neue Organisation rekonstituieren werde, und zwar mit dem erklärten Ziel, statt der Reichen nun die Armen dieser Welt zu unterstützen. (http://gatt.org/trastat_e.html).

Diese sensationelle Ankündigung rief weltweites Echo hervor, unter anderem eine erregte Debatte im kanadischen Parlament, wo der Abgeordnete John Duncan im Plenarsaal das Wort ergriff und fragte, „welche Auswirkungen dies auf unsere Positionen zu Holz, Landwirtschaft und anderen Streitfragen bezüglich des Welthandels haben“ werde. Zu diesem Zeitpunkt prangerte das Hauptquartier der WTO in Genf den „Vertreter“ als Hochstapler an: „Obwohl wir den Humor [des Hochstaplers] zu schätzen wissen, möchten wir nicht, dass angesehenere Nachrichtenorganisationen wie die Ihre zu denen zählen, die hinters Licht geführt werden.“ „Diesmal handelt es sich nicht um Humor“, sagte Andy Bichlbaum, der die WTO in Sydney „repräsentierte“. „Wir wollen die WTO tatsächlich auflösen und ihre Charta umschreiben, sodass die Armen von der Handelspolitik profitieren, statt darunter zu leiden.“

Bei früheren Auftritten hofften The Yes Men, beim Publikum diverser Veranstaltungen Entsetzen hervorzurufen, indem sie Ideen zum Freihandel auf ihre logischen Konsequenzen hin zuspitzten. Im September 2000 setzten sie sich vor einem positiv gestimmten Publikum internationaler JuristInnen im österreichischen Salzburg für den Verkauf von Wählerstimmen an die meistbietende Firma ein (<http://theyesmen.org/wto/ppt/>). Im Juni 2001 stellten sie einem begeisterten Publikum von TextilforscherInnen in Tampere, Finnland, den Management-Freizeitanzug vor. Diese Telepräsenz-Technologie soll es ManagerInnen ermöglichen, ArbeiterInnen in so genannten Sweatshops mit Hilfe eines knapp einen Meter langen goldenen Phallus ferngesteuerte Elektroschocks zu verabreichen. (<http://theyesmen.org/finland/photos.html>).

Im Mai 2002 versuchten The Yes Men, skeptische Studierende der Universität Plattsburgh, New York, davon zu überzeugen, dass das Welthungerproblem mit Hilfe des Recyclings von McDonald's-Hamburgern (<http://theyesmen.org/hamburger/>) aus Post-Konsumenten-Abfall zu lösen sei.

Die neueste Aktion von RTMark besteht aus der gefakten Website Dow-Chemical.com (2002/2003), auf der sich der gleichnamige amerikanische Chemie-Konzern zu seiner Rückzugs- und Nicht-Entschädigungs-Strategie aus dem verseuchten Bhopal bekennt. Durch einen Chemie-Unfall starben in der indischen Stadt Bhopal in den 1984 Jahren Tausende Menschen. Diese Website führte aufgrund einer gerichtlich angeordneten „einstweiligen Verfügung“ („temporary injunction“) nicht nur zu einer temporären Schließung der gesamten The

Thing-Website durch den Provider Verio, sondern auch zur Kündigung des Vertrag mit The

Thing zum 28. Februar 2003 durch den Provider (vgl. dazu den Text von Martin Conrads, „Den Netzaktivismus auf die Straße tragen“, in: Statement-Reader *Die Offene Stadt: Anwendungsmodelle*, hrsg. v. Marius Babias und Florian Waldvogel, Essen 2003).

DETOURNEMENT SOZIALER TECHNOLOGIEN

Übermorgen.

com
<http://www.ubermorgen.com>

Nach der zeitweiligen Loslösung von der von ihm mitbegründeten, sich als Firmatarnenden Künstlergruppe etoy im Jahr 1999 gründete Hans Bernhard (a.k.a. etoy.HANS, etoy.BRAINHARD, hans_extrem, e01) zusammen mit Maria Haas (a.k.a. Liz oder Lizvlx) die Firma [ubermorgen.com](http://www.ubermorgen.com), die in Deutschland, Österreich, der Schweiz und Bulgarien registriert ist. Handlungsfelder von Übermorgen sind Software-Entwicklung, Lizenz-Verträge, angewandtes Design und Beratungstätigkeiten für multinationale Unternehmen sowie Aktions-, Performance- und massenmediale Kommunikationskunst. Übermorgen bezeichnet seine Aktivitäten als „Media Hacking“ und verbreitet seine Inhalte mittels „Guerilla-Marketing-Taktiken“ bzw. mittels des so genannten „Schock-Marketing“. Auch das auf einer Idee von James Baumgartner basierende und von Übermorgen weiterentwickelte Projekt *[V]ote-auction* (2000) (heute www.vote-auction.net) basierte auf dieser Marketing- und Kommunikations-Strategie. Unter dem eingängigen Slogan „Bringing capitalism and democracy closer together!“ wurde US-amerikanischen Wählern pünktlich zur Präsidentschaftswahl 2000 (G. W. Bush vs. Gore) die Möglichkeit angeboten, ihre Stimme im Internet über eine Online-Auktions-Plattform meistbietend zu versteigern. Die angebotenen Stimmen eines ganzen US-Bundesstaates sollten dann an den Meistbietenden verkauft und der entsprechende Anteil am Erlös den Stimmenverkäufern ausbezahlt werden. In beneidenswerter Klarheit wurde so die Verschränkung von Kapital und (Stimm-)Macht demonstriert. Während individueller Stimmenverkauf in allen US-Bundesstaaten und auf Bundesebene zwar streng verboten ist, wird dieses Verbot nämlich durch massive (legale) Wahlkampfspenden großer Wirtschafts-

unternehmen permanent unterlaufen. Die Resonanz in den Massenmedien war überwältigend. In den drei Monaten vor der Wahl gab Übermorgen am Tag bis zu fünf Radio- und TV-Interviews und bis zu 20 Interviews per E-Mail und Telefon. Verschiedene US-amerikanische Staatsanwälte kündigten insgesamt 13 Gerichtsverfahren gegen Übermorgen.com an. In vier US-Bundesstaaten wurden wirkliche Verfahren eingeleitet (Missouri, Chicago, Massachusetts und Wisconsin) und einstweilige Verfügungen ausgesprochen. Aufgrund eines Richterspruchs in Illinois wurde die Domain der Website zweimal gesperrt, konnte aber unter leicht verändertem Namen jeweils wieder – rechtzeitig für die Wahlen selbst – online gehen. Der

Fernsehsender CNN berichtete sieben Mal über *[V]ote-auction* und widmete dem Thema am 24. Oktober 2000 eine halbstündige Folge der Justiz-Sendung „Burden of Proof“ unter dem Titel „Bidding for Ballots: Democracy on the Block“. Insgesamt sollen bis zu 450 Millionen Medienkonsumenten von der Aktion erfahren haben. Da den Vertretern von *[V]ote-Auction* jedoch letztendlich keine illegalen Aktivitäten nachgewiesen werden konnten, wurden die Gerichtsverfahren in allen Bundesstaaten (außer in Illinois) eingestellt. Übermorgen stellt alle in diesen Verfahren generierten Originaldokumente (Klagen, Gerichtsurteile, etc.) in Ausstellungen aus und nennt diese „foriginals“ (eine Kombination aus „forged“/gefälscht und „original“). Die so realisierte permanente Verquickung von Fakt und Fiktion verweist auf einen extrem erweiterten Materialbegriff, der für Übermorgen auch (internationales) Recht, Demokratie und globale Kommunikation (Input-Feedback-Loops) umfasst.

Institute for Applied Autonomy

(IAA)

<http://www.appliedautonomy.com>

Das US-amerikanische Institute for Applied Autonomy (IAA) untersucht die Strukturen des öffentlichen Raums im Zeitalter elektronischer Überwachung, analysiert die Grenzen der freien Meinungsäußerung und entwickelt technologische Lösungen, die AktivistInnen bei subversiven Aktionen unterstützen sollen. Der wichtigste Tätigkeitsbereich des IAA ist das Feld der so genannten „Contestational Robotics“ oder „Widerständigen Robotik“. Das IAA kehrt die traditionellen Beziehungen zwischen Robotern und autoritären Machtstrukturen um, indem es Roboter entwickelt, die den Bedürfnissen, den Anforderungen und den finanziellen Möglichkeiten kulturell widerständiger Kräfte entsprechen. Es hat bislang vier „Contestational

Robots“ gebaut: „GraffitiWriter“, „StreetWriter“, „Little Brother“ („Pamphleteer“) und die Netzapplikation „iSee“. Der „GraffitiWriter“ ist ein kleiner Roboter, der programmiert bzw. über das Internet ferngesteuert werden kann, um beliebige Texte mit einer Geschwindigkeit von 15 km/h auf horizontalen Flächen aufzutragen. Der Schreib- bzw. Druckprozess ähnelt dabei dem eines Nadeldruckers. Er kann in überwachten Räumen oder während öffentlicher Veranstaltungen eingesetzt werden. Beim „StreetWriter“ handelt es sich um einen umgebauten Kleintransporter, der während der Fahrt Nachrichten auf die Straße schreiben kann. Diese Nachrichten können von hohen Gebäuden oder niedrig fliegenden Flugzeugen gelesen werden und bis zu mehreren Hundert Metern lang sein. „Little Brother“ („Pamphleteer“) ist ein kleiner humanoider Roboter, der unermüdlich Flugblätter verteilen kann. Das aktuellste Projekt des IAA ist „iSee“. Dabei handelt es sich um eine netzbasierte Applikation, die die Standorte von Closed-Circuit-Überwachungskameras (CCTV) im öffentlichen Raum auflistet. Die BenutzerInnen können mittels eines PDA (Personal Digital Assistant) diejenigen Wege und Routen herausfinden, die nicht durch Kameras überwacht werden, und sich so unbeobachtet durch den öffentlichen Raum bewegen.

Heath Bunting / Kayle

Brandon

<http://www.irational.org>

org

Der britische Künstler Heath Bunting interessiert sich für die Herstellung von

Kommunikation

und die Schaffung sozialer Kontexte und Verbindungen von virtuellem und

physischem

Raum. Während Bunting in den 1980er Jahren mittels Graffiti psycho-geographische Inter-

ventionen in urbane Räume vollzog, sich im Kontext von Fax- und Mail Art und

Londoner

Piratenradios engagierte, wurde er in der 1990er Jahren zu einem der exponiertesten Vertre-

ter der so genannten „net.art“, einer informellen Gruppe vorrangig europäischer Netzkünstle-

rInnen, die dem Mitte der 1990er Jahre einsetzenden Internethype kritisch gegenüberstan-

den. Zwischen 1994 und 1997 entwickelte Bunting künstlerische Projekte vorwiegend

im

Internet. Heath Bunting war in dieser Zeit einer der profiliertesten Netzkünstler und einer

der

ersten, die sich aus der Netzkunst wieder zurückzogen. Er erkundet Reiserouten für die un-

kontrollierte Überwindung europäischer Staatsgrenzen. Das von der Tate Modern London

in

Auftrag gegebene Internet-Projekt *BorderXing Guide* (2001) dokumentiert die

illegalen

Grenzübertritte innerhalb und außerhalb Europas, die Heath Bunting und Kayle Brandon in den letzten Jahren im Selbstversuch vollzogen. *BorderXing Guide* versteht sich als Anleitung zum Grenzübertritt ohne Papiere. Als Briten besitzen Bunting und Brandon zwar EU-Pässe, gehen jedoch solche Wege durch Wälder, Flüsse, Berge und Tunnel, die Flüchtlinge und Papierlose wählen müssen, um von einem Land in ein anderes zu gelangen. Die Informationen, die Bunting und Brandon in Form von Fotografien, detaillierten Aufzeichnungen, Karten und lakonischen Kommentaren zu den einzelnen Routen auf der Website zur Verfügung stellen, sind jedoch nicht für jede/n InternetnutzerIn zugänglich. Um Zugang zu dem Projekt zu erhalten, muss man physisch zu einem der weltweit verteilten „Social Servers“ reisen (Orte mit öffentlichem Internet-Zugang), die Buntings Vertrauen genießen. Die Zugangsbegrenzung zu *BorderXing Guide* verfolgt dabei mehrere Ziele: Zum einen geht es um die Einbettung des Virtuellen in einen spezifischen sozialen Kontext. Zum anderen verweist das Projekt auf den paradoxen Zusammenhang zwischen einer immer besseren Vernetzung innerhalb der westlichen Welt (Geld, Güter, Informationen) und deren gleichzeitiger Abschottung gegenüber unerwünschten Einwanderern. *BorderXing* spielt mit seinen Prinzip der „umgekehrten Authentifizierung“ zudem auf die alltäglichen Erfahrungen illegaler GrenzgängerInnen an.

Renaud Auguste-

Dormeuil

Seit Mitte der 1990er Jahre widmet sich Renaud Auguste-Dormeuil der Untersuchung von Überwachungs- und Sicherheitssystemen, deren Präsenz im urbanen öffentlichen Raum heute allgegenwärtig geworden ist. Dabei geht es dem Künstler nicht, wie den Hackern, um das Aufzeigen möglicher Sicherheitslücken und Schwachstellen, sondern darum, auf die

ubiquitäre Präsenz dieser Systeme hinzuweisen und potentielle Schutz- oder Gegenmaßnahmen gegen das Dispositiv der Kontrolle zu entwickeln. Er zeichnet die Standorte von Überwachungskameras in Stadtpläne ein, die es ihren BenutzerInnen erlauben, sich unbeobachtet durch den Stadtraum zu bewegen. Die auf diesem Prinzip basierende vierteilige Posterserie *Quatre itinéraires d'importantes manifestations parisiennes autorisées par la Préfecture de Police (Vier wichtige, von der Polizeipräfektur genehmigte Demonstrationsrouten in Paris, 1998)* listet die Positionen von Überwachungskameras an vier wichtigen Demonstrationsachsen in Paris auf. Akribisch verzeichnet jede Karte, deren Layout sich an der offiziellen Straßenverkehrskarte der Pariser Bushaltestellen anlehnt, welche Institution entlang

dieser vier Routen welche Arten von Kameras betreibt. Von Ende 1999 bis Anfang 2000 bot der Künstler eine *Paris Mabuse Visit Tour* an (Video, 60 min.). Dabei handelte es sich um eine einstündige touristische Stadtrundfahrt durch Paris in einem Kleinbus, der die TeilnehmerInnen zu den „ungewöhnlichsten Standorten von Videoüberwachungskameras“ im 1. und 2. Arrondissement brachte. Im Video *De l'art de se camoufler chez soi* (*Von der Kunst, sich zu Hause zu verstecken*, 1998, 40 min.) führt der Künstler, ähnlich den Video-Heimwerkertipps im Baumarkt, die Konstruktion falscher Flurdecken, doppelter Wände und Bücherregale vor, hinter denen man Zuflucht vor Verfolgern finden kann. Ein weiteres Projekt, das sich mit der Ambivalenz von Lokalisierung und Kontrolle im Zeitalter der Satellitennavigation befasst, ist *GPS* (2001, variable Maße). Die zunächst ästhetisch-dekorativ erscheinende, in den Farben Gelb, Magenta und Grün gehaltene abstrakte Wandmalerei im Vortragsraum der Kokerei Zollverein erweist sich auf den zweiten Blick als eine Visualisierung der Funktionsweise des Global Positioning System (GPS). GPS erlaubt weltweit eine auf 30 Meter genaue Ortung von Personen oder Objekten, die mit einem entsprechenden Empfänger ausgestattet sind.

Surveillance Camera Players

(SCP)

<http://www.notbored.org/the-scp.html>

html

Die Surveillance Camera Players spielen seit Mitte der 1990er Jahre kurze Stücke vor den Überwachungskameras von New York. Ihre erste Aufführung fand im Dezember 1996 in der U-Bahn-Station Union Square statt. Gegeben wurde eine Drei-Minuten-Version von Alfred Jarrys *Père Ubu* – genau 100 Jahre nach der Premiere des skandalumwitterten Avantgardestücks. Weil die Überwachungskameras (noch) keinen Ton aufzeichnen können, werden alle Stücke stumm aufgeführt. Dialoge werden nicht gesprochen, sondern, ähnlich wie die Zwischentitel im Stummfilm, auf Texttafeln gezeigt. Inzwischen gehören neben selbstgeschriebenen Stücken auch Kurzfassungen von Werken wie Samuel Becketts *Warten auf Godot*, Edgar Allan Poes *Der Rabe* oder George Orwells *1984* zum Repertoire der Surveillance Camera Players. Das Publikum der Kurzstücke besteht aus dem Sicherheitspersonal, das die Bilder der Überwachungskameras ansieht, und aus den Passanten, die zufällig an den

Aufführungsorten der SCP vorbeikommen. Die Aufführungen enden zumeist damit, dass Wachmänner der bespielten Orte oder Institutionen die Gruppe auffordern, aufzuhören

und nach Hause zu gehen. Auf der Website der Gruppe findet sich neben akribischen Beschreibungen der Aufführungen auch eine Reihe von theoretischen Texten über die Aktivitäten der SCP. Diese bringen ihre Aktionen unter anderem mit Antonin Artauds *Theater der Grausamkeit*, dem politischen Straßentheater von Gruppen wie zum Beispiel dem *Living Theatre* und Guy Debords Konzeption der „Konstruktion von Situationen“ in Verbindung. Das Internet benutzen die SCP nur, um Informationen über ihre Aktivitäten zu verbreiten.

Bureau of Inverse Technology

(BIT)

<http://www.bureauit.org/>

Das Bureau of Inverse Technology wurde 1992 von Natalie Jeremijenko in Melbourne, Australien, gegründet, 1997 als Firma in Delaware (USA) etabliert und operiert seither weltweit.

Das Büro fungiert auch als Informationsagentur, die die Bedürfnisse des Informationszeitalters bedient. Die angebotenen Produkte umfassen Wirtschaftsindizes, Netzwerkeinrichtungen

und Visualisierungsvorrichtungen, wie auch Videos, Musik oder spezielle

Installationen.

Die „Suicide Box“ (1996) bestand aus einer automatischen Kamera, die an der Golden Gate

Bridge in San Francisco installiert wurde und auf vertikale Bewegungen reagierte, die

von

der Brücke ausgingen. Jede dieser vertikalen Bewegungen wurde aufgezeichnet. „BIT Pla-

ne“ (1997-99 [<http://www.bureauit.org/plane/>]) ist ein umgebautes fernsteuerbares Spionage-

Modellflugzeug (Spannweite 20 inches [= 50 cm]), das, ausgerüstet mit einer

Videokamera,

über ‚feindliches‘ Territorium fliegen und dort Aufnahmen machen kann. Aufgrund

seiner

geringen Abmessungen kann es auch solches Gelände überfliegen, das für andere Flugkör-

per unzugänglich ist. Der erste Überwachungsflug fand 1997 über dem Silicon Valley in Kali-

fornien statt: “[I]n an aerial reconnaissance over the Silicon Valley California 1997, bit

plane

flew solo and undetected into the glittering heartland of the Information Age. Video

generated

in this exercise includes footage retrieved over no-camera zones Apple, Lockheed,

Nasa

Ames, Netscape, Xerox Parc, Interval Research, Atari, Hewlett Packard, Oracle, Yahoo,

SGL,

Sun Microsystems.” (vgl.

Website)

0100101110101101.org

<http://0100101110101101.org/>

[org/](http://0100101110101101.org/home/life_sharing/)

<http://0100101110101101.org/home/>

[vopos/](http://0100101110101101.org/home/vopos/)

Das italienische Netzkunst-Duo, das sich der Einfachheit halber auch „zero one dot

org“

nennen lässt, ist Ende der 1990er Jahre durch seine radikalen Kopier-Projekte bekannt ge-

worden, in denen es sich mit Fragen von Original und Reproduktion, Autorenschaft, Copy-

right und Plagiat im Internet auseinander setzte. Seit Anfang 2001 arbeitet es an der Realisierung seines bislang umfangreichsten und aufwendigsten Projektes, das unter dem Titel *Glasnost (Transparenz)* läuft. Hierbei handelt es sich um ein Selbstüberwachungssystem, das unablässig Daten über das Leben der beiden Mitglieder von 0100101110101101.org sammelt und diese Informationen unzensuriert öffentlich macht. Der erste Schritt zur Realisierung von *Glasnost* war das Projekt *life_sharing* (2001). *life_sharing*, ein Anagramm des Begriffs *file sharing*, ermöglicht Internet-NutzerInnen den direkten Online-Zugang zum Computer der Künstler. Alle auf der Festplatte befindlichen Daten – Texte, Bilder, Software, privater Mailverkehr, etc. – unterliegen der Gnu Public License (GPL) und sind insofern frei zugänglich und kopier- und manipulierbar: “*life_sharing* is a brand new concept of net architecture turning a website into a hardcore personal media for complete digital transparency.” Seit dem Beginn des Projektes *VOPOS* (Januar 2002) trägt das Duo GPS-Transmitter (Global Positioning System), die in regelmäßigen Abständen die Koordinaten der Künstler an deren Webseiten senden, auf die die Öffentlichkeit jederzeit zugreifen kann. Die Daten werden auf Stadtkarten übertragen und visualisieren somit ständig den aktuellen Aufenthaltsort der Künstler: „*Glasnost* explores the contradictions of privacy in the era of information technology, mirroring the obsession of society in collecting and archiving personal data.“

SICHTBARMACHUNG VON MACHTSTRUKTUREN IN RÄUMEN ELEKTRONISCHER KOMMUNIKATION

Marko Peljhan / Projekt Atol: „makrolab“ (1997-2007)

<http://makrolab.ljudmila.org>

Marko Peljhans *makrolab* wurde erstmals während der *documenta X* 1997 in Kassel aufgebaut, operierte Anfang 2000 an der Westküste Australiens und im Frühsommer 2002 in Schottland. Beim *makrolab* handelt es sich um eine autonome Forschungs-, Arbeits- und Wohninheit, vom Aussehen her einem *Skylab* nicht unähnlich. Graham Mann, einer der Besucher im *makrolab II*, das Anfang 2000 auf Rottneest Island vor der Westküste Australiens installiert wurde, beschreibt dieses folgendermaßen: “*Makrolab II* is a Gibsonsque hexagonal prism bristling with antennae and weather instruments. It was shipped onto the island in a Seatainer, then plugged into communications networks and satellite links. It produces its own

power, recycles its water, and supports a crew of up to seven. [...] Like a spaceship, it needs to support its occupants without drawing on the local, ubiquitous, market-oriented, oversupply of consumer goods. It moves to different locations to sample different weather patterns, animal movements and datascares which Earth has to offer.”

³³ Diese mobile Forschungssta-

³³ Graham Mann, in: Bruce Sterling, *A Visit to the Makrolab*, in: Nettime, 21.4.2000 (<http://www.nettime.org>).

tion kartographiert mit Hilfe von allerlei technischem Gerät die „Topographie der Signale“

³⁴ im

gesamten elektromagnetischen Spektrum – als eine Art privates ECHELON-System:

³⁵ Es ist

ausgerüstet mit Sende- und Empfangsantennen, ³⁶ die verschiedene Signalbereiche erfassen und dort zirkulierende Datenströme aufzeichnen können. Diese Datenströme enthalten In-

formationen aus den unterschiedlichsten Quellen: aus privaten Telefongesprächen, satellitengesteuerten Navigationssystemen und militärischen und wirtschaftlichen Kommunikatio-

nen. Neben der Telekommunikation kartographiert das Projekt außerdem auch diverse na-

türliche Phänomene: „[T]his is the territory through which phone conversations, faxes, radio and TV programs, and reports transmitted over satellites and space probes flow. In short,

this is a world in which ordinary phone conversations intermingle with strategic debates between corporations or military headquarters, and with atmospheric phenomena, meteorological shifts and paths of bird migrations.”

³⁷ In Kassel klinkte sich das *makrolab* in Telefonate und andere Arten von Kommunikationen ein, die in dieser Zeit über internationale INMAR-

SAT-Telekommunikationssatelliten liefen. Der amerikanische Künstler Brian Springer, der einige Zeit im *makrolab* arbeitete, schrieb später: „Wir näherten uns dem Himmel über dem

Lutterberg als einer lebendigen Bücherei, aus deren Regalen uns Stimmen, Bilder und Datenkommunikation entgegenströmten.“

³⁸ Untersucht wurde zum Beispiel, so Marko Peljhan, wer die INMARSAT-Satelliten zu welchen Zwecken benutzte, „wie bestimmte Machtstruktu-

ren [...] sich der Technologie bedienen und was da verborgen wird“, und auch die Anfälligkeit privater Telekommunikation.

³⁹ Das *makrolab*, das als zehnjähriges Forschungsprojekt ge-

plant ist, wird abseits großer Städte oder Ausstellungen an möglichst abgelegenen

Orten aufgebaut (Lutterberg bei Kassel, Rottneest Island vor der Westküste Australiens, Athol Esta-

te in Schottland) und soll 2007 konsequenterweise mit einer Installation in der Antarktis ab-

geschlossen werden. Peljhan verfolgt in diesem Projekt eine Strategie, die er „Insulation /

- ³⁴ Dieter Daniels, Text zu Marko Peljhan, in: *cTy. Internationaler Medienkunstpreis 2000*, Südwestrundfunk Baden Baden, ZKM Zentrum für Kunst und Medientechnologie Karlsruhe, 2000, S. 94-97, hier: S. 95.
- ³⁵ "What makrolab does, is basically using the principle of ECHELON." (Marko Peljhan, "makrolab | Isolation", 31.08.1997. the makrolab lecture in the 100 days program", *documenta X*, Kassel, 31.08.1997). ECHELON ist ein System der amerikanischen National Security Agency (NSA) betriebenes weltweit operierendes elektronisches System zum Abhören kommerzieller Telekommunikationssatelliten. Es wird von den Vereinigten Staaten vor allem für die Überwachung nichtmilitärischer Ziele – Regierungen, Organisationen oder Firmen außerhalb der USA unter anderem für Wirtschaftsspionage eingesetzt. Vgl. Oliver Schröm, „Verrat unter Freunden. Wie die NSA Afrikas größter und verschwiegenster Geheimdienst, deutsche Firmen ausspioniert und dabei einen Milliarden Schaden anrichtet“, in: *Die Zeit*, 30.9.1999, S. 131.
- ³⁶ Das makrolab verfügt über „access to a wide spectrum of short wave, L-Band, and mobile radio frequencies and satellite telephone systems (INMARSAT), Internet and satellite video transmissions.“ (Springer, „MAKROLAB – A Heterotopia“, in: *Performing Arts Journal*, Herbst 1998, <http://www.makrolab.ljudmila.org/reports/heterotopia>).
- ³⁷ Igor Zabel, „Umetnost, mo• in javnost. Model Makrolab“ [Art, Power and the Public. Makrolab Model], *Murs. časopis Moderne galerije Ljubljana*. Jg. IX, 1997, Nr. 3-4. 1-8, S. 7.
- ³⁸ Brian Springer, in: Tilman Baumgärtel, „Kunst als Lauschangriff. Ein Gespräch mit Marko Peljhan über dessen Projekt Makrolab“, in: *Telepolis*, 6.10.1998 (<http://www.heise.de/tp/deutsch/special/info/6299/1.html>). veröffentlicht in: Tilman Baumgärtel, *net.art. Materialien zur Netzkunst*, Nürnberg 1999, S. 136-147.
- ³⁹ Greenpeace sagte Marko Peljhan: „Die wissen wahrscheinlich gar nicht, dass jedes Mal, wenn sie das Satelliten-Telefon auf ihrem Boot benutzen, ihre Gegner alles mithören können. Oder sie wissen es, aber es ihnen egal. Ich finde es sehr wichtig zu zeigen, dass die Privatsphäre nicht so geschützt ist, wie es die heute wahrscheinlich annehmen.“ (Peljhan, in: Baumgärtel 1999, 138).

Isolation“ (Isolierung / Isolation) nennt. Es handelt sich dabei um eine Kombination aus vollkommener physischer Isolation und gleichzeitig totaler medialer Vernetzung mit der Außenwelt: “[T]he project is located external to the exhibition venue, it is not accessible to the ordinary public, and its crew is shut away in a special environment entirely separate from its surroundings. The essential feature of the project, however, is that their retreat into the isolated system does not mean the interruption of all forms of communication” (Zabel 1997,

6). Erscheint das Ziel einer Isolation in einem explizit auf Kommunikation ausgerichteten Pro-

jekt zunächst wie ein Widerspruch, ⁴⁰ wird jedoch schnell klar, dass diese Kappung aller her-

kömmlichen Verbindungen einer maximalen Intensivierung der Untersuchung des immate-

riellen Territoriums der Signale dient. Das *makrolab* ist einerseits *vollkommen isoliert* und andererseits *voll vernetzt*. Es erscheint daher wie eine radikale Umsetzung des McLuhan-

schen Prothesenmodells. ⁴¹ Die physisch-geographische Isolierung (bei gleichzeitiger Vernet-

zung) soll der Besatzung die Unabhängigkeit von und gleichzeitige Reflexion der (auch me-

dial vermittelten) gesellschaftlichen Bedingungen ermöglichen: “Insulation / isolation is un-

derstood as a vehicle to achieve independence from and reflection of the actual entropic so-

cial conditions” (Peljhan, *d X*, 1997). Der deklarierte Rückzug aus dem Spektakel bzw.

aus der Gesellschaft des Spektakels ⁴² (Peljhan spielte in seinem Vortrag während der *documen-*

ta X auf Guy Debord und die Situationisten an) soll einen Raum der Ruhe und der Reflexion

eröffnen, von dem aus eine Art Vogelschau auf die Topographie der Signale möglich wird. Die zwischen den Zentren zirkulieren.⁴³ Darüber hinaus sollen durch diese „insulation / isolation“ auch die Voraussetzungen für eine intensiv(er)e Kommunikation unter den Besatzungsmitgliedern geschaffen werden. Peljhans These ist, dass wenige Individuen in einer solchen „intensiven Isolierung“ mehr „evolutionären Code“ produzieren können als große politische Bewegungen. Unter „evolutionärem Code“ versteht Peljhan die experimentelle Erforschung und Entwicklung von Strategien und Verhaltensweisen in zeitgenössischen und zukünftigen Gesellschaften, die zunächst in der Laborsituation des *makrolab* getestet werden, um später dann im alltäglichen Leben eingesetzt werden zu können. Genau hier liegt das *utopische* Potenzial des *makrolab*. Es geht zunächst um eine Bewusstmachung des immateriellen Datenraums, der sich wie eine neue Dimension über den materiellen Raum legt. Der zweite Schritt besteht in einer Verdeutlichung der in dieser Datensphäre vorhandenen antagonistischen Machtinteressen einschließlich ihrer Strategien des Datensammelns, der Überwachung und Kontrolle. Gegen diese Strategien hat das *makrolab* – dies ist der dritte Schritt – seine Taktik der „counter-surveillance“ entwickelt. Diese Taktik besteht in der Umdrehung bzw. in der Demokratisierung der erwähnten Strategien (wie sie zum Beispiel

⁴⁰ “Isolation of course, in a communication project sounds like a contradiction in terms.” (Peljhan, Vortrag *documenta X*, Kassel,

⁴¹ 1.08.1997).

⁴² Marshall McLuhan, *Die magischen Kanäle. Understanding Media*, Dresden

⁴³ 1994. Guy Debord, *Die Gesellschaft des Spektakels*, Berlin

⁴³ 1996. Daniels 2000, S.

95.

ECHELON verwendet), die normalerweise nur von institutionellen, staatlichen oder privatwirtschaftlichen Stellen betrieben werden können. Die Weitergabe der so gewonnenen Informationen an Dritte ist jedoch nicht legal. Peljhan sucht mit seinen Kollegen daher nach juristischen Möglichkeiten, diese Informationen trotzdem an die Öffentlichkeit zu bringen, um so über Struktur und Inhalt dieses normalerweise unsichtbaren Informationsraums aufzuklären. Es geht Peljhan und seinen Mitstreitern darum, der Öffentlichkeit taktische, juristische und technologische Mittel an die Hand zu geben, um sich selbst ein Bild von den Überwachungs- und Kontrollmethoden und -möglichkeiten zu machen, die normalerweise militärischen oder staatlichen Einrichtungen oder global agierenden großen Unternehmen oder Medienkonglomeraten vorbehalten sind.⁴⁴

world-information.

http://world-information.

org/

http://www.t0.or.at/

t0

World-information.org ist eine vom Netzkultur-Verein Public Netbase (Wien) initiierte Ausstel-

lung zu Themen der Herstellung, Manipulation, Kontrolle und Distribution von

Informationen

in der so genannten „Informationsgesellschaft“. Sie wurde 2000 in Brüssel, 2001 in Wien

und

Ende 2002 in Amsterdam gezeigt und wanderte im März 2003 nach Belgrad und

danach

nach New Delhi. Die Ausstellung fragt danach, wie Technologien die Gesellschaft

verändern

bzw. sich auf Gesellschaft, Politik, Kultur, Kunst und Wirtschaft auswirken. Auf 32 Informati-

onsdisplays wird die Entstehung und Manipulation der öffentlichen Meinung sowie die Ge-

fährdung der Public Domain durch aktuelle juristische und technische Entwicklungen im Be-

reich von Copyright und Urheberrecht, durch Monopolbildungen im Bereich der Massenme-

dien und durch die Implementierung von Kontrollstrukturen im Internet dargestellt.

Außerdem

setzt sich das Projekt mit der verschärften Sicherheitsgesetzgebung seit dem 11.

September

2001 auseinander, die unter anderem den umfassenden Einsatz biometrischer Kontrolltech-

nologien

vorsieht.

⁴⁴ Das makrolab erforscht in experimenteller Weise auch die juristischen Möglichkeiten des ‚öffentlichen Abhörens‘: “[T]he essential thing about [makrolab] is the demonstration of the possibility of the legal use of means for research on the telecommunications spectrum. Telecommunications are the most regulated part of legislation in all the countries of the world, and are crucial to projects which act to open and not close the Problem: Strategie Minimalnega Odpora – Analiza Taktičnega Delovanja v Družbi Kontrole” [Strategies of Minimal Resistance – Analysis of Tactical Work in the Surveillance Society], in: *Svet umetnosti Tečaj za sodobno umetnost 1999: Geopolitika in umetnost* [The World of Art Curatorial Course for Contemporary Geopolitics and Art]. Hg. v. OSI/SCCA, Ljubljana 1999, S. 60-63).

„insert_coin“ (2000/2001)

http://www.odem.org/

insert_coin/

http://www.online-demonstration.org/insert_coin/imkp2001.

html

Zwei Personen kontrollieren 250 Personen. Um die Kompetenz und Kritikfähigkeit der An-

wender bezüglich des Alltagsmediums Internet zu überprüfen, kontrollierten und manipulierten Dragan Espenschied und Alvar Freude im Rahmen ihrer Diplomarbeit *insert_coin* den Web-Datenverkehr an der Merz-Akademie in Stuttgart. So verwandelten sie beispielsweise Suchmaschinen in Denunzier-Portale, veränderten aktuelle Meldungen auf Nachrichtensites; selbst Wörter in privater Email-Kommunikation, die über Web-Interfaces wie Hotmail abgerufen wurden, liefen durch den von Espenschied und Freude manipulierten Proxy-Server (Filter). Und niemand bemerkte es. Authentizität vorzutäuschen, war ein Leichtes, denn auch die Adressen (URLs), die Daten im Web unverwechselbar auszeichnen, wurden von Espenschied und Freude kontrolliert. Als sie das Experiment den Studierenden und MitarbeiterInnen der Akademie bekannt machten, interessierte sich jedoch so gut wie niemand dafür. Obwohl die beiden eine simpel zu befolgende Anleitung veröffentlichten, mit der jeder selbstständig den Filter ausschalten konnte, nahm sich nur ein verschwindend geringer Teil der Studierenden eine Minute Zeit, um eine einfache Einstellung vorzunehmen und so wieder an ungefilterte Daten heranzukommen. Noch mehrere Monate nach dem Ende des Experiments war der Web-Zugriff von den meisten Computern der Akademie ausgefiltert. Das Experiment von Espenschied und Freude konnte beweisen, dass Manipulation von Internet-Inhalten sehr einfach und effizient funktionieren kann. Das Internet ist keinesfalls unkontrollierbar, ohne Hierarchien oder unabhängig von bestehenden Machtverhältnissen. Und die Benutzer bewegen sich unmündig in einem Medium, das jeden Tag mehr Bedeutung in Politik, Wirtschaft und Privatleben gewinnt.

Knowbotic Research: „Minds of Concern: Breaking News”

<http://www.krcf.org>

<http://www.unitedwehack.ath.cx/>

Das Projekt *Minds of Concern: Breaking News* der Künstlergruppe Knowbotic Research, das Anfang Mai 2002 in der Ausstellung *Open_Source_Art_Hack* im New Yorker New Museum gezeigt wurde, ⁴⁵ besteht aus einer Rauminstallation sowie einem „Public Domain Scanner“, also einer Software, die so genanntes „Portscanning“ erlaubt, das heißt, mit dieser Software kann man kontrollieren, wie bestimmte Computer an das Internet angeschlossen sind, welche Türen („Ports“) offen, welche geschlossen sind. Mittels Port-Scanning kann man die Verwundbarkeit bestimmter Server feststellen. Dies ist legal, so lange man nicht durch offene Türen oder Fenster in fremde Computer eindringt. Die Künstler geben den BenutzerInnen die

⁴⁵ "Minds of Concern: Breaking News" (2002), als Teil des Ausstellungsprojektes *Open_Source_Art_Hack*, The New Museum, 3.5.-30.6.2002 (<http://www.netartcommons.walkerart.org/>, <http://unitedwehack.ath.cx/>).

Möglichkeit, ein solches Port-Scanning nicht etwa auf Servern großer multinationaler Konzerne durchzuführen, sondern auf Servern von Nicht-Regierungs-Organisationen und kleiner, medienkultureller Institutionen. Damit wollen sie auf die Verwundbarkeit derjenigen AktivistInnen aufmerksam machen, die sich für Datensicherheit einsetzen. Das Projekt musste letztendlich vom Netz genommen werden, da der Provider des Museums dem Museum mit juristischen Konsequenzen drohte. Matthew Mirapaul schrieb dazu in der *New York Times* am 13.5.2002: “The dispute calls attention to one of the very points the piece is intended to make. Because the lines between public and private control of the Internet are not yet clearly defined, what artists want to do may be perfectly legal, but that does not mean they will be allowed to do it.”

ENTWICKLUNG AUTONOMER KOMMUNIKATIONSSYSTEME

Name.

Space

<http://www.name.space.xs2.net/>

net/

1996 gründete der New Yorker Video- und Medienkünstler Paul Garrin, der in den frühen

1980er Jahren Assistent der VideokünstlerInnen Nam June Paik und Shigeo Kubota war,

das Projekt Name.Space. Das Projekt sollte es jedem Netznutzer unabhängig vom

Domain

Name System (DNS) des Internet ermöglichen, seinen individuellen Domainnamen einzu-

richten. Bereits 1996 waren viele der begehrten Domainnamen – besonders solche mit gene-

rischen Top Level Domains wie .com, .org, .net, von denen es bis vor kurzem nur sieben

gab

– vergeben. ⁴⁶ Bisher hat die US-amerikanische Firma Network Solutions Inc. (NSI) ein

von der amerikanischen Regierung zugeteiltes Monopol auf die kostenpflichtige Vergabe

dieser Domainnamen (100 US \$ / Jahr pro Domainname). Wie viele Vertreter der

internationalen Netzcommunity übte auch Paul Garrin fundamentale Kritik am Domain Name System

(DNS),

dem er eine künstliche Verknappung von Top Level Domains unterstellte. Laut Garrin

stellt

die Monopolmacht von NSI eine Privatisierung von öffentlichem Gut, der Verkauf von (künst-

lich knapp gehaltenen) Domainnamen eine Kommerzialisierung des öffentlichen Raums

des

Internet dar. Garrin dazu in einem Interview: „Ich betrachte das Internet als öffentlichen

Raum – so wie die Straßen. In den USA werden jetzt immer mehr Straßen privatisiert.

Wenn

du auf eine Straße gehst, die jemand gekauft hat, oder in eine Shopping Mall [...], betrittst

du

Privateigentum, und du hast nicht mehr das durch die Verfassung geschützte Recht, frei dei-

⁴⁶ Ein Domainname ist zum Beispiel „mikro“ in <http://www.mikro.org>. Diese Adresse ist – im Gegensatz zu

der darunter liegenden IP-Nummer (www.mikro.org entspricht der IP-Nummer 194.95.161.64) – leicht zu

meistens einmalig im Internet. Letzter Teil einer URL ist immer eine Top Level Domain. Diese können Generic Top Level Domains (gTLDs) oder Country Code Top Level Domains (ccTLDs) sein. gTLDs sind heute: .org (für Organisationen), .edu (für Universitäten), .com (für kommerzielle Körperschaften), .gov (für die Regierung USA), .mil (für das Militär), .int (für internationale Organisationen), .net (für Netzprovider). Daneben gibt es dreihundert zweilettrige länderspezifische Top Level Domains (ccTLDs) wie zum Beispiel .de, .ru, .uk.

ne Meinung zu äußern. Je mehr Orte privatisiert werden, desto weniger öffentliche Plätze gibt es, an denen man sagen kann, was man will. In den letzten Jahren hat es diese Gentrifi-

zierung von ganzen Stadtvierteln gegeben, jetzt setzt eine Disneyfizierung des Netzes ein, die genauso gefährlich ist.“⁴⁷ Garrin wollte mit seiner Firma pgMedia daher das DNS durch ein eigenes Namenssystem ersetzen. Mit Name.Space wollte er beweisen, dass es zumin-

dest technisch keine Grenze für die Anzahl von (Top Level) Domains gibt. Der Namensraum des Name.Space erlaubte – das behauptete zumindest Garrin – im Gegensatz zum heutigen DNS die Einführung einer unbegrenzten Anzahl von Top Level Domains *durch die einzelnen Nutzer*. Damit die Name.Space-Domainnamen von jedem ans Internet angeschlossenen Computer aufgerufen werden könnten, wollte pgMedia NSI zur Aufnahme der Name.Space-

Domainnamen in den Rootserver File bewegen. Network Solutions lehnte ab. Die Klage, die Garrin daraufhin gegen NSI einreichte, wurde Anfang 2000 abschlägig beschieden. NSI be-

hält das Monopol zur Vergabe von Domainnamen in generischen TLDs bis mindestens zum Jahr 2003. Garrin, der Ende der 1970er Jahre bei den Konzeptkünstlern Martha Rosler und Hans Haacke an der Cooper Union in New York studierte und dort die politische Variante dieser Kunst kennen gelernt hatte, sieht seine Firma pgMedia als ein politisches Unterneh-

men, das sich direkt aus seiner künstlerischen Arbeit entwickelt hat.⁴⁸ Garrin ist

dass sich Künstler und unabhängige Medien ihre eigene technische und ökonomische Infrastruktur schaffen müssen, um unabhängig arbeiten zu können. Die Verbreitung unabhängiger Informationen und ‚unpopulärer‘, kritischer Ideen muss durch den Kauf eigener Bandbreite und die Schaffung einer eigenen Netzinfrastruktur gewährleistet werden. Die hierfür benötigten finanziellen Mittel sollen, so Garrin, durch eigene Firmen aufgebracht werden. Ein sol-

cher ‚autonomer‘ Server ist Garrins *Mediafilter* (<http://www.mediafilter.org>), der seit

März 1995 online ist. Hier findet man unabhängige Zeitschriften, die investigativen Journalismus fördern, zum Beispiel *Covert Action Quarterly* oder *The Balkan Media and Policy Monitor*.

Im September 1997 brach auf der Mailingliste *Nettime*⁴⁹ ein heftiger Streit über Garrins Na-

me.Space aus. Gestritten wurde weniger über die erklärten Ziele des Projekts (verschiedene Leute machten sich Gedanken über die notwendige Erweiterung des DNS), als vielmehr ü-

ber die Vorgehensweise, mit der Garrin diese Ziele erreichen wollte. Da war zunächst Garrins Einzelkämpfertum. Protokolle und Standards werden im Internet eigentlich immer kollektiv erarbeitet, wie auch Rop Gongrijp in der Diskussion bemerkte: "This is not a problem that you solve on your own or with a few friends. Internet is built by hundreds of thousands of people that have programmed it. You can't solve this with three people, not from the structure

⁴⁷ Paul Garrin, Interview mit Tilman Baumgärtel, 20.4.1997, in: Tilman Baumgärtel, *[net.art] Materialien* *Netzwerk*, Nürnberg 1999, S. 92-101, hier: S.

⁴⁸ Zu Paul Garrin vgl. auch Jutta Zaremba, „Medien(kampf)kunst. Paul Garrins Macht des Taktischen“, *Kunstforum International*, Bd. 153, Januar-März 2001, S. 195-
⁴⁹ Nettime ist eine internationale Mailingliste für Netzkritik, die seit 1995 besteht und heute über 1.500 Subscriber umfasst (<http://www.nettime.org>).

Name.Space has now. You solve this by working with large groups, involving universities etc.”⁵⁰ Garrin verstieß gegen dieses ‚Gesetz‘, indem er eigene Standards auf eigene Faust entwickelte. Garrin gab nach eigenen Worten dem „schnellen“ korporativen Modell eindeutig den Vorzug gegenüber „langsamen“ basisdemokratischen Entscheidungswegen. Durch die Gründung einer eigenen Firma, so die Kritiker weiter, schlage er (persönliches) Kapital aus einem gemeinsam verfolgten Ziel. Die weitreichendste Kritik an Garrins Name.Space kam von Rop Gongrijp, dem Leiter der holländischen Hacker-Organisation Hacktic und Mitglied des Amsterdamer Internet Service Providers xs4all. Laut Gongrijp funktioniere Name.space technisch überhaupt nicht, und sei daher auch keine Alternative zum bestehenden Domain Name System.⁵¹

INSULAR

Technologies
<http://www.insular.net>

Ein anderes autonomes Kommunikationssystem entwickelt der slowenische Künstler Marko Peljhan seit 1999. *INSULAR Technologies* („International Networking System for Universal Long-distance Advanced Radio“) ist konzipiert als ein weltweites, unabhängiges, offen zugängliches und dezentrales Radionetzwerk, das parallel zu den herkömmlichen Kommunikationsstrukturen Daten, Text und Sprache überträgt. Es soll in erster Linie eine sichere Kommunikation zwischen unabhängigen Kultur-, Medien- und gesellschaftlichen Initiativen, Nicht-Regierungsorganisationen und Individuen gewährleisten, die unter Umständen in entfernten Gegenden oder Umgebungen mit begrenzter Connectivity operieren. Sichere Kommunikati-

on wird durch den Einsatz von Verschlüsselung und durch die Existenz einer autonomen Infrastruktur gewährleistet, die darauf abzielt, die NutzerInnen unabhängiger von der gegenwärtigen bestehenden proprietären Telekommunikationsinfrastruktur (vor allem der kommerziellen Kommunikationssatelliten von INTELSAT) zu machen. *INSULAR Technologies* soll auch als Back-Up-System dienen und im Notfall bestehende digitale und analoge Netzwerke und Telekommunikationsinfrastrukturen ersetzen.

⁵⁰ Josephine Bosma. Interview with Rop Gongrijp, in: Nettime, <http://www.nettime.org/nettime.w3archive/199701/msg00026.html>.
⁵¹ Vgl. Boris Groendahl, "Plundering the Domain", in: *Rewired – Journal of a Strained Net*, <http://www.rewired.com/97/0203.html>.

DIGITALE EIGENTUMSFRAGEN

Rolux

<http://www.rolux.org>

Rolux (Sebastian Lütgert) ist eines der unabhängigen kleinen Netzprojekte, die sich im Berlin der 1990er Jahren mit seinen leer stehenden Gebäuden und verlassenen Geländen im Um-

feld von Clubs und Bars, Kunst und elektronischer Musik gebildet haben. Dazu gehört unter anderem auch mikro e.V., das bootlab, wo sich Lütgerts Arbeitsplatz befindet, Veranstaltungen wie (der inzwischen eingestellte) *last tuesday*, der (heute nicht mehr existierende) Club DaimlerChrysler, aber auch Mailinglisten wie Nettime und Rohrpost. Seit 2001 betreibt Lüt-

gert / Rolux das Projekt textz.com, ⁵² das mit dem flotten Spruch „we are the & in copy & pas-

te“ wirbt. textz.com ist eine Datenbank für Texte. Man findet Texte mit und ohne

Copyright, fiktionale und theoretische Texte, Manifeste und Songtexte. Da steht Theodor W. Adorno

neben der autonomen a.f.r.i.k.a.-Gruppe, Douglas Adams neben Klaus Theweleit und Kathy

Acker. Die Texte stammen aus unterschiedlichen Quellen. Sie werden entweder von den Autoren selbst eingereicht, als freie im Netz kursierende Texte von Mitwirkenden in die textz.com-Datenbank eingespeist oder von mit Scannern und Texterkennungssoftware bestückten UserInnen vom analogen Medium Papier in digitale ASCII-Files umgewandelt. Sebastian Lütgert selbst hat dem Projekt textz.com unter dem Titel „napster was only the beginning“ eine Einleitung vorangestellt, die eine wütende Ablehnung jeglicher proprietärer Schließungen („organized corporate piracy“) darstellt:

napster was only the beginning. an introduction to <http://textz.com> [v0.5]

a spectre is haunting the corporate world – the spectre of organized world-wide file-sharing. mp3, to name the most common synonym for the becoming-distributor of millions of former customers, has clearly shown that the flows of digital data are much more driven by people and formats than they are determined by legislation, ownership or the new global rules of the corporate-political. napster has reverse-engineered the ideology of a whole industry, and it has finally proven its total, complete and absolute obsolescence. the transnational companies that are now trying to break it up have started a war they will never be able to stop. there are going to be thousands of napsters. <http://textz.com> is not even zero-point-five of them. we are not the dot in dot-com, neither are we the minus in e-book. the future of online publishing sits right next to your computer: it's a \$50 scanner and a \$50 printer, both connected to the internet. we are the & in copy & paste, and plain ascii is still the format

⁵² Vgl. dazu auch Vali Djordjevic, „Nützliche Tools für den Netzintellektuellen. Minordomo und textz.com deffn's Hause ROLUX“, in: *Telepolis*, 23.7.2001.

of our choice. it shouldn't require a plug-in to read a book on the net, nor should it require a credit card. the text industry is a paper tiger. along with the mass erosion of their proprietary rights goes the vanishing of their digital watermarks. packed today, cracked tomorrow. whatever electronic gadgets they will come up with – they are all going to be dead media on their very release day. forget about your new kafka dvd. i already got it via sms.

this is not project gutenbergr. it is neither about constituting a canonical body of his-

torical texts (by authors so classical that they've all been watching the grass from
 below for almost a century of posthumous copyright), nor is it about htmlifying freely
 available books into unreadable sub-chapterized hyper-chunks. texts relate to texts by
 other means than a href. just go to your local bookstore and find out yourself. the net is not
 a rhizome, and a digital library should not be an interactive nirvana. the conceptual
 poverty of today's post-academic, post-corporate public online services – and we haven't
 seen dot-museum yet – is not and has never been a desirable alternative to a future that
 will be controlled by the super-pervasive data-streams of the upcoming military-
 entertainment complex. there are still other options. nostalgia is slavery. stay home, read a
 book.
 information does not want to be free. in fact it is absolutely free of will, a constant flow
 of signs of lives which are permanently being turned into commodities and
 transformed into commercial content. <http://textz.com> is not part of the information business. they
 say there was a time when content was king, but we have seen his head rolling. our
 week beats their year. ever since we have been moving from content to discontent,
 collecting scripts and viruses, writing programs and bots, dealing with textz as warez, as executa-
 bles – something that is able to change your life. this is not promotional material. facing
 the unified principles of information – the combined horror of global communication
 and so-called guerilla marketing – there is no more need for media theory or cultural
 studies. the resistance against corporate culture can itself no longer remain in the cultural
 domain. you make a mistake if you see what we do as merely
 apolitical.
 we are studying the coils of the serpent, watching the walk of the penguin,
 mapping the moves of our wired enemies. intellectual, digital and biological property – corner-
 stones of the new regimes of control – are the direct result of organized corporate
 piracy. they are not only replacing such obsolete notions as freedom, democracy, human
 rights and technological progress. all these new forms of ownership are, in the first place, at-
 tempts to expropriate people's work, data and bodies – just as the they begin to
 acquire. for the first time in history, the technical means to organize them differently.
 today's global media and communication conglomerates are mafias, and we shouldn't count
 on what's left of the national governments when it comes to fighting back. "humanity won't

be happy until the last copyright holder is hung by the guts of the last patent lawyer" was only the beginning. the nineties of the net are over. let's move on.

a.s.ambulanzen, berlin/germany, march 2001. no copyright <http://textz.com>

Im Mai 2002 hatte es die *F.A.Z.* abgelehnt, eine Vorabversion von Martin Walsers neuem Roman *Tod eines Kritikers* abzudrucken, da die Hauptfigur des Romans eine allzu deutliche Ähnlichkeit mit dem bekannten jüdischen Literaturkritiker Marcel Reich-Ranicki aufwies, vor allem aber weil der Roman ein „Repertoire antisemitischer Klischees“ enthielt. Daran anschließend entspann sich eine wilde Debatte in den Feuilletons der deutschen wie internationalen Medien, die daraufhin vom Suhrkamp Verlag mit einer Kopie des Manuskripts beliefert wurden. Dies geschah zum Teil über den Versand eines PDF-Dokuments, was zur Folge hatte, dass nicht lizenzierte Kopien im Internet auftauchten. Während sich der Suhrkamp Verlag dann schließlich trotz „kontroverser Diskussionen und Bedenken, die im Haus bestehen“, dazu entschloss, den Roman *Tod eines Kritikers* am 26. Juni 2002 vorzeitig zu veröffentlichen, war auch textz.com auf das Walser-Manuskript aufmerksam geworden. Als Pool für elektronisch publizierte, kritische Textproduktionen schien man hier jedoch nicht besonders von Walsers Werk angetan zu sein und beförderte auf der Website eine Datei mit dem Titel „walser.pdf“ kurzerhand in den virtuellen Papierkorb <http://textz.com/trash/walser.pdf>. Kurze Zeit später erhielt textz.com von Anwälten des Suhrkamp Verlags wegen angeblicher Urheberrechtsverstöße eine Abmahnung (<http://textz.com/trash/walser.txt>). Pikanterweise verbirgt sich hinter der verdächtigen Dateibenennung „walser.pdf“ nicht etwa das berüchtigte Walser-Manuskript, sondern Bruce Sterlings Veröffentlichung *The Hacker Crackdown – Law and Disorder on the Electronic Frontier*, ein von dem amerikanischen Autor als so genannte „Literary Freeware“ freigegebenes und autorisiertes E-Book, das sich mit den urheberrechtlichen Streitigkeiten und Grauzonen des elektronischen Publizierens auseinandersetzt. Die Betreiber von textz.com verstießen somit also keineswegs gegen die Veröffentlichungsrechte des Suhrkamp Verlags, dessen Rechtsabteilung schließlich nach einer kurzen Mailkorrespondenz auch nichts weiter von sich hören ließ. Am 24. Juni 2002 führte textz.com diesen Streich noch einen Schritt weiter: Statt Walsers Manuskript direkt als Textdatei zum Download anzubieten oder einen weiteren Link auf eine entsprechende Kopie zu setzen, veröffentlichte textz.com den 10.000 Zeilen umfassenden Quellcode eines Perl-Scripts (<http://textz.com/trash/walser.pl.txt>), das über einen entsprechenden Perl-Interpreter eine ASCII-Textversion von Walsers *Tod eines Kritikers* generieren kann. Ausdrücklich weist textz.com auf seiner Website darauf hin, dass dieses Skript nicht ohne die ausdrückliche, schriftliche Genehmigung des Suhrkamp Verlags in Frankfurt ausgeführt werden darf. Auch gehöre das „Reverse-Engineering der Schriften eines senilen deutschen Revisionisten nicht

⁵³ In: *Rohrpost*, 15.3.2001. Zusatz: “<http://textz.com> (a.k.a. <http://textwarez.com>) has been launched on february 28 2001, 10:00 CET. please support our system and contribute textz and

gerade zum Kerngeschäft von textz.com“. Als freie Software unter der GNU General Public License der Free Software Foundation jedoch darf der Source-Code frei verteilt und modifiziert werden. Das Perl-Skript „walser.php“ enthält außerdem die Utility „makewalser.php“, mit der PHP-Skripte auch für andere Texte erstellt werden können. [54](#)

AUFKLÄRERISCHER MEDIENAKTIVISMUS

BigBrotherAwards

<http://www.bigbrotherawards.de/>

Die „BigBrotherAwards Deutschland“ wurden ins Leben gerufen, um die öffentliche Diskussion um Privatsphäre und Datenschutz zu fördern – sie sollen missbräuchlichen Gebrauch von Technik und Informationen aufzeigen. Seit 1998 wird ein solcher „Preis“ in verschiedenen Ländern und seit dem Jahr 2000 auch in Deutschland an Firmen, Organisationen und Personen verliehen, die in nachhaltiger Weise die Privatsphäre von Menschen beeinträchtigen oder (persönliche) Daten Dritten zugänglich machen. Die deutschen BigBrother-Awards werden vom Bielefelder FoeBuD e. V. organisiert, der sich 1987 als Verein zur Förderung des öffentlichen bewegten und unbewegten Datenverkehrs gründete. Bekannt wurde der Verein durch Vernetzungsarbeit im Zerberus-Netz, seine Mailbox BIONIC, das Friedensnetzwerk ZaMir, das deutschsprachige Handbuch zu dem Verschlüsselungsprogramm Pretty Good Privacy (PGP) und seine monatliche Veranstaltungsreihe *Public Domain* zu Themen aus Zukunft und Technik, Wissenschaft und Politik, Kunst und Kultur.

den. Sie konnten sämtliche Inhalte kontrollieren, veränderten sie nach Belieben oder blockierten sie willkürlich – niemand protestierte (vgl. Espenschied & Freude: *insert_coin*, 2000-2001, siehe oben).

Chaos Computer Club (CCC)

<http://www.ccc.de>

„Der Chaos Computer Club ist eine galaktische Gemeinschaft von Lebewesen, unabhängig von Alter, Geschlecht und Rasse sowie gesellschaftlicher Stellung, die sich grenzüberschreitend für Informationsfreiheit einsetzt und mit den Auswirkungen von Technologie auf die Gesellschaft sowie das einzelne Lebewesen beschäftigt und das Wissen um diese Entwicklung fördert. Der CCC setzt sich für ein Menschenrecht auf zumindest weltweite, ungehinderte Kommunikation ein. Dies schließt natürlich technische Forschung, Entwicklung von entsprechenden technischen Hilfsmitteln und die Diskussion entsprechender technischer Sachgebiete sowie öffentliche Demonstrationen mit ein. Der Chaos Computer Club versteht sich als ein Forum der Hackerszene, eine Instanz zwischen Hackern, Systembetreibern und der Öffentlichkeit. Zunehmend ist diese Aufgabe in Teilbereichen (Netz-Zensur, Krypto-Regulierung) die einer Interessensvertretung, die versucht, durch Wissen Einfluss zu nehmen.“ (padeluun, <http://www.ccc.de/faq#ccc>)

privatkopie.

net
<http://www.privatkopie.net>

Im Anschluss an die internationale Konferenz *Wizards of OS 2*

⁵⁵ und den Workshop *Have*

you ever felt oppressed by technology? YOU WILL – Campaigning für Offene Kulturen

und *Freies Wissen* ⁵⁶ initiierte mikro e. V. im Jahr 2002 zusammen mit anderen

die Initiative privatkopie.net, die sich für den Erhalt der Informationsfreiheit in der Informationsgesellschaft einsetzt. Anlass war der Gesetzesentwurf der Bundesregierung zur Novellierung des Urheberrechts, der seit August 2002 vorlag. Dieser Entwurf sah vor, das Recht zum privaten Vervielfältigen, das in der analogen Welt jedem in begrenztem Umfang offen steht und zum festen Bestandteil des Alltags der NutzerInnen in der Informationsgesellschaft geworden ist, im digitalen Raum einzuschränken. Die Initiative privatkopie.net fordert dagegen für die demokratische Informationsgesellschaft ein Urheberrecht, das die Teilhabe aller am kulturellen Leben sowie die Informations- und Meinungsfreiheit garantiert. Im Laufe von 2002 wurden über 30.000 Unterschriften gesammelt und im Dezember 2002 der Bundesjustizministerin übergeben.

⁵⁵ Haus der Kulturen der Welt, Berlin, 11.-

⁵⁶ Workshop auf dem 18. *Chaos Communication Congress*, Berlin, 27.-29.12.2001.

USA/Schweiz/Österreich: "It's different because it's fundamentally different." - The Votauction-Case

Complaint, 16.10.2000

IN THE CIRCUIT COURT OF COOK COUNTY COUNTY DEPARTMENT, COUNTY DIVISION

Board of Election Commissioners of the City of Chicago, LANGDON D. NEAL, RICHARD A. COWEN, and THERESA M. PETRONE,

Plaintiffs,

vs.

HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC.,

Defendants.

COMPLAINT FOR DECLARATORY JUDGMENT, INJUNCTION AND OTHER RELIEF

Plaintiffs, BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and THERESA M. PETRONE, by their attorney, James M. Scanlon & Associates, hereby complain of Defendants HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., and, pursuant to Sections 2-701, 11-101 and 11-102 of the Code of Civil Procedure (735 ILCS 5/2-701, 5/11-101 and 5/11-102), seek declaratory judgment, injunctive and other relief against said Defendants either jointly, severally or in the alternative and in support of this Complaint, Plaintiffs state as follows:

NATURE OF THE COMPLAINT

1. This is a proceeding for declaratory and injunctive relief under Sections 2-701, 11-101 and 11-102

of the Code of Civil Procedure (735 ILCS 5/2-701, 5/11-01 and 5/11-102) for (a) the purpose of determining a question in actual controversy between the parties concerning whether the Defendants either jointly, severally or in the alternative are in violation of the election laws of the State of Illinois and the United States that prohibit the buying and selling of votes in elections for public office, and (b) for the purpose of obtaining injunctive relief against Defendants enjoining Defendants either jointly, severally or in the alternative from further violations of the election laws of the State of Illinois and the United States prohibiting the buying or selling of votes at the November 7, 2000 General Election (hereinafter referred to as the "Election") to be conducted in the State of Illinois. The Complaint also seeks other equitable and legal relief against Defendants, either jointly, severally or in the alternative, including but not limited to the award of damages to Plaintiffs and to members of a class consisting of all citizens of the State of Illinois for the deprivation of any rights, privileges or immunities secured by the Constitution or laws of the United States and of the State of Illinois.

PARTIES

2. Plaintiff BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO (the "Board") is a governmental entity created by Section 6-21 of The Election Code (10 ILCS 5/6-21) and is charged, pursuant to Section 6-26 of The Election Code (10 ILCS 5/6-26), with conducting all elections in the city of Chicago, Illinois.

3. Plaintiff LANGDON D. NEAL ("Neal") is a duly appointed Commissioner and the Chairman of the Board whose oath of office requires him to support and abide by the Constitution of the United States and of the State of Illinois and the laws passed in pursuance thereof. (10 ILCS 5/6-21, 5/6-24) Neal is also a citizen and resident of, and a registered voter in, the city of Chicago, Illinois who is qualified to vote and intends to vote at the Election to be conducted in the City of Chicago and in the State of Illinois, for the purpose of electing federal, state, county and judicial officers, including President and Vice President of the United States.

4. Plaintiff RICHARD A. COWEN ("Cowen") is a duly appointed Commissioner of the Board whose oath of office requires him to support and abide by the Constitution of the United States and of the State of Illinois and the laws passed in pursuance thereof. (10 ILCS 5/6-21, 5/6-24) Cowen is also a citizen and resident of, and a registered voter in, the city of Chicago, Illinois who is qualified to vote and intends to vote at the Election to be conducted in the City of Chicago and in the State of Illinois, for the purpose of electing federal, state, county and judicial officers, including President and Vice President of the United States.

5. Plaintiff THERESA M. PETRONE ("Petrone") is a duly appointed Commissioner of the Board whose oath of office requires her to support and abide by the Constitution of the United States and of the State of Illinois and the laws passed in pursuance thereof. (10 ILCS 5/6-21, 5/6-24) Petrone is also a citizen and resident of, and a registered voter in, the city of Chicago, Illinois who is qualified to vote and intends to vote at the Election to be conducted in the City of Chicago and in the State of Illinois, for the purpose of electing federal, state, county and judicial officers, including President and Vice President of the United States.

6. Upon information and belief, Defendants HANS BERNHARD ("Hans Bernard"), LUZIUS A. BERNHARD ("Luzius Bernhard"), OSKAR OBEREDER ("Obereder"), and CHRISTOPH JOHANNES MUTTER ("Mutter") are residents of and/or conduct business in Vienna, Austria. Upon information and belief, Hans Bernard currently owns and/or operates an Internet web site entitled "Voteauction.com" that transacts business within the State of Illinois. Upon information and belief, Luzius Bernhard is the named registrant of the "Voteauction.com" domain name and the site's administrative and technical contact. Upon information and belief, Obereder and Mutter are coordinators for the "Voteauction.com" web site.

7. Upon information and belief, Defendant JAMES BAUMGARTNER ("Baumgartner") is a resident of the State of New York. Upon information and belief, Baumgartner created and operates or operated an Internet web site entitled "Voteauction.com" that transacts business within the State of Illinois.

8. Upon information and belief, Defendant DOMAIN BANK, INC. ("Domain Bank") is a corporation organized and doing business under the laws of the State of Pennsylvania and its principal place of doing business is in the State of Pennsylvania. Domain Bank provides data processing and preparation services in computer graphics for Voteauction.com and the persons and/or businesses that own and/or operate Voteauction.com.

JURISDICTION

9. Jurisdiction is vested in this Court pursuant to Art. 6, Sec. 9, of the Illinois Constitution; the Code of Civil Procedure, 735 ILCS 5/2-701, 5/11-101, and 5/11-102; the Circuit Courts Act, 705 ILCS 35/26; and The Election Code, 10 ILCS 5/1-1 et seq.

10. Defendants, nonresidents of the State of Illinois having transacted business within the State of Illinois as alleged herein below, have submitted to the jurisdiction of this Court pursuant to 735 ILCS 5/2-209(a)(1).

11. Defendants, nonresidents of the State of Illinois having committed tortious acts within the State of Illinois as alleged herein below, have submitted to the jurisdiction of this Court pursuant to 735 ILCS 5/2-209(a)(2).

12. Defendants, nonresidents of the State of Illinois having made and/or performed a contract or promise substantially connected with the State of Illinois as alleged herein below, have submitted to the jurisdiction of this Court pursuant to 735 ILCS 5/2-209(a)(7).

13. Defendants, nonresidents of the State of Illinois having conspired with others to violate the election laws of the State of Illinois and of the United States and commit tortious acts within the State of Illinois as alleged herein below, have submitted to the jurisdiction of this Court pursuant to 735 ILCS 5/2-209(c).

VENUE

14. All individual Plaintiffs are residents of the city of Chicago, the County of Cook, and the State of Illinois.

15. All individual Defendants are nonresidents of the State of Illinois.

16. Venue is properly vested in this Court pursuant to Section 2-101 of the Code of Civil Procedure (735 ILCS 5/2-101).

GENERAL ALLEGATIONS

17. At the Election, registered and qualified voters in the State of Illinois will vote for and elect persons to be Electors of President and Vice President of the United States, Members of U.S. House of Representatives, State Senators, Representatives in the General Assembly, Supreme, Appellate and Circuit Judges, and various county officers.

18. At the Election, voters in the State of Illinois will vote for President and Vice President of the United States by marking an official ballot listing the names of the candidates of each political party or group for President and Vice President. Such votes are not deemed or taken as direct votes for the candidates for President and Vice President, but instead to the Presidential vote as votes for Electors of President and Vice President of the United States selected by the political parties or groups. Persons elected as Electors of President and Vice President must, following the Election, meet in Springfield, Illinois and cast their vote for President and Vice President of the United States. (Art. 2, §1, U.S. Const.; 10 ILCS 5/21-2 through 5/21-4) The State of Illinois is entitled to twenty-two "electoral votes." The candidates for President and Vice President of the United States receiving the most electoral votes cast by electors in the various States shall be declared elected.

19. The Board is vested with sole statutory power and duty to conduct the Election to be held within the territorial limits of the City of Chicago in accordance with election laws of the State of Illinois and of the United States.

20. As part of its duties, the Board has prepared, printed and distributed and will prepare, print and distribute absentee ballots to qualified voters who make application for such ballots. Specifically, the Board will mail absentee ballots from their offices in the city of Chicago, Illinois to all eligible absentee voters.

21. Sections 19-5 and 20-5 of The Election Code require that absentee voters certify under penalty of perjury that they have marked their ballots in secret. (10 ILCS 5/19-5, 5/20-5)

22. Sections 19-6 and 20-6 of The Election Code require that absentee voters return their marked absentee ballots directly to the Board in its offices in Chicago, Illinois only in the manner prescribed therein, namely: by mail, by personal delivery, by delivery by the voter's spouse, parent, child, brother or sister, or by a licensed messenger or motor carrier. (10 ILCS 5/19-5, 5/20-5)

23. The Board is further vested with the sole statutory power and duty to process such absentee ballots for tabulation and counting and to canvass the returns and results of said election in its offices in Chicago, Illinois, all in accordance with the election laws of the State of Illinois and of the United States.

24. Upon information and belief, Baumgartner created a web site on the computer Internet known as "Voteauction.com." In or about August 2000, the Voteauction.com web-site began appearing on the Internet at "http://www.voteauction.com." True and correct copies of Voteauction.com's web-site pages are made a part hereof and are attached hereto as EXHIBIT A. The affidavit of Daniel Doyle, who printed copies of the Voteauction.com web pages as they appear in EXHIBIT A and attests that they are true and correct copies thereof, is attached hereto as EXHIBIT B.

25. Defendants, through the Voteauction.com web site, solicit and allow individuals, including Illinois residents, to "sell" their votes for the Election and solicit and allow individuals or corporations, including Illinois residents and corporations, to "bid" on or buy such votes. See EXHIBIT A, 1-19.

26. The Voteauction.com web site states in part, "Now you can profit from your election capital by selling your vote to the highest bidder." See EXHIBIT A, 1. The web site solicits and allows persons to register with Voteauction.com by going to an on-line computer screen, filling in the form on the screen provided (including name, address and political affiliation), and then clicking the "Submit" button on the computer screen. See EXHIBIT A, 6-7.

27. The Voteauction.com web site states that as of October 12, 2000, as many as 1,131 Illinois residents have registered on-line through Voteauction.com, offering their votes for sale for the Election. Upon information and belief, some of these Illinois residents are also residents of the city of Chicago. See EXHIBIT A, 16.

28. Defendants, by and through Voteauction.com, solicit and allow Illinois individuals and corporations to "bid" on the votes being offered for sale by registering on-line using a computer screen registration form. Bidders submit bids for a block of votes consisting of all the votes offered for sale in any particular state. The Voteauction.com web site provides that the starting bid for each state is \$100, with a minimum bid increase of \$50. The Voteauction.com web site states in part, "The winning bidder for each state will be able to choose who the group will vote for en masse." The Voteauction.com web site states, "The winning bidder will have to contact the voteauction.com voters in order to provide payment and for the voters to provide verification." See EXHIBIT A, 8-19.

29. The Voteauction.com web site states that as of October 12, 2000 the highest bid offered for the purchase of Illinois residents' votes for the Election was \$14,000, equaling \$12.38 per vote. See EXHIBIT A, 16.

30. Articles posted on the Voteauction.com web site indicate that Baumgartner "had planned for voters to mail him absentee ballots to verify the selections." See EXHIBIT A, 29-30, Vote-selling Web site to be revived, possibly offshore, CNN.com, August 25, 2000. In an article appearing on

August 17, 2000 in the The Lycos Network, a copy of which is posted on the Voteauction.com web site and included herewith in EXHIBIT A, 32-34, Baumgartner is reported as stating that potential vote sellers were being notified that the Voteauction legal agreement, which was still being drafted, would be sent out at the end of the month. Baumgartner is also reported as saying that he was "considering a process in which the Voteauction participant fills out an absentee ballot and votes for whomever they want in every race but the presidency. Whether that choice will be Bush, Gore, Nader, Buchanan, or someone else entirely is determined by the outcome of the online auction." "Then when the time comes, whoever wins the auction decides who this group is going to vote for," Baumgartner is quoted as saying, "So I tell those people you should vote for this person. Then they fill in the form, and then they send it to me. And I just verify that they're voting for the correct person." See EXHIBIT A, 34.

31. In an article appearing on The Lycos Network on September 6, 2000, a copy of which is posted on Voteauction.com's web site and included herewith in EXHIBIT A, an unidentified spokesman for Voteauction.com is reported to have said:

"Verification will now be the responsibility of the winning bidder. *** They can choose from a variety of methods for verification of the votes. They may have the voters send in their absentee ballots for verification, they may have the voters take photographs inside the voting booth, or they go to the honor system – that is the system that many vote-purchasing endeavors have used in the past. We have chosen to have the winning bidders responsible for the verification because it would not be feasible to have people send their absentee ballots all the way to Austria and have us send them back to America within an appropriate time frame."

See EXHIBIT A, 42-43.

32. The Voteauction.com web site states that for the Election, Voteauction.com "is concentrating on just the U.S. Presidential election" but that Voteauction.com hopes that in future it will be able to "grow our business into every election market niche from Senatorial races to municipal water commissioner." See EXHIBIT A, 19.

33. The Voteauction.com web site states that it will not receive any money from the auction. However, Bernhard has stated that "We bought the domain name and related business because we see this as a serious business venture in which we can make money." See EXHIBIT A, 19, 29.

34. Nowhere on the Voteauction.com web site does it state that the selling and buying of votes, or offering to buy or sell votes is illegal or that the individuals selling or offering to sell their votes, and individuals buying or offering to buy votes may be committing a crime. See EXHIBIT A, 1-22.

35. The laws of the State of Illinois and of the United States prohibit the selling and buying of votes.

36. Section 29-1 of The Election Code (10 ILCS 5/29-1) provides, "Any person who knowingly gives, lends or promises to give or lend any money or other valuable consideration to any other person to influence such other person to vote *** or to influence such other person to vote for or against any candidate or public question to be voted upon at any election shall be guilty of a Class 4

felony." Thus, vote buying is illegal under Illinois law and any person giving or promising to give money to Illinois residents to influence them to vote or to vote for or against any candidate to be voted upon at the Election is guilty of a Class 4 felony, which is punishable by imprisonment for 1 to 3 years.

37. Section 29-3 of The Election Code (10 ILCS 5/29-3) provides, "Any person who votes for or against any candidate or public question in consideration of any gift or loan of money or for any other valuable consideration *** shall be guilty of a Class 4 felony." Thus, vote selling is illegal under Illinois law and any person voting for or against any candidate on the Illinois ballot for the Election in consideration of any money or other valuable consideration is guilty of a Class 4 felony, which is punishable by imprisonment for 1 to 3 years.

38. Any person attempting to sell or buy votes in Illinois has committed an offense under Illinois law and is guilty of a Class 4 felony that is punishable by imprisonment for 1 to 3 years. (10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-4) Thus, any person in Illinois who has attempted to sell his or her vote at the Election by registering with Voteauction.com to sell his or her vote, and any person who has attempted to buy the votes of Illinois residents for the Election by registering with Voteauction.com to bid on such votes, has committed a Class 4 felony.

39. Any person who solicits another to sell or buy votes in Illinois has committed an offense under Illinois law and is guilty of a Class 4 felony that is punishable by imprisonment for 1 to 3 years. (10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-1) Defendants, by and through Voteauction.com, are guilty of soliciting others to sell or buy votes in Illinois and have committed a Class 4 felony.

40. Any person who conspires with another to sell or buy votes in Illinois has committed an offense under Illinois law and is guilty of a Class 4 felony that is punishable by imprisonment for 1 to 3 years. (10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-2) Defendants have conspired with others to sell and buy votes in Illinois and are guilty of conspiring to sell and buy votes in Illinois under the laws of the State of Illinois.

41. Anyone who marks or tampers with an absentee ballot of another person or takes an absentee ballot of another person in violation of Section 19-6 of The Election Code (see ¶22 above) so that an opportunity for fraudulent marking or tampering is created is guilty of a Class 3 felony under Illinois law. (10 ILCS 5/29-20)

42. By requiring those offering to sell their votes to submit their absentee ballots to Defendants or to others so as to verify their voting selections, Defendants are guilty of (a) conspiring with others to commit absentee vote fraud, (b) soliciting others to commit absentee vote fraud, and (c) attempted absentee vote fraud.

43. Title 18, Section 597 of the United States Code (18 U.S.C. §597) provides, "Whoever makes or offers to make an expenditure to any person, either to vote or withhold his vote, or to vote for or against any candidate; and whoever solicits, accepts, or receives any such expenditure in consideration of his vote or the withholding of his vote shall be fined not more than \$1,000 or imprisoned not more than one year or both; and if the violation was willful, shall be fined not more

than \$10,000 or imprisoned not more than two years, or both."

44. Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)) provides that for Federal elections, "Whoever knowingly or willfully *** pays or offers to pay or accepts payment for *** voting shall be fined not more than \$10,000 or imprisoned not more than five years, or both."

45. Thus, any person in Illinois who has knowingly or willfully offered to sell his or her vote at the Election, which is also a Federal election, by registering with Voteauction.com to sell his or her vote, and any person who has knowingly or willfully offered to buy the votes of Illinois residents for the Election by registering with Voteauction.com to bid on such votes, has committed a criminal offense under 18 U.S.C. §597 and 42 U.S.C. §1973i(c).

46. Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)) also provides that for Federal elections, "Whoever knowingly or willfully *** conspires with another individual for the purpose of *** illegal voting *** shall be fined not more than \$10,000 or imprisoned not more than five years, or both."

47. Thus, Defendants have committed a violation of 42 U.S.C. §1973i(c) in that they have conspired for the purpose of illegal voting.

48. Title 42, Section 1973gg-10 of the United States Code (42 U.S.C. §1973gg-10) provides that in any Federal election, "A person *** knowingly and willfully deprives, defrauds, or attempts to deprive or defraud the residents of a State of a fair and impartially conducted election process by *** the procurement, casting, or tabulation of ballots that are known by the person to be materially false, fictitious, or fraudulent under the laws of the State in which the election is held, shall be fined in accordance with title 18 *** or imprisoned not more than 5 years, or both." Thus, federal law secures the right of voters in a State to have fair and impartially conducted elections.

49. Defendants, by and through Voteauction.com, have knowingly and willfully deprived and defrauded, and will deprive and defraud, Plaintiffs and all citizens of the State of Illinois of a fair and impartial election by procuring ballots that are known to be materially false and fraudulent under the laws of the State of Illinois.

50. Article 3, Section 3 of the Constitution of the State of Illinois (Art. 3, §3 Ill. Const.) guarantees Illinois citizens the right to "free and equal" elections. Under this provision, elections are free only when the voters are subjected to no intimidation or improper influence and when every voter is allowed to cast his or her own ballot as his or her own judgment and conscience dictate. When the ballot box becomes the receptacle of fraudulent votes, the freedom and equality of elections are destroyed.

51. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, by and through Voteauction.com, have deprived and will deprive the Plaintiffs and all Illinois citizens of their constitutional right to free and equal elections.

52. Defendants have been warned that the buying or selling of votes in Illinois is a Class 4 felony. See September 20, 2000 and October 5, 2000 electronic mail messages from A.L. Zimmer, General Counsel, Illinois State Board of Elections to the Voteauction.com "Message Board," which is posted on Voteauction.com's web site. See EXHIBIT A, 107-108.

53. In an article appearing on CNN.com on August 25, 2000, a copy of which is posted on Voteauction.com's web site and included herewith as EXHIBIT A, Hans Bernhard is reported to have said that his holding company would operate Voteauction.com outside of the United States to circumvent federal and state laws that forbid purchasing and buying ballots. See EXHIBIT A, 29.

54. Notwithstanding warnings that the buying and selling of votes is illegal under Illinois law and notwithstanding their own admissions that their conduct violates state and federal laws, Defendants have continued to knowingly and willfully violate the election laws of the State of Illinois and of the United States by encouraging, soliciting and allowing the residents of Illinois and others through the Voteauction.com web site to sell and buy votes for candidates at the Election.

COUNT I

DECLARATORY JUDGMENT

1-54. Plaintiffs re-allege and incorporate by reference the allegations contained in paragraphs 1 through 54 herein as their allegations 1 through 54 of Count I.

55. A dispute and controversy has arisen between the Plaintiffs and the Defendants concerning the right of Defendants to use and operate an Internet web site as an auction forum for the purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the Election and encouraging, soliciting and allowing individuals and corporations to "bid" on and buy such votes.

56. Defendants' continued use and operation of the Internet web site known as Voteauction.com as an auction forum for purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the Election and encouraging, soliciting and allowing individuals and corporations to "bid" on or buy such votes constitutes knowing and willful violations of the election laws of the State of Illinois and of the United States that will result in illegal and fraudulent voting at the Election if not prevented.

57. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to violate the election laws of the State of Illinois and of the United States.

58. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to deprive them or defraud them of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

59. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have deprived and defrauded, and will deprive and defraud, the Plaintiffs and all citizens of the State of Illinois of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

60. An actual controversy exists between the Plaintiffs and the Defendants.

WHEREFORE, Plaintiffs request a declaratory judgment in accordance with Section 2-701 of the Code of Civil Procedure against the Defendants, either jointly, severally or in the alternative as follows:

A. The Court declare illegal and tortious Defendants' use and operation of an Internet web site as an auction forum for the purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election and encouraging, soliciting and allowing individuals and corporations to "bid" on and buy such votes.

B. The Court declare that Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois not to violate the election laws of the State of Illinois and of the United States and that they are in breach of this duty.

C. The Court declare that Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois not to deprive them or defraud them of their rights and privileges under the Constitution and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process and they are in breach of this duty.

D. The Court declare that the Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois to cease and desist from using or operating the Internet web site known as "Voteauction.com" and to remove such web site from the Internet or, in the alternative, to modify the Internet web site known as "Voteauction.com" so as to remove any illegal content.

E. The Court declare that the Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois to cease and desist from using or operating any Internet web site by any name that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

F. The Court declare that anyone selling or attempting to sell his or her vote, and anyone buying or attempting to buy the votes of another is in violation of the election laws of the State of Illinois and of the United States as enumerated herein.

G. The Court declare that Defendants owe Plaintiffs their costs and attorneys' fees for this action.

H. The Court order such other relief that the Court may deem just.

COUNT II

INJUNCTIVE RELIEF

1-60. Plaintiffs re-allege and incorporate by reference the allegations contained in paragraphs 1 through 60 of Count I herein as their allegations 1 through 60 of Count II.

61. Unless injunctive relief is granted, Defendants will continue to violate the election laws of the State of Illinois and of the United States and to deprive Plaintiffs and all citizens of the State of Illinois of their rights and privileges under the Constitution of the United States and of the State of Illinois and the laws passed pursuant thereof to a free and equal election and to a fair and impartially conducted election process.

62. Unless injunctive relief is granted, Defendants' illegal and tortious conduct will allow the ballot box to become the receptacle of fraudulent votes, thus infecting the result of the Election with fraud.

63. Unless injunctive relief is granted, Defendants' illegal and tortious conduct may affect the results of the Election for President and Vice President of the United States as well as for other offices.

64. The Plaintiffs will suffer immediate and irreparable injury in fulfilling their statutory duties to provide for the orderly and lawful administration of this election unless Defendants' illegal and tortious conduct is enjoined forthwith. Plaintiffs Neal, Cowen and Petrone, as well as all citizens of the State of Illinois will, unless Defendants' conduct is enjoined forthwith, suffer irreparable injury to their rights as citizens of the State of Illinois to a free and fair election.

65. Given the nature of the injuries to result from Defendants' illegal and tortious conduct, neither Plaintiffs nor the citizens of the State of Illinois will have an adequate remedy at law in which to redress Defendants' conduct because the injuries suffered are of such a nature that damages may not be reasonably ascertained.

66. Absent immediate relief, Plaintiffs will, in fact, be denied meaningful relief because the right to vote in the Election will be rendered moot after the Election.

67. The threatened injury to the Plaintiffs and to the citizens of the State of Illinois will be immediate, certain and great if injunctive relief is denied while the loss or inconvenience to the Defendants (not being able to engage in an illegal enterprise) will be comparatively small and insignificant if injunctive relief is granted.

68. Plaintiffs have a reasonable likelihood of prevailing on the merits of this claim.

69. The granting of injunctive relief in this case will not have an injurious effect on the public and, in fact, will better serve the interests of the public than if not granted.

WHEREFORE, Plaintiffs request that the Court enter a temporary restraining order and preliminary and permanent injunctions in accordance with Sections 11-101 and 11-102 of the Code of Civil Procedure against Defendants as follows:

A. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating any Internet web site that encourages or allows residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election.

B. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using, operating, facilitating or accessing domain name "voteauction.com" and to remove such web site from the Internet completely or, in the alternative, to modify the Internet web site known as "voteauction.com" so as to remove any illegal content.

C. The Court enjoin Defendants and all those acting in concert with them from allowing or continuing registration of the Internet domain name "voteauction.com" or any other domain name offering substantially the same service as voteauction.com.

D. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating in the State of Illinois any Internet web site by any name in any manner that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

E. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately disclose to the proper election authorities the names and addresses of every individual in Illinois who has sold his or her vote or has offered to sell his or her vote through voteauction.com and the names and addresses of every individual and/or entity that has paid or has offered to pay for votes of Illinois residents through voteauction.com.

F. The Court enjoin the Defendants and all those acting in concert with them and order them to cease and desist from accepting from residents of the State of Illinois any registration or offer to sell votes or to buy votes at auction through voteauction.com and to modify their web site to indicate that all registrations or offers to sell votes from Illinois residents will be denied.

G. The Court order that Defendants shall within 10 days report to the Court on the

measures they have taken to implement this order.

H. The Court shall retain jurisdiction over this matter.

I. The Court order Defendants to pay Plaintiffs their costs and attorneys' fees for this action.

J. The Court order such other relief that the Court may deem just.

COUNT III

SEPARATE ACTION AT LAW

CLASS ACTION FOR DAMAGES FOR DEPRIVATION OF CONSTITUTIONAL RIGHTS (10 ILCS 5/29-17)

1-60. Plaintiffs Neal, Cowen and Petrone re-allege and incorporate by reference the allegations contained in paragraphs 1 through 60 of Count I herein as their allegations 1 through 60 of Count III.

61. Plaintiffs Neal, Cowen and Petrone, pursuant to Section 2-801 of the Code of Civil Procedure (735 ILCS 5/2-801), bring this action on their own behalf and on behalf of all citizens of the State of Illinois, except those who have offered to sell their votes and those who have bid on the votes being offered as alleged above (the "class"). The class is so numerous that joinder of all members is impractical; questions of law and fact are common to the class; adequate representation of claims of representative parties exists and a class action is an appropriate litigation procedure in terms of time, effort and expense and uniformity of decision.

62. Article 3, Section 3 of the Constitution of the State of Illinois (Art. 3, §3 Ill. Const.) guarantees Illinois citizens the right to "free and equal" elections. Under this provision, elections are free only when the voters are subjected to no intimidation or improper influence and when every voter is allowed to cast his or her own ballot as his or her own judgment and conscience dictate. When the ballot box becomes the receptacle of fraudulent votes, the freedom and equality of elections are destroyed.

63. Under Title 42, Section 1973gg-10 of the United States Code (42 U.S.C. §1973gg-10), federal law secures the right of voters in a State to have fair and impartially conducted elections.

64. Section 29-17 of The Election Code (10 ILCS 5/29-17) provides that "Any person who subjects, or causes to be subjected, a citizen of the State of Illinois or any other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution or laws of the United States or of the State of Illinois, relating to registration to vote, the conduct of elections, voting, or the nomination or election of candidates for public or political party office, shall be liable to the party injured or any person affected, in any action or proceeding for redress."

65. Under Section 29-17, Defendants and all those acting in concert with them, including those

Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs Neal, Cowen and Petrone and to each member of their class of their rights not to subject them to a deprivation of any rights or privileges secured under the Constitution and laws of the State of Illinois and of the United States, including those secured by Article 3, Section 3 of the Illinois Constitution and by 42 U.S.C. §1973gg-10 relating to voting, the conduct of election or the election of candidates for public office.

66. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have unlawfully subjected Plaintiffs Neal, Cowen and Petrone and each member of their class to the deprivation of their rights and privileges under Article 3, Section 3 of the Illinois Constitution to a free and equal election for the Election and Defendants have breached their duty to Plaintiffs and the class members.

67. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have unlawfully subjected Plaintiffs Neal, Cowen and Petrone and each member of their class to the deprivation of their right under 42 U.S.C. §1973gg-10 to a fair and impartially conducted election for the November 7, 2000 General Election and Defendants have breached their duty to Plaintiffs and the class members.

68. Plaintiffs Neal, Cowen and Petrone and each member of their class have suffered injuries due to Defendants' unlawful deprivation of Plaintiffs' and class members' constitutional and legal rights and Defendants' breach of duty toward Plaintiffs and the class members.

69. Defendants are, therefore, liable to Plaintiffs Neal, Cowen and Petrone and to each member of their class under Section 29-17 of The Election Code for the deprivation of their rights and privileges secured by the Constitution or laws of the United States and of the State of Illinois as enumerated above.

WHEREFORE, Plaintiffs request that the Court:

A. Order Defendants to pay class members their damages sustained due to the Defendants' deprivation of their constitutional and legal rights and privileges and Defendants' breach of duty.

B. Order Defendants to pay class members their costs and attorneys' fees for this action.

C. Order such other relief that the Court may deem just.

COUNT IV

SEPARATE ACTION AT LAW CLASS ACTION FOR DAMAGES FOR CONSPIRING TO ENCOURAGE ILLEGAL VOTING (10 ILCS 5/29-19)

1-60. Plaintiffs Neal, Cowen and Petrone re-allege and incorporate by reference the allegations contained in paragraphs 1 through 60 of Count I herein as their allegations 1 through 60 of Count IV.

61. Plaintiffs Neal, Cowen and Petrone, pursuant to Section 2-801 of the Code of Civil Procedure (735 ILCS 5/2-801), bring this action on their own behalf and on behalf of all citizens of the State of Illinois, except those who have offered to sell their votes and those who have bid on the votes being offered as alleged above (the "class"). The class is so numerous that joinder of all members is impractical; questions of law or fact are common to the class; adequate representation of claims of representative parties exists and a class action is an appropriate litigation procedure in terms of time, effort and expense and uniformity of decision.

62. Section 29-19 of The Election Code (10 ILCS 5/29-19) provides in part that "Whoever knowingly or willfully *** conspires with another individual for the purpose of encouraging *** illegal voting, or pays or offers to pay or accepts payment *** for voting shall be liable to the party injured or any other person affected, in an action or proceeding for redress."

63. Under Section 29-19, Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs Neal, Cowen and Petrone and to each member of their class not to conspire with others for the purpose of encouraging illegal voting.

64. Defendants, and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have knowingly and willfully conspired for the purpose of encouraging illegal voting.

65. Defendants, and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have by their unlawful conspiracy to encourage illegal voting breached their duty to Plaintiffs Neal, Cowen and Petrone and each member of their class and Plaintiffs Neal, Cowen and Petrone and each member of their class have suffered injuries as a result of said breach.

66. Defendants are, therefore, liable to Plaintiffs Neal, Cowen and Petrone and to each member of their class under Section 29-19 of The Election Code for conspiring to encourage illegal voting.

WHEREFORE, Plaintiffs request that the Court:

- A. Order Defendants to pay class members their damages for injuries sustained due to the Defendants' conspiracy to encourage illegal voting and Defendants' breach of duty.
- B. Order Defendants to pay class members their costs and attorneys' fees for this action.
- C. Order such other relief that the Court may deem just.

Motion

IN THE CIRCUIT COURT OF COOK COUNTY COUNTY DEPARTMENT, COUNTY DIVISION

BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO, LANGDON D.
NEAL, RICHARD S. COWEN and THERESA M. PETRONE,

Plaintiffs,

vs.

HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES
MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC.,

Defendants,

00 CE 031

**PLAINTIFFS' EMERGENCY MOTION FOR A TEMPORARY RESTRAINING
ORDER OR PRELIMINARY INJUNCTION**

NOW COMES the Board of Election Commissioners of the City of Chicago, langdon d. neal, richard a. cowen and THERESA M. PETRONE, Plaintiffs in the above-entitled cause, by their attorney, James M. Scanlon & Associates, and moves this Court to enter a temporary restraining order, without bond, pursuant to Section 11-101 of the Code of Civil Procedure (735 ILCS 5/11-101) or a preliminary injunction pursuant to Section 11-102 of the Code of Civil Procedure, notice having been given to the defendants, restraining and enjoining Defendants HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., and each them and their agents, employees, and all others acting in concert with them from using or operating an Internet web site known as "Voteauction.com" or any web site by any other name in any manner as a forum for conducting an "auction" for the purpose of encouraging, soliciting and allowing residents of the State of Illinois to sell their votes to be cast at the November 7, 2000 General Election and encouraging, soliciting or allowing individuals and corporations to "bid" on and buy such votes, all until further order of this Court.

More specifically, Plaintiffs move:

A. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating any Internet web site that encourages or allows residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election.

B. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using, operating, facilitating or accessing domain name "voteauction.com" and to remove such web site from the Internet completely or, in the alternative, to modify the Internet web site known as "voteauction.com" so as to remove any illegal content.

C. The Court enjoin Defendants and all those acting in concert with them from allowing or continuing registration of the Internet domain name "voteauction.com" or any other domain name offering substantially the same service as voteauction.com.

D. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating in the State of Illinois any Internet web site by any name in any manner that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

E. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately disclose to the proper election authorities the names and addresses of every individual in Illinois who has sold his or her vote or has offered to sell his or her vote through voteauction.com and the names and addresses of every individual and/or entity that has paid or has offered to pay for votes of Illinois residents through voteauction.com.

F. The Court enjoin the Defendants and all those acting in concert with them and order them to cease and desist from accepting from residents of the State of Illinois any registration or offer to sell votes or to buy votes at auction through voteauction.com and to modify their web site to indicate that all registrations or offers to sell votes from Illinois residents will be denied.

G. The Court order that Defendants shall within 10 days report to the Court on the measures they have taken to implement this order.

H. The Court shall retain jurisdiction over this matter.

I. The Court order Defendants to pay Plaintiffs their costs and attorneys' fees for this action.

J. The Court order such other relief that the Court may deem just.

In support of this motion, a copy of the Plaintiffs' verified Complaint for Declaratory Judgment, Injunction and Other Relief and exhibits thereto filed in this Court on October 16, 2000 is attached hereto and made a part of this motion.

Defendants.

MEMORANDUM OF LAW IN SUPPORT OF EMERGENCY MOTION FOR TEMPORARY RESTRAINING ORDER OR PRELIMINARY INJUNCTION

Introduction

Plaintiffs BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and THERESA M. PETRONE bring this action against the Defendants, HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., seeking declaratory judgment, injunctive relief and other legal and equitable remedies. Defendants either own, operate, maintain, service or support an Internet web site called "Voteauction.com." Voteauction.com is an "auction" site that encourages, solicits and allows voters in the United States and in the State of Illinois register to sell their votes to be cast at the November 7, 2000 General Election for President and Vice President of the United States. Voteauction.com also encourages, solicits and allows individuals or entities to "bid" on and buy these votes. Plaintiffs submit that Defendants, either jointly, severally or in the alternative are in violation of the election laws of the State of Illinois and the United States prohibiting the buying and selling of votes at an election, or the attempted buying and selling of votes at an election. These laws also prohibit anyone from soliciting others to buy or sell votes or from conspiring with others commit the offenses of buying or selling votes. At issue is whether Defendants should be allowed to knowingly and willfully ignore Federal and State laws designed to protect the ballot box from fraud and corruption.

BRIEF STATEMENT OF RELEVANT FACTS

In or about August of this year, defendant JAMES BAUMGARTNER, a resident of the State of New York, created and launched an Internet web site called "Voteauction.com." Voteauction.com encourages American voters to sell their votes for the November 7, 2000 General Election for President and Vice President to the highest bidder. The Voteauction.com web site states in part, "Now you can profit from your election capital by selling your vote to the highest bidder." See Complaint, ¶26, Exhibit A, 1. The web site solicits and allows individuals to register with Voteauction.com by going to an on-line computer screen, filling in the form on the screen provided

(including name, address and political affiliation), and then clicking the "sell" button on the left hand portion of the screen. (Complaint, ¶26, Exhibit A, 6-7)

Voteauction.com also solicits and allows individuals, corporations or others to "bid" on the votes being offered for sale by registering on-line using a computer screen registration form. Bidders can submit bids for a block of votes consisting of all the votes offered for sale in any particular state. The Voteauction.com web site provides that the starting bid for each state is \$100, with a minimum bid increase of \$50. The site states, "The winning bidder for each state will be able to choose who the group will vote for en masse." The site further states that, "The winning bidder will have to contact the voteauction.com voters in order to provide payment and for the voters to provide verification." (Complaint, ¶28, Exhibit A, 8-19)

According to the Voteauction.com web site, Voteauction.com is concentrating on just the U.S. Presidential election in the November 7, 2000 General Election, but Voteauction.com hopes that in future it will be able to "grow our business into every election market niche from Senatorial races to municipal water commissioner." (Complaint ¶32, Exhibit, 19)

As of October 12, 2000, the Voteauction.com web site claims that 1,131 Illinois residents (or about 7.5% of the total number of registrants throughout the United States) had registered on-line through Voteauction.com offering to sell their votes for the November 7, 2000 General Election to the highest bidder. (Complaint, ¶27, Exhibit A, 16) As of October 12, 2000, the Voteauction.com claims that the highest bid offered for the purchase of Illinois residents' votes for the November 7, 2000 General Election was \$14,000, equaling \$12.38 per vote. (Complaint, ¶29, Exhibit A, 16)

Articles posted on the Voteauction.com web site indicate that Defendant Baumgartner planned to have voters mail to him their absentee ballots to verify the selections they made for President and Vice President of the United States. He is reported as saying in August that potential vote sellers were being notified that the Voteauction "legal agreement," which was still being drafted, would be sent out at the end of the month. Baumgartner is also reported as saying that he was "considering a process in which the Voteauction participant fills out an absentee ballot and votes for whomever they want in every race but the presidency." "Whether that choice will be Bush, Gore, Nader, Buchanan, or someone else entirely is determined by the outcome of the online auction." "Then when the time comes, whoever wins the auction decides who this group is going to vote for," Baumgartner is quoted as saying, "So I tell those people you should vote for this person. Then they fill in the form, and then they send it to me. And I just verify that they're voting for the correct person." (Complaint, ¶30, Exhibit A, 34)

Sometime in August, Baumgartner purportedly sold the rights to Voteauction.com to Defendant Hans Bernhard, an Austrian businessman. Bernhard is reported to have said that his holding company would operate Voteauction.com outside of the United States to circumvent federal and state laws that forbid purchasing and buying ballots. (Complaint ¶53, Exhibit A, 29)

In an article appearing on The Lycos Network on September 6, 2000, a copy of which is posted on Voteauction.com's web site, an unidentified spokesman for Voteauction.com is reported to have said:

"Verification will now be the responsibility of the winning bidder. *** They can choose from a variety of methods for verification of the votes. They may have the voters send in their absentee ballots for verification, they may have the voters take photographs inside the voting booth, or they go to the honor system – that is the system that many vote-purchasing endeavors have used in the past. We have chosen to have the winning bidders responsible for the verification because it would not be feasible to have people send their absentee ballots all the way to Austria and have us send them back to America within an appropriate time frame."

(Complaint, ¶31, Exhibit A, 42-43)

The Voteauction.com web site claims that it will not receive any money from the auction. However, Bernhard has stated that "We bought the domain name and related business because we see this as a serious business venture in which we can make money." (Complaint, ¶33, Exhibit A, 19, 29)

On September 20 and again on October 5, the general counsel to the Illinois State Board of Elections, A.L. Zimmer, sent e-mails to Voteauction.com warning that the buying or selling of votes in Illinois is a Class 4 felony. (Complaint ¶52, Exhibit A, 107-108) In fact, there also federal laws that make the buying or selling of votes at any election involving candidates for federal office a criminal offense.

But nowhere on the Voteauction.com web site does it state or warn visitors to the site that the selling and buying of votes, or offering to buy or sell votes is illegal. Nor does the site warn that individuals selling or offering to sell their votes, and individuals buying or offering to buy votes may be committing a crime.

I. ILLINOIS JURISDICTION

Defendants are subject to the jurisdiction of the courts of the State of Illinois under Illinois' so-called "long-arm statute." Section 2-209 of the Illinois Code of Civil Procedure (10 ILCS 5/2-209) provides in relevant part:

(a) Any person, whether or not a citizen or resident of this State, who in person or through an agent does any of the acts hereinafter enumerated, thereby submits such person, and, if an individual, his or her personal representative, to the jurisdiction of the courts of this State as to any cause of action arising from the doing of any of such acts:

(1) The transaction of any business within this States;

(2) The commission of a tortious act within the State;

(7) The making or performance of any contract or promise substantially connected with this State.

(c) A court may also exercise jurisdiction on any other basis now or hereafter permitted by the Illinois Constitution and the Constitution of the United States.

Thus, the Illinois long-arm statute permits Illinois courts to exercise personal jurisdiction over defendants who engage in a variety of conduct in connection with the State and "on any other basis now or hereafter permitted by the Illinois Constitution and the Constitution of the United States." The long-arm statute of Illinois has been characterized as "one which provides jurisdiction over nonresidents to the fullest extent permitted by due process concepts." *Connelly v. Uniroyal, Inc.*, 55 Ill.App.3d 530, 536, 370 N.E.2d 1189 (First Dist. 1977). "An Illinois nonresident may be sued in Illinois if (1) jurisdiction is authorized under the Illinois long-arm statute, and (2) the minimum contacts required by due process are present." *FMC Corp. v. Varonos*, 892 F.2d 1308, 1310 (7th Cir. 1990). "The Illinois Constitution requires the court to inquire whether it is 'fair, just and reasonable to require a nonresident defendant to defend an action in Illinois, considering the quality and nature of the defendant's acts which occur in Illinois, or which affect interests located in Illinois'." *Robbins v. Ellwood*, 141 Ill.2d 249, 565 N.E.2d 1302, 1316 (1990). While Illinois authorizes courts to exercise personal jurisdiction under the long-arm statute, they must do so within the limits of federal constitutional standards. Federal due process requires minimum contacts with the forum state "such that the maintenance of the suit does not offend traditional notions of fair play and substantial justice." *Transcraft Corporation v. Doonan Trailer Corp.*, 1997 WL 733905, *2 (N.D. Ill. 1997), quoting *International Shoe Co. v. Washington*, 326 U.S. 310, 316, 66 S.Ct. 154, 90 L.Ed. 95 (1945). If the contacts between the defendants and Illinois are sufficient to satisfy the requirements of due process, then the requirements of both the Illinois long-arm statute and the United States Constitution have been met, and no other inquiry is needed. *Scherr v. Abrahams*, 1998 WL 299678 (N.D.Ill.) "Minimum contacts" have been defined as "some act by which the defendant purposely avails itself of the privilege of conducting activities within the forum state, thus invoking the benefits and protection of its laws." *Transcraft*, supra, 1997 WL 733905, *2, citing *Burger King Corp. v. Rudzewicz*, 471 U.S. 462, 475, 105 S.Ct. 2174, 85 L.Ed.2d 528 (1985). "Put another way, the federal due process standard requires courts to consider whether the defendant's purposeful contacts with the forum state were such that the defendant could reasonably expect the courts of that state to assert jurisdiction." *Id.* "The definition of 'minimum contacts,' however, depends on the type of personal jurisdiction asserted." *Pheasant Run, Inc. v. Moyse*, 1999 WL 58562, *2 (N.D. Ill.)

"General jurisdiction permits a court to exercise personal jurisdiction over a non-resident defendant for non-forum related activities when the defendant has engaged in 'systematic and continuous' activities in the forum state." *Zippo Manufacturing Company v. Zippo Dot Com, Inc.*, 952 F. Supp. 1119, 1122. "In the absence of general jurisdiction, specific jurisdiction permits a court to exercise personal jurisdiction over non-resident defendant for forum-related activities where the relationship between the defendant and the forum falls within the 'minimum contacts' framework of *International Shoe Co. v. Washington* [citation]." *Id.*

In the present case, this Court has specific jurisdiction over these Defendants. Defendants either own, operate, maintain, service or support the Internet web site called "Voteauction.com," which is the vehicle by and through which these Defendants have conducted illegal and tortious activity.

Defendants have submitted to the jurisdiction of Illinois courts on four grounds. First, they have transacted business within the State of Illinois for purposes of Section 2-209(a)(1) of the long-arm statute. Second, Defendants have committed tortious acts within the State of Illinois under Section 2-209(a)(2) of the statute. Third, Defendants have made and/or performed a contract or promise substantially connected with the State of Illinois under Section 2-209(a)(7) of the statute. Fourth, because the Court may also exercise jurisdiction on any other basis permitted by the Illinois Constitution, jurisdiction over the Defendants is established by their conspiracy with Illinois residents to commit tortious acts by their knowing, willful and continuing violations of the election laws of the State of Illinois and of the United States of America. "Specific jurisdiction over a non-resident defendant who has not consented to suit in a forum state will be shown where 'the defendant has purposely directed his activities at residents of the forum and the litigation results from alleged injuries that arise out of or relate to those activities'." *Vitullo v. Velocity Powerboats, Inc.*, 1998 WL 246152, *3 (N.D. Ill. 1998).

Transaction of business within the State of Illinois

Over the last several years, "a jurisprudence of 'web' personal jurisdiction has begun to develop" with regard to whether Internet web operators have transacted business in a forum state. *Transcraft Corporation v. Doonan Trailer Corp.*, 1997 WL 733905, *8 (N.D. Ill.). The cases have generally followed a "sliding scale" analysis first articulated in *Zippo Manufacturing Co. v Zippo Dot Com Inc.*, 952 F.Supp. 1119 (W.D. Pa. 1996) that divided "web" cases into three categories. Federal courts interpreting Illinois' long-arm statute have adopted the Zippo "sliding scale" framework. See, *Vitullo v. Velocity Powerboats, Inc.*, 1998 WL 246152 (N.D. Ill. 1998). The first category includes cases where defendants actively do business on the Internet. In those instances, personal jurisdiction is found because the defendants "enter into contracts with residents of a foreign jurisdiction that involve knowing and repeated transmission of computer files over the Internet." *Zippo*, 952 F.Supp. 1119, 1124. The second category deals with situations "where a user can exchange information with the host computer. In these cases, the exercise of jurisdiction is determined by examining the level of interactivity and commercial nature of the exchange of information that occurs on the Web site." *Id.* The third category involves passive Web sites; i.e., sites that merely provide information or advertisements to users. Courts have not exercised jurisdiction in this category because to do so "would mean that there would be a nationwide (indeed, worldwide) personal jurisdiction over anyone and everyone who establishes an Internet Web site. Such Nationwide jurisdiction is not consistent with traditional personal jurisdiction case law -." *Transcraft Corporation*, supra, 1997 WL 733905 *8, quoting *Hearst Corp. v. Goldberger*, 1997 WL 97097, *1 (S.D.N.Y. 1997).

"By considering the actual nature of the contacts between a defendant and Illinois via the Internet, the court avoids the risk of 'eviscerat[ing] the personal jurisdiction as it currently exists'." *Vitullo*, supra, 1998 WL 246152, *4. *Vitullo* observed that no court has ever held that an Internet advertisement alone is sufficient to confer jurisdiction - there had to be "something more" to indicate that the defendant "purposely (albeit electronically) directed his activity in a substantial way to the forum state." 1998 WL 246152, *4-5. *Vitullo* further observed that "something more" could be the specific intent to cause harm to a forum State's citizen, or for example, active use of the Internet to run a gambling game with contestants from the forum State. 1998 WL 246152, *5. For example, jurisdiction has been found in the following cases.

In *Hasbro Inc. v. Clue Computing Inc.*, 994 F. Supp. 34 (D. Mass. 1997), the court found jurisdiction where the defendants' web site encouraged and enabled anyone, including residents of the forum state, to send e-mail to the company.

In *Park Inns International v. Pacific Plaza Hotels Inc.*, 5 F.Supp. 2d 762 (D. Ariz. 1998), the court found jurisdiction where an interactive web site accepted hotel reservations from residents of the forum state.

In *American Network Inc. v. Access America/Connect Atlanta Inc.*, 975 F. Supp. 494 (S.D.N.Y. 1997), the court found jurisdiction where purposeful availment was found based on the defendant's sale of subscriptions for Internet services to residents of the forum state, and contracts were executed with those residents through its web site.

In *Digital Equipment Corp. v. Alta Vista Technology Inc.*, 960 F.Supp. 456 (D. Mass. 1997), jurisdiction was found where the defendant had purposely availed itself of the benefits of the forum by entering into an agreement with the residents of the forum state and thereafter sold products to forum residents on at least three occasions through its web site.

In *GTE New Media Services Inc. v. Ameritech Corp.*, 21 F.Supp.2d 27 (D.D.C. 1998), the court found jurisdiction where defendant's national "Yellow Pages" directory services were highly interactive and the quality and nature of the contacts were significant enough to allow the assertion of personal jurisdiction. The defendant actually derived substantial ad revenues from the sites from residents of the forum accessing and using the site.

In *Panavision International v. Toeppen*, 141 F.3d 1316 (9th Cir. 1998), jurisdiction was found where the defendant knowingly registered established trademark names as domain names for its web sites, then attempted to sell the rights to the domain name to the holder of the trademark.

In *State of Minnesota v. Granite Gate Resorts Inc.*, 568 N.W.2d 715 (Minn. 1997), the Minnesota appellate court held that defendants were subject to personal jurisdiction in the state based on their actions of advertising on the Internet a forthcoming on-line gambling service and developing from the Internet a mailing list that included one or more Minnesota residents. Gambling was illegal in Minnesota, but defendant's web site failed to advise Minnesota residents of that fact in violation of the state's consumer protection laws. Computers located throughout the United States, including Minnesota, accessed defendant's web sites and during a two-week period at least 248 Minnesota computers accessed and received transmissions from defendant's web site. The court found that advertising in the forum state, or establishing channels for providing regular advice to customers in the forum state indicates the defendant's intent to serve the market in that state. The Minnesota court concluded that defendants who know their message will be broadcast in that state are subject to suit there. The court also relied on its strong interests in enforcing its consumer protection statutes and regulating gambling.

In *Vitullo*, supra, 1998 WL 246152, the court found jurisdiction over out of state defendant where its web site solicited Illinois residents to attend a local boat show within Illinois. The web site provided a

hyperlink with information about the show. Therefore, the court found the web site's targeting of local residents was that "something more" that was sufficient to assert specific jurisdiction.

In *Thompson v. Handa-Lopez Inc.*, 998 F. Supp. 738 (W.D. Texas 1998), the court held that defendant California company operating an Internet casino game had sufficient minimum contacts with Texas to permit specific jurisdiction over defendant in Texas. Defendant's web site did more than advertise and maintain a toll free number - it continuously interacted with Texas casino players, entering into contracts with them as they played the various games. The court also held that Texas clearly had a strong interest in protecting its citizens by adjudicating disputes involving alleged breach of contract, fraud, and violations of the state's deceptive trade practices act by an Internet casino on Texas residents.

In *International Star Registry of Illinois v. Bowman-Haight Ventures Inc.*, 1999 WL 300285 (N.D. Ill. 1999), the court found that defendant Virginia corporation submitted to jurisdiction in Illinois under the state's long-arm statute where defendant's web site invited inquiries from potential customers in Illinois via electronic mail and at least 22 Illinois residents purchased "star" registrations over the Internet. The fact that defendant secured an economic benefit from Internet users in Illinois that purchased defendant's goods over the Internet signals that the defendant purposely availed itself of the privilege of conducting activities within Illinois.

In the case at bar, the Internet web site address, or "URL," through which *Voteaction.com* can be accessed is "<http://www.vote-auction.com/>." *Voteaction.com* can be, and has been, accessed by residents of the State of Illinois using computers located in the State of Illinois. Indeed, *Voteaction.com*'s own web site claims that as of October 12, 2000, as many as 1,131 Illinois residents (or about 7.5% of all residents nationwide) had registered with *Voteaction.com*, using its on-line registration form, for the purpose of selling their votes to the highest bidder. The lead paragraph on the first page of *Voteaction.com*'s web site states:

"Are you planning on staying home this election day? Now you can profit from your election capital by selling your vote to the highest bidder. To register with *voteaction.com*, click on the 'sell' button on the left hand portion of your screen."

There are three hyperlinked boxes appearing to the left of this message: (1) "SELL, register to sell your vote"; (2) "BID, register to bid on a voting block"; and (3) "CHECK the current price of a voting block." (Complaint, Exhibit A, 1) *Voteaction.com* then provides an on-line registration form that is to be completed by the vote seller. The vote seller then hits the "Submit" button and the registration is transmitted to *Voteaction.com* via the Internet. (Complaint, Exhibit A, 6-7) The site then advises vote sellers that, "When you register on this page, you will also be registered for the voters email list which will contain important updates for *voteaction* voters." (Complaint, Exhibit A, 6) According to reports posted on the *Voteaction.com* web site, vote sellers were to be notified that a "Voteaction legal agreement" was being drafted and would be sent out to sellers at the end of August. (Complaint ¶30, Exhibit A, 34) Upon information and belief, all or substantially all 1,131 Illinois residents who, according to *Voteaction.com*, have registered with *Voteaction.com* to sell their votes and to

register for the voters email list did so while located in the State of Illinois and using computers located in Illinois.

A similar procedure is available for individuals or corporations who wish to register to bid for and buy votes. (Complaint, Exhibit A, 8-15)

These facts demonstrate that Voteauction.com falls within the first category of web cases described under the Zippo "sliding scale" analysis: Defendants have clearly transacted business in Illinois over the Internet. Defendants have accepted over 1,100 on-line registrations from Illinois residents agreeing to sell their votes at auction and have entered into or will enter into agreements with these Illinois residents for the purpose of selling such votes at auction. Even if Defendants have not accepted money from these Illinois residents, Defendants have secured a business advantage by utilizing these residents' votes in their auction scheme. Clearly, these actions constitute the transaction of business within the State of Illinois by Defendants for purposes of Section 2-209(a)(1) of the Code of Civil Procedure, thus subjecting Defendants to the jurisdiction of Illinois courts.

Commission of Tortious Acts within the State of Illinois

"Under the Illinois long-arm statute, torts that are committed in Illinois authorize the exercise of jurisdiction here." *International Star Registry of Illinois v. Bowman-Haight Ventures Inc.*, 1999 WL 300285, *6 (N.D. Ill. 1999) See also, *FMC Corporation v. Varonas*, 892 F.2d 1308 (7th Cir. 1990) The word "tortious," when used by Illinois' long-arm statute, "is not restricted to the technical definition of a tort, but includes any act committed in this State which involves a breach of duty to another and makes the one committing the act liable to respondent in damages." *Braband v. Beech Aircraft Corporation*, 51 Ill.App.3d 296, 300, 367 N.E.2d 118 (First Dist. 1977), affirmed 72 Ill.2d 548, 382 N.E.2d 252 (1978), certiorari denied 442 U.S. 928, 99 S.Ct. 2857 (1979) "A tort to be an actionable wrong, requires a duty, a breach of the duty and an injury." *Braband*, 51 Ill.App.3d at 301.

In the case at bar, Defendants owe a duty to the citizens of Illinois not to violate Federal and State election laws designed to protect the integrity of the voting process. Certainly Defendants owe a duty to Plaintiffs and to the citizens of the State of Illinois under Section 29-17 of The Election Code not to cause them to be deprived of any right, privilege or immunity under the Constitution and laws of the State of Illinois and of the United States pertaining to the conduct of elections, voting, or the election of candidates for public office. See, Complaint, Count III, ¶¶64-65. Defendants also owe a duty to Plaintiffs and to the citizens of the State of Illinois under Section 29-19 of The Election Code not to conspire to encourage illegal voting. See Complaint, Count IV, ¶¶62-63. Both of these statutes create a duty the breach of which makes the offender liable to the persons injured.

Defendants' conduct violates the election laws of the State of Illinois and of the United States and has caused Plaintiffs and the citizens of the State of Illinois to be deprived of their rights and privileges to a free and equal election guaranteed under Article 3, Section 3 of the Illinois Constitution (Complaint, Count III, ¶62) and a fair and impartially conducted election (Complaint, Count III, ¶63). Defendants have, therefore, breached their duties to Plaintiffs and to the citizens of the State of Illinois and Defendants are, therefore, liable for their breach of duty.

Here, the injury occurs in Illinois, for it is here where the illegal and fraudulent ballots will be received, processed, counted and canvassed and it is here where the results of the illegal voting will be felt. (Complaint, ¶¶18-23) Tortious acts occur where the injury is sustained. *Gray v. American Radiator & Standard Sanitary Corp.*, 22 Ill.2d 432, 176 N.E.2d 761, 762-63 (1961) ("[T]he place of a wrong is where the last event takes place which is necessary to render the actor liable.") Defendants' deliberate and on-going communications via the Internet to residents in Illinois in furtherance of their scheme to auction votes and thereby defraud the people of Illinois were clearly made to affect Illinois interests. In so doing, they have subjected themselves to jurisdiction under Section 2-209(a)(2) of the long-arm statute for tortious activities committed in Illinois.

The fact that the Defendants have not had a physical presence in Illinois does not defeat jurisdiction. See, e.g., *FMC Corporation v. Varanos*, 892 F.2d 1308 (7th Cir. 1990) (telexes and telecopied communications from defendant in Greece to plaintiffs in Illinois, coupled with an intent to commit fraud and affect interests in Illinois, subjected defendant to long-arm jurisdiction). The phrase "commission of a tortious act" as employed in the long-arm statute applies not only to an injury which occurs in Illinois, but also to all elements and conduct which significantly relate to or have significant causal connection with the injury suffered. *Connelly v. Uniroyal Inc.*, 55 Ill.App.3d 530, 534, 370 N.E.2d 1189, 1192 (First Dist. 1977) And the fact that the illegal and fraudulent ballots have not yet been deposited into the ballot box in Illinois does not deprive the court of jurisdiction. "For the purpose of the state long-arm statute a 'tortious act' may be committed before a cause of action accrues and the statute of limitations commences to run." *Id.* Thus, "Nothing *** requires that the words 'tortious act' as used in the long-arm statute be construed to require an injury to occur in Illinois before the courts of this state may acquire jurisdiction." *Id.*

Defendants' present, past and future violations of Federal and State election laws and their continuing breach of duty to Plaintiffs' and Illinois citizens in depriving them of a fair, free and equal election constitute the commission of tortious acts within Illinois so as to subject them to jurisdiction of Illinois courts under 735 ILCS 5/2-209(a)(2)

Making or performance of a contract or promise substantially connected with the State of Illinois

Illinois courts have held that despite the lack of physical presence within Illinois the long-arm statute and due process permit Illinois courts to gain jurisdiction over a person or corporation who enters into a contract knowing that it will be performed in Illinois. *Biltmoor Moving and Storage Company v. Shell Oil Company*, 606 F.2d 202 (7th Cir. 1979) Here, the Defendants have induced over 1,100 Illinois residents to register on-line through the Defendants' web site to sell their votes for the November 7, 2000 General Election. *Voteauction.com* then arranges to have other individuals bid on and buy these votes. *Voteauction.com*'s web site indicates that those persons who register with *Voteauction.com* to sell their vote will be sent *Voteauction.com*'s "legal agreement." This "legal agreement" constitutes the making of a contract or promise substantially connected with the State of Illinois. Even without a formal "legal agreement" the conduct of the Defendants, the sellers (those Illinois residents who offer their votes for sale) and the bidders constitute a promise to sell, and a promise to buy such votes. Defendants have promised both sellers and buyers to act as the auctioneer

or facilitator of the illegal sale and purchase of votes. The performance by any party of the contract or promise would be substantially connected with the State of Illinois in that the votes of Illinois residents would be sold and bought illegally. Under the laws of Illinois, these ballots, unless detected, will be cast, counted and canvassed in Illinois. Defendants' conduct, and the conduct of their co-conspirators, is intended by them to affect the interests of Illinois by infecting Illinois ballot boxes with fraudulent votes. Accordingly, Defendants have, by operation of Section 2-209(a)(7) of the Code of Civil Procedure, subjected themselves to the jurisdiction of Illinois courts.

Conspiracy Theory

In 735 ILCS 5/2-209(c), the Illinois long-arm statute also has a "catch-all" provision which allows Illinois state courts to assert personal jurisdiction to the maximum extent to assert personal jurisdiction by the Illinois and United States Constitutions. *United Phosphorus Ltd. v. Angus Chemical Company*, 43 F.Supp.2d 904 (N.D. Ill. 1999). "Moreover, if jurisdiction exists under the 'catch-all' provision, a defendant does not have to perform any of the enumerated acts set forth in the remainder of the statute." *United Phosphorus*, 43 F.Supp.2d at 911-912.

Defendants are subject to Illinois jurisdiction under the so-called "conspiracy theory." "Under this theory, a court may assert jurisdiction over all of the co-conspirators, both resident and non-resident, based on their involvement in a conspiracy which occurred within the forum." *United Phosphorus*, 43 F.Supp.2d at 912. "To satisfy this standard, plaintiffs must: (1) make a prima facie factual showing of a conspiracy (i.e., point to evidence showing the existence of the conspiracy and the defendant's knowing participation in that conspiracy); (2) allege specific facts warranting the inference that the defendant was a member of the conspiracy; and (3) show that the defendant's co-conspirator committed a tortious act pursuant to the conspiracy in the forum." *Id.* "The evidence relating to the conspiracy may be direct or circumstantial." *Id.*

"[I]f the plaintiff can satisfy the three requirements necessary under the conspiracy theory of jurisdiction, even a foreign defendant with no real contact with the forum state and no direct business relations tied to the forum state would be subject to the court's jurisdiction." *Id.*

Here, the Plaintiffs have made a prima facie factual showing in their verified Complaint of the existence of a conspiracy among Defendants and between the Defendants and over 1,100 Illinois residents to sell and buy votes in violation of the election laws of the State of Illinois and of the United States. "[T]o be liable as a co-conspirator you must be a voluntary participant in a common venture ... you need not have agreed on the details of the conspiratorial scheme or even know who the other conspirators are. It is enough if you understand the general objectives of the scheme, accept them, and agree, either explicitly or implicitly, to do your part to further them." *United Phosphorus*, 43 F.Supp.2d at 914. By and through *Voteauction.com*, Defendants have solicited and allowed Illinois residents to register to sell their votes at auction, and Illinois residents have registered with Defendants through *Voteaction.com* for the purpose of selling their votes at auction. These acts by Defendants and these Illinois residents constitute a conspiracy between them to illegally sell votes and to arrange for the purchase of such votes through auction.

As to the second prong of the conspiracy theory test, Plaintiffs' verified Complaint makes a specific factual showing that the Defendants were members of (and, indeed, instigators of) the conspiracy to illegally sell and buy Illinois votes.

As regards the final element necessary to satisfy the conspiracy theory of jurisdiction, as alleged in the verified Complaint, Defendants and these Illinois residents have knowingly and intentionally committed violations of the election laws of this State and of the United States and have breached a duty to Plaintiffs and to all Illinois citizens not to subject them to the deprivation of the rights and privileges under the Constitution and laws of the State of Illinois and of the United States to fair, free and equal elections. Both Defendants and Defendants' co-conspirators (those Illinois residents who have sold or agreed to sell their votes) have committed tortious acts within the State of Illinois.

Because Plaintiff's Complaint makes a sufficient factual showing that there is a conspiracy, that Defendants are members of the conspiracy, and that Defendants' co-conspirators have committed and will commit tortious acts in Illinois pursuant to the conspiracy, Defendants are therefore subject to the jurisdiction of Illinois courts pursuant to the "conspiracy theory" under Section 2-209(c) of Illinois' long-arm statute.

II. DEFENDANTS' CONDUCT IS ILLEGAL AND TORTIOUS

As noted earlier, the laws of the State of Illinois and of the United States prohibit the selling and buying of votes. Section 29-1 of The Election Code (10 ILCS 5/29-1) provides, "Any person who knowingly gives, lends or promises to give or lend any money or other valuable consideration to any other person to influence such other person to vote *** or to influence such other person to vote for or against any candidate or public question to be voted upon at any election shall be guilty of a Class 4 felony." Thus, vote buying is illegal under Illinois law and anyone giving or promising to give money to an Illinois resident to influence him or her to vote or to vote for or against any candidate to be voted upon at the November 7, 2000 General Election is guilty of a Class 4 felony which is punishable by imprisonment for 1 to 3 years.

Section 29-3 of The Election Code (10 ILCS 5/29-3) prohibits vote selling, providing, "Any person who votes for or against any candidate or public question in consideration of any gift or loan of money or for any other valuable consideration *** shall be guilty of a Class 4 felony." Any person in Illinois who has attempted to sell his or her vote at the November 7, 2000 General Election by registering with Voteauction.com to sell his or her vote, and any person who has attempted to buy the votes of Illinois residents for the November 7, 2000 General Election by registering with Voteauction.com to bid on such votes, also commits a Class 4 felony. See 10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-4

Defendants, by and through Voteauction.com, are guilty of soliciting others to sell or buy votes in Illinois and have committed a Class 4 felony. See 10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-1. They are also guilty of conspiring with others to illegally sell and buy votes in Illinois. (ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-2)

Illinois law also prohibits anyone from marking or tampering with an absentee ballot of another person or from taking an absentee ballot of another person so that an opportunity for fraudulent marking or tampering is created. (10 ILCS 5/19-6, 5/29-20) Thus, Defendants' scheme to require those offering to sell their votes to submit their absentee ballots to Defendants so as to verify their voting selections violates Illinois law and violates the secrecy of the ballot and Defendants are guilty of conspiring to commit absentee vote fraud, of soliciting others to commit absentee vote fraud, and of attempted absentee vote fraud. See 10 ILCS 5/29-20.

Because the November 7, 2000 General Election is a "mixed election," i.e., there are also Federal offices to be elected, there are a number of Federal election statutes that also apply to Defendants' conduct. For example, Title 18, Section 597 of the United States Code (18 U.S.C. §597) makes it a crime to pay or offer to pay a person to vote or withhold his vote, or to vote for or against any candidate. It is also a crime to solicit, accept, or receive any payment in consideration for voting or withholding from voting. A similar prohibition is also found in Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)). Thus, any person in Illinois who has offered to sell his or her vote at the November 7, 2000 General Election by registering with Voteauction.com to sell his or her vote, and any person who has offered to buy the votes of Illinois residents for the November 7, 2000 General Election by registering with Voteauction.com to bid on such votes, has committed a violation of Federal law.

Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)) also provides that for Federal elections, "Whoever knowingly or willfully *** conspires with another individual for the purpose of *** illegal voting *** shall be fined not more than \$10,000 or imprisoned not more than five years, or both." Thus, Defendants and those Illinois residents who have agreed to sell their votes have committed a violation of Federal law in that they have conspired for the purpose of illegal voting.

There are also provisions in Federal and Illinois law that secure for Illinois residents the right to have fair, free and equal elections. Title 42, Section 1973gg10 of the United States Code (42 U.S.C. §1973gg-10) makes it a crime in any Federal election for a person to knowingly and willfully deprive, defraud, or attempt to deprive or defraud the residents of a State of a fair and impartially conducted election process by procuring or casting ballots that are known by the person to be materially false, fictitious, or fraudulent under the laws of the State in which the election is held. And Article 3, Section 3 of the Constitution of the State of Illinois (Art. 3, §3 Ill. Const.) guarantees Illinois citizens the right to "free and equal" elections. Under this provision, elections are free only when the voters are subjected to no intimidation or improper influence and when every voter is allowed to cast his or her own ballot as his or her own judgment and conscience dictate. *People v. Hoffman*, 116 Ill. 587, 597, 5 N.E. 596, 599 (1886). When the ballot box becomes the receptacle of fraudulent votes, the freedom and equality of elections are destroyed. Defendants' conduct by and through Voteauction.com violates the Plaintiffs' right and the right of all Illinois citizens to free and equal elections. *Emery v. Hennessy*, 331 Ill. 296, 300, 162 N.E. 835, 837 (1928).

There can be no dispute that Defendants and those Illinois residents who have agreed to sell their votes (and those, if any, who have agreed to buy votes) have knowingly and willfully violated the election laws of this State and of the United States. They have conspired with one another and have acted in concert with one another to buy and sell votes in violation of the express prohibitions of the

statutes.

Defendants' conduct is also tortious. Section 29-17 of The Election Code (10 ILCS 5/29-17) provides that "Any person who subjects, or causes to be subjected, a citizen of the State of Illinois or any other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution or laws of the United States or of the State of Illinois, relating to registration to vote, the conduct of elections, voting, or the nomination or election of candidates for public or political party office, shall be liable to the party injured or any person affected, in any action or proceeding for redress." Thus, Section 29-17 imposes a duty not to subject Illinois citizens to any deprivation of any right or privilege they have relating to voting, the conduct of elections, and the election of candidates for public office and makes any person breaching that duty liable to those who have been injured by the breach.

Defendants also have a duty under Section 29-19 of The Election Code (10 ILCS 5/29-19) not to conspire with another for the purpose of encouraging illegal voting. If they do so, they shall be liable to the party injured or any other person affected. Defendants, individually and in concert with others, have knowingly and willfully conspired for the purpose of encouraging illegal voting.

Without question, Defendants have breached their duty to Plaintiffs and to Illinois citizens by (1) unlawfully subjecting them to the deprivation of their rights under Article 3, Section 3 of the Illinois Constitution to a free and equal election for the November 7, 2000 General Election and of their right under federal law to a fair and impartially conducted election and (2) conspiring to encourage illegal voting. This constitutes tortious conduct sufficient to subject Defendants to the jurisdiction of the courts of the State of Illinois. This conduct also makes Defendants liable to Plaintiffs and to all Illinois citizens for damages for the injuries they have sustained.

III. INJUNCTIVE RELIEF

For purposes of their motion for a temporary restraining order or preliminary injunction, Plaintiffs have adopted and incorporated by reference their verified Complaint, which makes specific factual allegations showing the Plaintiffs are entitled to injunctive relief and states a prima facie cause of action.

Plaintiffs have demonstrated a reasonable likelihood of prevailing on the merits of this claim. However, to be entitled to injunctive relief, the Plaintiffs need only raise a fair question as to the existence of the right to an injunction leading the court to believe that the plaintiff would be entitled to the relief prayed for. *Lawter Intern Inc. v. Carroll*, 116 Ill.App.3d 717, 451 N.E.2d 1338 (First Dist. 1983).

Unless injunctive relief is granted, Defendants will continue to violate the election laws of the State of Illinois and of the United States and deprive the Plaintiffs and all citizens of the State of Illinois their rights and privileges under the Constitution of the United States and the State of Illinois and the laws passed pursuant thereof to a free and equal election. Defendants' illegal conduct will allow the ballot box to become the receptacle of fraudulent votes, thus infecting the result of the November 7,

2000 General Election, including the election for President and Vice President of the United States. This Court has the power to enjoin conduct that is criminal in nature. See, e.g., *City of Chicago v. Cecola*, 75 Ill.2d 423, 389 N.E.2d 526 (1979); *People v. Boston*, 92 Ill.App.3d 962, 416 N.E.2d 333 (Fourth Dist. 1981)

This matter presents situation of great necessity and extreme urgency. The Board and its three commissioners will suffer immediate and irreparable injury in fulfilling their statutory duties to provide for the orderly and lawful administration of this election unless Defendants' unlawful conduct is remedied forthwith. In addition, the three commissioners, as voters intending to vote at the November 7, 2000 General Election, and all citizens of this State will be deprived of their right under the Constitution and laws of the State of Illinois and of the United States to a fair, free and equal election.

Given the nature of these injuries to result from Defendants' unlawful conduct, neither Plaintiffs nor the citizens of the State of Illinois will have an adequate remedy at law in which to redress Defendants' unlawful conduct. Absent immediate relief, Plaintiffs and all voters will, in fact, be denied meaningful relief because the right to vote in this election will be rendered moot after the November 7, 2000 General Election and any remedy at law may be difficult to ascertain.

The threatened injury to the Plaintiffs and to the citizens of the State of Illinois will be immediate, certain and great if injunctive relief is denied while the loss or inconvenience to the Defendants will be comparatively small and insignificant if injunctive relief is granted.

The granting of injunctive relief in this case will not have an injurious effect on the public; indeed, the public interest demands that the Defendants and all those acting in concert with them be enjoined from continuing their illegal scheme.

Respectfully submitted,

BOARD OF ELECTION COMMISSIONERS

FOR THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and THERESA M. PETRONE, Plaintiffs

Preliminary Injunction Order

IN THE CIRCUIT COURT OF COOK COUNTY COUNTY DEPARTMENT, COUNTY DIVISION

Board of Election Commissioners of the City of Chicago, LANGDON D. NEAL, RICHARD A. COWEN, and THERESA M. PETRONE,

Plaintiffs,

vs.

HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC.,

Defendants.

00 CE 031

PRELIMINARY INJUNCTION ORDER

This matter coming before the Court upon Plaintiffs' Emergency Motion for a Temporary Restraining Order or Preliminary Injunction pursuant to Sections 2-701, 11-101 and 11-102 of the Code of Civil Procedure (735 ILCS 5/2-701, 5/11-101 and 5/11-102), seek declaratory judgment, injunctive and other relief against said Defendants either jointly, severally or in the alternative, and upon Plaintiffs' verified Complaint for Declaratory Judgment, Injunction and other relief filed against Defendants HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., and the Court having reviewed and considered the allegations in the verified complaint and exhibits thereto, as well as evidence presented at the hearing on this Motion, and having heard and considered oral argument, the Court finds as follows:

1. This Court has subject matter jurisdiction over this action.
2. This Court has personal jurisdiction over all of the parties in this action.
3. Venue is proper in Cook County.

4. Plaintiffs BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and THERESA M. PETRONE, having standing to bring this action.

5. Plaintiffs have demonstrated a likelihood of success on the merits and the proofs, once submitted would likely show that:

A. Defendants James Baumgartner, Hans Bernhard, Luzius Barnhard, Oskar Obereder, and Christoff Johannes Mutter, and those acting in concert with them, have violated the election laws of the State of Illinois and of the United States by using and operating an Internet web site known as "voteauction.com" as an auction forum for the purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election and encouraging, soliciting and allowing individuals and corporations to "bid" on and buy such votes.

B. These Defendants' continued use and operation of the Internet web site known as Voteauction.com as an auction forum for purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the Election and encouraging, soliciting and allowing individuals and corporations to "bid" on or buy such votes constitutes knowing and willful violations of the election laws of the State of Illinois and of the Unites States that will result in illegal and fraudulent voting at the Election if not prevented.

C. These Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to violate the election laws of the State of Illinois and of the United States.

D. These Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to deprive them or defraud them of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

E. These Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have deprived and defrauded, and will continue to deprive and defraud if not enjoined, the Plaintiffs and all citizens of the State of Illinois of their rights and privileges under the Constitutions and

laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

F. That anyone selling or attempting to sell his or her vote, and anyone buying or attempting to buy the votes of another is in violation of the election laws of the State of Illinois and of the United States as enumerated herein.

6. Plaintiffs possess certain and clearly demonstrated rights which need protection.

7. Plaintiffs will suffer irreparable harm without protection of an injunction.

8. There is no adequate remedy at law to compensate for Plaintiffs' injuries.

9. In the absence of injunctive relief, the Plaintiffs would suffer greater harm without an injunction than Defendants will suffer if it is issued.

10. Defendants have been notice of the Plaintiffs' Emergency Motion for a Temporary Restraining Order.

IT IS THEREFORE ORDERED that:

1. Defendants and all those acting in concert with them are enjoined from:

A. Using or operating any Internet web site that encourages or allows residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election.

B. Using, operating, facilitating or accessing domain name "voteauction.com" and to remove such web site from the Internet completely or, in the alternative, to modify the Internet web site known as "voteauction.com" so as to remove any illegal content.

C. Allowing or continuing registration of the Internet domain name "voteauction.com" or any other domain name offering substantially the same service as voteauction.com.

D. Using or operating in the State of Illinois any Internet web site by any name in any manner that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

E. Accepting from residents of the State of Illinois any registration or offer to sell votes or to buy votes at auction through voteauction.com and

to modify their web site to indicate that all registrations or offers to sell votes and/or buy votes from Illinois residents will be denied.

2. Defendants and all those acting in concert with them and order them shall immediately disclose to the proper election authorities the names and addresses of every individual in Illinois who has sold his or her vote or has offered to sell his or her vote through voteauction.com and the names and addresses of every individual and/or entity that has paid or has offered to pay for votes of Illinois residents through voteauction.com.

3. Defendants shall within 10 days report to the Court on the measures they have taken to implement this order.

4. The Court shall retain jurisdiction over this matter.

Jones Issues Warning Against On-line Vote Buying Schemes

SACRAMENTO --- Secretary of State Bill Jones today issued the following statement regarding recent stories about on-line vote buying and selling on the E-Bay auction site and through a web site at voteauction.com:

"Any individual who attempts to buy or sell votes, whether through an Internet auction site or personal communication, is guilty of a felony and will be prosecuted to the fullest extent of the law.

"We have an absolute zero tolerance policy for voter fraud in California. My election fraud investigation unit is looking into the recent reports of Internet-based vote buying schemes, will be monitoring web sites for suspicious election activity and will forward any information they find to the appropriate prosecutors for immediate action.

"During the last nine months, voter fraud investigations conducted by my office resulted in six convictions for a total of 13 years in prison."

"Voters who have been approached regarding vote-buying or voter coercion should contact the Secretary of State's office at 1-800-345-VOTE."

Missouri judge issues temporary restraining order against Web site that claims it buys and sells votes

Jefferson City, Mo. -- Attorney General Jay Nixon today obtained a temporary restraining order that stops an Austrian-based Web site from claiming that it can legally buy and sell votes from Missourians. The order, signed by Cole County Circuit Judge Thomas Brown, directs the operators of the Web site vote-auction.com to disclose on the site that the buying and selling of votes is illegal under Missouri law.

On Tuesday (Oct. 31), Nixon filed a lawsuit against several individuals and a business connected with vote-auction.com. The site represents that it will auction off votes to the highest bidder, with

money then going to the voters selling their ballots.

Nixon also is asking for preliminary and permanent injunctions against the defendants to keep them from making misrepresentations to Missourians. The Attorney General also is asking the court to assess civil penalties of up to \$1,000 for each violation of Missouri law. Judge Brown has scheduled a hearing on Nixon's request for a preliminary injunction on Nov. 28.

Earlier this month, an Illinois judge issued an injunction to keep voteauction.com from operating in that state; the operators of the Web site then changed the domain name of the business to vote-auction.com in an effort to circumvent that ruling. Nixon's lawsuit asks that any injunction handed down by the court cover not only the named defendants, but also any parent corporations, subsidiaries or anyone acting in concert with them or on their behalf to keep them from violating the law.

[V] Vote-auction falls victim to ILLEGAL DNS-SHUTDOWN

[V]ote-auction, the only platform worldwide allowing end-consumers to take part in the U.S. election industry [formerly called "soft money"], falls again victim to a repressive campaign against free speech.

Yesterday, 1st of November 2000, the domain Vote-auction.com got illegally shut down by InterNIC. InterNIC is the central institution located in the U.S. where all domain name service records for the .com/.net/.org are stored.

We, and neither our providers have received any notification about this action at all, nor have we been informed of any legal documents which would allow for such a step.

Up to this moment, InterNIC is declining comment on the issue.

[V] Why was the domain shut down in this way?

>Our first domain, voteauction.com, was registered with a dns-registry located in the U.S. Our "late" domain, vote-auction.com, however, was registered via a company located in Germany, i. e. outside of U.S. jurisdiction.

This is why, appearantly, some-one in the U.S., probably parties from the Chicago law suit where vote-auction.com is named as a defendant, decided to just forget about legal proceedings, and went directly to InterNIC, ignoring international law.

[V] What will happen to [V]ote-auction now?

Our lawyers are currently investigating, as you might imagine. Furthermore, we have discussed the issue with newly-elect ICANN board director Andy Mueller-Maguhn, who commented the issue with "I guess, we will have to do something about this". A colleague of his called it "it is absolutely clear that this is plain outrageous".

On a more practical level, we are reachable via our IP - our new url is:

<http://62.116.31.68>

Using the IP address will finally give us full protection against any further actions against our site, as IP addresses are not dependant on domain name services.

Luckily, this DNS-SHUTDOWN was not intelligently timed.

Due to our "opponents'" lazy tactics, Vote-auction.com will now definitely be online and reachable to the public on Election Day via several domains and under the IP-Address controlled by a european institution: ripe.net.

On a funny note, one could say that now they either have to shut down the whole Internet or arrest the whole US- population, OR, which is more likely, our site will stay functional and online.

[V] [V]ote-auction is BACK UNDER <http://62.116.31.68>

Thanks to the incredible work of our dear provider SILVER SERVER [www.sil.at], we were able to get back online fast and are now reachable at:

<http://62.116.31.68>

This is the safest address currently available.

Vote-auction can also be reached under:

<http://votauction.enemy.org>

Vote-auction has issued a free speech support campaign in order to gather hundreds of vote-auction and votauction domains or install sub-domains all pointing to:

<http://62.116.31.68>

From November, 2nd, the following domains shall be active:

<http://www.votauction.at> [Austrian domain]

<http://www.votauction.de> [Germany, thx to think-factory.de]

<http://www.votauction.cu> [Cuban domain]

<http://www.votauction.ru> [Russian domain]

<http://www.vote-auction.net> <http://www.vote-auction.org>

[V] Vote-auction.com ADDS NEW FEATURES

Now to some really good news!

Vote-auction, still the "Leader of the Election Industry", and the first mover in this field, has added various new features:

[] Updated figures, automated processes

Our new software has allowed us to verify the numbers which have been in the system so far. We have cleared out all double and fake entries and can now provide you with live, real-time rendered data:

<http://62.116.31.68/check.php3>

*current no. of sellers: 56.789

[] International polls

In order to showcase the US-presidential election even better, Vote-auction has released several polls for national and international audiences.

Vote-auction intends to involve a worldwide audience by polling their preferences on "Gore-Bush-Nader", a community poll will raise the question whether Vote-auction.com should be considered "legal or Illegal", and the most important question of all - "Would you rather go voting if you received money for it?". Find the polls at:

<http://62.116.31.68/index00.htm>

[] 1-CLICK-BIDDING function

In order to use our bidding section we have implemented a 1-click-bidding function with user-verification. This will help ensuring the authenticity of the bidders and will secure the bidders' offer. Find the bid-check section:

<http://62.116.31.68/check.php3>

[] ALL NEW MESSAGE-BOARD, heavily crowded

Created to stimulate public reaction from the U.S., but also the international audiences, you will now find our message board crowded and full with interesting and controversial discussions:

<http://62.116.31.68/forum/>

[] Extended PRESS-ARCHIVE, over 200 internat. news-segments

Due to the massive response in the media, we have updated our press-section providing you with broad information on how Vote-auction is featured and discussed in the press. Well over 200 e-press-clippings have been discovered by our PR-department:

<http://62.116.31.68/news.htm>

[V] Final note

We want to end this press release with a quote from chief counsel to the California secretary of state, Bill Jones, who seems to have a somewhat "personal" view on free speech:

"whether this is a parody [...] that this man is running, it makes absolutely no difference whatsoever in California. [...] because you are talking about the corruption of the voting process."

Source: CNN, "Burden of Proof", Oct 24 2000 <http://www.cnn.com/video/burden/2000/10/24/show.rm80.ram>

Appearantly, there are other individuals and/or authorities, who share his viewpoint. We have just received notice of further lawsuits filed in the states of Wisconsin and Missouri by their respective Attorney Generals.

For the Vote-auction team:

Klage des

Herrn Luzius Bernhard, Hollandstrasse 7 / 19, A - 1020 Wien, Österreich,

Klägers,

- Prozessbevollmächtigte: Rechtsanwältin Stephanie Schliepack, Lietzenburger Straße
102, 10707 Berlin -

gegen

Firma Computer Service Langenbach - CSL - GmbH, Rathausufer 16, 40213
Düsseldorf, vertreten durch den Geschäftsführer Siegfried Langenbach, -
Handelsregister-Auszug wird nachgereicht -

Beklagte,

Streitwert: 43.200,25 DM (entspricht 22.087,94 EUR)

- Verrechnungsscheck über die Gerichtskosten ist beigelegt -

Namens und in Vollmacht des Herrn Bernhard erhebe ich Klage gegen die Beklagte und beantrage

1. Registrierung der Domain "www.vote-auction.com" inklusive Validierung
entsprechend dem Vertrag zwischen Kläger und Beklagtem vom 18. Oktober 2000
über Registrierung und Nutzung der oben Domain "www.vote-auction.com";

2. die Beklagte zu verurteilen, 43.200,25 DM (entspricht 22.087,94 EUR) an den

Kläger zu zahlen zuzüglich 9,46 % Verzugszinsen ab Rechtshängigkeit als Schadensersatz für die unrechtmäßige Abschaltung der Domain "www.vote-auction.com" und den daraus entstandenen Schaden,

die ich im Termin ebenfalls stellen werde.

Der Firma CORE, Internet Council of Registrars, World Trade Center II, 29, Route de Pre-Bois, CH-1215 Genf, Schweiz, vertreten durch Werner Staub u.a.,

wird der Streit verkündet mit der Aufforderung, dem Rechtsstreit auf seiten des Klägers beizutreten.

Das Gericht wird gebeten,

diesen Schriftsatz der Streitverkündeten alsbald zuzustellen.

Sollte das Gericht das schriftliche Vorverfahren beschließen, wird bereits jetzt

Antrag auf Erlass eines Anerkenntnisurteils (§ 307 Abs. 2 ZPO) bzw. eines Versäumnisurteils (§ 331 Abs. 3 ZPO)

gestellt.

I.

Der Kläger ist schweizer Staatsbürger und hat die Domain namens "www.vote-auction.com" inne. Er hält sich jedoch regelmäßig in Berlin auf.

Die Beklagte ist eine Firma mit Sitz in Düsseldorf. Sie bietet u.a. Nutzungsverträge für .com-Domains über das Internet an. Sie ist eingetragener Registrar bei der Streitverkündeten, die die für die Nutzungsverträge an Domains notwendigen Registry-Einträge im Domain-Name-System bei .com-Domains vornimmt.

Der Kläger schloss während eines Aufenthalts in Berlin online über das Internet auf der Webseite "www.joker.com", die betrieben wird von der Beklagten als Registrar, einen Domainnutzungsvertrag über Registrierung und Nutzung der Domain "www.vote-auction.com". Für die Leistung von 12,00 EUR pro Jahr verpflichtete sich die Beklagte zur Bereitstellung der Domain.

Beweis: Vertragsbestätigung durch Email vom 18. Oktober 2000 - Anl. 1 -,

Whois-Abfrage vom 04. April 2000 - Anl. 2 -

Die Beklagte hat auf ihrer Webseite "www.joker.com" sogenannte Terms and Conditions hinterlegt, die in Deutsch und Englisch abgefasst waren.

Unter der Domain veröffentlichte der Kläger Inhalte, die angeblich nach u.s.-amerikanischem Recht rechtswidrig waren.

Inhaltlich war die Seite jedoch als Satire auf die Verhältnisse in den Vereinigten Staaten von Amerika während des Bundeswahlkampfes dort gemeint.

Beweis: Ausdruck der Webseite - Anl. 3 -,

Zeugnis der Elisabeth Haas,
Hollandstrasse 7 / 19, A - 1020 Wien, Österreich;

Parteivernehmung des Klägers.

Es war dort spasshaft eine Plattform zum Angebot und Kauf von Wählerstimmen eingerichtet worden. Die User der Webseite waren "aufgefordert", ihre Stimme anzubieten bzw. angebotene Stimmen zu ersteigern.

Die Seite war in englischer Sprache gehalten und mit Links auf Veröffentlichungen im Internet zu Bestechungs- und Korrumpierungsfällen versehen.

Die Seite war überzeichnet und auf eine unmögliche Leistung ausgerichtet in dem Bewusstsein, dass der Verkauf und Kauf von Wählerstimmen unmöglich ist, da jede Wählerstimme nur unter Vorlage von persönlichen Dokumenten und lediglich einmal pro Wähler abgegeben werden kann.

Hintergrund waren Bestechungsskandale betreffend der Kandidaten und deren Mitarbeiter im dortigen Wahlkampf, die in der Presse publik gemacht worden waren.

Die Aussage war, dass eine Wahl von Kandidaten, die der Bestechlichkeit und Vorteilsannahme verdächtig oder überführt sind, absurd sei. Die sollte "gespiegelt" werden an der Darstellung des Gedanken, dass sich nunmehr nicht nur die zu Wählenden, sondern auch die Wähler korrumpieren lassen könnten.

Beweis: Ausdruck der Website

Ein konkreter An- oder Verkauf von Wählerstimmen fand nicht statt.

Beweis: Zeugnis der Elisabeth Haas,

Parteivernehmung des Klägers

Der Kläger hatte die Seite selbst erstellt, wofür er 17 Arbeitstage aufwendete, die er normalerweise vergütet bekommt. Im einzelnen verwendete der Kläger für

- Konzept und Kreation

o Erstellung und Adaption von Logos, Layouts, Navigation zwei Tage (10. Oktober 2000, 12. Oktober 2000) - Tagessatz: 1.200 EUR -

o Basisdesign zwei Tage (13. Oktober 2000, 14. Oktober 2000) - Tagessatz: 1.200 EUR -

- Technik

o Programmierung des "Forums" einen Tag (15. Oktober 2000) - Tagessatz: 900 EUR -

o Programmierung der "Auktionssoftware" drei Tage (16. Oktober 2000, 24. Oktober 2000, 01. November 2000) - Tagessatz: 1.200 EUR -

o Erstellung von HTML/DHTML drei Tage (17. Oktober 2000, 18. Oktober 2000, 20. Oktober 2000) - Tagessatz: 900 EUR -

o Programmierung von Perl-Scripts zwei Tage (21. Oktober 2000, 22. Oktober 2000) - Tagessatz: 1.200 EUR -

- Hosting und Domain-Name-Service (Preise sind Pauschal-Preise für die Dienstleistung über ein Jahr)

o Domain-Hosting einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 500,00 EUR -

o Webspaces-Beschaffung und Verwaltung einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 500,00 EUR -

o SSH-Zugang und FTP-Zugriff einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 50,00 EUR -

o Bereitstellung von Email-Adressen einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 50,00 EUR -

insgesamt also 15.100,00 EUR zuzüglich Umsatzsteuer Österreich (20% = 3.020 EUR); brutto 18.120,00 EUR (entspricht 35.439,64 DM).

Beweis: Zeugnis der Elisabeth Haas,

Parteivernehmung

Am Freitag, den 03. November 2000, also vier Tage vor der Bundeswahl in den Vereinigten Staaten, nahm die Streitverkündete die Seite vom Netz, indem die Domain aus dem Root-Server-System

entfernt wurde. Die Seite war nunmehr nicht mehr direkt über die Domain erreichbar im Internet, sondern nur noch über die Server-IP-Nummer 62.116.31.68.

Zur Schadensbegrenzung wurde versucht, die Seite auf anderen ähnlich klingenden Domains zu veröffentlichen, wobei weitere Kosten entstanden sind.

Im einzelnen ist dem Kläger hierfür von Leon Aaron Kaplan, XXXXXXgasse x1 / xx, A - 1xx0 Wien, Österreich für die Arbeiten Server-Setup/Rekonfiguration, repetitive DNS Änderungen, Migration der Webseite auf neue Rechner und Aufsetzen der selben, Überwachung der DNS und Bug-Fixing des Servers vom 01. November bis zum 10. November 2000 die Arbeitszeit von 65 Stunden zum Stundenpreis von 700,00 ATS, also 45.500,00 ATS (entspricht 6.467,17 DM = 3305,61 EUR) zuzüglich Umsatzsteuer Österreich (20% = 9.100 ATS = 1.293,43 DM = 661,32 EUR), brutto 54.600,00 ATS (entspricht 7.760,61 DM und 3.967,94 EUR) in Rechnung gestellt worden.

Beweis: Rechnung vom 30. November 2000 - Anl. 4 -

II.

1. Es ist deutsches Recht anwendbar. Der Vertrag ist online abgeschlossen worden, das anwendbare Recht richtet sich somit nach dem Ort, an dem der Kläger die erforderlichen Rechtshandlungen vorgenommen hat, Art. 29 Abs. 1 Ziff. 1 EGBGB.

Der Kläger hatte den Vertrag in Berlin abgeschlossen und auch die Leistung von Berlin aus vorgenommen.

2. Die Beklagte ist zur Erfüllung des online abgeschlossenen Vertrages verpflichtet.

- Dass sie sich hierzu der Hilfe der Firma CORE bedient, ist ihr überlassen.

Die Firma CORE ist Erfüllungsgehilfe. Erfüllungsgehilfe ist, wer nach den tatsächlichen Gegebenheiten des Falles mit dem Willen des Schuldners bei der Erfüllung einer ihm obliegenden Verbindlichkeit als seine Hilfsperson tätig wird (BGHZ 13, 113; 50, 35; 62, 124; 98, 334). Erfüllungsgehilfe kann (anders bei § 831 BGB) auch jemand sein, der in seinem Verhalten keinem Weisungsrecht des Schuldners unterliegt (BGHZ 62, 124; BGH NJW 1993, 1705).

- Die Beklagte hätte die Firma CORE als ihren Erfüllungsgehilfen zur Vertragstreue anhalten müssen und ist hierzu nach wie vor verpflichtet. Dies hat sie jedoch unterlassen.

- Streitig ist die Hauptleistungspflicht des Vertrages, nämlich die Registratur der beantragten Domain. Dabei besteht die Registratur aus zwei Teilbereichen:

1. Eintragung der Domain in der Datenbank des Registrars,
2. Erreichbarkeit der Domain im Domain Name System (DNS) herzustellen und aufrecht zu erhalten.

- Es gab keinen Anlass, die Website wegen angeblich rechtswidriger Inhalte vom Netz zu nehmen.

Denn zum einen hatte die Beklagte als der Vertragspartner nichts gegen die Inhalte der Webseite eingewendet und sich auch keinen Vortrag der Firma CORE zu eigen gemacht.

Zum anderen ist der Access-Provider haftungsprivilegiert gem. § 5 Abs. 3 TDG. Es hätte demnach positive Kenntnis von der Rechtswidrigkeit der Webseite vorliegen müssen, damit eine Handlungspflicht aus haftungsrechtlichen Gründen hätte entstehen können. Dieser Umstand liegt erst recht nicht vor.

Jedenfalls ist die Seite nicht rechtswidrig:

Sie verstößt wegen der Kunst- und Meinungsfreiheit, die auch in den Vereinigten Staaten von Amerika geschützt sind, nicht gegen dort geltendes Recht.

Selbst wenn die Seite nach nicht u.s.-amerikanischem Recht rechtswidrig wäre, so hätte dies keine Ausstrahlungswirkung auf die Beurteilung der Webseite nach deutschem - und ggf. auch nicht nach schweizer - Recht.

3. Für den aus Nichterfüllung entstandenen Schaden haftet die Beklagte gemäß §§ 284 Abs. 1 S. 2, 285, 286 Abs. 1 BGB auf Schadensersatz in der vom Kläger geltend gemachten Höhe.

Insbesondere darf der Kläger für eigene Arbeitsleistung das für ihn in beruflicher Tätigkeit übliche Arbeitsentgelt verlangen.

4. Verzugszinsen sind fällig seit Rechtshängigkeit gem. § 288 Abs. 1 S. 1 BGB in Höhe von 5% über dem Zinssatz der EZB, z.Zt. also 9,46%.

5. Für den Fall, dass die Beklagte einwendet, sie hätte die Leistung ordnungsgemäß erbracht und der Schaden sei nicht die mangelhafte Leistung ihrerseits zurückzuführen, sondern auf Fehler der Streitverkündeten, und dieser Einwand der Beklagten zutrifft, hätte der Kläger gegen die Streitverkündete einen Anspruch auf Schadloshaltung.

Die Streitverkündung ist demnach gem. § 72 Abs. 1, 1. Alt. ZPO zulässig. Auch die ausländische Streitverkündete hat nach §§ 71 ff. ZPO die prozessuale Last, sich auf ein deutsches Verfahren einzulassen.

Zwei beglaubigte Abschriften anbei.

USA/Switzerland/Austria: "It's different because it's fundamentally different." - The Voteauction Case

Complaint , 16.10.2000

**IN THE CIRCUIT COURT OF COOK COUNTY
COUNTY DEPARTMENT, COUNTY DIVISION**

**Board OF Election Commissioners OF the town center OF Chicago, LANGDON D NEAL,
RICHARD A. COWEN, and THERESA M. PETRONE,**

Plaintiffs,

vs.

**HANS'S BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH
JOHANNES NUT/MOTHER, JAMES BAUMGARTNER and DOMAIN BANK, Inc.,**

Defendants.

COMPLAINT FOR DECLARATORY JUDGMENT, INJUNCTION AND OTHER RELIEF

Plaintiffs, BOARD OF ELECTION COMMISSIONERS OF THE TOWN CENTER OF CHICAGO, LANGDON D NEAL, RICHARD A. COWEN and THERESA M. PETRONE, by their attorney, James M. Scanlon & Associates, hereby complain OF Defendants HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES NUT/MOTHER, JAMES BAUMGARTNER and DOMAIN BANK, Inc., and, pursuant tons of sections 2-701, 11-101 and of 11-102 OF the code OF civil Procedure (735 ILCS 5/2 701, 5/11 101 and 5/11 102), seek declaratory judgment, injunctive and OTHER relief against said Defendants more either jointly, severally or into the alternative and in support OF this Complaint, Plaintiffs state as follows:

NATURE OF THE COMPLAINT

1. This is A proceeding for declaratory and injunctive relief of under sections 2-701, 11-101 and of 11-102 OF the code OF civil Procedure (735 ILCS 5/2 701, 5/11 01 and 5/11 102) for (A) the PUR-float OF determining A question in actual controversy between the parties concerning more whether the Defendants more either jointly, severally or into the alternative acres in violation OF the election laws OF the State OF Illinois and the United States that prohibit the buying and selling OF of votes into elections for public office, and (B) for the PUR-float OF obtaining injunctive relief against Defendants enjoining Defendants more either jointly, severally or into the alternative from violations OF the election laws OF the State OF Illinois and the university University of States prohibiting the buying or selling OF of votes RK the November 7, 2000 general Election (after referred tons as the "Election") ton conducted into the State OF Illinois. The Complaint thus seeks OTHER equitable and legally relief against Defendants, more either jointly, severally or in the alternative, including but emergency limited tons the award OF of damages ton of Plaintiffs and ton members OF A class consisting OF all citizens OF the State OF Illinois for the deprivation OF any rights, privileges or immunities secured by the Constitution or laws OF the United States and OF the State OF Illinois.

VENUE

14. All individually Plaintiffs of acres residents OF the town center OF Chicago, the County OF Cook, and the State OF Illinois.

15. All individually Defendants of acres nonresidents OF the State OF Illinois.

16. Venue is properly vested in this Court pursuant tons of section of 2-101 OF the code OF civil Procedure (735 ILCS 5/2 101).

GENERAL ALLEGATIONS

17. RK the Election, registered and qualified voters into the State OF Illinois wants vote for and elect person tons Electors OF President and Vice President OF the United States, Members OF U.S. House OF Representatives, State of senator, Representatives into the general assembly, supreme, Appellate and Circuit Judges, and various county officers.

18. RK the Election, voters into the State OF Illinois wants vote for President and Vice President OF the United States by marking on official ballot listing the names OF the candidates OF each political party or group for President and Vice President. Look for votes of acres emergency deemed or taken as direct votes for the candidates for President and Vice President, but instead ton the Presidential vote as votes for Electors OF President and Vice President OF the United States selected by the political parties or groups. Person elected as Electors OF President and Vice President must, following the Election, meet in Springfield, Illinois and cast their vote for President and Vice President OF the United States. (art. 2, §1, U. S. Const.; 10 ILCS 5/21 2 through 5/21 4) The State OF Illinois is entitled tons twenty two "electoral votes." The of candidates for President and Vice President OF the United States receiving the most electoral votes cast by electors into the various States shall declared elected.

19. The board is vested with brine statutory power and duty tons conduct the Election ton hero within the territorially limit OF the town center OF Chicago into accordance with election laws OF the State OF Illinois and OF the United States.

20. As part OF its duties, the board has prepared, printed and distributed and wants prepare, print and distribute absentee ballots ton qualified voters who make application for searches ballots. Specifically, the board wants mail absentee ballots from their offices into the town center OF Chicago, Illinois ton all eligible absentee voters.

- 21. Sections 19-5 and of 20-5 OF The Election code require absentee voters certify more under penalty OF by jury that that they have marked their ballots in secret. (10 ILCS 5/19 5, 5/20 5)**
- 22. Sections 19-6 and of 20-6 OF The Election code require absentee voters return their marked absentee ballots directly ton the board that into its offices in Chicago, Illinois only into the more manner prescribed therein, namely: by mail, by personal delivery, by delivery by the voter's spouse, parent, child, or more sister, or by A licensed more measuringclosely or engine carrier. (10 ILCS 5/19 5, 5/20 5)**
- 23. The board is vested with the brine statutory power and duty tons process look for absentee ballots for tabulation and COUNTING and ton canvass the returns and results OF said election into its offices in Chicago, Illinois, all into accordance with the election laws OF the State OF Illinois and OF the United States.**
- 24. Upon information and belief, Baumgartner created a web site on the computer Internet known as "Voteauction.com." In or about August 2000, the Voteauction.com web-site began appearing on the Internet at "http://www.voteauction.com." True and correct copies of Voteauction.com's web-site pages are made a part hereof and are attached hereto as EXHIBIT A. The affidavit of Daniel Doyle, who printed copies of the Voteauction.com web pages as they appear in EXHIBIT A and attests that they are true and correct copies thereof, is attached hereto as EXHIBIT B.**
- 25. Defendants, through the Voteauction.com web site, solicit and allow individuals, including Illinois residents, to "sell" their votes for the Election and solicit and allow individuals or corporations, including Illinois residents and corporations, to "bid" on or buy such votes. See EXHIBIT A, 1-19.**
- 26. The Voteauction.com web site states in part, "Now you can profit from your election capital by selling your vote to the highest bidder." See EXHIBIT A, 1. The web site solicits and allows persons to register with Voteauction.com by going to an on-line computer screen, filling in the form on the screen provided (including name, address and political affiliation), and then clicking the "Submit" button on the computer screen. See EXHIBIT A, 6-7.**
- 27. The Voteauction.com web site states that as of October 12, 2000, as many as 1,131 Illinois residents have registered on-line through Voteauction.com, offering their votes for sale for the Election. Upon information and belief, some of these Illinois residents are also residents of the city of Chicago. See EXHIBIT A, 16.**
- 28. Defendants, by and through Voteauction.com, solicit and allow Illinois individuals and corporations to "bid" on the votes being offered for sale by registering on-line using a computer screen registration form. Bidders submit bids for a block of votes consisting of all the votes offered for sale in any particular state. The Voteacution.com web site provides that the starting bid for each state is \$100, with a minimum bid increase of \$50. The Voteauction.com web site states in part, "The winning bidder for each state will be able to choose who the group will vote for en masse." The Voteauction.com web site states, "The winning bidder will have to**

contact the voteauction.com voters in order to provide payment and for the voters to provide verification." See EXHIBIT A, 8-19.

29. The Voteauction.com web site states that as of October 12, 2000 the highest bid offered for the purchase of Illinois residents' votes for the Election was \$14,000, equaling \$12.38 per vote. See EXHIBIT A, 16.

30. Articles posted on the Voteauction.com web site indicate that Baumgartner "had planned for voters to mail him absentee ballots to verify the selections." See EXHIBIT A, 29-30, Vote-selling Web site to be revived, possibly offshore, CNN.com, August 25, 2000. In an article appearing on August 17, 2000 in the The Lycos Network, a copy of which is posted on the Voteauction.com web site and included herewith in EXHIBIT A, 32-34, Baumgartner is reported as stating that potential vote sellers were being notified that the Voteauction legal agreement, which was still being drafted, would be sent out at the end of the month. Baumgartner is also reported as saying that he was "considering a process in which the Voteauction participant fills out an absentee ballot and votes for whomever they want in every race but the presidency. Whether that choice will be Bush, Gore, Nader, Buchanan, or someone else entirely is determined by the outcome of the online auction." "Then when the time comes, whoever wins the auction decides who this group is going to vote for," Baumgartner is quoted as saying, "So I tell those people you should vote for this person. Then they fill in the form, and then they send it to me. And I just verify that they're voting for the correct person." See EXHIBIT A, 34.

31. In an article appearing on The Lycos Network on September 6, 2000, a copy of which is posted on Voteauction.com's web site and included herewith in EXHIBIT A, an unidentified spokesman for Voteauction.com is reported to have said:

"Verification will now be the responsibility of the winning bidder. * They can choose from a variety of methods for verification of the votes. They may have the voters send in their absentee ballots for verification, they may have the voters take photographs inside the voting booth, or they go to the honor system – that is the system that many vote-purchasing endeavors have used in the past. We have chosen to have the winning bidders responsible for the verification because it would not be feasible to have people send their absentee ballots all the way to Austria and have us send them back to America within an appropriate time frame."**

See EXHIBIT A, 42-43.

32. The Voteauction.com web site states that for the Election, Voteauction.com "is concentrating on just the U.S. Presidential election" but that Voteauction.com hopes that in future it will be able to "grow our business into every election market niche from Senatorial races to municipal water commissioner." See EXHIBIT A, 19.

33. The Voteauction.com web site states that it will not receive any money from the auction. However, Bernhard has stated that "We bought the domain name and related business because we see this as a serious business venture in which we can make money." See EXHIBIT A, 19, 29.

34. Nowhere on the Voteauction.com web site does it state that the selling and buying of votes, or offering to buy or sell votes is illegal or that the individuals selling or offering to sell their votes, and individuals buying or offering to buy votes may be committing a crime. See EXHIBIT A, 1-22.

35. The laws of the State of Illinois and of the United States prohibit the selling and buying of votes.

36. Section 29-1 of The Election Code (10 ILCS 5/29-1) provides, "Any person who knowingly gives, lends or promises to give or lend any money or other valuable consideration to any other person to influence such other person to vote * or to influence such other person to vote for or against any candidate or public question to be voted upon at any election shall be guilty of a Class 4 felony." Thus, vote buying is illegal under Illinois law and any person giving or promising to give money to Illinois residents to influence them to vote or to vote for or against any candidate to be voted upon at the Election is guilty of a Class 4 felony, which is punishable by imprisonment for 1 to 3 years.**

37. Section 29-3 of The Election Code (10 ILCS 5/29-3) provides, "Any person who votes for or against any candidate or public question in consideration of any gift or loan of money or for any other valuable consideration * shall be guilty of a Class 4 felony." Thus, vote selling is illegal under Illinois law and any person voting for or against any candidate on the Illinois ballot for the Election in consideration of any money or other valuable consideration is guilty of a Class 4 felony, which is punishable by imprisonment for 1 to 3 years.**

38. Any person attempting to sell or buy votes in Illinois has committed an offense under Illinois law and is guilty of a Class 4 felony that is punishable by imprisonment for 1 to 3 years. (10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-4) Thus, any person in Illinois who has attempted to sell his or her vote at the Election by registering with Voteauction.com to sell his or her vote, and any person who has attempted to buy the votes of Illinois residents for the Election by registering with Voteauction.com to bid on such votes, has committed a Class 4 felony.

39. Any person who solicits another to sell or buy votes in Illinois has committed an offense under Illinois law and is guilty of a Class 4 felony that is punishable by imprisonment for 1 to 3 years. (10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-1) Defendants, by and through Voteauction.com, are guilty of soliciting others to sell or buy votes in Illinois and have committed a Class 4 felony.

40. Any person who conspires with another to sell or buy votes in Illinois has committed an offense under Illinois law and is guilty of a Class 4 felony that is punishable by imprisonment for 1 to 3 years. (10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-2) Defendants have conspired with others to sell and buy votes in Illinois and are guilty of conspiring to sell and buy votes in Illinois under the laws of the State of Illinois.

41. Anyone who marks or tampers with an absentee ballot of another person or takes an

absentee ballot of another person in violation of Section 19-6 of The Election Code (see ¶22 above) so that an opportunity for fraudulent marking or tampering is created is guilty of a Class 3 felony under Illinois law. (10 ILCS 5/29-20)

42. By requiring those offering to sell their votes to submit their absentee ballots to Defendants or to others so as to verify their voting selections, Defendants are guilty of (a) conspiring with others to commit absentee vote fraud, (b) soliciting others to commit absentee vote fraud, and (c) attempted absentee vote fraud.

43. Title 18, Section 597 of the United States Code (18 U.S.C. §597) provides, "Whoever makes or offers to make an expenditure to any person, either to vote or withhold his vote, or to vote for or against any candidate; and whoever solicits, accepts, or receives any such expenditure in consideration of his vote or the withholding of his vote shall be fined not more than \$1,000 or imprisoned not more than one year or both; and if the violation was willful, shall be fined not more than \$10,000 or imprisoned not more than two years, or both."

44. Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)) provides that for Federal elections, "Whoever knowingly or willfully * pays or offers to pay or accepts payment for *** voting shall be fined not more than \$10,000 or imprisoned not more than five years, or both."**

45. Thus, any person in Illinois who has knowingly or willfully offered to sell his or her vote at the Election, which is also a Federal election, by registering with Voteauction.com to sell his or her vote, and any person who has knowingly or willfully offered to buy the votes of Illinois residents for the Election by registering with Voteauction.com to bid on such votes, has committed a criminal offense under 18 U.S.C. §597 and 42 U.S.C. §1973i(c).

46. Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)) also provides that for Federal elections, "Whoever knowingly or willfully * conspires with another individual for the purpose of *** illegal voting *** shall be fined not more than \$10,000 or imprisoned not more than five years, or both."**

47. Thus, Defendants have committed a violation of 42 U.S.C. §1973i(c) in that they have conspired for the purpose of illegal voting.

48. Title 42, Section 1973gg10 of the United States Code (42 U.S.C. §1973gg-10) provides that in any Federal election, "A person * knowingly and willfully deprives, defrauds, or attempts to deprive or defraud the residents of a State of a fair and impartially conducted election process by *** the procurement, casting, or tabulation of ballots that are known by the person to be materially false, fictitious, or fraudulent under the laws of the State in which the election is held, shall be fined in accordance with title 18 *** or imprisoned not more than 5 years, or both." Thus, federal law secures the right of voters in a State to have fair and impartially conducted elections.**

49. Defendants, by and through Voteauction.com, have knowingly and willfully deprived and

defrauded, and will deprive and defraud, Plaintiffs and all citizens of the State of Illinois of a fair and impartial election by procuring ballots that are known to be materially false and fraudulent under the laws of the State of Illinois.

50. Article 3, Section 3 of the Constitution of the State of Illinois (Art. 3, §3 Ill. Const.) guarantees Illinois citizens the right to "free and equal" elections. Under this provision, elections are free only when the voters are subjected to no intimidation or improper influence and when every voter is allowed to cast his or her own ballot as his or her own judgment and conscience dictate. When the ballot box becomes the receptacle of fraudulent votes, the freedom and equality of elections are destroyed.

51. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, by and through Voteauction.com, have deprived and will deprive the Plaintiffs and all Illinois citizens of their constitutional right to free and equal elections.

52. Defendants have been warned that the buying or selling of votes in Illinois is a Class 4 felony. See September 20, 2000 and October 5, 2000 electronic mail messages from A.L. Zimmer, General Counsel, Illinois State Board of Elections to the Voteauction.com "Message Board," which is posted on Voteauction.com's web site. See EXHIBIT A, 107-108.

53. In an article appearing on CNN.com on August 25, 2000, a copy of which is posted on Voteauction.com's web site and included herewith as EXHIBIT A, Hans Bernhard is reported to have said that his holding company would operate Voteauction.com outside of the United States to circumvent federal and state laws that forbid purchasing and buying ballots. See EXHIBIT A, 29.

54. Notwithstanding warnings that the buying and selling of votes is illegal under Illinois law and notwithstanding their own admissions that their conduct violates state and federal laws, Defendants have continued to knowingly and willfully violate the election laws of the State of Illinois and of the United States by encouraging, soliciting and allowing the residents of Illinois and others through the Voteauction.com web site to sell and buy votes for candidates at the Election.

COUNT I

DECLARATORY JUDGMENT

1-54. Plaintiffs re-allege and incorporate by reference the allegations contained in paragraphs 1 through 54 herein as their allegations 1 through 54 of Count I.

55. A dispute and controversy has arisen between the Plaintiffs and the Defendants concerning the right of Defendants to use and operate an Internet web site as an auction forum for the purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast

at the Election and encouraging, soliciting and allowing individuals and corporations to "bid" on and buy such votes.

56. Defendants' continued use and operation of the Internet web site known as Voteauction.com as an auction forum for purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the Election and encouraging, soliciting and allowing individuals and corporations to "bid" on or buy such votes constitutes knowing and willful violations of the election laws of the State of Illinois and of the United States that will result in illegal and fraudulent voting at the Election if not prevented.

57. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to violate the election laws of the State of Illinois and of the United States.

58. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to deprive them or defraud them of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

59. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have deprived and defrauded, and will deprive and defraud, the Plaintiffs and all citizens of the State of Illinois of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

60. An actual controversy exists between the Plaintiffs and the Defendants.

WHEREFORE, Plaintiffs request a declaratory judgment in accordance with Section 2-701 of the Code of Civil Procedure against the Defendants, either jointly, severally or in the alternative as follows:

A. The Court declare illegal and tortious Defendants' use and operation of an Internet web site as an auction forum for the purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election and encouraging, soliciting and allowing individuals and corporations to "bid" on and buy such votes.

B. The Court declare that Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois not to violate the election laws of the State of Illinois and of the United States and that they are in breach of this duty.

C. The Court declare that Defendants and all those acting in concert with them

owe a duty to Plaintiffs and to all citizens of the State of Illinois not to deprive them or defraud them of their rights and privileges under the Constitution and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process and they are in breach of this duty.

D. The Court declare that the Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois to cease and desist from using or operating the Internet web site known as "Voteauction.com" and to remove such web site from the Internet or, in the alternative, to modify the Internet web site known as "Voteauction.com" so as to remove any illegal content.

E. The Court declare that the Defendants and all those acting in concert with them owe a duty to Plaintiffs and to all citizens of the State of Illinois to cease and desist from using or operating any Internet web site by any name that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

F. The Court declare that anyone selling or attempting to sell his or her vote, and anyone buying or attempting to buy the votes of another is in violation of the election laws of the State of Illinois and of the United States as enumerated herein.

G. The Court declare that Defendants owe Plaintiffs their costs and attorneys' fees for this action.

H. The Court order such other relief that the Court may deem just.

COUNT II

INJUNCTIVE RELIEF

1-60. Plaintiffs re-allege and incorporate by reference the allegations contained in paragraphs 1 through 60 of Count I herein as their allegations 1 through 60 of Count II.

61. Unless injunctive relief is granted, Defendants will continue to violate the election laws of the State of Illinois and of the United States and to deprive Plaintiffs and all citizens of the State of Illinois of their rights and privileges under the Constitution of the United States and of the State of Illinois and the laws passed pursuant thereof to a free and equal election and to a fair and impartially conducted election process.

62. Unless injunctive relief is granted, Defendants' illegal and tortious conduct will allow the ballot box to become the receptacle of fraudulent votes, thus infecting the result of the Election with fraud.

63. Unless injunctive relief is granted, Defendants' illegal and tortious conduct may affect the results of the Election for President and Vice President of the United States as well as for other offices.

64. The Plaintiffs will suffer immediate and irreparable injury in fulfilling their statutory duties to provide for the orderly and lawful administration of this election unless Defendants' illegal and tortious conduct is enjoined forthwith. Plaintiffs Neal, Cowen and Petrone, as well as all citizens of the State of Illinois will, unless Defendants' conduct is enjoined forthwith, suffer irreparable injury to their rights as citizens of the State of Illinois to a free and fair election.

65. Given the nature of the injuries to result from Defendants' illegal and tortious conduct, neither Plaintiffs nor the citizens of the State of Illinois will have an adequate remedy at law in which to redress Defendants' conduct because the injuries suffered are of such a nature that damages may not be reasonably ascertained.

66. Absent immediate relief, Plaintiffs will, in fact, be denied meaningful relief because the right to vote in the Election will be rendered moot after the Election.

67. The threatened injury to the Plaintiffs and to the citizens of the State of Illinois will be immediate, certain and great if injunctive relief is denied while the loss or inconvenience to the Defendants (not being able to engage in an illegal enterprise) will be comparatively small and insignificant if injunctive relief is granted.

68. Plaintiffs have a reasonable likelihood of prevailing on the merits of this claim.

69. The granting of injunctive relief in this case will not have an injurious effect on the public and, in fact, will better serve the interests of the public than if not granted.

WHEREFORE, Plaintiffs request that the Court enter a temporary restraining order and preliminary and permanent injunctions in accordance with Sections 11-101 and 11-102 of the Code of Civil Procedure against Defendants as follows:

A. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating any Internet web site that encourages or allows residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election.

B. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using, operating, facilitating or accessing domain name "voteauction.com" and to remove such web site from the Internet completely or, in the alternative, to modify the Internet web site known as "voteauction.com" so as to remove any illegal content.

C. The Court enjoin Defendants and all those acting in concert with them from

allowing or continuing registration of the Internet domain name "voteauction.com" or any other domain name offering substantially the same service as voteauction.com.

D. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating in the State of Illinois any Internet web site by any name in any manner that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

E. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately disclose to the proper election authorities the names and addresses of every individual in Illinois who has sold his or her vote or has offered to sell his or her vote through voteauction.com and the names and addresses of every individual and/or entity that has paid or has offered to pay for votes of Illinois residents through voteauction.com.

F. The Court enjoin the Defendants and all those acting in concert with them and order them to cease and desist from accepting from residents of the State of Illinois any registration or offer to sell votes or to buy votes at auction through voteauction.com and to modify their web site to indicate that all registrations or offers to sell votes from Illinois residents will be denied.

G. The Court order that Defendants shall within 10 days report to the Court on the measures they have taken to implement this order.

H. The Court shall retain jurisdiction over this matter.

I. The Court order Defendants to pay Plaintiffs their costs and attorneys' fees for this action.

J. The Court order such other relief that the Court may deem just.

COUNT III

SEPARATE ACTION AT LAW

CLASS ACTION FOR DAMAGES FOR DEPRIVATION OF CONSTITUTIONAL RIGHTS (10 ILCS 5/29-17)

1-60. Plaintiffs Neal, Cowen and Petrone re-allege and incorporate by reference the allegations contained in paragraphs 1 through 60 of Count I herein as their allegations 1 through 60 of Count III.

61. Plaintiffs Neal, Cowen and Petrone, pursuant to Section 2-801 of the Code of Civil

Procedure (735 ILCS 5/2-801), bring this action on their own behalf and on behalf of all citizens of the State of Illinois, except those who have offered to sell their votes and those who have bid on the votes being offered as alleged above (the "class"). The class is so numerous that joinder of all members is impractical; questions of law and fact are common to the class; adequate representation of claims of representative parties exists and a class action is an appropriate litigation procedure in terms of time, effort and expense and uniformity of decision.

62. Article 3, Section 3 of the Constitution of the State of Illinois (Art. 3, §3 Ill. Const.) guarantees Illinois citizens the right to "free and equal" elections. Under this provision, elections are free only when the voters are subjected to no intimidation or improper influence and when every voter is allowed to cast his or her own ballot as his or her own judgment and conscience dictate. When the ballot box becomes the receptacle of fraudulent votes, the freedom and equality of elections are destroyed.

63. Under Title 42, Section 1973gg10 of the United States Code (42 U.S.C. §1973gg-10), federal law secures the right of voters in a State to have fair and impartially conducted elections.

64. Section 29-17 of The Election Code (10 ILCS 5/29-17) provides that "Any person who subjects, or causes to be subjected, a citizen of the State of Illinois or any other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution or laws of the United States or of the State of Illinois, relating to registration to vote, the conduct of elections, voting, or the nomination or election of candidates for public or political party office, shall be liable to the party injured or any person affected, in any action or proceeding for redress."

65. Under Section 29-17, Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs Neal, Cowen and Petrone and to each member of their class of their rights not to subject them to a deprivation of any rights or privileges secured under the Constitution and laws of the State of Illinois and of the United States, including those secured by Article 3, Section 3 of the Illinois Constitution and by 42 U.S.C. §1973gg-10 relating to voting, the conduct of election or the election of candidates for public office.

66. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have unlawfully subjected Plaintiffs Neal, Cowen and Petrone and each member of their class to the deprivation of their rights and privileges under Article 3, Section 3 of the Illinois Constitution to a free and equal election for the Election and Defendants have breached their duty to Plaintiffs and the class members.

67. Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have unlawfully subjected Plaintiffs Neal, Cowen and Petrone and each member of their class to the deprivation of their right under 42 U.S.C. §1973gg-10 to a fair and impartially conducted election for the November 7, 2000 General Election and Defendants have breached their duty to Plaintiffs and the class

members.

68. Plaintiffs Neal, Cowen and Petrone and each member of their class have suffered injuries due to Defendants' unlawful deprivation of Plaintiffs' and class members' constitutional and legal rights and Defendants' breach of duty toward Plaintiffs and the class members.

69. Defendants are, therefore, liable to Plaintiffs Neal, Cowen and Petrone and to each member of their class under Section 29-17 of The Election Code for the deprivation of their rights and privileges secured by the Constitution or laws of the United States and of the State of Illinois as enumerated above.

WHEREFORE, Plaintiffs request that the Court:

A. Order Defendants to pay class members their damages sustained due to the Defendants' deprivation of their constitutional and legal rights and privileges and Defendants' breach of duty.

B. Order Defendants to pay class members their costs and attorneys' fees for this action.

C. Order such other relief that the Court may deem just.

COUNT IV

SEPARATE ACTION AT LAW CLASS ACTION FOR DAMAGES FOR CONSPIRING TO ENCOURAGE ILLEGAL VOTING (10 ILCS 5/29-19)

1-60. Plaintiffs Neal, Cowen and Petrone re-allege and incorporate by reference the allegations contained in paragraphs 1 through 60 of Count I herein as their allegations 1 through 60 of Count IV.

61. Plaintiffs Neal, Cowen and Petrone, pursuant to Section 2-801 of the Code of Civil Procedure (735 ILCS 5/2-801), bring this action on their own behalf and on behalf of all citizens of the State of Illinois, except those who have offered to sell their votes and those who have bid on the votes being offered as alleged above (the "class"). The class is so numerous that joinder of all members is impractical; questions of law or fact are common to the class; adequate representation of claims of representative parties exists and a class action is an appropriate litigation procedure in terms of time, effort and expense and uniformity of decision.

62. Section 29-19 of The Election Code (10 ILCS 5/29-19) provides in part that "Whoever knowingly or willfully * conspires with another individual for the purpose of encouraging *** illegal voting, or pays or offers to pay or accepts payment *** for voting shall be liable to the party injured or any other person affected, in an action or proceeding for redress."**

63. Under Section 29-19, Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs Neal, Cowen and Petrone and to each member of their class not to conspire with others for the purpose of encouraging illegal voting.

64. Defendants, and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have knowingly and willfully conspired for the purpose of encouraging illegal voting.

65. Defendants, and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have by their unlawful conspiracy to encourage illegal voting breached their duty to Plaintiffs Neal, Cowen and Petrone and each member of their class and Plaintiffs Neal, Cowen and Petrone and each member of their class have suffered injuries as a result of said breach.

66. Defendants are, therefore, liable to Plaintiffs Neal, Cowen and Petrone and to each member of their class under Section 29-19 of The Election Code for conspiring to encourage illegal voting.

WHEREFORE, Plaintiffs request that the Court:

A. Order Defendants to pay class members their damages for injuries sustained due to the Defendants' conspiracy to encourage illegal voting and Defendants' breach of duty.

B. Order Defendants to pay class members their costs and attorneys' fees for this action.

C. Order such other relief that the Court may deem just.

HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC.,

Defendants,

00 CE 031

PLAINTIFFS' EMERGENCY MOTION FOR A TEMPORARY RESTRAINING ORDER OR PRELIMINARY INJUNCTION

NOW COMES the Board of Election Commissioners of the City of Chicago, langdon d. neal, richard a. cowen and THERESA M. PETRONE, Plaintiffs in the above-entitled cause, by their attorney, James M. Scanlon & Associates, and moves this Court to enter a temporary restraining order, without bond, pursuant to Section 11-101 of the Code of Civil Procedure (735 ILCS 5/11-101) or a preliminary injunction pursuant to Section 11-102 of the Code of Civil Procedure, notice having been given to the defendants, restraining and enjoining Defendants HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., and each them and their agents, employees, and all others acting in concert with them from using or operating an Internet web site known as "Voteauction.com" or any web site by any other name in any manner as a forum for conducting an "auction" for the purpose of encouraging,

soliciting and allowing residents of the State of Illinois to sell their votes to be cast at the November 7, 2000 General Election and encouraging, soliciting or allowing individuals and corporations to "bid" on and buy such votes, all until further order of this Court.

More specifically, Plaintiffs move:

A. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating any Internet web site that encourages or allows residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election.

B. The Court enjoin Defendants and all those acting in concert with them and order them to immediately cease and desist from using, operating, facilitating or accessing domain name "voteauction.com" and to remove such web site from the Internet completely or, in the alternative, to modify the Internet web site known as "voteauction.com" so as to remove any illegal content.

C. The Court enjoin Defendants and all those acting in concert with them from allowing or continuing registration of the Internet domain name "voteauction.com" or any other domain name offering substantially the same service as voteauction.com.

D. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately cease and desist from using or operating in the State of Illinois any Internet web site by any name in any manner that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

E. The Court enjoin the Defendants and all those acting in concert with them and order them to immediately disclose to the proper election authorities the names and addresses of every individual in Illinois who has sold his or her vote or has offered to sell his or her vote through voteauction.com and the names and addresses of every individual and/or entity that has paid or has offered to pay for votes of Illinois residents through voteauction.com.

F. The Court enjoin the Defendants and all those acting in concert with them and order them to cease and desist from accepting from residents of the State of Illinois any registration or offer to sell votes or to buy votes at auction through voteauction.com and to modify their web site to indicate that all registrations or offers to sell votes from Illinois residents will be denied.

G. The Court order that Defendants shall within 10 days report to the Court on the measures they have taken to implement this order.

H. The Court shall retain jurisdiction over this matter.

I. The Court order Defendants to pay Plaintiffs their costs and attorneys' fees for this action.

J. The Court order such other relief that the Court may deem just.

In support of this motion, a copy of the Plaintiffs' verified Complaint for Declaratory Judgment, Injunction and Other Relief and exhibits thereto filed in this Court on October 16, 2000 is attached hereto and made a part of this motion.

MEMORANDUM OF LAW IN SUPPORT OF EMERGENCY MOTION FOR TEMPORARY RESTRAINING ORDER OR PRELIMINARY INJUNCTION

Introduction

Plaintiffs BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and THERESA M. PETRONE bring this action against the Defendants, HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., seeking declaratory judgment, injunctive relief and other legal and equitable remedies. Defendants either own, operate, maintain, service or support an Internet web site called "Voteauction.com." Voteauction.com is an "auction" site that encourages, solicits and allows voters in the United States and in the State of Illinois register to sell their votes to be cast at the November 7, 2000 General Election for President and Vice President of the United States. Voteauction.com also encourages, solicits and allows individuals or entities to "bid" on and buy these votes. Plaintiffs submit that Defendants, either jointly, severally or in the alternative are in violation of the election laws of the State of Illinois and the United States prohibiting the buying and selling of votes at an election, or the attempted buying and selling of votes at an election. These laws also prohibit anyone from soliciting others to buy or sell votes or from conspiring with others commit the offenses of buying or selling votes. At issue is whether Defendants should be allowed to knowingly and willfully ignore Federal and State laws designed to protect the ballot box from fraud and corruption.

BRIEF STATEMENT OF RELEVANT FACTS

In or about August of this year, defendant JAMES BAUMGARTNER, a resident of the State of New York, created and launched an Internet web site called "Voteauction.com." Voteauction.com encourages American voters to sell their votes for the November 7, 2000 General Election for President and Vice President to the highest bidder. The Voteauction.com web site states in part, "Now you can profit from your election capital by selling your vote to the highest bidder." See Complaint, ¶26, Exhibit A, 1. The web site solicits and allows individuals to register with Voteauction.com by going to an on-line computer screen, filling in the form on the screen provided (including name, address and political affiliation), and then clicking the "sell" button on the left hand portion of the screen. (Complaint, ¶26, Exhibit A, 6-7)

Voteauction.com also solicits and allows individuals, corporations or others to "bid" on the votes being offered for sale by registering on-line using a computer screen registration form. Bidders can submit bids for a block of votes consisting of all the votes offered for sale in any particular state. The Voteacution.com web site provides that the starting bid for each state is \$100, with a minimum bid increase of \$50. The site states, "The winning bidder for each state will be able to choose who the group will vote for en masse." The site further states that, "The winning bidder will have to contact the voteauction.com voters in order to provide payment

and for the voters to provide verification." (Complaint, ¶28, Exhibit A, 8-19)

According to the Voteauction.com web site, Voteauction.com is concentrating on just the U.S. Presidential election in the November 7, 2000 General Election, but Voteauction.com hopes that in future it will be able to "grow our business into every election market niche from Senatorial races to municipal water commissioner." (Complaint ¶32, Exhibit, 19)

As of October 12, 2000, the Voteauction.com web site claims that 1,131 Illinois residents (or about 7.5% of the total number of registrants throughout the United States) had registered on-line through Voteauction.com offering to sell their votes for the November 7, 2000 General Election to the highest bidder. (Complaint, ¶27, Exhibit A, 16) As of October 12, 2000, the Voteauction.com claims that the highest bid offered for the purchase of Illinois residents' votes for the November 7, 2000 General Election was \$14,000, equaling \$12.38 per vote. (Complaint, ¶29, Exhibit A, 16)

Articles posted on the Voteauction.com web site indicate that Defendant Baumgartner planned to have voters mail to him their absentee ballots to verify the selections they made for President and Vice President of the United States. He is reported as saying in August that potential vote sellers were being notified that the Voteauction "legal agreement," which was still being drafted, would be sent out at the end of the month. Baumgartner is also reported as saying that he was "considering a process in which the Voteauction participant fills out an absentee ballot and votes for whomever they want in every race but the presidency." "Whether that choice will be Bush, Gore, Nader, Buchanan, or someone else entirely is determined by the outcome of the online auction." "Then when the time comes, whoever wins the auction decides who this group is going to vote for," Baumgartner is quoted as saying, "So I tell those people you should vote for this person. Then they fill in the form, and then they send it to me. And I just verify that they're voting for the correct person." (Complaint, ¶30, Exhibit A, 34)

Sometime in August, Baumgartner purportedly sold the rights to Voteauction.com to Defendant Hans Bernhard, an Austrian businessman. Bernhard is reported to have said that his holding company would operate Voteauction.com outside of the United States to circumvent federal and state laws that forbid purchasing and buying ballots. (Complaint ¶53, Exhibit A, 29)

In an article appearing on The Lycos Network on September 6, 2000, a copy of which is posted on Voteauction.com's web site, an unidentified spokesman for Voteauction.com is reported to have said:

"Verification will now be the responsibility of the winning bidder. * They can choose from a variety of methods for verification of the votes. They may have the voters send in their absentee ballots for verification, they may have the voters take photographs inside the voting booth, or they go to the honor system – that is the system that many vote-purchasing endeavors have used in the past. We have chosen to have the winning bidders responsible for the verification because it would not be feasible to have people send their absentee ballots all the way to Austria and have us send them back to America within an appropriate time frame."**

(Complaint, ¶31, Exhibit A, 42-43)

The Voteauction.com web site claims that it will not receive any money from the auction. However, Bernhard has stated that "We bought the domain name and related business because we see this as a serious business venture in which we can make money." (Complaint, ¶33, Exhibit A, 19, 29)

On September 20 and again on October 5, the general counsel to the Illinois State Board of Elections, A.L. Zimmer, sent e-mails to Voteauction.com warning that the buying or selling of votes in Illinois is a Class 4 felony. (Complaint ¶52, Exhibit A, 107-108) In fact, there also federal laws that make the buying or selling of votes at any election involving candidates for federal office a criminal offense.

But nowhere on the Voteauction.com web site does it state or warn visitors to the site that the selling and buying of votes, or offering to buy or sell votes is illegal. Nor does the site warn that individuals selling or offering to sell their votes, and individuals buying or offering to buy votes may be committing a crime.

I. ILLINOIS JURISDICTION

Defendants are subject to the jurisdiction of the courts of the State of Illinois under Illinois' so-called "long-arm statute." Section 2-209 of the Illinois Code of Civil Procedure (10 ILCS 5/2-209) provides in relevant part:

(a) Any person, whether or not a citizen or resident of this State, who in person or through an agent does any of the acts hereinafter enumerated, thereby submits such person, and, if an individual, his or her personal representative, to the jurisdiction of the courts of this State as to any cause of action arising from the doing of any of such acts:

(1) The transaction of any business within this States;

(2) The commission of a tortious act within the State;

(7) The making or performance of any contract or promise substantially connected with this State.

(c) A court may also exercise jurisdiction on any other basis now or hereafter permitted by the Illinois Constitution and the Constitution of the United States.

Thus, the Illinois long-arm statute permits Illinois courts to exercise personal jurisdiction over defendants who engage in a variety of conduct in connection with the State and "on any other basis now or hereafter permitted by the Illinois Constitution and the Constitution of the United States." The long-arm statute of Illinois has been characterized as "one which provides jurisdiction over nonresidents to the fullest extent permitted by due process concepts." *Connelly v. Uniroyal, Inc.*, 55 Ill.App.3d 530, 536, 370 N.E.2d 1189 (First Dist. 1977). "An Illinois nonresident may be sued in Illinois if (1) jurisdiction is authorized under the Illinois long-arm statute, and (2) the minimum contacts required by due process are present." *FMC Corp. v. Varonos*, 892 F.2d 1308, 1310 (7th Cir. 1990). "The Illinois Constitution requires the court to inquire whether it is 'fair, just and reasonable to require a nonresident defendant to defend an action in Illinois, considering the quality and nature of the defendant's acts which occur in Illinois, or which affect interests located in Illinois.'" *Robbins v. Ellwood*, 141 Ill.2d 249, 565 N.E.2d 1302, 1316 (1990). While Illinois authorizes courts to exercise personal jurisdiction under the long-arm statute, they must do so within the limits of federal constitutional standards. Federal due process requires minimum contacts with the forum state "such that the maintenance of the suit does not offend traditional notions of fair play and substantial justice." *Transcraft Corporation v. Doonan Trailer Corp.*, 1997 WL 733905, *2 (N. D. Ill. 1997), quoting *International Shoe Co. v. Washington*, 326 U.S. 310, 316, 66 S.Ct. 154, 90 L.Ed. 95 (1945). If the contacts between the defendants and Illinois are sufficient to satisfy the requirements of due process, then the requirements of both the Illinois long-arm statute and the United States Constitution have been met, and no other inquiry is needed. *Scherr v. Abrahams*, 1998 WL 299678 (N.D.Ill.) "Minimum contacts" have been defined as "some act by which the defendant purposely avails itself of the privilege of conducting activities within the forum state, thus invoking the benefits and protection of its laws." *Transcraft*, supra, 1997 WL 733905, *2, citing *Burger King Corp. v. Rudzewicz*, 471 U.S. 462, 475, 105 S.Ct. 2174, 85 L.Ed.2d 528 (1985). "Put another way, the federal due process standard requires courts to consider whether the defendant's purposeful contacts with the forum state were such that the defendant could reasonably expect the courts of that state to assert jurisdiction." *Id.* "The definition of 'minimum contacts,' however, depends on the type of personal jurisdiction asserted." *Pheasant Run, Inc. v. Moyse*, 1999 WL 58562, *2 (N.D. Ill.)

"General jurisdiction permits a court to exercise personal jurisdiction over a non-resident defendant for non-forum related activities when the defendant has engaged in 'systematic and continuous' activities in the forum state." *Zippo Manufacturing Company v. Zippo Dot Com, Inc.*, 952 F. Supp. 1119, 1122. "In the absence of general jurisdiction, specific jurisdiction permits a court to exercise personal jurisdiction over non-resident defendant for forum-related activities where the relationship between the defendant and the forum falls within the 'minimum contacts' framework of *International Shoe Co. v. Washington* [citation]." *Id.*

In the present case, this Court has specific jurisdiction over these Defendants. Defendants either own, operate, maintain, service or support the Internet web site called "Voteauction.com," which is the vehicle by and through which these Defendants have conducted illegal and tortious activity. Defendants have submitted to the jurisdiction of Illinois courts on four grounds. First, they have transacted business within the State of Illinois for purposes of Section 2-209(a)(1) of the long-arm statute. Second, Defendants have committed tortious acts within the

State of Illinois under Section 2-209(a)(2) of the statute. Third, Defendants have made and/or performed a contract or promise substantially connected with the State of Illinois under Section 2-209(a)(7) of the statute. Fourth, because the Court may also exercise jurisdiction on any other basis permitted by the Illinois Constitution, jurisdiction over the Defendants is established by their conspiracy with Illinois residents to commit tortious acts by their knowing, willful and continuing violations of the election laws of the State of Illinois and of the United States of America. "Specific jurisdiction over a non-resident defendant who has not consented to suit in a forum state will be shown where 'the defendant has purposely directed his activities at residents of the forum and the litigation results from alleged injuries that arise out of or relate to those activities'." Vitullo v. Velocity Powerboats, Inc., 1998 WL 246152, *3 (N.D. Ill. 1998).

Transaction of business within the State of Illinois

Over the last several years, "a jurisprudence of 'web' personal jurisdiction has begun to develop" with regard to whether Internet web operators have transacted business in a forum state. Transcraft Corporation v. Doonan Trailer Corp., 1997 WL 733905, *8 (N.D. Ill.). The cases have generally followed a "sliding scale" analysis first articulated in Zippo Manufacturing Co. v Zippo Dot Com Inc., 952 F.Supp. 1119 (W.D. Pa. 1996) that divided "web" cases into three categories. Federal courts interpreting Illinois' long-arm statute have adopted the Zippo "sliding scale" framework. See, Vitullo v. Velocity Powerboats, Inc., 1998 WL 246152 (N.D. Ill. 1998). The first category includes cases where defendants actively do business on the Internet. In those instances, personal jurisdiction is found because the defendants "enter into contracts with residents of a foreign jurisdiction that involve knowing and repeated transmission of computer files over the Internet." Zippo, 952 F.Supp. 1119, 1124. The second category deals with situations "where a user can exchange information with the host computer. In these cases, the exercise of jurisdiction is determined by examining the level of interactivity and commercial nature of the exchange of information that occurs on the Web site." Id. The third category involves passive Web sites; i.e., sites that merely provide information or advertisements to users. Courts have not exercised jurisdiction in this category because to do so "would mean that there would be a nationwide (indeed, worldwide) personal jurisdiction over anyone and everyone who establishes an Internet Web site. Such Nationwide jurisdiction is not consistent with traditional personal jurisdiction case law -." Transcraft Corporation, supra, 1997 WL 733905 *8, quoting Hearst Corp. v. Goldberger, 1997 WL 97097, *1 (S.D.N.Y. 1997).

"By considering the actual nature of the contacts between a defendant and Illinois via the Internet, the court avoids the risk of 'eviscerat[ing] the personal jurisdiction as it currently exists'." Vitullo, supra, 1998 WL 246152, *4. Vitullo observed that no court has ever held that an Internet advertisement alone is sufficient to confer jurisdiction - there had to be "something more" to indicate that the defendant "purposely (albeit electronically) directed his activity in a substantial way to the forum state." 1998 WL 246152, *4-5. Vitullo further observed that "something more" could be the specific intent to cause harm to a forum State's citizen, or for example, active use of the Internet to run a gambling game with contestants from the forum State. 1998 WL 246152, *5. For example, jurisdiction has been found in the following cases.

In Hasbro Inc. v. Clue Computing Inc., 994 F. Supp. 34 (D. Mass. 1997), the court found jurisdiction where the defendants' web site encouraged and enabled anyone, including residents of the forum state, to send e-mail to the company.

In Park Inns International v. Pacific Plaza Hotels Inc., 5 F.Supp. 2d 762 (D. Ariz. 1998), the court found jurisdiction where an interactive web site accepted hotel reservations from residents of the forum state.

In American Network Inc. v. Access America/Connect Atlanta Inc., 975 F. Supp. 494 (S.D.N.Y. 1997), the court found jurisdiction where purposeful availment was found based on the defendant's sale of subscriptions for Internet services to residents of the forum state, and contracts were executed with those residents through its web site.

In Digital Equipment Corp. v. Alta Vista Technology Inc., 960 F.Supp. 456 (D. Mass. 1997), jurisdiction was found where the defendant had purposely availed itself of the benefits of the forum by entering into an agreement with the residents of the forum state and thereafter sold products to forum residents on at least three occasions through its web site.

In GTE New Media Services Inc. v. Ameritech Corp., 21 F.Supp.2d 27 (D.D.C. 1998), the court found jurisdiction where defendant's national "Yellow Pages" directory services were highly interactive and the quality and nature of the contacts were significant enough to allow the assertion of personal jurisdiction. The defendant actually derived substantial ad revenues from the sites from residents of the forum accessing and using the site.

In Panavision International v. Toepfen, 141 F.3d 1316 (9th Cir. 1998), jurisdiction was found where the defendant knowingly registered established trademark names as domain names for its web sites, then attempted to sell the rights to the domain name to the holder of the trademark.

In State of Minnesota v. Granite Gate Resorts Inc., 568 N.W.2d 715 (Minn. 1997), the Minnesota appellate court held that defendants were subject to personal jurisdiction in the state based on their actions of advertising on the Internet a forthcoming on-line gambling service and developing from the Internet a mailing list that included one or more Minnesota residents. Gambling was illegal in Minnesota, but defendant's web site failed to advise Minnesota residents of that fact in violation of the state's consumer protection laws. Computers located throughout the United States, including Minnesota, accessed defendant's web sites and during a two-week period at least 248 Minnesota computers accessed and received transmissions from defendant's web site. The court found that advertising in the forum state, or establishing channels for providing regular advice to customers in the forum state indicates the defendant's intent to serve the market in that state. The Minnesota court concluded that defendants who know their message will be broadcast in that state are subject to suit there. The court also relied on its strong interests in enforcing its consumer protection statutes and regulating gambling.

In Vitullo, supra, 1998 WL 246152, the court found jurisdiction over out of state defendant

where its web site solicited Illinois residents to attend a local boat show within Illinois. The web site provided a hyperlink with information about the show. Therefore, the court found the web site's targeting of local residents was that "something more" that was sufficient to assert specific jurisdiction.

In *Thompson v. Handa-Lopez Inc.*, 998 F. Supp. 738 (W.D. Texas 1998), the court held that defendant California company operating an Internet casino game had sufficient minimum contacts with Texas to permit specific jurisdiction over defendant in Texas. Defendant's web site did more than advertise and maintain a toll free number - it continuously interacted with Texas casino players, entering into contracts with them as they played the various games. The court also held that Texas clearly had a strong interest in protecting its citizens by adjudicating disputes involving alleged breach of contract, fraud, and violations of the state's deceptive trade practices act by an Internet casino on Texas residents.

In *International Star Registry of Illinois v. Bowman-Haight Ventures Inc.*, 1999 WL 300285 (N. D. Ill. 1999), the court found that defendant Virginia corporation submitted to jurisdiction in Illinois under the state's long-arm statute where defendant's web site invited inquiries from potential customers in Illinois via electronic mail and at least 22 Illinois residents purchased "star" registrations over the Internet. The fact that defendant secured an economic benefit from Internet users in Illinois that purchased defendant's goods over the Internet signals that the defendant purposely availed itself of the privilege of conducting activities within Illinois.

In the case at bar, the Internet web site address, or "URL," through which Voteaction.com can be accessed is "<http://www.vote-auction.com/>." Voteaction.com can be, and has been, accessed by residents of the State of Illinois using computers located in the State of Illinois. Indeed, Voteaction.com's own web site claims that as of October 12, 2000, as many as 1,131 Illinois residents (or about 7.5% of all residents nationwide) had registered with Voteaction.com, using its on-line registration form, for the purpose of selling their votes to the highest bidder. The lead paragraph on the first page of Voteaction.com's web site states:

"Are you planning on staying home this election day? Now you can profit from your election capital by selling your vote to the highest bidder. To register with voteaction.com, click on the 'sell' button on the left hand portion of your screen."

There are three hyperlinked boxes appearing to the left of this message: (1) "SELL, register to sell your vote"; (2) "BID, register to bid on a voting block"; and (3) "CHECK the current price of a voting block." (Complaint, Exhibit A, 1) Voteaction.com then provides an on-line registration form that is to be completed by the vote seller. The vote seller then hits the "Submit" button and the registration is transmitted to Voteaction.com via the Internet. (Complaint, Exhibit A, 6-7) The site then advises vote sellers that, "When you register on this page, you will also be registered for the voters email list which will contain important updates for voteaction voters." (Complaint, Exhibit A, 6) According to reports posted on the Voteaction.com web site, vote sellers were to be notified that a "Voteaction legal agreement"

was being drafted and would be sent out to sellers at the end of August. (Complaint ¶30, Exhibit A, 34) Upon information and belief, all or substantially all 1,131 Illinois residents who, according to Voteauction.com, have registered with Voteauction.com to sell their votes and to register for the voters email list did so while located in the State of Illinois and using computers located in Illinois.

A similar procedure is available for individuals or corporations who wish to register to bid for and buy votes. (Complaint, Exhibit A, 8-15)

These facts demonstrate that Voteauction.com falls within the first category of web cases described under the Zippo "sliding scale" analysis: Defendants have clearly transacted business in Illinois over the Internet. Defendants have accepted over 1,100 on-line registrations from Illinois residents agreeing to sell their votes at auction and have entered into or will enter into agreements with these Illinois residents for the purpose of selling such votes at auction. Even if Defendants have not accepted money from these Illinois residents, Defendants have secured a business advantage by utilizing these residents' votes in their auction scheme. Clearly, these actions constitute the transaction of business within the State of Illinois by Defendants for purposes of Section 2-209(a)(1) of the Code of Civil Procedure, thus subjecting Defendants to the jurisdiction of Illinois courts.

Commission of Tortious Acts within the State of Illinois

"Under the Illinois long-arm statute, torts that are committed in Illinois authorize the exercise of jurisdiction here." *International Star Registry of Illinois v. Bowman-Haight Ventures Inc.*, 1999 WL 300285, *6 (N.D. Ill. 1999) See also, *FMC Corporation v. Varonas*, 892 F.2d 1308 (7th Cir. 1990) The word "tortious," when used by Illinois' long-arm statute, "is not restricted to the technical definition of a tort, but includes any act committed in this State which involves a breach of duty to another and makes the one committing the act liable to respondent in damages." *Braband v. Beech Aircraft Corporation*, 51 Ill.App.3d 296, 300, 367 N.E.2d 118 (First Dist. 1977), affirmed 72 Ill.2d 548, 382 N.E.2d 252 (1978), certiorari denied 442 U.S. 928, 99 S.Ct. 2857 (1979) "A tort to be an actionable wrong, requires a duty, a breach of the duty and an injury." *Braband*, 51 Ill.App.3d at 301.

In the case at bar, Defendants owe a duty to the citizens of Illinois not to violate Federal and State election laws designed to protect the integrity of the voting process. Certainly Defendants owe a duty to Plaintiffs and to the citizens of the State of Illinois under Section 29-17 of The Election Code not to cause them to be deprived of any right, privilege or immunity under the Constitution and laws of the State of Illinois and of the United States pertaining to the conduct of elections, voting, or the election of candidates for public office. See, Complaint, Count III, ¶¶64-65. Defendants also owe a duty to Plaintiffs and to the citizens of the State of Illinois under Section 29-19 of The Election Code not to conspire to encourage illegal voting. See Complaint, Count IV, ¶¶62-63. Both of these statutes create a duty the breach of which makes the offender liable to the persons injured.

Defendants' conduct violates the election laws of the State of Illinois and of the United States and has caused Plaintiffs and the citizens of the State of Illinois to be deprived of their rights and privileges to a free and equal election guaranteed under Article 3, Section 3 of the Illinois Constitution (Complaint, Count III, ¶62) and a fair and impartially conducted election (Complaint, Count III, ¶63). Defendants have, therefore, breached their duties to Plaintiffs and to the citizens of the State of Illinois and Defendants are, therefore, liable for their breach of duty.

Here, the injury occurs in Illinois, for it is here where the illegal and fraudulent ballots will be received, processed, counted and canvassed and it is here where the results of the illegal voting will be felt. (Complaint, ¶¶18-23) Tortious acts occur where the injury is sustained. *Gray v. American Radiator & Standard Sanitary Corp.*, 22 Ill.2d 432, 176 N.E.2d 761, 762-63 (1961) ("[T]he place of a wrong is where the last event takes place which is necessary to render the actor liable.") Defendants' deliberate and on-going communications via the Internet to residents in Illinois in furtherance of their scheme to auction votes and thereby defraud the people of Illinois were clearly made to affect Illinois interests. In so doing, they have subjected themselves to jurisdiction under Section 2-209(a)(2) of the long-arm statute for tortious activities committed in Illinois.

The fact that the Defendants have not had a physical presence in Illinois does not defeat jurisdiction. See, e.g., *FMC Corporation v. Varanos*, 892 F.2d 1308 (7th Cir. 1990) (telexes and telecopied communications from defendant in Greece to plaintiffs in Illinois, coupled with an intent to commit fraud and affect interests in Illinois, subjected defendant to long-arm jurisdiction). The phrase "commission of a tortious act" as employed in the long-arm statute applies not only to an injury which occurs in Illinois, but also to all elements and conduct which significantly relate to or have significant causal connection with the injury suffered. *Connelly v. Uniroyal Inc.*, 55 Ill.App.3d 530, 534, 370 N.E.2d 1189, 1192 (First Dist. 1977) And the fact that the illegal and fraudulent ballots have not yet been deposited into the ballot box in Illinois does not deprive the court of jurisdiction. "For the purpose of the state long-arm statute a 'tortious act' may be committed before a cause of action accrues and the statute of limitations commences to run." *Id.* Thus, "Nothing * requires that the words 'tortious act' as used in the long-arm statute be construed to require an injury to occur in Illinois before the courts of this state may acquire jurisdiction." *Id.***

Defendants' present, past and future violations of Federal and State election laws and their continuing breach of duty to Plaintiffs' and Illinois citizens in depriving them of a fair, free and equal election constitute the commission of tortious acts within Illinois so as to subject them to jurisdiction of Illinois courts under 735 ILCS 5/2-209(a)(2)

Making or performance of a contract or promise substantially connected with the State of Illinois

Illinois courts have held that despite the lack of physical presence within Illinois the long-arm statute and due process permit Illinois courts to gain jurisdiction over a person or corporation who enters into a contract knowing that it will be performed in Illinois. *Biltmoor Moving and*

Storage Company v. Shell Oil Company, 606 F.2d 202 (7th Cir. 1979) Here, the Defendants have induced over 1,100 Illinois residents to register on-line through the Defendants' web site to sell their votes for the November 7, 2000 General Election. Voteauction.com then arranges to have other individuals bid on and buy these votes. Voteauction.com's web site indicates that those persons who register with Voteauction.com to sell their vote will be sent Voteauction.com's "legal agreement." This "legal agreement" constitutes the making of a contract or promise substantially connected with the State of Illinois. Even without a formal "legal agreement" the conduct of the Defendants, the sellers (those Illinois residents who offer their votes for sale) and the bidders constitute a promise to sell, and a promise to buy such votes. Defendants have promised both sellers and buyers to act as the auctioneer or facilitator of the illegal sale and purchase of votes. The performance by any party of the contract or promise would be substantially connected with the State of Illinois in that the votes of Illinois residents would be sold and bought illegally. Under the laws of Illinois, these ballots, unless detected, will be cast, counted and canvassed in Illinois. Defendants' conduct, and the conduct of their co-conspirators, is intended by them to affect the interests of Illinois by infecting Illinois ballot boxes with fraudulent votes. Accordingly, Defendants have, by operation of Section 2-209(a)(7) of the Code of Civil Procedure, subjected themselves to the jurisdiction of Illinois courts.

Conspiracy Theory

In 735 ILCS 5/2-209(c), the Illinois long-arm statute also has a "catch-all" provision which allows Illinois state courts to assert personal jurisdiction to the maximum extent to assert personal jurisdiction by the Illinois and United States Constitutions. United Phosphorus Ltd. v. Angus Chemical Company, 43 F.Supp.2d 904 (N.D. Ill. 1999). "Moreover, if jurisdiction exists under the 'catch-all' provision, a defendant does not have to perform any of the enumerated acts set forth in the remainder of the statute." United Phosphorus, 43 F.Supp.2d at 911-912.

Defendants are subject to Illinois jurisdiction under the so-called "conspiracy theory." "Under this theory, a court may assert jurisdiction over all of the co-conspirators, both resident and non-resident, based on their involvement in a conspiracy which occurred within the forum." United Phosphorus, 43 F.Supp.2d at 912. "To satisfy this standard, plaintiffs must: (1) make a prima facie factual showing of a conspiracy (i.e., point to evidence showing the existence of the conspiracy and the defendant's knowing participation in that conspiracy); (2) allege specific facts warranting the inference that the defendant was a member of the conspiracy; and (3) show that the defendant's co-conspirator committed a tortious act pursuant to the conspiracy in the forum." Id. "The evidence relating to the conspiracy may be direct or circumstantial." Id.

"[I]f the plaintiff can satisfy the three requirements necessary under the conspiracy theory of jurisdiction, even a foreign defendant with no real contact with the forum state and no direct business relations tied to the forum state would be subject to the court's jurisdiction." Id.

Here, the Plaintiffs have made a prima facie factual showing in their verified Complaint of the existence of a conspiracy among Defendants and between the Defendants and over 1,100 Illinois residents to sell and buy votes in violation of the election laws of the State of Illinois and of the United States. "[T]o be liable as a co-conspirator you must be a voluntary participant in a

common venture ... you need not have agreed on the details of the conspiratorial scheme or even know who the other conspirators are. It is enough if you understand the general objectives of the scheme, accept them, and agree, either explicitly or implicitly, to do your part to further them." United Phosphorus, 43 F.Supp.2d at 914. By and through Voteauction.com, Defendants have solicited and allowed Illinois residents to register to sell their votes at auction, and Illinois residents have registered with Defendants through Voteaction.com for the purpose of selling their votes at auction. These acts by Defendants and these Illinois residents constitute a conspiracy between them to illegally sell votes and to arrange for the purchase of such votes through auction.

As to the second prong of the conspiracy theory test, Plaintiffs' verified Complaint makes a specific factual showing that the Defendants were members of (and, indeed, instigators of) the conspiracy to illegally sell and buy Illinois votes.

As regards the final element necessary to satisfy the conspiracy theory of jurisdiction, as alleged in the verified Complaint, Defendants and these Illinois residents have knowingly and intentionally committed violations of the election laws of this State and of the United States and have breached a duty to Plaintiffs and to all Illinois citizens not to subject them to the deprivation of the rights and privileges under the Constitution and laws of the State of Illinois and of the United States to fair, free and equal elections. Both Defendants and Defendants' co-conspirators (those Illinois residents who have sold or agreed to sell their votes) have committed tortious acts within the State of Illinois.

Because Plaintiff's Complaint makes a sufficient factual showing that there is a conspiracy, that Defendants are members of the conspiracy, and that Defendants' co-conspirators have committed and will commit tortious acts in Illinois pursuant to the conspiracy, Defendants are therefore subject to the jurisdiction of Illinois courts pursuant to the "conspiracy theory" under Section 2-209(c) of Illinois' long-arm statute.

II. DEFENDANTS' CONDUCT IS ILLEGAL AND TORTIOUS

As noted earlier, the laws of the State of Illinois and of the United States prohibit the selling and buying of votes. Section 29-1 of The Election Code (10 ILCS 5/29-1) provides, "Any person who knowingly gives, lends or promises to give or lend any money or other valuable consideration to any other person to influence such other person to vote * or to influence such other person to vote for or against any candidate or public question to be voted upon at any election shall be guilty of a Class 4 felony." Thus, vote buying is illegal under Illinois law and anyone giving or promising to give money to an Illinois resident to influence him or her to vote or to vote for or against any candidate to be voted upon at the November 7, 2000 General Election is guilty of a Class 4 felony which is punishable by imprisonment for 1 to 3 years.**

Section 29-3 of The Election Code (10 ILCS 5/29-3) prohibits vote selling, providing, "Any person who votes for or against any candidate or public question in consideration of any gift or loan of money or for any other valuable consideration * shall be guilty of a Class 4 felony."**

Any person in Illinois who has attempted to sell his or her vote at the November 7, 2000 General Election by registering with Voteauction.com to sell his or her vote, and any person who has attempted to buy the votes of Illinois residents for the November 7, 2000 General Election by registering with Voteauction.com to bid on such votes, also commits a Class 4 felony. See 10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-4

Defendants, by and through Voteauction.com, are guilty of soliciting others to sell or buy votes in Illinois and have committed a Class 4 felony. See 10 ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-1. They are also guilty of conspiring with others to illegally sell and buy votes in Illinois. (ILCS 5/29-13; 720 ILCS 5/2-12; 720 ILCS 5/8-2)

Illinois law also prohibits anyone from marking or tampering with an absentee ballot of another person or from taking an absentee ballot of another person so that an opportunity for fraudulent marking or tampering is created. (10 ILCS 5/19-6, 5/29-20) Thus, Defendants' scheme to require those offering to sell their votes to submit their absentee ballots to Defendants so as to verify their voting selections violates Illinois law and violates the secrecy of the ballot and Defendants are guilty of conspiring to commit absentee vote fraud, of soliciting others to commit absentee vote fraud, and of attempted absentee vote fraud. See 10 ILCS 5/29-20.

Because the November 7, 2000 General Election is a "mixed election," i.e., there are also Federal offices to be elected, there are a number of Federal election statutes that also apply to Defendants' conduct. For example, Title 18, Section 597 of the United States Code (18 U.S.C. §597) makes it a crime to pay or offer to pay a person to vote or withhold his vote, or to vote for or against any candidate. It is also a crime to solicit, accept, or receive any payment in consideration for voting or withholding from voting. A similar prohibition is also found in Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)). Thus, any person in Illinois who has offered to sell his or her vote at the November 7, 2000 General Election by registering with Voteauction.com to sell his or her vote, and any person who has offered to buy the votes of Illinois residents for the November 7, 2000 General Election by registering with Voteauction.com to bid on such votes, has committed a violation of Federal law.

Title 42, Section 1973i(c) of the United States Code (42 U.S.C. §1973i(c)) also provides that for Federal elections, "Whoever knowingly or willfully * conspires with another individual for the purpose of *** illegal voting *** shall be fined not more than \$10,000 or imprisoned not more than five years, or both." Thus, Defendants and those Illinois residents who have agreed to sell their votes have committed a violation of Federal law in that they have conspired for the purpose of illegal voting.**

There are also provisions in Federal and Illinois law that secure for Illinois residents the right to have fair, free and equal elections. Title 42, Section 1973gg10 of the United States Code (42 U.S.C. §1973gg-10) makes it a crime in any Federal election for a person to knowingly and willfully deprive, defraud, or attempt to deprive or defraud the residents of a State of a fair and impartially conducted election process by procuring or casting ballots that are known by the person to be materially false, fictitious, or fraudulent under the laws of the State in which the

election is held. And Article 3, Section 3 of the Constitution of the State of Illinois (Art. 3, §3 Ill. Const.) guarantees Illinois citizens the right to "free and equal" elections. Under this provision, elections are free only when the voters are subjected to no intimidation or improper influence and when every voter is allowed to cast his or her own ballot as his or her own judgment and conscience dictate. *People v. Hoffman*, 116 Ill. 587, 597, 5 N.E. 596, 599 (1886). When the ballot box becomes the receptacle of fraudulent votes, the freedom and equality of elections are destroyed. Defendants' conduct by and through Voteauction.com violates the Plaintiffs' right and the right of all Illinois citizens to free and equal elections. *Emery v. Hennessy*, 331 Ill. 296, 300, 162 N.E. 835, 837 (1928).

There can be no dispute that Defendants and those Illinois residents who have agreed to sell their votes (and those, if any, who have agreed to buy votes) have knowingly and willfully violated the election laws of this State and of the United States. They have conspired with one another and have acted in concert with one another to buy and sell votes in violation of the express prohibitions of the statutes.

Defendants' conduct is also tortious. Section 29-17 of The Election Code (10 ILCS 5/29-17) provides that "Any person who subjects, or causes to be subjected, a citizen of the State of Illinois or any other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution or laws of the United States or of the State of Illinois, relating to registration to vote, the conduct of elections, voting, or the nomination or election of candidates for public or political party office, shall be liable to the party injured or any person affected, in any action or proceeding for redress." Thus, Section 29-17 imposes a duty not to subject Illinois citizens to any deprivation of any right or privilege they have relating to voting, the conduct of elections, and the election of candidates for public office and makes any person breaching that duty liable to those who have been injured by the breach.

Defendants also have a duty under Section 29-19 of The Election Code (10 ILCS 5/29-19) not to conspire with another for the purpose of encouraging illegal voting. If they do so, they shall be liable to the party injured or any other person affected. Defendants, individually and in concert with others, have knowingly and willfully conspired for the purpose of encouraging illegal voting.

Without question, Defendants have breached their duty to Plaintiffs and to Illinois citizens by (1) unlawfully subjecting them to the deprivation of their rights under Article 3, Section 3 of the Illinois Constitution to a free and equal election for the November 7, 2000 General Election and of their right under federal law to a fair and impartially conducted election and (2) conspiring to encourage illegal voting. This constitutes tortious conduct sufficient to subject Defendants to the jurisdiction of the courts of the State of Illinois. This conduct also makes Defendants liable to Plaintiffs and to all Illinois citizens for damages for the injuries they have sustained.

III. INJUNCTIVE RELIEF

For purposes of their motion for a temporary restraining order or preliminary injunction,

Plaintiffs have adopted and incorporated by reference their verified Complaint, which makes specific factual allegations showing the Plaintiffs are entitled to injunctive relief and states a prima facie cause of action.

Plaintiffs have demonstrated a reasonable likelihood of prevailing on the merits of this claim. However, to be entitled to injunctive relieve, the Plaintiffs need only raise a fair question as to the existence of the right to an injunction leading the court to believe that the plaintiff would be entitled to the relief prayed for. Lawter Intern Inc. v. Carroll, 116 Ill.App.3d 717, 451 N.E.2d 1338 (First Dist. 1983).

Unless injunctive relief is granted, Defendants will continue to violate the election laws of the State of Illinois and of the United States and deprive the Plaintiffs and all citizens of the State of Illinois their rights and privileges under the Constitution of the United States and the State of Illinois and the laws passed pursuant thereof to a free and equal election. Defendants' illegal conduct will allow the ballot box to become the receptacle of fraudulent votes, thus infecting the result of the November 7, 2000 General Election, including the election for President and Vice President of the United States. This Court has the power to enjoin conduct that is criminal in nature. See, e.g., City of Chicago v. Cecola, 75 Ill.2d 423, 389 N.E.2d 526 (1979); People v. Boston, 92 Ill.App.3d 962, 416 N.E.2d 333 (Fourth Dist. 1981)

This matter presents situation of great necessity and extreme urgency. The Board and its three commissioners will suffer immediate and irreparable injury in fulfilling their statutory duties to provide for the orderly and lawful administration of this election unless Defendants' unlawful conduct is remedied forthwith. In addition, the three commissioners, as voters intending to vote at the November 7, 2000 General Election, and all citizens of this State will be deprived of their right under the Constitution and laws of the State of Illinois and of the United States to a fair, free and equal election.

Given the nature of these injuries to result from Defendants' unlawful conduct, neither Plaintiffs nor the citizens of the State of Illinois will have an adequate remedy at law in which to redress Defendants' unlawful conduct. Absent immediate relief, Plaintiffs and all voters will, in fact, be denied meaningful relief because the right to vote in this election will be rendered moot after the November 7, 2000 General Election and any remedy at law may be difficult to ascertain.

The threatened injury to the Plaintiffs and to the citizens of the State of Illinois will be immediate, certain and great if injunctive relief is denied while the loss or inconvenience to the Defendants will be comparatively small and insignificant if injunctive relief is granted.

The granting of injunctive relief in this case will not have an injurious effect on the public; indeed, the public interest demands that the Defendants and all those acting in concert with them be enjoined from continuing their illegal scheme.

Respectfully submitted,

BOARD OF ELECTION COMMISSIONERS

**FOR THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and
THERESA M. PETRONE, Plaintiffs**

Preliminary Injunction Order

**IN THE CIRCUIT COURT OF COOK COUNTY
COUNTY DEPARTMENT, COUNTY DIVISION**

**Board of Election Commissioners of the City of Chicago, LANGDON D. NEAL, RICHARD A.
COWEN, and THERESA M. PETRONE,**

Plaintiffs,

vs.

**HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH
JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC.,**

Defendants.

00 CE 031

PRELIMINARY INJUNCTION ORDER

This matter coming before the Court upon Plaintiffs' Emergency Motion for a Temporary Restraining Order or Preliminary Injunction pursuant to Sections 2-701, 11-101 and 11-102 of the Code of Civil Procedure (735 ILCS 5/2-701, 5/11-101 and 5/11-102), seek declaratory judgment, injunctive and other relief against said Defendants either jointly, severally or in the alternative, and upon Plaintiffs' verified Complaint for Declaratory Judgment, Injunction and other relief filed against Defendants HANS BERNHARD, LUZIUS A. BERNHARD, OSKAR OBEREDER, CHRISTOPH JOHANNES MUTTER, JAMES BAUMGARTNER and DOMAIN BANK, INC., and the Court having reviewed and considered the allegations in the verified complaint and exhibits thereto, as well as evidence presented at the hearing on this Motion, and having heard and considered oral argument, the Court finds as follows:

- 1. This Court has subject matter jurisdiction over this action.**
- 2. This Court has personal jurisdiction over all of the parties in this action.**
- 3. Venue is proper in Cook County.**
- 4. Plaintiffs BOARD OF ELECTION COMMISSIONERS OF THE CITY OF CHICAGO, LANGDON D. NEAL, RICHARD A. COWEN and THERESA M. PETRONE, having standing to bring this action.**
- 5. Plaintiffs have demonstrated a likelihood of success on the merits and the proofs, once submitted would likely show that:**

A. Defendants James Baumgartner, Hans Bernhard, Luzius Barnhard, Oskar Obereder, and Christoff Johannes Mutter, and those acting in concert with them, have violated the election laws of the State of Illinois and of the United States by using and operating an Internet web site known as "voteauction.com" as an auction forum for the purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the November 7, 2000 General Election and encouraging, soliciting and allowing individuals and corporations to "bid" on and buy such votes.

B. These Defendants' continued use and operation of the Internet web site known as Voteauction.com as an auction forum for purpose of encouraging, soliciting and allowing residents of Illinois to sell their votes to be cast at the Election and encouraging, soliciting and allowing individuals and corporations to "bid" on or buy such votes constitutes knowing and willful violations of the election laws of the State of Illinois and of the Unites States that will result in illegal and fraudulent voting at the Election if not prevented.

C. These Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or

who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to violate the election laws of the State of Illinois and of the United States.

D. These Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, owe a duty to Plaintiffs and to all citizens of the State of Illinois not to deprive them or defraud them of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

E. These Defendants and all those acting in concert with them, including those Illinois residents who have or will sell their votes or who have or will buy such votes, have deprived and defrauded, and will continue to deprive and defraud if not enjoined, the Plaintiffs and all citizens of the State of Illinois of their rights and privileges under the Constitutions and laws of the State of Illinois and of the United States to a free and equal election and to a fair and impartially conducted election process.

F. That anyone selling or attempting to sell his or her vote, and anyone buying or attempting to buy the votes of another is in violation of the election laws of the State of Illinois and of the United States as enumerated herein.

6. Plaintiffs possess certain and clearly demonstrated rights which need protection.

7. Plaintiffs will suffer irreparable harm without protection of an injunction.

8. There is no adequate remedy at law to compensate for Plaintiffs' injuries.

9. In the absence of injunctive relief, the Plaintiffs would suffer greater harm without an injunction than Defendants will suffer if it is issued.

10. Defendants have been notice of the Plaintiffs' Emergency Motion for a Temporary Restraining Order.

IT IS THEREFORE ORDERED that:

1. Defendants and all those acting in concert with them are enjoined from:

A. Using or operating any Internet web site that encourages or allows residents of Illinois to sell their votes to be cast at the

November 7, 2000 General Election.

B. Using, operating, facilitating or accessing domain name "voteauction.com" and to remove such web site from the Internet completely or, in the alternative, to modify the Internet web site known as "voteauction.com" so as to remove any illegal content.

C. Allowing or continuing registration of the Internet domain name "voteauction.com" or any other domain name offering substantially the same service as voteauction.com.

D. Using or operating in the State of Illinois any Internet web site by any name in any manner that would violate prohibitions in the laws of the State of Illinois and of the United States against the buying and selling of votes in elections.

E. Accepting from residents of the State of Illinois any registration or offer to sell votes or to buy votes at auction through voteauction.com and to modify their web site to indicate that all registrations or offers to sell votes and/or buy votes from Illinois residents will be denied.

2. Defendants and all those acting in concert with them and order them shall immediately disclose to the proper election authorities the names and addresses of every individual in Illinois who has sold his or her vote or has offered to sell his or her vote through voteauction.com and the names and addresses of every individual and/or entity that has paid or has offered to pay for votes of Illinois residents through voteauction.com.

3. Defendants shall within 10 days report to the Court on the measures they have taken to implement this order.

4. The Court shall retain jurisdiction over this matter.

FOR IMMEDIATE RELEASE

Tuesday, August 22, 2000

Contact: Shad Balch, Alfie Charles

Jones Issues Warning Against On-line Vote Buying Schemes

SACRAMENTO --- Secretary of State Bill Jones today issued the following statement regarding recent stories about on-line vote buying and selling on the E-Bay auction site and through a web site at voteauction.com:

"Any individual who attempts to buy or sell votes, whether through an Internet auction site or personal communication, is guilty of a felony and will be prosecuted to the fullest extent of the law.

"We have an absolute zero tolerance policy for voter fraud in California. My election fraud investigation unit is looking into the recent reports of Internet-based vote buying schemes, will be monitoring web sites for suspicious election activity and will forward any information they find to the appropriate prosecutors for immediate action.

"During the last nine months, voter fraud investigations conducted by my office resulted in six convictions for a total of 13 years in prison."

"Voters who have been approached regarding vote-buying or voter coercion should contact the Secretary of State's office at 1-800-345-VOTE."

Missouri judge issues temporary restraining order against Web site that claims it buys and sells votes

Jefferson City, Mo. -- Attorney General Jay Nixon today obtained a temporary restraining order that stops an Austrian-based Web site from claiming that it can legally buy and sell votes from Missourians. The order, signed by Cole County Circuit Judge Thomas Brown, directs the operators of the Web site vote-auction.com to disclose on the site that the buying and selling of votes is illegal under Missouri law.

On Tuesday (Oct. 31), Nixon filed a lawsuit against several individuals and a business connected with vote-auction.com. The site represents that it will auction off votes to the highest bidder, with money then going to the voters selling their ballots.

Nixon also is asking for preliminary and permanent injunctions against the defendants to keep them from making misrepresentations to Missourians. The Attorney General also is asking the court to assess civil penalties of up to \$1,000 for each violation of Missouri law. Judge Brown has scheduled a hearing on Nixon's request for a preliminary injunction on Nov. 28.

Earlier this month, an Illinois judge issued an injunction to keep voteauction.com from operating in that state; the operators of the Web site then changed the domain name of the business to vote-auction.com in an effort to circumvent that ruling. Nixon's lawsuit asks that any injunction handed down by the court cover not only the named defendants, but also any parent corporations, subsidiaries or anyone acting in concert with them or on their behalf to keep them from violating the law.

vienna +43 676 9300061

[V] Vote-auction falls victim to ILLEGAL DNS-SHUTDOWN

[V]ote-auction, the only platform worldwide allowing end-consumers to take part in the U.S. election industry [formerly called "soft money"], falls again victim to a repressive campaign against free speech.

Yesterday, 1st of November 2000, the domain Vote-auction.com got illegally shut down by InterNIC. InterNIC is the central institution located in the U.S. where all domain name service records for the .com/.net/.org are stored.

We, and neither our providers have received any notification about this action at all, nor have we been informed of any legal documents which would allow for such a step.

Up to this moment, InterNIC is declining comment on the issue.

[V] Why was the domain shut down in this way?

>Our first domain, voteauction.com, was registered with a dns-registry located in the U.S. Our "late" domain, vote-auction.com, however, was registered via a company located in Germany, i.e. outside of U.S. jurisdiction.

This is why, appearantly, some-one in the U.S., probably parties from the Chicago law suit where vote-auction.com is named as a defendant, decided to just forget about legal proceedings, and went directly to InterNIC, ignoring international law.

[V] What will happen to [V]ote-auction now?

Our lawyers are currently investigating, as you might imagine.

Furthermore, we have discussed the issue with newly-elect ICANN board director Andy Mueller-Maguhn, who commented the issue with "I guess, we will have to do something about this".

A colleague of his called it "it is absolutely clear that this is plain outrageous".

On a more practical level, we are reachable via our IP - our new url is:

<http://62.116.31.68>

Using the IP address will finally give us full protection against any further actions against our site, as IP addresses are not dependant on domain name services.

Luckily, this DNS-SHUTDOWN was not intelligently timed.

Due to our "opponents'" lazy tactics, Vote-auction.com will now definitely be online and reachable to the public on Election Day via several domains and under the IP-Address controlled by a european institution: ripe.net.

On a funny note, one could say that now they either have to shut down the whole Internet or arrest the whole US- population, OR, which is more likely, our site will stay functional and online.

[V] [V]ote-auction is BACK UNDER <http://62.116.31.68>

Thanks to the incredible work of our dear provider SILVER SERVER [www.sil.at], we were able to get back online fast and are now reachable at:

<http://62.116.31.68>

This is the safest address currently available.

Vote-auction can also be reached under:

<http://votauction.enemy.org>

Vote-auction has issued a free speech support campaign in order to gather hundreds of vote-auction and votauction domains or install sub-domains all pointing to:

<http://62.116.31.68>

From November, 2nd, the following domains shall be active:

<http://www.votauction.at> [Austrian domain]

<http://www.votauction.de> [Germany, thx to think-factory.de]

<http://www.votauction.cu> [Cuban domain]

<http://www.votauction.ru> [Russian domain]

<http://www.vote-auction.net> <http://www.vote-auction.org>

[V] Vote-auction.com ADDS NEW FEATURES

Now to some really good news!

Vote-auction, still the "Leader of the Election Industry", and the first mover in this field, has added various new features:

[] Updated figures, automated processes

Our new software has allowed us to verify the numbers which have been in the system so far. We have cleared out all double and fake entries and can now provide you with live, real-time rendered data:

<http://62.116.31.68/check.php3>

***current no. of sellers: 56.789**

[] International polls

In order to showcase the US-presidential election even better, Vote-auction has released several polls for national and international audiences.

Vote-auction intends to involve a worldwide audience by polling their preferences on "Gore-Bush-Nader", a community poll will raise the question whether Vote-auction.com should be considered "legal or Illegal", and the most important question of all - "Would you rather go voting if you received money for it?". Find the polls at:

<http://62.116.31.68/index00.htm>

[] 1-CLICK-BIDDING function

In order to use our bidding section we have implemented a 1-click-bidding function with user-verification. This will help ensuring the authenticity of the bidders and will secure the bidders' offer. Find the bid-check section:

<http://62.116.31.68/check.php3>

[] ALL NEW MESSAGE-BOARD, heavily crowded

Created to stimulate public reaction from the U.S., but also the international audiences, you will now find our message board crowded and full with interesting and controversial discussions:

<http://62.116.31.68/forum/>

[] Extended PRESS-ARCHIVE, over 200 internat. news-segments

Due to the massive response in the media, we have updated our press-section providing you with broad information on how Vote-auction is featured and discussed in the press. Well over 200 e-press-clippings have been discovered by our PR-department:

<http://62.116.31.68/news.htm>

[V] Final note

We want to end this press release with a quote from chief counsel to the California secretary of state, Bill Jones, who seems to have a somewhat "personal" view on free speech:

"whether this is a parody [...] that this man is running, it makes absolutely no difference whatsoever in California. [...] because you are talking about the corruption of the voting process."

Source: CNN, "Burden of Proof", Oct 24 2000 <http://www.cnn.com/video/burden/2000/10/24/show.rm80.ram>

Appearantly, there are other individuals and/or authorities, who share his viewpoint. We have just received notice of further lawsuits filed in the states of Wisconsin and Missouri by their respective Attorney Generals.

For the Vote-auction team:

diesen Schriftsatz der Streitverkündeten alsbald zuzustellen.

Sollte das Gericht das schriftliche Vorverfahren beschließen, wird bereits jetzt

**Antrag auf Erlass eines Anerkenntnisurteils (§ 307 Abs. 2 ZPO) bzw. eines
Versäumnisurteils (§ 331 Abs. 3 ZPO)**

gestellt.

I.

Der Kläger ist schweizer Staatsbürger und hat die Domain namens "www.vote-auction.com" inne. Er hält sich jedoch regelmäßig in Berlin auf.

Die Beklagte ist eine Firma mit Sitz in Düsseldorf. Sie bietet u.a. Nutzungsverträge für .com-Domains über das Internet an. Sie ist eingetragener Registrar bei der Streitverkündeten, die die für die Nutzungsverträge an Domains notwendigen Registry-Einträge im Domain-Name-System bei .com-Domains vornimmt.

Der Kläger schloss während eines Aufenthalts in Berlin online über das Internet auf der Webseite "www.joker.com", die betrieben wird von der Beklagten als Registrar, einen Domainnutzungsvertrag über Registrierung und Nutzung der Domain "www.vote-auction.com". Für die Leistung von 12,00 EUR pro Jahr verpflichtete sich die Beklagte zur Bereitstellung der Domain.

Beweis: Vertragsbestätigung durch Email vom 18. Oktober 2000 - Anl. 1 -,

Whois-Abfrage vom 04. April 2000 - Anl. 2 -

Die Beklagte hat auf ihrer Webseite "www.joker.com" sogenannte Terms and Conditions hinterlegt, die in Deutsch und Englisch abgefasst waren.

Unter der Domain veröffentlichte der Kläger Inhalte, die angeblich nach u.s.-amerikanischem Recht rechtswidrig waren.

Inhaltlich war die Seite jedoch als Satire auf die Verhältnisse in den Vereinigten Staaten von Amerika während des Bundeswahlkampfes dort gemeint.

Beweis: Ausdruck der Webseite - Anl. 3 -,

**Zeugnis der Elisabeth Haas,
Hollandstrasse 7 / 19, A - 1020 Wien, Österreich;**

Parteivernehmung des Klägers.

Es war dort spasshaft eine Plattform zum Angebot und Kauf von Wählerstimmen eingerichtet worden. Die User der Webseite waren "aufgefordert", ihre Stimme anzubieten bzw. angebotene Stimmen zu ersteigern.

Die Seite war in englischer Sprache gehalten und mit Links auf Veröffentlichungen im Internet zu Bestechungs- und Korrumpierungsfällen versehen.

Die Seite war überzeichnet und auf eine unmögliche Leistung ausgerichtet in dem Bewusstsein, dass der Verkauf und Kauf von Wählerstimmen unmöglich ist, da jede Wählerstimme nur unter Vorlage von persönlichen Dokumenten und lediglich einmal pro Wähler abgegeben werden kann.

Hintergrund waren Bestechungsskandale betreffend der Kandidaten und deren Mitarbeiter im dortigen Wahlkampf, die in der Presse publik gemacht worden waren.

Die Aussage war, dass eine Wahl von Kandidaten, die der Bestechlichkeit und Vorteilsannahme verdächtig oder überführt sind, absurd sei. Die sollte "gespiegelt" werden an der Darstellung des Gedanken, dass sich nunmehr nicht nur die zu Wählenden, sondern auch die Wähler korrumpieren lassen könnten.

Beweis: Ausdruck der Website

Ein konkreter An- oder Verkauf von Wählerstimmen fand nicht statt.

Beweis: Zeugnis der Elisabeth Haas,

Parteivernehmung des Klägers

Der Kläger hatte die Seite selbst erstellt, wofür er 17 Arbeitstage aufwendete, die er normalerweise vergütet bekommt. Im einzelnen verwendete der Kläger für

- Konzept und Kreation

o Erstellung und Adaption von Logos, Layouts, Navigation zwei Tage (10. Oktober 2000, 12. Oktober 2000) - Tagessatz: 1.200 EUR -

o Basisdesign zwei Tage (13. Oktober 2000, 14. Oktober 2000) - Tagessatz: 1.200 EUR -

- Technik

o Programmierung des "Forums" einen Tag (15. Oktober 2000) - Tagessatz: 900 EUR -

o Programmierung der "Auktionssoftware" drei Tage (16. Oktober 2000, 24. Oktober 2000, 01. November 2000) - Tagessatz: 1.200 EUR -

o Erstellung von HTML/DHTML drei Tage (17. Oktober 2000, 18. Oktober 2000, 20. Oktober 2000) - Tagessatz: 900 EUR -

o Programmierung von Perl-Scripts zwei Tage (21. Oktober 2000, 22. Oktober

2000) - Tagessatz: 1.200 EUR -

- Hosting und Domain-Name-Service (Preise sind Pauschal-Preise für die Dienstleistung über ein Jahr)

o Domain-Hosting einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 500,00 EUR -

o Webservice-Beschaffung und Verwaltung einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 500,00 EUR -

o SSH-Zugang und FTP-Zugriff einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 50,00 EUR -

o Bereitstellung von Email-Adressen einen Tag (verteilt von August 2000 bis zum Tage der Klageeinreichung) - 50,00 EUR -

insgesamt also 15.100,00 EUR zuzüglich Umsatzsteuer Österreich (20% = 3.020 EUR); brutto 18.120,00 EUR (entspricht 35.439,64 DM).

Beweis: Zeugnis der Elisabeth Haas,

Parteivernehmung

Am Freitag, den 03. November 2000, also vier Tage vor der Bundeswahl in den Vereinigten Staaten, nahm die Streitverkündete die Seite vom Netz, indem die Domain aus dem Root-Server-System entfernt wurde. Die Seite war nunmehr nicht mehr direkt über die Domain erreichbar im Internet, sondern nur noch über die Server-IP-Nummer 62.116.31.68.

Zur Schadensbegrenzung wurde versucht, die Seite auf anderen ähnlich klingenden Domains zu veröffentlichen, wobei weitere Kosten entstanden sind.

Im einzelnen ist dem Kläger hierfür von Leon Aaron Kaplan, XXXXXXgasse x1 / xx, A - 1xx0 Wien, Österreich für die Arbeiten Server-Setup/Rekonfiguration, repetitive DNS Änderungen, Migration der Webseite auf neue Rechner und Aufsetzen der selben, Überwachung der DNS und Bug-Fixing des Servers vom 01. November bis zum 10. November 2000 die Arbeitszeit von 65 Stunden zum Stundenpreis von 700,00 ATS, also 45.500,00 ATS (entspricht 6.467,17 DM = 3305,61 EUR) zuzüglich Umsatzsteuer Österreich (20% = 9.100 ATS = 1.293,43 DM = 661,32 EUR), brutto 54.600,00 ATS (entspricht 7.760,61 DM und 3.967,94 EUR) in Rechnung gestellt worden.

Beweis: Rechnung vom 30. November 2000 - Anl. 4 -

II.

1. Es ist deutsches Recht anwendbar. Der Vertrag ist online abgeschlossen worden, das anwendbare Recht richtet sich somit nach dem Ort, an dem der Kläger die erforderlichen Rechtshandlungen vorgenommen hat, Art. 29 Abs. 1 Ziff. 1 EGBGB.

Der Kläger hatte den Vertrag in Berlin abgeschlossen und auch die Leistung von Berlin aus vorgenommen.

2. Die Beklagte ist zur Erfüllung des online abgeschlossenen Vertrages verpflichtet.

- Dass sie sich hierzu der Hilfe der Firma CORE bedient, ist ihr überlassen.

Die Firma CORE ist Erfüllungsgehilfe. Erfüllungsgehilfe ist, wer nach den tatsächlichen Gegebenheiten des Falles mit dem Willen des Schuldners bei der Erfüllung einer ihm obliegenden Verbindlichkeit als seine Hilfsperson tätig wird (BGHZ 13, 113; 50, 35; 62, 124; 98, 334). Erfüllungsgehilfe kann (anders bei § 831 BGB) auch jemand sein, der in seinem Verhalten keinem Weisungsrecht des Schuldners unterliegt (BGHZ 62, 124; BGH NJW 1993, 1705).

- Die Beklagte hätte die Firma CORE als ihren Erfüllungsgehilfen zur Vertragstreue anhalten müssen und ist hierzu nach wie vor verpflichtet. Dies hat sie jedoch unterlassen.

- Streitig ist die Hauptleistungspflicht des Vertrages, nämlich die Registratur der beantragten Domain. Dabei besteht die Registratur aus zwei Teilbereichen:

- 1. Eintragung der Domain in der Datenbank des Registrars,**
- 2. Erreichbarkeit der Domain im Domain Name System (DNS) herzustellen und aufrecht zu erhalten.**

- Es gab keinen Anlass, die Website wegen angeblich rechtswidriger Inhalte vom Netz zu nehmen.

Denn zum einen hatte die Beklagte als der Vertragspartner nichts gegen die Inhalte der Webseite eingewendet und sich auch keinen Vortrag der Firma CORE zu eigen gemacht.

Zum anderen ist der Access-Provider haftungsprivilegiert gem. § 5 Abs. 3 TDG. Es hätte demnach positive Kenntnis von der Rechtswidrigkeit der Webseite vorliegen müssen, damit eine Handlungspflicht aus haftungsrechtlichen Gründen hätte entstehen können. Dieser Umstand liegt erst recht nicht vor.

Jedenfalls ist die Seite nicht rechtswidrig:

Sie verstößt wegen der Kunst- und Meinungsfreiheit, die auch in den Vereinigten Staaten von Amerika geschützt sind, nicht gegen dort geltendes Recht.

Selbst wenn die Seite nach nicht u.s.-amerikanischem Recht rechtswidrig wäre, so hätte dies

keine Ausstrahlungswirkung auf die Beurteilung der Webseite nach deutschem - und ggf. auch nicht nach schweizer - Recht.

3. Für den aus Nichterfüllung entstandenen Schaden haftet die Beklagte gemäß §§ 284 Abs. 1 S. 2, 285, 286 Abs. 1 BGB auf Schadensersatz in der vom Kläger geltend gemachten Höhe.

Insbesondere darf der Kläger für eigene Arbeitsleistung das für ihn in beruflicher Tätigkeit übliche Arbeitsentgelt verlangen.

4. Verzugszinsen sind fällig seit Rechtshängigkeit gem. § 288 Abs. 1 S. 1 BGB in Höhe von 5% über dem Zinssatz der EZB, z.Zt. also 9,46%.

5. Für den Fall, dass die Beklagte einwendet, sie hätte die Leistung ordnungsgemäß erbracht und der Schaden sei nicht die mangelhafte Leistung ihrerseits zurückzuführen, sondern auf Fehler der Streitverkündeten, und dieser Einwand der Beklagten zutrifft, hätte der Kläger gegen die Streitverkündete einen Anspruch auf Schadloshaltung.

Die Streitverkündung ist demnach gem. § 72 Abs. 1, 1. Alt. ZPO zulässig. Auch die ausländische Streitverkündete hat nach §§ 71 ff. ZPO die prozessuale Last, sich auf ein deutsches Verfahren einzulassen.

Zwei beglaubigte Abschriften anbei.

[USA: Settlement Resolves First State Action under CAN-SPAM Act](#)

"Internet marketers should note that Massachusetts takes seriously federal and state laws meant to protect against unwanted and misleading e-mails,' AG Reilly said. 'These messages are the type of unwanted and annoying solicitations that have become the scourge of Internet users and threaten the credibility of companies using email for legitimate purposes.'"

AG Reilly, [Press Release](#), 2004-10-07

[USA: Reward for Arrest and Conviction of Mydoom Virus Author](#)

"SCO announced that it is offering a reward of up to a total of \$250,000 for information leading to the arrest and conviction of the individual or individuals responsible for creating the Mydoom virus."

SCO, [Press Release](#), 2004-01-27

Microsoft, [Press Release](#), 2004-01-29

[USA: Google vs. Booble](#)

"We have recently become aware of your website at <http://www.booble.com> (the Domain Name). This Domain Name is confusingly similar to the famous GOOGLE trademark. Your web site is a pornographic web site. Your web site improperly duplicates the distinctive and proprietary overall look and feel of Google's website."

Google Trademark Enforcement Team, [E-Mail](#), 2004-01-20

Booble, [E-Mail](#), 2004-01-28

2003

[USA: "RIAA v. Verizon"](#)

"Verizon declared victory for consumer safety and privacy today when the U.S. Court of Appeals for the District of Columbia announced it has struck down a controversial lower-court ruling that had forced Internet service providers to reveal the identity of any Internet subscriber accused of music piracy."

[District Court Decision](#) (PDF), 2003-01-21

Court of Appeals, [Opinion](#), 2003-12-19

Verizon, [News Release](#), 2003-12-19

USA: [Inappropriate Symbols from the Microsoft Office System](#)

"Microsoft has learned of a mistake in the Bookshelf Symbol 7 font included in the Microsoft Office System client applications. Due to an unintentional oversight, we failed to identify, prior to the release, the presence of two swastikas within the font."

MS, [Open Letter](#), 2003-12-12

USA: [Death Threats against Spammers \(The "Booher-Case"\)](#)

"During July 2003, subject Charles Booher, sent numerous email and telephonic death threats to an individual residing in Canada. Booher thought this individual was responsible for sending him spam email. The threatening messages sent by Booher were very explicit and graphic threatening to kill or maim the victim, as well as any employee at the victim's company. The Internet Service Provider (ISP) made numerous attempts to get him to stop, but he continued until his account was terminated."

Charles T. Booher, [E-Mail](#), 2003-07

FBI, [Press Release](#), 2003-11

[Indictment](#) (PDF), 2003-11-25

USA: [The MovieBuff-Case - Using Competitors Trademark in Domain and Meta-Tags - "Brookfield Communications, Inc. v. West Coast Entertainment Corp."](#)

"As we have seen, registration of a domain name for a Web site does not trump long-established principles of trademark law. When a firm uses a competitor's trademark in the domain name of its web site, users are likely to be confused as to its source or sponsorship. Similarly, using a competitor's trademark in the metatags of such web site is likely to cause what we have described as initial interest confusion. These forms of confusion are exactly what the trademark laws are designed to prevent."

[USA: Jack Kerouac, the "Charles Manson for the Beats" - "Gerald Nicosia v. Diane De Rooy"](#)

"Nicosia does not dispute that De Rooy's statements were published on her personal web-site, and through Internet discussion groups, as part of a heated debate concerning a bitter legal dispute. ... The Court finds that Nicosia has failed to plead actual malice with the required specificity, and hereby GRANTS De Rooy's motion to dismiss for failure to state a claim."

[Order](#), 1999-07-07

[USA: "Steven J. Caspi et.al. v. The Microsoft Network"](#)

"We are here called upon to determine the validity and enforceability of a forum selection clause contained in an on-line subscriber agreement of the Microsoft Network (MSN), an on-line computer service. The trial court granted defendants' motion to dismiss the complaint on the ground that the forum selection clause in the parties' contracts called for plaintiffs' claims to be litigated in the State of Washington. Plaintiffs appeal. We affirm."

[Appeal Court Decision](#), 1999-07-02

[USA: United States v. Daniel Mohrbacher - "...visual depictions of minors engaging in sexually explicit conduct"](#)

"Mohrbacher's illegal conduct consisted of downloading images of child pornography from a foreign-based electronic bulletin board. ... We agree with his reading of the statute, and accordingly reverse these two counts of conviction. However, we reject Mohrbacher's second contention on appeal, and hold that the district court did not clearly err by denying him credit for acceptance of responsibility."

[Appeal Court Decision](#), 1999-06-29

[USA: The Rio-Case - "Recording Industry Association of America v. Diamond Multimedia Systems"](#)

"...the Rio is not a digital audio recording device subject to the restrictions of the Audio Home Recording Act of 1992. The district court properly denied the motion for a preliminary injunction against the Rio's manufacture and distribution. Having so determined, we need not consider whether the balance of hardships or the possibility of irreparable harm supports injunctive relief. Affirmed."

[Appeal Court Decision](#), 1999-06-15

[USA: Defamation and related Causes - "Jewish Defense Organization, Inc. v. The Superior Court of L.A. County and Steven Rambam"](#)

"In the instant case, defendants' conduct in registering Rambam's name as a domain name and posting passive web sites on the Internet is not sufficient to subject them to jurisdiction in California."

[Appeal Court Decision](#), 1999-06-08

[USA: "Porsche v. Porsche" - Another Domain Dispute](#)

"Because the language of the Trademark Dilution Act does not appear to permit in rem actions against allegedly diluting marks, and because a contrary reading of the statute would unnecessarily put its constitutionality in doubt ..., the Court must conclude that the Complaint should be dismissed for lack of personal jurisdiction."

Memorandum Opinion, 1999-06-08

USA: Invasion of Privacy based on employer's review and dissemination of electronic Mail - "Bill McLaren v. Microsoft"

"In this case, appellant Bill McLaren, Jr. asks us to recognize a cause of action for invasion of privacy based on his employer's review and dissemination of electronic mail stored in a 'personal folders' application on McLaren's office computer. We conclude that McLaren's petition failed to allege facts sufficient to state a cause of action for invasion of privacy. We affirm the trial court's judgment."

Appeal Court Decision, 1999-05-28

USA: Crypto-Code protected by the 1st Amendment - "Bernstein v. United States of America"

"The government defendants appeal the grant of summary judgment to the plaintiff, Professor Daniel J. Bernstein ("Bernstein"), enjoining the enforcement of certain Export Administration Regulations ("EAR") that limit Bernstein's ability to distribute encryption software. ... We hold that the challenged regulations constitute a prior restraint on speech that offends the First Amendment."

Appeal Court Decision, 1999-05-06

USA: Domain Registration refused - "Seven Words L.L.C. v. Network Solutions Inc."

"Plaintiff registered for, and NSI refused to grant, the right to use the following domain names: fuck.com, cunt.com, cocksucker.com, motherfucker.com, piss.net, fuck.net, cunt.net, cocksucker.net, motherfucker.net and tits.net. NSI's arbitrary censorship policy and its refusal to register the Censored Domain Names, violates Plaintiff's rights of free speech under the First Amendment of the United States Constitution."

Complaint, 1999-04-12

USA: "United States v. Amirault"

"We believe the only truly striking aspects of the photograph to be the girl's nakedness and her youth. These factors alone are not enough to render the photo "lascivious." We therefore hold that the district court improperly applied the trafficking cross-reference at Amirault's sentencing."

Appeal Court Decision, 1999-04-06

USA: "Slinkman v. Prince George's County, Maryland et.al."

"Joseph Slinkman sues his wife and brother-in-law for accessing his electronic mail account. The brother-in-law, a senior police official for Prince George's County, Maryland, is alleged to have accessed the plaintiff's electronic mail account in violation of Maryland state law and the privacy inferences of the U.S. Constitution."

"When we have control over it, we will remove it."

[Public Statement](#), 1997-12-02

[USA: Canter & Siegel fighting for their rights in Arizona - "Cybersell v. Cybersell"](#)

"... The essentially passive nature of Cybersell FL's activity in posting a home page on the World Wide Web that allegedly used the service mark of Cybersell AZ does not qualify as purposeful activity invoking the benefits and protections of Arizona. ... Cybersell FL lacks sufficient minimum contacts with Arizona for personal jurisdiction to be asserted over it there. Accordingly, its motion to dismiss for lack of personal jurisdiction was properly granted."

[Appeal Court Decision](#), 1997-12-02

[USA: "US v. Mark Stuart Hockings"](#)

"Mark Stuart Hockings ("Hockings") was charged with one count of possessing eight computer files containing visual depictions of child pornography. ... Hockings argues that the charging statute is constitutionally vague because it criminalizes 'the transportation and possession of items [GIF files] that clearly are not visual depictions'. ... We disagree. Affirmed."

[Appeal Court Decision](#), 1997-11-21

[USA: The domain "epix.com"](#)

"The court finds that the use of the Internet website 'epix.com' by Interstellar Starship to publicize the 'Rocky Horror Picture Show' is not likely to confuse any actual or potential customer seeking to purchase printed circuit boards and computer programs from Epix, Inc. While the court concludes that Epix, Inc. is the owner of the valid Registered Trademark No. 1,618,449, under the facts of this case the court finds no infringement by Interstellar Starship."

[Opinion](#), 1997-11-20

[USA: The Liability of Network Solutions - The "Lockhead"-Domain](#)

"Because summary judgment on (all) claims is based on Lockheed's lack of a legal right to control the domain name registration process, there is no case or controversy between these parties. Therefore, the Court grants NSI's motion for summary judgment as to Lockheed's declaratory judgment cause of action."

[Order](#), 1997-11-17

[USA: Spam under Abuse of Domain flowers.com - "Tracy Parker v. C.N. Enterprises"](#)

"IT IS THERFORE ORDERED that Defendants ... hereby are permanently enjoined from ... sending or causing to be sent any Internet electronic mail message or other electronic communication using the domain name flowers.com as any portion of the return address of that message, or otherwise using the domain name flowers.com in any portion of the message header information."

[USA: Copyright Infringement with Clip Art - "Marobie v. NAFED"](#)

"Plaintiff's copyright infringement claim and unfair competition claim are based on the same conduct: the unauthorized copying and distribution of its clip art on NAFED's Web Page. Plaintiffs motion for summary judgment against NAFED on Count I is granted."

[Memorandum Opinion and Order](#), 1997-11-13

[USA: ISP held liable for defamatory speech - "Kenneth Zeran v. America Online Inc."](#)

"(CDA) Section 230, however, plainly immunizes computer service providers like AOL from liability for information that originates with third parties. Furthermore, Congress clearly expressed its intent that § 230 apply to lawsuits, like Zeran's, instituted after the CDA's enactment. Accordingly, we affirm the judgment of the district court."

[District Court Decision](#), 1997-03-21

[Appeal Court Decision](#), 1997-11-12

[USA: The "Hit Man" Manual hits the Web - "Vivian Rice et.al. v. Paladin Press"](#)

"A triple murder was committed in Montgomery County by a man who was alleged to have used this book, Hit Man, as his guide. He was caught and convicted and sentenced to death. ... Paladin Press settled the case, giving the families of those killed by the hit man several million dollars, agreeing to destroy the remaining 700 copies of the book in their possession, and surrendering any rights they have to publish and reproduce the work. While the families were successful in profiting from their loved one's death, they have not been successful in stifling the book. With the surrender of the

publishing rights by Paladin Press, the book has entered the public domain, and is being published on the Internet."

Stipulation

Appeal Court Decision, 1997-10-10

Hit Man On-Line - A Technical Manual for Independent Contractors, 1983-1999

USA: "Quad/Graphics, Inc. v. Southern Adirondack"

"It is the court's determination that disclosure of the information sought should not be permitted. Petitioner certainly has an internal security problem involving the unauthorized use of its computer equipment and resources. However a criminal complaint is not before this court and apparently has not been made. Were this application to be granted, the door would be open to other similar requests made, for example, by a parent who wishes to learn what a child is reading or viewing on the 'Internet'."

Opinion, 1997-09-30

USA: Cyberpromotion in Court - "Snow v. Doherty"

"Typically, spammers send their mass junk mailings from a computer telecommunications server other than the "mama" server at Indiana State. Spammers know that out of the millions of messages they send each day, tens of thousands are undeliverable, either because they are sent to an invalid address or because the messages are being "blocked" by the intended recipients. Spammers are further aware that their spamming activities generate numerous angry complaints from recipients who do not request the spam and must pay for the cost of receiving it."

Complaint, 1997-09-09

Time Table, 1997-09-22

USA: Trademark Infringement in the World Wide Web - "Playmate"

"... Plaintiff PEI is likely to succeed on the merits in proving inter alia trademark infringement, unfair competition, including a false designation of origin and false representation, in Defendants' use of the domain names "playboyxxx.com" and "playmatelive.com", ... and the repeated use of the PLAYBOY trademark in machine readable code in Defendants' Internet Web pages."

Court Order, 1997-09-08

USA: "Clue"-less - "Hasbro Inc. v. Clue Computing, Inc."

"I hereby: GRANT defendant's motion for summary judgment as to plaintiff's First Claim, federal trademark infringement; and sitting as finder of fact, award judgment for defendant as to plaintiff's Second Claim, federal trademark dilution and Third Claim, state trademark dilution."

Trg burze postaje Trgom hrvatskih velikana!

Odbor za imenovanja naselja, ulica i trgova zagrebačke Gradske skupštine prihvatio je prijedlog stručne skupine da se sadašnji Trg burze preimenuje u Trg hrvatskih velikana, a o tome bi se prijedlogu vijećnici zagrebačke skupštine trebali izjasniti na sjednici koja će se održati nakon predstojeće, sazvane za 7. studenoga. Prema prijedlogu koji je Odbor već prihvatio, sadašnji Trg hrvatskih velikana trebao bi se preimenovati u Trg žrtava fašizma.

Opasni grudnjaci

Nošenje grudnjaka boli - kaže istraživanje

The Mirror
Conspiracy

Britanski kirurg Robert Mansell sa Sveuèilišne bolnice u Cardiffu napravio je istraživanje o vezi nošenja grudnjaka i boli u grudima, koje je pokazalo da je kod 7%

žena, od njih više od sto koje su na tri mjeseca prestale nositi grudnjake, pala uèestalost bolova. Mansell isto tako tvrdi da nije pronašo nikakvu vezu između nošenja grudnjaka i raka dojki. [Iscrpnije...](#)

Dobra glazba

Album tjedna - 'The Mirror Conspiracy' od Thievery Corporation

The Mirror
Conspiracy

Thievery Corporation su dva mlada Amerikanca, Rob Garza i Eric Hilton, uglavnom obučena u ozbiljna odjelca èija je odluka da se bave glazbom pala jednostavno, ležerno i lako kao

i ona da se ustane od stola. 'The Mirror Conspiracy' je èetvrto izdanje pod imenom Thievery Corporation, a njihov spoj bossanove, jazza i duba u modernoj maniri dovodi ih do svjetskog vrha takvog zvuka. Proèitajte cijeli [tekst](#), a odite i na [glazbene](#) stranice po novosti.

Poèetak kolonizacije svemira

Posljednji dan ljudski rod iskljuèivo na Zemlji

Ljudi osvajaju
Mars

Današnji dan, ukoliko sve prođe po planu, bit æe posljednji dan ljudskog roda kao vrste koja obitava iskljuèivo na Zemlji. Na ruskom kozmodromu u

Kazakhstanu tri ruska astronauta i amerièki zapovjednik misije u posljednjim su pripremama za sutrašnje lansiranje na Međunarodnu Svemirsku Stanicu, gdje bi trebali ostati èetiri mjeseca dok ih ne zamijeni druga ekipa, i tako æe se izmjenjivati dok Stanica ne bude gotova oko 2006. godine, a nakon toga bi s nje mogle kretati ekspedicije na Mjesec ili Mars. Premijer

Od danas će Vlada i premijer Račan početi s praksom redovitih mjesečnih press konferencija kako bi što bolje informirali javnost o svojim potezima, koji prečesto u

javnosti ne budu najbolje shvaćeni. Konferencija je zakazana u 12:00 sati, a biti će prenošena preko radija, televizije i... Interneta. [GlobalNet](#)ov site [Vijesti.net](#) imat će ekskluzivni Web prijenos. Cool.

Da vidimo kako napreduje Kingova Internet knjiga

Prva tri dijela su bila po dolar, od 4-8 bit će po dva

Biljeica dobro uspijeva, zasad

[Stephen King](#) je krenuo s svojom Internet knjigom "The Plant" pitajući se uopće da li će išta biti od toga. No, evo, za prva tri dijela više od 75%

čitatelja je platilo po dolar, a to je bio Kingov zahtjev da piše dalje. Sada se pojavio i [četvrti dio](#), no s novom cijenom - od sada svaki nastavak, sve do eventualno osmog košta po dva dolara. Ukoliko bude više od osam nastavaka bit će besplatni kaže Stephen. Ćitate vi to? A jeste li platili?

16-godišnjak zaradio napuhavajući dionice preko Interneta

Stock exchange

Štos je jednostavan. Dečko je kupio jeftine dionice nekoliko tvrtki, zatim je lijepo prièao o tim tvrtkama na financijskim forumima i news grupama i kad im je vrijednost porasla prodao ih. U cijeloj transakciji zaradio je 800.000 dolara. Tu treba odbiti 285.000 dolara globe koju bi trebao platiti Securities and Exchange komisiji (SEC) koja pazi da takve stvari ne zlorabe. Momak se zaštitio disclaimerom na svom siteu u kojem kaže da bi svatko trebao napraviti svoje vlastito istraživanje o potencijalu dionica. Cijela prièa izašla je u [Wired.com](#)-u.

Internet bez granica

Site za prodaju glasačkog prava opet radi

Vote-auction

Mada je donesena presuda da se [voteauction.com](#) site ugasi jer su se na njemu mogli kupovati glasovi za amerièku predsjednièku kampanju, vlasnik sitea, Austijanac sa serverom u Bugarskoj, mu je samo promijenio ime u [vote-auction.com](#) i nastavio poslovati. Mediji su u cijeloj prièi propustili istaknuti da amerièka vlada nije tužila samo vlasnika sitea, veæ i presence providera i tvrtku koja je registrirala domenu, što prema nekima predstavlja veæu opasnost za slobodu govora, nego što je prodajom glasova ugrožena demokracija.

Box Office report

Blair Witch Project II nije smijenio De Nira

Uspješni fijasko

Nastavak prošlogodišnjeg hita Blair Witch Project prošao je slabije od oèekivanog u svom prvom vikendu prikazivanja. Na prvom mjestu vikend box officea je i dalje, èetvrti tjedan za redom, De Nirova hit komedija [Meet the Parents](#) koji povukao novih 15,1 milijun dolara i sada je s ukupno utrženih 100 milijuna dolara na tragu uspjeha "Šestog èula". [Book of Shadows: Blair Witch 2](#) je preko vikenda zaradio 13 milijuna dolara i s obzirom na prodana prava prikazivanja izvan Amerike za iznos od 20 milijuna dolara, veæ je u plusu obzirom na produkcijske troškove od 15 milijuna. Na [Rotten Tomatoes](#) veæ na prvi pogled je jasno da je film promašaj - same trule rajèice. Svejedno, treæi film, "prequel" tj. prethodnik, se veæ snima. [Opširnije...](#)

Boom

Eksplוזija europskog Interneta

Vrijednost poslovanja preko Interneta u Europi poskočit će s sadašnjih 53 milijarde dolara na 1.200 milijardi dolara u sljedeće četiri godine, kaže se u izvještaju koji je naručio Cisco Systems. Također se kaže da nedavni neuspjesi nekih većih dot.com tvrtki neće imati većeg učinka na zamah prebacivanja poslovanja na Internet. Zanimljivo je pogledati stanje 2000. i predviđanja za 2004. za neke europske zemlje. Njemačka sada ima 12,1 milijardu prometa, a imat će 317 milijardi. Cijela istočna Europa sada ima tek 300 milijuna prometa, a imat će 14,6 milijardi, manje od bilo koje zemlje zapadne Europe. [Opširnije...](#)

Silver screen

John Cleese će igrati u ekranizacija Harry Pottera

Monty Python legenda John Cleese glumit će lik Nearly-Headless Nicka u filmu "Harry Potter i kamen mudraca" koji se upravo snima u Engleskoj. Cleese je jučer navršio 61 godinu. [Opširnije...](#)

Budućnost Hrvatske

Linija: Vlada neće održati obećanje o smanjenju stope PDV-a

"Najveće je opterećenje za državni proračun premali iznos dohotka po glavi stanovnika. Bruto domaći proizvod po glavi stanovnika kod nas je 4.000 dolara, a europski je prosjek 23.000 dolara. Drugi je problem kako usustaviti poreznu politiku, jer još najveći dio prihoda u proračun pristiže zahvaljujući PDV-u", rekao potpredsjednik Vlade Slavko Linija na predavanju Budućnost gospodarstva Hrvatske. "Dok god ne smanjimo PDV, međunarodni kapital neće

stiaæi u Hrvatsku... Ne oèekujemo da æemo nešto bitnije promijeniti u sljedeæe tri godine", rekao je Liniaæ. [Opširnije...](#)

Web film

Dva grafièara na kompjutoru napravila akcijski Web hit film

405: The Movie

Prièa filma [405: The Movie](#) je jednostavna: džip ide autocestom, vozaè primjeti da se nešto èudno zbiva, osvrne se i ugleda Boing 747 kako se

spušta iza njega. Djelo je to dvojice kompjutorskih grafièara, Brucea Branita i Jeremyja Hunta koji su za stotinjak dana i gotovo ništa novaca napravili film od dvije i pol minute. Najveæi dio filma, ukljuèujuæi avion i džip u pokretu, napravljeni su na kompjutoru. "405" je postavljen na webu 5. lipnja i otada ga je pogledalo **2 milijuna** ljudi.

Sijamski san

Obavljena prva potpuno uspjeta operacija sijamskih blizanaca

Dvanaest sati je u australskom gradu Brisbaneu trajala operacija u kojoj je pod vodstvom Dr Scotta Campbella, pokušano i uspjeno radvanje sijamskih blizanki

Taj-lah i Monique Armstrong spojene potiljkom. Blizanke su bile postavljene jedna drugoj "naglavaèke i okrenute leđima", a nakon operacije se u dobrom stanju i žive. Roditelji se nadaju da æe ih za Božiaæ odvesti kuæi. Od 1928. do '87. je bilo samo 60 pokušaja radvanja sijamskih blizanaca, u kojima je preživjelo samo 26 od 60 blizanaca. [Iscrpnije...](#)

Antinastavak

Drugi dio filma 'Blair Witch' poèinje danas u amerièkim i britanskim kinima

Novi glumci, novi redatelj, nova prièa, posve novi film - tako bi se ukratko moglo opisati kakav je 'Book Of Shadows: [Blair Witch II](#)',

nastavak komercijalno iznimno uspješnog 'The Blair Witch Project'. Novi film ima sve karakteristike Hollywooda: sniman je s budžetom od petnaest milijuna dolara, s drugim redateljem - Joeom Berlingerom, novim, talentiranim glumcima, i

grafikom skupog filma. Prièa se vrti oko studenata obožavatelja prvog dijela koji su došli u šumu gdje je sniman taj film da otkriju istinu. Prvi dio snimljen je za 30.000 dolara, a zaradio je 250 milijuna. Ovaj nastavak, èini se, nakon prvih loših kritika i bez snage originalne inspiracije, ima malo izgleda da dosegne tu brojku. Svejedno, veæ se radi na treæem dijelu.

Globalno zagrijavanje gore nego što se mislilo

Zagađivači koje je proizveo čovjek "značajno su pridonijeli" globalnom zagrijavanju i Zemlja æ postati znatno toplija nego što se to prije mislilo, zaključili su

UN-ovog panela znanstvenika. Izvještaj 'Intergovernmental Panel on Climate Change' prvi je iscrpni pregled stanja od 1995. godine kada je isti panel zaključio da postoji ljudski utjecaj da zemljinu klimu zbog "efekta staklenika". Ukoliko se nešto ne poduzme, zemljina površinska prosječna temperatura mogla bi porasti s 2.7 na 11 Fahrenheita do kraja stoljeća. [Iscrpnije...](#)

Kraj savršenog hollywoodskog para

Rastava braka Bruce Willis i Demi Moore

Bilo pa prošlo...

Nekad najglamurozniji par Hollywooda, Bruce Willis i Demi Moore, službeno se rastaju nakon dvije godine razdvojenog života. Par se vjenčao 1987. godine nakon tri

mjeseca poznanstva, a na vjenčanju koje je koštalo 875,000 dolara pjevao je Little Richard. Vrijeme su provodili između ranča u Idahou, gdje njihovo troje djece još uvijek idu školu, te stana u New Yorku i kuće u Malibuu. Nakon što se par razdvojio, bivša prijateljica Demi Moore izjavila je jednom magazinu da je brak bio iz interesa. [Iscrpnije...](#)

Hollywoodski rođendan

De Niro: "Forget about it" - Clinton: "Talkin' to me?"

You talkin' to me?

Hollywoodska krema i glazbene zvijezde pojavile su se na proslavi 53. Rođendana Hillary Clinton u srijedu, gdje je predsjednikova supruga prikupila dva milijuna dolara za svoju senatsku kampanju. Vrhunac večeri je bio kada je Robert De Niro pokušavao predsjednika naučiti kako se izgovara "forget about it" s teškim njujorškim naglaskom, na što je Clinton odgovorio rečenicom iz 'Taksista': "You talkin' to me?" Zbijanju šala pridružili su se i Chevy Chase, Tom Cruise, Cameron Diaz, Ben Affleck, Nathan Lane i Cher. [Iscrpnije...](#)

Dio posade Kurska preživio prvu havariju

Ronioci pronašli pismo u potonuloj ruskoj podmornici

U džepu jednog od poginulih mornara s potonule ruske podmornice Kursk pronađeno je pismo koje navodi da je najmanje 23 člana posade preživjelo prvu eksploziju.

Ruske vlasti do sada su tvrdile da je većina od 118 članova posade poginula minutu nakon eksplozije na nuklearnoj podmornici, što opovrgava pismo koje je napisao časnik Kolesnikov. Prema navodima agencije Tass, u pismu također piše da je Kolesnikov pisao slijep. [Iscrpnije...](#)

Eminem nepoželjan u Kanadi

Vlasti Toronta žele spriječiti Eminemov nastup

Državni odvjetnik Ontarija želi spriječiti američkog rappera Eminema da nastupi danas u Torontu zbog pritužbe da njegove pjesme potiču nasilje prema ženama. Pravnici ove

kanadske provincije pokušavaju na sve načine zadržati Eminema izvan Kanade, pa su razmišljali tražiti pomoć i od federalnih useljeničkih vlasti. Pritužba je došla do konzervativnog državnog odvjetnika nakon što je jedna Kanađanka skinula Eminemovu glazbu s Interneta i prijavila ju policijskom odjelu za zločine mržnje. [Iscrpnije...](#)

Tko će imati No.1 igraću konzolu?

Sony izbacio PS2 u SAD-u, Microsoft brusi zube

Danas u amerièke duæane dolazi dugooèekivani Sonyjev PlayStation 2, što osim hordi zainteresiranih kupaca pozornost prati i korporacija Microsoft koja za godinu dana planira

izbaciti svoj Xbox za koji tvrdi da predstavlja najmoæniju igraæu konzolu na planeti. Prema najavama Robbie Bacha, koji je zadužen za taj projekt, bit æe to najveæi događaj te vrste koji je Microsoft ikad napravio. Sony tvrdi da æe PS2 vladati tržištem bar još nekoliko godina. [Iscrpnije...](#)

"Tužan dan u korporativnoj povijesti"

AT&T se dijeli u èetiri nove kompanije

Like a virgin

Korporacija AT&T juèer je objavila da æe se restrukturirati u obitelj èetiri odvojene kompanije (consumer, business, broadband, wireless), što je najveæe restrukturiranje

ovog korporativnog simbola još od podjele iz 1984. godine. Na taj se potez AT&T odlueio nakon što su dionice ove korporacije pale gotovo za pola ove godine. "Mislim da je ovo poèetak kraja jedne ikone. To je tužan dan u korporativnoj povijesti, predaja Wall Streetu, koji je glupo tražio kratkoroène rezultate i prihode dionica", izjavio je analitièar Gartner Grupe. [Iscrpnije...](#)

Euro pao na dosad najnižu vrijednost - 0,83 dolara

**Sve manje
vrijedi**

Jutros se na londonskoj burzi [euro](#) mogao kupiti za rekordno niskih 0,8288 dolara, nakon èega se opet malèice podigao. Krivicu za ovaj najnoviji pad navodno snosi jedna tvrtka koja promijenila znatnu kolièinu eura u dolare, kao i nevoljkost europskih centralnih banaka da jaæe podupru zajednièku valutu. Od startanja eura u sijeènju 1999. euro je pao u odnosu na dolar za 30%. [Iscrpnije](#) i [zbirka](#) euro novèanica...

Nemoguæe pecanje

Šveðanin æeli upecati èudovište iz Loch Nessa

Ljubitelji Nessiea digli su paniku saznavši da Šveðanin Jan Sundberg æeli uhvatiti komad koæe njihovog ljubimca za istraæivaæke potrebe. Loch Ness istraæitelj Dick Raynor

zatražio je od Sindberga da se suzdrži od nakane koju je nazvao "neetiènom i bolesnom". Nessie potpada pod škotski zakon o zaštiti životinja iz 1912, ali pitanje je, buduæi da postojanje èudovišta nikad nije dokazano, potpada li ono zaista pod taj zakon. [Nessie fan klub](#) i [iscrpnije...](#)

CIA skida tajnu s (nekih) dokumenata o Èileu

Hoæe li se otkriti istina o vezi CIA-e i Pinocheta?

Direktor [CIA](#)-e George Tenet pristao je izdati 13. studenog oko 450 dokumenata o tajnim operacijama u Èileu od 1962. do 1975. godine. U tom

razdoblju sumnja se da je CIA pripomogla pripremanju i izvršavanju puèa kojim je general Pinochet svrgnuo predsjednika Allendea i uveo diktaturu, no CIA je opovrgavala bilo kakvu umiješanost u puè i Allendeovu smrt. Direktor CIA-e isprva je zadržao izdavanje dokumenata zbog straha da æe se time otkriti obavještajne metode i izvori, ali je nakon redigiranja i izdvajanja oko dvadesetak dokumenata odluèeno da ostatak može ugledati svjetlo dana. Mutna slika, mutan ton...

MTV Interactive najbolji multimedijalni Web site

Keynote Systems, amerièka konzultantska grupa specijalizirana za Internet, napravila je index 20 najpopularnijih web siteova, mjereæi im kvalitetu audio i

video streaming prijenosa. Rezultati su jako loši, tako da je prosjeèna ocjena 1.87 od moguæih 10 bodova, što oznaèava DVD kvalitetu zapisa. Od 20 web stranica, MTV Interactive je osvojio najviše bodova,

3.6 od mogućih 10. Ostali su Barnesandnoble.com za audio e-commerce, WUSL-FM 99 za Internet radio i CNBC.com za financijski radio. Iscrpnije na [Information Technology...](#)

Povratak svemirskog taksija

Discovery sletio na rezervnu lokaciju u pustinji Mojave

Space shuttle Discovery uspio se jučer popodne sigurno spustiti na rezervnu lokaciju u bazi Edwards u Kaliforniji, nakon što nije mogao sletjeti na matični svemirski centar

Kennedy u Floridi, pa je naplanirano kružio u orbiti dva dana. Iz baze Edwards u pustinji Mojave završila je i prva misija shuttlea 1981. godine. Pustinjska se baza koristila redovito za slijetanje shuttlea u prvim godinama shuttle programa, a ovo je prvi put da se koristi od 1996. godine. NASA-i će trebati šest dana da dotegli shuttle nazad u matičnu bazu, a Discovery čeka nova misija za manje od četiri mjeseca.

Trg burze postaje Trgom hrvatskih velikana!

Odbor za imenovanja naselja, ulica i trgova zagrebačke Gradske skupštine prihvatio je prijedlog stručne skupine da se sadašnji Trg burze preimenuje u Trg hrvatskih velikana, a o tome bi se prijedlogu vijećnici zagrebačke skupštine trebali izjasniti na sjednici koja će se održati nakon predstojeće, sazvane za 7. studenoga. Prema prijedlogu koji je Odbor već prihvatio, sadašnji Trg hrvatskih velikana trebao bi se preimenovati u Trg žrtava fašizma. [Opširnije...](#) [Foto](#) reportaža.

Da vidimo kako napreduje Kingova Internet knjiga

Prva tri dijela su bila po dolar, od 4-8 bit æ po dva

Bilježica dobro uspijeva, zasad

[Stephen King](#) je krenuo s svojom Internet knjigom "The Plant" pitajuæi se uopæe da li æ išta biti od toga. No, evo, za prva tri dijela više od 75%

èitatelja je platilo po dolar, a to je bio Kingov zahtjev da piše dalje. Sada se pojavio i [èetvrti dio](#), no s novom cijenom - od sada svaki nastavak, sve do eventualno osmog košta po dva dolara. Ukoliko bude više od osam nastavaka bit æ besplatni kaže Stephen. Èitate vi to? A jeste li platili?

Kako zaraditi na Internetu?

16-godišnjak zaradio napuhavajuæi dionice preko Interneta

Stock exchange

Štos je jednostavan. Deèko je kupio jeftine dionice nekoliko tvrtki, zatim je lijepo prièao o tim tvrtkama na financijskim forumima i news grupama i kad im je vrijednost porasla prodao

ih. U cijeloj transakciji zaradio je 800.000 dolara. Tu treba odbiti 285.000 dolara globe koju bi trebao platiti Securities and Exchange komisiji (SEC) koja pazi da takve stvari ne zlorabe. Momak se zaštitio disclaimerom na svom siteu u kojem kaže da bi svatko trebao napraviti svoje vlastito istraživanje o potencijalu dionica. Cijela prièa izašla je u [Wired.com](#)-u.

Internet bez granica

Site za prodaju glasaèkog prava opet radi

Vote-auction

Mada je donesena presuda da se [voteauction.com](#) site ugasi jer su se na njemu mogli kupovati glasovi za amerièku predsjednièku kampanju,

vlasnik sitea, Austijanac sa serverom u Bugarskoj, mu je samo promijenio ime u [vote-auction.com](#) i nastavio poslovati. Mediji su u cijeloj prièi propustili istaknuti da amerièka vlada nije tužila samo vlasnika sitea, veæ i presence providera i tvrtku koja je registrirala domenu, što prema nekima predstavlja veæu opasnost za slobodu govora, nego što je prodajom glasova ugrožena demokracija.

Box Office report

Blair Witch Project II nije smijenio De Nira

 Uspješni fijasko

Nastavak prošlogodišnjeg hita Blair Witch Project prošao je slabije od očekivanog u svom prvom vikendu prikazivanja. Na prvom mjestu vikend box officea je i dalje, četvrti tjedan

za redom, De Nirova hit komedija [Meet the Parents](#) koji povukao novih 15,1 milijun dolara i sada je s ukupno utrženih 100 milijuna dolara na tragu uspjeha "Šestog čula". [Book of Shadows: Blair Witch 2](#) je preko vikenda zaradio 13 milijuna dolara i s obzirom na prodana prava prikazivanja izvan Amerike za iznos od 20 milijuna dolara, već je u plusu obzirom na produkcijske troškove od 15 milijuna. Na [Rotten Tomatoes](#) već na prvi pogled je jasno da je film promašaj - same trule rajčice. Svejedno, treći film, "prequel" tj. prethodnik, se već snima. [Opširnije...](#)

Nedjeljna misa na stadionu

Papa na nogometnoj utakmici!

Konferencijom pod nazivom "U vremenu jubileja, lice i duša sporta", kojoj je prisustvovao i papa Ivan Pavao II. u subotu je u Vatikanu započela proslava jubileja sporta u prisustvu oko 8.000 vjernika. Naglasivši da sport povezuje ali i razdvaja ljude, Papa je osudio nasilje na stadionima i u sportu uopće. Uputio je apel navijačima da ne uništavaju sport vrijeđajući protivničku ekipu. U nedjelju ujutro papa Ivan Pavao II. će na stadionu Olimpico služiti misu i prisustvovati nogometnoj utakmici između Italije i ostalog svijeta.

**28.10.2000,
subota**

Boom

Eksplozija europskog Interneta

Vrijednost poslovanja preko Interneta u Europi poskočit će s sadašnjih 53 milijarde dolara na 1.200 milijardi dolara u sljedeće četiri godine, kaže se u izvještaju koji je naručio Cisco Systems. Također se kaže da nedavni neuspjesi nekih većih dot.com tvrtki neće imati većeg učinka na zamah prebacivanja poslovanja na Internet. Zanimljivo je pogledati stanje 2000. i predviđanja za 2004. za neke europske zemlje. Njemačka sada ima 12,1 milijardu prometa, a imat će 317 milijardi. Cijela istočna Europa sada ima tek 300 milijuna prometa, a imat će 14,6 milijardi, manje od bilo koje zemlje zapadne Europe. [Opširnije...](#)

Web film

Dva grafièara na kompjutoru napravila akcijski Web hit film

405: The Movie

Prièa filma [405: The Movie](#) je jednostavna: džip ide autocestom, vozaè primjeti da se nešto èudno zbiva, osvrne se i ugleda Boing 747 kako se

spušta iza njega. Djelo je to dvojice kompjutorskih grafièara, Brucea Branita i Jeremyja Hunta koji su za stotinjak dana i gotovo ništa novaca napravili film od dvije i pol minute. Najveæi dio filma, ukljuèujuæi avion i džip u pokretu, napravljeni su na kompjutoru. "405" je postavljen na webu 5. lipnja i otada ga je pogledalo **2 milijuna** ljudi.

Sijamski san

Obavljena prva potpuno uspjeta operacija sijamskih blizanaca

Dvanaest sati je u australskom gradu Brisbaneu trajala operacija u kojoj je pod vodstvom Dr Scotta Campbella, pokušano i uspjeno radvajanje sijamskih blizanki

Taj-lah i Monique Armstrong spojene potiljkom.

Blizanke su bile postavljene jedna drugoj "naglavaèke i okrenute leđima", a nakon operacije se u dobrom stanju i žive. Roditelji se nadaju da æe ih za Božiae odvesti kuæi. Od 1928. do '87. je bilo samo 60 pokušaja radvavanja sijamskih blizanaca, u kojima je preživjelo samo 26 od 60 blizanaca. [Iscrpnije...](#)

Antinastavak

Drugi dio filma 'Blair Witch' poeinje danas u amerièkim i britanskim kinima

Novi glumci, novi redatelj, nova prièa, posve novi film - tako bi se ukratko moglo opisati kakav je 'Book Of Shadows: [Blair Witch II](#)',

nastavak komercijalno iznimno uspješnog 'The Blair Witch Project'. Novi film ima sve karakteristike Hollywooda: sniman je s budžetom od petnaest milijuna dolara, s drugim redateljem - Joeom Berlingerom, novim, talentiranim glumcima, i grafikom skupog filma. Prièa se vrti oko studenata obožavatelja prvog dijela koji su došli u šumu gdje je sniman taj film da otkriju istinu. Prvi dio snimljen je za 30.000 dolara, a zaradio je 250 milijuna. Ovaj nastavak, èini se, nakon prvih loših kritika i bez snage originalne inspiracije, ima malo izgleda da dosegne tu brojku. Svejedno, veæ se radi na treæem dijelu. [Iscrpnije...](#)

Ima koga kod kuæe

NASA objavila desetogodišnji plan o istraživanju Marsa

Do 2010 trajati æe istraživanje Marsa kojim se želi odgovoriti na pitanje koje odavno muèi Zemljane: Je li ikada postojao život na Crvenom planetu i postoji li možda sada? [NASA](#)

planira šest veæih misija u narednoj dekadi, u kojima æe sudjelovati i Italija i Francuska. Iako je samo prošle godine na Marsu izgubljeno dvije robotske letjelice, plan je da se svake od iduæih pet godina potroši 400 do 450 milijuna dolara na ovo istraživanje èiji je cilj da se donese uzorak tla s Marsa. [Iscrpnije...](#)

Kad neæe milom, hoæe silom

Hakeri provalili u Microsoft

[Microsoft](#) je objavio kako su hakeri provalili u kompanijinu kompjutorsku mrežu i došli do nacrtâ Windowsa. U

Microsoftu vjeruju da im nisu narušili izvorni kod, što ne iskljuèuje da nisu, a vrlo je

vjerojatno da su do njega došli. Provalu je u srijedu otkrilo osiguranje kada su primjetili da se interni kodovi šalju na e-mail u St. Petersburg u Rusiji. Američki sudovi već neko vrijeme sa slabim uspjehom pokušavaju razbiti monopol koji Microsoft ima na software tržištu. [Iscrpnije...](#)

Iz dubine

Oproštajno pismo kapetana podmornice "Kursk"

"Sada je 13... sati. Pišem na slijepo... Zbog havarije, donijeli smo odluku da svi članovi posade iz 6., 7. i 8. odsjeka prijeđu u 9... Ovdje nas je 23.

Trojica su neuspješno pokušali

izaći na vrh kroz luk na 9. odsjeku..." Tako ide oproštajno pismo 33-godišnjeg kapetana Dmitrija Kolesnjikova pronađeno u njegovom džepu. Pismo je ponovno u ruskoj javnosti probudilo vjerovanje da je do katastrofe nuklearne podmornice "Kursk" došlo zbog sudara s nekom drugom podmornicom.

Novosti iz HT-a

Uz telefonski račun za studeni i specifikacija poziva

[Hrvatski telekom](#) do kraja ove godine namjerava telefonskim pretplatnicima ponuditi mogućnost slanja specifikacije telefonskih poziva uz račun, te

će od dva milijuna pretplatnika zatražiti odgovor žele li to, rekao je jučer na konferenciji za novinare glasnogovornik HT-a Marjan Jurleka. Po njegovim riječima, na svakih 1000 HTovih korisnika fiksne telefonije, prigovor na iznos računa iznosi prosječno samo jedan korisnik. Jurleka je izvijestio i o povećanju broja korisnika Simpa GSM usluge na 200 tisuća. Povećanje broja korisnika bilježi i ISDN, kojim se u Hrvatskoj trenutno služi 15 tisuća korisnika. Novosti iz VIP-a

VIP net otvorio centar Službe za korisnike

Djelatnici [VIP](#) netove Službe za korisnike, koja radi svih 365 dana u godini od 0-24 sata, putem besplatnog pozivnog broja 091 77-00, odnosno 091

77-77 za VIPme korisnike, dobili su novu poslovnu zgradu, jer se njihov broj povećao s 40 na 140 djelatnika. Služba za korisnike dosad je primila tri i

pol milijuna poziva, rekla je juèer predsjednica Uprave VIP neta Tatjana Holjevac, a investicija vrijedi oko osam milijuna maraka. Novost je i mogućnost kupovine VIP me bonova od 0 do 24 sata na 80 bankomata Raiffeisen banke u cijeloj Hrvatskoj. [Opširnije...](#)

It's a funny and bussy world

Taksist æe platiti kaznu zato što su roditelji zaboravili dijete

Real Home
Alone story

Èikaški taksist Arshad Aziz mogao bi platiti kaznu od 100 dolara zato što je braèni par koji je vozio na aerodrom ostavio u taksiju trogodišnje dijete. Aziz je navodno prekršio

propis jer nije provjerio da li je stražnje sjedište automobila ispražnjeno nakon što je dovezao putnike. Roditelji su prošli bez kazne za zaboravljeno dijete.

Vrlo tražena roba

Novi Spice Girls album veæ imao pretpremijeru na Napsteru

Spice Girls

Svih 11 pjesama s novog, još neobjavljenog albuma [Spice Girls](#) spretni su hackeri uspjeli pronaæi i skinuti s tajnog servera, te su ih preko [Napstera](#)

ponudili svima na preslušavanje. Napster je zbog toga od juèer popodne imao iznimno velik promet. Pjesme se veæ mogu naæi i na drugim siteovima, jedan od vlasnika sitea komentira: "To je ono što smo èekali tri godine, cijelu prošlu noæ preslušavao sam album." Službeni izlazak albuma najavljen je za 6. studenog.

Globalno zagrijavanje gore nego što se mislilo

Zagaðivaæi koje je proizveo èovjek "znaèajno su pridonijeli" globalnom zagrijavanju i Zemlja æe postati znatno toplija nego što se to prije mislilo, zakljuèeci su

UN-ovog panela znanstvenika. Izvještaj 'Intergovernmental Panel on Climate Change' prvi je iscrpni pregled stanja od 1995. godine kada je isti panel zakljuèio da postoji ljudski utjecaj da zemljinu klimu zbog "efekta staklenika". Ukoliko se nešto ne poduzme, zemljina površinska prosjeèna temperatura mogla bi porasti s 2.7 na 11 Fahrenheita do kraja stoljeæa. [Iscrpnije...](#)

Kraj savršenog hollywoodskog para

Rastava braka Bruce Willisa i Demi Moore

Bilo pa prošlo...

Nekad najglamurozniji par Hollywooda, Bruce Willis i Demi More, službeno se rastaju nakon dvije godine razdvojenog života. Par se vjenčao 1987. godine nakon tri mjeseca poznanstva, a na vjenčanju koje je koštalo 875,000 dolara pjevao je Little Richard. Vrijeme su provodili između ranča u Idahou, gdje njihovo troje djece još uvijek idu školu, te stana u New Yorku i kuće u Malibuu. Nakon što se par razdvojio, bivša prijateljica Demi Moore izjavila je jednom magazinu da je brak bio iz interesa. [Iscrpnije...](#)

Hollywoodski rođendan

De Niro: "Forget about it" - Clinton: "Talkin' to me?"

You talkin' to me?

Hollywoodska krema i glazbene zvijezde pojavile su se na proslavi 53. Rođendana Hillary Clinton u srijedu, gdje je predsjednikova supruga prikupila dva milijuna dolara za svoju senatsku kampanju. Vrhunac večeri je bio kada je Robert De Niro pokušavao predsjednika naučiti kako se izgovara "forget about it" s teškim njujorškim naglaskom, na što je Clinton odgovorio rečenicom iz 'Taksista': "You talkin' to me?" Zbijanju šala pridružili su se i Chevy Chase, Tom Cruise, Cameron Diaz, Ben Affleck, Nathan Lane i Cher. [Iscrpnije...](#)

Dio posade Kurska preživio prvu havariju

Ronioci pronašli pismo u potonuloj ruskoj podmornici

U džepu jednog od poginulih mornara s potonule ruske podmornice Kursk pronađeno je pismo koje navodi da je najmanje 23 člana posade preživjelo prvu eksploziju.

Ruske vlasti do sada su tvrdile da je većina od 118 članova posade poginula minutu nakon eksplozije na nuklearnoj podmornici, što opovrgava pismo koje je napisao časnik Kolesnikov. Prema navodima agencije Tass, u pismu također piše da je Kolesnikov pisao slijep. [Iscrpnije...](#)

Eminem nepoželjan u Kanadi

Vlasti Toronta žele spriječiti Eminemov nastup

Državni odvjetnik Ontarija želi spriječiti američkog rappera Eminema da nastupi danas u Torontu zbog pritužbe da njegove pjesme potiču nasilje prema ženama. Pravnici ove

kanadske provincije pokušavaju na sve načine zadržati Eminema izvan Kanade, pa su razmišljali tražiti pomoć i od federalnih useljeničkih vlasti. Pritužba je došla do konzervativnog državnog odvjetnika nakon što je jedna Kanađanka skinula Eminemovu glazbu s Interneta i prijavila ju policijskom odjelu za zločine mržnje. [Iscrpnije...](#)

Tko će imati No.1 igraću konzolu?

Sony izbacio PS2 u SAD-u, Microsoft brusi zube

Danas u američke dućane dolazi dugoočekivani Sonyjev PlayStation 2, što osim hordi zainteresiranih kupaca pažljivo prati i korporacija Microsoft koja za godinu dana planira

izbaciti svoj Xbox za koji tvrdi da predstavlja najmoćniju igraću konzolu na planeti. Prema najavama Robbie Bacha, koji je zadužen za taj projekt, bit će to najveći događaj te vrste koji je Microsoft ikad napravio. Sony tvrdi da će PS2 vladati tržištem bar još nekoliko godina. [Iscrpnije...](#)

"Tužan dan u korporativnoj povijesti"

AT&T se dijeli u četiri nove kompanije

Like a virgin

Korporacija AT&T jučer je objavila da će se restrukturirati u obitelj četiri odvojene kompanije (consumer, business, broadband, wireless), što je najveće restrukturiranje

ovog korporativnog simbola još od podjele iz 1984. godine. Na taj se potez AT&T odlučio nakon što su dionice ove korporacije pale gotovo za pola ove godine. "Mislim da je ovo početak kraja jedne ikone. To je tužan dan u korporativnoj povijesti, predaja Wall Streetu, koji je glupo tražio kratkoročne rezultate i prihode dionica", izjavio je analitičar Gartner Grupe. [Iscrpnije...](#)

Ništa prije braka

Britney Spears: "Još uvijek sam djevica"

Like a virgin

18-godišnja američka pop zvijezda Britney Spears, koja je objavila hitove poput "Baby, one more time" i "Oops! (I did it again)", izjavila je britanskom Daily Staru da je još uvijek djevica i "da bi htjela pričekati dok ne osjeti da je u vezi s pravom osobom, s kojom æe stupiti u brak". [Iscrpnije...](#)

Making it all only makes sense

Osvježeni Microsoftov MSN kreæe na AOL dominaciju

MSN Explorer

Juèer redizajnirani [MSN](#), [Microsoftova](#) ISP usluga, ima najozbiljnije namjere krenuti na vodeæeg Internet providera u svijetu - [AOL](#). MSN trenutaèno ima 3,5 milijuna korisnika, a AOL èak 25 milijuna. MSN æe u 10.000 duæana dijeliti besplatni CD s novim MSN Explorerom. Predstavnik Microsofta je izjavio hladno i zastrašujuæe: "Cilj kampanje je stvoriti od MSN-a globalni *brand name* koji æe imati prepoznatljivost, snagu i vrijednost naših osnovnih proizvoda Windowsa i Office paketa." Microsoft u kampanju namjerava uložiti milijardu dolara! [Iscrpnije...](#)

Internetizacija Hrvatske

Potrebna hitna informatizacija i internetizacija Hrvatske

Glavna poruka Konferencije "Internetizacija Hrvatske" koju je u srijedu organizirala tvrtka Ericsson Nikola Tesla, bila je da Hrvatska treba **hitno** izraditi strategiju informatièkog razvoja, a taj bi se dokument, kao što je sluèaj u razvijenim zemljama svijeta, trebao usaglasiti i prihvatiti na najvišoj državnoj razini. Hrvatska sada znatno zaostaje u informatizaciji ne samo za razvijenim nego i za nekih tranzicijskim zemljama. Posebna pozornost pritom je posveæena Internetu i elektronskoj trgovini jer, kako je naglasio Ake Enell, predsjednik Nikole Tesle, Internetom se u svijetu veæ sada služi 400 milijuna korisnika, a do 2003. godine bit æe ih više od milijardu od èega æe polovica koristiti i mobilni Internet. Pokrovitelj skupa bio je potpredsjednik Vlade dr. Goran Graniæ. [Iscrpnije...](#)

Breaking news

Euro pao na dosad najnižu vrijednost - 0,83

dolara

Sve manje
vrijedi

Jutros se na londonskoj burzi euro mogao kupiti za rekordno niskih 0,8288 dolara, nakon èega se opet malèice podigao. Krivicu za ovaj najnoviji pad

navodno snosi jedna tvrtka koja promijenila znatnu kolièinu eura u dolare, kao i nevoljkost europskih centralnih banaka da jaèe podupru zajednièku valutu. Od startanja eura u sijeènju 1999. euro je pao u odnosu na dolar za 30%. [Iscrpnije](#) i [zbirka](#) euro novèanica...

Nemoguæe pecanje

Šveðanin æeli upecati èudovište iz Loch Nessa

Ljubitelji Nessiea digli su paniku saznavši da Šveðanin Jan Sundberg æeli uhvatiti komad koæe njihovog ljubimca za istraæivaèke potrebe. Loch Ness istraæitelj Dick Raynor

zatraæio je od Sindberga da se suzdræi od nakane koju je nazvao "neetiènom i bolesnom". Nessie potpada pod škotski zakon o zaštitu æivotinja iz 1912, ali pitanje je, buduæi da postojanje èudovišta nikad nije dokazano, potpada li ono zaista pod taj zakon. [Nessie fan klub](#) i [iscrpnije](#)...

CIA skida tajnu s (nekih) dokumenata o Èileu

Hoæe li se otkriti istina o vezi CIA-e i Pinocheta?

Direktor CIA-e George Tenet pristao je izdati 13. studenog oko 450 dokumenata o tajnim operacijama u Èileu od 1962. do 1975. godine. U tom

razdoblju sumnja se da je CIA pripomogla pripremanju i izvršavanju puèa kojim je general Pinochet svrgnuo predsjednika Allendea i uveo diktaturu, no CIA je opovrgavala bilo kakvu umiješanost u puèe i Allendeovu smrt. Direktor CIA-e isprva je zadržao izdavanje dokumenata zbog straha da æe se time otkriti obavještajne metode i izvori, ali je nakon redigiranja i izdvajanja oko dvadesetak dokumenata odluèeno da ostatak moæe ugledati svjetlo dana. [Iscrpnije](#)...

PC-biz

Compaqu raste profit, ali prijeti euro

Najveći svjetski proizvođač PC-a Compaq izvjestio je o izvrsnoj prodaji svih svojih proizvodnih linija i porastu profita u trećem kvartalu (550 milijuna dolara), no

istovremeno je upozorio da će profit u četvrtom kvartalu biti ugrožen slabim eurom. Profit bolji od očekivanog pokazuje preokret za Compaq koji je prije godinu dana pokazivao stagnaciju rasta prihoda.

Discovery sletio na rezervnu lokaciju u pustinji Mojave

Space shuttle Discovery uspio se jučer popodne sigurno spustiti na rezervnu lokaciju u bazi Edwards u Kaliforniji, nakon što nije mogao sletjeti na matični svemirski centar

Kennedy u Floridi, pa je naplanirano kružio u orbiti dva dana. Iz baze Edwards u pustinji Mojave završila je i prva misija shuttlea 1981. godine. Pustinjska se baza koristila redovito za slijetanje shuttlea u prvim godinama shuttle programa, a ovo je prvi put da se koristi od 1996. godine. NASA-i će trebati šest dana da dolegli shuttle nazad u matičnu bazu, a Discovery čeka nova misija za manje od četiri mjeseca.

participate in the american election - wherever you are!

Vienna / Oslo / Washington, 22/10/2004, A0133 1/3 30 5330E13/01

[SELLtheVOTE](#) DOES IT THE AMERICAN WAY - THE DEMOCRATIC WAY

Voice from SELLtheVOTE.COM user Linda, 25, NY: My vote goes to a Puerto Rican, Puerto Ricans living in Puerto Rico pay federal taxes, fight in the US army, and have US passports - but are entirely denied a right to vote in the presidential elections. ... Puerto Rico has been occupied and used as a military training base by the US ... for decades. I offer my vote to a Puerto Rican living in Puerto Rico ... I will sell you my vote.

In 2000, CNN asked the makers of [V]ote-auction: "Why on earth are you europeans intervening in a U.S. election?", Voteauction replied: "Because the U.S. President has the power and the means to

change the face of the world, so the world should have the democratic power to elect the U.S. President."

In 2004, this proposition has become real with the web-site <http://SELLtheVOTE.COM> : U.S. voters are now able to sell their electoral vote to citizens of any country of the world wanting to democratically influence the U.S. presidential elections 2004, Kerry vs Bush.

During the last 4 years, the United States of America, their illegitimate president and the U.S. corporate fascists have terrorized the world with acts of war, cultural and political terrorism and disasterous mismanagement.

Al Qaeda is fighting back with bombs, media hacks and evil networks, but SELLtheVOTE.COM wants to get the job done the american way - the democratic way:

<http://SELLtheVOTE.COM>: our bombs are ballots. thank you.
<http://SELLtheVOTE.COM>: our ballots are bombs. thank you.
<http://SELLtheVOTE.COM>: our bombs are bombs. thank you.

***Online Salespoint:

live movie

germany´s second public tv station, zdf, is airing an interesting experiment tonight: a complete live movie. the tv movie is going to be shot at two locations at the same time and the director will cut the feeds in realtime as if it were a sporting event. the two locations in berlin (one in zehlendorf, one in charlottenburg) will be connected through a point-to-point radio beam. apparently this has been done before so the zdf is taking it even one step further and wrote a live taxi trip through berlin rush-hour into the plot. let´s see what´s going to happen... (if you´re still waiting for these 15 minutes, this could be it!) the whole thing will also be broadcasted (you guessed it) live on the internet.

donald trump's hairdo!

so i was in n.y. last week. my friend got us into this party for donald trump's reality t.v. show "the apprentice". man and then he came: donald trump himself surrounded by a couple of girls of his "trump models". yes, he owns a model agency! the party was pretty cool: open bar all night , stiff drinks, bad eurohouse and free cigarettes! although you could not smoke them inside.

so i took this two shots of his haircut. i also had my 3d camera on me, but haven't developed those images yet. but with that thing i will have the full 3d experience of his wicked hairdo! it is actually way cooler than it shows here.

they guy seems pretty cool. when he came in with his model girlfriend and the other ladies, my girlfriend was standing close to him apparently and the first thing he said when he saw the crowd, that was already there, was: "great, look at this! a lot of beautiful women here!" never can't get enough.

gervais is god, haim saban certainly not.

the german tv station pro sieben (recently bought by [haim saban](#)) is airing the premiere of "[stromberg](#)" today, a preposterous ripoff of bbc´s "[the office](#)". after watching some trailer i just couldn´t cope with it. not sure wether to laugh or to puke about the unbelievable naivity the sat1/pro sieben group program scouts are exhibiting in adapting sucessfull foreign formats. from what i saw in the preview it seems as if they copied every single episode in all details from story to characters to script.

listen up!

chaosradio verspricht heute abend super-interessant zu werden:

Chaosradio 96, 06.10.2004, 22-1 Uhr

<http://chaosradio.ccc.de/cr96.html>

Industriespionage

Das Erlangen von Erkenntnissen zu wirtschaftlichen Zwecken hat die klassische Spionage der Staaten und Nationen schon längst in der Priorität verdrängt. Geld regiert die Welt.

Bekannt werden Fälle der Industriespionage viel zu selten, die Dunkelziffer ist hoch. Wir versuchen, das zu ändern: Chaosradio gibt Hörern die Gelegenheit geben, ihre Geschichten zu erzählen (ohne Namen zu nennen, versteht sich).

Wir haben aber auch einige Anekdoten mitgebracht und werden aus dem Nähkästchen der uns bekannten Fälle plaudern. Auch ein paar generelle Erwägungen zum Thema Methoden und Schutz stehen auf dem Programm.

Fragen und Kommentare zu dieser Sendung bitte an 96@chaosradio.ccc.de, allgemeine Anfragen bitte an chaosradio@ccc.de

things are simple at the top

i shouldn't have gone to photokina. we were already on our way out, when stumbling across the ultimate in photographic perfection: the alpa 12 swa, a middle format camera, or rather a frame, which let's you combine rodenstock or schneider lenses with film or digital backs (linhof or mamiya). the extremely friendly swiss employee of alpa showed us the baby. let me tell you, it radiates perfection like nothing else. it's so orgiastically crafted, it's like no other camera you have seen before. so honestly, there is simply not much to add to their claim "Alpa - Things are simple at the top."

well maybe one thing: the prices are prohibitive. just the body starts at 3k euro, add a digital back and some lenses and you are easily in the range of a well equipped golf. just a shoulderstrap goes for 126 euro...

too bad their [website](#) doesn't work. i guess their just too busy crafting their cameras to craft their apache equally well.

Posted by felix at [19:37](#) | [Comments \(200\)](#) | [TrackBack](#)

ichat AV must have

having been frustrated for a long time with the really awful brightness settings for the isight in ichat, i found [iglasses](#). a little plugin that gives you total control (in a photoshop sort of way) of your webcam's settings within ichat. it is a really an awesome add on. i wonder why apple never got that sorted out. if you ever wanted to do you own sex video desert storm style like paris hilton did, then you just might want to try the night vision setting.

plus: the website says that iglasses makes it possible to run the isight on a g3.

arabic week pt. x

as you have guessed, it ´s arabic week at actioncontents. and as if bestellt, the house the apartment in berlin i was checking out was located in, was host to the palestinian embassy (or the general delegation as they have to call it). i was almost tempted to take the apartment just for that reason. it has some undeniable advantages , for example a police patrol 24/7 outside the door and therefore very little graffiti (as the real-estate agent was pointing out). hmmm.

[SELLtheVOTE](#) DOES IT THE AMERICAN WAY - THE DEMOCRATIC WAY

Voice from SELLtheVOTE.COM user Linda, 25, NY: My vote goes to a Puerto Rican, Puerto Ricans living in Puerto Rico pay federal taxes, fight in the US army, and have US passports - but are entirely denied a right to vote in the presidential elections. ... Puerto Rico

*has been occupied and used as a military training base by the US ...
for decades. I offer my vote to a Puerto Rican living in Puerto Rico ...
I will sell you my vote.*

In 2000, CNN asked the makers of [V]ote-auction: "Why on earth are you europeans intervening in a U.S. election?", Voteauction replied: "Because the U.S. President has the power and the means to change the face of the world, so the world should have the democratic power to elect the U.S. President."

In 2004, this proposition has become real with the web-site <http://SELLtheVOTE.COM> : U.S. voters are now able to sell their electoral vote to citizens of any country of the world wanting to democratically influence the U.S. presidential elections 2004, Kerry vs Bush.

During the last 4 years, the United States of America, their illegitimate president and the U.S. corporate fascists have terrorized the world with acts of war, cultural and political terrorism and disasterous mismanagement.

Al Qaeda is fighting back with bombs, media hacks and evil networks, but SELLtheVOTE.COM wants to get the job done the american way - the democratic way:

<http://SELLtheVOTE.COM>: our bombs are ballots. thank you.
<http://SELLtheVOTE.COM>: our ballots are bombs. thank you.
<http://SELLtheVOTE.COM>: our bombs are bombs. thank you.

***Online Salespoint:

<http://SELLtheVOTE.COM>: our bombs are ballots. thank you.

*** Buy Official Overseas Absentee Balloting Material in Austria.
SELLtheVOTE and THE AGENCY [FOR MANUAL ELECTION RECOUNTS] will sell 46 Florida absentee ballots in Graz / Austria
Nov 2 - Nov 11, Kunsthaus Graz, medien.KUNSTLABOR.
ubermorgen news-release upcoming...

***THE AGENCY FOR MANUAL ELECTION RECOUNTS will perform a MANUAL RECOUNT of DIGITALLY CASTED Florida paper machine ballots in the gallery space Nov 15 - Nov 25, the results will be documented and released online:

live movie

germany's second public tv station, zdf, is airing an interesting experiment tonight: a complete live movie. the tv movie is going to be shot at two locations at the same time and the director will cut the feeds in realtime as if it were a sporting event. the two locations in berlin (one in zehlendorf, one in charlottenburg) will be connected through a point-to-point radio beam. apparently this has been done before so the zdf is taking it even one step further and wrote a live taxi trip through berlin rush-hour into the plot. let's see what's going to happen... (if you're still waiting for these 15 minutes, this could be it!) the whole thing will also be broadcasted (you guessed it) live on the internet.

donald trump's hairdo!

so i was in n.y. last week. my friend got us into this party for donald trump's reality t.v. show "the apprentice". man and then he came: donald trump himself

surrounded by a couple of girls of his "trump models". yes, he owns a model agency! the party was pretty cool: open bar all night , stiff drinks, bad eurohouse and free cigarettes! although you could not smoke them inside. so i took this two shots of his haircut. i also had my 3d camera on me, but haven't developed those images yet. but with that thing i will have the full 3d experience of his wicked hairdo! it is actually way cooler than it shows here.

they guy seems pretty cool. when he came in with his model girlfriend and the other ladies, my girlfriend was standing close to him apparently and the first thing he said when he saw the crowd, that was already there, was: "great, look at this! a lot of beautiful women here!" never can't get enough.

chaosradio verspricht heute abend super-interessant zu werden:

Chaosradio 96, 06.10.2004, 22-1 Uhr

<http://chaosradio.ccc.de/cr96.html>

Industriespionage

Das Erlangen von Erkenntnissen zu wirtschaftlichen Zwecken hat die klassische Spionage der Staaten und Nationen schon längst in der Priorität verdrängt. Geld regiert die Welt.

Bekannt werden Fälle der Industriespionage viel zu selten, die Dunkelziffer ist hoch. Wir versuchen, das zu ändern: Chaosradio gibt Hörern die Gelegenheit geben, ihre Geschichten zu erzählen (ohne Namen zu nennen, versteht sich).

Wir haben aber auch einige Anekdoten mitgebracht und werden aus dem Nähkästchen der uns bekannten Fälle plaudern. Auch ein paar generelle Erwägungen zum Thema Methoden und Schutz stehen auf dem Programm.

Fragen und Kommentare zu dieser Sendung bitte an 96@chaosradio.ccc.de, allgemeine Anfragen bitte an chaosradio@ccc.de

things are simple at the top

i shouldn't have gone to photokina. we were already on our way out, when stumbling across the ultimate in photographic perfection: the alpa 12 swa, a middle format camera, or rather a frame, which let's you combine rodenstock or schneider lenses with film or digital backs (linhof or mamiya). the extremely friendly swiss employee of alpa showed us the baby. let me tell you, it radiates perfection like nothing else. it's so orgiastically crafted, it's like no other camera you have seen before. so honestly, there is simply not much to add to their claim "Alpa - Things are simple at the top."

well maybe one thing: the prices are prohibitive. just the body starts at 3k euro, add a digital back and some lenses and you are easily in the range of a well equipped golf. just a shoulderstrap goes for 126 euro...

too bad their [website](#) doesn't work. i guess their just too busy crafting their cameras to craft their apache equally well.

ichat AV must have

having been frustrated for a long time with the really awful brightness settings for the isight in ichat, i found [iglasses](#). a little plugin that gives you total control (in a photoshop sort of way) of your webcam's settings within ichat. it is a really an awesome add on. i wonder why apple never got that sorted out. if you ever wanted to do you own sex video desert storm style like paris hilton did, then you just might want to try the night vision setting.

plus: the website says that iglasses makes it possible to run the isight on a g3.

[“I’ve been trying to prove what the medium can do my whole life... If I thought my point had been made, I don't know what I’d do.”](#)

– [Will Eisner](#)

Anyone who spends much time here has probably realized that I am somewhat obsessed with stories about different media in their developmental stages, and the people that revolutionized those media. Recently I came upon Will Eisner as a sterling example of a pioneer in his own medium. He has been drawing comics for over 60 years, and is considered by many to be “the single person most responsible for giving comics their *brains*.” (comics writer Alan Moore)

What I find most fascinating about his development of the graphic novel is that his biggest influence on the art was not through a new technique or style, but through a change in the *focus* of comics. In an industry dominated by “increasingly pumped- and sexed-up transmutations”[‡] of “hypertrophied mutants and space aliens raging gaudy supernatural war”[‡] “whose elemental function has always been to commodify the testosterone delirium of male adolescence,”[‡] Will Eisner brought depth, personality, character-building.

His stories “are intimate fables about desperation, loss, and human folly... One Spirit story was told from the point of view of a murderer, all the images rendered in the ovals of the killer's eyes. Another one took place in the ‘real time’ of the ten minutes Eisner calculated it would take to read it.”[‡]

He used the same graphical techniques as the rest of the industry: the speech bubbles, the sequential square panes, the neat but casual brush-stroke lettering. Yet his change of emphasis did more to revolutionize the potential of comics for expression than the seemingly more experimental approaches to style of the late 1960’s

As we push our own medium out of it’s infancy, this is an important lesson to consider. We put a lot of focus on the technical aspects of our craft, pushing XHTML and CSS to backward and forward compatibility, tweaking ActionScript into the ether, and there are many from other web cliques who are still developing hypertext as a story-telling medium.

But for the most part, our perspective, our *voice*, is largely consistent. For the most part, we make the audience aware of our presence as authors, of our work as a product of our efforts. This medium seems to make us exceptionally self-aware as authors.

Exploring most web sites is akin to reading a book in which the author intermittently breaks in with his or her own narrative comments. How many sites go so far as to make the very window on the story a part of a character, as Eisner did?

There are exceptions of course. [jodi](#) has experimented with the browser itself as an element of a website. [Hi-res](#) consistently [subvert our expectations of how a website should run](#), shocking us into a more direct experience of the story itself.

We have been extremely successful at pushing the tech side of this medium, and we've spun some fantastic stories here. And if we take a cue from Eisner, another way to push this medium is by changing the user's perspective in the experience.

‡All of the quotes in this post are from [an article in the New York Review of Books](#). You can't read this article online without paying for it, but the purchase is well worth it. Besides, it's always a good idea to support micropayment where it is reasonable and in support of something worthwhile.

Wednesday, February 27, 2002:

According to Richard M. Smith of [Computer bytes man](#), Windows Media Player for XP has some almost surreal privacy invasions.

'Each time a new DVD movie is played on a computer, the WMP software contacts a Microsoft Web server to get title and chapter information for the DVD. When this contact is made, the Microsoft Web server is given an electronic fingerprint which identifies the DVD movie being watched and a cookie which uniquely identifies a particular WMP player. With this two pieces of information Microsoft can track what DVD movies are being watched on a particular computer.'

Until recently, Microsoft didn't even mention this fact in their privacy policy. This has been amended, and Microsoft now offers the following useful tip:

'To prevent a server from uniquely identifying your computer:
On the Tools menu, click Options.
On the Player tab, clear the Allow Internet sites to uniquely identify your Player check box.'

So is the *status quo* thinking at Microsoft now that as long as we give the user a way out, we can abuse them by default? To be fair, anyone who uses XP in light of all that's been said about its invasive properties deserve this sort of invasion.

So, let us say it once more. Do not purchase XP. Preferably stop using Microsoft products, but at the very least do not move to XP.

Monday, February 25, 2002:

PHP is a Designer's dream.

I haven't been this excited about a language since I read about the theory of XML (the practice of it is an entirely different matter).

The *thème du riguer* in web circles is separating [style](#) from [content](#). The *Design* is essentially the organization of all that. We aim for fluid xhtml/css that is useful in all browsers, and pretty in some.

In look, the complexity of this sort of design on the web has stepped back to when we first started using tables for layout. Simple modular designs.

Jakob Nielson is beside himself.

But as absolute positioning and the z-index creep in, we start to create sites just as contorted as those [Matrioshka-doll](#)(warning; 5 elvis popups) tables we're trying to get away from.

The wonder of separate style and content is that even [the most contorted styling](#) will render [readable content](#) in [Mosaic](#). So, we've got the best of both worlds. The |337 d-ZineR can wank css-2 all he/she wants without choking those poor Lynxes.

This is the lesson all us good little web designers are being taught today.

The reality is that css and xhtml alone have never severed content from style as flexibly as we dream. There is a level between the content of xhtml and the rendering of it's style with css that hangs in limbo between the two, inevitably forced into a place it really shouldn't be.

Tomorrow's answer (in practical terms) in xml. Today's is php.

And that's what I did this weekend. Used xhtml for [pure content](#). Used css for [pure styling](#). And used php to [organize it all](#). Admittedly, this weekend's efforts pushed a modular design down an [increasingly sticky path](#) of gratuitous styling, but for a front-end coder, the potential is inspiring.

PHP is easy, it is open-source, and it is *nix. Check it out. I'll write a simple tutorial to follow.

Sunday, February 17, 2002:

I attended [in Neville Brody in Conversation at the ICA](#) last night.

Some rather unpleasant vibes, a lot of vague handwaving without ever really nailing anything down (very un-Jesus like). Brody started by lambasting the ICA for manipulating what was meant to be a varied panel on some esoteric theme I can't remember into easy, empty celebrity fluff. This, he says, is endemic of 'the celebrity syndrome of design' where we 'aspire to a lifestyle' rather than anything 'authentic' in our work.

Following this theme of the lack of authenticity in design, he spoke of designers as 'interior decorators of the mind,' painting design as the 'flavor enhancer' for the non-nourishing blandness of media. Digital Media in particular lacks substance, he posits, going on to say that 'media isn't creative anymore; it is reproductive.'

This became a theme in general for the evening: 'The Internet is nothing but a stream of 1's and 0's'... 'all flash no content.' And the only way a designer can make any difference is by carefully selecting our clients.

I'll agree that in the scope of things, design is relatively unimportant to the world. People don't become designers to change the world; in fact, we are complicit in the manipulation of the comfortable redefinition of 'need' that has created so much waste and imbalance in the world. But it seems this panel and much of the audience, have our designer heads so deeply inserted in each other's sweet-smelling arses that we fail to see the non-designed world around us.

Their assault on the Internet is a perfect example. The only 1's and 0's I've ever seen on the Internet were on some designer's site who evidently felt it necessary to remind us that we were using something technological. And 'all flash no content' is exactly what you see on Designer sites, and rarely anywhere else on the web. The Internet is choked with content, and HTML is such a well-structured language that many neophyte sites can be very well designed. It is actually the designer's desire to decorate rather than uncover that has created much of the empty crap on the Internet. I know because I've done loads of it myself.

In painting the designer as a passive laquer to an inevitable phenomenon, we are ignoring the fact that we are an active part of the problem. Re-branding a company's look rather than re-evaluating a company's approach. The narrowing gap between Marketing and Design.

It's when we ignore our history as crafts-people and try to raise our self-importance by becoming strategic manipulators of public goals that we hurt society. Designers tend to have many superficial traits. But the importance of perfection to our work, and our acceptance of our role's responsibility in the bigger picture of what we do is how we can use design as a positive force.

Thursday, February 14, 2002:

Much conversation on the [Graphics List](#) today. Mostly just whingeing about clients and 'other' designers, and then of course the dogmas regarding flash and HTML-email leap in, but I've pulled a couple gems out of the stack today:

'Ask them what the most important thing on the page is. Now, ask them, "is that the most interesting thing on the page?"'

'Years and years ago I met a designer who said he charged \$25 an hour for design work, \$30 an hour if the client wanted to watch, and \$50 an hour if they wanted to help.'

'given a speaker who is talking and showing slides, only 20% of the listeners' attention is given to what the speaker is saying whilst 80% goes to what is on the screen.'

Wednesday, February 13, 2002:

Web? Somewhat. Activism? Not by my definition of it. But the [centre for applied autonomy](#) is an amusing resource for social intervention.

[iSee](#) is a clunky application with an immensely tedious flash intro that looks to be a great tool for getting to know some more out of the way chunks of New York. Basically, you tell it where you are and where you want to go, and it will plot a path for you that avoids as many surveillance cameras as possible. While I really don't care if someone is videotaping me (I actually quite like the idea of being on film for some bored bloke), it's always fun to subvert self-appointed big-brothers, and neighborhoods without cameras tend to be more exciting than the highly watched ones.

The video about [graffiti writer](#) is meticulously voiced in stilted grandiose, and their point about how easily an intermediary can allow people to commit crimes is a valid one.

Not quite the [The Yes Men](#), but these techno-pranksters are definitely worth a look.

Tuesday, February 12, 2002:

What's that 'they' say: that you always dislike in others what you dislike about yourself. Well, I guess I don't like when I pair evocative descriptions with empty buzzwords, because I really don't like this: 'Sparking and pulsing somewhere across the mediascape, freshly formed from the collision and convergence of newer media arts, is [Mediatopia](#).'

Can you see the convergence sparking? Can you hear the pulsing collision of newer media arts? Can you sense the former english majors turned web designers finally getting back to what they wanted to be doing in the first place?

Still, thinking about the web is a good thing, and this looks like it could be a place for playing with our ideas about *these many media* without needing to be too academic or too avant-garde.

This is a good thing.

The much disputed schadenfreude primp, or what abusing google can teach us about starting conversations with stangers

What's magical about search engines is not thier ability to find what you are looking for; that's their *raison d'etre-quoi*. The magic of search engines is their ability to give you what you weren't looking for but really wanted. Like back in the old days when I'd shimmy my butt down The Shining-like hallways of my University's stacks looking for some [Michener book on Ukiyo-e](#), and end up with a 30 foot long accordion folding book of Japanese carp. Not crap; carp. Japanese carp.

Misguided online searches can bring similarly delectable delights, and [Google-Whacking](#) has joined my [LINKINATOR](#) as my favorite ways of abusing google for unexpected results.

I'll let you in on a secret here. We're not really abusing google per se; we are twisting our perspective on that tool so that we ask it the sorts of questions we wouldn't normally ask it. It's a great way to make life more interesting as well. Each day, ask one person one question you wouldn't normally ask them. To the ticket-seller, "Does fried Ice cream melt?" To the grocer, "Where were you born?" To the accountant, "What do potatoes taste like?"

And here is one more secret. While most internet pop-culture thrives on its self-referentiality, this phenomenon dooms Googlewhacking by it's very nature. [schadenfreude primp](#) is the perfect example.

So we start with mislaid searches for Japanese art, travel through a 21st century search tool, and end right back where we started, in the floating world of fleeting phenomena.

Monday, February 04, 2002:

I guess this weekend's theme has become philosophising the internet.

.....

I want to look at this Situationist Internet thing from a different angle. Debord is always talking about how image has come to replace reality in our societies, yet the clearest path he seems to provide for cutting through to this reality is through nonsense, by subverting this fabricated reality through unexpected and innappropriate societal intervention.

I mentioned some obvious societal interventions the Internet has provided below, but let's look at this

more abstractly. I said that on the Internet the appearance of a thing *is* the thing itself.

But that's not really the case in a no-nonsense technical way.

The appearance is the way the browser renders the code. And although browsers have generally followed similar perspectives on this code, it would be possible to make a browser that rendered the code in an entirely different way. When thinking about how different animals experience this world, *very* different animals, my Mom asks me to imagine what the world would be like if we experienced site through our ears. If the information that comes through our eyes were processed by our brain as sound.

An [old psych experiment put goggles that turned the world upside down](#) on the wearer. Sort of a periscope with one lense missing. After a few days of vertigo, the participants learned to function perfectly fine in this upside down world, and in fact had to *re-learn* how to function in the normal world once their goggles had been removed.

Throw that kind of mind warp on a browser and the web is a very different place. The appearance is distinctly *not* the thing. Our perception of this world is dictated by a software company!

So what's real in this world. Like [Plato's pure forms](#), is the code the reality, which must be filtered through an organ before most can perceive it? Would a view-source only browser be a "purer" way of experiencing the web?

Obviously this is all mental wanking today. Our code is nowhere near rich enough to render much variety through different perspectives. How many ways are there to look at `Arial 11px #666666? Or sprite(theCurrentSpriteNum).locX = theMouseLoc/ getDate ()?`

There's not much room for interpretation there, but by purposefully abusing the code we can change the meaning of things on the Internet. Recontextualizing content is certainly a current-day step we can take towards this. By altering the appearance or proximity of information on the internet we change its reality.

Or our perception of its reality.

Because its not real*. It just has an initial or intended state.

*(again, I'm exhibiting my prejudice of only considering tangible stuff as real, and I know that's wrong. for instance, you can't touch or smell love, but that's real. on the other hand, a rock is very real, yet we can change its identity by using it in different ways. rock-hammer. rock-knife. rock-pen. rock-bed. is the real then the potential?...)

.....

When I first read [Guy Debord's Society of the Spectacle](#), I was struck by how the Internet seemed so much to be an application of the concepts this man spoke of in the 1960s. A society built on appearance over reality, image over thing, empty but compelling "experience" from an armchair. Marketing and media do this to the "real" world, but the Internet itself is pure image. Where would a situationist find the pulp of life in such a detached reality?

Yet by entering a world that is nothing but image, we are forced to create our own image. In this world, we are what we pretend to be, and when a destination is an image, [Debord's scolding over preferring our image of reality](#) over any reality we were once able to grasp becomes moot. We have embraced in the Internet just that which the situationists abhor, yet within this supremely false world, we do have control over what we are.

I guess it really is the lesser of two evils: portraying ourselves with our ideas versus portraying ourselves by consuming someone else's package of what we should be. When we are faced so baldly with pure appearance we *ourselves* have to make something of it.

Of course, I am making an assumption here: that because our experience of the Internet is flat; because it does not exist outside electricity, because it so easily loses the real world trappings of space and time, that it is pure appearance. When I think about it this way, I see that in fact the opposite can be true. The Internet is pure substance. Any site *is* what it appears to be. How do you differentiate the appearance from the thing when the appearance *is* the thing?

Suddenly the Internet seems a situationist dream rather than nightmare. Where any site has the same "amount" of reality, we can really mess with that reality. [Vote-auction.com](#). [The yes men](#). [The last page of the internet](#). [Requiem for a dream](#). [Pornolizer](#). [Vaporware](#).

This is pure bullshit. Isn't that what [detournement](#) is all about?

.....

| [\[permanent link\]](#)

* * *

Sunday, February 03, 2002:

Maybe it's just their cheap nostalgia shots ("Up-up Down-down Left-right Left-right B A start"), but for me, [the Moldy Peaches](#) really seem to speak of my generation, the priveleged conscienti. We've got the white man's burden ("I'm running out of ethnic friends"), and the irrational is the only sustainable sense of adventure we can interject into our daily lives without mussing up our hair too much (or what's left of it after burying our hypocrisy in knee-jerk politics for so long).

So what does this have to do with WebActivism?

Nothing. Except that webactivism as I see it is truly an affair of the priveleged conscienci. All I really care about in this world, I mean in the selfish your-house-is-on-fire-what-do-you-take-with-you sense of *caring*, aside from a few people, is my data. Not my shiny computer (though I bought a laptop so I can visualize my idyllic nomad lifestyle more plausibly with one), but my data. And thanks to open source, most of that's off on some server in California, so I don't have to carry it around with me and feel that weight of ownership. Outside of building real relationships, this is the most non-material kind of ownership I can envision.

But pixel or not, virtual or not, it is still a possession, and it still possesses me. I no longer have the fear that bar my portfolio I'm fucked, but I'd still like to have a couple gigabyte of laurels to rest on should it be necessary.

The [pyrric](#) part of it all is, data becomes real. Our virtual world is now subject to real-world laws. [John Perry Barlow's declaration of independence](#) just doesn't cut it any more. The Internet may be the first thing to go in armageddon, but it is as real and alive as [the velveteen rabbit](#).

So, we've won. We've convinced the world that the Internet is alive and real. But with that victory we enter reality, with all its stigmas and trappings. If we expect code to be ruled as speech, as free speech, then we accept that the constitution governs our world as well. 468x60 pixels is property that can be rented. [Red pixels are real](#).

The Internet is an idealist dream that has survived its prostitution. It has become real through love. But it has become real to those who don't love it as well. Only priveleged people get velvet bunny dolls. Only priveleged people can sing hard-core songs about them. Only priveleged people can love *something* until it becomes real.

And once it becomes real it is no longer an imaginary world of our own creation. Our world has entered the real world. The irrational has its feet on the ground. Is this what you wanted?

read this twice and listen to the Moldy Peaches if this seems disconnected

Thursday, February 28, 2002:

[“I’ve been trying to prove what the medium can do my whole life... If I thought my point had been made, I don't know what I’d do.”](#)

– [Will Eisner](#)

Anyone who spends much time here has probably realized that I am somewhat obsessed with stories about different media in their developmental stages, and the people that revolutionized those media. Recently I came upon Will Eisner as a sterling example of a pioneer in his own medium. He has been drawing comics for over 60 years, and is considered by many to be “the single person most responsible for giving comics their *brains*.” (comics writer Alan Moore)

What I find most fascinating about his development of the graphic novel is that his biggest influence on the art was not through a new technique or style, but through a change in the *focus* of comics. In an industry dominated by “increasingly pumped- and sexed-up transmutations”[‡] of “hypertrophied mutants and space aliens raging gaudy supernatural war”[‡] “whose elemental function has always been to commodify the testosterone delirium of male adolescence,”[‡] Will Eisner brought depth, personality, character-building.

His stories “are intimate fables about desperation, loss, and human folly... One Spirit story was told from the point of view of a murderer, all the images rendered in the ovals of the killer's eyes. Another one took place in the ‘real time’ of the ten minutes Eisner calculated it would take to read it.”[‡]

He used the same graphical techniques as the rest of the industry: the speech bubbles, the sequential square panes, the neat but casual brush-stroke lettering. Yet his change of emphasis did more to revolutionize the potential of comics for expression than the seemingly more experimental approaches to style of the late 1960's

As we push our own medium out of it's infancy, this is an important lesson to consider. We put a lot of focus on the technical aspects of our craft, pushing XHTML and CSS to backward and forward compatibility, tweaking ActionScript into the ether, and there are many from other web cliques who are still dveloping hypertext as a story-telling medium.

But for the most part, our perspective, our *voice*, is largely consistent. For the most part, we make the audience aware of our presence as authors, of our work as a product of our efforts. This medium seems to make us exceptionally self-aware as authors.

Exploring most web sites is akin to reading a book in which the author intermittently breaks in with his or her own narrative comments. How many sites go so far as to make the very window on the story a part of a character, as Eisner did?

There are exceptions of course. [jodi](#) has experimented with the browser itself as an element of a website. [Hi-res](#) consistently [subvert our expectations of how a website should run](#), shocking us into a more direct experience of the story itself.

We have been extremely sucessfull at pushing the tech side of this medium, and we've spun some fantastic stories here. And if we take a cue from Eisner, another way to push this medium is by changing the user's perspective in the experience.

‡*All of the quotes in this post are from [an article in the New York Review of Books](#). You can't read this article online without paying for it, but the purchase is well worth it. Besides, it's always a good idea to support micropayment where it is reasonable and in support of something worthwhile.*

Wednesday, February 27, 2002:

According to Richard M. Smith of [Computer bytes man](#), Windows Media Player for XP has some almost surreal privacy invasions.

'Each time a new DVD movie is played on a computer, the WMP software contacts a Microsoft Web server to get title and chapter information for the DVD. When this contact is made, the Microsoft Web server is given an electronic fingerprint which identifies the DVD movie being watched and a cookie which uniquely identifies a particular WMP player. With this two pieces of information Microsoft can track what DVD movies are being watched on a particular computer.'

Until recently, Microsoft didn't even mention this fact in their privacy policy. This has been amended, and Microsoft now offers the following useful tip:

'To prevent a server from uniquely identifying your computer:
On the Tools menu, click Options.
On the Player tab, clear the Allow Internet sites to uniquely identify your Player check box.'

So is the *status quo* thinking at Microsoft now that as long as we give the user a way out, we can abuse them by default? To be fair, anyone who uses XP in light of all that's been said about its invasive properties deserve this sort of invasion.

So, let us say it once more. Do not purchase XP. Preferably stop using Microsoft products, but at the very least do not move to XP.

PHP is a Designer's dream.

I haven't been this excited about a language since I read about the theory of XML (the practice of it is an entirely different matter).

The *thème du riguer* in web circles is separating [style](#) from [content](#). The [Design](#) is essentially the organization of all that. We aim for fluid xhtml/css that is useful in all browsers, and pretty in some.

In look, the complexity of this sort of design on the web has stepped back to when we first started using tables for layout. Simple modular designs.

Jakob Nielson is beside himself.

But as absolute positioning and the z-index creep in, we start to create sites just as contorted as those [Matrioshka-doll](#)^(warning; 5 elvis popups) tables we're trying to get away from.

The wonder of separate style and content is that even [the most contorted styling](#) will render [readable content](#) in [Mosaic](#). So, we've got the best of both worlds. The |337 d-ZineR can wank css-2 all he/she wants without choking those poor Lynxes.

This is the lesson all us good little web designers are being taught today.

The reality is that css and xhtml alone have never severed content from style as flexibly as we dream. There is a level between the content of xhtml and the rendering of it's style with css that hangs in limbo between the two, inevitably forced into a place it really shouldn't be.

Tomorrow's answer (in practical terms) in xml. Today's is php.

And that's what I did this weekend. Used xhtml for [pure content](#). Used css for [pure styling](#). And used php to [organize it all](#). Admittedly, this weekend's efforts pushed a modular design down an [increasingly sticky path](#) of gratuitous styling, but for a front-end coder, the potential is inspiring.

PHP is easy, it is open-source, and it is *nix. Check it out. I'll write a simple tutorial to follow.

Sunday, February 17, 2002:

I attended [in Neville Brody in Conversation at the ICA](#) last night.

Some rather unpleasant vibes, a lot of vague handwaving without ever really nailing anything down (very un-Jesus like). Brody started by lambasting the ICA for manipulating what was meant to be a varied panel on some esoteric theme I can't remember into easy, empty celebrity fluff. This, he says, is endemic of 'the celebrity syndrome of design' where we 'aspire to a lifestyle' rather than anything 'authentic' in our work.

Following this theme of the lack of authenticity in design, he spoke of designers as 'interior decorators of the mind,' painting design as the 'flavor enhancer' for the non-nourishing blandness of media. Digital Media in particular lacks substance, he posits, going on to say that 'media isn't creative anymore; it is reproductive.'

This became a theme in general for the evening: 'The Internet is nothing but a stream of 1's and 0's'... 'all flash no content.' And the only way a designer can make any difference is by carefully selecting our clients.

I'll agree that in the scope of things, design is relatively unimportant to the world. People don't become designers to change the world; in fact, we are complicit in the manipulation of the comfortable redefinition of 'need' that has created so much waste and imbalance in the world. But it seems this panel and much of the audience, have our designer heads so deeply inserted in each other's sweet-smelling arses that we fail to see the non-designed world around us.

Their assault on the Internet is a perfect example. The only 1's and 0's I've ever seen on the Internet were on some designer's site who evidently felt it necessary to remind us that we were using something technological. And 'all flash no content' is exactly what you see on Designer sites, and rarely anywhere else on the web. The Internet is choked with content, and HTML is such a well-structured language that many neophyte sites can be very well designed. It is actually the designer's desire to decorate rather than uncover that has created much of the empty crap on the Internet. I know because I've done loads of it myself.

In painting the designer as a passive laquer to an inevitable phenomenon, we are ignoring the fact that we are an active part of the problem. Re-branding a company's look rather than re-evaluating a company's approach. The narrowing gap between Marketing and Design.

It's when we ignore our history as crafts-people and try to raise our self-importance by becoming strategic manipulators of public goals that we hurt society. Designers tend to have many superficial traits. But the importance of perfection to our work, and our acceptance of our role's responsibility in the bigger picture of what we do is how we can use design as a positive force.

The much disputed schadenfreude primp, or what abusing google can teach us about starting conversations with stangers

What's magical about search engines is not thier ability to find what you are looking for; that's their *raison d'etre-quoi*. The magic of search engines is their ability to give you what you weren't looking for but really wanted. Like back in the old days when I'd shimmy my butt down The Shining-like hallways of my University's stacks looking for some [Michener book on Ukiyo-e](#), and end up with a 30 foot long accordion folding book of Japanese carp. Not crap; carp. Japanese carp.

Misguided online searches can bring similarly delectable delights, and [Google-Whacking](#) has joined my [LINKINATOR](#) as my favorite ways of abusing google for unexpected results.

I'll let you in on a secret here. We're not really abusing google per se; we are twisting our perspective on that tool so that we ask it the sorts of questions we wouldn't normally ask it. It's a great way to make life more interesting as well. Each day, ask one person one question you wouldn't normally ask them. To the ticket-seller, "Does fried Ice cream melt?" To the grocer, "Where were you born?" To the accountant, "What do potatoes taste like?"

And here is one more secret. While most internet pop-culture thrives on its self-referentiality, this phenomenon dooms Googlehacking by it's very nature. [schadenfreude primp](#) is the perfect example.

So we start with mislaid searches for Japanese art, travel through a 21st century search tool, and end right back where we started, in the floating world of fleeting phenomena.

Monday, February 04, 2002:

I guess this weekend's theme has become philosophising the internet.

.....

I want to look at this Situationist Internet thing from a different angle. Debord is always talking about how image has come to replace reality in our societies, yet the clearest path he seems to provide for cutting through to this reality is through nonsense, by subverting this fabricated reality through unexpected and innappropriate societal intervention.

I mentioned some obvious societal interventions the Internet has provided below, but let's look at this more abstractly. I said that on the Internet the appearance of a thing *is* the thing itself.

But that's not really the case in a no-nonsense technical way.

The appearance is the way the browser renders the code. And although browsers have generally followed similar perspectives on this code, it would be possible to make a browser that rendered the code in an entirely different way. When thinking about how different animals experience this world, *very* different animals, my Mom asks me to imagine what the world would be like if we experienced site through our ears. If the information that comes through our eyes were processed by our brain as sound.

An [old psych experiment put goggles that turned the world upside down](#) on the wearer. Sort of a periscope with one lense missing. After a few days of vertigo, the participants learned to function perfectly fine in this upside down world, and in fact had to *re-learn* how to function in the normal world once their goggles had been removed.

Throw that kind of mind warp on a browser and the web is a very different place. The appearance is distinctly *not* the thing. Our perception of this world is dictated by a software company!

So what's real in this world. Like [Plato's pure forms](#), is the code the reality, which must be filtered through an organ before most can perceive it? Would a view-source only browser be a "purer" way of experiencing the web?

Obviously this is all mental wanking today. Our code is nowhere near rich enough to render much variety through different perspectives. How many ways are there to look at `Arial 11px #666666? Or sprite(theCurrentSpriteNum).locX = theMouseLoc/ getDate ()?`

There's not much room for interpretation there, but by purposefully abusing the code we can change

the meaning of things on the Internet. Recontextualizing content is certainly a current-day step we can take towards this. By altering the appearance or proximity of information on the internet we change its reality.

Or our perception of its reality.

Because its not real*. It just has an initial or intended state.

*(again, I'm exhibiting my prejudice of only considering tangible stuff as real, and I know that's wrong. for instance, you can't touch or smell love, but that's real. on the other hand, a rock is very real, yet we can change its identity by using it in different ways. rock-hammer. rock-knife. rock-pen. rock-bed. is the real then the potential?...)

.....

When I first read [Guy Debord's Society of the Spectacle](#), I was struck by how the Internet seemed so much to be an application of the concepts this man spoke of in the 1960s. A society built on appearance over reality, image over thing, empty but compelling "experience" from an armchair. Marketing and media do this to the "real" world, but the Internet itself is pure image. Where would a situationist find the pulp of life in such a detached reality?

Yet by entering a world that is nothing but image, we are forced to create our own image. In this world, we are what we pretend to be, and when a destination is an image, [Debord's scolding over preferring our image of reality](#) over any reality we were once able to grasp becomes moot. We have embraced in the Internet just that which the situationists abhor, yet within this supremely false world, we do have control over what we are.

I guess it really is the lesser of two evils: portraying ourselves with our ideas versus portraying ourselves by consuming someone else's package of what we should be. When we are faced so baldly with pure appearance we *ourselves* have to make something of it.

Of course, I am making an assumption her: that because our experience of the Internet is flat; because it does not exist outside electricity, because it so easily loses the real world trappings of space and time, that it is pure appearance. When I think about it this way, I see that in fact the opposite can be true. The Internet is pure substance. Any site *is* what it appears to be. How do you differentiate the appearance from the thing when the appearance *is* the thing?

Suddenly the Internet seems a situationist dream rather than nightmare. Where any site has the same "amount" of reality, we can really mess with that reality. [Vote-auction.com](#). [The yes men](#). [The last page of the internet](#). [Requiem for a dream](#). [Pornolizer](#). [Vaporware](#).

This is pure bullshit. Isn't that what [detournement](#) is all about?

.....

| [\[permanent link\]](#)

* * *

Sunday, February 03, 2002:

Maybe it's just their cheap nostalgia shots ("Up-up Down-down Left-right Left-right B A start"), but for me, [the Moldy Peaches](#) really seem to speak of my generation, the priveleged conscienti. We've got the white man's burden ("I'm running out of ethnic friends"), and the irrational is the only sustainable sense of adventure we can interject into our daily lives without mussing up our hair too much (or what's left of it after burying our hypocrisy in knee-jerk politics for so long).

So what does this have to do with WebActivism?

Nothing. Except that webactivism as I see it is truly an affair of the priveleged conscienti. All I really care about in this world, I mean in the selfish your-house-is-on-fire-what-do-you-take-with-you sense of *caring*, aside from a few people, is my data. Not my shiny computer (though I bought a laptop so I can visualize my idyllic nomad lifestyle more plausibly with one), but my data. And thanks to open source, most of that's off on some server in California, so I don't have to carry it around with me and feel that weight of ownership. Outside of building real relationships, this is the most non-material kind of ownership I can envision.

But pixel or not, virtual or not, it is still a possession, and it still possesses me. I no longer have the fear that bar my portfolio I'm fucked, but I'd still like to have a couple gigabyte of laurels to rest on should it be necessary.

The [pyrric](#) part of it all is, data becomes real. Our virtual world is now subject to real-world laws. [John Perry Barlow's declaration of independence](#) just doesn't cut it any more. The Internet may be the first thing to go in armageddon, but it is as real and alive as [the velveteen rabbit](#).

So, we've won. We've convinced the world that the Internet is alive and real. But with that victory we enter reality, with all its stigmas and trappings. If we expect code to be ruled as speech, as free speech, then we accept that the constitution governs our world as well. 468x60 pixels is property that can be rented. [Red pixels are real](#).

The Internet is an idealist dream that has survived its prostitution. It has become real through love. But it has become real to those who don't love it as well. Only priveleged people get velvet bunny dolls. Only priveleged people can sing hard-core songs about them. Only priveleged people can love *something* until it becomes real.

And once it becomes real it is no longer an imaginary world of our own creation. Our world has entered the real world. The irrational has its feet on the ground. Is this what you wanted?

read this twice and listen to the Moldy Peaches if this seems disconnected

.....

dear uberfriends

about others I...

the reason for this email. our goood friends from micromusic# just released the < microbuilder - community construction kit > .

"the renown on-line music and computer culture community micromusic.net presents their microbuilder project: a starter package for global villages, digital communities and open source file sharing freaks.

microbuilder-team: gino esposto & paco manzanas
[info at microbuilder.com](http://info.at.microbuilder.com)

purchase the microbuilder package for only EUR 129.00 (limited and personalized edition, 200 copies): <http://micromusic.net/shop>

the package includes the software, a book with contributions from the micromusic and net.culture environment (text, graphics and documentations; including a sexy ubermorgen text <http://ubermorgen.com/microbook>) and several gadgets that let the hearts

of software fumlbers and on-line freaks melt. all of it is wrapped
up in
a design price awarded box (swiss design 2003). <http://microbuilder.com>

"

microbuilder release party: april 21 2004
venue: bogen13, viaduktstrasse 13, 8005 zurich/switzerland

about others II...

and our other good friends from monochrom also just released
their new
blog under <http://www.monochrom.at/english/>

if you love trashy manic chaotic and not-so-funny jokes about the
soviet union and other intellectual highlights and cultural art,
get to
know these fun-loving nerds and nerdesses.

News : Août 2000

Abréviations utilisées : NPLN -> Note Pour Les Novices, CONTQM -> Cette Opinion Ne Tient Qu'à Moi

Jeudi 31 Août 2000

- **Ca n'a rien de surprenant...**

Le logiciel Promis, qui avait beaucoup fait parler de lui dans les années 80 est un logiciel destiné aux juristes qui classe les documents et d'établir des corrélations entre eux. Il a depuis été retouché par l'administration américaine qui l'a revendu, sous un autre nom, à l'étranger, à des services secrets (en Jordanie et Israël, notamment) mais aussi à des sociétés, dont quelques grandes banques françaises.

Cependant, les modifications auraient consisté en la pose de dispositifs d'écoute et d'intrusion sur les ordinateurs où il serait installé, donnant ainsi aux États-Unis la possibilité d'espionner un grand nombre d'entreprises et d'agences gouvernementales. Juste là, tout va bien pour les américains sauf que le gouvernement canadien qui utilise le logiciel PIRS pour coordonner les enquêtes des ses services secrets et de la Police montée, soupçonne que ce soit une de ces version de Promis. Une enquête a donc été ouverte pour déterminer si des mouchards existent bien.

- **France Telecom ne possède pas les Pages Jaunes.**

France Telecom, qui possède www.pagesjaunes.fr, avait demandé à l'Office Mondial de la Propriété Industrielle (OMPI) de statuer en sa faveur sur la question de savoir à qui appartiennent les domaines pagesjaunes.com, pagesjaunes.net et lespagesjaunes.com. Mais l'OMPI n'a pas suivi en expliquant notamment que autres annuaires nommés Pages Jaunes existent dans des pays francophones avec le nom pagesjaunes.ch, [.ca](http://pagesjaunes.ca), [.be](http://pagesjaunes.be), [.lu](http://pagesjaunes.lu).

- **Tout le monde a droit à un e-mail... 2ème édition**

La Poste a annoncé qu'elle allait offrir un e-mail gratuit à chaque français, qui est consultable directement de chez vous (sur le site ou sur votre gestionnaire de mails) ou sur des bornes payantes dans les postes. Seulement voilà, le service existe depuis un an....

- **Sony sort son Palm**

Sony et Palm ont dévoilé le Clie, premier PDA issu de leur alliance qui marque l'entrée du Japonais sur ce marché grandissant.

- **Les rumeurs se précisent**

La société Mainsoft, développeur Unix/Linux, est soupçonnée d'être l'un des piliers de la conversion d'Office sous Linux. Elle a déjà porté I.E. et Windows Media Player sur cette plate-forme. (CONTQM : Si on trouve même les logiciels MS sous Linux, quel sera l'intérêt de conserver Windows ?)

- **AGP x8 pour Intel**

Milieu 2001, Intel devrait sortir ce nouveau bus graphique qui permettra d'accélérer encore la 3D.

- **Nouveau système de promotion**

Au Etats-Unis (ailleurs je ne sais pas), Windows Me (NPLN : Windows Millenium, qui sort le 14/09 partout dans le monde) sera distribué sous forme de démos dans les grands magasins.

Mercredi 30 Août 2000

- **Les nouveau amis de Napster**

De nombreuses organisations se sont constituées soutiens de Napster devant la Cour d'appel, comme par exemple la Consumer Electronics Association (CEA) et la Digital Media Association (DiMA).

La CEA estime que le juge a mal interprété le cas du Betamax de Sony de 1984 car Napster a, à ses yeux, créé un nouveau standard qui peut avoir des applications légales bien qu'il soit souvent utilisé pour enfreindre la loi. La DiMA qui représente plus de 960 ntreprises dont AOL et Yahoo rejoint les positions de la CEA.

- **Barbie fait confiance aux petites filles**

Les directeurs de Barbie.com a engagé 26 petites filles entre 6 et 12 ans pour les aider à repenser le site qui avait été ouvert cet été. Toutes les semaines ces filles recevaient par mail des photos d'écran du site en construction et étaient questionnées par e-mail ou téléphone. Bien sûr elles ont reçu une rémunération (non communiquée) pour leurs services.

Il semble que cette façon de procéder soit payante puisque le trafic a doublé à la réouverture du site puis a quadruplé après les publicités à la T.V.. De plus, les visiteurs se fidélisent. Le visiteur reste à chaque fois 26 mn en moyenne.

- **Freesurf sanctionne des abonnés**

Suivant la route tracée par OneTel, Freesurf a inscrit sur une liste noire et déconnecté des abonnés du forfait illimité soir et week-end pour avoir brisé les règles. Selon les conditions du forfait à 100 F/mois, l'abonné est restreint à la consultation du web et de ses mails et aux groupes de discussions. Mais 531 abonnés ont été déconnectés en une semaine, sans préavis et en n'ayant pas

forcément enfreint les règles. Ils sont accusés d'avoir utilisé des passerelles pour télécharger des logiciels.

Sur le fait qu'il y ait eu des erreurs et pas de préavis, le directeur de Freesurf explique "qu'il s'agissait d'une mesure d'urgence. Mais nous nous sommes rendus compte que certaines pratiques étaient considérées à tort comme des fraudes." Ils sont donc en train d'examiner les cas un par un pour reconnecter ceux qui ont été déconnectés par erreur. Parmi les erreurs techniques relevées, un abonné qui introduirait tout simplement un CD dans son PC et lancerait le logiciel de lecture WinAmp tout en étant connecté serait considéré comme un fraudeur car WinAmp utilise un protocole interdit par le forfait illimité. Freesurf soutient cependant vouloir poursuivre son offre d'accès illimité.

- **Les antennes-relais seraient dangereuses**

Selon une étude commandée par la revue Science et Avenir, les vibrations qui transmettent les signaux radio de téléphonie mobile seraient nettement plus nocives que les opérateurs ne le déclarent.

L'étude, réalisée dans quinze appartements d'Ile-de-France situés derrière une antenne-relais ou au dernier étage d'un immeuble en accueillant une, révèle que dans près de deux cas sur trois, l'intensité des radiations émises est dix fois supérieure aux valeurs annoncées par les laboratoires de France Telecom.

Déjà, en avril 1999 déjà, la direction générale de la santé et le secrétariat d'Etat au logement avaient publié un rapport préconisant une « restriction d'usage totale ou partielle » des balcons de HLM sur lesquels sont installées ces antennes, voire même une « condamnation de certaines pièces d'habitation ».

- **Intel largué**

Le PIII 1,13 GHz a été retiré de la vente 1 mois après sa sortie à cause d'une anomalie sur un circuit entraînant des problèmes de fonctionnement avec certains logiciels. De plus certains assembleurs comme Dell avaient déjà suspendu leurs commandes en raison de l'incapacité d'Intel à fournir ce modèle en nombre suffisant. Pendant ce temps, AMD a lancé son Athlon 1,1 GHz et il a déjà plus de 10 constructeurs comme clients, notamment Compaq, Fujitsu Siemens Computers, Gateway, Hewlett-Packard et IBM.

AMD est donc seul sur le créneau haut de gamme et son produit est moins cher. Intel prévoit que les modifications à apporter au design de son PIII vont prendre quelques mois..... autant dire une éternité vu que les processeurs cadencés à 1,5 GHz sont attendus d'ici peu.

- **Amazon.com crée Amazon.fr**

L'ouverture a eu lieu dans la nuit du 30 au 31 août. Le site proposera 4 boutiques (livres, musique, DVD et vidéo) qui proposeraient l'ensemble des références disponibles en France. Cependant, contrairement à ses concurrents, aucun chiffre n'a été donné pour les produits français alors que l'on connaît ceux des produits étrangers (240.000 références de CD en import, 700.000 livres en anglais). Pour les prix, le site se conformera à la réglementation française en vigueur sur le prix unique du livre.

N'ayant pu racheter Alapage (France Telecom a été plus rapide), Amazon a du

construire un site de toute pièce mais a su s'entourer d'une équipe composé d'anciens de chez Vivendi, Havas ou la FNAC. Mais les concurrents, la FNAC, Alapage et BOL ne s'inquiètent pas et pensent même que la campagne de publicité que va lancer Amazon va leur être bénéfique.

- **Entre Netscape et I.E., choisissez K-Meleon**

Il s'agit d'un navigateur gratuit et sous licence G.P.L. (NPLN : le code source du logiciel est disponible et modifiable à volonté par tout un chacun) qui ressemble à I.E. mais qui intègre le moteur d'interprétation Gecko, qui sera au coeur de Netscape 6. On a donc là un clone plus léger (4 Mo) de Netscape Navigator, il intéressera donc : tous ceux qui veulent disposer des navigateurs de Microsoft et de Netscape, les développeurs de sites web souhaitant s'assurer de l'apparence d'un site dans les deux versions ou les internautes voulant se rendre sur des sites inaccessibles avec I.E..

Pour les familiers du monde Unix/Linux, c'est le pendant Windows de Galeon (qui intègre déjà Gecko).

- **La dernière version de MS Office est en test**

Office 10 inclura une nouvelle technologie de reconnaissance vocale, un support XML additionnel, une application de collaboration par Internet et des outils de gestion du contenu.

- **Du nouveau sur les Palms**

Un programmeur a créé le premier Cheval de Troie connu pour Palm...

Mardi 29 Août 2000

- **Virus pour les enfants**

Ça vient de sortir ! Si vous recevez un e-mail avec Pikachu (le Pokemon !) en fichier attaché, ne cliquez pas dessus. C'est un nouveau virus qui traîne sur le net.

- **Motorola jette l'éponge sur Iridium**

Ça faisait quelques temps que ça couvait... Faute de repeneur, Motorola a décidé de saborder les 66 satellites de son réseau de téléphonie mobile. Voilà comment jeter facilement 7 milliards de \$!

- **Pentium IV a grossi**

Il faut s'attendre à ce qu'Intel ait du mal à fournir le Pentium IV et qu'il soit cher. En effet, le petit nouveau contient 42 millions de transistors (contre 28 pour le PIII), soit une surface de 217 mm² (contre une centaine sur le PIII). Ils seront produits avec les mêmes technologies que le PIII mais du fait de sa taille, Intel ne pourra en monter qu'un par galette de silicium là où il montait deux PIII en même temps. Le calcul est donc très simple : vitesse de production réduite de moitié et coût de matière première doublé... que devient le prix final ?

A moyen terme, le problème de surface devrait être réduit avec le passage à la

technologie 0,13 micron et l'utilisation de galettes de 300 mm contre 200 actuellement.

Un processeur nommé Foster devrait suivre. Il s'agit d'un PIV pour serveurs et stations de travail

- **Riposte d'Intel**

Intel a aussi dévoilé la technologie XScale qui vise à contrôler consommation et dégagement thermique et qui présente de nombreuses similitudes avec le processeur de Transmeta.

- **PGP buggé**

PGP (Pretty Good Privacy), la référence en matière de cryptage souffrirait d'un bug qui, dans certaines conditions permet accéder, dans les versions Windows, aux données décodées.

- **Micro\$oft bouche les trous**

Une faille dans FrontPage Server Extensions rendait possibles les attaques du type Denial of Service. Microsoft aurait corrigé le problème.

- **Rumeurs**

Il semblerait que Micro\$oft fasse développer par une firme israélienne une version de sa suite Office pour Linux. MS a bien sûr démenti la rumeur.

- **Oracle gratuit**

La firme a lancé OracleSalesOnline.com, un service qui offrira, le logiciel de base d'automatisation de la force de vente gratuitement. Seuls les modules additionnels seront payants, comme le logiciel de "sales-compensation", selon un système de pay-per-use (paiement à l'utilisation).

- **TrustE perd en crédibilité**

Le sceau TrustE est en temps normal une marque de garantie de la confidentialité sur des sites marchands. Mais l'organisation aurait fait profiter une société des données de ses visiteurs.

- **Yahoo veut crypter**

Yahoo prévoit de permettre aux utilisateurs de ses services mail de crypter leurs messages en utilisant le site SecureDelivery.com. Il serait le premier à proposer cette option.

- **Microsoft a des problèmes avec Hotmail**

Des utilisateurs Hotmail ont expliqué que suite à la fermeture de leur compte pour cause d'inactivité (ce qui est normal) ils ont créé un nouveau compte avec le même nom d'utilisateur et ont découvert avec étonnement que leur liste de contacts AIM était maintenue sur leur nouveau compte. Conclusion, si quelqu'un crée un compte avec votre ancien pseudo, il récupère votre liste de contact. Micro\$oft enquêterait de manière approfondie sur la question.

- **Nintendo se donne du temps**

Le Gameboy Advance ne sortira qu'en Mars au Japon et en Juillet en Europe à cause de ruptures de stocks en composants qui sont dus en grande partie à la forte demande actuelle en Gameboys Color

- **Du nouveau chez les cellulaires**

Suite à la polémique sur les dangers des cellulaires en matière de radiation, les principaux constructeurs ont décidé d'indiquer sur les emballages la quantité de radiations émises par leurs appareils

Mercredi 23 Août 2000

- **Dure concurrence pour Intel**

AMD (le grand rival) et Transmeta (l'étoile montante) devraient annoncer un coopération technologique. Transmeta est très intéressé par la technologie LDT (Lightning Data Transfer) créée par AMD qui accélère les échanges de données entre le processeur et les différents composants du PC et qui sera intégré aux jeux de composants des Athlon en 2001. Cette technologie permettrait à Transmeta d'atteindre le GHz. De son côté, AMD aurait accès à la technologie de Transmeta, dont les processeurs consomment 50 % d'énergie en moins que ses concurrents à fréquence égale.

Cette alliance ne va pas faire le bonheur d'Intel qui perd des parts de marché et patauge entre ses problèmes avec les composants i820 et les retards sur le Pentium IV, d'autant plus qu'AMD sera bientôt sur tous les fronts : portables (Athlon mobile fin 2000), ordinateurs de bureau (Athlon Thunderbird 1,2 GHz), serveurs (Sledgehammer).

- **Premier cyber hold-up**

Egg, la banque britannique uniquement on-line a été électriquement "braquée". Selon la banque, aucune perte (quelques dizaines de milliers de £) n'a été subie. Le 3 malfaiteur présumés ont été arrêté après une enquête de 6 mois suite à une alerte de Egg qui dispose de logiciels permettant de repérer tout ordinateur à partir duquel sont effectuées des opérations multiples.

- **Faites vos courses**

Uranium Online est un site qui vous permet d'acheter des barres de combustible nucléaire en ligne...

- Selon une étude de NetValue, 575000 heures auraient été consacrées aux jeux d'argent en ligne au mois de juillet.

- **Radio France est web-actif**

Mi septembre, Radio France va sortir la première de ses Webradios thématiques. Ce sera "la radio du livre".

Mardi 22 Août 2000

- **Le philippin s'en sort bien**

Le gouvernement Philippin, faute de loi adaptée, a décidé abandonner les charges retenues contre l'auteur présumé du virus 'I Love You', ce qui ne fait pas la joie des américains.

- **Gadget inutiles**

Sous prétexte de l'explosion des nouvelles technologies ont veut nous faire acheter n'importe quoi...

Philips, en collaboration avec Levi's va sortir en France en Septembre des blousons avec écouteurs intégrés et prises pour connecter téléphones mobiles et lecteur MP3.

- **Le Xeon suit le mouvement**

Le Xeon, processeur haute performance d'Intel va lui aussi être très bientôt porté à 1 GHz

- **On ne s'arrête plus d'accélérer**

Cette semaine, Intel a dévoilé cette semaine sont pentium IV. Les analystes estiment qu'il devrait atteindre les 10 GHz d'ici 4 ans.

Le fondateur a aussi annoncé la sortie de nouveaux processeurs pour serveurs et pour ordinateurs de poche.

- **Un de moins**

MP3.com avait 4 procès pour violation de copyrights sur le dos, il n'y en a plus que 3. Le site vient de conclure un accord avec Sony qui lui permettra de distribuer la musique du producteur.

- **Reality Run : fin de la course**

La semaine dernière je vous parlais de la chasse à l'homme organisée en Allemagne, Roger, le fugitif, a été rattrapé au bout de 7 jours par la chasseuse de prime qui empoche 10000 \$ au passage. Si vous êtes intéressés vous pouvez faire acte de candidature. Les prochains sites, pour lesquels votent les internautes, pourraient être Vienne ou Amsterdam.

Lundi 21 Août 2000

- **Altavista U.K. renonce**

C'est tombé lundi, le patron d'Altavista U.K. a annoncé que le forfait illimité ne se ferait pas (au passage je corrige ce que j'ai dit la semaine dernière, le forfait était de 60 £ / an). Il a prétexté que c'était de la faute de British Telecom qui ne lui avait pas proposé de forfait comme prévu mais des tarifications à la minute. Et British Telecom de dire que ce n'est pas de sa faute, blah, blah, blah.... Bref fin d'une aventure qui n'avait pas commencé.

- **Forfait illimité de OneTel**

L'Association des Internaute Médiateurs (ADIM) a demandé l'assignation en référé de OneTel pour tout le flou et les nombreux revirements ayant entouré le forfait illimité de l'opérateur (hésitations de la hotline, accusations de fraude, les connexions impossibles,...)

- **Les prochains processeurs d'Intel**

On en sait un peu plus sur la prochaine série d'Intel : Les vitesses débiteront à 1,4 GHz et ils seront basés sur une nouvelle architecture pour accélérer la vitesse de streaming et faciliter le travail peer-to-peer (égal à égal) en réseau.

- **AMD marque un point**

C'est n'est pas sur le plan de la vitesse des processeurs ou AMD est toujours à 1,1 GHz et Intel à 1,13 mais sur celui des prix. AMD a décidé de casser les prix des Athlon et Duron a titre d'exemple aux ÉtatsUnis :

Intel Pentium III 850 MHz (256K L2 Cache, 100 MHz FSB, Slot 1): 454 \$

AMD Athlon 850 MHz (512K L2 Cache, 200 MHz FSB, Slot A) : 239 \$

A ce prix là, y'a pas photo pour le choix... Mais pour les inconditionnels d'Intel, pas de panique, on peut raisonnablement penser qu'il suivra.

- **Nokia fonctionnera en Open-Source**

Nokia a sorti son nouveau navigateur internet pour téléphone cellulaire. La firme a décidé de laisser le code en Open-Source en espérant ainsi marquer des points le marché des logiciels "sans fils".

- **Compaq remporte un gros contrat ?**

Compaq devrait normalement emporter un contrat avec le Ministère de l'énergie américain pour un super-ordinateur de simulation des armes nucléaires.

Dimanche 20 Août 2000

- **Premier agrément pour mobile monétique**

C'est Sagem qui a été le premier à obtenir, pour un terminal GSM monétique, l'agrément EMV délivré par Europay International. C'est un téléphone de la gamme Sagem 900 qui vient de recevoir cet agrément. Il pourra donc être utilisé pour payer avec sa carte bancaire (Mastercard ou Visa) à distance, y compris pour des paiements internationaux, en toute sécurité. Ce téléphone est associé à une batterie monétique disposant du coupleur carte à puce, associé à une application située dans la carte SIM de l'opérateur. Sagem a déjà enregistré plus de 500000 commandes.

- **Protégez-vous des ondes mobiles**

Alors que la polémique fait rage pour savoir si oui ou non et dans quelle mesure les téléphones mobiles sont dangereux pour la santé, la société japonais Gunze vient de mettre au point un T-shirt, le "Pace protector", qui protège des ondes

électromagnétiques en en supprimant jusqu'à 92%. En fait, il a été conçu pour les porteurs de stimulateur cardiaque. Il est tissé en fil de nylon argenté et est efficace même à 2 cm du pacemaker. Son prix, 1640 F.

- **Les grosses dépenses de France Telecom**

C'est maintenant les dans les licences UMTS belges et suédoises que FT a décidé d'investir.

Pour la Suède c'est par le biais de sa filiale Orange et en collaboration avec Skanska (groupe du bâtiment) et la Swedish Broadband Company.

En Belgique, c'est la filiale Mobistar qui va au charbon. L'acquisition, si elle se fait, sera payée par l'endettement et une augmentation du capital. De plus FT envisage que la filiale de Mobistar, Mobistar Corporate Solutions fusionne avec Global One, le groupe de services de communication pour grandes entreprises acquis en début d'année..... par France Telecom.

- **Saut quantique pour les ordinateurs**

(Attention, je vais parler un peu technique, pour ceux qui n'auront pas tous compris -essayez quand même-, dites vous que c'est plus d'une dizaine d'années de théories et d'expériences qui commence à montrer des signes de "réalisabilité")

Bienvenue dans le monde du spin nucléaire et des enchevêtrements subatomiques. Les chercheurs d'IBM ont montré que l'ordinateur quantique, dont on parle depuis de nombreuses années, est réalisable et devrait largement distancer les meilleurs super-ordinateurs. Ils ont annoncé qu'il avaient utilisé "l'ordinateur quantique le plus moderne au monde" pour résoudre en une étape un problème mathématique alors qu'il en faudrait 4 avec un ordinateur conventionnel. On espère pouvoir ainsi surpasser l'architecture silicium en utilisant notamment le fait qu'une particule subatomique peut exister dans deux états quantiques apparemment opposés. Bien sûr, l'ordinateur d'IBM, ne tient pas dans la poche. Il occupe une demi pièce pleine d'électro-aimants et de spectromètres.

Le coeur du système est constitué de 5 atomes de fluor, chacun représentant un unique "bit quantique" ou "qubit" de capacité de stockage en suspension dans une molécule spécialement conçue pour. Lorsqu'on lui applique un champ magnétique, le noyau au centre des atomes peut être mis en rotation rapide de façon mesurable et contrôlable, en utilisant l'Imagerie de Résonance Magnétique (IRM, comme en médecine). Chaque noyau en rotation interagit avec les autres, créant un "enchevêtrement" qui défie logiquement les lois quantiques et que les chercheurs peuvent dompter pour effectuer des calculs à une vitesse phénoménale. Isaac Chuang, leader du projet ordinateur quantique chez IBM souligne que "c'est la première fois qu'une équipe réussit un calcul en utilisant une molécule de 5 qubit". Cependant il ne faut pas s'attendre à voir les premières applications commerciales d'ordinateurs quantiques avant au moins 20 ans.

Chez H.P., on salue les avancées d'IBM qui sont considérées comme "impressionnantes et encourageantes". Mais la firme, elle, travaille sur un type

plus conventionnel d'ordinateur super-rapide et à faible consommation pour lequel ils s'attendent à pouvoir produire des résultats d'ici 5 ans. D'autres voies explorées sont celles de l'ordinateur biologique construit à partir d'ADN ou d'ordinateurs pour lesquels on utiliserait des réactions chimiques pour assembler des composants encore plus petits.

- **Linuxiens, choisissez votre camp**

De grandes compagnies se sont associées dans la Gnome Foundation pour soutenir Gnome l'une des deux interfaces graphiques les plus utilisées sous Linux. Ce groupe dirigera le projet et décidera quels packages doivent être inclus dans Gnome. Les sociétés impliquées sont, entre autres, Sun Microsystems, VA Linux Systems, Collab.Net, Compaq Computer and IBM plus celles qui sont directement impliquées dans le projet : Red Hat, Gunitais, Henzai, Eazel et Hélix Code. Ajoutez à cela des participation de la Free Software Foundation (pionnière dans le logiciel open-source) et l'Object Management Group (qui s'attache à créer des programmes qui communiquent ensemble de façon standard).

Ceci ne va pas aller dans le sens de l'unification avec le compétiteur principal, KDE, qui est utilisé dans les distributions de SuSE, Corel, Caldera, Red Hat, sur les ordinateurs Linux d'IBM. Cette séparation entre les deux grands est dangereuse parce que les programmeurs auront à choisir entre les deux pour assurer la compatibilité de leurs logiciels.

Sun Microsystems va adopter l'interface Gnome pour ses systèmes d'exploitation Solaris et fournira plus de 50 programmeurs au projet Gnome. De plus, StarOffice (le pendant de Microsoft Office sous Linux), appartient à Sun et sera donc plus étroitement lié à Gnome. La suite adoptera Bonobo, une technologie Gnome similaire au logiciel Microsoft COM qui permet à un programme d'utiliser les composants d'un autre (par exemple, un gestionnaire de mail peut utiliser le moteur Gecko de Netscape ou un Messenger Instantané utiliser le correcteur d'orthographe de StarOffice).

- **La démocratie en danger**

Les américains nous auront tout fait ! La commission électorale fédérale américaine a découvert que des votes avaient été mis aux enchères sur eBay. Et les enchères (sérieuses ou non) variaient de 5 à 10000 \$. Averti, eBay a supprimé les offres.

D'autres, comme le site Vote Auction vont plus loin, tentant d'ériger l'idée en système. Derrière le site, James Baumgartner, un étudiant qui a fait de Voteauction son sujet de thèse. « De toute façon, explique-t-il, c'est le candidat le mieux pourvu financièrement qui gagne quasiment à tous les coups. » S'il ne s'adresse pas directement aux candidats, le site ouvre ses enchères aux entreprises qui financent d'ordinaire les campagnes. L'analyse rejoint celle d'un internaute qui tente de vendre son vote aux enchères sur Yahoo. « Les sénateurs vendent régulièrement leur vote au plus offrant, avance-t-il, Pourquoi le citoyen américain serait-il exclu du système ? »

Samedi 19 Août 2000

- **Marijuana Express**

iToke, un site hollandais compte lancer à Amsterdam un service de livraison de marijuana à domicile.

- **Netscape Communicator 4.75**

Je sais, il y a eu la version 4.74 le mois dernier, mais si cette nouvelle mise-à-jour sort si vite après c'est qu'elle contient le correctif permettant de réparer le trou de sécurité, dont je vous parlais la semaine dernière, Brown Orifice.

- **AMD n'oublie pas Linux**

AMD recrute actuellement des développeurs Linux pour écrire des logiciels pour le Sledgehammer, son processeur 64 bits qui devrait sortir courant 2001. La firme a créé un site web pour les développeurs Linux et enverra aux participant un "simulateur de technologie" du processeur pour que les entreprises puissent commencer à faire migrer leurs systèmes d'exploitation et logiciels. Et il parait que ce n'est qu'un début...

- **IBM fait la promotion de SuSE**

Big Blue fournira une version CD de la distribution Linux de Suse avec chacun des serveurs Intel qu'il vend en Europe. SuSE estime que cette collaboration devrait lui permettre de faire essayer sa technologie à 20000 clients potentiels.

- **AOL sur Linux ?**

Un site web (<http://www.techpages.com>) propose une pré-version non-officielle d'AOL pour Linux. son nom de code : Gamera. Certaines sources proches d'AOL auraient confirmé que le logiciel est authentique...

- **Corel Linux Second edition**

La première version a fait un pas important dans la simplification de l'installation de Linux mais il semble que cette nouvelle version fassent encore mieux.

- **I Love You Again**

Quelques firmes Américaines et Européenne ont été touchées par une nouvelle version du ver "I Love You" (VBS/Loveletter.bd), il s'agit notamment de banques. Cette nouvelle mouture télécharge et lance un programme nommé "hcheck.exe" qui qui récupère les mots de passe stockés sur l'ordinateur infecté.

- **Sony sur de nouveaux créneaux**

Le Walkman a fait son succès, Sony a donc décidé d'ici la fin de l'année, de sortir une nouvelle ligne de walkmans MP3. Mais ce ne sera pas tout, la firme sortira aussi d'autres appareils internet et des téléphones cellulaires.

- **Un PDA change le cours d'un procès**

Aux Etats-Unis, un procès pour meurtre va devoir être recommencé parce qu'un

des jurés a lu des commentaires sur le procès sur son PalmPilot.

- **Transmeta accroche un nouveau gros contrat**

Vaio, c'est la gamme d'ultraportables de Sony. Ils étaient jusqu'à présent équipé d'un Celeron 366. Mais la nouvelle gamme C1 sera, elle, équipée d'un Crusoë de chez Transmeta. C'est la faible consommation électrique et la dissipation thermique réduite qui fait basculer le choix de Sony vers le nouveau venu. En effet, le Crusoë consommerait 1 Watt (0,02 en mode veille) contre 15 à 20 pour les Celeron.

Après le contrat signé avec IBM, il ne manque plus que Toshiba au tableau de chasse de Transmeta pour avoir toutes les grosses pointures du monde de l'ordinateur portable.

- **Hallucinant !**

Pour faire sa promotion, un site internet offre 5000 \$ au 10 premiers bébés qui porteront légalement son nom.

- **Webmasters, attention !**

Un éditeur de site a été condamné par la justice américaine pour un lien qui renvoyait vers le code source du DeCSS, logiciel illégal permettant de pirater les DVD. Ce cas pourrait faire jurisprudence.

- **Tuez à distance**

Columbo va avoir du fil a retordre... L'Institut de technologie thaïlandais King Mongkut a présenté un robot armé qui détecte les intrus grâce à une caméra et des capteurs. Vous passez un ordre par Internet et il tire.

Jeudi 17 Août 2000

- **Chasse à l'homme**

Les allemands ont lancé un nouveau jeu le 14/08 : un chasse à l'homme dans Berlin en direct sur le WebLe fugitif, Roger, enseignant en Hollande. Sur ses traces Jack Black, chasseur de primes qui gagnera 10000 \$ s'il rattrape Roger. Roger porte sur lui une webcam et un micro pour que les internautes puissent tout suivre sur le Net et n'a le droit qu'à 2 h de répit par jour dans une cache secrète. Pour être sûr que le fugitif n'attend pas patiemment la fin dans une chambre d'hôtel, il doit suivre un parcours quotidien qui passe par des lieux connus de Berlin qu'il doit prendre en photo. Ensuite, il doit laisser les photos (en format numérique) sur un banc ou collé à une poubelle pour que les organisateurs les récupèrent.

Les internautes ne doivent pas participer physiquement à la chasse mais peuvent aider Roger ou Jack sur le Net. Soit dit en passant Roger n'est pas discret puisqu'il porte un tee-shirt aux couleurs du site.

Le jeu, qui enregistre 600000 pages vues par jour doit durer 24 jours et recommencer ensuite avec un nouveau candidat. S'il en réchappe, Roger gagnera 100000 \$!

<http://www.realityrun.com> (le site est aussi en anglais)

- **Nouveau problème de sécurité**

Un nouvel utilitaire internet permet de scanner l'IIS (Internet Information Server) de Microsoft, découvrir ses points de vulnérabilité et lancer une attaque qui peut révéler les nom et mots de passe des utilisateurs. Et c'est sur ce système serveur que Microsoft veut faire migrer MSN Messenger !!!!

- **Va-t-il se casser les dents ?**

Malgré les déboires de ses prédécesseurs, un nouveau FAI se lance dans l'internet illimité. AOL vous proposera, dès lundi, ce service 24h/24 pour 99 F par mois. La contrepartie, vous vous engagez pour 24 mois. (CONTQM : ceux qui il y a un an se sont engagé avec un abonnement d'un an chez AOL pour avoir des prix plus bas se sont mordus les doigts avec l'arrivée des FAI gratuits, est-ce le moment de recommencer ? 2 ans, en matière d'informatique, c'est très long. Tout peut arriver...)

- **L'escroc Altavista**

Le portail a annoncé un forfait illimité en Grande-Bretagne pour 60 £/mois. Il a ensuite affirmé que les inscription se ferait par lots de 25000 par semaine pour ne pas engorger le service. Le Mirror a donc mené l'enquête pour trouver des internautes qui profitent de ce service (ils devraient être 100000 à l'heure actuelle) et pas moyen d'en trouver un seul. Et bizarrement, seul le PDG d'Altavista U.K. peut s'exprimer sur la question, lequel passe des vacances qui n'en finissent plus de s'allonger. Pourquoi un portail de cette envergure aurait-il tenté une telle escroquerie ? Nous en saurons plus après les vacances du PDG...

- **Contenus payants**

Realnetworks, la firme propriétaire du célèbre RealPlayer a annoncé le lancement aux États-Unis d'un forfait payant qui permettra d'accéder à des programmes exclusifs chaque mois.

Mercredi 16 août 2000

- **Stinger le nouvel OS de Micro\$oft**

Non, ce n'est pas le successeur de Windows ME c'est tout simplement l'OS que Micro\$oft a conçu pour les téléphones cellulaires. Il s'agit d'une version réduite de Windows CE. Il propose, en plus des fonctions de téléphonies, un agenda intelligent qui peut forcer le téléphone à vibrer plutôt qu'à sonner aux heures de réunion et fonctionner en relation avec Outlook, et peut gérer l'affichage couleur. Samsung, s'est déjà montré intéressé par le système. Micro\$oft travaille par ailleurs sur un OS supplémentaire destiné, celui-là, à équiper les téléphones permettant d'accéder à Internet.

Tout cela ne sera pas de trop pour faire face à la montée en puissance programmée de Java et Linux sur toutes ces petites machines

- **Zapstation**

On pensait avoir tout vu ? Voici la Zapstation. C'est une sorte de console qui se branche sur votre T.V.. Elle offre un accès Web, lit les fichiers MP3, les CD et les DVD, télécharge des vidéos, reçoit les radios mondiales... Elle embarque une disque dur de 30 Go, utilise un Celeron 566 Mhz et peut-être reliée à une imprimante, un baladeur, tout type de périphérique informatique classique, à un ampli. Vous l'utilisez grâce à une télécommande et un clavier sans fil. Elle sera disponible vers Novembre.

<http://www.zapmedia.com>

- **SVG version finale**

SVG signifie Scalable Vector Graphics et s'appuie sur le langage XML. Ceci garantit donc une indépendance vis-à-vis des plates-formes. Il est indépendant de la résolution de l'écran et peut intégrer des textes descriptifs. De plus il permet de créer des liens vers des zones de l'images sans avoir à la mapper. Le gros problème est qu'aucun navigateur ne supporte évidemment ce format pour l'instant. Seul Adobe propose de télécharger un plug-in.

- **m100, le nouveau Palm**

Il devait être moins cher, c'est le cas aux États-Unis (150\$) mais en France il sera à 1500 F (comme le Palm III). Le nouveautés ? Son capot devient amovible (les nouveaux, disponibles en 4 couleurs, coûtent tout de même 200 F pièce !) et il possède un petit hublot qui permet de voir l'heure même capot fermé. Il est plus petit que la série III, faisant perdre à l'écran 1/4 de sa surface et une nouvelle touche permet d'accéder directement au bloc-note. La synchronisation avec l'ordinateur se fait maintenant directement par câble plutôt qu'avec une station d'accueil. Il fonctionne sous Palm OS 3.5 et emporte 2 petits Mo de mémoire.

- **Nouvelle folie japonaise**

Après le Tamagoshi dans la poche voici les nouveaux venus. Ce sont de petites créatures virtuelles qui s'occupent de vous livrer vos mails. Vous devez donc vous en occuper comme leurs prédécesseurs mais la lecture de votre courrier dépendra leur bonne volonté. Il paraît que les japonais en sont fous.

[La version Sony de la chose](#)

-

Un rapport de Forrester Research conclue que les standards open-source (NPLN : logiciel dont le code est accessible à tout un chacun, comme c'est le cas de Linux par exemple) domineront l'industrie du logiciel d'ici 4 ans. Il ajoute aussi qu'IBM et Dell devraient tirer leur épingle du jeu tandis que Oracle et Microsoft auront à batailler ferme pour s'en sortir.

-

Ce sont les enfants de moins de 11 ans qui cliquent le plus sur les bannières de pubs et les adolescents qui cliquent le moins (soit dit en passant, et moi jamais).

- **Vite !**

Le ministère de la Justice américain veut "expédier" le passage de l'appel de Micro\$oft devant la Cour Suprême parce que ce procès "a une importance extrême pour [leur] économie nationale" (sic).

- **La Banque de France soutient Napster....**

... malgré elle. En effet, un pirate a squatté la page d'accueil d'une trentaine de sites dont celui de la BNF

Mardi 15 Août 2000

- **Bonne blague**

Les clients Londoniens de Safeway, une chaîne britannique de supermarchés ont eut une jolie surprise. Ceux-ci ont reçu un message leur annonçant une hausse des prix et leur conseillant de faire leurs courses ailleurs. La firme n'a toujours pas pu déterminer où était la faille.

Lundi 14 Août 2000

- **Musique mobile protégée**

Intel et Matsushita ont lancé conjointement un système de protection des contenus numériques pour protéger par exemple la musique. Il n'est sûrement pas compatible avec Napster

- **e-commerce Visa ou rien**

Les vendeurs on-line vont devoir les respecter les règles établies par Visa concernant l'e-commerce ou aller voir ailleurs...

- **Un de plus chez Linux**

C'est au tour de Linux, après Dell et IBM de faire de Linux un de ses 3 systèmes d'exploitation stratégiques.

- **e-book par Micro\$oft**

Barnes and Nobles, une chaîne de librairies américaines (deuxième librairie en ligne, loin derrière Amazon.com) et MS lancent le plus gros service de vente de livres électroniques.

Micro\$oft en profite pour glisser Reader 1.5, son logiciel gratuit qui optimise l'affichage des e-Books sur un écran d'ordinateur de bureau ou un PDA, offre des options de recherche de mots, de surlignage ou encore de marque-page. 2000 eBook sont déjà disponibles dans ce format sur le site de Barnes and Noble et 150 titres supplémentaires devraient s'ajouter chaque mois. De plus MS propose d'autres applications dont un programme interagissant dans Word qui permet de convertir un document au format livre électronique et une autre

firme, Overdrive propose un logiciel permettant de faire la même chose à partir d'un document HTML ou d'un fichier texte.

A suivre, les plaintes des éditeurs en réponse à la création de moteurs d'échange d'e-books qui ne sauraient tarder à apparaître.

- **PSX 2 fin novembre**

La Playstation 2 ne sera disponible en France que le 24 novembre pour un prix d'environ 3000 F

- **Un standard de messagerie instantanées**

L'Internet Engineering Task Force va examiner 3 propositions de technologies pour définir un standard de messagerie instantanée. La proposition d'AOL, jugée peu innovante a déjà été rejetée (CONTQM : c'est bien mais pourvu que la technologie retenue n'appartienne pas à Microsoft non plus mais plutôt à une firme encore indépendante)

- **Apache 2.0 arrive**

D'ici la fin de l'année, la version 2 d'Apache, l'application serveur web la plus utilisée dans le monde, devrait être terminée pour la fin de l'année.

- **Hotmail sous Win2000**

Microsoft a décidé de ne plus faire appel au monde du logiciel libre, soit ; mais Hotmail, son service de messagerie instantanée fonctionne sous Apache et FreeBSD ! MS va donc être obligé de le faire migrer sous Windows 2000. (CONTQM : quelque chose me dit que le service sera moins performant !)

- **Le web parlera**

Le W3C (World Wide Web Consortium) travaille sur le SSML (Speech Synthesis Markup Language), une extension du XML (eXtended Markup Language) qui devrait permettre d'intégrer des instructions de synthèse vocale aux contenus textuels du Web permettant de faire des sites interrogeables par téléphone.

- **La chine sous Linux**

L'administration chinoise tournera sous Linux. elle affirme vouloir ainsi "briser le monopole de Windows et des technologies étrangères".

- **Windows is back**

La marine américaine avait renoncé à conserver Windows NT sur ses navires parce qu'il avait tendance à planter. Mais cela ne l'empêche pas d'avoir décidé d'installer une version spécifique de Windows 2000 sur ses nouveaux porte-avions.

- **Carnivore suite**

Le ministère de la Justice américain emploiera une université pour conduire une analyse indépendante du système d'espionnage des mails du FBI : Carnivore.

- **Le 64 bits d'AMD**

Le manuel technique du Sledgehammer, le processeur 64 bits d'AMD a été publié cette semaine. Ce processeur devrait être à la fois capable de gérer les programmes prévus pour les processeurs 32 bits (comme le PIII ou l'Athlon) et les programmes pour les processeurs 64 bits (comme l'UltraSparc de Sun, l'Alpha de Compaq ou le futur Itanium d'Intel).

Vendredi 11 Août 2000

- **Record du monde ?**

La femme la plus "téléchargée" du monde serait Danni Ashe. C'est du moins ce qu'essaye d'établir en ce moment le Livre Guinness des Records. Elle revendique 800 millions de téléchargements. Si vous voulez voir de qui il s'agit : <http://www.dannisharddrive.com/> (pour ceux qui ne s'en seraient pas doutés, il est recommandé d'être âgé de plus de 18 ans !)

- **Un soutien pour Napster...**

...et pas des moindres. Celui qui se faisait dernièrement appeler Prince dit sur son site que Napster est "un développement passionnant dans l'histoire de la musique" et en profite pour critiquer violemment le patron de Time Warner.

- **Poussez-les d'un côté, ils reviennent de l'autre.**

AOL cherche à faire figure propre concernant les MP3 en déconnectant un site de recherche de MP3. Cependant, la firme doit encaisser la sortie d'un nouveau logiciel d'échange de fichiers qui permet aux utilisateurs d'AOL messenger d'accéder à un réseau type Napster.

Pour ceux que ça intéresse, il se nomme AIMSTER et vous pouvez le trouver à : <http://www.aimster.com/>

Jeudi 10 Août 2000

- **Please stop...**

Le Pentagone a lancé un appel aux hackers, les suppliant d'arrêter de s'en prendre à ses réseaux... pour des raisons de sécurité.

- **Un Net-piège...**

Chapeau pour les douanes américaines ! 400 internautes qui espéraient pouvoir accéder à une chaîne satellite américaine à des prix défiant toute concurrence sont en fait tombés dans un piège tendu par les douanes.

- **Le trou de Netscape**

Le trou de sécurité des versions de Netscape antérieures à la version 6 a été dénommé BrownOrifice (petite allusion à son cousin dévastateur BackOrifice). Vous pouvez tester son mode de fonctionnement sur ce site qui lui est dédié : <http://www.brumleve.com/BrownOrifice/>. Ne vous inquiétez pas, je vous

rappelle que c'est sans risque pour votre système si ce n'est qu'on peut parcourir votre disque, sans pour autant pouvoir modifier quoi que ce soit.

La meilleure façon de se prémunir contre cette défaillance du système : désactiver les applet Java, en attendant le patch sur lequel travaille Netscape.

Mercredi 9 Août 2000

- **Après les MP3 et les fichiers multimédia, les jeux**

Swapoo, www.swapoo.com, est un site qui suit le chemin tracé par Napster mais il concerne les échanges de jeux pour consoles.

- **La chasse aux pirates est ouverte**

C'est la nouvelle occupation de Micro\$oft. La firme fait appel à la délation par le biais d'une hot-line et d'un service e-mail mais elle s'est aussi équipée d'outils de recherche automatique pour localiser sur le web les logiciels piratés ou vendus à prix suspect sur les sites web, ftp et de chat.

Un moteur de recherche scrute 24h sur 24 le web a cet effet. Micro\$oft compte ainsi recueillir des milliers d'adresses par jour. Afin de contacter immédiatement les sites ou FAI hébergeurs.

MS est soutenu par la Business Software Alliance, association d'éditeurs dont Microsoft est le principal promoteur.

Parallèlement, MS a aussi nommé un responsable aux affaires gouvernementales pour pousser l'administration américaine à mettre la pression sur les États pirates (la Russie et la Chine notamment).

Les éditeurs américains estiment perdre 150 milliards de francs par an du fait du piratage.

- **Netscape fait fort !**

Les navigateurs Netscape permettraient de voir le contenu de votre disque dur et ceci grâce à un applet Java présent sur certains sites.

Mardi 8 Août 2000

- **Un pingouin au poignet**

Les chercheurs d'IBM ont installé le Système d'exploitation Linux dans une montre-bracelet pour démontrer que le système pouvait être utilisé même dans les plus petits appareils.

- **Transmeta première version**

Transmeta a lancé la production de ses processeurs Crusoe chez Taiwan Semiconductor Manufacturing et d'autres fondeurs ce qui pourrait être le début d'une longue série...

- **Onetel raccroche**

Après la suspension des accès illimités, Onetel a décidé de limiter la consommation des abonnés qui y ont souscrit. (CONTQM : Mais que croyaient-ils chez Onetel, qu'avec une connexion illimitée les abonnés ne feraient que 20h ?)

- **Multimania se diversifie**

A partir d'Octobre, les membres de Multimania pourront diffuser gratuitement du contenu audio et vidéo sur leur site perso avec les technologie RealNetworks.

- **Cyber-police chinoise**

Début Août, la Chine a lancé sa police internet.

- **CD audio et MP3**

Ça y est, ils arrive en France ! Une société chinoise, A-Max va lancer mi-août le Napa DA V309 distribué par Bataca. Il s'agit d'un discman qui peut lire aussi bien les CD audio que les MP3. Son prix sera de 1300 F environ. (CONTQM : avant de vous ruer dessus, méfiez-vous, j'ai eu l'occasion de tester un modèle concurrent et le résultat n'était pas fameux.)

Dimanche 6 Août 2000

- **Les secrets d'Apple révélés par l'Abeille ouvrière**

Apple a demandé une enquête judiciaire suite aux révélations faites concernant son prochain portable iBook. Un inconnu a en effet publié sur le web des informations concernant sa nouvelle souris optique et un PowerMac biprocesseur avant leur présentation le mois dernier. Worker Bee, c'est son nom, aurait aussi dévoilé un troisième produit que la firme à la pomme n'a toujours pas présenté, qui serait une version de l'iBook équipée d'un processeur plus rapide. Apple a donc sommé le portail Yahoo! de révéler les informations les informations qu'il possède sur worker bee puisque celui-ci a fait ses révélations sur GeoCities (qui appartient à Yahoo!).

- **Publicité pour l'échange de fichiers**

La décision de fermer Napster a doublé les connexions au site. Le soir de la fermeture du site, le nombre de connexions a été porté à 849196, contre 443070 la veille. Il a ainsi dépassé la fréquentation de sites comme Amazon.com. De plus les sites de téléchargement enregistre une hausse importante des demandes de logiciels d'échange de fichier.

- **Le Limousin n'est pas rentable**

Le Conseil régional dénonce la disparition de la notion de service public. En effet, le Limousin fait partie zones que Completel a jugé non rentables pour l'utilisation la boucle radio locale pour l'Internet.

- **Le mobile tue ?**

Un procès va s'ouvrir aux États-Unis suite à la plainte d'un médecin estimant

que sa tumeur cérébrale est due à son téléphone cellulaire. Au Royaume-Uni, le gouvernement s'est lancé dans une campagne pour inciter les enfants à ne pas utiliser les cellulaires. Pendant ce temps des études sont toujours en cours pour déterminer si oui ou non il y a danger.

- **IBM et Micro\$oft pour un standard**

Les deux compagnies ont décidé de collaborer pour définir des standards internet, concernant notamment le XML pour simplifier le développement de leurs applications futures.

- **Dessins animés sur PDA**

Cela pourrait arriver bientôt... Warner Brothers et Sony Pictures sont en train de tester la possibilité de distribuer, par le biais d'Internet, des dessins animés sur ce support.

- **Le Conseil constitutionnel censure**

Le Conseil constitutionnel a apporté des modifications à la loi sur la liberté de communication, notamment en censurant d'office l'article concernant la responsabilité pénale des hébergeurs, déclarant anticonstitutionnelle la saisie par un tiers.

- **La Dram Rambus double sa vitesse**

Une RDRAM 1066 MHz, avec une bande passante de 2,1 Go/s, voilà la dernière avancée du constructeur de mémoire. La technique ? La même que celle de la DDR SDRAM : le doublement de la fréquence (2*533 MHz).

- **Vous jouerez plus tard**

La sortie en Europe de la Playstation 2 a été retardée, vraisemblablement pour pouvoir répondre à la demande en Amérique du Nord.

- **Alerte aux virus**

McAfee a créé un service qui vous envoie les formations sur les nouveaux virus directement sur votre téléphone WAP.

- **Téléchargement de musique autorisés**

Cette semaine Universal lance son service de téléchargement de musique imitant ainsi Sony et EMI. BMG et Time Warner s'y mettront d'ici la fin de l'année

Vendredi 4 Août 2000

- **Opérateurs téléphone : US vs UE**

Près de 50 compagnies de téléphone européennes se sont jointes à la campagne de l'Union Européenne pour stopper la proposition de loi américaine visant à empêcher, entre autres, Deutsche Telekom de s'offrir Voicestream.

- **Micro\$oft a chaud**

L'Union Européenne a officiellement lancé à son tour une procédure antitrust contre Micro\$oft. Du coup, MS incite un juge à renvoyer plus de 60 actions en cours aux États-Unis pour avoir les mains un peu plus libres

Jeudi 3 Août 2000

- **Le GMT ne sera pas la référence**

Tony Blair s'était engagé dans une campagne pour que Greenwich soit le point de référence de l'horloge internet avec le GeT (Greenwich Electronic Time). Mais le système basé sur Java est incompatible avec Internet Explorer, donc avec près de 80% d'internautes, les tests montrant des écarts allant jusqu'à 9s. (Si quelqu'un peut m'expliquer l'intérêt de créer une heure Internet alors qu'il existe déjà une heure de référence, qu'il m'envoie un mail, merci).

- **Offres d'emploi**

Comme tous les ans, le week-end dernier s'est tenu à Las Vegas le DefCon, le congrès de hackers (NPLN : ceux qui forcent les systèmes informatiques protégés). Depuis quelques années, les hackers invitent même officiellement des agents fédéraux aux conférences. En effet, auparavant, ils cherchaient à s'infiltrer incognito et un jeu avait été lancé, "Spot the Fed" qui consistait pour les hackers à démasquer ces agents. Cette année, les fédéraux (un officier du ministère de la Défense, un membre d'une cellule discrète proche de la C.I.A.) ont même été invités à s'exprimer sous forme de conférences et de tables rondes (nommées "Meet the Fed"). Le dernier jour, "Spot the Fed" a sorti aussi un gros poisson, un agent de la NSA. Leurs interventions ont eu un point commun, la tentative à peine voilée de recruter des hackers pour les services de renseignement américains.

Par contre, interrogés à ce sujet, ils ont démenti l'existence du réseau d'espionnage Echelon.

- **Ils ne liront pas grand chose**

Selon les analyses d'un chercheur universitaire, le dispositif de surveillance des mails, qui sera mis en place au Royaume-Uni serait techniquement obsolète. Il ne prendrait pas en charge les serveurs de mail étrangers, ni certains petits FAI britanniques, oubliés par le dispositif, les accès internet à haut débit, ni avec le nouveau protocole internet IPv6 (futur standard du web). Un gaspillage de 200 millions de francs.

- **IBM gonfle ses disques**

D'ici deux ans, les disques durs devraient dépasser les 200 Go. Alors que la technologie holographique, lorsqu'elle sera au point, devrait pouvoir permettre d'atteindre 1 Go par cm², IBM propose une technologie intermédiaire basée sur un système de stockage nano-mécanique composé de milliers de micropointes. Il permet de stocker 1,25 Go sur une surface de 3 millimètres carrés comprenant

32 x 32, soit 1024 micropointes qui réagissent à l'électricité et adoptent un état levé (1) ou baissé (0). On devrait donc pouvoir atteindre 500 milliards de bits par pouce carré, soit 5 fois la densité maximale pouvant être atteinte sur support magnétique, celle-ci étant estimée à 100 (les disques les plus récents ont une densité de 12 milliards de bits au pouce carré).

- **Etudes / Sondages**

Sondage Sofres : Seuls 7 % des internautes de l'Hexagone ont acheté en ligne au cours des derniers mois, contre 27 % des Américains ayant accès au net.

- **WebTV Basque**

Ce mois-ci va s'ouvrir TVPI.fr une web T.V. locale privée du Pays proposant 20% de programmes en langue basque.

Mercredi 2 Aout 2000

- **Du nouveau dans l'échange de fichiers**

La startup Autonomous Zone ose ce qu'aucune n'avait fait auparavant, vous payer pour échanger des fichiers ! Le concept est simple : on reprend le système de Napster étendu à tous types de fichiers, avec son moteur de recherche et tout et tout, sauf que quand quelqu'un télécharge un fichier depuis votre ordinateur, vous recevez des Mojos, une monnaie inventée par la startup mais convertible en dollars (1 mojo = 1/1000 cent).

On pourrait donc s'attendre à revoir le même genre de manoeuvre judiciaire que contre Napster, d'autant plus que certains sites pornographiques majeurs comme Penthouse seraient de la partie. Mais les créateurs de la société sont confiants, assurant qu'on ne peut leur demander de supprimer des références illégales puisque leur système, contrairement à Napster, ne mémorise pas l'index des fichiers. De plus, ils affirment vouloir travailler avec Hollywood sur un système de paiement volontaire nommé PayLars (en référence à Lars Ulrich, batteur de Metallica à l'origine de poursuites contre Napster).

MojoNation, c'est le nom du logiciel, sera déjà disponible en version beta au salon des Hackers, le DefCon. Le logiciel pourrait de plus reprendre le système de Freenet qui sauvegarde les fichiers sur son serveur, les rendant téléchargeables même après la déconnexion du fournisseur. De plus vous aurez un formulaire à remplir, pour pouvoir établir une liste des fournisseurs de fichiers de confiance (le même système de notation que sur les sites de ventes aux enchères). Pour gagner des Mojos, vous pourrez aussi vendre une partie de votre bande passante, de l'espace disque pour servir de serveur ou créer d'autres services payants.

- **Le futur de Napster**

Napster a entamé une série de rencontre avec EMusic qui pourrait aboutir à un partenariat, lequel pourrait affecter la décision de la cour sur l'action en justice en cours.

- **Red Hat a convaincu Ericsson**

Les efforts soutenus de Red Hat pour faire entrer Linux dans les petits appareils non-PC portent enfin leurs fruits puisque la firme vient de signer un accord de partenariat avec Ericsson.

- **Le Net "s'installe" en Iran et Irak**

En Iran, c'est le premier centre rural connecté au web et en Irak, le premier premier cyber-café

Mardi 1^{er} Août 2000

- **URL plus simple**

Suite à une étude montrant que les utilisateurs de téléphone Wap devaient taper 70 touches en moyenne pour entre une adresse, la société Bango a mis au point un système d'URL par chiffres pour simplifier la tâche. Il se nomme le Bango Number et vous permet de taper un numéro (3 chiffres min) en lieu et place de l'adresse. Maintenant, la course est lancée pour acheter les numéros, les plus chers étant bien sur ceux de 3 chiffres.

- **Quand on a de l'argent...**

Micro\$oft compte dépenser 500 millions de \$ pour le marketing et la vente de sa future console de Xbox, le plus gros budget jamais atteint par la firme pour lancer un nouveau produit.

- **Vous êtes espionnés...**

L'info n'est pas nouvelle, mais cette fois, un cabinet d'étude a utilisé un renifleur de paquet pour savoir quelles informations étaient recueillies à notre insu et le résultat est sidérant.

Ce cabinet a téléchargé des données depuis son propre site. En résumé, les serveurs de Real, AOL ou Netzip récupèrent le nom du fichier (exécutable) téléchargé, l'adresse exacte du serveur de provenance, l'adresse IP de l'ordinateur de l'internaute. Le logiciel crée une clé d'identification à partir du nom de la machine lors de l'installation de Windows . Couplé à un cookie, il permet par exemple de créer un historique des fichiers téléchargés. Lisible en hexadécimal et en équivalent ASCII, le fichier ne laisse guère de doute sur les risques de son exploitation.

- **On joue dans le comique**

Le premier patch correctif pour Windows 2000 US est sorti : 83 Mo (version française pour le 10 Août). Après le patch pour office de plus de 100 Mo, les logiciels de MS coûtent plus cher en téléphone qu'à l'achat si on les veut à jour !

- **Du cinéma avec la Playstation**

Sony a lancé le GScube. C'est un outil de développement pour l'industrie cinématographique et la création multimédia.... basé sur la technologie PlayStation 2.

Si vous avez appris une nouvelle importante à diffuser :

News: August 2000

Abbreviations used: NPLN - > Note For The Beginners, CONTQM - > This Opinion Is due Only To Me

Thursday 31 Août 2000

- **Ca does not have anything of surprising...**

The Promis software, which had made much speak about him in the Eighties is a software intended for the lawyers who classifies the documents and to establish correlations between them. It has had for summer improved by the American administration which resold it, under another name, abroad, with secret service (in Jordan and Israel, in particular) but also at companies, of which some large French banks.

However, the modifications would have consisted of the installation of devices of listening and intrusion on the computers where it would be installed, thus giving to the United States the possibility of espionner a great number of companies and government agencies. Just there, all goes well for American except that the Canadian government which uses software PIRS to coordinate the investigations as of the its secret service and assembled Police force, suspects that it is one of these version of Promised. An investigation was thus open to determine if informers exist well.

- **France Telecom does not have the Yellow Pages.**

France Telecom, which has www.pagesjaunes.fr, had required of the World Office of the Patent rights (OMPI) to rule in its favour on the question of knowing to which belong the pagesjaunes.com fields, pagesjaunes.net and lespagesjaunes.com. But the OPMI did not follow while explaining in particular that other named directories Yellow Pages exist in French-speaking countries with the name pagesjaunes.ch, ca, be, lu.

- **Everyone is entitled to an e-mail... 2nd edition**

The Post office announced that it was going to offer a free e-mail to each French, who is consultable directly of on your premise (on the site or your manager of malls) or on paying terminals in the stations. Only here is, the service has existed for one year....

- **Sony leaves its Palm**

Sony and Palm revealed Clie, first PDA resulting from their alliance which marks the entry of the Japanese on this growing market.

- **The rumours are specified**

The Mainsoft company, Unix/Linux developer, are suspected of being one of the pillars of the conversion of Office under Linux. It already carried I.E. and Windows Media Player on this platform. (CONTQM: If one finds even software ms under Linux, which will be the interest to preserve Windows?)

- **AGP x8 for INTEL**

Medium 2001, INTEL should leave this new graphic bus which will make it possible to still accelerate the 3d.

- **New system of promotion**

In the United States (elsewhere I do not know), Windows Me (NPLN: Windows Millenium, which leaves the 14/09 everywhere in the world) will be distributed in the form of demonstrations in the department stores.

Wednesday August 30, 2000

- **New friends of Napster**

Many organizations provided supports of Napster before the Court of Appeal, such as for example Consuming it Electronics Association (ECA) and the DIGITAL Media Association (DiMA).

The ECA estimates that the judge badly interpreted the case of Betamax of Sony of 1984 bus Napster has, in its eyes, created a new standard which can have legal applications although it is often used for enfreindre the law. DiMA which represents more than 960 ntreprises whose AOL and Yahoo joined the positions of the ECA.

- **Barbie makes confidence with the small girls**

The directors of Barbie.com engaged 26 small girls between 6 and 12 years to help them to reconsider the site which had been open this summer. Every week these girls received by mail of the photographs of screen of the site in construction and were questioned by e-mail or telephone. Of course they received a remuneration (not communicated) for their services.

It seems that this way of proceeding is paying since the traffic doubled with the reopening of the site then quadrupled after publicities with the T.V.. Moreover, the visitors are fidélisent. The visitor remains each time 26 mn on average.

- **Freesurf sanctions subscribers**

According to the road traced by OneTel, Freesurf registered on a black list and disconnected from the subscribers of the unlimited fixed price evening and weekend to have broken the rules. According to conditions' of the fixed price with 100 F/mois, the subscriber is restricts with the consultation of the Web and its malls and with the newsgroups. But 531 subscribers were disconnected in

one week, without notice and by not having inevitably enfreint the rules. They are shown to have used footbridges to download software.

On the fact that there were errors and not notice, the director of Freesurf explains "that it was about an emergency measure. But we realized that some practise were regarded wrongly as frauds." They are thus in the train examining the cases one by one for reconnecter those which were disconnected by error.

Among the raised technical errors, an subscriber who would quite simply introduce CD into his PC and would launch the software of WinAmp reading while being connected would be regarded as a defrauder bus WinAmp uses a protocol prohibited by the unlimited fixed price.

Freesurf however supports to want to continue its offer of unlimited access.

- **The antenna-relays would be dangerous**

According to a study ordered by the review Science and Future, the vibrations which transmit the radio operator signals of mobile telephony would be definitely more harmful than the operators declare it.

The study, carried out in fifteen apartments of Island-of-France located behind a antenna-relay or on the last floor of a building by accomodating one, reveals that in nearly two cases out of three, the intensity of emitted radiations is ten times higher than the values announced by the laboratories of France Telecom.

Already, in April 1999 already, the general direction of health and the secretariat of State to housing had published a report recommending a "restriction of use total or partial" of the balconies of HLM on which these antennas are installed, and even a "judgment of certain rooms".

- **Released INTEL**

The PIII 1,13 GHz was withdrawn from sale 1 month after its exit because of an anomaly on an involving circuit of the problems of operation with certain software. Moreover certain assemblers as Dell had already suspended their orders because of the incapacity of INTEL required this model in a sufficient number. During this time, AMD launched its Athlon 1,1 GHz and it has already more than 10 manufacturers like customers, in particular Compaq, Fujitsu Siemens Computers, Gateway, Hewlett-Packard and IBM.

AMD is thus alone on the top-of-the-range crenel and its product is less expensive. INTEL provides that the modifications to be made to the design of its PIII will take a few months..... as much to say an eternity considering the given rhythm processors with 1,5 GHz are awaited before long.

- **Amazon.com Creates Amazon.fr**

The opening took place in the night from the 30 to August 31. The site will propose 4 shops (books, music, DVD and video) which would propose the whole of the references available in France. However, contrary to its competitors, no figure was given for the French products whereas one knows those of the foreign products (240.000 CD references in importation, 700.000 English books). For the prices, the site will conform to the French regulation into force on the flat price of the book.

Not having been able to repurchase Alapage (France Telecom was faster),

Amazon has to build a site of any part but knew to be surrounded by a team made up of old from Vivendi, Havas or the FNAC. But competitors, the FNAC, Alapage and BOWL do not worry and even think that the publicity campaign which Amazon will launch will be beneficial for them.

- **Between Netscape and I.E., choose K-Meleon**

It acts as a free navigator and under licence G.P.L. (NPLN: the source code of the software is available and modifiable at will by all one each one) which resembles I.E. but which integrates the engine of Gecko interpretation, which will be in the heart of Netscape 6. There is thus there a lighter clone (4 Mo) of Netscape Navigator, it will thus interest: all those which want to have the navigators of Microsoft and Netscape, the developers of Web sites wishing to ensure itself of the appearance of a site in the two versions or the Net surfers wanting to go on inaccessible sites with I.E..

For the familiar ones of the Unix/Linux world, it is during Windows de Galeon (which integrates already Gecko).

- **The last version of ms Office is in test**

Office 10 will include a new technology of voice recognition, an additional support XML, an application of collaboration by Internet and the management tools of the contents.

- **The new one on Palms**

A programmer created the first Trojan horse known for Palm...

Tuesday 29 Août 2000

- **Virus for the children**

That has just left! If you receive an e-mail with Pikachu (Pokemon!) in attached file, do not click above. These is a new virus which trails on the Net.

- **Motorola throws sponge on Iridium**

That made a few times that that brooded... For lack of repreneur, Motorola decided to scuttle the 66 satellites of its network of mobile telephony. Here how to throw 7 billion \$ easily!

- **Pentium IV grew bigger**

One has to expect that INTEL has evil required Pentium IV and that he is expensive. Indeed, the small new one contains 42 million transistors (against 28 for the PIII), that is to say a surface of 217 mm² (against a hundred on the PIII). They will be produced with same technologies as the PIII but because of its size, INTEL will be able to assemble only one by silicon wafer of them where it assembled two PIII at the same time. Calculation is thus very simple: speed of production reduced by half and raw material cost doubled... which becomes the final price?

With medium term, the problem of surface should be tiny room with the

passage to technology 0,13 micron and the use of wafers of 300 mm against 200 currently.

A processor named Foster should follow. It is about a PIV for waiters and workstations

- **Counteract of INTEL**

INTEL also revealed the XScale technology which aims at controlling consumption and thermal release and which presents many similarities with the processor of Transmeta.

- **Bugé PGP**

PGP (Pretty Good Privacy), the reference as regards encoding would suffer from a bug which, under certain conditions makes it possible to reach, in the Windows versions, with the decoded data.

- **Micro\$oft bouche les trous**

Une faille dans FrontPage Server Extensions rendait possibles les attaques du type Denial of Service. Microsoft aurait corrigé le problème.

- **Rumeurs**

Il semblerait que Micro\$oft fasse développer par une firme israélienne une version de sa suite Office pour Linux. MS a bien sûr démenti la rumeur.

- **Oracle gratuit**

La firme a lancé OracleSalesOnline.com, un service qui offrira, le logiciel de base d'automatisation de la force de vente gratuitement. Seuls les modules additionnels seront payants, comme le logiciel de "sales-compensation", selon un système de pay-per-use (paiement à l'utilisation).

- **TrustE perd en crédibilité**

Le sceau TrustE est en temps normal une marque de garantie de la confidentialité sur des sites marchands. Mais l'organisation aurait fait profiter une société des données de ses visiteurs.

- **Yahoo veut crypter**

Yahoo prévoit de permettre aux utilisateurs de ses services mail de crypter leurs messages en utilisant le site SecureDelivery.com. Il serait le premier à proposer cette option.

- **Microsoft a des problèmes avec Hotmail**

Des utilisateurs Hotmail ont expliqué que suite à la fermeture de leur compte pour cause d'inactivité (ce qui est normal) ils ont créé un nouveau compte avec le même nom d'utilisateur et ont découvert avec étonnement que leur liste de contacts AIM était maintenue sur leur nouveau compte. Conclusion, si quelqu'un crée un compte avec votre ancien pseudo, il récupère votre liste de contact. Micro\$oft enquêterait de manière approfondie sur la question.

- **Nintendo se donne du temps**

Le Gameboy Advance ne sortira qu'en Mars au Japon et en Juillet en Europe à cause de ruptures de stocks en composants qui sont dus en grande partie à la forte demande actuelle en Gameboys Color

- **Du nouveau chez les cellulaires**

Suite à la polémique sur les dangers des cellulaires en matière de radiation, les principaux constructeurs ont décidé d'indiquer sur les emballages la quantité de radiations émises par leurs appareils

Mercredi 23 Août 2000

- **Dure concurrence pour Intel**

AMD (le grand rival) et Transmeta (l'étoile montante) devraient annoncer un coopération technologique. Transmeta est très intéressé par la technologie LDT (Lightning Data Transfer) créée par AMD qui accélère les échanges de données entre le processeur et les différents composants du PC et qui sera intégré aux jeux de composants des Athlon en 2001. Cette technologie permettrait à Transmeta d'atteindre le GHz. De son côté, AMD aurait accès à la technologie de Transmeta, dont les processeurs consomment 50 % d'énergie en moins que ses concurrents à fréquence égale.

Cette alliance ne va pas faire le bonheur d'Intel qui perd des parts de marché et patauge entre ses problèmes avec les composants i820 et les retards sur le Pentium IV, d'autant plus qu'AMD sera bientôt sur tous les fronts : portables (Athlon mobile fin 2000), ordinateurs de bureau (Athlon Thunderbird 1,2 GHz), serveurs (Sledgehammer).

- **Premier cyber hold-up**

Egg, la banque britannique uniquement on-line a été électroniquement "braquée". Selon la banque, aucune perte (quelques dizaines de milliers de £) n'a été subie. Le 3 malfaiteur présumés ont été arrêté après une enquête de 6 mois suite à une alerte de Egg qui dispose de logiciels permettant de repérer tout ordinateur à partir duquel sont effectuées des opérations multiples.

- **Faites vos courses**

Uranium Online est un site qui vous permet d'acheter des barres de combustible nucléaire en ligne...

- Selon une étude de NetValue, 575000 heures auraient été consacrées aux jeux d'argent en ligne au mois de juillet.

- **Radio France est web-actif**

Mi septembre, Radio France va sortir la première de ses Webradios thématiques. Ce sera "la radio du livre".

Mardi 22 Août 2000

- **Le philippin s'en sort bien**

Le gouvernement Philippin, faute de loi adaptée, a décidé abandonner les charges retenues contre l'auteur présumé du virus 'I Love You', ce qui ne fait pas la joie des américains.

- **Gadget inutiles**

Sous prétexte de l'explosion des nouvelles technologies ont veut nous faire acheter n'importe quoi...

Philips, en collaboration avec Levi's va sortir en France en Septembre des blousons avec écouteurs intégrés et prises pour connecter téléphones mobiles et lecteur MP3.

- **Le Xeon suit le mouvement**

Le Xeon, processeur haute performance d'Intel va lui aussi être très bientôt porté à 1 GHz

- **On ne s'arrête plus d'accélérer**

Cette semaine, Intel a dévoilé cette semaine sont pentium IV. Les analystes estiment qu'il devrait atteindre les 10 GHz d'ici 4 ans.

Le fondeur a aussi annoncé la sortie de nouveaux processeurs pour serveurs et pour ordinateurs de poche.

- **Un de moins**

MP3.com avait 4 procès pour violation de copyrights sur le dos, il n'y en a plus que 3. Le site vient de conclure un accord avec Sony qui lui permettra de distribuer la musique du producteur.

- **Reality Run : fin de la course**

La semaine dernière je vous parlais de la chasse à l'homme organisée en Allemagne, Roger, le fugitif, a été rattrapé au bout de 7 jours par la chasseuse de prime qui empoche 10000 \$ au passage. Si vous êtes intéressés vous pouvez faire acte de candidature. Les prochains sites, pour lesquels votent les internautes, pourraient être Vienne ou Amsterdam.

Lundi 21 Août 2000

- **Altavista U.K. renonce**

C'est tombé lundi, le patron d'Altavista U.K. a annoncé que le forfait illimité ne se ferait pas (au passage je corrige ce que j'ai dit la semaine dernière, le forfait était de 60 £ / an). Il a prétexté que c'était de la faute de British Telecom qui ne lui avait pas proposé de forfait comme prévu mais des tarifications à la minute. Et British Telecom de dire que ce n'est pas de sa faute, blah, blah, blah.... Bref fin d'une aventure qui n'avait pas commencé.

- **Forfait illimité de OneTel**

L'Association des Internaute Médiateurs (ADIM) a demandé l'assignation en référé de OneTel pour tout le flou et les nombreux revirements ayant entouré le forfait illimité de l'opérateur (hésitations de la hotline, accusations de fraude, les connexions impossibles,...)

- **Les prochains processeurs d'Intel**

On en sait un peu plus sur la prochaine série d'Intel : Les vitesses débiteront à 1,4 GHz et ils seront basés sur une nouvelle architecture pour accélérer la vitesse de streaming et faciliter le travail peer-to-peer (égal à égal) en réseau.

- **AMD marque un point**

C'est n'est pas sur le plan de la vitesse des processeurs ou AMD est toujours à 1,1 GHz et Intel à 1,13 mais sur celui des prix. AMD a décidé de casser les prix des Athlon et Duron a titre d'exemple aux ÉtatsUnis :

Intel Pentium III 850 MHz (256K L2 Cache, 100 MHz FSB, Slot 1): 454 \$

AMD Athlon 850 MHz (512K L2 Cache, 200 MHz FSB, Slot A) : 239 \$

A ce prix là, y'a pas photo pour le choix... Mais pour les inconditionnels d'Intel, pas de panique, on peut raisonnablement penser qu'il suivra.

- **Nokia fonctionnera en Open-Source**

Nokia a sorti son nouveau navigateur internet pour téléphone cellulaire. La firme a décidé de laisser le code en Open-Source en espérant ainsi marquer des points le marché des logiciels "sans fils".

- **Compaq remporte un gros contrat ?**

Compaq devrait normalement emporter un contrat avec le Ministère de l'énergie américain pour un super-ordinateur de simulation des armes nucléaires.

Dimanche 20 Août 2000

- **Premier agrément pour mobile monétique**

C'est Sagem qui a été le premier à obtenir, pour un terminal GSM monétique, l'agrément EMV délivré par Europay International. C'est un téléphone de la gamme Sagem 900 qui vient de recevoir cet agrément. Il pourra donc être utilisé pour payer avec sa carte bancaire (Mastercard ou Visa) à distance, y compris pour des paiements internationaux, en toute sécurité. Ce téléphone est associé à une batterie monétique disposant du coupleur carte à puce, associé à une application située dans la carte SIM de l'opérateur. Sagem a déjà enregistré plus de 500000 commandes.

- **Protégez-vous des ondes mobiles**

Alors que la polémique fait rage pour savoir si oui ou non et dans quelle mesure les téléphones mobiles sont dangereux pour la santé, la société japonais Gunze vient de mettre au point un T-shirt, le "Pace protector", qui protège des ondes

électromagnétiques en en supprimant jusqu'à 92%. En fait, il a été conçu pour les porteurs de stimulateur cardiaque. Il est tissé en fil de nylon argenté et est efficace même à 2 cm du pacemaker. Son prix, 1640 F.

- **Les grosses dépenses de France Telecom**

C'est maintenant les dans les licences UMTS belges et suédoises que FT a décidé d'investir.

Pour la Suède c'est par le biais de sa filiale Orange et en collaboration avec Skanska (groupe du bâtiment) et la Swedish Broadband Company.

En Belgique, c'est la filiale Mobistar qui va au charbon. L'acquisition, si elle se fait, sera payée par l'endettement et une augmentation du capital. De plus FT envisage que la filiale de Mobistar, Mobistar Corporate Solutions fusionne avec Global One, le groupe de services de communication pour grandes entreprises acquis en début d'année..... par France Telecom.

- **Saut quantique pour les ordinateurs**

(Attention, je vais parler un peu technique, pour ceux qui n'auront pas tous compris -essayez quand même-, dites vous que c'est plus d'une dizaine d'années de théories et d'expériences qui commence à montrer des signes de "réalisabilité")

Bienvenue dans le monde du spin nucléaire et des enchevêtrements subatomiques. Les chercheurs d'IBM ont montré que l'ordinateur quantique, dont on parle depuis de nombreuses années, est réalisable et devrait largement distancer les meilleurs super-ordinateurs. Ils ont annoncé qu'il avaient utilisé "l'ordinateur quantique le plus moderne au monde" pour résoudre en une étape un problème mathématique alors qu'il en faudrait 4 avec un ordinateur conventionnel. On espère pouvoir ainsi surpasser l'architecture silicium en utilisant notamment le fait qu'une particule subatomique peut exister dans deux états quantiques apparemment opposés. Bien sûr, l'ordinateur d'IBM, ne tient pas dans la poche. Il occupe une demi pièce pleine d'électro-aimants et de spectromètres.

Le coeur du système est constitué de 5 atomes de fluor, chacun représentant un unique "bit quantique" ou "qubit" de capacité de stockage en suspension dans une molécule spécialement conçue pour. Lorsqu'on lui applique un champ magnétique, le noyau au centre des atomes peut être mis en rotation rapide de façon mesurable et contrôlable, en utilisant l'Imagerie de Résonance Magnétique (IRM, comme en médecine). Chaque noyau en rotation interagit avec les autres, créant un "enchevêtrement" qui défie logiquement les lois quantiques et que les chercheurs peuvent dompter pour effectuer des calculs à une vitesse phénoménale. Isaac Chuang, leader du projet ordinateur quantique chez IBM souligne que "c'est la première fois qu'une équipe réussit un calcul en utilisant une molécule de 5 qubit". Cependant il ne faut pas s'attendre à voir les premières applications commerciales d'ordinateurs quantiques avant au moins 20 ans.

Chez H.P., on salue les avancées d'IBM qui sont considérées comme "impressionnantes et encourageantes". Mais la firme, elle, travaille sur un type

plus conventionnel d'ordinateur super-rapide et à faible consommation pour lequel ils s'attendent à pouvoir produire des résultats d'ici 5 ans. D'autres voies explorées sont celles de l'ordinateur biologique construit à partir d'ADN ou d'ordinateurs pour lesquels on utiliserait des réactions chimiques pour assembler des composants encore plus petits.

- **Linuxiens, choisissez votre camp**

De grandes compagnies se sont associées dans la Gnome Foundation pour soutenir Gnome l'une des deux interfaces graphiques les plus utilisées sous Linux. Ce groupe dirigera le projet et décidera quels packages doivent être inclus dans Gnome. Les sociétés impliquées sont, entre autres, Sun Microsystems, VA Linux Systems, Collab.Net, Compaq Computer and IBM plus celles qui sont directement impliquées dans le projet : Red Hat, Gunitais, Henzai, Eazel et Hélix Code. Ajoutez à cela des participation de la Free Software Foundation (pionnière dans le logiciel open-source) et l'Object Management Group (qui s'attache à créer des programme qui communiquent ensemble de façon standard).

Ceci ne va pas aller dans le sens de l'unification avec le compétiteur principal, KDE, qui est utilisé dans les distributions de SuSE, Corel, Caldera, Red Hat, sur les ordinateurs Linux d'IBM. Cette séparation entre les deux grands est dangereuse parce que les programmeurs auront à choisir entre les deux pour assurer la compatibilité de leurs logiciels.

Sun Microsystems va adopter l'interface Gnome pour ses système d'exploitation Solaris et fournira plus de 50 programmeurs au projet Gnome. De plus, StarOffice (le pendant de Micro\$oft Office sous Linux), appartient à Sun est sera donc plus étroitement lié à Gnome. La suite adoptera Bonobo, une technologie Gnome similaire au logiciel Microsoft COM qui permet à un programme d'utiliser les composants d'un autre (par exemple, un gestionnaire de mail peut utiliser le moteur Gecko de Netscape ou un Messenger Instantané utiliser le correcteur d'orthographe de StarOffice).

- **La démocratie en danger**

Les américains nous auront tout fait ! La commission électorale fédérale américaine a découvert que des votes avaient été mis aux enchères sur eBay. Et les enchères (sérieuses ou non) variaient de 5 à 10000 \$. Averti, eBay a supprimé les offres.

D'autres, comme le site Vote Auction vont plus loin, tentant d'ériger l'idée en système. Derrière le site, James Baumgartner, un étudiant qui a fait de Voteauction son sujet de thèse. « De toute façon, explique-t-il , c'est le candidat le mieux pourvu financièrement qui gagne quasiment à tous les coups. » S'il ne s'adresse pas directement aux candidats, le site ouvre ses enchères aux entreprises qui financent d'ordinaire les campagnes. L'analyse rejoint celle d'un internaute qui tente de vendre son vote aux enchères sur Yahoo. « Les sénateurs vendent régulièrement leur vote au plus offrant, avance-t-il, Pourquoi le citoyen américain serait-il exclu du système ? »

Samedi 19 Août 2000

- **Marijuana Express**

iToke, un site hollandais compte lancer à Amsterdam un service de livraison de marijuana à domicile.

- **Netscape Communicator 4.75**

Je sais, il y a eu la version 4.74 le mois dernier, mais si cette nouvelle mise-à-jour sort si vite après c'est qu'elle contient le correctif permettant de réparer le trou de sécurité, dont je vous parlais la semaine dernière, Brown Orifice.

- **AMD n'oublie pas Linux**

AMD recrute actuellement des développeurs Linux pour écrire des logiciels pour le Sledgehammer, son processeur 64 bits qui devrait sortir courant 2001. La firme a créé un site web pour les développeurs Linux et enverra aux participant un "simulateur de technologie" du processeur pour que les entreprises puissent commencer à faire migrer leurs systèmes d'exploitation et logiciels. Et il parait que ce n'est qu'un début...

- **IBM fait la promotion de SuSE**

Big Blue fournira une version CD de la distribution Linux de Suse avec chacun des serveurs Intel qu'il vend en Europe. SuSE estime que cette collaboration devrait lui permettre de faire essayer sa technologie à 20000 clients potentiels.

- **AOL sur Linux ?**

Un site web (<http://www.techpages.com>) propose une pré-version non-officielle d'AOL pour Linux. son nom de code : Gamera. Certaines sources proches d'AOL auraient confirmé que le logiciel est authentique...

- **Corel Linux Second edition**

La première version a fait un pas important dans la simplification de l'installation de Linux mais il semble que cette nouvelle version fassent encore mieux.

- **I Love You Again**

Quelques firmes Américaines et Européenne ont été touchées par une nouvelle version du ver "I Love You" (VBS/Loveletter.bd), il s'agit notamment de banques. Cette nouvelle mouture télécharge et lance un programme nommé "hcheck.exe" qui qui récupère les mots de passe stockés sur l'ordinateur infecté.

- **Sony sur de nouveaux créneaux**

Le Walkman a fait son succès, Sony a donc décidé d'ici la fin de l'année, de sortir une nouvelle ligne de walkmans MP3. Mais ce ne sera pas tout, la firme sortira aussi d'autres appareils internet et des téléphones cellulaires.

- **Un PDA change le cours d'un procès**

Aux Etats-Unis, un procès pour meurtre va devoir être recommencé parce qu'un

des jurés a lu des commentaires sur le procès sur son PalmPilot.

- **Transmeta accroche un nouveau gros contrat**

Vaio, c'est la gamme d'ultraportables de Sony. Ils étaient jusqu'à présent équipé d'un Celeron 366. Mais la nouvelle gamme C1 sera, elle, équipée d'un Crusoë de chez Transmeta. C'est la faible consommation électrique et la dissipation thermique réduite qui fait basculer le choix de Sony vers le nouveau venu. En effet, le Crusoë consommerait 1 Watt (0,02 en mode veille) contre 15 à 20 pour les Celeron.

Après le contrat signé avec IBM, il ne manque plus que Toshiba au tableau de chasse de Transmeta pour avoir toutes les grosses pointures du monde de l'ordinateur portable.

- **Hallucinant !**

Pour faire sa promotion, un site internet offre 5000 \$ au 10 premiers bébés qui porteront légalement son nom.

- **Webmasters, attention !**

Un éditeur de site a été condamné par la justice américaine pour un lien qui renvoyait vers le code source du DeCSS, logiciel illégal permettant de pirater les DVD. Ce cas pourrait faire jurisprudence.

- **Tuez à distance**

Columbo va avoir du fil a retordre... L'Institut de technologie thaïlandais King Mongkut a présenté un robot armé qui détecte les intrus grâce à une caméra et des capteurs. Vous passez un ordre par Internet et il tire.

Jeudi 17 Août 2000

- **Chasse à l'homme**

Les allemands ont lancé un nouveau jeu le 14/08 : un chasse à l'homme dans Berlin en direct sur le WebLe fugitif, Roger, enseignant en Hollande. Sur ses traces Jack Black, chasseur de primes qui gagnera 10000 \$ s'il rattrape Roger. Roger porte sur lui une webcam et un micro pour que les internautes puissent tout suivre sur le Net et n'a le droit qu'à 2 h de répit par jour dans une cache secrète. Pour être sûr que le fugitif n'attend pas patiemment la fin dans une chambre d'hôtel, il doit suivre un parcours quotidien qui passe par des lieux connus de Berlin qu'il doit prendre en photo. Ensuite, il doit laisser les photos (en format numérique) sur un banc ou collé à une poubelle pour que les organisateurs les récupèrent.

Les internautes ne doivent pas participer physiquement à la chasse mais peuvent aider Roger ou Jack sur le Net. Soit dit en passant Roger n'est pas discret puisqu'il porte un tee-shirt aux couleurs du site.

Le jeu, qui enregistre 600000 pages vues par jour doit durer 24 jours et recommencer ensuite avec un nouveau candidat. S'il en réchappe, Roger gagnera 100000 \$!

<http://www.realityrun.com> (le site est aussi en anglais)

- **Nouveau problème de sécurité**

Un nouvel utilitaire internet permet de scanner l'IIS (Internet Information Server) de Microsoft, découvrir ses points de vulnérabilité et lancer une attaque qui peut révéler les nom et mots de passe des utilisateurs. Et c'est sur ce système serveur que Microsoft veut faire migrer MSN Messenger !!!!

- **Va-t-il se casser les dents ?**

Malgré les déboires de ses prédécesseurs, un nouveau FAI se lance dans l'internet illimité. AOL vous proposera, dès lundi, ce service 24h/24 pour 99 F par mois. La contrepartie, vous vous engagez pour 24 mois. (CONTQM : ceux qui il y a un an se sont engagé avec un abonnement d'un an chez AOL pour avoir des prix plus bas se sont mordus les doigts avec l'arrivée des FAI gratuits, est-ce le moment de recommencer ? 2 ans, en matière d'informatique, c'est très long. Tout peut arriver...)

- **L'escroc Altavista**

Le portail a annoncé un forfait illimité en Grande-Bretagne pour 60 £/mois. Il a ensuite affirmé que les inscription se ferait par lots de 25000 par semaine pour ne pas engorger le service. Le Mirror a donc mené l'enquête pour trouver des internautes qui profitent de ce service (ils devraient être 100000 à l'heure actuelle) et pas moyen d'en trouver un seul. Et bizarrement, seul le PDG d'Altavista U.K. peut s'exprimer sur la question, lequel passe des vacances qui n'en finissent plus de s'allonger. Pourquoi un portail de cette envergure aurait-il tenté une telle escroquerie ? Nous en saurons plus après les vacances du PDG...

- **Contenus payants**

Realnetworks, la firme propriétaire du célèbre RealPlayer a annoncé le lancement aux États-Unis d'un forfait payant qui permettra d'accéder à des programmes exclusifs chaque mois.

Mercredi 16 août 2000

- **Stinger le nouvel OS de Micro\$oft**

Non, ce n'est pas le successeur de Windows ME c'est tout simplement l'OS que Micro\$oft a conçu pour les téléphones cellulaires. Il s'agit d'une version réduite de Windows CE. Il propose, en plus des fonctions de téléphonies, un agenda intelligent qui peut forcer le téléphone à vibrer plutôt qu'à sonner aux heures de réunion et fonctionner en relation avec Outlook, et peut gérer l'affichage couleur. Samsung, s'est déjà montré intéressé par le système. Micro\$oft travaille par ailleurs sur un OS supplémentaire destiné, celui-là, à équiper les téléphones permettant d'accéder à Internet.

Tout cela ne sera pas de trop pour faire face à la montée en puissance programmée de Java et Linux sur toutes ces petites machines

- **Zapstation**

On pensait avoir tout vu ? Voici la Zapstation. C'est une sorte de console qui se branche sur votre T.V.. Elle offre un accès Web, lit les fichiers MP3, les CD et les DVD, télécharge des vidéos, reçoit les radios mondiales... Elle embarque une disque dur de 30 Go, utilise un Celeron 566 Mhz et peut-être reliée à une imprimante, un baladeur, tout type de périphérique informatique classique, à un ampli. Vous l'utilisez grâce à une télécommande et un clavier sans fil. Elle sera disponible vers Novembre.

<http://www.zapmedia.com>

- **SVG version finale**

SVG signifie Scalable Vector Graphics et s'appuie sur le langage XML. Ceci garantit donc une indépendance vis-à-vis des plates-formes. Il est indépendant de la résolution de l'écran et peut intégrer des textes descriptifs. De plus il permet de créer des liens vers des zones de l'images sans avoir à la mapper. Le gros problème est qu'aucun navigateur ne supporte évidemment ce format pour l'instant. Seul Adobe propose de télécharger un plug-in.

- **m100, le nouveau Palm**

Il devait être moins cher, c'est le cas aux États-Unis (150\$) mais en France il sera à 1500 F (comme le Palm III). Le nouveautés ? Son capot devient amovible (les nouveaux, disponibles en 4 couleurs, coûtent tout de même 200 F pièce !) et il possède un petit hublot qui permet de voir l'heure même capot fermé. Il est plus petit que la série III, faisant perdre à l'écran 1/4 de sa surface et une nouvelle touche permet d'accéder directement au bloc-note. La synchronisation avec l'ordinateur se fait maintenant directement par câble plutôt qu'avec une station d'accueil. Il fonctionne sous Palm OS 3.5 et emporte 2 petits Mo de mémoire.

- **Nouvelle folie japonaise**

Après le Tamagoshi dans la poche voici les nouveaux venus. Ce sont de petites créatures virtuelles qui s'occupent de vous livrer vos mails. Vous devez donc vous en occuper comme leurs prédécesseurs mais la lecture de votre courrier dépendra leur bonne volonté. Il paraît que les japonais en sont fous.

[La version Sony de la chose](#)

-

Un rapport de Forrester Research conclue que les standards open-source (NPLN : logiciel dont le code est accessible à tout un chacun, comme c'est le cas de Linux par exemple) domineront l'industrie du logiciel d'ici 4 ans. Il ajoute aussi qu'IBM et Dell devraient tirer leur épingle du jeu tandis que Oracle et Microsoft auront à batailler ferme pour s'en sortir.

-

Ce sont les enfants de moins de 11 ans qui cliquent le plus sur les bannières de pubs et les adolescents qui cliquent le moins (soit dit en passant, et moi jamais).

- **Vite !**

Le ministère de la Justice américain veut "expédier" le passage de l'appel de Micro\$oft devant la Cour Suprême parce que ce procès "a une importance extrême pour [leur] économie nationale" (sic).

- **La Banque de France soutient Napster....**

... malgré elle. En effet, un pirate a squatté la page d'accueil d'une trentaine de sites dont celui de la BNF

Mardi 15 Août 2000

- **Bonne blague**

Les clients Londoniens de Safeway, une chaîne britannique de supermarchés ont eut une jolie surprise. Ceux-ci ont reçu un message leur annonçant une hausse des prix et leur conseillant de faire leurs courses ailleurs. La firme n'a toujours pas pu déterminer où était la faille.

Lundi 14 Août 2000

- **Musique mobile protégée**

Intel et Matsushita ont lancé conjointement un système de protection des contenus numériques pour protéger par exemple la musique. Il n'est sûrement pas compatible avec Napster

- **e-commerce Visa ou rien**

Les vendeurs on-line vont devoir les respecter les règles établies par Visa concernant l'e-commerce ou aller voir ailleurs...

- **Un de plus chez Linux**

C'est au tour de Linux, après Dell et IBM de faire de Linux un de ses 3 systèmes d'exploitation stratégiques.

- **e-book par Micro\$oft**

Barnes and Nobles, une chaîne de librairies américaines (deuxième librairie en ligne, loin derrière Amazon.com) et MS lancent le plus gros service de vente de livres électroniques.

Micro\$oft en profite pour glisser Reader 1.5, son logiciel gratuit qui optimise l'affichage des e-Books sur un écran d'ordinateur de bureau ou un PDA, offre des options de recherche de mots, de surlignage ou encore de marque-page. 2000 eBook sont déjà disponibles dans ce format sur le site de Barnes and Noble et 150 titres supplémentaires devraient s'ajouter chaque mois. De plus MS propose d'autres applications dont un programme interagissant dans Word qui permet de convertir un document au format livre électronique et une autre

firme, Overdrive propose un logiciel permettant de faire la même chose à partir d'un document HTML ou d'un fichier texte.

A suivre, les plaintes des éditeurs en réponse à la création de moteurs d'échange d'e-books qui ne sauraient tarder à apparaître.

- **PSX 2 fin novembre**

La Playstation 2 ne sera disponible en France que le 24 novembre pour un prix d'environ 3000 F

- **Un standard de messagerie instantanées**

L'Internet Engineering Task Force va examiner 3 propositions de technologies pour définir un standard de messagerie instantanée. La proposition d'AOL, jugée peu innovante a déjà été rejetée (CONTQM : c'est bien mais pourvu que la technologie retenue n'appartienne pas à Microsoft non plus mais plutôt à une firme encore indépendante)

- **Apache 2.0 arrive**

D'ici la fin de l'année, la version 2 d'Apache, l'application serveur web la plus utilisée dans le monde, devrait être terminée pour la fin de l'année.

- **Hotmail sous Win2000**

Microsoft a décidé de ne plus faire appel au monde du logiciel libre, soit ; mais Hotmail, son service de messagerie instantanée fonctionne sous Apache et FreeBSD ! MS va donc être obligé de le faire migrer sous Windows 2000. (CONTQM : quelque chose me dit que le service sera moins performant !)

- **Le web parlera**

Le W3C (World Wide Web Consortium) travaille sur le SSML (Speech Synthesis Markup Language), une extension du XML (eXtended Markup Language) qui devrait permettre d'intégrer des instructions de synthèse vocale aux contenus textuels du Web permettant de faire des sites interrogeables par téléphone.

- **La chine sous Linux**

L'administration chinoise tournera sous Linux. elle affirme vouloir ainsi "briser le monopole de Windows et des technologies étrangères".

- **Windows is back**

La marine américaine avait renoncé à conserver Windows NT sur ses navires parce qu'il avait tendance à planter. Mais cela ne l'empêche pas d'avoir décidé d'installer une version spécifique de Windows 2000 sur ses nouveaux porte-avions.

- **Carnivore suite**

Le ministère de la Justice américain emploiera une université pour conduire une analyse indépendante du système d'espionnage des mails du FBI : Carnivore.

- **Le 64 bits d'AMD**

Le manuel technique du Sledgehammer, le processeur 64 bits d'AMD a été publié cette semaine. Ce processeur devrait être à la fois capable de gérer les programmes prévus pour les processeurs 32 bits (comme le PIII ou l'Athlon) et les programmes pour les processeurs 64 bits (comme l'UltraSparc de Sun, l'Alpha de Compaq ou le futur Itanium d'Intel).

Vendredi 11 Août 2000

- **Record du monde ?**

La femme la plus "téléchargée" du monde serait Danni Ashe. C'est du moins ce qu'essaye d'établir en ce moment le Livre Guinness des Records. Elle revendique 800 millions de téléchargements. Si vous voulez voir de qui il s'agit : <http://www.dannisharddrive.com/> (pour ceux qui ne s'en seraient pas doutés, il est recommandé d'être âgé de plus de 18 ans !)

- **Un soutien pour Napster...**

...et pas des moindres. Celui qui se faisait dernièrement appeler Prince dit sur son site que Napster est "un développement passionnant dans l'histoire de la musique" et en profite pour critiquer violemment le patron de Time Warner.

- **Poussez-les d'un côté, ils reviennent de l'autre.**

AOL cherche à faire figure propre concernant les MP3 en déconnectant un site de recherche de MP3. Cependant, la firme doit encaisser la sortie d'un nouveau logiciel d'échange de fichiers qui permet aux utilisateurs d'AOL messenger d'accéder à un réseau type Napster.

Pour ceux que ça intéresse, il se nomme AIMSTER et vous pouvez le trouver à : <http://www.aimster.com/>

Jeudi 10 Août 2000

- **Please stop...**

Le Pentagone a lancé un appel aux hackers, les suppliant d'arrêter de s'en prendre à ses réseaux... pour des raisons de sécurité.

- **Un Net-piège...**

Chapeau pour les douanes américaines ! 400 internautes qui espéraient pouvoir accéder à une chaîne satellite américaine à des prix défiant toute concurrence sont en fait tombés dans un piège tendu par les douanes.

- **Le trou de Netscape**

Le trou de sécurité des versions de Netscape antérieures à la version 6 a été dénommé BrownOrifice (petite allusion à son cousin dévastateur BackOrifice). Vous pouvez tester son mode de fonctionnement sur ce site qui lui est dédié : <http://www.brumleve.com/BrownOrifice/>. Ne vous inquiétez pas, je vous

rappelle que c'est sans risque pour votre système si ce n'est qu'on peut parcourir votre disque, sans pour autant pouvoir modifier quoi que ce soit.

La meilleure façon de se prémunir contre cette défaillance du système : désactiver les applet Java, en attendant le patch sur lequel travaille Netscape.

Mercredi 9 Août 2000

- **Après les MP3 et les fichiers multimédia, les jeux**

Swapoo, www.swapoo.com, est un site qui suit le chemin tracé par Napster mais il concerne les échanges de jeux pour consoles.

- **La chasse aux pirates est ouverte**

C'est la nouvelle occupation de Micro\$oft. La firme fait appel à la délation par le biais d'une hot-line et d'un service e-mail mais elle s'est aussi équipée d'outils de recherche automatique pour localiser sur le web les logiciels piratés ou vendus à prix suspect sur les sites web, ftp et de chat.

Un moteur de recherche scrute 24h sur 24 le web a cet effet. Micro\$oft compte ainsi recueillir des milliers d'adresses par jour. Afin de contacter immédiatement les sites ou FAI hébergeurs.

MS est soutenu par la Business Software Alliance, association d'éditeurs dont Microsoft est le principal promoteur.

Parallèlement, MS a aussi nommé un responsable aux affaires gouvernementales pour pousser l'administration américaine à mettre la pression sur les États pirates (la Russie et la Chine notamment).

Les éditeurs américains estiment perdre 150 milliards de francs par an du fait du piratage.

- **Netscape fait fort !**

Les navigateurs Netscape permettraient de voir le contenu de votre disque dur et ceci grâce à un applet Java présent sur certains sites.

Mardi 8 Août 2000

- **Un pingouin au poignet**

Les chercheurs d'IBM ont installé le Système d'exploitation Linux dans une montre-bracelet pour démontrer que le système pouvait être utilisé même dans les plus petits appareils.

- **Transmeta première version**

Transmeta a lancé la production de ses processeurs Crusoe chez Taiwan Semiconductor Manufacturing et d'autres fondeurs ce qui pourrait être le début d'une longue série...

- **Onetel raccroche**

Après la suspension des accès illimités, Onetel a décidé de limiter la consommation des abonnés qui y ont souscrit. (CONTQM : Mais que croyaient-ils chez Onetel, qu'avec une connexion illimitée les abonnés ne feraient que 20h ?)

- **Multimania se diversifie**

A partir d'Octobre, les membres de Multimania pourront diffuser gratuitement du contenu audio et vidéo sur leur site perso avec les technologie RealNetworks.

- **Cyber-police chinoise**

Début Août, la Chine a lancé sa police internet.

- **CD audio et MP3**

Ça y est, ils arrive en France ! Une société chinoise, A-Max va lancer mi-août le Napa DA V309 distribué par Bataca. Il s'agit d'un discman qui peut lire aussi bien les CD audio que les MP3. Son prix sera de 1300 F environ. (CONTQM : avant de vous ruer dessus, méfiez-vous, j'ai eu l'occasion de tester un modèle concurrent et le résultat n'était pas fameux.)

Dimanche 6 Août 2000

- **Les secrets d'Apple révélés par l'Abeille ouvrière**

Apple a demandé une enquête judiciaire suite aux révélations faites concernant son prochain portable iBook. Un inconnu a en effet publié sur le web des informations concernant sa nouvelle souris optique et un PowerMac biprocesseur avant leur présentation le mois dernier. Worker Bee, c'est son nom, aurait aussi dévoilé un troisième produit que la firme à la pomme n'a toujours pas présenté, qui serait une version de l'iBook équipée d'un processeur plus rapide. Apple a donc sommé le portail Yahoo! de révéler les informations les informations qu'il possède sur worker bee puisque celui-ci a fait ses révélations sur GeoCities (qui appartient à Yahoo!).

- **Publicité pour l'échange de fichiers**

La décision de fermer Napster a doublé les connexions au site. Le soir de la fermeture du site, le nombre de connexions a été porté à 849196, contre 443070 la veille. Il a ainsi dépassé la fréquentation de sites comme Amazon.com. De plus les sites de téléchargement enregistre une hausse importante des demandes de logiciels d'échange de fichier.

- **Le Limousin n'est pas rentable**

Le Conseil régional dénonce la disparition de la notion de service public. En effet, le Limousin fait partie zones que Completel a jugé non rentables pour l'utilisation la boucle radio locale pour l'Internet.

- **Le mobile tue ?**

Un procès va s'ouvrir aux États-Unis suite à la plainte d'un médecin estimant

que sa tumeur cérébrale est due à son téléphone cellulaire. Au Royaume-Uni, le gouvernement s'est lancé dans une campagne pour inciter les enfants à ne pas utiliser les cellulaires. Pendant ce temps des études sont toujours en cours pour déterminer si oui ou non il y a danger.

- **IBM et Micro\$oft pour un standard**

Les deux compagnies ont décidé de collaborer pour définir des standards internet, concernant notamment le XML pour simplifier le développement de leurs applications futures.

- **Dessins animés sur PDA**

Cela pourrait arriver bientôt... Warner Brothers et Sony Pictures sont en train de tester la possibilité de distribuer, par le biais d'Internet, des dessins animés sur ce support.

- **Le Conseil constitutionnel censure**

Le Conseil constitutionnel a apporté des modifications à la loi sur la liberté de communication, notamment en censurant d'office l'article concernant la responsabilité pénale des hébergeurs, déclarant anticonstitutionnelle la saisie par un tiers.

- **La Dram Rambus double sa vitesse**

Une RDRAM 1066 MHz, avec une bande passante de 2,1 Go/s, voilà la dernière avancée du constructeur de mémoire. La technique ? La même que celle de la DDR SDRAM : le doublement de la fréquence (2*533 MHz).

- **Vous jouerez plus tard**

La sortie en Europe de la Playstation 2 a été retardée, vraisemblablement pour pouvoir répondre à la demande en Amérique du Nord.

- **Alerte aux virus**

McAfee a créé un service qui vous envoie les formations sur les nouveaux virus directement sur votre téléphone WAP.

- **Téléchargement de musique autorisés**

Cette semaine Universal lance son service de téléchargement de musique imitant ainsi Sony et EMI. BMG et Time Warner s'y mettront d'ici la fin de l'année

Vendredi 4 Août 2000

- **Opérateurs téléphone : US vs UE**

Près de 50 compagnies de téléphone européennes se sont jointes à la campagne de l'Union Européenne pour stopper la proposition de loi américaine visant à empêcher, entre autres, Deutsche Telekom de s'offrir Voicestream.

- **Micro\$oft a chaud**

L'Union Européenne a officiellement lancé à son tour une procédure antitrust contre Micro\$oft. Du coup, MS incite un juge à renvoyer plus de 60 actions en cours aux États-Unis pour avoir les mains un peu plus libres

Jeudi 3 Août 2000

- **Le GMT ne sera pas la référence**

Tony Blair s'était engagé dans une campagne pour que Greenwich soit le point de référence de l'horloge internet avec le GeT (Greenwich Electronic Time). Mais le système basé sur Java est incompatible avec Internet Explorer, donc avec près de 80% d'internautes, les tests montrant des écarts allant jusqu'à 9s. (Si quelqu'un peut m'expliquer l'intérêt de créer une heure Internet alors qu'il existe déjà une heure de référence, qu'il m'envoie un mail, merci).

- **Offres d'emploi**

Comme tous les ans, le week-end dernier s'est tenu à Las Vegas le DefCon, le congrès de hackers (NPLN : ceux qui forcent les systèmes informatiques protégés). Depuis quelques années, les hackers invitent même officiellement des agents fédéraux aux conférences. En effet, auparavant, ils cherchaient à s'infiltrer incognito et un jeu avait été lancé, "Spot the Fed" qui consistait pour les hackers à démasquer ces agents. Cette année, les fédéraux (un officier du ministère de la Défense, un membre d'une cellule discrète proche de la C.I.A.) ont même été invités à s'exprimer sous forme de conférences et de tables rondes (nommées "Meet the Fed"). Le dernier jour, "Spot the Fed" a sorti aussi un gros poisson, un agent de la NSA. Leurs interventions ont eu un point commun, la tentative à peine voilée de recruter des hackers pour les services de renseignement américains.

Par contre, interrogés à ce sujet, ils ont démenti l'existence du réseau d'espionnage Echelon.

- **Ils ne liront pas grand chose**

Selon les analyses d'un chercheur universitaire, le dispositif de surveillance des mails, qui sera mis en place au Royaume-Uni serait techniquement obsolète. Il ne prendrait pas en charge les serveurs de mail étrangers, ni certains petits FAI britanniques, oubliés par le dispositif, les accès internet à haut débit, ni avec le nouveau protocole internet IPv6 (futur standard du web). Un gaspillage de 200 millions de francs.

- **IBM gonfle ses disques**

D'ici deux ans, les disques durs devraient dépasser les 200 Go. Alors que la technologie holographique, lorsqu'elle sera au point, devrait pouvoir permettre d'atteindre 1 Go par cm², IBM propose une technologie intermédiaire basée sur un système de stockage nano-mécanique composé de milliers de micropointes. Il permet de stocker 1,25 Go sur une surface de 3 millimètres carrés comprenant

32 x 32, soit 1024 micropointes qui réagissent à l'électricité et adoptent un état levé (1) ou baissé (0). On devrait donc pouvoir atteindre 500 milliards de bits par pouce carré, soit 5 fois la densité maximale pouvant être atteinte sur support magnétique, celle-ci étant estimée à 100 (les disques les plus récents ont une densité de 12 milliards de bits au pouce carré).

- **Etudes / Sondages**

Sondage Sofres : Seuls 7 % des internautes de l'Hexagone ont acheté en ligne au cours des derniers mois, contre 27 % des Américains ayant accès au net.

- **WebTV Basque**

Ce mois-ci va s'ouvrir TVPI.fr une web T.V. locale privée du Pays proposant 20% de programmes en langue basque.

Mercredi 2 Aout 2000

- **Du nouveau dans l'échange de fichiers**

La startup Autonomous Zone ose ce qu'aucune n'avait fait auparavant, vous payer pour échanger des fichiers ! Le concept est simple : on reprend le système de Napster étendu à tous types de fichiers, avec son moteur de recherche et tout et tout, sauf que quand quelqu'un télécharge un fichier depuis votre ordinateur, vous recevez des Mojos, une monnaie inventée par la startup mais convertible en dollars (1 mojo = 1/1000 cent).

On pourrait donc s'attendre à revoir le même genre de manoeuvre judiciaire que contre Napster, d'autant plus que certains sites pornographiques majeurs comme Penthouse seraient de la partie. Mais les créateurs de la société sont confiants, assurant qu'on ne peut leur demander de supprimer des références illégales puisque leur système, contrairement à Napster, ne mémorise pas l'index des fichiers. De plus, ils affirment vouloir travailler avec Hollywood sur un système de paiement volontaire nommé PayLars (en référence à Lars Ulrich, batteur de Metallica à l'origine de poursuites contre Napster).

MojoNation, c'est le nom du logiciel, sera déjà disponible en version beta au salon des Hackers, le DefCon. Le logiciel pourrait de plus reprendre le système de Freenet qui sauvegarde les fichiers sur son serveur, les rendant téléchargeables même après la déconnexion du fournisseur. De plus vous aurez un formulaire à remplir, pour pouvoir établir une liste des fournisseurs de fichiers de confiance (le même système de notation que sur les sites de ventes aux enchères). Pour gagner des Mojos, vous pourrez aussi vendre une partie de votre bande passante, de l'espace disque pour servir de serveur ou créer d'autres services payants.

- **Le futur de Napster**

Napster a entamé une série de rencontre avec EMusic qui pourrait aboutir à un partenariat, lequel pourrait affecter la décision de la cour sur l'action en justice en cours.

- **Red Hat a convaincu Ericsson**

Les efforts soutenus de Red Hat pour faire entrer Linux dans les petits appareils non-PC portent enfin leurs fruits puisque la firme vient de signer un accord de partenariat avec Ericsson.

- **Le Net "s'installe" en Iran et Irak**

En Iran, c'est le premier centre rural connecté au web et en Irak, le premier premier cyber-café

Mardi 1^{er} Août 2000

- **URL plus simple**

Suite à une étude montrant que les utilisateurs de téléphone Wap devaient taper 70 touches en moyenne pour entre une adresse, la société Bango a mis au point un système d'URL par chiffres pour simplifier la tâche. Il se nomme le Bango Number et vous permet de taper un numéro (3 chiffres min) en lieu et place de l'adresse. Maintenant, la course est lancée pour acheter les numéros, les plus chers étant bien sur ceux de 3 chiffres.

- **Quand on a de l'argent...**

Micro\$oft compte dépenser 500 millions de \$ pour le marketing et la vente de sa future console de Xbox, le plus gros budget jamais atteint par la firme pour lancer un nouveau produit.

- **Vous êtes espionnés...**

L'info n'est pas nouvelle, mais cette fois, un cabinet d'étude a utilisé un renifleur de paquet pour savoir quelles informations étaient recueillies à notre insu et le résultat est sidérant.

Ce cabinet a téléchargé des données depuis son propre site. En résumé, les serveurs de Real, AOL ou Netzip récupèrent le nom du fichier (exécutable) téléchargé, l'adresse exacte du serveur de provenance, l'adresse IP de l'ordinateur de l'internaute. Le logiciel crée une clé d'identification à partir du nom de la machine lors de l'installation de Windows . Couplé à un cookie, il permet par exemple de créer un historique des fichiers téléchargés. Lisible en hexadécimal et en équivalent ASCII, le fichier ne laisse guère de doute sur les risques de son exploitation.

- **On joue dans le comique**

Le premier patch correctif pour Windows 2000 US est sorti : 83 Mo (version française pour le 10 Août). Après le patch pour office de plus de 100 Mo, les logiciels de MS coûtent plus cher en téléphone qu'à l'achat si on les veut à jour !

- **Du cinéma avec la Playstation**

Sony a lancé le GScube. C'est un outil de développement pour l'industrie cinématographique et la création multimédia.... basé sur la technologie PlayStation 2.

Si vous avez appris une nouvelle importante à diffuser :

Jeudi 31 Août 2000

- **Ca n'a rien de surprenant...**

Le logiciel Promis, qui avait beaucoup fait parler de lui dans les années 80 est un logiciel destiné aux juristes qui classe les documents et d'établir des corrélations entre eux. Il a depuis été retouché par l'administration américaine qui l'a revendu, sous un autre nom, à l'étranger, à des services secrets (en Jordanie et Israël, notamment) mais aussi à des sociétés, dont quelques grandes banques françaises.

Cependant, les modifications auraient consisté en la pose de dispositifs d'écoute et d'intrusion sur les ordinateurs où il serait installé, donnant ainsi aux États-Unis la possibilité d'espionner un grand nombre d'entreprises et d'agences gouvernementales. Juste là, tout va bien pour les américains sauf que le gouvernement canadien qui utilise le logiciel PIRS pour coordonner les enquêtes des ses services secrets et de la Police montée, soupçonne que ce soit une de ces version de Promis. Une enquête a donc été ouverte pour déterminer

si des mouchards existent bien.

- **France Telecom ne possède pas les Pages Jaunes.**

France Telecom, qui possède www.pagesjaunes.fr, avait demandé à l'Office Mondial de la Propriété Industrielle (OMPI) de statuer en sa faveur sur la question de savoir à qui appartiennent les domaines pagesjaunes.com, pagesjaunes.net et lespagesjaunes.com. Mais l'OMPI n'a pas suivi en expliquant notamment que autres annuaires nommés Pages Jaunes existent dans des pays francophones avec le nom pagesjaunes.ch, pagesjaunes.ca, pagesjaunes.be, pagesjaunes.lu.

- **Tout le monde a droit à un e-mail... 2ème édition**

La Poste a annoncé qu'elle allait offrir un e-mail gratuit à chaque français, qui est consultable directement de chez vous (sur le site ou sur votre gestionnaire de mails) ou sur des bornes payantes dans les postes. Seulement voilà, le service existe depuis un an....

- **Sony sort son Palm**

Sony et Palm ont dévoilé le Clie, premier PDA issu de leur alliance qui marque l'entrée du Japonais sur ce marché grandissant.

- **Les rumeurs se précisent**

La société Mainsoft, développeur Unix/Linux, est soupçonnée d'être l'un des piliers de la conversion d'Office sous Linux. Elle a déjà porté I.E. et Windows Media Player sur cette plate-forme. (CONTQM : Si on trouve même les logiciels MS sous Linux, quel sera l'intérêt de conserver Windows ?)

- **AGP x8 pour Intel**

Milieu 2001, Intel devrait sortir ce nouveau bus graphique qui permettra d'accélérer encore la 3D.

- **Nouveau système de promotion**

Au Etats-Unis (ailleurs je ne sais pas), Windows Me (NPLN : Windows Millenium, qui sort le 14/09 partout dans le monde) sera distribué sous forme de démos dans les grands magasins.

Mercredi 30 Août 2000

- **Les nouveau amis de Napster**

De nombreuses organisations se sont constituées soutiens de Napster devant la Cour d'appel, comme par exemple la Consumer Electronics Association (CEA) et la Digital Media Association (DiMA).

La CEA estime que le juge a mal interprété le cas du Betamax de Sony de 1984 car Napster a, à ses yeux, créé un nouveau standard qui peut avoir des applications légales bien qu'il soit souvent utilisé pour enfreindre la loi. La DiMA qui représente plus de 960 ntreprises dont AOL et Yahoo rejoint les positions de la CEA.

- **Barbie fait confiance aux petites filles**

Les directeurs de Barbie.com a engagé 26 petites filles entre 6 et 12 ans pour les aider à repenser le site qui avait été ouvert cet été. Toutes les semaines ces filles recevaient par mail des photos d'écran du site en construction et étaient questionnées par e-mail ou téléphone. Bien sûr elles ont reçu une rémunération (non communiquée) pour leurs services.

Il semble que cette façon de procéder soit payante puisque le trafic a doublé à la réouverture du site puis a quadruplé après les publicités à la T.V.. De plus, les visiteurs se fidélisent. Le visiteur reste à chaque fois 26 mn en moyenne.

- **Freesurf sanctionne des abonnés**

Suivant la route tracée par OneTel, Freesurf a inscrit sur une liste noire et déconnecté des abonnés du forfait illimité soir et week-end pour avoir brisé les règles. Selon les conditions du forfait à 100 F/mois, l'abonné est restreint à la consultation du web et de ses mails et aux groupes de discussions. Mais 531 abonnés ont été déconnectés en une semaine, sans préavis et en n'ayant pas forcément enfreint les règles. Ils sont accusés d'avoir utilisé des passerelles pour télécharger des logiciels.

Sur le fait qu'il y ait eu des erreurs et pas de préavis, le directeur de Freesurf explique "qu'il s'agissait d'une mesure d'urgence. Mais nous nous sommes rendus compte que certaines pratiques étaient considérées à tort comme des fraudes." Ils sont donc en train examiner les cas un par un pour reconnecter ceux qui ont été déconnectés par erreur. Parmi les erreurs techniques relevées, un abonné qui introduirait tout simplement un CD dans son PC et lancerait le logiciel de lecture WinAmp tout en étant connecté serait considéré comme un fraudeur car WinAmp utilise un protocole interdit par le forfait illimité. Freesurf soutient cependant vouloir poursuivre son offre d'accès illimité.

- **Les antennes-relais seraient dangereuses**

Selon une étude commandée par la revue Science et Avenir, les vibrations qui transmettent les signaux radio de téléphonie mobile seraient nettement plus nocives que les opérateurs ne le déclarent.

L'étude, réalisée dans quinze appartements d'Ile-de-France situés derrière une antenne-relais ou au dernier étage d'un immeuble en accueillant une, révèle que dans près de deux cas sur trois, l'intensité des radiations émises est dix fois supérieure aux valeurs annoncées par les laboratoires de France Telecom.

Déjà, en avril 1999 déjà, la direction générale de la santé et le secrétariat d'Etat au logement avaient publié un rapport préconisant une « restriction d'usage totale ou partielle » des balcons de HLM sur lesquels sont installées ces antennes, voire même une « condamnation de certaines pièces d'habitation ».

- **Intel largué**

Le PIII 1,13 GHz a été retiré de la vente 1 mois après sa sortie à cause d'une anomalie sur un circuit entraînant des problèmes de fonctionnement avec certains logiciels. De plus certains assembleurs comme Dell avaient déjà suspendu leurs commandes en raison de l'incapacité d'Intel à fournir ce modèle

en nombre suffisant. Pendant ce temps, AMD a lancé son Athlon 1,1 GHz et il a déjà plus de 10 constructeurs comme clients, notamment Compaq, Fujitsu Siemens Computers, Gateway, Hewlett-Packard et IBM.

AMD est donc seul sur le créneau haut de gamme et son produit est moins cher. Intel prévoit que les modifications à apporter au design de son PIII vont prendre quelques mois..... autant dire une éternité vu que les processeurs cadencés à 1,5 GHz sont attendus d'ici peu.

- **Amazon.com crée Amazon.fr**

L'ouverture a eu lieu dans la nuit du 30 au 31 août. Le site proposera 4 boutiques (livres, musique, DVD et vidéo) qui proposeraient l'ensemble des références disponibles en France. Cependant, contrairement à ses concurrents, aucun chiffre n'a été donné pour les produits français alors que l'on connaît ceux des produits étrangers (240.000 références de CD en import, 700.000 livres en anglais). Pour les prix, le site se conformera à la réglementation française en vigueur sur le prix unique du livre.

N'ayant pu racheter Alapage (France Telecom a été plus rapide), Amazon a dû construire un site de toute pièce mais a su s'entourer d'une équipe composée d'anciens de chez Vivendi, Havas ou la FNAC. Mais les concurrents, la FNAC, Alapage et BOL ne s'inquiètent pas et pensent même que la campagne de publicité que va lancer Amazon va leur être bénéfique.

- **Entre Netscape et I.E., choisissez K-Meleon**

Il s'agit d'un navigateur gratuit et sous licence G.P.L. (NPLN : le code source du logiciel est disponible et modifiable à volonté par tout un chacun) qui ressemble à I.E. mais qui intègre le moteur d'interprétation Gecko, qui sera au coeur de Netscape 6. On a donc là un clone plus léger (4 Mo) de Netscape Navigator, il intéressera donc : tous ceux qui veulent disposer des navigateurs de Microsoft et de Netscape, les développeurs de sites web souhaitant s'assurer de l'apparence d'un site dans les deux versions ou les internautes voulant se rendre sur des sites inaccessibles avec I.E..

Pour les familiers du monde Unix/Linux, c'est le pendant Windows de Galeon (qui intègre déjà Gecko).

- **La dernière version de MS Office est en test**

Office 10 inclura une nouvelle technologie de reconnaissance vocale, un support XML additionnel, une application de collaboration par Internet et des outils de gestion du contenu.

- **Du nouveau sur les Palms**

Un programmeur a créé le premier Cheval de Troie connu pour Palm...

Mardi 29 Août 2000

- **Virus pour les enfants**

Ça vient de sortir ! Si vous recevez un e-mail avec Pikachu (le Pokemon !) en

fichier attaché, ne cliquez pas dessus. C'est un nouveau virus qui traîne sur le net.

- **Motorola jette l'éponge sur Iridium**

Ça faisait quelques temps que ça couvait... Faute de repeneur, Motorola a décidé de saborder les 66 satellites de son réseau de téléphonie mobile. Voilà comment jeter facilement 7 milliards de \$!

- **Pentium IV a grossi**

Il faut s'attendre à ce qu'Intel ait du mal à fournir le Pentium IV et qu'il soit cher. En effet, le petit nouveau contient 42 millions de transistors (contre 28 pour le PIII), soit une surface de 217 mm² (contre une centaine sur le PIII). Ils seront produits avec les mêmes technologies que le PIII mais du fait de sa taille, Intel ne pourra en monter qu'un par galette de silicium là où il montait deux PIII en même temps. Le calcul est donc très simple : vitesse de production réduite de moitié et coût de matière première doublé... que devient le prix final ?

A moyen terme, le problème de surface devrait être réduit avec le passage à la technologie 0,13 micron et l'utilisation de galettes de 300 mm contre 200 actuellement.

Un processeur nommé Foster devrait suivre. Il s'agit d'un PIV pour serveurs et stations de travail

- **Riposte d'Intel**

Intel a aussi dévoilé la technologie XScale qui vise à contrôler consommation et dégagement thermique et qui présente de nombreuses similitudes avec le processeur de Transmeta.

- **PGP buggé**

PGP (Pretty Good Privacy), la référence en matière de cryptage souffrirait d'un bug qui, dans certaines conditions permet accéder, dans les versions Windows, aux données décodées.

- **Micro\$oft bouche les trous**

Une faille dans FrontPage Server Extensions rendait possibles les attaques du type Denial of Service. Microsoft aurait corrigé le problème.

- **Rumeurs**

Il semblerait que Micro\$oft fasse développer par une firme israélienne une version de sa suite Office pour Linux. MS a bien sûr démenti la rumeur.

- **Oracle gratuit**

La firme a lancé OracleSalesOnline.com, un service qui offrira, le logiciel de base d'automatisation de la force de vente gratuitement. Seuls les modules additionnels seront payants, comme le logiciel de "sales-compensation", selon un système de pay-per-use (paiement à l'utilisation).

- **TrustE perd en crédibilité**

Le sceau TrustE est en temps normal une marque de garantie de la confidentialité sur des sites marchands. Mais l'organisation aurait fait profiter une société des données de ses visiteurs.

- **Yahoo veut crypter**

Yahoo prévoit de permettre aux utilisateurs de ses services mail de crypter leurs messages en utilisant le site SecureDelivery.com. Il serait le premier à proposer cette option.

- **Microsoft a des problèmes avec Hotmail**

Des utilisateurs Hotmail ont expliqué que suite à la fermeture de leur compte pour cause d'inactivité (ce qui est normal) ils ont créé un nouveau compte avec le même nom d'utilisateur et ont découvert avec étonnement que leur liste de contacts AIM était maintenue sur leur nouveau compte. Conclusion, si quelqu'un crée un compte avec votre ancien pseudo, il récupère votre liste de contact. Micro\$oft enquêterait de manière approfondie sur la question.

- **Nintendo se donne du temps**

Le Gameboy Advance ne sortira qu'en Mars au Japon et en Juillet en Europe à cause de ruptures de stocks en composants qui sont dus en grande partie à la forte demande actuelle en Gameboys Color

- **Du nouveau chez les cellulaires**

Suite à la polémique sur les dangers des cellulaires en matière de radiation, les principaux constructeurs ont décidé d'indiquer sur les emballages la quantité de radiations émises par leurs appareils

Mercredi 23 Août 2000

- **Dure concurrence pour Intel**

AMD (le grand rival) et Transmeta (l'étoile montante) devraient annoncer un coopération technologique. Transmeta est très intéressé par la technologie LDT (Lightning Data Transfer) créée par AMD qui accélère les échanges de données entre le processeur et les différents composants du PC et qui sera intégré aux jeux de composants des Athlon en 2001. Cette technologie permettrait à Transmeta d'atteindre le GHz. De son côté, AMD aurait accès à la technologie de Transmeta, dont les processeurs consomment 50 % d'énergie en moins que ses concurrents à fréquence égale.

Cette alliance ne va pas faire le bonheur d'Intel qui perd des parts de marché et patauge entre ses problèmes avec les composants i820 et les retards sur le Pentium IV, d'autant plus qu'AMD sera bientôt sur tous les fronts : portables (Athlon mobile fin 2000), ordinateurs de bureau (Athlon Thunderbird 1,2 GHz), serveurs (Sledgehammer).

- **Premier cyber hold-up**

Egg, la banque britannique uniquement on-line a été électroniquement

"braquée". Selon la banque, aucune perte (quelques dizaines de milliers de £) n'a été subie. Le 3 malfaiteur présumés ont été arrêté après une enquête de 6 mois suite à une alerte de Egg qui dispose de logiciels permettant de repérer tout ordinateur à partir duquel sont effectuées des opérations multiples.

- **Faites vos courses**

Uranium Online est un site qui vous permet d'acheter des barres de combustible nucléaire en ligne...

- Selon une étude de NetValue, 575000 heures auraient été consacrées aux jeux d'argent en ligne au mois de juillet.

- **Radio France est web-actif**

Mi septembre, Radio France va sortir la première de ses Webradios thématiques. Ce sera "la radio du livre".

Mardi 22 Août 2000

- **Le philippin s'en sort bien**

Le gouvernement Philippin, faute de loi adaptée, a décidé abandonner les charges retenues contre l'auteur présumé du virus 'I Love You', ce qui ne fait pas la joie des américains.

- **Gadget inutiles**

Sous prétexte de l'explosion des nouvelles technologies ont veut nous faire acheter n'importe quoi...

Philips, en collaboration avec Levi's va sortir en France en Septembre des blousons avec écouteurs intégrés et prises pour connecter téléphones mobiles et lecteur MP3.

- **Le Xeon suit le mouvement**

Le Xeon, processeur haute performance d'Intel va lui aussi être très bientôt porté à 1 GHz

- **On ne s'arrête plus d'accélérer**

Cette semaine, Intel a dévoilé cette semaine sont pentium IV. Les analystes estiment qu'il devrait atteindre les 10 GHz d'ici 4 ans.

Le fondeur a aussi annoncé la sortie de nouveaux processeurs pour serveurs et pour ordinateurs de poche.

- **Un de moins**

MP3.com avait 4 procès pour violation de copyrights sur le dos, il n'y en a plus que 3. Le site vient de conclure un accord avec Sony qui lui permettra de distribuer la musique du producteur.

- **Reality Run : fin de la course**

La semaine dernière je vous parlais de la chasse à l'homme organisée en Allemagne, Roger, le fugitif, a été rattrapé au bout de 7 jours par la chasseuse de prime qui empoche 10000 \$ au passage. Si vous êtes intéressés vous pouvez faire acte de candidature. Les prochains sites, pour lesquels votent les internautes, pourraient être Vienne ou Amsterdam.

Lundi 21 Août 2000

- **Altavista U.K. renonce**

C'est tombé lundi, le patron d'Altavista U.K. a annoncé que le forfait illimité ne se ferait pas (au passage je corrige ce que j'ai dit la semaine dernière, le forfait était de 60 £ / an). Il a prétexté que c'était de la faute de British Telecom qui ne lui avait pas proposé de forfait comme prévu mais des tarifications à la minute. Et British Telecom de dire que ce n'est pas de sa faute, blah, blah, blah... Bref fin d'une aventure qui n'avait pas commencé.

- **Forfait illimité de OneTel**

L'Association des Internaute Médiateurs (ADIM) a demandé l'assignation en référé de OneTel pour tout le flou et les nombreux revirements ayant entouré le forfait illimité de l'opérateur (hésitations de la hotline, accusations de fraude, les connexions impossibles,...)

- **Les prochains processeurs d'Intel**

On en sait un peu plus sur la prochaine série d'Intel : Les vitesses débiteront à 1,4 GHz et ils seront basés sur une nouvelle architecture pour accélérer la vitesse de streaming et faciliter le travail peer-to-peer (égal à égal) en réseau.

- **AMD marque un point**

C'est n'est pas sur le plan de la vitesse des processeurs ou AMD est toujours à 1,1 GHz et Intel à 1,13 mais sur celui des prix. AMD a décidé de casser les prix des Athlon et Duron a titre d'exemple aux ÉtatsUnis :

Intel Pentium III 850 MHz (256K L2 Cache, 100 MHz FSB, Slot 1): 454 \$

AMD Athlon 850 MHz (512K L2 Cache, 200 MHz FSB, Slot A) : 239 \$

A ce prix là, y'a pas photo pour le choix... Mais pour les inconditionnels d'Intel, pas de panique, on peut raisonnablement penser qu'il suivra.

- **Nokia fonctionnera en Open-Source**

Nokia a sorti son nouveau navigateur internet pour téléphone cellulaire. La firme a décidé de laisser le code en Open-Source en espérant ainsi marquer des points le marché des logiciels "sans fils".

- **Compaq remporte un gros contrat ?**

Compaq devrait normalement emporter un contrat avec le Ministère de l'énergie américain pour un super-ordinateur de simulation des armes nucléaires.

Dimanche 20 Août 2000

- **Premier agrément pour mobile monétique**

C'est Sagem qui a été le premier à obtenir, pour un terminal GSM monétique, l'agrément EMV délivré par Europay International. C'est un téléphone de la gamme Sagem 900 qui vient de recevoir cet agrément. Il pourra donc être utilisé pour payer avec sa carte bancaire (Mastercard ou Visa) à distance, y compris pour des paiements internationaux, en toute sécurité. Ce téléphone est associé à une batterie monétique disposant du coupleur carte à puce, associé à une application située dans la carte SIM de l'opérateur. Sagem a déjà enregistré plus de 500000 commandes.

- **Protégez-vous des ondes mobiles**

Alors que la polémique fait rage pour savoir si oui ou non et dans quelle mesure les téléphones mobiles sont dangereux pour la santé, la société japonaise Gunze vient de mettre au point un T-shirt, le "Pace protector", qui protège des ondes électromagnétiques en en supprimant jusqu'à 92%. En fait, il a été conçu pour les porteurs de stimulateur cardiaque. Il est tissé en fil de nylon argenté et est efficace même à 2 cm du pacemaker. Son prix, 1640 F.

- **Les grosses dépenses de France Telecom**

C'est maintenant les dans les licences UMTS belges et suédoises que FT a décidé d'investir.

Pour la Suède c'est par le biais de sa filiale Orange et en collaboration avec Skanska (groupe du bâtiment) et la Swedish Broadband Company.

En Belgique, c'est la filiale Mobistar qui va au charbon. L'acquisition, si elle se fait, sera payée par l'endettement et une augmentation du capital. De plus FT envisage que la filiale de Mobistar, Mobistar Corporate Solutions fusionne avec Global One, le groupe de services de communication pour grandes entreprises acquis en début d'année..... par France Telecom.

- **Saut quantique pour les ordinateurs**

(Attention, je vais parler un peu technique, pour ceux qui n'auront pas tous compris -essayez quand même-, dites vous que c'est plus d'une dizaine d'années de théories et d'expériences qui commence à montrer des signes de "réalisabilité")

Bienvenue dans le monde du spin nucléaire et des enchevêtrements subatomiques. Les chercheurs d'IBM ont montré que l'ordinateur quantique, dont on parle depuis de nombreuses années, est réalisable et devrait largement distancer les meilleurs super-ordinateurs. Ils ont annoncé qu'ils avaient utilisé "l'ordinateur quantique le plus moderne au monde" pour résoudre en une étape un problème mathématique alors qu'il en faudrait 4 avec un ordinateur conventionnel. On espère pouvoir ainsi surpasser l'architecture silicium en utilisant notamment le fait qu'une particule subatomique peut exister dans deux états quantiques apparemment opposés. Bien sûr, l'ordinateur d'IBM, ne tient pas

dans la poche. Il occupe une demi pièce pleine d'électro-aimants et de spectromètres.

Le coeur du système est constitué de 5 atome de fluor, chacun représentant un unique "bit quantique" ou "qubit" de capacité de stockage en suspension dans une molécule spécialement conçue pour. Lorsqu'on lui applique un champ magnétique, le noyau au centre des atomes peut être mis en rotation rapide de façon mesurable et contrôlable, en utilisant l'Imagerie de Résonance Magnétique (IRM, comme en médecine). Chaque noyau en rotation interagit avec les autres, créant un "enchevêtrement" qui défie logiquement les lois quantiques et que les chercheurs peuvent dompter pour effectuer des calculs à une vitesse phénoménale. Isaac Chuang, leader du projet ordinateur quantique chez IBM souligne que "c'est la premier fois qu'une équipe réussit un calcul en utilisant une molécule de 5 qubit". Cependant il ne faut pas s'attendre à voir les premières applications commerciales d'ordinateurs quantiques avant au moins 20 ans.

Chez H.P., on salue les avancées d'IBM qui sont considérées comme "impressionnantes et encourageantes". Mais la firme, elle, travaille sur un type plus conventionnel d'ordinateur super-rapide et à faible consommation pour lequel ils s'attendent à pouvoir produire des résultats d'ici 5 ans. D'autres voies explorées sont celles de l'ordinateur biologique construit à partir d'ADN ou d'ordinateurs pour lesquels on utiliserait des réactions chimiques pour assembler des composants encore plus petits.

- **Linuxiens, choisissez votre camp**

De grandes compagnies se sont associées dans la Gnome Foundation pour soutenir Gnome l'une des deux interfaces graphiques les plus utilisées sous Linux. Ce groupe dirigera le projet et décidera quels packages doivent être inclus dans Gnome. Les sociétés impliquées sont, entre autres, Sun Microsystems, VA Linux Systems, Collab.Net, Compaq Computer and IBM plus celles qui sont directement impliquées dans le projet : Red Hat, Gunitais, Henzai, Eazel et Hélix Code. Ajoutez à cela des participation de la Free Software Foundation (pionnière dans le logiciel open-source) et l'Object Management Group (qui s'attache à créer des programme qui communiquent ensemble de façon standard).

Ceci ne va pas aller dans le sens de l'unification avec le compétiteur principal, KDE, qui est utilisé dans les distributions de SuSE, Corel, Caldera, Red Hat, sur les ordinateurs Linux d'IBM. Cette séparation entre les deux grands est dangereuse parce que les programmeurs auront à choisir entre les deux pour assurer la compatibilité de leurs logiciels.

Sun Microsystems va adopter l'interface Gnome pour ses système d'exploitation Solaris et fournira plus de 50 programmeurs au projet Gnome. De plus, StarOffice (le pendant de Micro\$oft Office sous Linux), appartient à Sun est sera donc plus étroitement lié à Gnome. La suite adoptera Bonobo, une technologie Gnome similaire au logiciel Microsoft COM qui permet à un programme d'utiliser les composants d'un autre (par exemple, un gestionnaire de mail peut utiliser le moteur Gecko de Netscape ou un Messenger Instantané

utiliser le correcteur d'orthographe de StarOffice).

- **La démocratie en danger**

Les américains nous auront tout fait ! La commission électorale fédérale américaine a découvert que des votes avaient été mis aux enchères sur eBay. Et les enchères (sérieuses ou non) variaient de 5 à 10000 \$. Averti, eBay a supprimé les offres.

D'autres, comme le site **Vote Auction** vont plus loin, tentant d'ériger l'idée en système. Derrière le site, James Baumgartner, un étudiant qui a fait de Voteauction son sujet de thèse. « De toute façon, explique-t-il , c'est le candidat le mieux pourvu financièrement qui gagne quasiment à tous les coups. » S'il ne s'adresse pas directement aux candidats, le site ouvre ses enchères aux entreprises qui financent d'ordinaire les campagnes. L'analyse rejoint celle d'un internaute qui tente de vendre son vote aux enchères sur Yahoo. « Les sénateurs vendent régulièrement leur vote au plus offrant, avance-t-il, Pourquoi le citoyen américain serait-il exclu du système ? »

Samedi 19 Août 2000

- **Marijuana Express**

iToke, un site hollandais compte lancer à Amsterdam un service de livraison de marijuana à domicile.

- **Netscape Communicator 4.75**

Je sais, il y a eu la version 4.74 le mois dernier, mais si cette nouvelle mise-à-jour sort si vite après c'est qu'elle contient le correctif permettant de réparer le trou de sécurité, dont je vous parlais la semaine dernière, Brown Orifice.

- **AMD n'oublie pas Linux**

AMD recrute actuellement des développeurs Linux pour écrire des logiciels pour le Sledgehammer, son processeur 64 bits qui devrait sortir courant 2001. La firme a créé un site web pour les développeurs Linux et enverra aux participant un "simulateur de technologie" du processeur pour que les entreprises puissent commencer à faire migrer leurs systèmes d'exploitation et logiciels. Et il parait que ce n'est qu'un début...

- **IBM fait la promotion de SuSE**

Big Blue fournira une version CD de la distribution Linux de Suse avec chacun des serveurs Intel qu'il vend en Europe. SuSE estime que cette collaboration devrait lui permettre de faire essayer sa technologie à 20000 clients potentiels.

- **AOL sur Linux ?**

Un site web (<http://www.techpages.com>) propose une pré-version non-officielle d'AOL pour Linux. son nom de code : Gamera. Certaines sources proches d'AOL auraient confirmé que le logiciel est authentique...

- **Corel Linux Second edition**

La première version a fait un pas important dans la simplification de l'installation de Linux mais il semble que cette nouvelle version fassent encore mieux.

- **I Love You Again**

Quelques firmes Américaines et Européenne ont été touchées par une nouvelle version du ver "I Love You" (VBS/Loveletter.bd), il s'agit notamment de banques. Cette nouvelle mouture télécharge et lance un programme nommé "hcheck.exe" qui qui récupère les mots de passe stockés sur l'ordinateur infecté.

- **Sony sur de nouveaux créneaux**

Le Walkman a fait son succès, Sony a donc décidé d'ici la fin de l'année, de sortir une nouvelle ligne de walkmans MP3. Mais ce ne sera pas tout, la firme sortira aussi d'autres appareils internet et des téléphones cellulaires.

- **Un PDA change le cours d'un procès**

Aux Etats-Unis, un procès pour meurtre va devoir être recommencé parce qu'un des jurés a lu des commentaires sur le procès sur son PalmPilot.

- **Transmeta accroche un nouveau gros contrat**

Vaio, c'est la gamme d'ultraportables de Sony. Ils étaient jusqu'à présent équipé d'un Celeron 366. Mais la nouvelle gamme C1 sera, elle, équipée d'un Crusoë de chez Transmeta. C'est la faible consommation électrique et la dissipation thermique réduite qui fait basculer le choix de Sony vers le nouveau venu. En effet, le Crusoë consommerait 1 Watt (0,02 en mode veille) contre 15 à 20 pour les Celeron.

Après le contrat signé avec IBM, il ne manque plus que Toshiba au tableau de chasse de Transmeta pour avoir toutes les grosses pointures du monde de l'ordinateur portable.

- **Hallucinant !**

Pour faire sa promotion, un site internet offre 5000 \$ au 10 premiers bébés qui porteront légalement son nom.

- **Webmasters, attention !**

Un éditeur de site a été condamné par la justice américaine pour un lien qui renvoyait vers le code source du DeCSS, logiciel illégal permettant de pirater les DVD. Ce cas pourrait faire jurisprudence.

- **Tuez à distance**

Columbo va avoir du fil a retordre... L'Institut de technologie thaïlandais King Mongkut a présenté un robot armé qui détecte les intrus grâce à une caméra et des capteurs. Vous passez un ordre par Internet et il tire.

Jeudi 17 Août 2000

- **Chasse à l'homme**

Les allemands ont lancé un nouveau jeu le 14/08 : un chasse à l'homme dans Berlin en direct sur le WebLe fugitif, Roger, enseignant en Hollande. Sur ses traces Jack Black, chasseur de primes qui gagnera 10000 \$ s'il rattrape Roger. Roger porte sur lui une webcam et un micro pour que les internautes puissent tout suivre sur le Net et n'a le droit qu'à 2 h de répit par jour dans une cache secrète. Pour être sûr que le fugitif n'attend pas patiemment la fin dans une chambre d'hôtel, il doit suivre un parcours quotidien qui passe par des lieux connus de Berlin qu'il doit prendre en photo. Ensuite, il doit laisser les photos (en format numérique) sur un banc ou collé à une poubelle pour que les organisateurs les récupèrent.

Les internautes ne doivent pas participer physiquement à la chasse mais peuvent aider Roger ou Jack sur le Net. Soit dit en passant Roger n'est pas discret puisqu'il porte un tee-shirt aux couleurs du site.

Le jeu, qui enregistre 600000 pages vues par jour doit durer 24 jours et recommencer ensuite avec un nouveau candidat. S'il en réchappe, Roger gagnera 100000 \$!

<http://www.realityrun.com> (le site est aussi en anglais)

- **Nouveau problème de sécurité**

Un nouvel utilitaire internet permet de scanner l'IIS (Internet Information Server) de Microsoft, découvrir ses points de vulnérabilité et lancer une attaque qui peut révéler les nom et mots de passe des utilisateurs. Et c'est sur ce système serveur que Microsoft veut faire migrer MSN Messenger !!!!

- **Va-t-il se casser les dents ?**

Malgré les déboires de ses prédécesseurs, un nouveau FAI se lance dans l'internet illimité. AOL vous proposera, dès lundi, ce service 24h/24 pour 99 F par mois. La contrepartie, vous vous engagez pour 24 mois. (CONTQM : ceux qui il y a un an se sont engagé avec un abonnement d'un an chez AOL pour avoir des prix plus bas se sont mordus les doigts avec l'arrivée des FAI gratuits, est-ce le moment de recommencer ? 2 ans, en matière d'informatique, c'est très long. Tout peut arriver...)

- **L'escroc Altavista**

Le portail a annoncé un forfait illimité en Grande-Bretagne pour 60 £/mois. Il a ensuite affirmé que les inscription se ferait par lots de 25000 par semaine pour ne pas engorger le service. Le Mirror a donc mené l'enquête pour trouver des internautes qui profitent de ce service (ils devraient être 100000 à l'heure actuelle) et pas moyen d'en trouver un seul. Et bizarrement, seul le PDG d'Altavista U.K. peut s'exprimer sur la question, lequel passe des vacances qui n'en finissent plus de s'allonger. Pourquoi un portail de cette envergure aurait-il tenté une telle escroquerie ? Nous en saurons plus après les vacances du PDG...

- **Contenus payants**

Realnetworks, la firme propriétaire du célèbre RealPlayer a annoncé le lancement aux États-Unis d'un forfait payant qui permettra d'accéder à des

programmes exclusifs chaque mois.

Mercredi 16 août 2000

- **Stinger le nouvel OS de Micro\$oft**

Non, ce n'est pas le successeur de Windows ME c'est tout simplement l'OS que Micro\$oft a conçu pour les téléphones cellulaires. Il s'agit d'une version réduite de Windows CE. Il propose, en plus des fonctions de téléphonies, un agenda intelligent qui peut forcer le téléphone à vibrer plutôt qu'à sonner aux heures de réunion et fonctionner en relation avec Outlook, et peut gérer l'affichage couleur. Samsung, s'est déjà montré intéressé par le système. Micro\$oft travaille par ailleurs sur un OS supplémentaire destiné, celui-là, à équiper les téléphones permettant d'accéder à Internet.

Tout cela ne sera pas de trop pour faire face à la montée en puissance programmée de Java et Linux sur toutes ces petites machines

- **Zapstation**

On pensait avoir tout vu ? Voici la Zapstation. C'est une sorte de console qui se branche sur votre T.V.. Elle offre un accès Web, lit les fichiers MP3, les CD et les DVD, télécharge des vidéos, reçoit les radios mondiales... Elle embarque une disque dur de 30 Go, utilise un Celeron 566 Mhz et peut-être reliée à une imprimante, un baladeur, tout type de périphérique informatique classique, à un ampli. Vous l'utilisez grâce à une télécommande et un clavier sans fil. Elle sera disponible vers Novembre.

<http://www.zapmedia.com>

- **SVG version finale**

SVG signifie Scalable Vector Graphics et s'appuie sur le langage XML. Ceci garantit donc une indépendance vis-à-vis des plates-formes. Il est indépendant de la résolution de l'écran et peut intégrer des textes descriptifs. De plus il permet de créer des liens vers des zones de l'images sans avoir à la mapper.

Le gros problème est qu'aucun navigateur ne supporte évidemment ce format pour l'instant. Seul Adobe propose de télécharger un plug-in.

- **m100, le nouveau Palm**

Il devait être moins cher, c'est le cas aux États-Unis (150\$) mais en France il sera à 1500 F (comme le Palm III). Le nouveautés ? Son capot devient amovible (les nouveaux, disponibles en 4 couleurs, coûtent tout de même 200 F pièce !) et il possède un petit hublot qui permet de voir l'heure même capot fermé. Il est plus petit que la série III, faisant perdre à l'écran 1/4 de sa surface et une nouvelle touche permet d'accéder directement au bloc-note. La synchronisation avec l'ordinateur se fait maintenant directement par câble plutôt qu'avec une station d'accueil. Il fonctionne sous Palm OS 3.5 et emporte 2 petits Mo de mémoire.

- **Nouvelle folie japonaise**

Après le Tamagoshi dans la poche voici les nouveaux venus. Ce sont de petites créatures virtuelles qui s'occupent de vous livrer vos mails. Vous devez donc vous en occuper comme leurs prédécesseurs mais la lecture de votre courrier dépendra leur bonne volonté. Il paraît que les japonais en sont fous.

[La version Sony de la chose](#)

-

Un rapport de Forrester Research conclue que les standards open-source (NPLN : logiciel dont le code est accessible à tout un chacun, comme c'est le cas de Linux par exemple) domineront l'industrie du logiciel d'ici 4 ans. Il ajoute aussi qu'IBM et Dell devraient tirer leur épingle du jeu tandis que Oracle et Microsoft auront à batailler ferme pour s'en sortir.

-

Ce sont les enfants de moins de 11 ans qui cliquent le plus sur les bannières de pubs et les adolescents qui cliquent le moins (soit dit en passant, et moi jamais).

- **Vite !**

Le ministère de la Justice américain veut "expédier" le passage de l'appel de Micro\$oft devant la Cour Suprême parce que ce procès "a une importance extrême pour [leur] économie nationale" (sic).

- **La Banque de France soutient Napster....**

... malgré elle. En effet, un pirate a squatté la page d'accueil d'une trentaine de sites dont celui de la BNF

Mardi 15 Août 2000

- **Bonne blague**

Les clients Londoniens de Safeway, une chaîne britannique de supermarchés ont eut une jolie surprise. Ceux-ci ont reçu un message leur annonçant une hausse des prix et leur conseillant de faire leurs courses ailleurs. La firme n'a toujours pas pu déterminer où était la faille.

Lundi 14 Août 2000

- **Musique mobile protégée**

Intel et Matsushita ont lancé conjointement un système de protection des contenus numériques pour protéger par exemple la musique. Il n'est sûrement pas compatible avec Napster

- **e-commerce Visa ou rien**

Les vendeurs on-line vont devoir les respecter les règles établies par Visa

concernant l'e-commerce ou aller voir ailleurs...

- **Un de plus chez Linux**

C'est au tour de Linux, après Dell et IBM de faire de Linux un de ses 3 systèmes d'exploitation stratégiques.

- **e-book par Micro\$oft**

Barnes and Nobles, une chaîne de librairies américaines (deuxième librairie en ligne, loin derrière Amazon.com) et MS lancent le plus gros service de vente de livres électroniques.

Micro\$oft en profite pour glisser Reader 1.5, son logiciel gratuit qui optimise l'affichage des e-Books sur un écran d'ordinateur de bureau ou un PDA, offre des options de recherche de mots, de surlignage ou encore de marque-page.

2000 eBook sont déjà disponibles dans ce format sur le site de Barnes and Noble et 150 titres supplémentaires devraient s'ajouter chaque mois. De plus MS propose d'autres applications dont un programme interagissant dans Word qui permet de convertir un document au format livre électronique et une autre firme, Overdrive propose un logiciel permettant de faire la même chose à partir d'un document HTML ou d'un fichier texte.

A suivre, les plaintes des éditeurs en réponse à la création de moteurs d'échange d'e-books qui ne sauraient tarder à apparaître.

- **PSX 2 fin novembre**

La Playstation 2 ne sera disponible en France que le 24 novembre pour un prix d'environ 3000 F

- **Un standard de messagerie instantanées**

L'Internet Engineering Task Force va examiner 3 propositions de technologies pour définir un standard de messagerie instantanée. La proposition d'AOL, jugée peu innovante a déjà été rejetée (CONTQM : c'est bien mais pourvu que la technologie retenue n'appartienne pas à Microsoft non plus mais plutôt à une firme encore indépendante)

- **Apache 2.0 arrive**

D'ici la fin de l'année, la version 2 d'Apache, l'application serveur web la plus utilisée dans le monde, devrait être terminée pour la fin de l'année.

- **Hotmail sous Win2000**

Microsoft a décidé de ne plus faire appel au monde du logiciel libre, soit ; mais Hotmail, son service de messagerie instantanée fonctionne sous Apache et FreeBSD ! MS va donc être obligé de le faire migrer sous Windows 2000. (CONTQM : quelque chose me dit que le service sera moins performant !)

- **Le web parlera**

Le W3C (World Wide Web Consortium) travaille sur le SSML (Speech Synthesis Markup Language), une extension du XML (eXtended Markup Language) qui devrait permettre d'intégrer des instructions de synthèse vocale

aux contenus textuels du Web permettant de faire des sites interrogeables par téléphone.

- **La chine sous Linux**

L'administration chinoise tournera sous Linux. elle affirme vouloir ainsi "briser le monopole de Windows et des technologies étrangères".

- **Windows is back**

La marine américaine avait renoncé à conserver Windows NT sur ses navires parce qu'il avait tendance à planter. Mais cela ne l'empêche pas d'avoir décidé d'installer une version spécifique de Windows 2000 sur ses nouveaux porte-avions.

- **Carnivore suite**

Le ministère de la Justice américain emploiera une université pour conduire une analyse indépendante du système d'espionnage des mails du FBI : Carnivore.

- **Le 64 bits d'AMD**

Le manuel technique du Sledgehammer, le processeur 64 bits d'AMD a été publié cette semaine. Ce processeur devrait être à la fois capable de gérer les programmes prévus pour les processeurs 32 bits (comme le PIII ou l'Athlon) et les programmes pour les processeurs 64 bits (comme l'UltraSparc de Sun, l'Alpha de Compaq ou le futur Itanium d'Intel).

Vendredi 11 Août 2000

- **Record du monde ?**

La femme la plus "téléchargée" du monde serait Danni Ashe. C'est du moins ce qu'essaye d'établir en ce moment le Livre Guinness des Records. Elle revendique 800 millions de téléchargements. Si vous voulez voir de qui il s'agit : <http://www.dannisharddrive.com/> (pour ceux qui ne s'en seraient pas doutés, il est recommandé d'être âgé de plus de 18 ans !)

- **Un soutien pour Napster...**

...et pas des moindres. Celui qui se faisait dernièrement appeler Prince dit sur son site que Napster est "un développement passionnant dans l'histoire de la musique" et en profite pour critiquer violemment le patron de Time Warner.

- **Poussez-les d'un côté, ils reviennent de l'autre.**

AOL cherche à faire figure propre concernant les MP3 en déconnectant un site de recherche de MP3. Cependant, la firme doit encaisser la sortie d'un nouveau logiciel d'échange de fichiers qui permet aux utilisateurs d'AOL messenger d'accéder à un réseau type Napster.

Pour ceux que ça intéresse, il se nomme AIMSTER et vous pouvez le trouver à : <http://www.aimster.com/>

Jeudi 10 Août 2000

- **Please stop...**

Le Pentagone a lancé un appel aux hackers, les suppliant d'arrêter de s'en prendre à ses réseaux... pour des raisons de sécurité.

- **Un Net-piège...**

Chapeau pour les douanes américaines ! 400 internautes qui espéraient pouvoir accéder à une chaîne satellite américaine à des prix défiant toute concurrence sont en fait tombés dans un piège tendu par les douanes.

- **Le trou de Netscape**

Le trou de sécurité des versions de Netscape antérieures à la version 6 a été dénommé BrownOrifice (petite allusion à son cousin dévastateur BackOrifice).

Vous pouvez tester son mode de fonctionnement sur ce site qui lui est dédié :

<http://www.brumleve.com/BrownOrifice/>. Ne vous inquiétez pas, je vous

rappelle que c'est sans risque pour votre système si ce n'est qu'on peut parcourir votre disque, sans pour autant pouvoir modifier quoi que ce soit.

La meilleure façon de se prémunir contre cette défaillance du système :

désactiver les applets Java, en attendant le patch sur lequel travaille Netscape.

Mercredi 9 Août 2000

- **Après les MP3 et les fichiers multimédia, les jeux**

Swapoo, www.swapoo.com, est un site qui suit le chemin tracé par Napster mais il concerne les échanges de jeux pour consoles.

- **La chasse aux pirates est ouverte**

C'est la nouvelle occupation de Micro\$oft. La firme fait appel à la délation par le biais d'une hot-line et d'un service e-mail mais elle s'est aussi équipée d'outils de recherche automatique pour localiser sur le web les logiciels piratés ou vendus à prix suspect sur les sites web, ftp et de chat.

Un moteur de recherche scrute 24h sur 24 le web à cet effet. Micro\$oft compte ainsi recueillir des milliers d'adresses par jour. Afin de contacter immédiatement les sites ou FAI hébergeurs.

MS est soutenu par la Business Software Alliance, association d'éditeurs dont Microsoft est le principal promoteur.

Parallèlement, MS a aussi nommé un responsable aux affaires

gouvernementales pour pousser l'administration américaine à mettre la pression sur les États pirates (la Russie et la Chine notamment).

Les éditeurs américains estiment perdre 150 milliards de francs par an du fait du piratage.

- **Netscape fait fort !**

Les navigateurs Netscape permettraient de voir le contenu de votre disque dur et ceci grâce à un applet Java présent sur certains sites.

Mardi 8 Août 2000

- **Un pingouin au poignet**

Les chercheurs d'IBM ont installé le Système d'exploitation Linux dans une montre-bracelet pour démontrer que le système pouvait être utilisé même dans les plus petits appareils.

- **Transmeta première version**

Transmeta a lancé la production de ses processeurs Crusoe chez Taiwan Semiconductor Manufacturing et d'autres fondeurs ce qui pourrait être le début d'une longue série...

- **Onetel raccroche**

Après la suspension des accès illimités, Onetel a décidé de limiter la consommation des abonnés qui y ont souscrit. (CONTQM : Mais que croyaient-ils chez Onetel, qu'avec une connexion illimitée les abonnés ne feraient que 20h ?)

- **Multimania se diversifie**

A partir d'Octobre, les membres de Multimania pourront diffuser gratuitement du contenu audio et vidéo sur leur site perso avec les technologie RealNetworks.

- **Cyber-police chinoise**

Début Août, la Chine a lancé sa police internet.

- **CD audio et MP3**

Ça y est, ils arrive en France ! Une société chinoise, A-Max va lancer mi-août le Napa DA V309 distribué par Bataca. Il s'agit d'un discman qui peut lire aussi bien les CD audio que les MP3. Son prix sera de 1300 F environ. (CONTQM : avant de vous ruer dessus, méfiez-vous, j'ai eu l'occasion de tester un modèle concurrent et le résultat n'était pas fameux.)

Dimanche 6 Août 2000

- **Les secrets d'Apple révélés par l'Abeille ouvrière**

Apple a demandé une enquête judiciaire suite aux révélations faites concernant son prochain portable iBook. Un inconnu a en effet publié sur le web des informations concernant sa nouvelle souris optique et un PowerMac biprocesseur avant leur présentation le mois dernier. Worker Bee, c'est son nom, aurait aussi dévoilé un troisième produit que la firme à la pomme n'a toujours pas présenté, qui serait une version de l'iBook équipée d'un processeur plus

rapide. Apple a donc sommé le portail Yahoo! de révéler les informations les informations qu'il possède sur worker bee puisque celui-ci a fait ses révélations sur GeoCities (qui appartient à Yahoo!).

- **Publicité pour l'échange de fichiers**

La décision de fermer Napster a doublé les connexions au site. Le soir de la fermeture du site, le nombre de connexions a été porté à 849196, contre 443070 la veille. Il a ainsi dépassé la fréquentation de sites comme Amazon.com. De plus les sites de téléchargement enregistre une hausse importante des demandes de logiciels d'échange de fichier.

- **Le Limousin n'est pas rentable**

Le Conseil régional dénonce la disparition de la notion de service public. En effet, le Limousin fait partie zones que Completel a jugé non rentables pour l'utilisation la boucle radio locale pour l'Internet.

- **Le mobile tue ?**

Un procès va s'ouvrir aux États-Unis suite à la plainte d'un médecin estimant que sa tumeur cérébrale est due à son téléphone cellulaire. Au Royaume-Uni, le gouvernement s'est lancé dans une campagne pour inciter les enfants à ne pas utiliser les cellulaires. Pendant ce temps des études sont toujours en cours pour déterminer si oui ou non il y a danger.

- **IBM et Micro\$oft pour un standard**

Les deux compagnies ont décidé de collaborer pour définir des standards internet, concernant notamment le XML pour simplifier le développement de leurs applications futures.

- **Dessins animés sur PDA**

Cela pourrait arriver bientôt... Warner Brothers et Sony Pictures sont en train de tester la possibilité de distribuer, par le biais d'Internet, des dessins animés sur ce support.

- **Le Conseil constitutionnel censure**

Le Conseil constitutionnel a apporté des modifications à la loi sur la liberté de communication, notamment en censurant d'office l'article concernant la responsabilité pénale des hébergeurs, déclarant anticonstitutionnelle la saisie par un tiers.

- **La Dram Rambus double sa vitesse**

Une RDRAM 1066 MHz, avec une bande passante de 2,1 Go/s, voilà la dernière avancée du constructeur de mémoire. La technique ? La même que celle de la DDR SDRAM : le doublement de la fréquence (2*533 MHz).

- **Vous jouerez plus tard**

La sortie en Europe de la Playstation 2 a été retardée, vraisemblablement pour pouvoir répondre à la demande en Amérique du Nord.

- **Alerte aux virus**

McAfee a créé un service qui vous envoie les formations sur les nouveaux virus directement sur votre téléphone WAP.

- **Téléchargement de musique autorisés**

Cette semaine Universal lance son service de téléchargement de musique imitant ainsi Sony et EMI. BMG et Time Warner s'y mettront d'ici la fin de l'année

Vendredi 4 Août 2000

- **Opérateurs téléphone : US vs UE**

Près de 50 compagnies de téléphone européennes se sont jointes à la campagne de l'Union Européenne pour stopper la proposition de loi américaine visant à empêcher, entre autres, Deutsche Telekom de s'offrir Voicestream.

- **Micro\$oft a chaud**

L'Union Européenne a officiellement lancé à son tour une procédure antitrust contre Micro\$oft. Du coup, MS incite un juge à renvoyer plus de 60 actions en cours aux États-Unis pour avoir les mains un peu plus libres

Jeudi 3 Août 2000

- **Le GMT ne sera pas la référence**

Tony Blair s'était engagé dans une campagne pour que Greenwich soit le point de référence de l'horloge internet avec le GeT (Greenwich Electronic Time). Mais le système basé sur Java est incompatible avec Internet Explorer, donc avec près de 80% d'internautes, les tests montrant des écarts allant jusqu'à 9s. (Si quelqu'un peut m'expliquer l'intérêt de créer une heure Internet alors qu'il existe déjà une heure de référence, qu'il m'envoie un mail, merci).

- **Offres d'emploi**

Comme tous les ans, le week-end dernier s'est tenu à Las Vegas le DefCon, le congrès de hackers (NPLN : ceux qui forcent les systèmes informatiques protégés). Depuis quelques années, les hackers invitent même officiellement des agents fédéraux aux conférences. En effet, auparavant, ils cherchaient à s'infiltrer incognito et un jeu avait été lancé, "Spot the Fed" qui consistait pour les hacker à démasquer ces agents. Cette année, les fédéraux (un officiel du ministère de la Défense, un membre d'une cellule discrète proche de la C.I.A.) ont même été invités à s'exprimer sous forme de conférences et de tables rondes (nommées "Meet the Fed"). Le dernier jour, "Spot the Fed" a sorti aussi un gros poisson, un agent de la NSA. Leurs interventions ont eu un point commun, la tentative à peine voilée de recruter des hackers pour les services de

renseignement américains.

Par contre, interrogés à ce sujet, ils ont démenti l'existence du réseau d'espionnage Echelon.

- **Ils ne liront pas grand chose**

Selon les analyses d'un chercheur universitaire, le dispositif de surveillance des mails, qui sera mis en place au Royaume-Uni serait techniquement obsolète. Il ne prendrait pas en charge les serveurs de mail étrangers, ni certains petits FAI britanniques, oubliés par le dispositif, les accès internet à haut débit, ni avec le nouveau protocole internet IPv6 (futur standard du web). Un gaspillage de 200 millions de francs.

- **IBM gonfle ses disques**

D'ici deux ans, les disques durs devraient dépasser les 200 Go. Alors que la technologie holographique, lorsqu'elle sera au point, devrait pouvoir permettre d'atteindre 1 Go par cm², IBM propose une technologie intermédiaire basé sur un système de stockage nano-mécanique composé de milliers de micropointes. Il permet de stocker 1,25 Go sur une surface de 3 millimètres carrés comprenant 32 x 32, soit 1024 micropointes qui réagissent à l'électricité et adoptent un état levé (1) ou baissé (0). On devrait donc pouvoir atteindre 500 milliards de bits par pouce carré, soit 5 fois la densité maximale pouvant être atteinte sur support magnétique, celle-ci étant estimée à 100 (les disques les plus récents ont une densité de 12 milliards de bits au pouce carré).

- **Etudes / Sondages**

Sondage Sofres : Seuls 7 % des internautes de l'Hexagone ont acheté en ligne au cours des derniers mois, contre 27 % des Américains ayant accès au net.

- **WebTV Basque**

Ce mois-ci va s'ouvrir TVPI.fr une web T.V. locale privée du Pays proposant 20% de programmes en langue basque.

Mercredi 2 Aout 2000

- **Du nouveau dans l'échange de fichiers**

La startup Autonomous Zone ose ce qu'aucune n'avait fait auparavant, vous payer pour échanger des fichiers ! Le concept est simple : on reprend le système de Napster étendu à tous types de fichiers, avec son moteur de recherche et tout et tout, sauf que quand quelqu'un télécharge un fichier depuis votre ordinateur, vous recevez des Mojos, une monnaie inventée par la startup mais convertible en dollars (1 mojo = 1/1000 cent).

On pourrait donc s'attendre à revoir le même genre de manoeuvre judiciaire que contre Napster, d'autant plus que certains sites pornographiques majeurs comme Penthouse seraient de la partie. Mais les créateurs de la société sont confiants, assurant qu'on ne peut leur demander de supprimer des références illégales puisque leur système, contrairement à Napster, ne mémorise pas l'index des

fichiers. De plus, ils affirment vouloir travailler avec Hollywood sur un système de paiement volontaire nommé PayLars (en référence à Lars Ulrich, batteur de Metallica à l'origine de poursuites contre Napster).

MojoNation, c'est le nom du logiciel, sera déjà disponible en version beta au salon des Hackers, le DefCon. Le logiciel pourrait de plus reprendre le système de Freenet qui sauvegarde les fichiers sur son serveur, les rendant téléchargeables même après la déconnexion du fournisseur. De plus vous aurez un formulaire à remplir, pour pouvoir établir une liste des fournisseurs de fichiers de confiance (le même système de notation que sur les sites de ventes aux enchères). Pour gagner des Mojos, vous pourrez aussi vendre une partie de votre bande passante, de l'espace disque pour servir de serveur ou créer d'autres services payants.

- **Le futur de Napster**

Napster a entamé une série de rencontre avec EMusic qui pourrait aboutir à un partenariat, lequel pourrait affecter la décision de la cour sur l'action en justice en cours.

- **Red Hat a convaincu Ericsson**

Les efforts soutenus de Red Hat pour faire entrer Linux dans les petits appareils non-PC portent enfin leurs fruits puisque la firme vient de signer un accord de partenariat avec Ericsson.

- **Le Net "s'installe" en Iran et Irak**

En Iran, c'est le premier centre rural connecté au web et en Irak, le premier premier cyber-café

Mardi 1^{er} Août 2000

- **URL plus simple**

Suite à une étude montrant que les utilisateurs de téléphone Wap devaient taper 70 touches en moyenne pour entre une adresse, la société Bango a mis au point un système d'URL par chiffres pour simplifier la tâche. Il se nomme le Bango Number et vous permet de taper un numéro (3 chiffres min) en lieu et place de l'adresse. Maintenant, la course est lancée pour acheter les numéros, les plus chers étant bien sur ceux de 3 chiffres.

- **Quand on a de l'argent...**

Micro\$oft compte dépenser 500 millions de \$ pour le marketing et la vente de sa future console de Xbox, le plus gros budget jamais atteint par la firme pour lancer un nouveau produit.

- **Vous êtes espionnés...**

L'info n'est pas nouvelle, mais cette fois, un cabinet d'étude a utilisé un renifleur de paquet pour savoir quelles informations étaient recueillies à notre insu et le résultat est sidérant.

Ce cabinet a téléchargé des données depuis son propre site. En résumé, les serveurs de Real, AOL ou Netzip récupèrent le nom du fichier (exécutable) téléchargé, l'adresse exacte du serveur de provenance, l'adresse IP de l'ordinateur de l'internaute. Le logiciel crée une clé d'identification à partir du nom de la machine lors de l'installation de Windows . Couplé à un cookie, il permet par exemple de créer un historique des fichiers téléchargés. Lisible en hexadécimal et en équivalent ASCII, le fichier ne laisse guère de doute sur les risques de son exploitation.

- **On joue dans le comique**

Le premier patch correctif pour Windows 2000 US est sorti : 83 Mo (version française pour le 10 Août). Après le patch pour office de plus de 100 Mo, les logiciels de MS coûtent plus cher en téléphone qu'à l'achat si on les veut à jour !

- **Du cinéma avec la Playstation**

Sony a lancé le GScube. C'est un outil de développement pour l'industrie cinématographique et la création multimédia.... basé sur la technologie PlayStation 2.

Et si les Américains avaient eu le vote électronique

Par Estelle DumoutZDNet France

Samedi 11 novembre 2000

    TrackBack

L'incertitude qui règne sur le résultat des élections du président des États-Unis relance l'idée du vote électronique. Avec toutefois de sérieuses réserves.

La confusion règne toujours aux États-Unis quant au nom du futur président. Le recompte des voix en Floride risque de durer jusqu'au 17 novembre, afin d'inclure les votes par correspondance. Une situation qui n'aurait jamais pu se produire si le vote électronique avait été utilisé. C'est du moins l'hypothèse avancée par certains experts.

« Le problème de toute élection est que le processus de vérification est laborieux et sujet aux erreurs. Mais avec l'internet, cette étape se fait automatiquement et rapidement. »

Pas d'incertitude en cas de scrutin serré et des résultats fiables en quelques minutes

C'est ce qu'a déclaré Jim Adler, le président de Votehere.net, à l'agence Reuters mercredi 8 novembre. Sa société a organisé un vote en ligne test lors des élections présidentielles en Californie et en Arizona.

Le doute semé par l'écart très faible entre les deux candidats à la présidence américaine est du pain béni pour tous les partisans du vote électronique. Ceux-ci ont naturellement sauté sur l'occasion pour marteler leurs arguments chocs. Leur solution miracle permettrait à chaque personne de voter depuis chez elle. L'abstentionnisme n'aurait plus lieu d'être. Plus d'incertitude en cas de scrutin serré et des résultats fiables dans les minutes qui suivent la clôture des élections.

Cafouillages électroniques

Ces arguments ont de quoi séduire à première vue, mais en approfondissant la question, il devient clair que le e-vote ne peut être considéré comme une panacée. « Le problème n'est pas abordé sous le bon angle », affirme Stéphane Rozès, directeur du département Opinion à l'institut de sondage CSA. « Le rapport à la

citoyenneté, en France comme aux USA, induit une démarche volontariste de la part des électeurs, explique-t-il. Instaurer un rapport

And if the Americans had had the electronic vote

By ZDNet France

Saturday November 11, 2000

 [React](#)  [E-mail](#)  [Print](#)  [TrackBack](#)

The uncertainty which reigns on the result of the elections of the president of the United States starts again the electronic idea of the vote. With however of serious reserves.

Confusion always reigns in the United States as for the name of the future president. Voices in Florida recount is likely to last until November 17, in order to include the votes by correspondence. A situation which could never have occurred if the electronic vote had been used. It is at least the assumption advanced by certain experts.

"the problem of any election is that the process of checking is hard and error prone. But with the Internet, this stage is done automatically and quickly "

No the uncertainty in the event of tight poll and of the reliable results in a few minutes

It is what Jim Adler declared, president de Votehere.net, at the agency Reuters Wednesday November 8. Its company organized a vote in test line at the time of the presidential elections in California and Arizona.

The doubt sown by the very weak difference between the two candidates with the American presidency is bread blessed for all the partisans of the electronic vote. Those naturally jumped on the occasion to hammer their shock arguments. Their miracle solution would make it possible to each person to vote since at it. The abstentionism would not take place any more to be. More uncertainty in the event of tight poll and of the reliable results in the minutes which follow the election closure.

Electronic misfirings

These arguments have what to allure at first sight, but by looking further into the question, it becomes clear that the E-vote cannot be regarded as a panacea "the problem is not approached under the good angle", affirms Stéphane Rozès, director of the Opinion department at the institute of survey CSA. "the report/ratio

with the citizenship, in France as in the USA, induced a voluntarist step on behalf of the voters, explains it. To found a report/ratio

Et si les Américains avaient eu le vote électronique

Par Estelle DumoutZDNet France

Samedi 11 novembre 2000

Réagissez E-mail Imprimez TrackBack

L'incertitude qui règne sur le résultat des élections du président des États-Unis relance l'idée du vote électronique. Avec toutefois de sérieuses réserves.

La confusion règne toujours aux États-Unis quant au nom du futur président. Le recompte des voix en

Floride risque de durer jusqu'au 17 novembre, afin d'inclure les votes par correspondance. Une situation qui n'aurait jamais pu se produire si le vote électronique avait été utilisé. C'est du moins l'hypothèse avancée par certains experts.

« Le problème de toute élection est que le processus de vérification est laborieux et sujet aux erreurs. Mais avec l'internet, cette étape se fait automatiquement et rapidement. »

Pas d'incertitude en cas de scrutin serré et des résultats fiables en quelques minutes

C'est ce qu'a déclaré Jim Adler, le président de Votehere.net, à l'agence Reuters mercredi 8 novembre. Sa société a organisé un vote en ligne test lors des élections présidentielles en Californie et en Arizona.

Le doute semé par l'écart très faible entre les deux candidats à la présidence américaine est du pain béni pour tous les partisans du vote électronique. Ceux-ci ont naturellement sauté sur l'occasion pour marteler leurs arguments chocs. Leur solution miracle permettrait à chaque personne de voter depuis chez elle. L'abstentionnisme n'aurait plus lieu d'être. Plus d'incertitude en cas de scrutin serré et des résultats fiables dans les minutes qui suivent la clôture des élections.

Cafouillages électroniques

Ces arguments ont de quoi séduire à première vue, mais en approfondissant la question, il devient clair que le e-vote ne peut être considéré comme une panacée. « Le problème n'est pas abordé sous le bon angle », affirme Stéphane Rozès, directeur du département Opinion à l'institut de sondage CSA. « Le rapport à la citoyenneté, en France comme aux USA, induit une démarche volontariste de la part des électeurs, explique-t-il. Instaurer un rapport

ja was jetzt ist es softwarekunst oder mögliche Kunst?
der (kunst)markt für softwarekunst ist ja wirklich noch sehr spärlich
ausgeprägt.

Einteressanter link wieder mal aus CH: <http://www.conservix.org>
F. Thommen versucht software-kunst nicht ganz ohne augenzwinkern zu
archivieren und so einer klientel der zukunft zur verfügung zu stellen.
Was die damit machen, fällt wohl unter das Generationenproblem :-)
Ein Muss für jede Orginasation, die aus irgendwelchen gründen mögliche
künstlerische Software sammelt ;-)
Ist auch unter der GPL publiziert, aber wie soviel Software ist sie halt
ohne Admins und Feinabstimmung nicht brauchbar. Deswegen: Ladet die
Software gratis runter und schafft bezahlte Stellen für die unmöglichen
Programmierer!

Die Arbeit [V]ote-auction (vote-auction.net) von ubermorgen.com als
Beispiel möglicher künstlerischer Praxis in der Gegenwart

<http://www.akbild.ac.at/index.php?l=de&a=797>

* Der Begriff und die Produktion von Software-Kunst haben sich in
den
letzten Jahren an der Schnittmenge von sonst fast gänzlich
getrennten
Bereichen gesellschaftlicher Produktion ausgebildet - jenem von
Software, die ihre fast ausschließlich im Internet stattfindende
Weiterentwicklung einer lebendigen Kultur der Zusammenarbeit

verdankt,
und der von Kunst, deren Ansätze und Strategien auch über das Internet
und Ausstellungen hinaus die vielfältigen Möglichkeiten von
Softwareprogrammierung nutzen. Anhand exemplarischer Projekte
werden
erste Einblicke in die experimentellen, interventionistischen und
konzeptuellen Besonderheiten und Problematiken dieser Schnittmenge
gegeben. Näher vorgestellt wird eine Arbeit von Hans Bernhard und
Liz
Haas der Plattform [ubermorgen.com](http://www.ubermorgen.com): [V]ote-Auction (
<http://www.vote-auction.net>) basiert auf Marketingstrategien und
verweist durch die Verquickung von Fakt und Fiktion auf einen
extrem
erweiterten Materialbegriff, der u. a. internationales Recht, den
Begriff von Demokratie und globale Kommunikation umfasst. Unter dem
Slogan »Bringing capitalism and democrazy closer together!« wurde
US-amerikanischen Wählern zur Präsidentschaftswahl 2000 (G. W. Bush
vs.
Al Gore) angeboten, ihre Stimme über eine Online-Auktions-Plattform
zu
versteigern. - <http://www.ubermorgen.com> -

latimes.com: It's the little things that may decide race

By Ronald Brownstein/Los Angeles Times Political Writer

October 24, 2000
Web posted at: 12:12 p.m. EDT (1612 GMT)

WASHINGTON (Los Angeles Times) -- Everything counts. In the presidential race's final turn, that may be the simple mantra for both

George W. Bush and Al Gore.

Just two weeks before election day, the race remains so achingly close that the result could turn on factors too small to notice in an ordinary year. From Ralph Nader's share of the vote in the Pacific Northwest, to the effect on seniors in Pennsylvania and Florida of new Democratic ads on Social Security, to the relative success of the two parties' get-out-the-vote efforts, the campaigns are contending with a virtually endless list of variables that could determine the winner in an extraordinarily large number of states.

"Normally, the last couple of weeks is essentially a victory lap for one candidate and an exercise in self-delusion for the other," says Democratic pollster Mark Mellman. "For the first time in a long time, these last two weeks really count."

Indeed, for the first time in decades, the number of states genuinely in play appears to be growing, not shrinking, as the election approaches.

In just the last few days, for instance, Republicans added Minnesota to their target list and are contemplating a return to the airwaves in Illinois, which they had virtually written off. Bush today is scheduled to appear in Gore's home state of Tennessee--where Republicans, encouraged by favorable polls, have launched a major television advertising push.

Meanwhile, Gore continues to press Bush in Nevada and, more important, Florida, where even GOP polls show the two men still close enough to feel the sweat on the other's brow.

This expansion of the battlefield comes amid a flurry of national polls released Monday that showed Gore narrowing the lead Bush opened last week after the three presidential debates. This latest reversal follows the pattern evident since early August: Neither Bush nor Gore has been able to maintain a significant lead for any sustained period.

"Neither one of these guys can put the other guy away," says Tom Cole, the chief of staff at the Republican National Committee.

Both the overall national poll numbers and the list of states in play indicate a slight advantage for Bush in the contest. Analysts in both parties say that with at least one-sixth of voters either undecided or loosely committed, either candidate could still potentially open a decisive lead in the campaign's final days. But for now, the polls suggest that with the impressions sparked by the debates receding, the race is drifting back toward equilibrium--just as it did after the effect of the conventions

subsidized earlier this fall.

Both men, in fact, appeared to emerge from the debates without neutralizing their greatest vulnerability. For Gore, the issue is honesty and sincerity: In a New York Times/CBS poll released Monday, only 37% of voters agreed that the vice president said what he really believed most of the time, rather than what people wanted to hear. (Almost half felt that way about Bush.)

Bush's preparedness an issue for Democrats

For Bush, the issue is whether he's fully prepared to serve as president, a theme Democrats are pounding on this week. In the New York Times/CBS survey, only 49% of voters said Bush had "prepared himself well enough for the job of president;" 73% felt that way about Gore.

Citing such lingering doubts, independent pollster John Zogby echoes many analysts when he concludes: "Neither candidate has closed the deal."

That's evident in most of the national polls released Monday. Zogby's tracking poll for Reuters and MSNBC gave Bush a two-percentage-point lead, down from four points the day before. The volatile CNN/USA Today/Gallup Poll, which had Bush as much as 10 points ahead over the weekend, also gave the Republican a two-point advantage. An ABC/Washington Post tracking survey released Monday showed Bush and Gore tied at 47%.

Not all polls are so close. One other tracking poll released Monday, the bipartisan Voter.com survey, gave Bush a five-point advantage. A Newsweek survey released Sunday put Bush seven points ahead. Privately, the Bush campaign believes it holds a lead of four or five points; Gore's polling showed Bush one point ahead through Sunday, officials say.

Perhaps even more revealing than the tightness of the national numbers is the breadth of the electoral college battlefield. With both Gore and Bush offering broadly centrist messages, each has been able to remain competitive in states the other party usually has secured by now.

Bush is reaching farther behind enemy lines than Gore: The Texas governor is still seriously contesting six states that have voted Democratic in each of the past three elections--Washington, Oregon, Iowa, Wisconsin, West Virginia and Minnesota.

Gore, in contrast, doesn't appear to be a serious threat to capture any state won last time by Bob Dole. But Gore doesn't need to capture any Republican ground to win; it's Bush who has to peel away at least 109 of the 379 electoral votes Clinton won in 1996.

Right now, the map for both men is filled with question marks. Each side claims their private polling gives them the lead in the most closely contested states. But the public polls mostly show a dead heat. In just the last week, those surveys have shown Bush and Gore running within two points of each other in Illinois, Michigan, Pennsylvania, Missouri, Washington, Oregon, and Florida, and just three points apart in New Hampshire and Minnesota.

One key question in several of these states is whether Nader's liberal supporters stay with him--or drift back toward Gore for fear of delivering the election to Bush. Nader as of now is drawing enough support to potentially drive Washington, Oregon and perhaps Minnesota and Wisconsin to the GOP. Tad Devine, a senior consultant to Gore, says that about half of Nader's voters--he's now drawing about 4% nationally but as much as 8% or 9% in his best states--may be willing to switch to Gore.

With so many states at the tipping point, the focus in the days ahead may turn

increasingly toward the ground game--each party's effort to mobilize and turn out its voters. "This could be the first presidential race in a long, long time where it truly makes the difference, maybe the first since 1968," says the RNC's Cole.

Each side promises an enormous effort to reach its supporters. The RNC and local GOP officials have budgeted an unprecedented \$70 million to direct mail and phone calls meant to turn out their partisans; when the contributions of organized labor are included, Democrats will likely have a competitive effort, both sides agree.

Getting out the vote is repetitive, tiresome, unglamorous work. Yet those doing it likely will be energized this year by the prospect of actually making a difference.

"It is all about execution at this point," said Todd Cook, the Midwest political director of the Service Employees International Union, as he stood outside a computerized union phone-bank center in Michigan last week. "It's about making sure people are showing up when they're supposed to make phone calls, and people are going door-to-door when they are supposed to. All the little detail stuff."

In a race potentially this close, all those little things loom large.

Electrohype i Malmö vintern 2004

Alla kanske inte tänker på det, men vi befinner oss mitt inne i en revolution. Övergången mellan den analoga tidsåldern till den digitala. Den har pågått i några decennier, tagit ordentlig fart i och med tillgängliggörandet av Internet för tio år sedan, och kommer att pågå ett tag till.

Föreningen Electrohype i Malmö har sedan 1999 arbetat med att sätta strålkastarljuset på den digitala konsten – det vill säga konst som framställs med eller visas med hjälp av datorer. Det kan vara allt från Sture Johannessons psykedeliska planscher från 60-talet till konst som bara finns på Internet.

I slutet av november öppnades Electrohypes ”tredje nordiska biennial för datorbaserad och högteknologisk konst” – denna gång på Malmö konsthall.

PERSPEKTIV är temat för årets Electrohype. Det innebär bland annat perspektiv bakåt – de tidigaste verken är från sextiotalet. Men också perspektiv på vad datorer och digital teknik kan användas till inom konsten. Som slumpgeneratorer och beräkningsapparater. Som styrprogram för mekaniska skulpturer. Eller som konstrum – en del av verken på Electrohype existerar bara på Internet – som **Lene Leth Rasmussens** *100 hemligheter*. Det är en kuslig och lite förbjuden känsla att surfa in och läsa vad andra har skrivit. På något sätt föds det ett behov hos en själv att maila in en hemlighet. Det uppstår ett frö till en handling.

Och många av verken på Electrohype handlar just om människors beteende. **Peter Palvéns** *Social sounds* är en simulering av hur människor synkroniserar sina handlingar precis som grodor synkroniserar sitt kväkande: **Yunchul Kims** (*void*)*traffic* visar trafiken på en universitetsserver i form av vulkanutbrottsliknande vågor på en svart vägg.

Det som gör Electrohype så bra och trovärdig är att utställningen inte bara lyfter fram den

digitala teknikens möjligheter, utan även begränsningarna, fallgroparna och den naiva övertron.

Kanadensaren **Norman T. White** representeras av *Den hjälplösa roboten*. En robot som kan göra – ingenting, förutom att bli tillfredsställd. Och det blir den genom att man snurrar den... illustration: En kvinnlig röst klagar – ”The other way PLEASE. NOT THAT WAY!!! Slower, please. THE OTHER WAY! osv

Så kan tekniken kan snärja oss. Det spelar ingen roll hur snälla vi är mot den. Hårddiskar havererar ändå. Digitala arkiv självdestrueras. Mobiltelefoner och bärbara datorer gör det lättare för oss, visst, men de skapar också nya beroenden – eluttagsberoende, Internetberoende, spelberoende.

Den digitala revolutionen är en lustig revolution – för den märks inte alltid. Det är svårt att skilja ett papper med text som är tryckt i en tryckpress från 1960-talet - från ett papper som är utskrivet i en laserskrivare. På ytan är allt som vanligt, men processen bakom en helt annan.

Så är det ofta med konsten som skapas med de digitala verktygen också. Det konstnärliga arbetet har flyttat – förr låg det i utförandet, tillexempel målandet. Nu ligger det i programmerandet... Konsten den utför sig sen själv på galleriet enligt programmeringen, slumpen eller interaktion. Det finns flera såna här – mycket bra – självgenererande verk på Electrohype – verk som visar att den digitala tekniken förändrar konstnärernas möjligheter, och att publiken följaktligen måste låta sina uppfattningar om vad konst skall vara förändras med det.

**“Net.Art vs Web.Art:
Creadores, activistas, pintamonas
y otros negocios del arte *on-line* “ ***

José Ramón Alcalá **

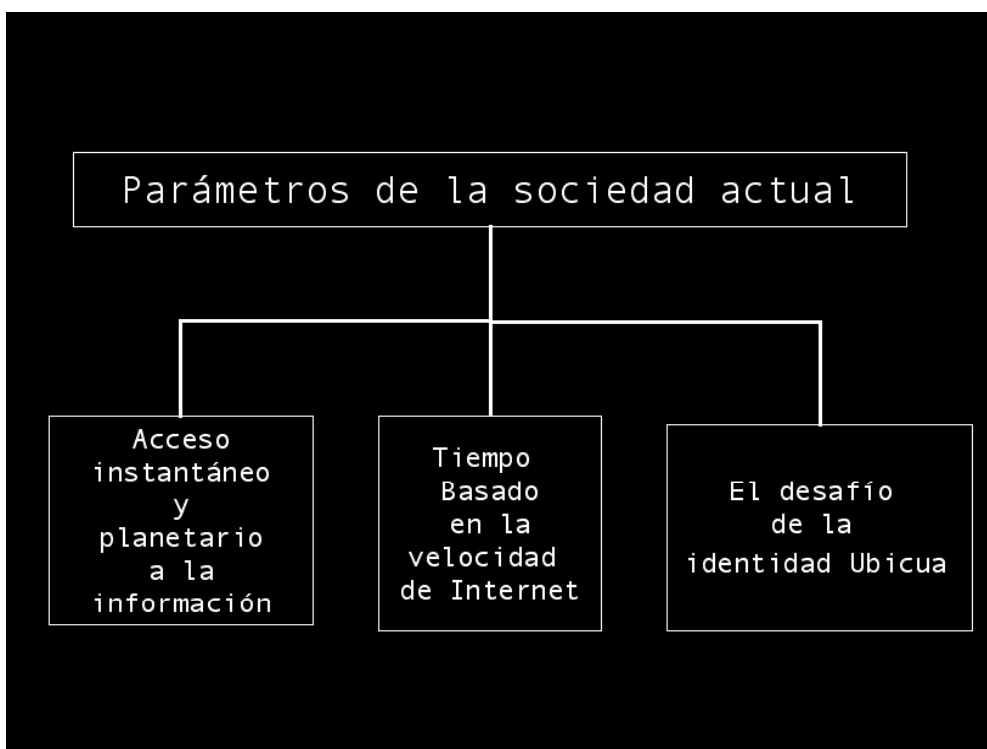

Convendremos todos los que, por uno u otro motivo, nos hemos reunido en esta sala esta tarde otoñal, que el tema que en su día pacté con el comisario de este ciclo de conferencias sobre *Net Art*, mi amigo Nilo Casares (motivo por el que supongo habrá querido confiarme dicha responsabilidad), no deja a nadie satisfecho del todo.

Todavía no he conversado con nadie -durante las largas semanas de la preparación de mi conferencia- que, planteados los términos de sus contenidos y descrito el título propuesto, haya estado de acuerdo o mostrado su interés por el mismo, al menos en los términos exactos en los que se ha hecho su redacción, y que es de mi absoluta e intransferible responsabilidad.

Web.art y *net.art* no son sólo barbarismos de difícil traducción castellana, como otra tanta infinitud de términos de procedencia anglosajona que han ido jalonando los hitos del arte actual (y sobre todo el arte tecnológico -en particular- y de nuestra cultura contemporánea -en general-), sino que, por sí mismos, no representan sino una confusa maraña de aproximaciones dispares a las formas operativas del arte actual. Enfrentarlos resulta casi tan obsceno como puede ser proponer una pugna entre un armario y una flor, sin que además haya propósito alguno destinado a tal confrontación. Sin embargo, en su sin-sentido y en la imposibilidad más absoluta de llegar a conclusión alguna al respecto, es precisamente donde radica su interés. Porque, a partir de este estéril y titánico esfuerzo -prácticamente baldío- acertamos a comprender las perversas desviaciones de tantas y tantas actitudes operacionales de la crítica actual con respecto a una serie de prácticas actuales del arte que, ni por asomo, son capaces de alcanzar a comprender. No es un problema de capacidad o de falta de voluntad, sino que se trata de algo mucho más grave y profundo..., y que no es sino el hecho mismo de pertenecer a una cultura que ya no posee más conexión con aquella que se pretende analizar (evaluar) que la de la cita. Para hablar de *web.art* o *net.art* es preciso estar ya instalado en esta nueva cultura emergente. Una cultura cuyos parámetros particulares (y sus correspondencias antagónicas con la precedente) describió con rotunda nitidez Roy Ascott (precisamente no muy lejos de aquí y en fechas no muy lejanas)

Configurando una dinámica funcional para la sociedad actual que está basada - entre otros muchos- en tres grandes conquistas tecnológicas :

Esta cultura, no sólo ha dotado de nuevos fines a las artes modernas, para lo que se ha provisto de nuevos medios, sino que su construcción está siendo posible gracias a creadores con una nueva mentalidad, con una inédita actitud. Con una capacidad de

hacer visible -formalizable- esa nueva visión de las cosas, esa moderna mirada que refleja el espejo de nosotros mismos, de cuanto nos rodea. Esa que los pensadores, artistas y poetas han imaginado junto a los científicos como imagen del mundo, pues la que nos reflejaban los viejos cristales empañados que heredamos de nuestros padres ya no nos representa, ya no nos sentimos fielmente descritos en sus partículas luminescentes.

“El único verdadero viaje,
el único baño de juventud sería
el de no andar hacia nuevos pasajes,
sino tener otros ojos.”
Marcel Proust

Pero no os preocupéis porque no eludiré mi responsabilidad, ni me deslizaré por sus tangentes. Prometo hablar aquí y ahora de creadores, de activistas, incluso de algunos pintamonas y de todos los “negocios” del arte de la Red.

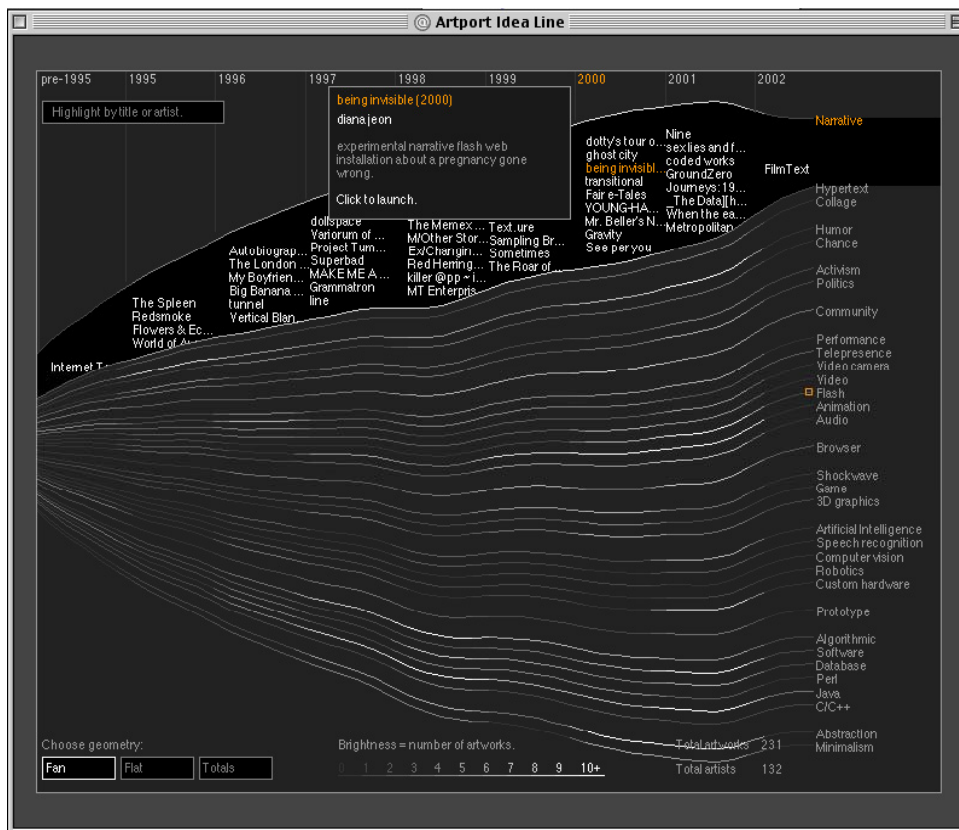

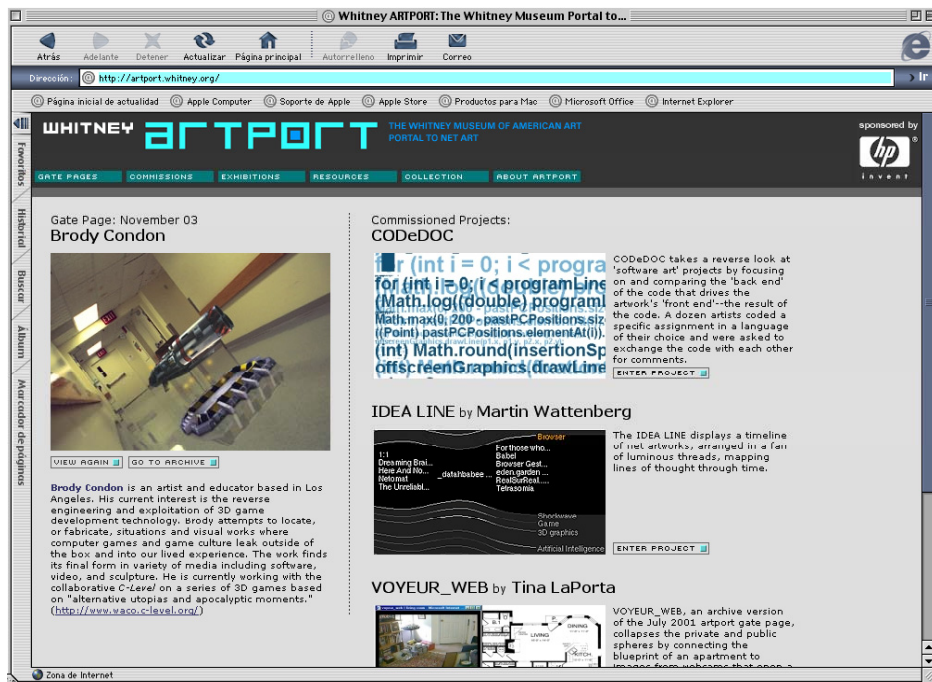

Convendréis por tanto conmigo que deberíamos comenzar por el principio. Y el principio no es, desde luego, la ansiada taxonomía que promete el objetivo responsable - frente al ridículo título dado-, de ofrecernos un retrato naturalista de las semejanzas y diferencias entre sus oponentes (*net art - web art*), sino más bien conformar entre los aquí presentes un pacto tácito sobre qué se entiende hoy día por práctica artística en la Red.

I. Premisas

¿Qué se entiende hoy día por práctica artística en la Red?

Estoy con Mark Tribe (co-responsable de *Rhizome*, uno de las más prestigiosos *sites* dedicados al Arte de la Red) que “*Net.Art* es todo arte que está pensado para ser experimentado *on-line* y para el cual la tipología de la *network* es, de alguna manera, integral o fundamental”

Pero el problema, como apuntaba Martin Wattenberg en la cabecera del *site Artport* (específicamente creado por los responsables del *Whitney Museum for the American Arts* de Nueva York para albergar las manifestaciones artísticas de, en, por y para la Red, que “Desde sus comienzos, el *Net.Art* ha recorrido múltiples direcciones. Más que un medio, el *net* es un entorno único para albergar muy diversos medias: programación y animación, audio y video, videojuegos y comunidades. Cada artista selecciona entre estos caminos y los relanza hacia nuevas combinaciones...”

A pesar de que hoy día ya podemos hablar incluso de un “periodo heroico del *Net.Art*” y que sin embargo éste no parte más allá de una fecha tan reciente como es 1994, la proliferación salvaje de las prácticas artísticas que se han producido en la Red Internet desde entonces (en menos de una década), nos plantea una enorme dificultad al intentar abarcar toda la actividad creativa que se produce y se ha producido recientemente en la RED, e incluso por la enorme complejidad de comprender éstas.

Natalie Bookchin y Alexei Shulgin, en la “Introducción al *net.art* (1994-1999)” de su comprometida publicación *Net.art de un vistazo. La modernidad definitiva*, nos daban un recetario descriptivo de lo que, a su juicio representaba la práctica del Arte de la Red :

1. Definición

a. net.art es un término que se define a sí mismo, creado por la disfunción de una pieza de software y utilizado originalmente para describir la actividad artística y comunicativa en Internet.

b. Los net.artistas buscaban quebrar las disciplinas autónomas y las anticuadas clasificaciones impuestas a algunas prácticas artísticas.

2. 0% Compromiso

a. Manteniendo la independencia de las burocracias institucionales

b. Trabajando lejos de la marginalidad, intentando conseguir una audiencia substancial, comunicación, diálogo y diversión.

c. Iniciando caminos al margen de valores anquilosados provenientes un sistema teórico e ideológico estructurado.

d. T.A.Z (temporary autonomous zone) de finales de los 90: Anarquía y espontaneidad

3. Práctica sobre Teoría

a. El ideal utópico de la desaparición del vacío existente entre el arte y la vida cotidiana, ha sido conseguido, quizás por primera vez, y convertido en un hecho para la práctica diaria.

b. Llevar más allá la crítica institucional: con lo cual un artista/individuo puede equivaler o situarse al mismo nivel que cualquier institución o corporación.

c. La práctica muerte del autor

Pasando a definir lo que ellos consideraban las “Figuras específicas del net.art”

1. Formación de comunidades de artistas a lo largo de naciones y disciplinas

2. Inversión sin intereses materiales

3. Colaboración sin consideraciones por la apropiación de ideas

4. Privilegio de comunicación sobre representación

5. Inmediatez

6. Inmaterialidad

7. Temporalidad

8. Acción basada en un proceso

9. Actuación sin preocupación o miedo ante las posibles consecuencias históricas

10. Parasitismo como estrategia

a. Movimiento desde los campos primarios de alimentación de la red

b. Expansión hacia infraestructuras conectadas en la vida real

11. Desvaneciendo fronteras entre lo público y lo privado

12. Todos en Uno:

a. Internet como medio para la producción, publicación, distribución. promoción, diálogo, consumo y crítica

b. Desintegración y mutación entre las figuras de artista, comisario, escritor, audiencia, galería, teórico, coleccionista de arte y museo.

Con toda probabilidad, este “manifiesto” descubría al gran público la forma creativa sin duda culturalmente más aportativa, pero a la vez más auténtica y más coherente con el medio utilizado y -añado yo de mi cosecha- artísticamente más vanguardista. Pero no era la única consecuente con el medio, ni la única capaz de revelarnos un nuevo imaginario, o esa nueva filosofía del uso creativo de los media. Muchos nuevos artistas, inoculados con la semilla de esa nueva mentalidad mediática, habían decidido abordar la

Red para hacer de ella un inmenso laboratorio multidisciplinar, multirracial, multicultural, multimedial, planteando discursos y objetivos tan diversos como dispares. ¿Quién podría entonces atribuirse la potestad de juzgar y, peor aún, jerarquizar todos estos usos y actitudes?

Lo cierto es que todas esas formas de abordar la red, todas esos planteamientos, formulaciones y actitudes diversas han construido un mapa creativo de la Red tan variopinto como inabarcable, en el que, sin embargo, se ha ido implantando -por consenso tácito- unas ciertas jerarquías, si ese nombre se lo pudiésemos otorgar al hecho de coincidir una mayoría importante de profesionales y estudiosos de la Red en lo que denominaríamos como “piezas de referencia” y, en sentido contrario, propuestas no pertinentes, es decir aquellas que no formarían parte, en ningún sentido ni desde ningún punto de vista como parte de aquello que nos hemos dado en llamar “Arte de la Red”.

Por tanto, trabajar hacia la construcción de una mínima taxonomía (por genérica que ésta pueda ser) y que organice o clarifique mínimamente todos estos abordamientos del medio, proporcionaría a los potenciales estudios teóricos ese necesario punto de vista -global, metodológico y en cierta manera historicista (o tan sólo basado en criterios fundados) necesarios para establecer criterios selectivos, si es que es de nuestro interés hacer coincidir estas prácticas artísticas con el Discurso General del Arte. Y este punto de vista no es, como podría parecer a simple vista, unidireccional (desde la Crítica y la Historia, desde la Institución Arte hacia los artistas y sus producciones), sino que se revela en muchas ocasiones (y cada vez más), bidireccional y retroalimentativo. Por que, aunque todos estamos de acuerdo en que la mayoría de los net artistas no esperan nada de la Institución-Arte (como ha quedado suficientemente claro en el “manifiesto” de Natalie Bookchin y Alexei Shulgin), pues van en otra dirección, sin embargo, cada día son más los que creen en una potencial dimensión institucional de este arte y se acercan al Museo (a la Institución-Arte) para establecer posibles colaboraciones. Como dice el artista Tamas Banovich: “Desde los mismos comienzos, uno de nuestros retos fue el de integrar arte digital y basado en la red en el discurso general del arte. Porque realmente pensábamos que su ghettonización y su definición por su medio (como herramienta) generaban una situación contraproducente, y yo pensaba que para ser compatible y generar expectación debería participar del discurso general”. También, Julian Stallabrass -otro reputado activista de la Red-, decía en este mismo sentido, pero moderando su optimismo: “Cada uno ofrece potencialmente algo al otro: el museo proporciona a los artistas *on-line* audiencias que de otro modo les sería muy difícil de conseguir y, dado que la Web está llena de lucrativos sitios comerciales, los artistas *on-line* ofrecen claramente al museo una conexión con la cultura más cambiante y vanguardista. Aunque existe una preocupación real en que el *net art* sea convertido por el museo en algo acomodado, tal y como ha sucedido por ejemplo con la fotografía y el vídeo, pues muchos podrían decir que éstas han cambiado demasiado en su transformación hacia obras de arte de apariencia familiar y que, sin embargo, el museo no ha cambiado lo suficiente. Pero el reto del arte *on-line* es aún mayor y mantiene la esperanza de una transformación del arte hacia una dirección democrática y participativa.” Desde luego, Vuk Cosic (pionero entre los pioneros) nos sitúa frente a las potenciales consecuencias negativas: “¿Cómo pueden estos dos seguir todavía juntos? ¿Por qué? Yo suelo responder que hay dos razones. Una representa la mayor fuerza en el universo, que es el conformismo de los artistas, y la segunda es la necesidad de los museos de mantener su prestigio, y ellos sólo lo hacen mostrando arte contemporáneo actual.” En cualquier caso, la necesidad de instalar este tipo de producciones en un servidor que las haga transparentes al mundo, la búsqueda de financiación (a ser posible, en *cash*) posibilitando un trabajo intensivo y dedicado a medio o largo plazo y la ilusión por conseguir audiencias, no sólo buscando el anhelado

“prestigio profesional”, sino aunque sólo sea por conseguir credibilidad artística, parece que son poderosas razones para permitir que ese acercamiento -tan imprevisible o indeseado en muchas ocasiones- se siga produciendo hoy día.

Por ello, asumí el reto de trabajar en la dirección de conseguir una cierta organización de todo este material, siendo muy consciente de su dificultad y ofreciendo como resultado en proceso de construcción algo que tal vez pueda ser considerado tan sólo como un pobre material crítico, que además es producto del absoluto desbordamiento que produce trabajar en la Red, pero desde la honestidad y la responsabilidad de quien trabaja también desde la Institución Arte (aunque sea tan peculiar, y outsider como el MIDE de Cuenca). En este punto debo agradecer especialmente las largas y fructíferas conversaciones de trabajo con Paco Berenguer, cuya Tesis Doctoral tengo el placer de dirigir. El análisis realizado por mí es, en ciertos aspectos muy cercano a sus investigaciones. En cualquier caso, la profundidad de sus investigaciones en torno al concepto y a la metodología sobre la interfaz (y, fundamentalmente, la interfaz *on-line*), al ser fruto del trabajo intelectual correspondiente a su propia y específica línea de investigación, merece una consideración en particular (pero que el lector preferirá a buen seguro realizar a partir de su directo material –algo perfectamente posible en un futuro inmediato dada la segura pertinencia de su publicación como trabajo de investigación específico).

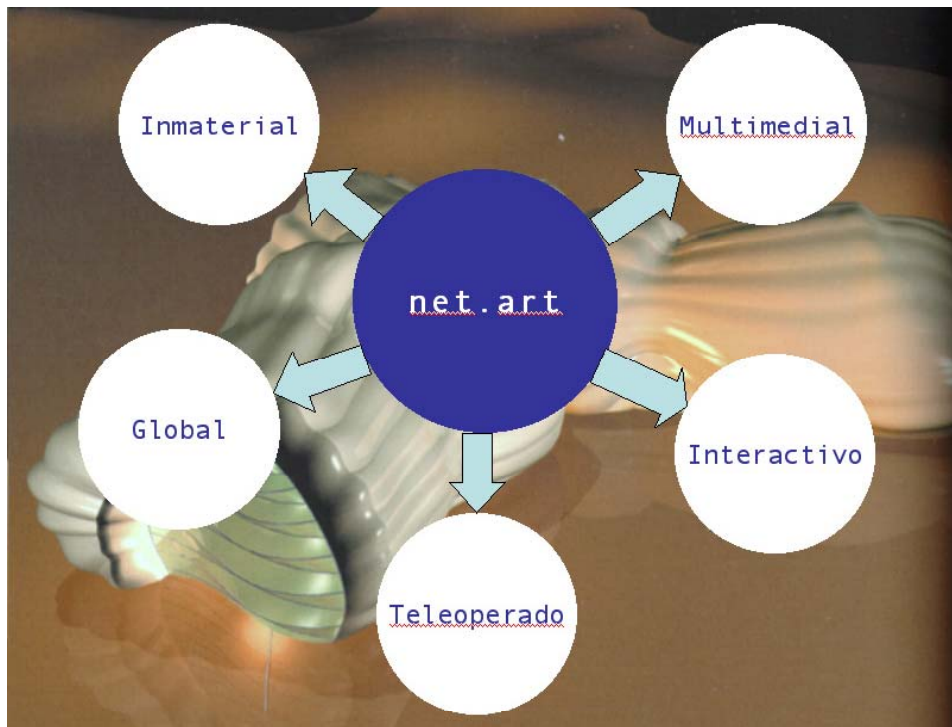

Desde luego, en el reto por construir una cierta taxonomía posible, las dificultades y obstáculos son abundantes y constantes:

- I. Diversidad de objetivos, de actitudes, posicionamientos-concepciones
- II. Dificultad de “ser espectador usuario” de:
 - .Gran variedad de modelos
 - .Interfaces no estándares, o poco intuitivos
 - .Interactividad de muy diversos niveles
- III. Nuevas concepciones creativas y discursivas que intentan escapar a las clasificaciones. (Propuestas radicales como ARTE = VIDA).
- IV. Falta de perspectiva histórica. Ausencia de estudios críticos.

En cualquier caso, la historia del *net.art* ya puede ser escrita de alguna incipiente manera... si acaso no está ya escrita. Sólo tenemos que navegar por la delirante página web que el *Whitney Museum* le ha dedicado, en su sección *Artport*, a la *Idea Line* (una historia del net art) (<http://www.whitney.org/artport/commissions/idealine.shtml>), una modélica descripción -coherentemente interactiva y *on line*- de la multitud de diversas manifestaciones del Arte en Red acaecidas durante su periodo moderno (o pos-heróico) del *net art* y que nos demuestra además que el concepto y el rigor crítico y metodológico no está reñido ni con el atrevimiento ni con la ilusión por divertir y apasionar.

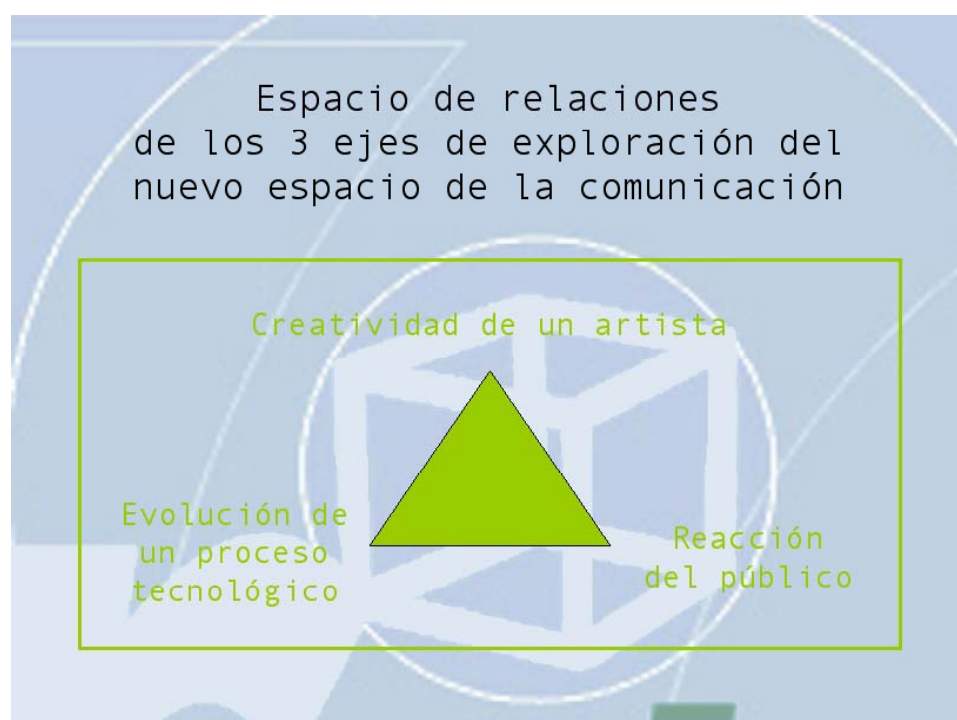

Este delirante gráfico interactivo y *on line*, esta fascinante proposición taxonómica, emanada desde el conocimiento que proporciona en mentes preclaras la experiencia y el ejercicio responsable de la crítica en la Institución-Arte, nos revela, a poco que naveguemos a través de su interfaz, una riqueza creativa y un potencial artístico absolutamente modernos. Se que este término de “modernidad” no puede ser empleado gratuitamente, aunque está conectado con la idea de “la modernidad definitiva” (que leíamos antes) de Bookchin y Shulgin; por ello y para definirlo con precisión, recalaré en el remanso del método -siquiera por unos instantes- y lo haré a partir de tres simples –pero

muy densos- gráficos que explican con precisión el alcance de esta modernidad a partir de las características de su tecnologías.

El futuro Espacio de la Comunicación

Así mismo, todo esto inconmensurable “maremagnum” de ideas, que no son sino aproximaciones intuitivas desde el pensamiento o desde la sensibilidad humanas a la idea moderna de mundo, de espacio y de lo vivo, nos dibuja los retazos proposicionales de un Red que, en mi opinión no deberíamos dejar de describir, de desnudar, de radiografiar. Tal vez el retrato, la imagen, de ese imaginario que hoy nos refleja la web -como una gran metáfora de esta nuestra nueva cultura emergente, de la que no todos participan (caracterizando una sociedad en transición que se resiste a abandonar la decadencia perfecta de la vieja cultura que construyeron los hombres del Renacimiento y retroalimentaron las vanguardias de la sociedad industrial), la imagen apuntada en las

intervenciones artísticas en la Red de nuestros hábitos, de nuestras conciencias programáticas y cosmogónicas, de nuestro sentido de la transcendentalidad cultural, sea el aspecto más definitorio y clarificador, tal vez el más apasionante que a buen seguro podríamos poner sobre la mesa del debate que, confío, generará mi intervención.

Por ello, deberíamos dibujar, aunque fuera esbozando, los rasgos de esa nueva cultura.

¿Qué significa Nueva Cultura?

¿Cuales son las características de esto que hemos dado en llamar “una Nueva Cultura en ciernes”

“Los límites de mi lenguaje significan los límites de mi mundo”.

Ludwig Wittgenstein

“El mundo cambia a medida que lo hacen nuestras interfaces.

Los límites del mundo son los límites de nuestra interfaz.

No interactuamos con el mundo, sólo con la interfaz del mundo”.

Peter Weibel

La “cibercultura” anhela la transparencia del “ver a través”. Mediante nuestras técnicas de recuperación de la información, vemos a través de la materia, del espacio, del tiempo. Cuando la tecnología nos da acceso mental y físico a algún lugar (remoto) de la Tierra o en el profundo espacio, más allá de los límites previos, nuestras mentes la siguen. De ahí que nuestra psicología deba evolucionar con esa tecnología. Basten dos ejemplos –evolutivos- para comprender las verdaderas y revolucionarias transformaciones psicológicas y conceptuales que podía sufrir la percepción del mundo en la mente de los artistas a través de un uso maduro de las tecnologías actuales: En el año 1992, a mi regreso a España, después de trabajar como artista/investigador-residente en el *ArtLab* de Tokio, gracias a una Beca de la *Canon Foundation in Europe*, pacté con el artista Hirotaka Maruyama que, como manera de mantener “en caliente” la gran amistad fraguada entre ambos durante ese año japonés, todos los días del año, él me mandaría -vía Internet- una imagen del sol amaneciendo por la ventana de su estudio de la bahía oriental de Yokohama, para que así, yo pudiese disfrutar con más de diez horas de antelación de mi propio amanecer en el estudio del Golfo de Valencia. En la actualidad, todavía podemos disfrutar del proyecto *Sensorium* (<http://www.sensorium.org>) que, en 1996, puso en marcha Shinichi Takemura. Significa una percepción aún más globalmente planetaria y los recursos y, por tanto, las consecuencias, se multiplican exponencialmente, pero, básicamente supone sólo una evolución tecno-conceptual de la misma idea de formalizar perceptivamente lo remoto, como algo ya mucho más próximo, más dimensionalmente reducido.

Lo que parece evidente es que estos nuevos medios se han consolidado como herramientas para la comprensión del mundo y para el desarrollo de las ideas gracias a:

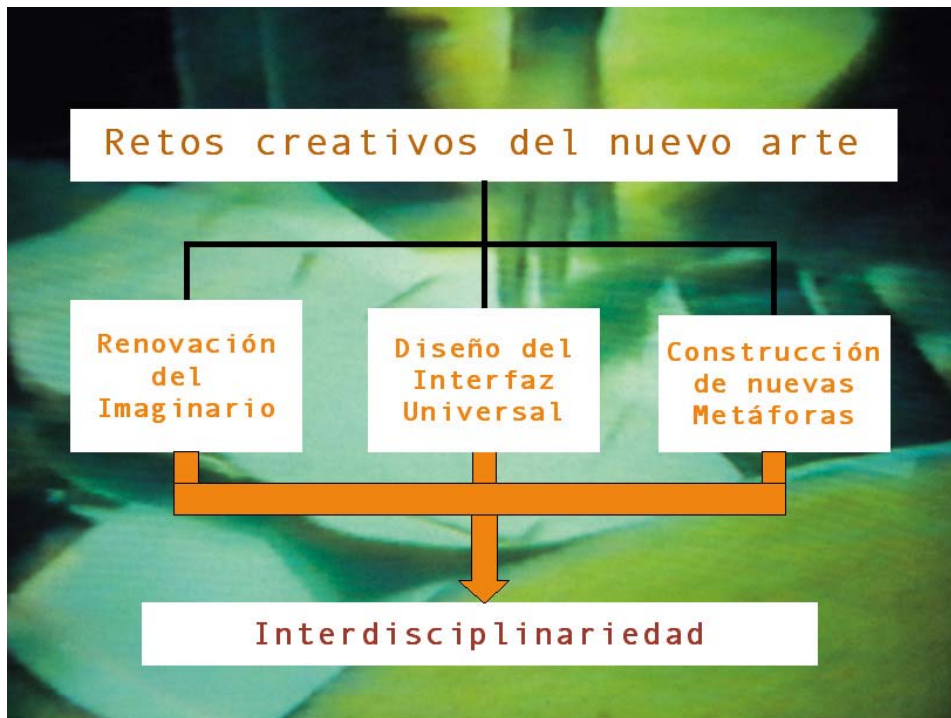

-Una tecnología Instantánea; de alcance y retroalimentación inmediatas. Sin periodo de adaptación.

-Una tecnología Transparente; capaz de distribuir la información en tiempo real. Proponiendo la totalidad del mundo como un campo para la conciencia.

-y una tecnología Inteligente, que nos propone una conciencia global. Imperfecta en esta época incipiente y primitiva que nos ha tocado vivir, pero que conducirá en breve a formas

embrionarias de conciencia autónoma –con iniciativa y juicio- (<http://www.vote-auction.net>)

Por ello, el artista que ha decidido trabajar en este medio y con estas tecnologías, es tremendamente consciente de que todo está por hacer, que la representación de un nuevo mundo formalizará los rasgos de esta nueva cultura en ciernes. Pero sus retos son de todo tipo y la empresa gigantesca. Fundamentalmente, a mí me interesaría destacar tres grandes retos que por sí mismos definen el amplio campo de acción que hemos visto gráficamente representado en la *Idea Line* de *Artport* :

y que en las propuestas que ya hemos empezado a ver formalizadas (como apuntes o esbozos de este *work-in-progress* actual) se constituye ya la imagen embrionaria y renovada de los tres protagonistas del hecho creativo :

Gracias a ellas, la visión de la Red -formalizada por sus múltiples y heterogéneas aproximaciones creativas-, es ya algo tangible.

Idea de la Red desde sus aproximaciones creativas

Ya sabemos, por ejemplo que ésta, es a un tiempo:

- a. Oral y escrita
- b. Pública y privada
- c. Individual y colectiva

También hemos llegado a comprender que la Red es una entidad compuesta de :

1. Cuerpo (*Body*)
2. Espacio (*Space*)
3. Lugar (*Place*)

1. Cuerpo (*Body*)

-Que este cuerpo está formalizado por una gigantesca Base de Datos.

-Nuestra Memoria Colectiva.

-“En la era eléctrica nos vemos a nosotros mismos cada vez más, traducidos en términos de información, dirigiéndonos hacia la extensión tecnológica de nuestra conciencia”
Marshall McLuhan

-Es orgánico, su movimiento es perpetuo y se comporta como un sistema auto-organizado.

-Ver, SHAPIRO, Andréw: *El Mundo en un Clic*. Ed. DeBolsillo. Barcelona, 2002.

Verónica Perales. Vivant. 1.0. Proyecto *on-line* basado en la “Memoria” de la Red

2. La Red es Espacio (Space)

- Vacío **infinito** lleno de tensiones.
- Oscuridad (negritud total).
- El Espacio de Internet no es neutral, no tiene límite claro, no es estable, ni está unificado.
- Desterritorialización de la práctica artística (en una dimensión planetaria).
- Net.Art = Acontecimiento provocado en un “no-lugar” común (acceso común) desde un ordenador/es individual/es en cualquier lugar. (Doble ubicuidad contradictoria con la territorialización de las direcciones IP)
- “El mundo es una gran web formada por una red invisible que conecta al ser humano con todo lo que le rodea” (Shinichi Takemura: *Sensorium*, 1996)
- La dimensión cuantificadora de su espacio viene determinada por la información (DATA).
- La dimensión que le proporciona la información = substancia para una potencial arquitectura específica.
- El tiempo también es una dimensión potencial parametral del “espacio” de la red (El tiempo no se da en abstracto, sino soportado por un espacio mental (en constante evolución cultural))
- En tanto que mundo multicultural, estamos buscando modelos de integración más allá de las disputas por diferencias lingüísticas, raciales, políticas, etc. Necesitamos metáforas para comenzar a reconocer nuestro planeta, y no sólo como nuestro hogar, sino como nuestro cuerpo.
- La Red es el sistema metafórico que lo soporta.
- Ver: VIRTUAL WORLDS AND ARCHITECTURAL SPACE : AN EXPLORATION. Foundation Daniel Langlois. Canadá. 2002.
<http://www.fondation-langlois.org/zidarich/index.html>
- Ver también: CENTURY, Michel : *Pathways to Innovation in Digital Culture*.

EGALAB. Modelo 7 para su galería virtual.
Fragmento de los corredores como “Pasajes de Información”

EGALAB. Modelo 7 para su galería virtual
Fragmento de los corredores como “Pasajes de Información”

3. Lugar (place)

-Conexiones.

-La Red como provocador de encuentros.

-Un no-espacio para la acción.

-El **MA** japonés (espacio = fluido continuo, vivo, reactante y gobernado por un preciso sentido de la temporalidad y el ritmo. Este espacio (espacio-tiempo) alude a la compleja red de relaciones entre las personas y los objetos.

-“La red Internet es este **ma** psicotecnológico, un mundo de intervalos electrónicos en constante actividad y reverberación”. *D.de Kerckhove*.

-“La paradoja: mientras nuestro *hardware* (la realidad material de la Tierra) está contrayéndose e implosionando sobre sí mismo (porque nuestras tecnologías reducen

continuamente los intervalos de tiempo y espacio entre las operaciones), nuestro software (nuestra realidad psicológica y tecnológica), se expande continuamente". *D.de Kerckhove*.
-El acceso a reinos infinitos está también expandiendo el alcance de nuestra cultura de fondo en desarrollo.

-Ver: FORESTA, Don: *Mondes Multiple*. Éditions BàS. Guyancourt (Francia), 1991.

En todo este despliegue de formas de actuación del arte de la Red, ¿podríamos atrevernos a proponer una cierta taxonomía? Mis discusiones intelectuales con mi querido -y ya mencionado en este mismo texto- Paco Berenguer me permiten apuntar algunas diferencias pertinentes entre un cierto Browser Art y el Net.Art como un sistema conceptualmente intermediario entre este último y el Web.Art. Resulta obvio que en las actitudes de aquellos creadores cuyas propuestas para la Red y desde la Red las hemos dado en llamar "Web Art", existe todavía una cierta tendencia a considerar el material

audiovisual que manejan como un sistema formal, cuya organización se debe en buena medida a los tradicionales parámetros constitutivos del Arte que ha caracterizado la cultura saliente y que ha presidido el acto creativo durante los últimos seis siglos. La percepción y la actitud de aquellos que en la red han construido todo cuanto hemos denominado creación del tipo "Browser Art", está, de alguna manera, relacionada con este *Web Art*, por cuanto no elude su responsabilidad respecto a una cierta y necesaria "formalidad" de la obra como material que se constituye en obra dispuesta a ser observada, pero que, a diferencia del *web.art* y en sintonía con el *net.art*, tiene voluntad de ser materia constitutiva de la Red. En buena manera y en muchas ocasiones, este específico e intermediativo "browser art", es deudor del trabajo tecnicista con el *software*, no sólo como material creativo, sino como actitud artística *per se*. Algunos ya han convenido denominarlo "software art", pero, a pesar de su especificidad y de la pertinencia de su apelación y definición (no puesta en duda -al menos por parte de quien firma este ensayo-), por sí misma, esta forma de creación no necesita necesariamente de la Red para desarrollarse. Por ello, cuando lo hace, es parte del territorio creacional que hemos denominado "Browser Art".

III. Una cierta taxonomía posible

En cualquier caso, lo que sí que puedo constatar, volviendo al territorio más generalista de mi aportación, es que he observado diferentes pares -o binomios contrapuestos- de actitudes característicamente diferenciadas de los artistas frente a la Red (o en la Red):

Frente al medio

Los que tienen en cuenta el medio. (*net.artistas*)

Los que sólo lo usan como mecanismo de divulgación. (*pintamonas*)

Frente a la cultura

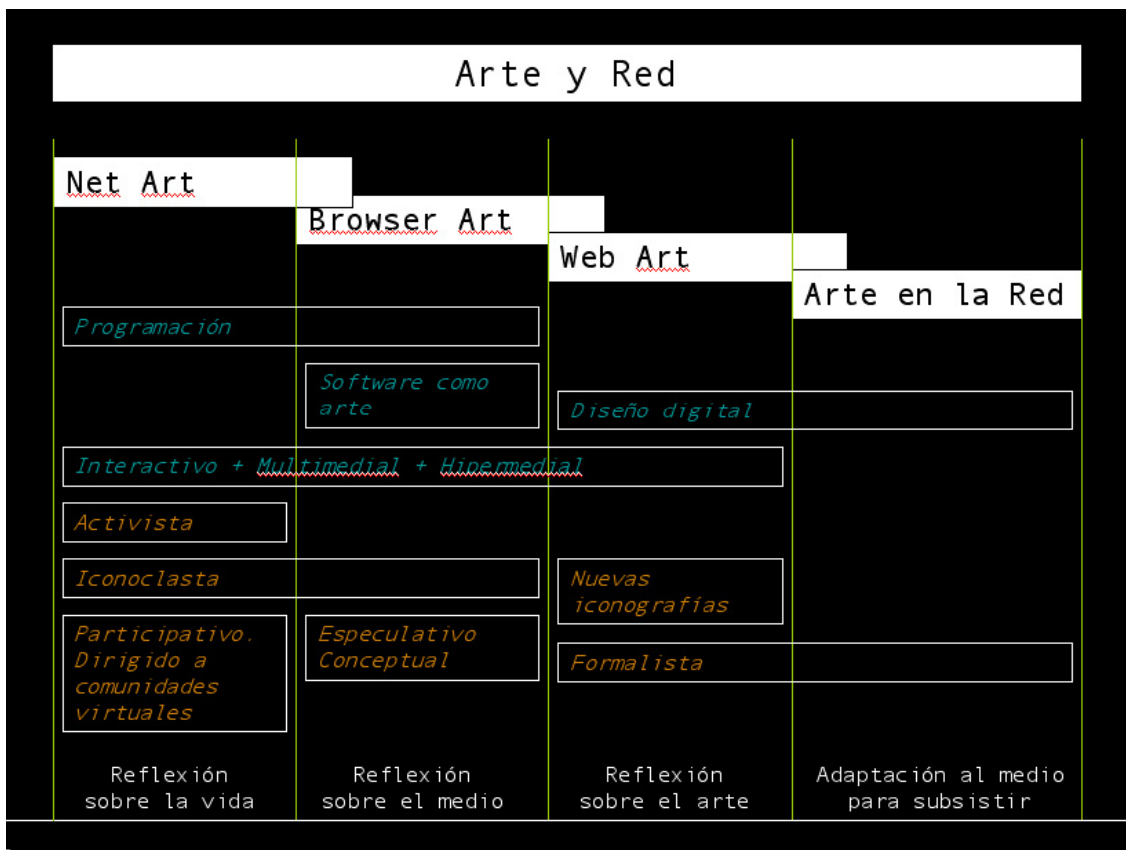

Los que están ya instalados creativamente en la nueva cultura. (*modernos*)

Los que siguen actuando según los parámetros de la vieja cultura. (*antiguos*)

Frente al discurso

Los artistas y los activistas: Sistema comunicacional para los discursos del arte actual. (*net.artistas*)

Los diseñadores y publicistas. Sistema compositivo para los lenguajes artísticos. (*web.artistas*)

Algunas conclusiones inconclusas

Pero lo que sí podemos aseverar para terminar, desde esta mínima perspectiva histórica, es que existe una evolución del Arte de Red, que va desde el espíritu anti-institucional de sus acciones y el carácter efímero de las producciones de los comienzos, hasta la tendencia casi contraria actual, caracterizada por la creación de instituciones para el net.art, penetrando éste en el discurso general del arte -primero- y en el mercado del arte -después-, y la construcción y mantenimiento de archivos que contengan, preserven y muestren dichas obras y sus evoluciones creativas (como en el caso -extremo- del *site-galería Art.Teleportancia* de Olia Lialina, que vende obras del *Periodo Heróico del Net.Art* --1994-1998--, a 2.000 \$ c.u.).

“El net art, como área de investigaciones frenéticas y como territorio de innovación ya no existe.

La intensa búsqueda para descubrir la naturaleza de la comunicación y las posibilidades de la representación ha sido suplantada por el ‘design’ y el deseo de las expectativas de los comisarios.

Tras el Periodo Heróico del Net.Art, ha llegado el web.art, una disciplina artística mucho más estable.”
Vuc Cosic

Sin embargo, los proyectos interesantes siguen siendo proyectos interesantes.

*. Texto, gráficos e imágenes de la Conferencia pronunciada en *La Llotgeta*. Aula de Cultura de la CAM. Valencia, 17/11 2003, dentro del Ciclo de Conferencias “web/net.art (o el net.art contra la web.art)”.

**Creadores, Activistas,
pintamonas
y otros negocios del arte on-line “**
*

José Ramón Alcalá

**

Convendremos todos los que, por uno u otro motivo, nos hemos reunido en sala esta tarde otoñal, que el tema que en su día pacté con el comisario de este ciclo de conferencias sobre *Net Art*, mi amigo Nilo Casares (motivo por el que supongo habré confiado dicha responsabilidad), no deja a nadie satisfecho del todo.

Todavía no he conversado con nadie -durante las largas semanas de preparación de mi conferencia- que, planteados los términos de sus contenidos y el título propuesto, haya estado de acuerdo o mostrado su interés por el mismo, al menos en los términos exactos en los que se ha hecho su redacción, y que es de mi absoluta intransferible responsabilidad.

Web.art y *net.art* no son sólo barbarismos de difícil traducción castellana, otra tanta como la multitud de términos de procedencia anglosajona que han ido jalonando los derroteros del arte actual (y sobre todo el arte tecnológico -en particular- y de nuestra cultura contemporánea -en general-), sino que, por sí mismos, no representan sino una confusa maraña de aproximaciones dispares a las formas operativas del arte actual. Enfrentarlos resulta casi tan obscuro como puede ser proponer una pugna entre un armario y una flor sin que además haya propósito alguno destinado a tal confrontación. Sin embargo, en su sentido y en la imposibilidad más absoluta de llegar a conclusión alguna al respecto es precisamente donde radica su interés. Porque, a partir de este estéril y único esfuerzo -prácticamente baldío- acertamos a comprender las perversas desviaciones de tantas y tantas actitudes operacionales de la crítica actual con respecto a una serie de prácticas actuales del arte que, ni por asomo, son capaces de alcanzar a comprender. No es un problema de capacidad o de falta de voluntad, sino que se trata de algo mucho más grave y profundo..., y que no es sino el hecho mismo de pertenecer a una cultura que no posee más conexión con aquella que se pretende analizar (evaluar) que la de la propia cultura. Para hablar de *web.art* o *net.art* es preciso estar ya instalado en esta nueva cultura emergente. Una cultura cuyos parámetros particulares (y sus correspondencias con la precedente) describió con rotunda nitidez Roy Ascott (precisamente muy lejos de aquí y en fechas no muy

lejanas)

Page 2

Configurando una dinámica funcional para la sociedad actual que está basada -
entre otros muchos- en tres grandes conquistas
tecnológicas :

Esta cultura, no sólo ha dotado de nuevos fines a las artes modernas, para lo que se ha provisto de nuevos medios, sino que su construcción está siendo posible gracias a creadores con una nueva mentalidad, con una inédita actitud. Con una capacidad de

Page 3

hacer visible -formalizable- esa nueva visión de las cosas, esa moderna mirada que refleja el espejo de nosotros mismos, de cuanto nos rodea. Esa que los pensadores y poetas han imaginado junto a los científicos como imagen del mundo, pues la que nos reflejaban los viejos cristales empañados que heredamos de nuestros padres no nos representa, ya no nos sentimos fielmente descritos en sus partículas luminiscentes.

“El único verdadero
el único ~~único~~ ^{único} de juventud
el de no ~~andar~~ ^{sería} hacia nuevos
pasajes, sino tener otros
ojos.” *Marcel
Proust*

Pero no os preocupéis porque no eludiré mi responsabilidad, ni me deslizaré por sus tangentes. Prometo hablar aquí y ahora de creadores, de activistas, incluso de algunos pintamonas y de todos los “negocios” del arte de la Red.

Convendréis por tanto conmigo que deberíamos comenzar por el principio. Y el principio no es, desde luego, la ansiada taxonomía que promete el objetivo responsable -

frente al ridículo título dado- de ofrecernos un retrato naturalista de las semejanzas y diferencias entre sus oponentes (*net art - web art*), sino más bien conformar entre los presentes un pacto tácito sobre qué se entiende hoy día por práctica artística en la Red.

I.

Premisas ¿Qué se entiende hoy día por práctica artística en la Red?

Estoy con Mark Tribe (co-responsable de *Rhizome*, uno de las más prestigiosos *sites* dedicados al Arte de la Red) que "*Net.Art* es todo arte que está pensado para ser experimentado *on-line* y para el cual la tipología de la *network* es, de alguna manera o integrada o fundamental"

Pero el problema, como apuntaba Martin Wattenberg en la cabecera del *site Artport* (específicamente creado por los responsables del *Whitney Museum for the American Arts* de Nueva York para albergar las manifestaciones artísticas de, en, por y para la Red, que "Desde sus comienzos, el *Net.Art* ha recorrido múltiples direcciones. Mas que un medio, el *net* es un entorno único para albergar muy diversos medios: programación y animación, audio y video, videojuegos y comunidades. Cada artista selecciona entre estos caminos y los relanza hacia nuevas combinaciones..."

A pesar de que hoy día ya podemos hablar incluso de un “periodo heroico *Net.Art*” y de que sin embargo éste no parte más allá de una fecha tan reciente como 1994, la proliferación salvaje de las prácticas artísticas que se han producido en la Red Internet desde entonces (en menos de una década), nos plantea una enorme dificultad al intentar abarcar toda la actividad creativa que se produce y se ha producido recientemente en la RED, e incluso por la enorme complejidad de comprender éstas.

Natalie Bookchin y Alexei Shulgin, en la “Introducción al *net.art* (1994-1999)” de su publicación *Net.art de un vistazo. La modernidad definitiva*, nos daban un recetario descriptivo de lo que, a su juicio representaba la práctica del Arte de la Red :

1.

Definición: net.art es un término que se define a sí mismo, creado por la disfunción de una pieza de software utilizado originalmente para describir la actividad artística y comunicativa en Internet.

Entre los net.artistas buscaban quebrar las disciplinas autónomas y las anticuadas imposiciones de algunas prácticas artísticas.

2. Objetivos

Compartiendo la independencia de las burocracias

Institucionales lejos de la marginalidad, intentando conseguir una audiencia substancial, diálogo comunicativo,

diversificando caminos al margen de valores anquilosados provinientes un sistema teórico e ideológico

d. T.A.Z (temporary autonomous zone) de finales de los 90: Anarquía y

3. Principios

Teoría: El ideal utópico de la desaparición del vacío existente entre el arte y la vida cotidiana, ha conseguido, quizás por primera vez, y convertido en un hecho para la práctica

diaria. Llevar más allá la crítica institucional: con lo cual un artista/individuo puede equivaler o situarse mismo nivel que cualquier institución o

corporación: la práctica muerte del autor

Pasando a definir lo que ellos consideraban las "Figuras específicas del net.art"

1. Formación de comunidades de artistas a lo largo de naciones y

disciplinas

2. Intercambio sin consideraciones por la apropiación de

el privilegio de comunicación sobre

representación

3. Inmediatez

4. Inmaterialidad

5. Temporalidad basada en un

proceso sin preocupación o miedo ante las posibles consecuencias

6. Historicismo como

estrategia de movimiento desde los campos primarios de alimentación de la

7. Expansión hacia infraestructuras conectadas en la vida

11. Desdibujando fronteras entre lo público y lo

privado

Uno: a. Internet como medio para la producción, publicación, distribución, promoción, diálogo, consumo crítico

b. Desintegración y mutación entre las figuras de artista, comisario, escritor, audiencia, galería, coleccionista de arte y museo.

Con toda probabilidad, este "manifiesto" descubría al gran público la forma

sin duda creativamente más aportativa, pero a la vez más auténtica y más coherente

9. El medio utilizado y -añado yo de mi cosecha- artísticamente más vanguardista. Pero

10. Es la única consecuente con el medio, ni la única capaz de revelarnos un

nuevo imaginario, o esa nueva filosofía del uso creativo de los media. Muchos nuevos

11. Artistas motivados con la semilla de esa nueva mentalidad mediática, habían decidido abordar

la

Red para hacer de ella un inmenso laboratorio multidisciplinar, multirracial, multicultural, planteando discursos y objetivos tan diversos como dispares. ¿Quién podría atribuirse la potestad de juzgar y, peor aún, jerarquizar todos estos usos y actitudes?

Lo cierto es que todas esas formas de abordar la red, todas esas formulaciones y actitudes diversas han construido un mapa creativo de la Red tan rico como inabarcable, en el que, sin embargo, se ha ido implantando - por consenso tácito- unas ciertas jerarquías, si ese nombre se lo pudiésemos otorgar al hecho de coincidir una mayoría importante de profesionales y estudiosos de la Red en denominarlas como "piezas de referencia" y, en sentido contrario, propuestas pertinentes, es decir aquellas que no formarían parte, en ningún sentido ni desde ningún punto de vista como parte de aquello que nos hemos dado en llamar "Arte de la Red".

Por tanto, trabajar hacia la construcción de una mínima taxonomía (por que ésta pueda ser) y que organice o clarifique mínimamente todos estos abordamientos, proporcionaría a los potenciales estudios teóricos ese necesario punto de vista global, metodológico y en cierta manera historicista (o tan sólo basado en fundamentos) necesarios para establecer criterios selectivos, si es que es de nuestro interés coincidir estas prácticas artísticas con el Discurso General del Arte. Y este punto de vista no es, como podría parecer a simple vista, unidireccional (desde la Crítica y la Historia, desde la Institución Arte hacia los artistas y sus producciones), sino que se revela en muchas ocasiones (y cada vez más), bidireccional y retroalimentativo. Por supuesto que todos estamos de acuerdo en que la mayoría de los net artistas no esperan nada de la Institución-Arte (como ha quedado suficientemente claro en el "manifiesto" de Natalie Bookchin y Alexei Shulgin), pues van en otra dirección, sin embargo, cada día más los que creen en una potencial dimensión institucional de este arte y se acercan al Museo (a la Institución-Arte) para establecer posibles colaboraciones. Como dice el artista Tatiana Banovich: "Desde los mismos comienzos, uno de nuestros retos fue el de integrar integral y basado en la red en el discurso general del arte. Porque pensamos que su ghettonización y su definición por su medio (como herramienta) generaban una situación contraproducente, y yo pensaba que para ser compatible y generar expectativa debería participar del discurso general". También, Julian Stallabrass, otro reputado activista de la Red-, decía en este mismo sentido, pero moderando su optimismo: "Cada uno ofrece potencialmente algo al otro: el museo proporciona a los artistas *on-line* audiencias que de otro modo les sería muy difícil de conseguir y, dado que Web está llena de lucrativos sitios comerciales, los artistas *on-line* ofrecen al museo una conexión con la cultura más cambiante y vanguardista. Aunque existe preocupación real en que el *net art* sea convertido por el museo en algo acomodado, tal como ha sucedido por ejemplo con la fotografía y el vídeo, pues muchos podrían decir que estas han cambiado demasiado en su transformación hacia obras de arte de apariencia familiar y que, sin embargo, el museo no ha cambiado lo suficiente. Pero el reto del arte *on-line* es aún mayor y mantiene la esperanza de una transformación del arte hacia una dirección democrática y participativa." Desde luego, Vuk Cosic (pionero entre los pioneros) nos sitúa frente a las potenciales consecuencias negativas: "¿Cómo pueden estos seguir todavía juntos? ¿Por qué? Yo suelo responder que hay dos

El arte presenta la mayor fuerza en el universo, que es el conformismo de los artistas, y la segunda es la necesidad de los museos de mantener su prestigio, y ellos sólo lo hacen mostrando arte contemporáneo actual." En cualquier caso, la necesidad de instalar este tipo de producciones en un servidor que las haga transparentes al mundo, la búsqueda de financiación (a ser posible, en *cash*) posibilitando un trabajo intensivo y dedicado a medio o largo plazo y la ilusión por conseguir audiencias, no sólo buscando el anhelo

"prestigio profesional", sino aunque sólo sea por conseguir credibilidad artística, parecen poderosas razones para permitir que ese acercamiento -tan imprevisible e indeseado en muchas ocasiones- se siga produciendo hoy día.

Por ello, asumí el reto de trabajar en la dirección de conseguir una organización de todo este material, siendo muy consciente de su dificultad y ofreciendo como resultado en proceso de construcción algo que tal vez pueda ser considerado tan sólo como un pobre material crítico, que además es producto del desbordamiento que produce trabajar en la Red, pero desde la honestidad y la responsabilidad de quien trabaja también desde la Institución Arte (aunque sea tan peculiar, y outsider como el MIDE de Cuenca). En este punto debo agradecer especialmente las largas y fructíferas conversaciones de trabajo con Paco Bermejo. En esta tesis Doctoral tengo el placer de dirigir. El análisis realizado por mí es, en ciertos aspectos muy cercano a sus investigaciones. En cualquier caso, la profundidad de sus investigaciones en torno al concepto y a la metodología sobre la interfaz (fundamentalmente, la interfaz *on-line*), al ser fruto del trabajo intelectual correspondiente a su propia y específica línea de investigación, merece una consideración en particular (pero que el lector preferirá a buen seguro realizar a partir de su directo material – algo perfectamente posible en un futuro inmediato dada la segura pertinencia de su publicación como trabajo de investigación específico).

Desde luego, en el reto por construir una cierta taxonomía posible, las dificultades y obstáculos son abundantes y constantes:

- I. Diversidad de objetivos, de actitudes, posicionamientos-concepciones de "ser espectador usuario"
- de: .Gran variedad de modelos
interfases no estándares, o poco intuitivos
interactividad de muy diversos niveles
- III. Diversas concepciones creativas y discursivas que intentan escapar a las clasificaciones. (Propuestas radicales como ARTE = VIDA)
- IV. Falta de perspectiva histórica. Ausencia de estudios críticos.

En cualquier caso, la historia del *net.art* ya puede ser escrita de alguna manera... Si acaso no está ya escrita. Sólo tenemos que navegar por la delirante página Web que el *Whitney Museum* le ha dedicado, en su sección *Artport*, a la *Idea Line*

historia del net art) (<http://www.whitney.org/artport/commissions/idealine.shtml>),
una
modélica descripción -coherentemente interactiva y *on line*- de la multitud de
diversas
manifestaciones del Arte en Red acaecidas durante su periodo moderno (o pos-
heróico) y que nos demuestra además que el concepto y el rigor crítico y
metodológico
no está referido ni con el atrevimiento ni con la ilusión por divertir y
apasionar.

Este delirante gráfico interactivo y *on line*, esta fascinante proposición
emanada desde el conocimiento que proporciona en mentes preclaras la experiencia y
taxonómica
El ejercicio responsable de la crítica en la Institución-Arte, nos revela, a poco
El
hacemos a través de su interfaz, una riqueza creativa y un potencial
artístico
artísticamente modernos. Se que este término de "modernidad" no puede ser
empleado
gradualmente, aunque está conectado con la idea de "la modernidad
definitiva" (que
eramos antes) de Bookchin y Shulgin ; por ello y para definirlo con precisión, recalaré en
remanso del método -siquiera por unos instantes- y lo haré a partir de tres simples –
pero

muy densos- gráficos que explican con precisión el alcance de esta modernidad a
partir
partir características de su
tecnologías.

Así mismo, todo esto inconmensurable "maremagnum" de ideas, que no son aproximaciones intuitivas desde el pensamiento o desde la sensibilidad humanas a la idea moderna de mundo, de espacio y de lo vivo, nos dibuja los retazos proposicionales de Red que, en mi opinión no deberíamos dejar de describir, de desnudar, de radiografiar. Tal vez el retrato, la imagen, de ese imaginario que hoy nos refleja la web -como una metáfora de esta nuestra nueva cultura emergente, de la que no todos participan- caracterizando una sociedad en transición que se resiste a abandonar la dependencia de la vieja cultura que construyeron los hombres del Renacimiento y retroalimentaron las vanguardias de la sociedad industrial), la imagen apuntada en las

intervenciones artísticas en la Red de nuestros hábitos, de nuestras preocupaciones y cosmogónicas, de nuestro sentido de la transcendentalidad cultural, es el aspecto más definitorio y clarificador, tal vez el más apasionante que a buen seguro podamos poner sobre la mesa del debate que, confío, generará mi intervención.

Por ello, deberíamos dibujar, aunque fuera esbozando, los rasgos de esa cultura. nueva

¿Qué significa Nueva

Cultura Son las características de esto que hemos dado en llamar "una Cultura en ciernes"

"Los límites de mi lenguaje significan los límites de mi mundo".

*Ludwig
Wittgenstein*

"El mundo cambia a medida que lo hacen nuestras interfaces. Los límites del mundo son los límites de nuestra interfaz. No interactuamos con el mundo, sólo con la interfaz del mundo".

*Peter
Weibel*

La "cibercultura" anhela la transparencia del "ver a través". Mediante técnicas de recuperación de la información, vemos a través de la materia, del espacio, del tiempo. Cuando la tecnología nos da acceso mental y físico a algún lugar (remoto) de la Tierra o en el profundo espacio, más allá de los límites previos, nuestras mentes siguen. De ahí que nuestra psicología deba evolucionar con esa tecnología. Basten dos ejemplos –evolutivos- para comprender las verdaderas y revolucionarias transformaciones psicológicas y conceptuales que podía sufrir la percepción del mundo en la mente de los artistas a través de un uso maduro de las tecnologías actuales: En el año 1992, a mi regreso a España, después de trabajar como artista/investigador-residente en el *ArtLAB* de Tokio, gracias a una Beca de la *Canon Foundation in Europe*, pacté con el artista Hirohisa Maruyama que, como manera de mantener "en caliente" la gran amistad mantenida entre ambos durante ese año japonés, todos los días del año, él me mandaría -vía Internet- una imagen del sol amaneciendo por la ventana de su estudio de la bahía oriental de Yokohama, para que así, yo pudiese disfrutar con más de diez horas de contemplación de mi propio amanecer en el estudio del Golfo de Valencia. En la actualidad todavía podemos disfrutar del proyecto *Sensorium* (<http://www.sensorium.org>) que, en 1996, puso en marcha Shinichi Takemura. Significa una percepción aún más globalmente planetaria y los recursos y, por tanto, las consecuencias, se multiplican exponencialmente, pero, básicamente supone sólo una evolución tecno-conceptual de la misma idea de formalizar perceptivamente lo remoto, como algo ya mucho más próximo y más dimensionalmente reducido.

Lo que parece evidente es que estos nuevos medios se han consolidado como herramientas para la comprensión del mundo y para el desarrollo de las ideas gracias a una tecnología Instantánea; de alcance y retroalimentación inmediatas. Sin periodo de adaptación.

-Una tecnología Transparente; capaz de distribuir la información en tiempo real proponiendo la totalidad del mundo como un campo para la conciencia y una tecnología Inteligente, que nos propone una conciencia global. Imperfecta en esta época incipiente y primitiva que nos ha tocado vivir, pero que conducirá en breve a formas

)

Por ello, el artista que ha decidido trabajar en este medio y con estas tecnologías es tremendamente consciente de que todo está por hacer, que la representación de este mundo formalizará los rasgos de esta nueva cultura en ciernes. Pero sus retos son de todo tipo y la empresa gigantesca. Fundamentalmente, a mí me interesaría destacar tres grandes retos que por sí mismos definen el amplio campo de acción que hemos visto gráficamente representado en la *Idea Line* de *Artport* :

y que en las propuestas que ya hemos empezado a ver formalizadas (como apuntes Esbozos de este *work-in-progress* actual) se constituye ya la imagen embrionaria renovada de los tres protagonistas del hecho creativo :

Gracias a ellas, la visión de la Red -formalizada por sus múltiples y aproximaciones heterogéneas-, es ya algo tangible.

Idea de la Red desde sus aproximaciones creativas

Ya sabemos, por ejemplo que ésta, es a un

a. Oral y tiempo:

b. Pública y

c. Privada;

d. Individual y colectiva

También hemos llegado a comprender que la Red es una entidad compuesta de :

1. Cuerpo (*Body*)

2. Espacio (*Space*)

3. Lugar

(*Place*)

1. Cuerpo (*Body*)

-Que este cuerpo está formalizado por una gigantesca Base de

Datos Nuestra Memoria

Colectiva En la Era eléctrica nos vemos a nosotros mismos cada vez más, traducidos en

términos de información, dirigiéndonos hacia la extensión tecnológica de nuestra

conciencia" *Marshall McLuhan*

-Es orgánico, su movimiento es perpetuo y se comporta como un sistema auto-

organizado.

En todo este despliegue de formas de actuación del arte de la Red, atrevemos ~~podríamos~~ una cierta taxonomía? Mis discusiones intelectuales con mi querido y ya mencionado en este mismo texto- Paco Berenguer me permiten apuntar algunas diferencias pertinentes entre un cierto Browser Art y el Net.Art como un sistema conceptualmente intermediario entre este último y el Web.Art. Resulta obvio que en las actitudes de aquellos creadores cuyas propuestas para la Red y desde la Red las han llamado "Web Art", existe todavía una cierta tendencia a considerar el material

audiovisual que manejan como un sistema formal, cuya organización se debe en buena medida a los tradicionales parámetros constitutivos del Arte que ha caracterizado la cultura saliente y que ha presidido el acto creativo durante los últimos seis siglos. La percepción y la actitud de aquellos que en la red han construido todo cuanto hemos denominado creación del tipo "Browser Art", está, de alguna manera, relacionada con *Web Art*, por cuanto no elude su responsabilidad respecto a una cierta y necesaria formalidad " de la obra como material que se constituye en obra dispuesta a ser conservada, pero que, a diferencia del *web.art* y en sintonía con el *net.art*, tiene voluntad de ser materia constitutiva de la Red. En buena manera y en muchas ocasiones, este específico e intermediario "browser art", es deudor del trabajo tecnicista con el *software* como material creativo, sino como actitud artística *per se*. Algunos ya han convenido denominarlo "software art", pero, a pesar de su especificidad y de la pertinencia de su apelación y definición (no puesta en duda -al menos por parte de quien este ensayo-), por sí misma, esta forma de creación no necesita necesariamente de la Red para desarrollarse. Por ello, cuando lo hace, es parte del territorio creacional que hemos denominado "Browser Art".

III. Una cierta taxonomía posible

En cualquier caso, lo que sí que puedo constatar, volviendo al territorio generalista más de mi aportación, es que he observado diferentes pares -o binomios- de actitudes característicamente diferenciadas de los artistas frente a la Red (o en la Red):

Frente al medio

Los que tienen en cuenta el medio. (*net.artistas*)

Los que sólo lo usan como mecanismo de divulgación. (*pintamonas*)

Frente a la cultura

Los que están ya instalados creativamente en la nueva cultura. (*modernos*)

Los que siguen actuando según los parámetros de la vieja cultura. (*antiguos*)

Frente al discurso

Los artistas y los activistas: Sistema comunicacional para los discursos del arte actual (*net.artistas*)

Los diseñadores y publicistas. Sistema compositivo para los lenguajes artísticos (*web.artistas*)

Algunas conclusiones inconclusas

Pero lo que sí podemos aseverar para terminar, desde esta mínima histórica, ~~es que existe~~ una evolución del Arte de Red, que va desde el espíritu anti-institucional de sus acciones y el carácter efímero de las producciones de los comienzos, hasta la tendencia casi contraria actual, caracterizada por la creación de instituciones para el net art, penetrando éste en el discurso general del arte -primero- y en el mercado del arte -después-, y la construcción y mantenimiento de archivos que contengan y muestren dichas obras y sus evoluciones creativas (como en el caso extremo- del *site-galería Art.Teleportancia* de Olia Lialina, que vende obras del ~~Periodo~~ del *Net.Art --1994-1998--*, a 2.000 \$ c. u.).

“El net art, como área de investigaciones frenéticas y como territorio de innovación

Der digitale Literaturbetrieb

Analysen – Konzepte – Erfahrungen

Dokumentation des Expertengesprächs am 12. Oktober 2001. Aus Anlass des Erscheinens von "Literatur im Netz. Projekte, Hintergründe, Strukturen und Verlage im Internet" von Christine Böhler, Triton Verlag 2001 diskutierten auf Einladung von multimedia business austria im Rahmen der Frankfurter Buchmesse 2001:

Christine Böhler (Literatur + Medien)
René Kohl (txt.de)
Moderation: Stefan Becht

BECHT Herzlich willkommen. Wir sind heute mit Christine Böhler und René Kohl zusammengekommen. Die Christine hat das Buch "Literatur im Netz" gemacht, das die Grundlage unseres Gespräches sein wird. "Literatur im Netz" entstand im Zusammenhang mit einem Forschungsauftrag über digitale literarische Formen der 90-er Jahre.

Christine Böhler beschäftigt sich seit Anfang der 90-er Jahre mit der digitalen Literatur, sie ist Publizistin und freie Kuratorin und hat von 1991 bis 1998 in Wien im Literaturhaus den Veranstaltungsbereich aufgebaut. Das heißt, sie kennt sich auch aus mit Texten, mit dem Vortragen von Texten, mit den unterschiedlichen Qualitäten, und auch mit den Sensibilitäten der Autoren.

Der René Kohl handelt seit 15 Jahren mit Büchern, immer erfolgreicher. Er kümmert sich um Informationen und Ideen, und führt heute die Geschäfte von TXT. Das ist ein bisschen mehr als eine Web-Agentur, denn die kümmern sich darum, dass die Verlage ins Netz kommen. Der René kann stolz sein, denn er hat vielen kleineren und mittleren Verlagen geholfen, sich überhaupt dem Medium Internet zu nähern. Es war sehr viel Aufbauarbeit notwendig, mehr als ein Abbild eines Kataloges zu schaffen. Er wird uns dann ein bisschen was über die Problematiken, die damit verbunden sind, erzählen.

Christine Böhler betreibt seit 1996 ein Projekt, das heißt "Lichtzeile". "Lichtzeile" ist eine Web-Adresse, www.lichtzeile.at, und gleichzeitig ist diese Lichtzeile real im Wiener Stadtraum vorhanden. Mich würde interessieren, was ist das?

BÖHLER Danke für die Einführung. Die Lichtzeile ist eine Leuchtschrift, und zwar eine dieser wunderbar altmodischen 70-er Jahre Leuchtschriften, die Sie sicher alle kennen, die an Bahnhöfen und bei Frisören hängen, und die ist in Wien im Stadtraum präsent. Im größten Jugendlokal in Wien, das sich „Flex“ nennt, sie hängt dort im Winterhalbjahr im großen Veranstaltungs- und Konzertraum und im Sommerhalbjahr vor dem Lokal. Das ist am Donaukanal, ein beliebter Wiener Spazierweg, wo viele Pensionisten, Hundebesitzer, Mütter mit Kindern und Fahrradfahrer, und viele andere sind. Lichtzeile.at ist eigentlich ein sehr langes Projekt, das sich über den Österreichschwerpunkt bei der Frankfurter Buchmesse mitentwickelt hat. Damals habe ich schon Leuchtschriften-Projekte hier in Frankfurt auf der Buchmesse gemacht, unter anderem mit Elfriede Jelinek, Friederike Mayröcker, Franz Schuh, und aus dem hat sich das dann weiterentwickelt. Als das Internet öffentlich zugänglich wurde, haben wir versucht diese Technologie auch ins Netz zu bringen, und das funktioniert jetzt eben so, dass es tatsächlich diese reale neun Meter lange Laufschrift gibt. Es werden monatlich Autoren eingeladen, die ihre Texte dann zu dieser Leuchtschrift schicken. Mit Unterstützung vom Bundesministerium für Kunst in Österreich funktioniert das ganze. Gleichzeitig können Userinnen und User aus dem Netz auch ihre Texte hinschicken, und es ist so ein bisschen ein Spielen mit Text im öffentlichen Raum. Das Projekt ist auch sehr bezeichnend für das, wieso ich eigentlich diese ganze Sache hier mache und auch wieso ich dieses Buch geschrieben habe.

Ich bin begeisterte Bücherleserin, Textmensch, und habe so ein bisschen den Traum, dass Text und literarisch wertvoller Text und Sprache unsere Realität durchdringen, auch diese Werbebotschaften, die überall auftauchen, durchdringen, dass Text einfach präsent ist, dass Literatur präsent ist. Das ist die Lichtzeile.

BECHT Was mich außerdem interessiert ist, welche Literaturangebote es im Web gibt. Also vielleicht könnte einmal René anfangen uns aus seiner Sicht einen kleinen Überblick zu geben.

KOHL Ich erzähle einmal nichts von den Projekten im Netz, die ohnehin in dem Buch vorkommen. Ich kann vielleicht in zwei Sätzen sagen, welche Form der Literatur wir von TXT betreuen und verfolgen. TXT als ein existierendes Projekt, an das vieles rangehängt wurde, und das schon viele Metamorphosen durchgemacht hat, war vor fünf Jahren als eine Web-Plattform gegründet worden. Damals hieß das noch nicht Portal sondern maximal Plattform, das Wort Portal kam dann kurz danach hierzulande auf. Der Anlass war gefunden, als zwei kleine Verlage sich dachten, wir haben einen kleinen Web-Auftritt, wir würden auch gerne über das Web Bücher publizieren, wir würden vielleicht sogar alles das was man heute immer noch glaubt, printing-on-demand, ebook und all die Technologien, für uns nutzen. Bloß wie soll man uns finden? Und als zwei zusammen waren, haben sie gedacht: Wenn jetzt noch zwei oder noch fünf oder noch zwanzig sind, dann können wir vielleicht eine kritische Masse erreichen, die notwendig ist, damit ein Web-Auftritt, eine Web-Adresse, ein Ort geschaffen wird, in diesem ursprünglich ja sehr ortlosen oder nur aus lauter Inseln bestehenden Internet, damit sich an diesem Ort was trifft. Damit waren eine Unmenge von Ideen verbunden, die ich, weil ich ein Jahr später dazu stieß, nur skizziert fand als nicht klickbare Knöpfchen. Man wollte z.B. Veranstaltungen über das Internet in die Welt schicken. Das hat man auch gemacht. Ich erinnere mich an Judith Hermann, die schon vor fünf Jahren übers Web und über TXT in die Welt publiziert wurde, als, glaube ich, ihr Buch noch nicht einmal verlegt war. Man wollte Autoren einen Raum zur Selbstdarstel-

lung geben, man wollte die Publikationstechniken tatsächlich probieren, wollte Texte, deren Auflage so gering war, dass sich das Drucken nicht lohnte, zum Download ins Netz stellen, etc.. Meine Aufgabe war es, diese vielen Phantasien mit den Kollegen, die jetzt mittlerweile noch dabei sind, auf das machbare zurechtzustutzen, weil sich an jeder Ecke und zu jeder Gelegenheit zeigte, dass nicht alles machbar ist. Die Autoren waren nicht in der Lage, Texte so aufzubereiten, dass sie im Web stehen konnten, die Verlage haben die Autoren darin nicht unterstützen können, weil sie die Technik nicht beherrschten, die Übertragungsraten waren so furchtbar, wie sie es heute noch immer für größere Textmengen sind. Hörproben sind immer noch etwas mühsam an den Hörer zu bringen, auch wenn sich da natürlich einiges getan hat. Ich habe im Prinzip sehr viel damit zu tun gehabt, aus dem Wünschbaren das Machbare herauszudestillieren. Das ist zur Zeit eine sehr konzentrierte, mittlerweile hoch technologisierte, datenbankgestützte Applikation, so eine Art kleine Wundermaschine, die die Firma TXT baut, um erstmals ganz klein anzufangen, die ersten Schritte vorzunehmen, um überhaupt etwas im Web zeigen zu können. Die ersten Schritte heißt, es werden erstmals wieder nur Buchkataloge präsentiert, es werden Autorenfotos präsentiert, und es werden Autorenportraits präsentiert, und das unterstützt die Firma TXT in der Kooperation mit den Buchverlagen. Alle weiteren Vorstellungen, die wir hatten, haben wir auch noch, die heißen: Literatur übers Web, meinetwegen als Downloaddateien, Life-Lesungen im Internet veranstalten, Video-Konferenzen veranstalten. Im Moment trauen wir uns das alles noch nicht so richtig zu, oder nicht mehr richtig zu, muss man sagen.

BECHT Das war schon sehr in der konkreten Praxis. Wollen wir noch ein bisschen über die Theorie sprechen? Wollen wir noch ein bisschen über das sprechen, was auch visionär vorhanden sein könnte?

BÖHLER Visionär ist immer schwierig. Ich glaube das Netz wird so viel mit Visionen beladen, da möchte ich mich lieber etwas zurückhalten. Im Augenblick passiert dieser Auszug auch der Literatur ins Netz, und das Netz ist ja

ein Medium in dem jeder und jede, der Zugang zum Internet hat, und technologisch was kann, publizieren kann. Das wird im amerikanischen Sprachraum, wo das am meisten passiert, „personal narrative“ genannt. Das ist diese Ebene der unzähligen TagebuchschreiberInnen, das ist auch die Ebene der unzähligen Autoren, die sich jetzt vielleicht gar nicht mehr darum kümmern, einen Verlag zu finden. Es gab ja schon immer, glaube ich, unzählige Menschen, die Literatur produzierten, die lag dann halt in der Schublade. Diese Leute haben die Möglichkeit, ihre Texte jetzt ins Web zu stellen. Aber ist das, und da hat die Wissenschaft momentan große Probleme, dann veröffentlicht? Ich habe dafür den Ausdruck „öffentliche Intimität“ geprägt, weil bisher eben zum Beispiel Tagebücher Schlüsselchen mit Schloss dran hatten, und jetzt stehen diese Dinge einfach im Web. Das heißt, es entsteht einmal eine Ebene von unzähligen Schreibenden und Publizierenden, das ist die Ebene des Minimedia, die vor sich hindichtet und arbeitet und tut, mit absolut keinem Qualitätslevel. Es gibt ja auch keine Strukturen bisher im Netz, die sagen, das ist gut, oder das ist schlecht. Organisieren im Sinn von Zusammenschlüssen tut sich diese Szene dann dennoch. Es gibt Verbindungen, etwa Web-Ringe, die kennen Sie wahrscheinlich alle, wo man von einem Themenkreis zum nächsten über die Seiten hüpfen kann. Es gibt dann wieder Seiten, die über diese kleinen Seiten schreiben, das ist die Ebene des sogenannten Middlemedia, und dann kommen erst die Massenmedien. Und es gab ja immer schon Kommunikation am Telefon, Kommunikation unter Menschen, nur hat es jetzt so diesen „globalen Touch“, wobei global für mich dann immer Europa, also die erste Welt ist, und Amerika und Japan usw., und damit wird gewissermaßen eine Entmachtung einerseits der Diskursmacht der Massenmedien erreicht, andererseits natürlich auch eine Entmachtung der Verlage, denn teilweise machen sich Leute als Autoren ohne Verlag selbständig. Und man muss davon ausgehen, dass Autoren, auch kleine Autoren ja auch im „analogen Raum“ nichts verdienen. Wer kann leben vom Schreiben?

KOHL Das lässt mich sofort fragen, was heißt das denn „Autoren“? Wenn einerseits

Autoren im Web sich selbst verlegen, unlektoriert möglicherweise, und wenn andererseits die Verlage entweder kein Interesse oder keine Möglichkeit oder keine Kompetenz haben, Autoren übers Web zu verlegen. Also ich sehe zumindest verlagsseitig wenig Ambitionen. Bis auf Ausnahmeprojekte wie „Null“, von dem du in deinem Buch schreibst, dass es doch eher so ein bisschen nach Marketing-Gag riecht, als nach wirklich neuer literarischer Inspiration. Was vielleicht aus Sicht der Herausgeber nicht stimmt, aus Sicht des Verlages vielleicht etwas mehr. Was heißt das, wenn die Autoren einerseits sich selbst verlegen, die Verlage dieses Medium nicht relevant finden, spricht das gegen die Qualität der Texte, oder für die Inkompetenz der Verlage? Das würde mich interessieren.

BÖHLER Ich glaube es spricht für beides. Die Verlage spüren eine starke Bedrohung durch das Netz, es gibt eine Umfrage vom Fraunhofer-Institut, die letztes Jahr durchgeführt wurde. Von 225 befragten Verlegern sagen ca. 97 %, dass sie das Netz als Bedrohung erfahren, weil Content abwandert.

KOHL Ich hatte gefragt warum, also worin besteht die Bedrohung für die Verlage?

BÖHLER Ich zitiere: „Das Fraunhofer-Institut untersuchte in der Studie „Veränderungsmanagement im Verlagswesen“, durchgeführt im zweiten Halbjahr 1999, die Haltung deutscher Verlage zum sich ändernden Markt- und Berufsbild, und stellte die Frage nach möglichen Maßnahmen und Zukunftsentwicklungen. 95 % der 227 zu ihrer Lage befragten Verleger gaben an, einen starken bis sehr starken Veränderungsdruck zu spüren. Die Gründe sahen über 70 % in der inhaltlichen, redaktionellen Qualität. Inhalt, als die wichtigste Ware der Verlage, ist sowohl in der Definition, als auch in der wirtschaftlichen Bedeutung einem Wandel unterworfen. Bisher als kulturell wertvoll definierte Inhalte verlieren in der Informationsgesellschaft an Bedeutung, da sie in den neuen Medien schlecht verwertbar sind. Das Internet als Content-Industrie bietet neue Möglichkeiten und bedroht gleichzeitig die klassischen Geschäftsgebiete der Verlagsindustrie.“ So weit zu

dieser Bedrohung oder zu diesem Veränderungsdruck. Das Internet fordert ja völlig andere Textarten und völlig anderen Umgang mit Text als es das klassische Medium Buch tut. Im Buch habe ich ein langes Stück Text, das linear gelesen werden kann, das als abgeschlossenes Werk vorliegt. Das Internet will kleine, fragmentierte Textteile, die sich immer wieder aufeinander beziehen, die dann auch im Netz unendlich oft, oder sehr oft, in verschiedenen Zusammenstellungen vorkommen. Das Netz verlangt sehr nach grafischen Elementen, verlangt nach Ton. Da sind dann auch die vielen, ich sage einmal Schriftstellerseiten, die nichts anderes tun als im Netz zu publizieren, d.h. ihr Gedicht 'reinzustellen. Aber was will ich mit einem Gedicht im Netz? Also ist die Frage, was will das Medium? Und das spüren natürlich auch die Autoren. Ich glaube, dass die literarischen Verleger am wenigsten Veränderungsdruck spüren. Die großen Verlierer waren teilweise bisher die enzyklopädischen, wobei das zum Teil auch die ganz großen Gewinner sind, was Naturwissenschaften und Sozialwissenschaften betrifft. Da glaube ich, dass sehr viel passiert, dass aber die neuen Arten, die überhaupt im Netz passieren könnten, sich erstens noch nicht wirklich herausgebildet haben, und zweitens die Verleger auch da nie wirklich eingestiegen sind. Und das ist auch so ein bisschen mein Vorwurf und meine Aufforderung in diesem Buch. Es wäre ein Ziel, dass literarische Verleger ihr kreatives Potential nutzen. Die Verlage haben ja die Autoren, die haben ja begabte Menschen um da mehr zu tun, als eben nur ihr Verlagsprogramm auf die Webseite zu stellen.

BECHT René, vielleicht könntest du ein bisschen erzählen, was die alltäglichen Probleme sind, dann wird vielleicht auch etwas deutlicher, warum gerade die Verlage etwas zögerlich und vielleicht auch kompliziert und behäbig sind.

KOHL Das ist ziemlich einfach gesagt: Wir arbeiten mit kleinen oder mittelgroßen Unternehmen, die sehr rührig sind, z.B. der Kunstmann-Verlag oder der Luchterhand -Verlag oder der Christoph Links-Verlag oder der Merwe-Verlag oder der Wagenbach -Verlag, also im Prinzip die Verlage, die man aufzählt, wenn man

so von den kleinen oder Independent Verlagen spricht, die können ja groß an Inhalt und klein an Verlagsvolumen sein. Das Hauptproblem ist die technische Inkompetenz in den Häusern, es wird nicht geschult. Ich bin mir auch nicht sicher, wie weit die Ausbildungssituation, die Fortbildungssituation darauf Rücksicht nimmt. Die Berufsschulen und die Fachhochschulen scheinen da stärker orientiert zu sein, an der Universität scheint da einfach nach wie vor entschieden Inhalt gelehrt zu werden, und noch zu wenig Technik. Die Alten lassen die Jungen nicht ran, das heißt, die Alten entscheiden am Ende für welche Ideen Geld ausgegeben wird, und wenn jemand nicht versteht, dass in der Technik nicht nur der Feind steckt, sondern dass da auch Hilfen stecken, dann tritt man auf der Stelle. Die Verlage, mit denen wir arbeiten, haben zum Teil schon gemerkt, dass man einiges mit dem Web anfangen kann, müssen aber leider erst erfahren, dass sie in früheren Zeiten ihre Hausarbeiten nicht gemacht haben. Das heißt, dass sie nicht gründlich das Datenmaterial aufbereitet haben, sondern man hat ein Buch hergestellt, hat es setzen lassen, hat es dann dem Drucker geschickt, der Drucker hat es gedruckt, und der Verlag hat die Datei gelöscht. Das heißt, wenn man heute ältere Texte ins Netz stellen wollte, und sei es nur weil sie vergriffen sind, wären viele Verlage gezwungen sie neu zu erfassen oder einscannen zu lassen. Sie haben wenig Erfahrung im Umgang mit Bildmaterial, das heißt, selbst wenn Bilder produziert sind, wenn es Autorenfotos gibt, oder wenn die Autoren auch Material mitbringen, was vielleicht rund um den Entstehungsprozess eines Buches interessant wäre, wenn man sagen würde, die Dokumentation zum Buch findet man im Web oder ähnliches, würden die Verlage weder organisatorisch noch technisch noch auch was ihre Inspiration betrifft, auch nur irgendwie wissen, wie sie es machen sollten. In diesen Bereichen versuchen wir schon Ideen zu sammeln, wir versuchen, Kommunikationsflüsse zu unterstützen, und müssen wirklich ziemlich an der Basis anfangen. Autoren, könnte ich mir vorstellen, gibt es schon, gerade jüngere Autoren, die mit dem Computer groß geworden sind, die können sicher mit den Medien eleganter umgehen. Wenn sie aber so richtig inspiriert sind, wenn sie mit all ihrem Sachverstand, mit all diesem cross-

media-Wissen anfangen wollen, dann werden sie heute nicht mehr auf die Idee kommen, ein Buch machen zu wollen, sondern dann werden sie auf die Idee kommen, eher zum Film, oder eher vielleicht in die neue Medienindustrie zu gehen. Es gibt natürlich Ausnahmen, aber es sind Ausnahmen und es erfordert ein hohes Verständnis des Autors und wahrscheinlich ziemlich viel Vertrauen seitens des Verlags, damit so etwas entsteht. Zum Beispiel ein Buch wie "Kahuna-Modus", das jetzt gerade als ein auf verschiedenen Kanälen operierendes Projekt entstanden ist.

BÖHLER Ja. Oder auch Leute, die ausziehen ins Web, und gar nicht mehr Dichter werden. Es gibt ein Interview im Buch mit der Medienkunstgruppe "Übermorgen.com": Die sind hier in Deutschland bekannt geworden durch ihre Aktion mit Christoph Schlingensief. Bei seiner Hamlet-Inszenierung im Schauspielhaus Zürich haben sie diese Naziline-Webpage gemacht, sie arbeiten sehr viel mit fact und fiction im Netz. Also mit der Tatsache, dass wir noch alte kulturelle Muster haben, wir vertrauen einer bestimmten Art von Grafik, Aufmachung, Sprache, das impliziert für uns Wahrheit, und genau das tun "Uübermorgen.com".

Die haben auch diese US-Präsidenten - Wahlkampf Seite vote auction gemacht, wo man Wahlkampfstimmen verkaufen konnte. Das ist tatsächlich gelandet vor dem obersten Richter in Amerika, der dann entscheiden musste, ist das jetzt fact oder fiction. Till Eulenspiegel ist etwas ganz ähnliches, im Netz, da leben solche Dinge jetzt natürlich wieder auf. Bei dem Interview, das ich mit ihnen geführt habe, sagte einer von Übermorgen, der früher Mitglied bei der bekannten Medienkunstgruppe „e-toy“ war, dass er eigentlich mit Schreiben begonnen hat. Also er saß dann auf irgendwelchen Raves mit seinem Laptop und hat geschrieben, hat es aber nie wirklich zum Buch geschafft. Aber über die Verbindung verschiedener Medien mit Kunst hat er geschafft, seine Fiktionen im Netz zu bauen, und er hat sich sehr gefreut, als ich gesagt habe, für mich ist das eine Art von Literatur, von Narrativität.

Das andere Beispiel, der Kahuna-Modus ist ein Roman, der letztes Jahr bei Eichborn erschienen ist. Im Zuge der medialen Aufrüstung der Verla-

ge hat man die Autorin Nika Bertram gefragt, ob sie auch was im Web dazu machen will, und das hat sie getan: einerseits ein MUD, das ist so eine Art verbesserter Chat-Raum, eine alte Form von Chat-Raum, wo man verschiedene Identitäten annehmen kann, Gebäude bauen und Taxi fahren, oder sich prügeln kann oder was immer, sehr nett und gar nicht multimedial, ein reiner Textraum. Das hat Nika Bertram gebaut, und dazu noch ein digitales Spiel. Ich finde dieses Projekt eben so spannend, weil man da auch die verschiedenen Kulturtechniken sieht, die notwendig sind, solche Texte zu erfassen und zu begreifen. Wir sind ja alle gewohnt Bücher zu lesen, und tun uns da nicht schwer. Ich habe aber gemerkt, wie schwierig es für mich ist, mich dem Stoff zu nähern über das digitale Spiel oder über das MUD. Und natürlich auch der gravierende Unterschied, dass ein Buch im Moment seines Erscheinens ein abgeschlossenes Werk ist. Es hat dann noch eine Rezeptionsgeschichte, aber die Geschichte an sich ist festgeschrieben. Das MUD zum Beispiel entsteht mit der Benützung. Da werden Strukturen vorgegeben, und dann kann es auch von den Usern weiterentwickelt werden. Die Adresse ist www.kahunamodus.de.

BECHT Da möchte ich ganz vehement widersprechen. Das Buch ist nach wie vor das stärkste Medium, weil ich es überall hin mitnehmen kann. Das Buch ist kompakt, es ist fertig, jeder der eine wirkliche Botschaft hat, kann ein Buch schreiben. Für mich wäre die Frage interessant, wo verknüpft sich denn was mit wem? Oder schließt es sich aus? Seht Ihr diese Ausschlüsse überhaupt, oder könnte es nicht viel mehr so sein, dass man sich gegenseitig hilft? Und dass dieses gegenseitige Helfen, also auch das Buch dem Web, dazu beitragen könnte, beides, oder vielleicht noch mehr Medienformen stärker zu machen. Und dann wüsste ich gern von dir, inwieweit das Web für dich ein Distributionsmedium ist, also nicht nur für Texte, sondern auch für Waren, die dann wieder körperlich werden? Und von dir wüsste ich gerne, inwieweit aus den Texten, die es digital gibt, irgendwann vielleicht doch wieder, wie bei dir, auch Bücher werden?

KOHL Wir haben eine Erfahrung gemacht, in dem Präsentieren der Bücher und in dem was zählbar ist. Wir haben bei uns einen Shop installiert, wo man Bücher der Verlage, die mit uns zusammen Web-Auftritte bauen, auch über uns bestellen kann, und über den Shop können wir relativ viel darüber erfahren, was Leute interessiert, wenn sie bei uns unterwegs sind. Was mir sehr stark auffällt ist, dass Literatur grundsätzlich nicht gekauft wird im Internet. Wir haben Verlage, die ganz klassisch das ganze Sortiment haben: Literatur, Politik, Sachbuch, Philosophie und Kunst. Literatur ist definitiv, was man über das Web nicht präsentiert bekommen möchte. Oder vielleicht präsentiert, aber was man nicht kaufen möchte. Das Internet ist offenbar nicht geeignet genug, diese Atmosphäre zu vermitteln, die man gerne vermittelt bekommen möchte, wenn man angestoßen sein möchte, Literatur zu beziehen. Ich denke, das gilt nicht nur für den Kauf von Büchern, ich vermute, das würde auch gelten, wenn man Literatur umsonst beziehen könnte. Meine Vermutung ist, man will einfach Literatur so nicht präsentiert bekommen. Ich glaube zweitens, dass das Buch sehr stark ist, und dass es auch für bestimmte Formen z.B. den Roman, ein praktisches, handliches Medium ist. Wenn man das Buch hat, warum soll man es nicht nutzen, warum soll man nicht solche Bücher machen?

Das Beispiel vorher fand ich schon ganz interessant. Ich habe mit dem Verleger des Gestalten-Verlages, so einem Design-starken Verlag aus Deutschland, gesprochen, der so wunderbare Verpackungen, wunderbare Mixturen aus Buch und CD, Buch und vielleicht auch demnächst DVD entwickeln wird. Ich habe mit ihm darüber gesprochen, was eigentlich so los ist, warum sich die ganze Welt ändert, warum man auch so viel mit Bildern zu tun bekommt, und warum man eigentlich aus allen anderen Branchen auch noch Anregungen aufnehmen könnte. Und warum die Verleger nicht Lust haben, mehr zu machen, als das was sie machen. Man kann sagen, sie haben keine Lust, weil sie keine Lust haben Geld auszugeben für Dinge, die sie nicht richtig verstehen. Denn alles das, was nicht Buch machen ist, muss man erst einmal lernen wollen. Aber ich denke, es hat auch etwas mit mangelnder Phantasie zu tun, und ich glaube wirklich, dass es für jüngere Autoren noch andere

Vorstellungen gibt sich zu artikulieren, als nur in Buchform. Und die Verlage unterstützen sie nicht. Es ist für einige Schaffende, die ich kenne, nicht sexy, so einen Verlag zu suchen, das ist ein Zurückgehen in eine Welt, die das nicht umsetzt, was man selber bietet. Ich finde ein sehr starkes Argument ist, dass die Verlagswelt ein wenig die Kompetenz verliert, an der künstlerischen Avantgarde teilzunehmen, weil sie darauf verzichtet, neue Medien überhaupt in ihren Vorstellungskreis gelangen zu lassen.

BÖHLER Eine deiner Fragen war die nach der Stärke des Buches. Ich glaube durchaus, dass der Roman ans Buch gebunden ist. Und daher glaube ich, wird die neue Erzählform, wenn man von so etwas sprechen will, bei narrativen Strukturen im Netz, nicht der Roman sein. Ich glaube aber durchaus, dass Bücher ins Netz wirken können und vice versa, auch wenn die Beispiele, die im Buch vorkommen eigentlich alle echte Probleme haben. Also "Null", wahrscheinlich das bekannteste Projekt hier in Deutschland, das im Netz entstanden ist und dann ins Buch ging, hatte ja doch auch mit recht schlechter Presse zu kämpfen. Und dann gibt es noch das andere Beispiel das Tagebau-Projekt, dem wurde sehr angekreidet, wieso es jetzt überhaupt als Buch veröffentlicht werde. Weil natürlich die im Netz vorherrschenden Gegebenheiten, und auch die im Netz vorherrschende Schreibweise nicht literarischen Qualitätsnormen entspricht. Ich glaube, es ist sehr problematisch, wenn man Netzliteratur oder unter den Bedingungen des Netzes entstandene Literatur dann wieder in die Buchform transportiert und als Buch veröffentlicht. Das wird nach einem anderen Maßstab gemessen, nämlich nach dem Maßstab des literarischen Kanons, den das Buch impliziert. Und ich glaube, da liegt ein großes Problem, da wir einerseits keine Maßstäbe haben, und keine oder kaum Vergleichswerte für literarische Formen im Netz, bis auf die ewige Hypertextdebatte, die, glaube ich, mehr geschadet als wirklich Gutes bewirkt hat, was die Literatur betrifft. Also wirken kann das Buch sehr wohl, nur die Vergleichswerte und die Erfahrungswerte sind nicht da.

Wenn man tatsächlich mit dem Netz und mit neuen Medien arbeiten will, muss man ja im besten Fall nicht nur begnadeter Schreiber oder

Schreiberin sein, sondern auch noch wissen, was überhaupt geht, und wie das geht, wie ich es realisieren kann. Man muss im besten Fall programmieren können, oder muss einen Programmierer bezahlen können. Das sind ja wesentlich teurere Dinge als sich hinsetzen mit einem Blatt Papier und schreiben. Und wenn die Verlage sich da völlig raushalten - auch die meisten Verlage haben wenig Geld - haben wir wieder das Problem der Realisierung.

KOHL Man kann die beiden Aspekte schon zusammendenken. Den Aspekt der Qualitätsfrage, wo du sagst, es gibt keine Maßstäbe. Ein Maßstab für etwas, was gelesen werden könnte, könnte sein, was ein gediegener Lektor oder meinetwegen auch ein kaufmännisch ausgerichteter Verleger für gut befindet. Das könnte ein Maßstab sein, mit dem man sich auch für das Web Kommunikationsformen vorstellen könnte. Es ist nur so, dass die Lektoren an der Stelle streiken, oder die Verleger an der Stelle streiken, und sagen: wir verstehen unsere Kompetenz nicht nur an den Text, sondern offenbar auch an das Papier gebunden. Und ich denke, da produziert man eine Sackgasse, aus der man rauskommen könnte, und aus der man auch irgendwann rauskommen wird. Also ich glaube, das ist eine Frage der Zeit und vielleicht noch eine Frage der Gewöhnung. Die technische Seite, die zu beherrschen zur Zeit noch Aufwand bedeutet, und Aufwand bedeutet dann letztlich Geld, wird sich auch vereinfachen. Die technischen Hilfsmittel werden einfacher. Sich selbst verlegen, oder Texte ins Netz stellen kann heute jeder, das kann man wirklich lernen, und das kostet tendenziell eher weniger als mehr. Es ist nur daran gebunden, dass es Verleger gibt, die das machen möchten, die sagen, wir möchten gerne ein Buch und den Web-Auftritt präsentieren, und wir sagen dem Käufer des Buches, du kriegst damit noch einen Web-Auftritt mitgeliefert, du kriegst z.B. noch ein Passwort mitgeliefert oder du kriegst einen Zugang mitgeliefert. Man muss da nur auch etwas versprechen was dann kommt, und da haben wir noch nicht viel gesehen, würde ich sagen.

BECHT Wenn die Autoren selbst im Web publizieren, was wären dann die vorstellbaren Formen?

BÖHLER Ich muss da jetzt leider ganz woanders einhaken, weil wir dauernd von den Verlagen sprechen, sagen wir einmal die klassischen Printverlage. Ich habe mir auch angeschaut was die "neuen" Verlage im Netz so tun, und ich finde deswegen auch ganz gut, dass wir hier sitzen, umgeben von Adobe und Microsoft. Tatsächlich ist es ja so, dass die IT-Industrie, also die Internet-Industrie für sich alles beansprucht, was Content ist. Content ist alles, was im Netz vorkommt, das ist Software, das sind User-Daten, das sind Texte, das sind Fotos, das ist aber auch Kultur, das ist schlichtweg alles, was im Netz ist. Und die neuen Verlage, die im Netz entstehen, sind sehr oft kleine Zweigfirmen von großen Internet-Technologiefirmen, die dann unter anderem in ihrem Repertoire auch Literatur dabei haben: „Wir machen jetzt auch eine kleine Seite für Literatur, kostet ja nicht viel“. Die Leute können dort gratis ihre Texte abgeben, es gibt eine minimale Community-Betreuung, und wenn sich was daraus entwickelt, ist gut, und sonst ist nicht viel verloren gegangen. Dann verbreitet etwa Adobe mit e-book und PDF-Reader neue Modelle für Literatur im Netz.

Print-on-demand ist eine digitale Technologie, die sehr niedere Auflagenzahlen erlaubt, die meist dazu führt, dass die Autorinnen und Autoren ihre Bücher völlig selbst finanzieren. Und da sehe ich auch eine große Gefahr. Es gibt Verlage, die sind eigentlich reine Dienstleistungsbetriebe, die es Schreibwilligen und Literaten und anderen ermöglichen, ihre Bücher zu publizieren. Ich zahle als Autor dafür, ich bin mein eigener Verleger, mein eigener Redakteur, mache die Grafik selbst, mache das Lektorat selbst, und ich muss dann eigentlich auch noch selbst meine Käufer finden. Und in all dem sehe ich wirklich eine große Gefahr. Es gibt Vorzüge dieser Technologie für antiquarische Werke, die so leicht wieder aufgelegt werden können. Wie bei jeder Technologie gibt es hier Vorteile und Nachteile, aber das momentane Problem bei den Autoren ist, dass sie völlig auf sich selbst zurückgeworfen werden, das Buch selbst finanzieren. Die neuen Verlage sind fast alle - es gibt wenige Ausnahmen - reine Dienstleistungsbetriebe, die sagen: O.K. gib mir deinen Inhalt, ich mache ein Buch daraus, das kostet tausend Mark, und das ist ganz günstig.

KOHL Meine These wäre, es gibt keinen Autor ohne Verleger. Das heißt, man kann zwar schreiben, man kann sich als Schreibender fühlen, man kann seine Texte ins Netz stellen, man kann seine Texte von Printing-on-demand drucken lassen, aber man wird denjenigen brauchen, diese erste Instanz, die nicht der Käufer ist. Ich habe den Verleger, der mir gesagt hat, das ist gut, was du machst, der mir hilft, aus einem Text ein Buch zu machen, der dafür sorgt, dass es hergestellt wird, und dass es verbreitet wird. Das ist für mich interessant, alles andere kann sich im Netz finden, kann sich treffen, kann sich kurzschließen. Und sobald sich irgend etwas herauskristallisiert, was interessanter ist, wird daraus das Buch werden, wonach sich alle sehnen, oder dann wird auch meinetwegen das Online-Projekt, wonach sich alle sehnen, und das erst dann wahrgenommen wird, wenn es die Reputation durch den Verlag bekommt. Das finde ich auch nicht schlecht so. Ich meine, die Verleger haben eine Aufgabe, das wiederhole ich noch einmal, in der sie gebraucht werden, als Beobachter und Begutachter und dann auch Distributoren. Dann müssen sie sich auch, oder sollten sie sich auch die technische Butter nicht vom Brot nehmen lassen, und sollten nicht an der Stelle aufhören, wo Adobe anfängt, sondern sollten im Prinzip Adobe vorschlagen, wie sie sich die e-books vorstellen, oder wie sie sich die Formate vorstellen, oder wie sie sich die Ästhetik vorstellen. Und nicht die Technik sollte dem Verlag alles dieses vorstellen.

BECHT Also ist der Tenor, es geht nicht um den Leser, es geht zuerst um den Verleger, um eine redaktionelle Instanz. Das schöne am Web ist doch, dass erst einmal jeder lesen kann, das heißt, die Resonanz wäre auch eine direkte vom Leser. Du sagst, die Verleger sollten ihrer "verlegerischen Aufgabe" gesamt habhaft werden. Sie sollen sich auch darum kümmern, was im Web passiert, sie sollen sich darum kümmern, welche technologischen Möglichkeiten zur Verfügung stehen und sich nicht auf irgendwelche "merkwürdige" Lesegeräte festlegen, wenn es längst schon Möglichkeiten gibt, Sachen auch auf Papier wieder auszudrucken, wenn sie nur digital vorhanden sind.

Christine, wie ist das für dich? Siehst du zuerst den Verleger und dann den Leser, oder zuerst den Leser und dann den Verleger?

BÖHLER Ganz wichtig und entscheidend ist das kommunikative Moment im Netz, aus dem sehr viel entstehen kann und auch die Freiheit, die mit dem Netz entstanden ist, Dinge in die Welt zu setzen, Dinge auszuprobieren - und dass Strukturen entstehen, seien es künstlerische Strukturen, seien es inhaltliche. Ich sehe nur eine Gefahr darin: es bilden sich immer mehr globale Stoffe und globale Werke heraus, und auf der anderen Seite kleine Communities. So existieren große globale Stoffe wie Harry Potter. Die werden dann wirklich auf allen Ebenen dieser Welt, die nur vorstellbar sind, vom T-Shirt über die Unterhose zur Teetasse zum Buch zur CD-Rom vermarktet, da gibt es auch alle Medienformate dazu. Ich war zwar noch nie auf der Harry Potter-Website, aber ich bin sicher, die gibt es, und wahrscheinlich ist die gar nicht so schlecht, keine Ahnung. Und dann gibt es die kleinen Gruppen etwa der Tomatenzüchter für die ganz spezielle Sorte. Es passiert natürlich, dass ästhetisch schwierige Formen abdriften in kaum mehr wahrnehmbares Ding, vor allem wenn es keine Strukturen gibt, die auffangen und promoten und festhalten. Da sehe ich momentan eigentlich die Schwierigkeit.

Der digitale Literaturbetrieb

Analysen – Konzepte – Erfahrungen

Dokumentation des Expertengesprächs am 12. Oktober 2001. Aus Anlass des Erscheinens von "Literatur im Netz. Projekte, Hintergründe, Strukturen und Verlage im Internet" von Christine Böhler, Triton Verlag 2001 diskutierten auf Einladung von multimedia business austria im Rahmen der Frankfurter Buchmesse 2001:

Christine Böhler (Literatur + Medien)

René Kohl (txt.de)

Moderation: Stefan Becht

BECHT Herzlich willkommen. Wir sind heute mit Christine Böhler und René Kohl zusammgekommen. Die Christine hat das Buch "Literatur im Netz" gemacht, das die Grundlage unseres Gespräches sein wird. "Literatur im Netz" entstand im Zusammenhang mit einem Forschungsauftrag über digitale literarische Formen der 90-er Jahre.

Christine Böhler beschäftigt sich seit Anfang der 90-er Jahre mit der digitalen Literatur, sie ist Publizistin und freie Kuratorin und hat von 1991 bis 1998 in Wien im Literaturhaus den Veranstaltungsbereich aufgebaut. Das heißt, sie kennt sich auch aus mit Texten, mit dem Vortragen von Texten, mit den unterschiedlichen Qualitäten, und auch mit den Sensibilitäten der Autoren.

Der René Kohl handelt seit 15 Jahren mit Büchern, immer erfolgreicher. Er kümmert sich um Informationen und Ideen, und führt heute die Geschäfte von TXT. Das ist ein bisschen mehr als eine Web-Agentur, denn die kümmern sich darum, dass die Verlage ins Netz kommen. Der René kann stolz sein, denn er hat vielen kleineren und mittleren Verlagen geholfen, sich überhaupt dem Medium Internet zu nähern. Es war

BÖHLER Danke für die Einführung. Die Lichtzeile ist eine Leuchtschrift, und zwar eine dieser wunderbar altmodischen 70-er Jahre Leuchtschriften, die Sie sicher alle kennen, die an Bahnhöfen und bei Frisören hängen, und die ist in Wien im Stadtraum präsent. Im größten Jugendlokal in Wien, das sich „Flex“ nennt, sie hängt dort im Winterhalbjahr im großen Veranstaltungs- und Konzertraum und im Sommerhalbjahr vor dem Lokal. Das ist am Donaukanal, ein beliebter Wiener Spazierweg, wo viele Pensionisten, Hundebesitzer, Mütter mit Kindern und Fahrradfahrer, und viele andere sind. Lichtzeile.at ist eigentlich ein sehr langes Projekt, das sich über den Österreichschwerpunkt bei der Frankfurter Buchmesse mitentwickelt hat. Damals habe ich schon Leuchtschriften-Projekte hier in Frankfurt auf der Buchmesse gemacht, unter anderem mit Elfriede Jelinek, Friederike Mayröcker, Franz Schuh, und aus dem hat sich das dann weiterentwickelt. Als das Internet öffentlich zugänglich wurde, haben wir versucht diese Technologie auch ins Netz zu bringen, und das funktioniert jetzt eben so, dass es tatsächlich diese reale neun Meter lange Laufschrift gibt. Es werden monatlich Autoren ein-

sehr viel Aufbauarbeit notwendig, mehr als ein Abbild eines Kataloges zu schaffen. Er wird uns dann ein bisschen was über die Problematiken, die damit verbunden sind, erzählen.

Christine Böhler betreibt seit 1996 ein Projekt, das heißt "Lichtzeile". "Lichtzeile" ist eine Web-Adresse, www.lichtzeile.at, und gleichzeitig ist diese Lichtzeile real im Wiener Stadtraum vorhanden. Mich würde interessieren, was ist das?

geladen, die ihre Texte dann zu dieser Leuchtschrift schicken. Mit Unterstützung vom Bundesministerium für Kunst in Österreich funktioniert das ganze. Gleichzeitig können Userinnen und User aus dem Netz auch ihre Texte hinschicken, und es ist so ein bisschen ein Spielen mit Text im öffentlichen Raum. Das Projekt ist auch sehr bezeichnend für das, wieso ich eigentlich diese ganze Sache hier mache und auch wieso ich dieses Buch geschrieben habe.

Ich bin begeisterte Bücherleserin, Textmensch, und habe so ein bisschen den Traum, dass Text und literarisch wertvoller Text und Sprache unsere Realität durchdringen, auch diese Werbebotschaften, die überall auftauchen, durchdringen, dass Text einfach präsent ist, dass Literatur präsent ist. Das ist die Lichtzeile.

BECHT Was mich außerdem interessiert ist, welche Literaturangebote es im Web gibt. Also vielleicht könnte einmal René anfangen uns aus seiner Sicht einen kleinen Überblick zu geben.

KOHL Ich erzähle einmal nichts von den Projekten im Netz, die ohnehin in dem Buch vorkommen. Ich kann vielleicht in zwei Sätzen sagen, welche Form der Literatur wir von TXT betreuen und verfolgen. TXT als ein existierendes Projekt, an das vieles rangehängt wurde, und das schon viele Metamorphosen durchgemacht hat, war vor fünf Jahren als eine Web-Plattform gegründet worden. Damals hieß das noch nicht Portal sondern maximal Plattform, das Wort Portal kam dann kurz danach hierzulande auf. Der Anlass war gefunden, als zwei kleine Verlage sich dachten, wir haben einen kleinen Web-Auftritt, wir würden auch gerne über das Web Bücher publizieren, wir würden vielleicht sogar alles das was man heute immer noch glaubt, printing-on-demand, ebook und all die Technologien, für uns nutzen. Bloß wie soll man uns finden? Und als zwei zusammen waren, haben sie gedacht: Wenn jetzt noch zwei oder noch fünf oder noch zwanzig sind, dann können wir vielleicht eine kritische

lung geben, man wollte die Publikationstechniken tatsächlich probieren, wollte Texte, deren Auflage so gering war, dass sich das Drucken nicht lohnte, zum Download ins Netz stellen, etc.. Meine Aufgabe war es, diese vielen Phantasien mit den Kollegen, die jetzt mittlerweile noch dabei sind, auf das machbare zurechtzustutzen, weil sich an jeder Ecke und zu jeder Gelegenheit zeigte, dass nicht alles machbar ist. Die Autoren waren nicht in der Lage, Texte so aufzubereiten, dass sie im Web stehen konnten, die Verlage haben die Autoren darin nicht unterstützen können, weil sie die Technik nicht beherrschten, die Übertragungsraten waren so furchtbar, wie sie es heute noch immer für größere Textmengen sind. Hörproben sind immer noch etwas mühsam an den Hörer zu bringen, auch wenn sich da natürlich einiges getan hat. Ich habe im Prinzip sehr viel damit zu tun gehabt, aus dem Wünschbaren das Machbare herauszudestillieren. Das ist zur Zeit eine sehr konzentrierte, mittlerweile hoch technologisierte, datenbankgestützte Applikation, so eine Art kleine Wundermaschine, die die Firma TXT baut, um erstmals ganz klein anzufangen, die ersten Schritte vorzunehmen, um überhaupt etwas im Web zeigen zu können. Die ersten Schritte heißt, es werden erstmals wieder nur Buchkataloge präsentiert, es werden Autorenfotos präsentiert, und es werden Autorenportraits präsentiert, und das unterstützt die Firma TXT in der Kooperation mit den Buchverlagen. Alle weiteren Vorstellungen, die wir hatten, haben wir auch noch, die heißen: Literatur übers Web, meinetwegen als Downloaddateien, Life-

Masse erreichen, die notwendig ist, damit ein Web-Auftritt, eine Web-Adresse, ein Ort geschaffen wird, in diesem ursprünglich ja sehr ortlosen oder nur aus lauter Inseln bestehenden Internet, damit sich an diesem Ort was trifft. Damit waren eine Unmenge von Ideen verbunden, die ich, weil ich ein Jahr später dazu stieß, nur skizziert fand als nicht klickbare Knöpfchen. Man wollte z.B. Veranstaltungen über das Internet in die Welt schicken. Das hat man auch gemacht. Ich erinnere mich an Judith Hermann, die schon vor fünf Jahren übers Web und über TXT in die Welt publiziert wurde, als, glaube ich, ihr Buch noch nicht einmal verlegt war. Man wollte Autoren einen Raum zur Selbstdarstel-

http://www.mba.at/ffb_2001/

ein Medium in dem jeder und jede, der Zugang zum Internet hat, und technologisch was kann, publizieren kann. Das wird im amerikanischen Sprachraum, wo das am meisten passiert, „personal narrative“ genannt. Das ist diese Ebene der unzähligen TagebuchschreiberInnen, das ist auch die Ebene der unzähligen Autoren, die sich jetzt vielleicht gar nicht mehr darum kümmern, einen Verlag zu finden. Es gab ja schon immer, glaube ich, unzählige Menschen, die Literatur produzierten, die lag dann halt in der Schublade. Diese Leute haben die Möglichkeit, ihre Texte jetzt ins Web zu stellen. Aber ist das, und da hat die Wissenschaft momentan große Probleme, dann veröffentlicht? Ich habe dafür den Ausdruck "öffentliche Intimität" geprägt, weil bisher eben zum Beispiel Tagebücher Schlüsselchen mit Schloss dran hatten, und jetzt stehen diese Dinge einfach im Web. Das heißt, es entsteht einmal eine Ebene von unzähligen Schreibenden und Publizierenden, das ist die Ebene des Minimedia, die vor sich hindichtet und arbeitet und tut, mit absolut keinem Qualitätslevel. Es gibt ja auch keine Strukturen bisher im Netz, die sagen, das ist gut, oder das ist schlecht. Organisieren im Sinn von Zusammenschlüssen tut sich diese Szene dann dennoch. Es gibt Verbindungen, etwa Web-Ringe, die kennen Sie wahrscheinlich alle, wo man von einem

Lesungen im Internet veranstalten, Video-Konferenzen veranstalten. Im Moment trauen wir uns das alles noch nicht so richtig zu, oder nicht mehr richtig zu, muss man sagen.

BECHT Das war schon sehr in der konkreten Praxis. Wollen wir noch ein bisschen über die Theorie sprechen? Wollen wir noch ein bisschen über das sprechen, was auch visionär vorhanden sein könnte?

BÖHLER Visionär ist immer schwierig. Ich glaube das Netz wird so viel mit Visionen beladen, da möchte ich mich lieber etwas zurückhalten. Im Augenblick passiert dieser Auszug auch der Literatur ins Netz, und das Netz ist ja

Autoren im Web sich selbst verlegen, unlektoriert möglicherweise, und wenn andererseits die Verlage entweder kein Interesse oder keine Möglichkeit oder keine Kompetenz haben, Autoren übers Web zu verlegen. Also ich sehe zumindest verlagsseitig wenig Ambitionen. Bis auf Ausnahmeprojekte wie "Null", von dem du in deinem Buch schreibst, dass es doch eher so ein bisschen nach Marketing-Gag riecht, als nach wirklich neuer literarischer Inspiration. Was vielleicht aus Sicht der Herausgeber nicht stimmt, aus Sicht des Verlages vielleicht etwas mehr. Was heißt das, wenn die Autoren einerseits sich selbst verlegen, die Verlage dieses Medium nicht relevant finden, spricht das gegen die Qualität der Texte, oder für die Inkompetenz der Verlage? Das würde mich interessieren.

BÖHLER Ich glaube es spricht für beides. Die Verlage spüren eine starke Bedrohung durch das Netz, es gibt eine Umfrage vom Frauenhofer-Institut, die letztes Jahr durchgeführt wurde. Von 225 befragten Verlegern sagen ca. 97 %, dass sie das Netz als Bedrohung erfahren, weil Content abwandert.

KOHL Ich hatte gefragt warum, also worin besteht die Bedrohung für die Verlage?

Themenkreis zum nächsten über die Seiten hüpfen kann. Es gibt dann wieder Seiten, die über diese kleinen Seiten schreiben, das ist die Ebene des sogenannten Middlemedia, und dann kommen erst die Massenmedien. Und es gab ja immer schon Kommunikation am Telefon, Kommunikation unter Menschen, nur hat es jetzt so diesen "globalen Touch", wobei global für mich dann immer Europa, also die erste Welt ist, und Amerika und Japan usw., und damit wird gewissermaßen eine Entmachtung einerseits der Diskursmacht der Massenmedien erreicht, andererseits natürlich auch eine Entmachtung der Verlage, denn teilweise machen sich Leute als Autoren ohne Verlag selbständig. Und man muss davon ausgehen, dass Autoren, auch kleine Autoren ja auch im "analogen Raum" nichts verdienen. Wer kann leben vom Schreiben?

KOHL Das lässt mich sofort fragen, was heißt das denn „Autoren“? Wenn einerseits

http://www.mba.at/ffb_2001/

BÖHLER Ich zitiere: "Das Fraunhofer-Institut untersuchte in der Studie "Veränderungsmanagement im Verlagswesen", durchgeführt im zweiten Halbjahr 1999, die Haltung deutscher Verlage zum sich ändernden Markt- und Berufsbild, und stellte die Frage nach möglichen Maßnahmen und Zukunftsentwicklungen. 95 % der 227 zu ihrer Lage befragten Verleger gaben an, einen starken bis sehr starken Veränderungsdruck zu spüren. Die Gründe sahen über 70 % in der inhaltlichen, redaktionellen Qualität. Inhalt, als die wichtigste Ware der Verlage, ist sowohl in der Definition, als auch in der wirtschaftlichen Bedeutung einem Wandel unterworfen. Bisher als kulturell wertvoll definierte Inhalte verlieren in der Informationsgesellschaft an Bedeutung, da sie in den neuen Medien schlecht verwertbar sind. Das Internet als Content-Industrie bietet neue Möglichkeiten und bedroht gleichzeitig die klassischen Geschäftsgebiete der Verlagsindustrie." So weit zu

dieser Bedrohung oder zu diesem Veränderungsdruck. Das Internet fordert ja völlig andere Textarten und völlig anderen Umgang mit Text als es das klassische Medium Buch tut. Im Buch habe ich ein langes Stück Text, das linear gelesen werden kann, das als abgeschlossenes Werk vorliegt. Das Internet will kleine, fragmentierte Textteile, die sich immer wieder aufeinander beziehen, die dann auch im Netz unendlich oft, oder sehr oft, in verschiedenen Zusammenstellungen vorkommen. Das Netz verlangt sehr nach grafischen Elementen, verlangt nach ~~D~~Das sind dann auch die vielen, ich sage einmal Schriftstellerseiten, die nichts anderes tun als im Netz zu publizieren, d.h. ihr Gedicht 'reinzustellen. Aber was will ich mit einem Gedicht im Netz? Also ist die Frage, was will das Medium? Und das spüren natürlich auch die Autoren. Ich glaube, dass die literarischen Verleger am wenigsten Veränderungsdruck spüren. Die großen Verlierer waren teilweise bisher die enzyklopädischen, wobei das zum Teil auch die ganz großen Gewinner sind, was Naturwissenschaften

so von den kleinen oder Independent Verlagen spricht, die können ja groß an Inhalt und klein an Verlagsvolumen sein. Das Hauptproblem ist die technische Inkompetenz in den Häusern, es wird nicht geschult. Ich bin mir auch nicht sicher, wie weit die Ausbildungssituation, die Fortbildungssituation darauf Rücksicht nimmt. Die Berufsschulen und die Fachhochschulen scheinen da stärker orientiert zu sein, an der Universität scheint da einfach nach wie vor entschieden Inhalt gelehrt zu werden, und noch zu wenig Technik. Die Alten lassen die Jungen nicht ran, das heißt, die Alten entscheiden am Ende für welche Ideen Geld ausgegeben wird, und wenn jemand nicht versteht, dass in der Technik nicht nur der Feind steckt, sondern dass da auch Hilfen stecken, dann tritt man auf der Stelle. Die Verlage, mit denen wir arbeiten, haben zum Teil schon gemerkt, dass man einiges mit dem Web anfangen kann, müssen aber leider erst erfahren, dass sie in früheren Zeiten ihre Hausarbeiten nicht gemacht haben. Das heißt, dass sie nicht gründlich das Datenmaterial auf-

und Sozialwissenschaften betrifft. Da glaube ich, dass sehr viel passiert, dass aber die neuen Arten, die überhaupt im Netz passieren könnten, sich erstens noch nicht wirklich herausgebildet haben, und zweitens die Verleger auch da nie wirklich eingestiegen sind. Und das ist auch so ein bisschen mein Vorwurf und meine Aufforderung in diesem Buch. Es wäre ein Ziel, dass literarische Verleger ihr kreatives Potential nutzen. Die Verlage haben ja die Autoren, die haben ja begabte Menschen um da mehr zu tun, als eben nur ihr Verlagsprogramm auf die Webseite zu stellen.

BECHT René, vielleicht könntest du ein bisschen erzählen, was die alltäglichen Probleme sind, dann wird vielleicht auch etwas deutlicher, warum gerade die Verlage etwas zögerlich und vielleicht auch kompliziert und behäbig sind.

KOHL Das ist ziemlich einfach gesagt: Wir arbeiten mit kleinen oder mittelgroßen Unternehmen, die sehr rührig sind, z.B. der Kunstmann-Verlag oder der Luchterhand -Verlag oder der Christoph Links-Verlag oder der Merwe-Verlag oder der Wagenbach -Verlag, also im Prinzip die Verlage, die man aufzählt, wenn man

bereitet haben, sondern man hat ein Buch hergestellt, hat es setzen lassen, hat es dann dem Drucker geschickt, der Drucker hat es gedruckt, und der Verlag hat die Datei gelöscht. Das heißt, wenn man heute ältere Texte ins Netz stellen wollte, und sei es nur weil sie vergriffen sind, wären viele Verlage gezwungen sie neu zu erfassen oder einscannen zu lassen. Sie haben wenig Erfahrung im Umgang mit Bildmaterial, das heißt, selbst wenn Bilder produziert sind, wenn es Autorenfotos gibt, oder wenn die Autoren auch Material mitbringen, was vielleicht rund um den Entstehungsprozess eines Buches interessant wäre, wenn man sagen würde, die Dokumentation zum Buch findet man im Web oder ähnliches, würden die Verlage weder organisatorisch noch technisch noch auch was ihre Inspiration betrifft, auch nur irgendwie wissen, wie sie es machen sollten. In diesen Bereichen versuchen wir schon Ideen zu sammeln, wir versuchen, Kommunikationsflüsse zu unterstützen, und müssen wirklich ziemlich an der Basis anfangen. Autoren, könnte ich mir vorstellen, gibt es schon, gerade jüngere Autoren, die mit dem Computer groß geworden sind, die können sicher mit den Medien eleganter umgehen. Wenn sie aber so richtig inspiriert sind, wenn sie mit all ihrem Sachverstand, mit all diesem cross-

http://www.mba.at/ffb_2001/

media-Wissen anfangen wollen, dann werden sie heute nicht mehr auf die Idee kommen, ein Buch machen zu wollen, sondern dann werden sie auf die Idee kommen, eher zum Film, oder eher vielleicht in die neue Medienindustrie zu gehen. Es gibt natürlich Ausnahmen, aber es sind Ausnahmen und es erfordert ein hohes Verständnis des Autors und wahrscheinlich ziemlich viel Vertrauen seitens des Verlags, damit so etwas entsteht. Zum Beispiel ein Buch wie "Kahuna-Modus", das jetzt gerade als ein auf verschiedenen Kanälen operierendes Projekt entstanden ist.

BÖHLER Ja. Oder auch Leute, die ausziehen ins Web, und gar nicht mehr Dichter

ge hat man die Autorin Nika Bertram gefragt, ob sie auch was im Web dazu machen will, und das hat sie getan: einerseits ein MUD, das ist so eine Art verbesserter Chat-Raum, eine alte Form von Chat-Raum, wo man verschiedene Identitäten annehmen kann, Gebäude bauen und Taxi fahren, oder sich prügeln kann oder was immer, sehr nett und gar nicht multimedial, ein reiner Textraum. Das hat Nika Bertram gebaut, und dazu noch ein digitales Spiel. Ich finde dieses Projekt eben so spannend, weil man da auch die verschiedenen Kulturtechniken sieht, die notwendig sind, solche Texte zu erfassen und zu begreifen. Wir sind ja alle gewohnt Bücher zu lesen, und tun uns da nicht schwer. Ich habe aber gemerkt, wie schwierig es für mich ist,

werden. Es gibt ein Interview im Buch mit der Medienkunstgruppe "Übermorgen.com". Die sind hier in Deutschland bekannt geworden durch ihre Aktion mit Christoph Schlingensief. Bei seiner Hamlet-Inszenierung im Schauspielhaus Zürich haben sie diese Naziline-Webpage gemacht, sie arbeiten sehr viel mit fact und fiction im Netz. Also mit der Tatsache, dass wir noch alte kulturelle Muster haben, wir vertrauen einer bestimmten Art von Grafik, Aufmachung, Sprache, das impliziert für uns Wahrheit, und genau das tun "Übermorgen.com".

Die haben auch diese US-Präsidenten - Wahlkampf Seite **vote auction** gemacht, wo man Wahlkampfstimmen verkaufen konnte. Das ist tatsächlich gelandet vor dem obersten Richter in Amerika, der dann entscheiden musste, ist das jetzt fact oder fiction. Till Eulenspiegel ist etwas ganz ähnliches, im Netz, da leben solche Dinge jetzt natürlich wieder auf. Bei dem Interview, das ich mit ihnen geführt habe, sagte einer von Übermorgen, der früher Mitglied bei der bekannten Medienkunstgruppe „e-toy“ war, dass er eigentlich mit Schreiben begonnen hat. Also er saß dann auf irgendwelchen Raves mit seinem Laptop und hat geschrieben, hat es aber nie wirklich zum Buch geschafft. Aber über die Verbindung verschiedener Medien mit Kunst hat er geschafft, seine Fiktionen im Netz zu bauen, und er hat sich sehr gefreut, als ich gesagt habe, für mich ist das eine Art von Literatur, von Narrativität.

Das andere Beispiel, der Kahuna-Modus ist ein Roman, der letztes Jahr bei Eichborn erschienen ist. Im Zuge der medialen Aufrüstung der Verla-

mich dem Stoff zu nähern über das digitale Spiel oder über das MUD. Und natürlich auch der gravierende Unterschied, dass ein Buch im Moment seines Erscheinens ein abgeschlossenes Werk ist. Es hat dann noch eine Rezeptionsgeschichte, aber die Geschichte an sich ist festgeschrieben. Das MUD zum Beispiel entsteht mit der Benützung. Da werden Strukturen vorgegeben, und dann kann es auch von den Usern weiterentwickelt werden. Die Adresse ist www.Kahunamodus.de.

BECHT Da möchte ich ganz vehement widersprechen. Das Buch ist nach wie vor das stärkste Medium, weil ich es überall hin mitnehmen kann. Das Buch ist kompakt, es ist fertig, jeder der eine wirkliche Botschaft hat, kann ein Buch schreiben. Für mich wäre die Frage interessant, wo verknüpft sich denn was mit wem? Oder schließt es sich aus? Seht Ihr diese Ausschlüsse überhaupt, oder könnte es nicht viel mehr so sein, dass man sich gegenseitig hilft? Und dass dieses gegenseitige Helfen, also auch das Buch dem Web, dazu beitragen könnte, beides, oder vielleicht noch mehr Medienformen stärker zu machen. Und dann wüsste ich gern von dir, inwieweit das Web für dich ein Distributionsmedium ist, also nicht nur für Texte, sondern auch für Waren, die dann wieder körperlich werden? Und von dir wüsste ich gerne, inwieweit aus den Texten, die es digital gibt, irgendwann vielleicht doch wieder, wie bei dir, auch Bücher werden?

http://www.mba.at/ffb_2001/

KOHL Wir haben eine Erfahrung gemacht, in dem Präsentieren der Bücher und in dem was zählbar ist. Wir haben bei uns einen Shop installiert, wo man Bücher der Verlage, die mit uns zusammen Web-Auftritte bauen, auch über uns bestellen kann, und über den Shop können wir relativ viel darüber erfahren, was Leute interessiert, wenn sie bei uns unterwegs sind. Was mir sehr stark auffällt ist, dass Literatur grundsätzlich nicht gekauft wird im Internet. Wir

Vorstellungen gibt sich zu artikulieren, als nur in Buchform. Und die Verlage unterstützen sie nicht. Es ist für einige Schaffende, die ich kenne, nicht sexy, so einen Verlag zu suchen, das ist ein Zurückgehen in eine Welt, die das nicht umsetzt, was man selber bietet. Ich finde ein sehr starkes Argument ist, dass die Verlagswelt ein wenig die Kompetenz verliert, an der künstlerischen Avantgarde teilzunehmen, weil sie darauf verzichtet, neue Medien überhaupt in ihren

haben Verlage, die ganz klassisch das ganze Sortiment haben: Literatur, Politik, Sachbuch, Philosophie und Kunst. Literatur ist definitiv, was man über das Web nicht präsentiert bekommen möchte. Oder vielleicht präsentiert, aber was man nicht kaufen möchte. Das Internet ist offenbar nicht geeignet genug, diese Atmosphäre zu vermitteln, die man gerne vermittelt bekommen möchte, wenn man angestoßen sein möchte, Literatur zu beziehen. Ich denke, das gilt nicht nur für den Kauf von Büchern, ich vermute, das würde auch gelten, wenn man Literatur umsonst beziehen könnte. Meine Vermutung ist, man will einfach Literatur so nicht präsentiert bekommen. Ich glaube zweitens, dass das Buch sehr stark ist, und dass es auch für bestimmte Formen z.B. den Roman, ein praktisches, handliches Medium ist. Wenn man das Buch hat, warum soll man es nicht nutzen, warum soll man nicht solche Bücher

Das Beispiel vorher fand ich schon ganz interessant. Ich habe mit dem Verleger des Gestalten-Verlages, so einem Design-starken Verlag aus Deutschland, gesprochen, der so wunderbare Verpackungen, wunderbare Mixturen aus Buch und CD, Buch und vielleicht auch demnächst DVD entwickeln wird. Ich habe mit ihm darüber gesprochen, was eigentlich so los ist, warum sich die ganze Welt ändert, warum man auch so viel mit Bildern zu tun bekommt, und warum man eigentlich aus allen anderen Branchen auch noch Anregungen aufnehmen könnte. Und warum die Verleger nicht Lust haben, mehr zu machen, als das was sie machen. Man kann sagen, sie haben keine Lust, weil sie keine Lust haben Geld auszugeben für Dinge, die sie nicht richtig verstehen. Denn alles das, was nicht Buch machen ist, muss man erst einmal lernen wollen. Aber ich denke, es hat auch etwas mit mangelnder Phantasie zu tun, und ich glaube wirklich, dass es für jüngere Autoren noch andere

Vorstellungskreis gelangen zu lassen.

BÖHLER Eine deiner Fragen war die nach der Stärke des Buches. Ich glaube durchaus, dass der Roman ans Buch gebunden ist. Und daher glaube ich, wird die neue Erzählform, wenn man von so etwas sprechen will, bei narrativen Strukturen im Netz, nicht der Roman sein. Ich glaube aber durchaus, dass Bücher ins Netz wirken können und vice versa, auch wenn die Beispiele, die im Buch vorkommen eigentlich alle echte Probleme haben. Also "Null", wahrscheinlich das bekannteste Projekt hier in Deutschland, das im Netz entstanden ist und dann ins Buch ging, hatte ja doch auch mit recht schlechter Presse zu kämpfen. Und dann gibt es noch das andere Beispiel das Tagebau-Projekt, dem wurde sehr angekreidet, wieso es jetzt überhaupt als Buch veröffentlicht werde. Weil natürlich die im Netz vorherrschenden Gegebenheiten, und auch die im Netz vorherrschende Schreibweise nicht literarischen Qualitätsnormen entspricht. Ich glaube, es ist sehr problematisch, wenn man Netzliteratur oder unter den Bedingungen des Netzes entstandene Literatur dann wieder in die Buchform transportiert und als Buch veröffentlicht. Das wird nach einem anderen Maßstab gemessen, nämlich nach dem Maßstab des literarischen Kanons, den das Buch impliziert. Und ich glaube, da liegt ein großes Problem, da wir einerseits keine Maßstäbe haben, und keine oder kaum Vergleichswerte für literarische Formen im Netz, bis auf die ewige Hypertextdebatte, die, glaube ich, mehr geschadet als wirklich Gutes bewirkt hat, was die Literatur betrifft. Also wirken kann das Buch sehr wohl, nur die Vergleichswerte und die Erfahrungswerte sind nicht. Wenn man tatsächlich mit dem Netz und mit neuen Medien arbeiten will, muss man ja im besten Fall nicht nur begnadeter Schreiber oder

http://www.mba.at/ffb_2001/

Schreiberin sein, sondern auch noch wissen, was überhaupt geht, und wie das geht, wie ich es realisieren kann. Man muss im besten Fall pro-

BÖHLER Ich muss da jetzt leider ganz woanders einhaken, weil wir dauernd von den Verlagen sprechen, sagen wir einmal die klassi-

grammieren können, oder muss einen Programmierer bezahlen können. Das sind ja wesentlich teurere Dinge als sich hinsetzen mit einem Blatt Papier und schreiben. Und wenn die Verlage sich da völlig raushalten - auch die meisten Verlage haben wenig Geld - haben wir wieder das Problem der Realisierung.

KOHL Man kann die beiden Aspekte schon zusammendenken. Den Aspekt der Qualitätsfrage, wo du sagst, es gibt keine Maßstäbe. Ein Maßstab für etwas, was gelesen werden könnte, könnte sein, was ein gediegener Lektor oder meinetwegen auch ein kaufmännisch ausgerichteter Verleger für gut befindet. Das könnte ein Maßstab sein, mit dem man sich auch für das Web Kommunikationsformen vorstellen könnte. Es ist nur so, dass die Lektoren an der Stelle streiken, oder die Verleger an der Stelle streiken, und sagen: wir verstehen unsere Kompetenz nicht nur an den Text, sondern offenbar auch an das Papier gebunden. Und ich denke, da produziert man eine Sackgasse, aus der man rauskommen könnte, und aus der man auch irgendwann rauskommen wird. Also ich glaube, das ist eine Frage der Zeit und vielleicht noch eine Frage der Gewöhnung. Die technische Seite, die zu beherrschen zur Zeit noch Aufwand bedeutet, und Aufwand bedeutet dann letztlich Geld, wird sich auch vereinfachen. Die technischen Hilfsmittel werden einfacher. Sich selbst verlegen, oder Texte ins Netz stellen kann heute jeder, das kann man wirklich lernen, und das kostet tendenziell eher weniger als mehr. Es ist nur daran gebunden, dass es Verleger gibt, die das machen möchten, die sagen, wir möchten gerne ein Buch und den Web-Auftritt präsentieren, und wir sagen dem Käufer des Buches, du kriegst damit noch einen Web-Auftritt mitgeliefert, du kriegst z.B. noch ein Passwort mitgeliefert oder du kriegst einen Zugang mitgeliefert. Man muss da nur auch etwas versprechen was dann kommt, und da haben wir noch nicht viel gesehen, würde ich sagen.

BECHT Wenn die Autoren selbst im Web publizieren, was wären dann die vorstellbaren Formen?

schon Printverlage. Ich habe mir auch angeschaut was die neuen Verlage im Netz so tun, und ich finde deswegen auch ganz gut, dass wir hier sitzen, umgeben von Adobe und Microsoft. Tatsächlich ist es ja so, dass die IT-Industrie, also die Internet-Industrie für sich alles beansprucht, was Content ist. Content ist alles, was im Netz vorkommt, das ist Software, das sind User-Daten, das sind Texte, das sind Fotos, das ist aber auch Kultur, das ist schlichtweg alles, was im Netz ist. Und die neuen Verlage, die im Netz entstehen, sind sehr oft kleine Zweigfirmen von großen Internet-Technologiefirmen, die dann unter anderem in ihrem Repertoire auch Literatur dabei haben: „Wir machen jetzt auch eine kleine Seite für Literatur, kostet ja nicht viel“. Die Leute können dort gratis ihre Texte abgeben, es gibt eine minimale Community-Betreuung, und wenn sich was daraus entwickelt, ist gut, und sonst ist nicht viel verloren gegangen. Dann verbreitet etwa Adobe mit ebook und PDF-Reader neue Modelle für Literatur im Netz.

Print-on-demand ist eine digitale Technologie, die sehr niedere Auflagenzahlen erlaubt, die meist dazu führt, dass die Autorinnen und Autoren ihre Bücher völlig selbst finanzieren. Und da sehe ich auch eine große Gefahr. Es gibt Verlage, die sind eigentlich reine Dienstleistungsbetriebe, die es Schreibwilligen und Literaten und anderen ermöglichen, ihre Bücher zu publizieren. Ich zahle als Autor dafür, ich bin mein eigener Verleger, mein eigener Redakteur, mache die Grafik selbst, mache das Lektorat selbst, und ich muss dann eigentlich auch noch selbst meine Käufer finden. Und in all dem sehe ich wirklich eine große Gefahr. Es gibt Vorzüge dieser Technologie für antiquarische Werke, die so leicht wieder aufgelegt werden können. Wie bei jeder Technologie gibt es hier Vorteile und Nachteile, aber das momentane Problem bei den Autoren ist, dass sie völlig auf sich selbst zurückgeworfen werden, das Buch selbst finanzieren. Die neuen Verlage sind fast alle - es gibt wenige Ausnahmen - reine Dienstleistungsbetriebe, die sagen: O.K. gib mir deinen Inhalt, ich mache ein Buch daraus, das kostet tausend Mark, und das ist ganz günstig.

http://www.mba.at/ffb_2001/

KOHL Meine These wäre, es gibt keinen Autor ohne Verleger. Das heißt, man kann zwar schreiben, man kann sich als Schreibender fühlen, man kann seine Texte ins Netz stellen, man kann seine Texte von Printing-on-demand drucken lassen, aber man wird denjenigen brauchen, diese erste Instanz, die nicht der Käufer ist. Ich habe den Verleger, der mir gesagt hat, das ist gut, was du machst, der mir hilft, aus einem Text ein Buch zu machen, der dafür sorgt, dass es hergestellt wird, und dass es verbreitet wird. Das ist für mich interessant, alles andere kann sich im Netz finden, kann sich treffen, kann sich kurzschließen. Und sobald sich irgend etwas herauskristallisiert, was interessanter ist, wird daraus das Buch werden, wonach sich alle sehnen, oder dann wird auch meinerwegen das Online-Projekt, wonach sich alle sehnen, und das erst dann wahrgenommen wird, wenn es die Reputation durch den Verlag bekommt. Das finde ich auch nicht schlecht so. Ich meine, die Verleger haben eine Aufgabe, das wiederhole ich noch einmal, in der sie gebraucht werden, als Beobachter und Begutachter und dann auch Distributoren. Dann müssen sie sich auch, oder sollten sie sich auch die technische Butter nicht vom Brot nehmen lassen, und sollten nicht an der Stelle aufhören, wo Adobe anfängt, sondern sollten im Prinzip Adobe vorschlagen, wie sie sich die e-books vorstellen, oder wie sie sich die Formate vorstellen, oder wie sie sich die Ästhetik vorstellen. Und nicht die Technik sollte dem Verlag alles dieses vorstellen.

BECHT Also ist der Tenor, es geht nicht um den Leser, es geht zuerst um den Verleger, um eine redaktionelle Instanz. Das schöne am Web ist doch, dass erst einmal jeder lesen kann, das heißt, die Resonanz wäre auch eine direkte vom Leser. Du sagst, die Verleger sollten ihrer "verlegerischen Aufgabe" gesamt habhaft werden. Sie sollen sich auch darum kümmern, was im Web passiert, sie sollen sich darum kümmern, welche technologischen Möglichkeiten zur Verfügung stehen und sich nicht auf irgendwelche "merkwürdige" Lesegeräte festlegen, wenn es längst schon Möglichkeiten gibt, Sachen auch auf Papier wieder auszudrucken, wenn sie nur digital vorhanden sind.

Christine, wie ist das für dich? Siehst du zuerst den Verleger und dann den Leser, oder zuerst den Leser und dann den Verleger?

BÖHLER Ganz wichtig und entscheidend ist das kommunikative Moment im Netz, aus dem sehr viel entstehen kann und auch die Freiheit, die mit dem Netz entstanden ist, Dinge in die Welt zu setzen, Dinge auszuprobieren - und dass Strukturen entstehen, seien es künstlerische Strukturen, seien es inhaltliche. Ich sehe nur eine Gefahr darin: es bilden sich immer mehr globale Stoffe und globale Werke heraus, und auf der anderen Seite kleine Communities. So existieren große globale Stoffe wie Harry Potter. Die werden dann wirklich auf allen Ebenen dieser Welt, die nur vorstellbar sind, vom T-Shirt über die Unterhose zur Teetasse zum Buch zur CD-Rom vermarktet, da gibt es auch alle Medienformate dazu. Ich war zwar noch nie auf der Harry Potter-Website, aber ich bin sicher, die gibt es, und wahrscheinlich ist die gar nicht so schlecht, keine Ahnung. Und dann gibt es die kleinen Gruppen etwa der Tomatenzüchter für die ganz spezielle Sorte. Es passiert natürlich, dass ästhetisch schwierige Formen abdriften in kaum mehr wahrnehmbares Ding, vor allem wenn es keine Strukturen gibt, die auffangen und promoten und festhalten. Da sehe ich momentan eigentlich die Schwierigkeit.

Raumkontrolle 5: ErsatzRadio, Berlin

Foto: Thomas Aurin

[ERSATZRADIO 7 Tage Raumkontrolle auf 104,1](#)
[So 1. bis Sa 7. Juni 2003](#)

ERSATZRADIO erweitert, radikalisiert und popularisiert das Thema Raumkontrolle. Mit Telefoninterviews, in Gesprächen mit Studiogästen, durch weltweite Lokalberichterstattung und Verkehrsnachrichten und Beiträgen von 15 internationalen freien Radiostationen entsteht ein akustisches Wörterbuch zur strategischen Aneignung von Raum. ERSATZRADIO beginnt am 1. Juni mit einer Sondersendung, einem Livestream von den Protesten, Demonstrationen und Blockaden rund um den Genfer See anlässlich des diesjährigen G8 Gipfels in Evian und sendet ab 21.00 Uhr sein reguläres Programm. ERSATZRADIO

Konzept, Archiv, Programm: [Anselm Franke](#), [Hannah Hurtzig](#)
Radioleitung: Klaas Glenewinkel
Programmplanung: Anja Wollenberg
Vorproduktion: Zsolt Barat
Technik Studio: Jens Gröger
Tontechnik: Oliver Pritzkow, Andreas Schwartz
Archivar: Andreas Jeromin

Eine Kooperation mit der Ausstellung "Territories" in den KW, in Zusammenarbeit mit dem

bootlab und TwenFM.

ERSATZRADIO

Sondersendung 1.6.

"Jeder Mensch ist ein Experte/ Multitude e.V." ist mit dem Expertenmobil vor Ort beim G8 Gipfel in Evian und sendet live am 1. Juni ab 10.00 Uhr mit Beginn der ersten Aktionen.

Medienaktivisten aus zahlreichen Ländern mixen Live-Bilder und vorproduziertes Programm zu Audio- und Video-Streams, die aus einem öffentlich zugänglichen P2P-Netzwerk gespeist und dort auch wieder archiviert werden.

Haben genug Menschen die vor, während und nach den Aktionen hochgeladenen, benutzten oder gemixten Audio- und Video-Materialien mithilfe der üblichen P2P-Clients geteilt, bleiben diese auch über den eigentlichen Produktionszeitraum hinaus verfügbar.

Das Expertenmobil garantiert Bewegungs- und Kommunikationsfreiheit: Die Internetverbindung wird über eine bidirektionale Satellitenanlage hergestellt, der laufende Betrieb mit Solarenergie bestritten.

Nach dem G8 Gipfel reist das Expertenmobil weiter zu den noborder Camps in Rumänien, Polen und Süditalien, sowie zum EU Gipfel nach Thessaloniki.

Tägliche Sendungen

8.00 - 9.00 Uhr
MORGENSTERN*

Exerzitien zur Austreibung der Nacht im Hörer.

Es ist sehr früh, die Sonne ist im Osten aufgegangen, es ist ein kritischer Moment. Ob man jetzt an der Welt oder einer leichten Kreislaufschwäche leidet, das Gedankengeschäft und die Beschleunigung am Morgen sollte man anderen überlassen dürfen. Morgenstern bietet beides. Der Sadismus des Radios, -einer spricht ohne zu hören, alle hören ohne sprechen zu können,- wird hier nutzbringend angewendet: Moral- und Strafpredigten, fluchende Kapitalismuskritik von René Pollesch, Revolutionsopern, Exorzismen, voreilige Beschimpfungen von Angestellten und Schauermärchen bringen die graue Frühe zum Glühen.

*Morgenstern, bezeichnet eine keulenförmige Notwaffe, mit Nägeln besetzt, auch: Stachelkeule.

9.00 - 11.00 Uhr
Der Morgen Danach

Ein Berlin Surrogat in 6 Sendungen.

Am Morgen danach wird der Überhang des vorangegangenen Tages und der letzten Nacht gesammelt. Mailinglisten und Weblogs, Stories und Manifeste, Dialoge und Übereifer - das unaufhörliche Gespräch der fremden Stimmen, die inneren Monologe der Stadt. Morgendliche Visite, eine Diagnose ohne Kommentar und Moderation von Holger Schulze. Ozeanien hat sich schon immer im Krieg mit Ostasien befunden. Ozeanien war von jeher der Alliierte von Eurasien. Die gefühlte Bevölkerung. Die gefühlte Bewölkung. Das Wetter.

Mo 2.6. Nathalie Bruys aka Kodi (Musik)

Di 3.6. Hanna Buhl (Text) und ein Überraschungsgast (Musik),

Mi 4.6. Ingo Kottkamp (Musik) und Corinna Nicolai (Text),

Do 5.6. Sami Khatib (Musik) und Joseph Imorde (Text),

Fr 6.6. Janine Rostrum aka Planningtorock (Musik) und Ingo Kottkamp (Text),

Sa 7.6. Christine Lang (Musik) und Matze Schmidt (Text)

11.00 - 12.00 Uhr

Vom Durchqueren der Räume. Hörstücke.

Irgendwann hatte die Landkarte dann doch gesiegt und vertrieb den Bericht des Reisenden. Die Karte geometrisierte und kolonisierte den Raum, war für alle ablesbar und der Erzähler der Wegstrecke war verschwunden. Die Autoren der Hörstücke bewegen sich durch den kartografierten Raum, aber so, als sei ihnen die Aufsicht, der Kartenblick, verlorengegangen. Es sind Wanderungen durch Strassen und Orte und deren Verwandlungen durch den Passanten. Akustische Psychogeografien, die den Bewegungen des Gehens, Schlenderns und Hastens folgen.

Mit Stücken u.a. von: Hildegard Westerkamp (Vancouver), Stefan Kaegi (Frankfurt), Janet Cardiff

(London), Gob Squad (Berlin/ London), Eran Schaerf (Berlin).

12.00 - 18.00 Uhr

RAUMKONTROLLE - Das Magazin

PRODUKTION UND GEBRAUCH GEBAUTER UMWELT

AnArchitektur

Das Berliner Magazin An Architektur stellt seine Arbeit zur "Produktion und Gebrauch von gebauter Umwelt" vor. Recherchen zu extraterritorialen Räumen wie Guantanamo Bay in Kuba oder San Diego in der Karibik, neuartige (Rechts-)räume, die im "War on Terrorism" zu Gefangenenlager der "unlawful combatants" umfunktioniert werden. Orte der Redefinition und Unterwanderung Internationalen Rechts und amerikanischer Bürgerrechte. Interviews u.a. mit The Lawyers Committee, New York.

BORDERBIAS

Ein Beitrag des Journalisten Martin Hirsch über die Grenzbeziehungen zwischen den USA und Kanada, die verschärften Grenzkontrollen seit dem 11. September und den G8 Gipfel in Kanada.

BE SUPERNATURAL

Brain Balancing über das Radio

Kommunikation ohne Telefon, Kabel, Fiberglass oder Satellit ist nicht unmöglich! Brainbalancing

über Radio macht uns unabhängig! In einem 18 minütigen do-it-yourself Workshop erklären Nina Fischer und Maron el Sani eine Methode zur technikfreien Telekommunikation über das Radio.

MEDIEN IN ISRAEL UND PALÄSTINA

Manu Luksch interviewte 4 Experten mit unterschiedlichen Positionen zum Thema: Nisreem Abu-Zayyad (Palestine-Israel Journal), Galit Eilat (Director Digital Art Lab, Holon,) Momo Yoel (indymedia, Tel Aviv) and Ronni Shendar (Alternative Information Centre, Jerusalem).

KontrollRaum

Der öffentliche Raum, erfasst und verarbeitet. Der Chaos Computer Club Berlin möchte ergründen, ob in Berlin die allgemeine Sicherheitslage ein unbeobachtetes In-der-Nase-Bohren noch zulässt. Frank Rieger, Frank Rosengart, CCC, www.ccc.de

Spread Radio - Tunes inna Family Style.

Klangraumkontrolle mit Dr. B. Lunt und Oben Ole von Style & The Family Tunes

Holland ist ein ordentliches Land

Die holländische Gesellschaft ist ein ständig wachsendes Geflecht aus Gesetzen und Regularien. Am Ende richtet sich das Regelwerk gegen alle. Gruppe Schie 2.0, Rotterdam, über Selbstregulierung und Freiheit.

ETHNOGRAPHIE EINES SANIERUNGSGEBIETS

Sanierung, die physische Bereinigung von Raum, geht immer einher mit einer sozialen Bereinigung. Das Beispiel Friedrichshain, 2002, vorgetragen von Thomas Goetz.

REFLECTIONS ON SERENDIPITY AND THE ART OF DRIFTING Drifting friends

Nach 5 Jahren Japanaufenthalt entdecken Mic Vieser und Reto Wettach Deutschland wieder neu. Eine Audio-Kollage unerwarteter Erfahrungen. Mit dem Berliner DJ/Produzent Deckart. www.driftingfriends.de

BORDER DEVICE(S) Multiplicity

80 Forscher aus 24 Ländern arbeiten im Netzwerk von MULTIPLICITY an einer umfassenden Kartographie von globalen Grenzphänomenen. Präsentiert werden sieben Fallstudien. www.multiplicity.it

LIGNA Interventionistisches Radiohören

"Werde Teil des FSK-Radioballetts! Nimm einen Rundfunkempfänger mit Miniaturkopfhörer und ein rotes Tuch, geh auf die Strasse und warte auf weitere Anweisungen!" Von legendären Aktionen wie "Radioballett", "Öffentliches Radiohören in der Hamburger Innenstadt" als Beispiel ihrer interventionistischen Radioaktionen. www.fsk-hh.org

Look, listen & repeat Nacherzählte Filme im Radio

Sie sehen die nacherzählten Filme am nächsten Tag im Arsenal.

In der Erinnerung entwickeln Kinofilme ein seltsames Eigenleben, das nichts mit "Filmkritik" im landläufigen Sinn zu tun hat. Nach individuellen, zuweilen lustigen, oft wilden und immer aufschlussreichen Archivierungsmustern speichert das Zuschauergedächtnis Handlungen, Schrecksekunden, Schauplätze, Glücksgefühle, Gesichter, Musiken, Kostüme oder Dialoge aus gesehenen Filmen. Um diesen Prozess kreist die Reihe von Dorothee Wenner: sechs filmbegeisterte Menschen rekonstruieren sechs Filme mit einer thematischen Gemeinsamkeit. Es sind Spiel- und Dokumentarfilme aus unterschiedlichen Ländern, in denen es um Grenzen, Zonen, no-go-areas und Überwachungssysteme geht. Die Nacherzählungen sind zugleich Vorankündigungen:

2.6. (17.30 Uhr) FAMILY VIEWING von Atom Egoyan, Kanada 1987. Den Film über videoüberwachtes Familienleben erzählt nach: Christian Petzold, Regisseur

3.6. (17.30 Uhr) C'MON BABE Sharon Sandusky, USA 1988 und ELEFANTEN (Karl Kels, D2002) den legendären Lemmingefilm erzählt nach: Lemminge-Expertin Stefanie Schulte Strathaus, Kinomacherin

4.6. (17.15 Uhr) NADYA'S VILLAGE, Seiichi Motohasi, Japan 1997 den japanischen

Dokumentarfilm über ein Dorf in ihrer ukrainischen Heimat erzählt nach: Katja Potapejko, Studentin

5.6. (16.15 Uhr) STALKER, UdSSR 1978/79 von Andrej Tarkowskij. Den russischen Spielfilm erzählt nach: Nico Schröder, Filmjournalist.

6.6. (17.30 Uhr) ON THE BEAT China/Spanien 1995 von Ning Ying. Den Spielfilm über den Fahrradpolizisten aus Beijing erzählen Ulrich und Erika Gregor nach, Int. Forum und Arsenal-Kino.

7.6. (17.30 Uhr) THE CRUISE von Bennett Miller, USA 1998 den Dokumentarfilm über den exzentrischen Tourist-Guide aus Manhattan erzählt nach: Hanns Zischler, Schauspieler und Regisseur.

Interviews

Die Interviewer

Stefan Retfeld, Architekt, Berlin, Phil Misselwitz, Architekt, Tel Aviv, London, Berlin, Susanne Schindler, Redakteurin bei Arch+, Sarah Herda, Storfront for Art and Architecture, New York, Jochen Becker, Kurator, Kritiker, Berlin, Stephan Lanz, Stadtforscher und -planer, Berlin und Meron Benvenisti, David Campbell, Jeff Halper, Rafi Segal, Eyal Weizman

20.00 - 21.00 Uhr

RAUMKONTROLLE - Der Kommentar

Die sieben Dialoge des KIOSK werden unmittelbar im Anschluß an die Sendung von Passanten auf der Kastanienallee im Studio kommentiert.

21.00 - 23.00 Uhr und 24.00 - 4.00 Uhr

TWEN FM macht legal Musik

Auf nächtlicher Kreuzfahrt durch die Berliner Musikszene wird TwenFM snares, hihats und Bässe durch den Äther jagen. TwenFM geht auf Sendung u.a. mit Puppemastaz, Jeansteam, Frathese Toys, Nerdinger, Bad Kleinen, femmes with fatal breaks, dj peejay, bandolero sound system, Neon Man, Extravaganza, BpitchControl, DJ Aziz, Pilsskills. twenFM seit 1999 als Piratensender in und um Mitte, P-berg aktiv, kämpft um ein dauerhaftes legales Sendeforum für alternative Berliner Musik, Kultur und Medienproduzenten. TwenFM broadcasted DJ-Sessions, live und direct: zwei Technics, ein Mixer, ein Mic, alle Genres. Dabei rotieren neue Talente, erfahrene Produzenten und Bignames gleichberechtigt nebeneinander.

23.00 - 24.00 Uhr

SOUND OF THE CITY

Gespräche zur Stadt und Musik.

Christoph Gurk lädt ein bis zwei Gäste und ihre Plattensammlung zum zwanglosen Talk ins Studio. Es geht um die Bedeutung von Pop für die persönliche Biografie, das innige Verhältnis von Musik und Stadt, die Geschichte des Sound als Code urbaner Subkulturen oder auch den Zusammenhang zwischen Klang und Konzepten von Raumkontrolle. Nichts muss, alles kann.

Studiogäste:

So 1.6. René Pollesch (Regisseur, Volksbühne am Rosa-Luxemburg-Platz)

Mo 2.6. Jan Jelinek (Musiker, Farben)

Di 3.6. Barbara Morgenstern (Musikerin, Solokünstlerin)

Mi 4.6. Reinhold Friedl (Musiker, Zeitkratzer Ensemble)

Do 5.6. Yvonne Cornelius (Musikerin, Niobe Tse Tse)

Fr 6.6. Ronald Lippok & Bernd Jesträm (Musiker, Tarwater)

Sa 7.6. Bettina Köster (Ex-Malaria)

ELEVATORMUSIC

Wird bei der Pabstwahl Musik gehört?

Ganztägiger Soundteppich.

Hanno Leichtmann und Nicholas Bussmann lassen sich über den gesamten Zeitraum des

ERSATZRADIO in einen gläsernen Aufzug eines leerstehenden Bürokomplexes am Hackeschen Markt einschließen. Das einwöchige Experiment dient der Auslotung der Beziehungen von Musik zu Raum und ihren Funktionen in unserer Gesellschaft. Allein über eine schnelle Datenleitung mit der Aussenwelt verbunden soll in dem Aufzug versucht werden, eine Musik zu entwerfen, die auf die engen Raumbedingungen modernen Großstädte eingeht - vielleicht sogar darüber hinaus in ihre Zukunft verweist. Weitere Passagiere: Jan Jelinek, Andrew Peckler, Thaddeus Herrmann, Lars Rudolph, Hannes Strobl, Static, Resistance, Holger Friedrich, Leonid Soybelman.

bootlab

"JUNIRADIO IS NOT UNIRADIO"

Vom 8. bis 30.6. sendet das bootlab im Rahmen von ErsatzRadio, unter dem Titel JUNIRADIO. Ein dreiwöchiges Modell zur Durchsetzung eines freien Radios für Berlin.

Selbstdarstellung: "Juniradio is not Uniradio, und auch kein Ersatzradio für Uniradio, und wir sind auch nicht der Offene Kanal. Juniradio ist ein freies Radio, insofern es ohne kommerzielle oder institutionelle Zwänge das Senden von Sendungen ermöglicht, die überall sonst von der Berliner Radiomafia verhindert werden. Juniradio ist kein Hauptstadtkulturfonds, und wir sind auch nicht Partner für Berlin. Juniradio ist ein offenes Radio, insofern es nicht von Profis, Experten oder PR-Spezialisten hergestellt wird, sondern von einem Netz lokaler wie internationaler Gruppen. Radio funktioniert nicht wie ein Theater, sondern wie eine Fabrik. Höchste Qualität bei minimalem Budget. Ein politisches Radio ist Juniradio insofern, als es eine gesellschaftliche Imagination adressiert: den Wunsch nach einem besseren Radio in Berlin, das nicht als Spekulation auf Marktnischen oder Zielgruppen zustande käme, sondern als eine Wette auf reale, sinnvolle und produktive Zusammenhänge. Und zwar endlich auch zwischen dem Radio und dem Leben der Leute."

www.juniradio.net

HE MEDIA CENTER TO END ALL MEDIA CENTERS

The Media Center to end all Media Centers: Das bootlab steht nicht leer, sondern fördert, beherbergt und verbindet seit Anfang 2000 eine Vielzahl unabhängiger Projekte, u.a. die Bar im Radio, Kino Raum 3, Klubradio, Last Tuesday, Mikro e.V., Radio Internationale Stadt, radiokampagne.de, Starship, textz.com, TwenFM, vote-auction.com und viele andere mehr.

SPARE RADIO 7 days space control for 104,1
So 1st to SA 7 June 2003

SPARE RADIO extended, radicalizes and popularizes the topic space control. With telephone interviews, in discussions with Studiogaesten, by world-wide restaurant reporting and traffic message and contributions of 15 international free radio stations an acoustic dictionary develops for the strategic appropriation of area. SPARE RADIO begins its regular program approximately on 1 June with a special transmission, a Livestream of the protests, demonstrations and blockades around that Geneva lake on the occasion of the G8 of this year of summit in Evian and sends starting from 21.00 o'clock. SPARE RADIO

Concept, archives, program: [Anselm Franke](#) , [Hannah Hurtzig](#)

Radio line: Klaas Glenewinkel

Program planning: Anja wool mountain

Vorproduktion: Zsolt Barat

Technology studio: Jens Groeger

Audio engineering: Olive Pritzkow, Andreas Schwartz

Archivist: Andreas Jeromin

A co-operation with the exhibition "Territories" in KW, in co-operation with the boat lab and TwenFM.

SPARE RADIO

Special transmission 1.6.

"each humans are an expert/a Multitude e.V." live on 1 June starting from 10.00 o'clock with beginning of the first actions is with expert-mobilely locally with the G8 the summit in Evian and sends. Medium activists from numerous countries mix Live pictures and before-produced program for audio and video Streams, which are fed from a publicly accessible P2P-Netzwerk and archived there also again.

Credit enough humans forwards, during and after the actions high-loaded, used or mixed audio and video materials the assistance of the usual P2P-Clients divided, these remain available also beyond the actual production period.

Expert-mobilely movement and communication liberty guarantees: The InterNet connection is made over a bi-directional satellite plant, which denied current enterprise with solar energy.

After the G8 summit continues to travel expert-mobilely to the noborder Camps to Romania, Poland and South Italies, as well as to European Union the summit after Thessaloniki.

4.00 - 8,00 o'clock
Night magazine. Repetitions & promises

Daily transmissions

8.00 - 9,00 o'clock
MORNING STAR *
Exerzitionen for driving the night out in the listener.
It is very early, the sun is come up in the east, it is a critical moment. Whether one suffers now from the world or easy cycle weakness, which to thought business and acceleration in the morning one should be allowed to leave others. Morning star offers both. The Sadismus of the radio, one speaks without to hear, all hears without to speak be able, - one uses profitably here: Moral and punishing lectures, swearing capitalism criticism of René Pollesch, revolution operas, Exorzismen, hasty insults of employees and shower fairy tales bring the grey early one to the glowing.
* Morning star, marks a lobar emergency weapon, occupied with nails, also: Prick club.

9.00 - 11,00 o'clock
The morning after
A Berlin surrogat in 6 transmissions.
In the morning after the overhang of the preceding daily and the last night is collected. Mailing lists and Weblogs, Stories and communist manifestos, dialogues and overeagerness - the incessant discussion of the strange voices, the internal Monologe of the city. Morning visite, a diagnosis without comment and presentation of Holger Schulze. Ozeanien always was in the war with Eastern Asia. Ozeanien was always the allied one of Eurasien. The felt population. The felt cloudy appearance. The weather.
Mo 2.6. Nathalie Bruys aka Kodi (music)
Di 3.6. Hanna Buhl (text) and a surprise guest (music),
Mi 4.6. Ingo Kottkamp (music) and Corinna Nicolai (text),
DO 5.6. Sami Khatib (music) and Joseph Imorde (text),
Fr 6.6. Janine Rostrum aka Planningtorock (music) and Ingo Kottkamp (text),
SA 7.6. Christine long (music) and Matze Schmidt (text)

11.00 - 12,00 o'clock
Of crossing the areas. Pieces of hearing.
The map had triumphed sometime then nevertheless and drove the report out of the traveler. The map geometrisierte and colonized the area, was readable for all and the storytellers of the distance had disappeared. The authors of the pieces of hearing move by the kartografierten area, but, as if the supervision, was lost to them the map view. There is migrations by roads and places and their conversions by the passanten.

Acoustic Psychogeografien, those the movements of going, Schlenderns and Hastens to follow. With pieces among other things of: Hildegard Westerkamp (Vancouver), Stefan Kaegi (Frankfurt), Janet Cardiff (London), Gob Squad (Berlin/London), Eran sharp (Berlin).

12.00 - 18,00 o'clock

SPACE CONTROL - the magazine

PRODUCTION AND USE OF BUILT ENVIRONMENT

AnArchitektur

Citizen of Berlin the magazine at architecture presents his work to the "production and use of built environment". Searches to specially-territorial areas such as Guantanamo Bay in Cuba or San Diego in the Karibik, new (right s) area, which was in "on Terrorism" to camp "unlawful combatants" is re-designed. Places of the redefinition and infiltration international one of right and American citizen rights. Interview among other things with The Lawyers Committee, New York.

www.anarchitektur.com

VIA EGNATIA Stalker

The history of the connecting VIA EGNATIA, old Rome with Constantinopel, is over the centuries a history of the DISPLACEMENTS. In the twenties a forced "population exchange" took place from one and a half million humans between Greece and Turkey, since hundredthousands are Kurds to Europe fled over this route. A reconstruction of the events, archives of personal stories and Kartografien along the VIA EGNATIA. www.stalkerlab.it

Alain Platel & les Ballets de C de la B. to guest in the studio.

The Companie gastiert in June at the people stage.

Radio flow

Radio flow is konzertantes radio, which synthesizes artistic propaganda from medium stream and personal expressions. Radio flow results from the manipulativen and generativen transformation of the Live inputs from manipulators, generators, speech by molders and musicians. The flow ensemble: Ulrike Gabriel, Antoine Chessex, Gilles Aubry, Kerstin woman suppl., Axel Doerner, Dirk Bruinsma

Under the plaster is the universe

C-cousin is a fallen space station under Berlin center. because of restoration work on some C-cousin of deck others are occupied. These are in old new Germany building, area 127. A report on archaeology of the future and subversive strategies of the city appropriation www.cbase.org

SUPERSCHOOL PRESENTS: CONGRESS OF THE SMATTERING OF KNOWLEDGE

Superschool. Smattering of knowledge + smattering of knowledge = full knowledge Halfknowing solve the large mysteries of mankind. The congress of smattering of knowledge cultivates the fallow lands of its brain. Dying cities: Does Leipzig become the spirit city? Golan heights, Gaza, Guantanamo Bay: What here is law? 1984 vs. 2003: Who controls the city? www.superschool.de

PROHIBITED AREAS IN the PUBLIC AREA Significans

The artists and Aktivistengruppe AG Significans produces three halfhour transmissions to the spatial restrictions, which are imposed foreigners, refugees and Migranten.

Guests: among other things Elizabeth Ngo Oum, Mohammed Abdel of amines of the Brandenburger refugee initiative and the lawyer Thomas Moritz.

80 researchers from 24 countries work in the network of MULTIPLICITY on a
comprehensive Karthographie of global border phenomena. Presented seven case
studies are www.multiplicity.it

LIGNA interventionist radio listening

"become part of the FSK Radioballetts! Take a broadcast receiver with miniature
headphone and a red cloth, go on the road and wait for further instructions!" Of
legendary actions like "radio ballet", "public radio listening in that Hamburg city
center" as example of their interventionist radio actions. www.fsk hh.org

Look, would list & repeat repeated films in the radio

Sie sehen die nacherzählten Filme am nächsten Tag im Arsenal.

In der Erinnerung entwickeln Kinofilme ein seltsames Eigenleben, das nichts mit
"Filmkritik" im landläufigen Sinn zu tun hat. Nach individuellen, zuweilen lustigen, oft
wilden und immer aufschlussreichen Archivierungsmustern speichert das
Zuschauergedächtnis Handlungen, Schrecksekunden, Schauplätze, Glücksgefühle,
Gesichter, Musiken, Kostüme oder Dialoge aus gesehenen Filmen. Um diesen Prozess
kreist die Reihe von Dorothee Wenner: sechs filmbegeisterte Menschen rekonstruieren
sechs Filme mit einer thematischen Gemeinsamkeit. Es sind Spiel- und Dokumentarfilme
aus unterschiedlichen Ländern, in denen es um Grenzen, Zonen, no-go-areas und
Überwachungssysteme geht. Die Nacherzählungen sind zugleich Vorankündigungen:
2.6. (17.30 Uhr) FAMILY VIEWING von Atom Egoyan, Kanada 1987. Den Film über

- videoüberwachtes Familienleben erzählt nach: Christian Petzold, Regisseur
3.6. (17.30 Uhr) C'MON BABE Sharon Sandusky, USA 1988 und ELEFANTEN (Karl Kels, D2002) den legendären Lemmingefilm erzählt nach: Lemminge-Expertin Stefanie Schulte Strathaus, Kinomacherin
4.6. (17.15 Uhr) NADYA'S VILLAGE, Seiichi Motohasi, Japan 1997 den japanischen Dokumentarfilm über ein Dorf in ihrer ukrainischen Heimat erzählt nach: Katja Potapejko, Studentin
5.6. (16.15 Uhr) STALKER, UdSSR 1978/79 von Andrej Tarkowskij. Den russischen Spielfilm erzählt nach: Nico Schröder, Filmjournalist.
6.6. (17.30 Uhr) ON THE BEAT China/Spanien 1995 von Ning Ying. Den Spielfilm über den Fahrradpolizisten aus Beijing erzählen Ulrich und Erika Gregor nach, Int. Forum und Arsenal-Kino.
7.6. (17.30 Uhr) THE CRUISE von Bennett Miller, USA 1998 den Dokumentarfilm über den exzentrischen Tourist-Guide aus Manhattan erzählt nach: Hanns Zischler, Schauspieler und Regisseur.

"JUNIRADIO IS NOT UNIRADIO"

Vom 8. bis 30.6. sendet das bootlab im Rahmen von ErsatzRadio, unter dem Titel JUNIRADIO. Ein dreiwöchiges Modell zur Durchsetzung eines freien Radios für Berlin. Selbstdarstellung: "Juniradio is not Uniradio, und auch kein Ersatzradio für Uniradio, und wir sind auch nicht der Offene Kanal. Juniradio ist ein freies Radio, insofern es ohne kommerzielle oder institutionelle Zwänge das Senden von Sendungen ermöglicht, die überall sonst von der Berliner Radiomafia verhindert werden. Juniradio ist kein Hauptstadtkulturfonds, und wir sind auch nicht Partner für Berlin. Juniradio ist ein offenes Radio, insofern es nicht von Profis, Experten oder PR-Spezialisten hergestellt wird, sondern von einem Netz lokaler wie internationaler Gruppen. Radio funktioniert nicht wie ein Theater, sondern wie eine Fabrik. Höchste Qualität bei minimalem Budget. Ein politisches Radio ist Juniradio insofern, als es eine gesellschaftliche Imagination adressiert: den Wunsch nach einem besseren Radio in Berlin, das nicht als Spekulation auf Marktnischen oder Zielgruppen zustande käme, sondern als eine Wette auf reale, sinnvolle und produktive Zusammenhänge. Und zwar endlich auch zwischen dem Radio und dem Leben der Leute."

Raumkontrolle 5: ErsatzRadio, Berlin

Foto: Thomas Aurin

ERSATZRADIO 7 Tage Raumkontrolle auf 104,1
So 1. bis Sa 7. Juni 2003

ERSATZRADIO erweitert, radikalisiert und popularisiert das Thema Raumkontrolle. Mit Telefoninterviews, in Gesprächen mit Studiogästen, durch weltweite Lokalberichterstattung und Verkehrsnachrichten und Beiträgen von 15 internationalen freien Radiostationen entsteht ein akustisches Wörterbuch zur strategischen Aneignung von Raum. ERSATZRADIO beginnt am 1. Juni mit einer Sondersendung, einem Livestream von den Protesten, Demonstrationen und Blockaden rund um den Genfer See anlässlich des diesjährigen G8 Gipfels in Evian und sendet ab 21.00 Uhr sein reguläres Programm. ERSATZRADIO

Konzept, Archiv, Programm: Anselm Franke, Hannah Hurtzig

Radioleitung: Klaas Glenewinkel

Programmplanung: Anja Wollenberg

Vorproduktion: Zsolt Barat

Technik Studio: Jens Gröger

Tontechnik: Oliver Pritzkow, Andreas Schwartz

Archivar: Andreas Jeromin

Eine Kooperation mit der Ausstellung "Territories" in den KW, in Zusammenarbeit mit dem bootlab und TwenFM.

ERSATZRADIO

Sondersendung 1.6.

"Jeder Mensch ist ein Experte/ Multitude e.V." ist mit dem Expertenmobil vor Ort beim G8 Gipfel in Evian und sendet live am 1. Juni ab 10.00 Uhr mit Beginn der ersten Aktionen.

Medienaktivisten aus zahlreichen Ländern mixen Live-Bilder und vorproduziertes Programm zu Audio- und Video-Streams, die aus einem öffentlich zugänglichen P2P-Netzwerk gespeist und dort auch wieder archiviert werden.

Haben genug Menschen die vor, während und nach den Aktionen hochgeladenen, benutzten oder gemixten Audio- und Video-Materialien mithilfe der üblichen P2P-Clients geteilt, bleiben diese auch über den eigentlichen Produktionszeitraum hinaus verfügbar.

Das Expertenmobil garantiert Bewegungs- und Kommunikationsfreiheit: Die Internetverbindung wird über eine bidirektionale Satellitenanlage hergestellt, der laufende Betrieb mit Solarenergie bestritten.

Nach dem G8 Gipfel reist das Expertenmobil weiter zu den noborder Camps in Rumänien, Polen und Süditalien, sowie zum EU Gipfel nach Thessaloniki.

24.00 - 4.00 Uhr

Der Piratensender Twen fm macht durch

4.00 - 8.00 Uhr
Nachtmagazin . Wiederholungen & Versprechen

Tägliche Sendungen

8.00 - 9.00 Uhr
MORGENSTERN*

Exerzitien zur Austreibung der Nacht im Hörer.

Es ist sehr früh, die Sonne ist im Osten aufgegangen, es ist ein kritischer Moment. Ob man jetzt an der Welt oder einer leichten Kreislaufschwäche leidet, das Gedankengeschäft und die Beschleunigung am Morgen sollte man anderen überlassen dürfen. Morgenstern bietet beides. Der Sadismus des Radios, -einer spricht ohne zu hören, alle hören ohne sprechen zu können,- wird hier nutzbringend angewendet: Moral- und Strafpredigten, fluchende Kapitalismuskritik von René Pollesch, Revolutionsopern, Exorzismen, voreilige Beschimpfungen von Angestellten und Schauermärchen bringen die graue Frühe zum Glühen.

*Morgenstern, bezeichnet eine keulenförmige Notwaffe, mit Nägeln besetzt, auch: Stachelkeule.

9.00 - 11.00 Uhr

Der Morgen Danach

Ein Berlin Surrogat in 6 Sendungen.

Am Morgen danach wird der Überhang des vorangegangenen Tages und der letzten Nacht gesammelt. Mailinglisten und Weblogs, Stories und Manifeste, Dialoge und Übereifer - das unaufhörliche Gespräch der fremden Stimmen, die inneren Monologe der Stadt. Morgendliche Visite, eine Diagnose ohne Kommentar und Moderation von Holger Schulze. Ozeanien hat sich schon immer im Krieg mit Ostasien befunden. Ozeanien war von jeher der Alliierte von Eurasien. Die gefühlte Bevölkerung. Die gefühlte Bewölkung. Das Wetter.

Mo 2.6. Nathalie Bruys aka Kodi (Musik)

Di 3.6. Hanna Buhl (Text) und ein Überraschungsgast (Musik),

Mi 4.6. Ingo Kottkamp (Musik) und Corinna Nicolai (Text),

Do 5.6. Sami Khatib (Musik) und Joseph Imorde (Text),

Fr 6.6. Janine Rostrum aka Planningtorock (Musik) und Ingo Kottkamp (Text),

Sa 7.6. Christine Lang (Musik) und Matze Schmidt (Text)

11.00 - 12.00 Uhr

Vom Durchqueren der Räume. Hörstücke.

Irgendwann hatte die Landkarte dann doch gesiegt und vertrieb den Bericht des Reisenden. Die Karte geometrisierte und kolonisierte den Raum, war für alle ablesbar und der Erzähler der Wegstrecke war verschwunden. Die Autoren der Hörstücke bewegen sich durch den kartografierten Raum, aber so, als sei ihnen die Aufsicht, der Kartenblick, verlorengegangen. Es sind Wanderungen durch Strassen und Orte und deren Verwandlungen durch den Passanten. Akustische Psychogeografien, die den Bewegungen des Gehens, Schlenderns und Hastens folgen. Mit Stücken u.a. von: Hildegard Westerkamp (Vancouver), Stefan Kaegi (Frankfurt), Janet Cardiff (London), Gob Squad (Berlin/ London), Eran Schaerf (Berlin).

12.00 - 18.00 Uhr

RAUMKONTROLLE - Das Magazin

PRODUKTION UND GEBRAUCH GEBAUTER UMWELT

AnArchitektur

Das Berliner Magazin An Architektur stellt seine Arbeit zur "Produktion und Gebrauch von gebauter Umwelt" vor. Recherchen zu extraterritorialen Räumen wie Guantanamo Bay in Kuba oder San Diego in der Karibik, neuartige (Rechts-)räume, die im "War on Terrorism" zu Gefangenenlager der "unlawful combatants" umfunktioniert werden. Orte der Redefinition und Unterwanderung Internationalen Rechts und amerikanischer Bürgerrechte. Interviews u.a. mit The Lawyers Committee, New York.

www.anarchitektur.com

VIA EGNATIA Stalker

Die Geschichte der das alte Rom mit Constantinopel verbindenden VIA EGNATIA ist über die Jahrhunderte eine Geschichte der Displacements. In den zwanziger Jahren fand ein erzwungener "Bevölkerungsaustausch" von eineinhalb Millionen Menschen zwischen Griechenland und der

Türkei statt, seitdem sind über diese Route Hunderttausende Kurden nach Europa geflüchtet. Eine Rekonstruktion der Ereignisse, ein Archiv persönlicher Geschichten und Kartografien entlang der VIA EGNATIA. www.stalkerlab.it

Alain Platel & les Ballets de C. de la B. zu Gast im Studio.
Die Compañie gastiert im Juni an der Volksbühne.

RADIO-FLOW

Radio-Flow ist konzertantes Radio, das aus Medienströmen und persönlichen Äußerungen künstlerische Propaganda synthetisiert. Radio-Flow entsteht aus der manipulativen und generativen Transformation der Live-Inputs durch Manipulatoren, Generatoren, Sprechperformer und Musiker. Das Flow-Ensemble: Ulrike Gabriel, Antoine Chessex, Gilles Aubry, Kerstin Weiberg, Axel Doerner, Dirk Bruinsma

Unter dem Pflaster liegt das All

C-Base ist eine abgestürzte Raumstation unter Berlin Mitte. !Achtung! wegen Restaurationsarbeiten auf einigen c-base Decks werden andere belegt. Diese befinden sich im alten Neuen Deutschland Gebäude, Raum 127. Ein Bericht über Archäologie der Zukunft und subversive Strategien der Stadtaneignung. www.c-base.org

SUPERSCHOOL PRÄSENTIERT: KONGRESS DES HALBWISSENS

Superschool. Halbwissen + Halbwissen = Vollwissen
Halbwissende lösen die großen Rätsel der Menschheit. Der Halbwissenskongreß bebaut die Brachflächen ihres Gehirns. Sterbende Städte: Wird Leipzig zur Geisterstadt? Golan-Höhen, Gaza, Guantanamo Bay: Was ist hier Gesetz? 1984 vs. 2003: Wer kontrolliert die Stadt? www.superschool.de

SPERRZONEN IM ÖFFENTLICHEN RAUM Significans

Die Künstler und Aktivistengruppe AG Significans produziert drei halbstündige Sendungen zu den räumlichen Beschränkungen, die AusländerInnen, Flüchtlingen und Migranten auferlegt werden. Gäste: u.a. Elisabeth Ngo Oum, Mohammed Abdel Amine von der Brandenburger Flüchtlingsinitiative und der Anwalt Thomas Moritz. www.significans.de

BORDERBIAS

Ein Beitrag des Journalisten Martin Hirsch über die Grenzbeziehungen zwischen den USA und Kanada, die verschärften Grenzkontrollen seit dem 11. September und den G8 Gipfel in Kanada.

BE SUPERNATURAL

Brain Balancing über das Radio
Kommunikation ohne Telefon, Kabel, Fiberglass oder Satellit ist nicht unmöglich! Brainbalancing über Radio macht uns unabhängig! In einem 18 minütigen do-it-yourself Workshop erklären Nina Fischer und Maron el Sani eine Methode zur technikfreien Telekommunikation über das Radio.

MEDIEN IN ISRAEL UND PALÄSTINA

Manu Luksch interviewte 4 Experten mit unterschiedlichen Positionen zum Thema: Nisreem Abu-Zayyad (Palestine-Israel Journal), Galit Eilat (Director Digital Art Lab, Holon,) Momo Yoel (indymedia, Tel Aviv) and Ronni Shendar (Alternative Information Centre, Jerusalem).

KontrollRaum

Der öffentliche Raum, erfasst und verarbeitet. Der Chaos Computer Club Berlin möchte ergründen, ob in Berlin die allgemeine Sicherheitslage ein unbeobachtetes In-der-Nase-Bohren noch zulässt. Frank Rieger, Frank Rosengart, CCC, www.ccc.de

Spread Radio - Tunes inna Family Style.

Klangraumkontrolle mit Dr. B. Lunt und Oben Ole von Style & The Family Tunes

Holland ist ein ordentliches Land

Die holländische Gesellschaft ist ein ständig wachsendes Geflecht aus Gesetzen und Regularien. Am Ende richtet sich das Regelwerk gegen alle. Gruppe Schie 2.0, Rotterdam, über Selbstregulierung und Freiheit.

ETHNOGRAPHIE EINES SANIERUNGSGEBIETS

Sanierung, die physische Bereinigung von Raum, geht immer einher mit einer sozialen Bereinigung. Das Beispiel Friedrichshain, 2002, vorgetragen von Thomas Goetz.

REFLECTIONS ON SERENDIPITY AND THE ART OF DRIFTING Drifting friends

Nach 5 Jahren Japanaufenthalt entdecken Mic Vieser und Reto Wettach Deutschland wieder neu. Eine Audio-Kollage unerwarteter Erfahrungen. Mit dem Berliner DJ/Produzent Deckart. www.driftingfriends.de

BORDER DEVICE(S) Multiplicity

80 Forscher aus 24 Ländern arbeiten im Netzwerk von MULTIPLICITY an einer umfassenden Kartographie von globalen Grenzphänomenen. Präsentiert werden sieben Fallstudien. www.multiplicity.it

LIGNA Interventionistisches Radiohören

"Werde Teil des FSK-Radioballetts! Nimm einen Rundfunkempfänger mit Miniaturkopfhörer und ein rotes Tuch, geh auf die Strasse und warte auf weitere Anweisungen!" Von legendären Aktionen wie "Radioballett", "Öffentliches Radiohören in der Hamburger Innenstadt" als Beispiel ihrer interventionistischen Radioaktionen. www.fsk-hh.org

Look, listen & repeat Nacherzählte Filme im Radio

Sie sehen die nacherzählten Filme am nächsten Tag im Arsenal.

In der Erinnerung entwickeln Kinofilme ein seltsames Eigenleben, das nichts mit "Filmkritik" im landläufigen Sinn zu tun hat. Nach individuellen, zuweilen lustigen, oft wilden und immer aufschlussreichen Archivierungsmustern speichert das Zuschauergedächtnis Handlungen, Schrecksekunden, Schauplätze, Glücksgefühle, Gesichter, Musiken, Kostüme oder Dialoge aus gesehenen Filmen. Um diesen Prozess kreist die Reihe von Dorothee Wenner: sechs filmbegeisterte Menschen rekonstruieren sechs Filme mit einer thematischen Gemeinsamkeit. Es sind Spiel- und Dokumentarfilme aus unterschiedlichen Ländern, in denen es um Grenzen, Zonen, no-go-areas und Überwachungssysteme geht. Die Nacherzählungen sind zugleich Vorankündigungen:

2.6. (17.30 Uhr) FAMILY VIEWING von Atom Egoyan, Kanada 1987. Den Film über videoüberwachtes Familienleben erzählt nach: Christian Petzold, Regisseur

3.6. (17.30 Uhr) C'MON BABE Sharon Sandusky, USA 1988 und ELEFANTEN (Karl Kels, D2002) den legendären Lemmingefilm erzählt nach: Lemminge-Expertin Stefanie Schulte Strathaus, Kinomacherin

4.6. (17.15 Uhr) NADYA'S VILLAGE, Seiichi Motohasi, Japan 1997 den japanischen Dokumentarfilm über ein Dorf in ihrer ukrainischen Heimat erzählt nach: Katja Potapejko, Studentin

5.6. (16.15 Uhr) STALKER, UdSSR 1978/79 von Andrej Tarkowskij. Den russischen Spielfilm erzählt nach: Nico Schröder, Filmjournalist.

6.6. (17.30 Uhr) ON THE BEAT China/Spainien 1995 von Ning Ying. Den Spielfilm über den Fahrradpolizisten aus Beijing erzählen Ulrich und Erika Gregor nach, Int. Forum und Arsenal-Kino.

7.6. (17.30 Uhr) THE CRUISE von Bennett Miller, USA 1998 den Dokumentarfilm über den exzentrischen Tourist-Guide aus Manhattan erzählt nach: Hanns Zischler, Schauspieler und Regisseur.

Interviews

Die Interviewer

Stefan Retfeld, Architekt, Berlin, Phil Misselwitz, Architekt, Tel Aviv, London, Berlin, Susanne Schindler, Redakteurin bei Arch+, Sarah Herda, Storfront for Art and Architecture, New York, Jochen Becker, Kurator, Kritiker, Berlin, Stephan Lanz, Stadtforscher und -planer, Berlin und Meron Benvenisti, David Campbell, Jeff Halper, Rafi Segal, Eyal Weizman

Die Interviewpartner

Kontrolle:

Prof. Arjun Appadurai; Geograph, Yale University; Der Raum der Nationalstaaten heute: Identität, Gewalt und Territorium
Michael Baute; Filmkritiker, Berlin/Antje Ehmann - Filmwissenschaftlerin, Berlin; Über das Kameraauge

Manuela Krause macht und moderiert die Sendung Micropolis auf Klubradio (www.klubradio.de), auch bekannt als Olimpia auf Superstar Records.

RP Kahl, Regisseur, Produzent. Filme: Silvester Countdown, Angel Express, 99 EURO-Films, Europe (99 EURO-Films 2)

Sprecher: Kathrin Angerer, Herbert Fritsch

18.00 - 20.00 Uhr

RAUMKONTROLLE - Die Dialoge

Dialoge zum strategischen Raum von Architektur, Stadt- und Landschaftsplanung. Mit Fallbeispielen aus Israel, Südafrika, Bosnien und Deutschland. Aus dem Archiv "Erzählungen von Orten, Räumen und Territorien" des KIOSK für nützliches Wissen. Sie hören eine Aufzeichnung der gestrigen Veranstaltung in der Villa Elisabeth. In englischer Sprache

Mo 2.6. Zvi Efrat - Eran Schaerf

Di 3.6. Friedemann Büttner - Amos Gitai

Mi 4.6. Sharon Rotbard - Roemer van Toorn
Do 5.6. David Campbell - Eyal Weizman
Fr 6.6. Jeff Halper - Lindsay Bremner
Sa 7.6. Meron Benvenisti - Milan Prodanovic

20.00 - 21.00 Uhr

RAUMKONTROLLE - Der Kommentar

Die sieben Dialoge des KIOSK werden unmittelbar im Anschluß an die Sendung von Passanten auf der Kastanienallee im Studio kommentiert.

21.00 - 23.00 Uhr und 24.00 - 4.00 Uhr

TWEN FM macht legal Musik

Auf nächtlicher Kreuzfahrt durch die Berliner Musikszene wird TwenFM snares, hihats und Bässe durch den Äther jagen. TwenFM geht auf Sendung u.a. mit Puppemastaz, Jeansteam, Frathese Toys, Nerdinger, Bad Kleinen, femmes with fatal breaks, dj peejay, bandolero sound system, Neon Man, Extravaganza, BpitchControl, DJ Aziz, Pilsskills. twenFM seit 1999 als Piratensender in und um Mitte, P-berg aktiv, kämpft um ein dauerhaftes legales Sendeforum.für alternative Berliner Musik, Kultur und Medienproduzenten. TwenFM broadcasted DJ-Sessions, live und direct: zwei Technics, ein Mixer , ein Mic, alle Genres. Dabei rotieren neue Talente, erfahrene Produzenten und Bignames gleichberechtigt nebeneinander.

23.00 - 24.00 Uhr

SOUND OF THE CITY

Gespräche zur Stadt und Musik.

Christoph Gurk lädt ein bis zwei Gäste und ihre Plattensammlung zum zwanglosen Talk ins Studio. Es geht um die Bedeutung von Pop für die persönliche Biografie, das innige Verhältnis von Musik und Stadt, die Geschichte des Sound als Code urbaner Subkulturen oder auch den Zusammenhang zwischen Klang und Konzepten von Raumkontrolle. Nichts muss, alles kann. Studiogäste:

So 1.6. René Pollesch (Regisseur, Volksbühne am Rosa-Luxemburg-Platz)

Mo 2.6. Jan Jelinek (Musiker, Farben)

Di 3.6. Barbara Morgenstern (Musikerin, Solokünstlerin)

Mi 4.6. Reinhold Friedl (Musiker, Zeitkratzer Ensemble)

Do 5.6. Yvonne Cornelius (Musikerin, Niobe Tse Tse)

Fr 6.6. Ronald Lippok & Bernd Jesträm (Musiker, Tarwater)

Sa 7.6. Bettina Köster (Ex-Malaria)

ELEVATORMUSIC

Wird bei der Pabstwahl Musik gehört?

Ganztägiger Soundteppich.

Hanno Leichtmann und Nicholas Bussmann lassen sich über den gesamten Zeitraum des ERSATZRADIO in einen gläsernen Aufzug eines leerstehenden Bürokomplexes am Hackeschen Markt einschließen. Das einwöchige Experiment dient der Auslotung der Beziehungen von Musik zu Raum und ihren Funktionen in unserer Gesellschaft. Allein über eine schnelle Datenleitung mit der Aussenwelt verbunden soll in dem Aufzug versucht werden, eine Musik zu entwerfen, die auf die engen Raumbedingungen modernen Großstädte eingeht - vielleicht sogar darüber hinaus in ihre Zukunft verweist. Weitere Passagiere: Jan Jelinek, Andrew Peckler, Thaddeus Herrmann, Lars Rudolph, Hannes Strobl, Static, Resistance, Holger Friedrich, Leonid Soybelman.

bootlab

"JUNIRADIO IS NOT UNIRADIO"

Vom 8. bis 30.6. sendet das bootlab im Rahmen von ErsatzRadio, unter dem Titel JUNIRADIO. Ein dreiwöchiges Modell zur Durchsetzung eines freien Radios für Berlin.

Selbstdarstellung: "Juniradio is not Uniradio, und auch kein Ersatzradio für Uniradio, und wir sind auch nicht der Offene Kanal. Juniradio ist ein freies Radio, insofern es ohne kommerzielle oder institutionelle Zwänge das Senden von Sendungen ermöglicht, die überall sonst von der Berliner Radiomafia verhindert werden. Juniradio ist kein Hauptstadtkulturfonds, und wir sind auch nicht

Partner für Berlin. Juniradio ist ein offenes Radio, insofern es nicht von Profis, Experten oder PR-Spezialisten hergestellt wird, sondern von einem Netz lokaler wie internationaler Gruppen. Radio funktioniert nicht wie ein Theater, sondern wie eine Fabrik. Höchste Qualität bei minimalem Budget. Ein politisches Radio ist Juniradio insofern, als es eine gesellschaftliche Imagination adressiert: den Wunsch nach einem besseren Radio in Berlin, das nicht als Spekulation auf Marktnischen oder Zielgruppen zustande käme, sondern als eine Wette auf reale, sinnvolle und produktive Zusammenhänge. Und zwar endlich auch zwischen dem Radio und dem Leben der Leute."

Betalounge, Hamburg, San Francisco www.betalounge.de, Betalounge wurde in San Francisco als eines der ersten Webradios gegründet und sendet heute aus den NSEC Studio (Network Syndicate European Community) in Hamburg. Alle Shows werden nach dem Live Event archiviert, und sind dann über www.betalounge.de zugänglich. DFM www.dfm.nu, DFM sendet seit dem 1. Januar 1998 als unabhängiger Webcast-Sender in den Niederlanden. Radio100 www.radio100.nl, Radio100 war einer der ersten und ist einer der letzten Piratensender in Amsterdam. Radiointerference www.radiointerference.nl, Radiointerference basiert auf einer Zusammenstellung archivierter Streams. Die Beiträge kommen von internationalen Künstlern. Spamradio www.spamradio.com, Spamradio ist ein Radioprojekt, das Junkmails (spam) in ein Radioprogramm verwandelt. Eine Computerstimme liest den Spam vor. Unterlegt ist das Ganze mit elektronischer Musik. Radio Fro, 105.0 Mhz, Linz www.fro.at, Radio Fro ist ein Themenradio über Politik, Bildung, Kunst, Kultur, Soziales, Unterhaltung und je nach dem was der Programmleitung gerade einfällt. Gegründet wurde Radio Fro 1998. Ambient-tv www.ambienttv.net, AmbientTV.NET arbeitet als Kunstproduktionsunternehmen. Im Zentrum stehen Projekte, die Sound, Bild, Informationen, Tanz, Radio und Netzwerke kombinieren. radiokampagne www.radiokampagne.de, Die Radiokampagne.de ist ein Zusammenschluss von Radio-Initiativen, Wortkünstlern und Musikern, die ein freies Radio für Berlin Brandenburg fordern. Radio4A, 101.4 FM, Brighton, Das Radioprojekt 4A besteht aus engagierten Leuten, die Geld, Zeit und Ideale aufbringen und dabei als Piratensender mit einem Bein im Gefängnis stehen. Radiomars www.radiomars.si, Radiomars ist ein Radiosender in Maribo/Slovenien für und von Studenten, der vor allem unbekannte Musiker unterstützt. WMFU www.wfmu.org, Gegründet auf dem Campus der Upsala Hochschule, in East Orange, machte sich WMFU 1994 unabhängig und sendet heute auf 91.1 Mhz FM in New Jersey City.

[LISA 1 - E-valimiste sotsioloogilise uuringu tulemused 61](#)

1. Sissejuhatus

Valimistel on riigis demokraatiaideede elluviimisel täita elutähtis funktsioon - olla vahendajaks rahva tahte ja riigivõimu teostamise vahel. Selle funktsiooni täitmise kvaliteet on otseselt seotud valimisaktiivsusega ja valimistulemuste usaldusväarsusega. Kurss selle kvaliteedi maksimeerimise suunas uute tehnoloogiliste võimaluste abil on demokraatlikus ühiskonnas loomulik.

Valimised interneti vahendusel on loogiliseks jätkuks majanduses ja riigihalduses praegu juba kasutatavatele rakendustele. Elektroonilised valimised seavad aga tunduvalt kõrgemad nõuded süsteemi turvalisusele ja salajasusele, tagatud peavad olema võrdsed võimalused valijatele ning hulk muid eeldusi - e-valimiste läbiviimine on märgatavalt suurem väljakutse kui mistahes kommertslike infosüsteemide ülesehitamine. See väljakutse ei seisne mitte süsteemi kavandamises, väljatöötamises või kontrollimises, vaid avalikkuse usalduse võitmisel.

Eesti on võtnud sihi olla eeskujuks teiste riikide seas ning viia ühena esimestest läbi vabad, üldised ja ühetaolised valimised elektroonilisel teel. See ambitsioonikas ettevõtmine saigi käesoleva bakalaureusetöö esmaseks ajendiks.

E-valimiste pooldajad näevad süsteemi peamiste eelistena mugavust, efektiivsust, täpsust ja pikemas perspektiivis väiksemaid kulusi võrreldes traditsiooniliste valimistega. Vastuseisjate arvates ei suudeta veel niipea tagada piisavat valijate privaatsuse ning süsteemi turvalisuse ja töökindluse taset, mis tagaks valimistulemuste autentsuse. Interneti kättesaadavuse ebaühtlane jaotumus võib põhjustada sotsiaalset killustatust. Võimalike riskide esiletoomine ja nende vähendamise võimalustest ülevaatliku pildi andmine on ka käesoleva analüüsi eesmärgiks. Praktilise eesmärgina näen e-valimiste olemuse arusaadavaks tegemist potentsiaalsele valijale.

Allikatena olen kasutanud Eesti justiitsministeeriumis tehtud uurimusi, välisriikides läbi viidud uuringuid ja valminud standardeid, spetsialistide arvamusi ja seniste praktiliste katsetuste analüüse.

1. Analüüsi piiritlemine ja sisukirjeldus

E-valimiste teema haakub mitmete teadusharudega - õiguse, majanduse, politoloogia, filosoofia, sotsioloogia ja muidugi tehnoloogiaga. Sedavõrd komplitseeritud süsteemi käsitlemisel tuleb arvestada eri valdkondade omavahelisi seoseid ja mõjusid üksteisele. Põhjendades seisukohta ühes valdkonnas, tuleb tihtilugu esitada argumente teisest. E-valimiste teoreetiline käsitus eeldab interdistsiplinaarset lähenemist. Erinevate aspektide vaatluse olengi eesmärgiks võtnud käesoleva töö teises ja kolmandas peatükis, lähtudes esmajoones siiski neist probleemiasetustest, mis on õiguslikust seisukohast relevantsemad.

Oma töös annan ülevaate elektrooniliste valimiste tähtsusest demokraatiale, süsteemi eeldustest, eelistest ja puudustest, probleemidest ning nende lahendustest.

Bakalaureusetöö esimeses osas on käsitletud e-valimiste teoreetilisi aluseid - e-valimiste olemust ning kohta demokraatias. Sellesse jaotisesse kuuluvad ka mõisted, liigitused, eesmärgid ja põhimõtted. Ulatuslikum peatükk esimesest osast on pühendatud demokraatlikele valimisprintsipiidele vastavate tulemuste saavutatavusele e-valimistel. Tähelepanu on juhitud ennekõike küsimustele, mis e-valimiste korraldamisel võivad tekitada kõige enam erimeelsusi.

Töö teine osa käsitleb e-valimiste eelduste erinevaid aspekte ja võtmeküsimusi, millele tuleks e-valimiste eel tingimata vastused leida. Selles osas on toodud ka e-valimiste sotsiaalsete probleemide hindamiseks Eestis läbi viidud sotsioloogilise uuringu tulemused.

Kolmandas osas olen esitanud üldistatud mudeli e-valimiste süsteemist, mis peaks lihtsustama e-valimiste protsessiga kaasneva problemaatika tunnetamist ning andma teemaga esmakordselt kokku puutuvale inimesele üldise ettekujutuse sellest, mis tegelikult e-valimiste süsteemis valimise ajal aset leiab.

Neljandas osas olen kirjeldanud e-valimiste esimesi reaalseid katsetusi ning arengusuundi välisriikides. Eraldi peatükki Eesti kohta ei ole, sest Eesti e-valimistega seonduv on läbivaks teemaks

töö põhiosas.

2. E-valimiste mõiste ja seonduvad definitsioonid

Erialakirjanduses võib kohata arvukaid erinevaid mõisteid aparatuuride või elektrooniliste seadmetega valimiste tähistamiseks, mille ulatus ühelt poolt piirneb valimistega telegraafi või mehhaaniliste häälte lugemismasinatega ning kõige arenenumal kujul tähistavad valimisi suvalisest interneti ühendatud seadmest.

Kõige sagedamini kasutatakse sõnapaari elektroonilised valimised (i.k. electronic elections), mis tähistab valimisviise mistahes spetsiaalselt valimisteks kohandatud elektrooniliste seadmete vahendusel. See on väga lai mõiste ning hõlmab kogu kontseptsiooni, mis puudutab valimisõiguse teostamist.

Ingliskeelses kirjanduses jaguneb elektrooniliste valimiste mõiste kaheks - internetivalimised (internet voting, online voting) ja valimised võrguühenduseta seadmete abil (offline voting). Internetivalimine omakorda võib toimuda spetsiaalses internetiühendusega valimispunktis (poll-site internet voting) või suvalisest internetiühendusega arvutist (remote internet voting).

Justiitsministeeriumis on e-Riigi ja e-Kodaniku kõrval võetud kasutusele nimetus eValimised, mis kirjapildist lähtuvalt peaks tähistama elektroonilisi valimisi kui projekti. Selle all mõeldakse elektroonilist hääletamist suvalisest interneti ühendatud arvutist, ehk siis eValimised on Eestis saanud internetivalimiste sünonüümiks. Eesliitega “e-“ on tähistatud ka teisi mõisteid, mis elektrooniliste valimistega seonduvad - näiteks on justiitsministeeriumile koostatud analüüsides kasutatud lühendeid “e-hääle” ja “e-valija” (9, lk 4). Käesolevas töös on siiski jäädud traditsiooniliste “hääle” ja “valija” juurde, mis on elementideks e-valimiste protseduuris.

Internetivalimistega on tegu ka siis, kui valida saab vaid spetsiaalsest valimispunktis asuvast seadmest, mis on ühendatud interneti. Kuna Eesti e-valimiste korraldamise suunitlus on teine, siis sellisel süsteemil käesoleva töö teooria osas pikemalt ei peatuta.

Kokkuvõtvalt - käesolevas bakalaureusetöös on kasutusel mõiste “elektroonilised valimised” (lühendatult “e-valimised”), mis justiitsministeeriumi eeskujul tähistab internetivalimisi suvalisest internetiühendusega arvutist (remote internet voting), kui ei ole eraldi märgitud, et mõeldud on valimisi muude elektrooniliste vahendite abil.

“E-valimised” laiemas tähenduses ja mitmuses tähistab kogu elektrooniliste valimiste kontseptsiooni. Kitsamas tähenduses ja ainsuses tähistab termin “e-valimine” või “e-hääletamine” hääletamisprotseduuri ehk toiminguid, mida isik teostab oma hääle andmisel või selle kontrollimisel arvutite vahendusel. Kohalike omavalitsuse valimise seaduses tähistab seda protseduuri mõiste “elektrooniline hääletamine” (38, § 50), mis hõlmab seaduse kohaselt isiku autentimist, valiku tegemist ja valiku järelkontrolli valijale.

Käesolevas töös on kasutatud veel järgnevaid elektrooniliste valimistega seonduvaid mõisteid:

autentimine - isiku või protsessi identsuse kontrolli ja tõendamine 1;

digitaalallkiri - tehniliste ja organisatsiooniliste vahendite süsteemi abil moodustatud andmete kogum, mida allkirja andja kasutab, märkimaks oma seost dokumendiga. Digitaalallkiri moodustatakse allkirja andja poolt allkirja andmise vahendi abil, millele vastab üheselt allkirja kontrollimise vahend². Digitaalallkirjaga võib "allkirjastada" mistahes andmekandjale jäädvustatud teavet;

krüpteerimine - andmete viimine kõrvaliste jaoks loetamatule kujule;

dekrüpteerimine - krüptogrammi teisendamine avatekstiks, ka õifrit ja/või võtit teadmata;

sertifikaat - dokument, mis on välja antud, võimaldamaks digitaalallkirja andmist ja milles avalik võti seotakse üheselt füüsilise isikuga³;

sertifitseerimisteenus - digitaalallkirja andmiseks vajalike sertifikaatide väljaandmine, sertifikaatide alusel antud digitaalallkirjade kontrollimise võimaldamine ning sertifikaatide kehtivuse peatamise, kehtivuse peatamise lõpetamise ja kehtetuks tunnistamise menetlemine. Sertifitseerimise tulemusena annab sertifitseerimisteenuse osutaja sertifikaadi taotlejale välja sertifikaadi⁴;

valimiste süsteem - valimiste organisatoorne süsteem. See hõlmab kõike, mis on vajalik valimiste läbiviimiseks alates valijate registreerumisest ja hääletamisest kuni valimistulemuste kindlakstegemiseni ja süsteemi auditeerimiseni - andmekäitlust, seadmeid, tehnilist tuge ning järelevalvet. Mitte segamini ajada valimissüsteemiga.

Käesolevas töös on viidatud ka uutele Eesti Riigikogu valimise seaduse eelnõule, mis ei olnud käesoleva töö valmimise ajaks veel vastu võetud, ja Kohalike omavalitsuste volikogude valimise seadusele⁵, mis võeti vastu 27. märtsil 2002. Kuna e-valimisi puudutav osa on neis ühesugune, siis edaspidi on neid nimetatud ühiselt "Eesti valimisseadusteks".

2. E-valimised ja demokraatia

Ühiskonna arenguga kaasneb demokraatia tähenduse järk-järguline teisenemine. Arusaadavalt tuleks demokraatia väärtuste avamiseks kasutada ka uute tehnoloogiasaavutustega kaasnevaid alternatiive. Üheks esimeseks etapiks demokraatia "uuenemisel" on e-valimised.

Uute kommunikatsioonivahendite kaasamine riigi haldamisse on käivitamas muudatusi, mille mõjud demokraatiale on palju ulatuslikumad, kui praegu ennustada osatakse. Inimestel on üha enam võimalusi poliitilises diskussioonis osalemiseks, nad saavad anda tagasisidet poliitilistele otsustele ning soovitada ja algatada poliitilisi protsesse iseseisvalt või teistega ühinedes. Rahvaesindajad saavad ülevaate probleemidest ja nendest lahendusvariantidest, mida tavalised kodanikud tegelikult

elus näha sooviksid. Lisaks poliitilisele harimisele ja kodanikutunde kasvatamisele ajendab otsene demokraatias osalemine inimesi süvenema rohkem riigihalduse probleemidesse ning tegema pingutusi neist arusaamiseks.

E-valimistega, mida peetakse elektroonilise demokraatia üheks esimeseks etapiks, saavad alguse sotsiaalsed harjumused ja rajatakse tehniline infrastruktuur, mille pinnalt on suhteliselt väheste ressurssidega võimalik arendada demokraatia uusi vorme.

E-valimiste paigutamiseks kaasaja demokraatia konteksti tuleb alustada kaugemalt -demokraatia olukorrast tänapäeval ning elektroonilise demokraatia aktualiseerumisest.

Demokraatia⁶ idee pärineb Vana-Kreekast, kus linnriikide kodanikud tulid linna keskväljakule kokku, et jõuda konsensuseni otsuste vastuvõtmisel. Otsuseid tegid inimesed ise, vahetu suhtlemise käigus. Otsustada võidi mida tahes - näiteks maksude tõstmise 50% võrra ühel päeval ja nende langetamise järgmisel. Seaduste ja võimude lahususe puudumise tõttu oli selline süsteem arvatavasti üsnagi ebaefektiivne. Inimeste hulga kasvuga ei osutunud taoline valitsemisvorm enam otstarbekaks ning see asendus esindusdemokraatiaga.

Lääneriikides tänapäevaks välja kujunenud esindusdemokraatial on aga mitmeid puudusi, mis põhjustavad rahva seas järk-järgult suurenevat rahulolematust. Võimu ja sellega kaasnevate hüvede koondumine esindajate kätte õhutab usaldamatust, mis omakorda süvendab poliitikute võõrandumist rahvast. Sageli süüdistatakse poliitikuid võimuahnuses ja korrupsioonis, rahvaesindajad ei seisvat tõeliste väärtuste eest, nad ei vastutavat isiklikult oma tegude eest, ei arvestavat kodanike vajadustega ning ei lahendavat nende tegelikke probleeme. Olukorda on iseloomustatud kui üldist esindusdemokraatia kriisi (1, lk 14).

Vabariigi valimiskomisjoni andmetel oli valimisaktiivsus Eestis Riigikogu 1999. aasta valimistel 57.3% ning kohalike omavalitsuste valimistel 49.9%.⁷ Võrreldes Riigikogu 1992 ja 1995. aasta valimistega on valimisaktiivsus langenud ligi 10%. Tõenäoliselt edasine langus enam nii järsk ei ole, kuid kodanike süvenev poliitiline ükskõiksus on siiski probleem, millega iga demokraatlik riik peaks aktiivselt võitlema. Kõige passiivsemateks peetakse seejuures 18-25 aastaseid noori - just neid, kellel on kõige paremad võimalused ja kogemused interneti kasutamisel. Maailmas läbi viidud sotsioloogilistest uuringutest nähtub, et e-valimiste korraldamisel tõuseks valimisaktiivsus mitme protsendi võrra eelkõige noorte valijate arvelt.

Eesti valitsuse tegevust toetas Emor-i uuringu põhjal 2001. aastal keskmiselt vaid umbes 46% kodanikest⁸.

Selleks, et demokraatia toimiks ja endast tõepoolest “rahva võimu” kujutaks, on vajalik esindajate ja kodanike omavaheline suhtlemine ning inimeste arvamuste kuuldavaks saamine. Poliitiline kommunikatsioon ei tohi jääda vaid massimeedia tasemele, vajalik on ka individuaalne suhtlus. Demokraatia parendamisel on kommunikatsioonitehnoloogiatel seetõttu tähtis roll.

1. Elektrooniline demokraatia

Kõige laiemas mõttes tähistab elektrooniline demokraatia süsteemi, mis võimaldab infotehnoloogia vahenditega teostada rahva võimu. Nüüdisaja kommunikatsioonivõimalused muudavad demokraatia algupärase idee taas kättesaadavaks (22, lk. 1).

Demokraatia baseerub suuresti info avalikkusel ja valitsuse tegevuse läbipaistvusel. Mitmete lääneriikide valitsused on juba astunud samme oma tegevuse avalikustamises internetis. Üksikud riigid on jõudnud ka teiste elektroonilise demokraatia etappideni, nagu internetis avalike foorumite korraldamine rahvaesindajate osavõtul, arvamusküsitlused ja kodanikualgatused. Paljukiidetud näiteks on Eesti e-riik ja elektroonilise demokraatia nurgakiviks saanud kodanike seadusloome initsiatiivi süsteem "Täna Otsustan Mina"⁹.

Poliitikateoreetik Brian Fay on öelnud, et demokraatias on kõige tähtsam indiviidide osalemine iseenda kollektiivse identiteedi määratlemises. Demokraatia ei tähenda mitte ainult hääletamist, vaid osalemist diskussioonis (19, lk 1). Ideaalses demokraatias peaks igalühel olema võimalus küsimuste tõstatamiseks, arvamuste vahetuseks ning otsustamine eeldaks konsensuseni jõudmist.

Tegelikkuses ei ole täieliku üksmeele taotlemine mõistagi praktiline. Tänapäeva tehnoloogiaga on aga kättesaadavaks saanud demokraatia realiseerimise viisid, mis pakuvad küllaltki efektiivset kompromissi ideaali ja praktilise lahenduse vahel. Selline demokraatia seisneks interaktiivses elektroonilises dialoogis rahva ja esindajate vahel, mille pinnalt võiksid rahvaalgatuse teel tõusetuda seadusemuudatused. Hääletamine oleks integreeritud aruteluga, igalühel oleks võimalus oma häält diskussiooni käigus muuta.

Interneti vahendusel on kergem leida ka mõttekaaslasi, kellega ühinedes saab algatada märksa mõjukamaid protsesse, kui üksikisik tavaliselt suudaks.

Tõeline demokraatia tähendab seda, et enne otsuste vastuvõtmist toimub reaalne dialoog esindajate ja rahva vahel. Interneti vahendusel saaks igalüks osaleda interaktiivses suhtlemises, argumentatsioonis ja otsuste vastuvõtmises. Teoreetiliselt võimaldaks see seadusandlikku võimu teostada selliselt, et rahval oleks võimalus kõiki legislatiivotsuseid vastu võtta ise, rahvahääletusega. Rohkearvulised vähemtähtsad otsused jäävad mõistagi alatiseks esindajate hooleks, kuid igal aastal mõnekümne seaduse läbihääletamine elektroonilisel teel ei valmistaks pikemas perspektiivis mingeid raskusi ega tähendaks olulisi kulutusi. Inimesed saaksid ise otsustada ka seda, millised ettepanekud vääriskid rahvahääletust ja millised mitte.

Tänapäeval on suhteliselt vähe riike, kus on ette nähtud rahvaalgatus. Eesti Vabariigi 1920-nda aasta Põhiseaduses oli seaduste andmise, muutmise või kehtetuks tunnistamise algatamise õigus antud 25 000-le hääleõiguslikule kodanikule. Tänapäeval on Eestis on rahvaalgatuse võimalus ette nähtud Kohaliku omavalitsuste korralduse seaduses. Nimetatud seaduse § 32 näeb ette võimaluse, et vähemalt ühel protsendil hääleõiguslikel valla- või linnaelanikel, kuid mitte vähem kui viiel hääleõiguslikul valla- või linnaelanikul, on õigus teha kohaliku elu küsimustes valla- või linnavolikogu või -valitsuse õigusaktide vastuvõtmiseks, muutmiseks või tühistamiseks algatusi, mis võetakse arutusele hiljemalt kolme kuu jooksul.¹⁰

Rahvaalgatuseks vajalike digitaalallkirjaga allkirjastatud häälte kokkusaamine internetis oleks märksa lihtsam kui klassikalistel meetoditel. Eestis võiks internet juba järgmisel aastal toimida väga kaaluka otsedemokraatia vahendina, kui piisavalt paljudel kodanikel oleks võimalik anda internetis õiguslikult siduvat digitaalallkirja. Kõlab küll populistlikult, kuid võib-olla oleks elektroonilise demokraatia arendamine kohalike omavalitsuste tasandil just selleks innovatiivsuse märgiks, millega Eesti võiks silma paista?

2. Demokraatlike valimisprintsipiide tagatus e-valimiste protseduuris

Valimiste kvaliteedi taset hinnatakse nii siseriiklikult kui ka väljastpoolt. Legitiimsuse hindamisel on määrava tähtsusega eelkõige rahvusvahelise üldsuse arvamus. Lõplikuks otsustajaks võib vaidluste korral saada rahvusvaheline kohus, seetõttu oleks õige demokraatiaprintsiipide käsitlemisel argumentatsiooni aluseks võtta rahvusvaheline õigus - eelkõige tavad, printsiibid ja analoogia traditsiooniliste valimise süsteemidega, kuna praktika selles valdkonnas on peaaegu olematu.

Valimisprintsipiide osas on omaks võetud kindlad nõuded, millest tuleb kinni pidada ka e-valimistel. Demokraatlik valimiste süsteem peab olema rajatud järgmistele baasprintsipiidele:

- üldisus - diskrimineerimine välistamine ja inimeste võrdne kohtlemine;
- vabadus - valija hääletusotsus peab olema vaba igasugusest surveavaldusest;
- salajasus - valimisvabaduse tagamiseks peab valik peab jääma salajaseks;
- ühetaolisus - igal valijal on üks hääl ning iga hääl peab olema võrdse kaaluga (26, lk 13).

Nimetatud nõuded on rahvusvahelisse õigusesse ja riikide põhiseadustesse juurdunud. ÜRO Inimõiguste ülddeklaratsiooni artikkel 21.3 sätestab - Avaliku valitsusvõimu aluseks peab olema rahva tahe; see tahe peab avalduma perioodilistes ja tõelistes valimistes, mis tuleb läbi viia üldise ja võrdse valimisõiguse alusel salajase hääletamise teel või mõnel teisel vaba valimisõigust tagaval hääletusviisil.

On aga mõisteta, et sotsiaalsete muutuste ja muutustega kaasnevate uute väärtushinnangute taustal võetakse omaks nende nõuete uued tõlgendused ning printsipiide järgimist ei taotle enam endiste kriteeriumide alusel. Järgnevalt on nimetatud põhimõtteid ükshaaval analüüsitud.

1. Valimiste üldisus

Valimiste üldisuse printsiip eeldab valijate üldist ja võrdset ligipääsu oma valimisõiguste teostamisele, keelates igasuguse diskrimineerimise rahvuse, soo või muudel tunnustel (5, lk 27).

- Diskrimineerimise välistamine tähendab, et riik ei või põhjendamatult kellegi õigusi piirata.
- Võrdse kohtlemise printsiip tähendab aga seda, et riik peab käsitlema kõiki inimesi samasugustes situatsioonides võrdselt.

ÜRO Inimõiguste ülddeklaratsioonis sisaldub diskrimineerimise välistamise printsiip artiklis 2.1 - Igal inimesel peavad olema kõik selle deklaratsiooniga välja kuulutatud õigused ja vabadused, olenemata rassist, nahavärvusest, soost, keelest, usulisest, poliitilisest või muudest veendumustest, rahvuslikust või sotsiaalsest päritolust, varanduslikust, seisuslikust või muust asjaolust. Deklaratsiooni artikkel 7 sätestab võrdsuse printsiibi - Kõik inimesed on seaduse ees võrdsed ja neil on igasuguse diskrimineerimiseta õigus seaduse võrdsele kaitsele.

Nimetatud printsiibid sisalduvad ka Eesti Vabariigi Põhiseaduses § 12 lg 1 - Kõik on seaduse ees võrdsed. Kedagi ei tohi diskrimineerida rahvuse, rassi, nahavärvuse, soo, keele, päritolu, usutunnistuse, poliitiliste või muude veendumuste, samuti varalise ja sotsiaalse seisundi või muude asjaolude tõttu.

Valimistel diskrimineerimise vältimiseks tuleb kõigile valimisõiguslikele kodanikele luua võrdsed võimalused valimistel osalemiseks ning tagada inimeste võrdne kohtlemine. 2001. aastal rahvusvahelise konsortsiumi poolt läbi viidud CyberVote projekti analüüsis toodi välja üldised tingimused, mis peavad olema tagatud, et e-valimiste süsteem ei osutuks diskrimineerivaks või põhjustaks ebavõrdset kohtlemist:

- igal valijal peab olema võrdne ligipääs valimise süsteemile - olgu see siis personaalarvutiga kodust, avalikust internetipunktist, spetsiaalsest valimispunktist, või traditsioonil viisil hääletussedelitega valimisel;
- süsteem peab olema kasutatav igale valijale sõltumata tema haridusest, vanusest, intelligentsuse tasemest ja kehalisest tervisest;
- vajadusel peab olema tagatud valijate juhendamine ja assisteerimine;
- süsteem peab olema kasutatav ka haigetele ja puuetega valijatele ning riigist eemal viibijatele (26, lk. 18).

Põhiliselt diskuteeritakse valimisvabaduse küsimuses süsteemile ligipääsu üle. Kui valimised toimuksid ainult interneti vahendusel ning kõikidele valijatele ei ole tagatud süsteemi kasutatavus, siis on tegu diskrimineerimisega, sest ligipääsetavus internetile on erineva varandusliku olukorraga, sotsiaalse seisundiga ja haridustasemega inimestele erinev. Uuringud on ka näidanud, et nt. erinevatesse etnilistesse gruppidesse kuuluvate inimeste ligipääsetavus internetile on erinev. Diskrimineerimise vältimiseks tuleb esialgu paralleelselt internetivalimistega säilitada ka valimiste võimalus valimispunktides.

Küsimus võrdsest kohtlemisest on aga laiemal ulatusega. Kui osad inimesed saavad valida näiteks mobiiltelefoni vahendusel ja teised peavad käima valimispunktides, siis võib seda käsitleda kui ebavõrdset kohtlemist. Tegelikult siiski kellegi jaoks e-valimiste võimaluse lisamisega valimist ei raskendata, osadele tehakse valimine vaid lihtsamaks.. Teisalt võib aga väita, et sel juhul on osad inimesed võrdsemad võrdsete seas.

Valimiste üldisuse puhul ei ole tegemist absoluutse reegluga. Põhiõigusi ja -vabadusi võib piirata, kui see on kooskõlas Põhiseadusega ning piirangud on demokraatlikus ühiskonnas vajalikud ning ei moonuta piiratavate õiguste ja vabaduste olemust. 11 Eestis ei või hääletada isikud, kes on kohtu poolt

süüdi mõistetud ja kannavad karistust kinnipidamiskohas.12

Üldisuse tagatuse hindamisel tuleks lähtuda kõrvalekallete eesmärgipärasusest. Valimiste eesmärk on demokraatia realiseerimine. Internetivalimiste eesmärgiks on valimisaktiivsuse suurendamine, mis on demokraatia parendamise protsessi loomulik osa.

E-valimisteks ollakse valmis siis, kui reeglitest ollakse valmis tegema teatavaid mööndusi ning printsiipidest kõrvalekaldumist suudetakse redutseerida ühiskonna jaoks aktsepteeritavale tasemele. Ebavõrdse kohtlemise vähendamiseks on mitmeid võimalusi - näiteks tuleb enne valimisi teha piisavalt selgitustööd ja harida valijaid arvutite kasutamisel, diskrimineerimise vältimiseks tuleb rajada piisavalt e-valimist võimaldavaid avalikke internetipunkte, valijatele võrdsete võimaluste tagamiseks aitaks kaasa ka valimisperioodi pikendamine.

2. Vabade valimiste põhimõte

Valimised on vabad, kui hääletamine toimub ilma sunni ja lubamatu surveavaldamiseta valijale. Keelatud on igasugune valija tahtevabaduse piiramine nii avaliku võimu kui ka eraisikute poolt, samuti igasugune kontroll hääletamise üle. Valijale ei tohi survet avaldada ei enne ega pärast valimisi (2, lk 1).

Elektrooniliste valimiste puhul tõusetub taas küsimus printsiibi absoluutsusest. Kui hääletamine on lubatud omas kodus, töökohal või avalikus internetipunktis, siis ei ole surve avaldamine ega kontroll hääletamise üle täielikult välistatav.

Riigi ülesandeks on rakendada proportsionaalseid meetmeid nende mõjutuste vähendamiseks - kehtestada rangemad sanktsioonid häälte ostmise eest, füüsilise jõu kasutamise või sellega ähvardamise eest, luua täiendavad kontrollimehhanismid. Samas, formaalselt võib riik karmid sanktsioonid kehtestada, kuid tegelikkuses jäävad ebaseaduslikud mõjutused alatiseks püsima, ka ilma interneti osatähtsusega.

Valimisvabadus oleks kaudselt tagatud juhul, kui surveavalduse tagajärjel tehtud valikut saaks hiljem oma tahte järgi ümber muuta. Eesti valimisseaduste kohaselt toimuks elektrooniline hääletamine ainult eelhääletamise perioodil ning tavaliste valimiste ajal saaks igaüks soovi korral e-valimistel antud hääle ümber hääletada.

Valija otsust võib mõjutada ka viimastel aastatel kahetsusväärset elavnenud häälte kaubandusega. Ühendriikide 2000. a. valimiste ajal ilmus interneti häälte kaubitsemise koduleht www.vote-auction.com¹³. Võimud lasid lehe sulgeda, misjärel see jätkas kohe tegutsemist Austriast. Tegelikult mingit häälte ostmist aset ei leidnud ning kampaaniat ennast tituleeritakse nüüd meediaga manipuleerimise musternäidiseks, millega idee algatajad teenisid märkimisväärseid summasid (11, lk 1). Siiski on see hoiatav näide probleemidest mis võivad esile kerkida ning millega tuleb arvestada.. Võimalik lahendus peitub e-valimiste salajasuses, mida on käsitletud järgmises alapunktis.

Internet võib olla massilise häältekaubanduse taimelavaks, kuid samavõrra oleks ta seda ka tavalistel valimistel. Häältekaubanduse vähendamiseks saab e-valimiste infosüsteemis rõhutada sellise

tegevuse ebaseaduslikkust ning anda juhiseid pealesunnitud hääletuseotsustuse muutmiseks tavavalimiste käigus.

Keelatud surveavalduse ja lubatud mõjutamise piiritlemine võib üksikjuhtudel osutada aga keeruliseks. Näiteks tuleks kriitilisemalt suhtuda valimiste eel korraldatavatesse "valimispidudesse", kus otseselt valimisreklaami ei tehta, kuid mille korraldajaks on nt. mõni poliitiline organisatsioon. Sellisel peol osalejad võidakse mingil hetkel arvuti taha valima panna. Tegu ei ole sunniga, kui valija hääletab omal vabal tahtel, kuid see tahe ei ole kujunenud isikliku sisemise veendumuse alusel, vaid on mõjutatud hetkeolukorrast ning kõrvaliste isikute valitsevast meelsusest. Kontrolli keelustatuse printsiipi ehk valija privaatsusesse tuleb suhtuda väga tähelepanelikult ning taunida taoliste ürituste korraldamist e-valimiste ajal.

Efektivseimaks valimiskampania vahendiks saab e-valimistel tõenäoliselt interneti vahendusel edastatav poliitiline propaganda. Internet on ka parim allikas kandidaatide ning parteide kohta info kogumiseks ja isikliku arvamuse kujundamiseks. Teadmised aitavad tõsta hääle kvaliteeti ja seeläbi ka demokraatia kvaliteeti. Seetõttu ei ole taunimisväärne, kui valija külastab omal algatusel parteide või kandidaatide kodulehekülgi info leidmise eesmärgil. Lubamatu on aga mistahes valimisreklaam e-valimiste infosüsteemis - kõiki kandidaate tuleb esitada võrdselt.

Eraldi küsimus on selles, kas e-valimiste infosüsteem võiks sisaldada viiteid välistele internetiaadressidele, milles sisaldub valimisreklaam või kandidaati ülistavad artiklid. Tõenäoliselt saaks valija selle info soovi korral kätte niikuinii, otsingumootorite või parteide kodulehekülgede vahendusel. Seetõttu ei ole taunitav, kui kandidaatide isikuandmetega kaasneks ka internetiaadress, millelt tema kohta rohkem infot saab. Valija jaoks peab aga olema selgelt teadvustatud, et selline infolehekülg ei ole seotud valimissüsteemiga (isegi kui selle kujundus on täpselt sarnane) ning et seal asuvate andmete õigsust ei ole kontrollitud. Valija eksimusse viimise vältimiseks võiks isegi kehtestada selliste infolehekülgede kujunduse kohustusliku vormi, mis peab sisaldama vastavaid hoiatusi ning mille välisilme erineks küllaldaselt e-valimise infosüsteemi omast.

Vabasid valimisi aitab tagada salajasuse printsiip.

3. Valimiste salajasus

Hääletamine on salajane, kui hääletajal on võimalus jätta enda teada, kelle poolt ta kavatses hääletada, hääletab või on hääletanud. Salajasuse printsiip välistab hääletamise avalikustamise ja käsib tagada valijatele tingimused, mis võimaldavad valimisakti saladuses pidada (4, lk 1).

Tavapäraste valimiste korral on valija anonüümsuse säilimine tagatud hääletamisega valimiskabiinides, hääletussedeli kokkuvoltimisel ning pitseeritud valimiskasti laskmisel, kus hääletussedelid segunevad. E-valimistel peab hääle salajasus olema kaitstud tippasemel tehniliste lahendustega - et mitte keegi, sealhulgas süsteemi haldajad, ei saaks häält seostada selle andnud valijaga kogu valimiste protseduuri vältel ega ka pärast valimisi. Takistatud peab olema ka andmete lubamatu kopeerimine.

Salajasuse tagatus sõltub konkreetse süsteemi tehnilisest teostusest ja toimimisest, mida peaks saama

ebaseaduslike tegevuste välistamiseks täielikult kontrollida. Sellised võimalused annab süsteemi auditeerimine. Auditeerimise võimaldamiseks on vajalik infosüsteemi programmikoodi ja kõikide päringute lähtetekstide avalikustamine. Süsteem peab salvestama kõik auditeerimiseks vajalikud andmed, sealhulgas päringute logi ning hääletuse transkriptsioonid (vt. 4.5.), et saaks kontrollida algusest lõpuni kõike, mis süsteemis toimub ning vajadusel välja selgitada, miks üht või teist operatsiooni teostati.

Mitmete riikide praktikas eksisteerib praegu ka erandeid salajasuse absoluutsusest. Mõnedes riikides, nagu Hollandis, Saksamaal ja Rootsis, on väljaspool riigipiire viibival või haigel valijal lubatud anda hääl posti teel. Ameerika Ühendriikides viidi 2000 aasta üldvalimistel Oregoni osariigis hääletamine läbi ainult posti teel. 21-päevase valimisperioodi jooksul hääletas rekordarv inimesi. Valimisaktiivsus tõusis umbes 10% ning kulutused valimistele vähenesid tunduvalt (24, lk. 1).

Hääle edastamine vahendajate kaudu, nagu postiteenistus, on enamasti erandlik ja mõeldud tavaliselt ainult inimestele, kes füüsiliselt ei saa tavapärasel viisil hääletada. Salajasuse printsiipi on laiendatud, et avada tee kõrgemale eesmärgile - tagada hääletamise võimalus üldse.

Posti teel valimistel on anonüümsus tagatud sellega, et hääl edastatakse kahes ümbrikus - välimine ümbrik sisaldab valija koodi, sisemine aga hääletussedelit. Valimisjaoskonnas ümbrikud eraldatakse ning hääl muutub anonüümseks.

Salajasuse täielikuks tagamiseks oleks mõnede ekspertide arvetes kindlam, kui ka e-valimistel tehtud eelistus muutuks kohe hääletamise järel anonüümseks - häält isikuga seostavad andmed tuleks selleks kustutada kohe pärast andmete auditeerimist ja salvestamist. Hääle anonüümseks muutumisega ei ole aga võimalik hääletamise järelkontroll valija jaoks.

Kuidas saaks valija pärast hääletamist veenduda, et hääl läks õieti kirja ja et seda ei ole valimissüsteemi siseselt moonutatud? Üks võimalus on anda kohest tagasisidet, milles sisalduvate andmetega oleks võimalik üheselt tuvastada tagasiside saatja. Sellega kaasneb aga oht hääletamisotsustuse avalikuks tulekule - näiteks hääle ostja saaks hiljem kontrollida, kuidas valija on hääletanud. Turvalisus oleks maksimaalselt tagatud vaid süsteemis, milles häält võib tagantjärele kontrollida ainult spetsiaalselt hääle kontrollimiseks mõeldud arvuti abil ning üksinda, valimisametnike järelvalvega kohas.

Mistahes seaduste abil ei ole aga võimalik välistada, et hääletamise ajal keegi kõrvaline isik arvutiekraani ei vaata. Valimiste salajasuse reeglit ei saa paraku absolutiseerida, tuleb mõnda, et näiteks perekonnaliikmed kodudes või kaastöötajad töö juures võivad tehtud valikuid kõrvalt näha. Samas, igal inimesel on õigus oma põhiõigustest loobuda ning iseseisvalt avaldada oma eelistusi.

See kõrvalekalle salajasuse absoluutsusest põhjustab demokraatiale eeldatavasti vähem kahju, kui e-valimistest saadav kasu valimisaktiivsuse kasvu näol. Siiski tuleb senisest rangemalt sanktsioneerida hääle ostmist ja surveavaldamist, mida taoline salajasuse reegli riive põhjustab.

Salajasuse tase ja kontrolli vajadus on otseselt seotud süsteemi maksumuse ja kasutamise mugavusega. Mõistlik tase tuleb saavutada arvestades sotsiaalset tegelikkust - inimeste usaldust

interneti ja e-valimise süsteemi vastu selle alusel kontrollitavuse nõudlust. Paraku on see tase piiratud süsteemi väljatöötamiseks eraldatavate rahaliste ressurssidega, mille osas tuleb samuti jõuda kompromissile põhjalike analüüside järel.

4. Valimiste ühetaolisus

Ühetaolisuse printsiip nõuab, et iga valimisõiguslik kodanik saaks oma valimisõigust teostada formaalselt võimalikult sarnasel viisil. Aktiivse valimisõiguse jaoks tähendab ühetaolisuse printsiip, et kõigil valimisõiguslikel kodanikel peab olema võrdne arv hääli ja kõigil häälteil peab olema parlamendikohtade jaotamisel võrdne kaal (2, lk 1).

Antud printsiipi saab jagada neljaks eraldiseisvaks nõudeks:

- ainult valimiseks õigustatud isikud saavad hääletada;
- iga valija võib hääletada vaid ühe korra;
- iga antud häält arvestatakse ülelugemisel vaid ühel korral;
- ükski antud hääl ei tohi valimiste käigus moonuda.

Selleks, et ainult valimiseks õigustatud isikud saaksid valida, tuleb protsessi alustada isiku kindlakstegemisest ehk autentimisest. Autentimise järel pöörduakse valimisõiguse tuvastamiseks valijate registrisse.

Tavavalimiste puhul toimub autentimine füüsiliselt, e-valimistel tehakse seda elektrooniliselt. Füüsiline autentimine tähendab seda, et isikusamasus tuvastatakse isiku füüsiliste omaduste alusel - nagu näojooned, sugu, käekiri allkirjas vms. Tavavalimistel võrdleb valimisametnik isiku väliste omaduste samasust tema isikut tõendaval dokumendil oleva fotoga.

Füüsilise ja digitaalse autentimise usaldusväärsuse tase on erinev. Füüsilisel autentimisel on keerulisem esineda kellegi teisena, kuna isiku füüsilised omadused on võrdlemisi püsivad. Tulevikus saab isikusamasuse tuvastamise efektiivseimaks vormiks vahetu biomeetriline autentimine - nt. sõrmejälgede, silma võrkkesta kujutise või DNA struktuuri alusel.

Digitaalne autentimine toimub aga personaalse, isikuga üheselt seostatava koodi alusel. See kood võib olla kantud märkide kombinatsioonina paber kandjale või digitaalselt ID-kaardile. Tegu on kaudse autentimisega - kontrollitakse koodi vastavust isikuandmetele ning seeläbi vastavust isikule. Koodi ja isiku sidumiseks on vajalik ühekordne füüsiline autentimine, mida teostab sertifitseerimisteenuse osutaja. See kood võib olla digitaalallkiri, mida identifitseerimiseks kasutatakse kombineerituna isikliku salasõnaga. Vastavalt Eesti digitaalallkirja seadusele on digitaalallkirjal samasugused õiguslikud tagajärjed nagu omakäelisel allkirjal ning digitaalallkiri peab võimaldama üheselt tuvastada isiku, kelle nimel allkiri on antud.¹⁴

Tuleb aga arvestada, et digitaalset koodi ja salasõna võib aga üle anda teisele isikule - tasu eest või muul viisil mõjutamise tulemusena. Taas on tegu valimisprintsiibi riivamisega, millega e-valimiste

süsteemile üleminekul peab arvestama.

Järgnevalt on toodud üldised eeldused, mis e-valimiste ühetaolisuse jaoks peavad olema tagatud:

- kasutada tuleb turvalist ja usaldusväärset digitaalse autentimise meetodit, mis võimaldab hääletada ainult valimisõiguslikel kodanikel;
- valijal peab olema personaalne digitaalne allkiri, mis võimaldab tema isikut üheselt tuvastada ning mis on antud füüsilise autentimisega;
- digitaalallkiri peab olema seaduslikult aktsepteeritud isikusamasuse tuvastamise viis;
- digitaalallkirja väärkasutamine peab olema seadustega sanktsioneeritud (26, lk. 29).

Teised ühetaolisuse nõuded peavad olema tagatud konkreetsete tehniliste lahendustega, mida kontrollitakse süsteemi auditeerimisega. Auditeerimine peab hõlmama ka järelevalvet, et kellelgi ei oleks võimalust õigusvastaste kannete tegemiseks. Igast muudatusest peab jääma süsteemi märged (vt. 3.3).

5. Valimiste otsesus

Otsesuse printsiibi tähendus valimistel on, et rahva esinduskogu peab olema valitud ilma valijameeste vaheastmeta. Valimiste otsesus ei ole e-valimiste spetsiifikat puudutav küsimus.

6. Kokkuvõtte demokraatiaprintsiipidest

Eelnevast nähtub, et ühiskonnas endastmõistetavaks saanud valimiste printsiipe ei ole e-valimistel võimalik tagada sama efektiivselt, kui klassikalistel valimistel. Tänapäeval kasutatavad valimise süsteemid on seadnud selles osas kõrged standardid, milledest järeleandmiste tegemine osutub nähtavasti küllaltki vaeariikkaks. Inimestele on omane loomupärane ettevaatlikkus ja umbusaldus radikaalsete muudatuste vastu, eriti kui need puudutavad demokraatliku ühiskonnakorralduse aluseid. Seega ei saa e-valimisi korraldada enne, kui ühiskond selleks valmis on.

Ennekõike tuleks endale teadvustada, et diskussioon ei seisne mitte tavaliste valimiste ja e-valimiste võrdluses, vaid demokraatia kvaliteedi võimalikult kõrgema taseme saavutamises. Demokraatlike valimisprintsiipide tagatus tuleb mõistagi võtta aluseks, kuid e-valimiste elluviimiseks peab tegema neist mõningaid mööndusi. Näiteks ei saa tagada endisel määral valimiste salajasust ning tuleb arvestada võimalusega, et kõrvaline isik võib valimise ajal arvutiekraani näha. Kui ühiskond aktsepteerib, et see kõrvalekalle salajasuse printsiibist kahjustab demokraatiat minimaalselt ning saavutatavad eelised on proportsionaalselt suuremad, siis on üleminek e-valimistele õigustatud.

3. E-valimiste spetsiifika erinevates valdkondades

E-valimistele poolt- või vastuargumendi esitaja peab arvestama oma argumendi mõju kõigile faktoritele - olgu selleks siis demokraatiaprintsiipide tagatus, sotsiaalpoliitika, maksumus või

kasutajamugavus. Seetõttu ei saa diskussioon e-valimiste võimalikkuse üle jääda vaid ühe eriala piiresse. Vajalik on interdistsiplinaarne lähenemine, kõiki faktoreid tuleb käsitleda seotult ja üldistatult. Spetsialistide hooleks jääksid üksnes detailid. Järgnevalt on kokku võetud mõned aspektid, mida erinevates käsitlustes on eri valdkondade kohta esile toodud ning mis vajaksid täiendavat uurimist.

Esmase nõudena toonitatakse kõikjal seda, et alguses peavad e-valimised olema korraldatud alternatiivina tavalistele valimistele ning võimalike puuduste korral peab tavavalimistel olema võimalus uuesti hääletada. Eestis saaks elektrooniliselt hääletada eelhääletamise ajal, seega peab eelhääletamise ja valimispäeva vaheline periood olema piisavalt pikk. Ka eelhääletamise pikendamine annaks aega võimalike vigade kõrvaldamiseks.

1. Sotsiaalsed aspektid

Millal võib öelda, et e-valimised on korda läinud? Kui esimesed valimised organisatoorselt õnnestuvad ja legitiimseks tunnistatakse, kuid valimisaktiivsus loodetud määral ei suurene, kas siis on e-valimisteks tehtud kulutused end õigustanud?

Skeptikute arvates ei ole valimissüsteemide senised uuendused, nagu kirja teel hääletamine, valimisperioodi pikendamine või registreerumise lihtsustamine valimisaktiivsusele erilist mõju avaldanud. Sotsioloogilised uuringud on näidanud, et poliitiline motivatsioon, valimisagitatsioon ja info kättesaadavus avaldavad märksa tugevamat mõju kui süsteemi kasutamise mugavus (12, lk. 24).

Esimeste e-valimistega on aga olukord teine. Tähtsaks motivaatoriks riigi jaoks on võimalus innovatiivsusega silma paista ning valija jaoks milleski nii tähtsas osalemine. Valijal tekib huvi süsteemi vastu, millest ka meedias kahtlemata väga palju juttu tuleb. Täiendavaks motivaatoriks on uudishimu.

Esmakordne kogemus uue süsteemiga on seejuures ülimalt tähtis.. Selles suhtes on valijad nagu teenusetarbijad - kui esmamulje on hea, siis tullaakse veel hiljemgi tagasi, kui aga miski pahameelt tekitab, siis ei taheta tõenäoliselt enam niipea uut süsteemi katsetada.

E-valimistele peab eelnema pikaajaline kampaania, milles selgitatakse e-valimiste eeliseid ka pikemas perspektiivis ning tehakse põhjalikult tööd süsteemi usaldusväarsuse selgitamiseks. Nagu T. Tammet ja H. Krosing oma analüüsis rõhutavad, tuleb ühiskonnale teadvustada, et esimeste e-valimiste näol on tegu piiratud ulatuse, piiratud tehnoloogilise keerukuse ja piiratud tähtsusega katsetusega. Probleemide ilmsiks tuleku korral e-valimiste osas peavad olema loodud alternatiivsed klassikalised lahendused, mis tagavad igal juhul valimiste võrdsuse, õigluse ja ühetaolisuse (9, lk. 4).

1. Interneti usaldusmäär

Üldist usaldusväarsuse taset interneti infosüsteemide turvalisuse vastu iseloomustab tõsiasi, et Hansapanga ja Ühispaniga andmetel internetipankade kasutajateks ligi kolmandik Eesti elanikkonnast. Need inimesed on valmis usaldama oma vara elektroonilise süsteemi käsutusse ning sellest võib järeldada, et puhtpsühholoogiliselt on vähemalt see osa Eesti elanikkonnast e-valimisteks valmis.

Teadupärast saab e-valimiste tehnoloogiline teostus olema tunduvalt keerukam, kui panganduses. Seda aga inimesed enamasti endale veel ei teadvusta. Paradoksaalselt võib seetõttu süsteemi põhjalikuma selgitamisega kaasneda rohkem umbusaldust.

Samuti esineb paljudel sügavaid eelarvamusi tipptehnoloogia suhtes. Arvutit peetakse eriti hapraks ja hinnaliseks seadmeks, mida võib kergesti rikkuda. Isegi arvutihiire kasutamine võib paljude jaoks olla esmakordne kogemus. Valijatele tuleb selgitada, et hääletamise käigus seadmete ära rikkumine ei ole väga lihtne.

2. Digitaalne killustatus

Formaalselt võib võrdne ligipääs süsteemile olla tagatud igapähele, kuid e-valimistel hääletavad siiski vaid need, kellel on ligipääs internetile ning mõningane kasutamiskogemus - sotsioloogiliste uuringute kohaselt keskmisest haritumad, jõukamad ja nooremad linnainimesed (29, lk 44). Sotsiaalse ebavõrdsuse olukorda, milles interneti kasutavatel inimestel on eelised ligipääsemiseks põhivajadusi puudutavatele teenustele, nagu tööturg, tervishoid või poliitiliste õiguste teostamine, tähistatakse mõistega "digitaalne killustatus" (digital divide). Arvamused digitaalse killustatuse mõjudest e-valimistele on vastuolulised. Interneti avalik kättesaadavus paraneb iga aastaga, mis annab alust arvata, et aja jooksul probleemi teravus väheneb.

Emori andmetel kuulus 2002.a. talvisel uuringuperioodil internetikasutajate hulka 39% Eesti 15-74 aastast elanikkonnast.

Tabel 1. Interneti kasutajate osakaal Eesti 15-74 aastast elanikkonnast

Allikas: AS-i Emor e-seire uuring, avaldatud 21.03.2002 15

Graafik näitab u. 8-protsendilist internetikasutajate arvu kasvu võrreldes 2001. aasta veebruariga. See annab alust loota, et 2005-ndaks aastaks, kui Eestis esmakordselt e-valimisi läbi saaks viia, võivad internetikasutajaid olla juba umbes pooled Eesti elanikest, mis peaks huvi ja nõudlust e-valimiste vastu veelgi kasvatama.

3. E-valimiste vastuvõetavusest Eestis - küsitlus 2002. a. aprillis

Inimeste valmisolekust ülevaate saamiseks tuleks eelnevalt läbi viia sotsioloogilisi uuringuid. E-valimisi ei saa inimestele peale suruda, kui nad ise sellest huvitatud ei ole.

2002. aasta aprillis viisid TÜ sotsioloogiadengid käesolevas diplomitöös kasutamiseks läbi 18-75 aastaste Eesti kodanike seas telefoniküsitluse, mille eesmärk oli interneti kasutamise võimaluste ning e-valimiste huvi selgitamine. Küsitleti 200-t suvaliselt valitud inimest, neist 100 linnadest ja 100 maakondadest. Järgnevalt on toodud mõned arvulised näitajad küsitluse tulemuste kohta:

- vastanute keskmine vanus oli 47 aastat;
- interneti kasutamise kogemus oli 34,5 protsendil vastanutest; soovi korral oleks interneti kasutamise võimalus tööl, tuttava juures või avalikus internetipunktis lisaks veel 20-l

protsendil;

85% vastanutest enamasti käib valimas; 40,7% vastanutest, kes enamasti valimas käivad, eelistaksid valimist internetis;

maapiirkondades elavatest internetikasutamise kogemusega vastanutest eelistaksid internetivalimisi 34,9 %, linnades elavatest internetikasutajatest aga 46,5%. Kindlat seisukohta antud küsimuses ei omanud 10,5% linna- ning 9,3 % maainimestest;

54,5% vastanutest pidas internetivalimiste tulemusi sama usaldusväärseks nagu tavalistel valimistel.

Tulemusi analüüsides võib nentida, et huvi internetivalimiste vastu on olemas ning enam kui pooltel vastanutest oleks soovi korral võimalik interneti kasutada. Samas oli väga palju ka neid, kes kahtleksid internetivalimiste tulemuste usaldusvääruses võrreldes tavaliste valimistega - 45,5%. Selle arvamuse muutmisest saab üks raskemaid ülesandeid e-valimiste eel. See näitab veelkord ulatusliku selgitusprogrammi vajalikkust.

Küsitluse peaesmärk oli hinnata, milline oleks e-valimiste mõju valimisaktiivsusele. Tulemus - 32% neist 15-st protsendist vastanutest, kes tavaliselt valimas ei käi, teeksid seda juhul, kui oleks võimalik valida internetis. See tähendaks valimisaktiivsuse üldist kasvu 4,5% võrra, mis on küllaltki ootuspärane tulemus, arvestades, et e-valimiste teemat ei ole meedias seni väga palju kajastatud.

Detailsem statistika on toodud käesoleva töö lisas nr. 1.

2. Õiguslikud aspektid

Internetivalimiste spetsiifikast tulenevalt on erinevates õigusharudes vajalik täiendav regulatsioon. Uutes Eesti valimisseadustes sisaldub üldine raamistik, kuid e-valimiste korraldamiseks peaksid olema lahendatud mitmed seni veel lahtised küsimused.

1. Jurisdiktsioon

Internet on oma olemuselt rahvusvaheline keskkond, mida ei kontrolli ükski suveräänne võim. E-valimisi on võimalik rünnata ka väljastpoolt riigipiire või kasutades välisriikides asuvaid tehnilisi ressursse, milleni siseriikliku õiguse pädevus ei küündi. Vajalikud on riikidevahelised kokkulepped, mis võimaldaks vastutusele võtta ka süsteemi ründajaid välisriikidest..

2. Vastutus

Ajalooliselt on valimiste õnnestumise eest vastutavad olnud valimisametnikud. Kui aga süsteemi töökindlus sõltub paljuski tehnoloogiast või tarkvarast, siis ei saa selle puudustes alati ametnikke vastutavaks teha. Seetõttu tuleb määratleda, kes konkreetselt ühe või teise valimiste etapi või elemendi eest vastutab. Ajaliselt võivad need etapid kesta vaid sekundi murdosa (nt. andmete liikumisel valija arvutist valimisserverisse), seega peab regulatsioon olema piisavalt detailne ja

tehniliste aspektide osas korrektne.

Teenusetõkestamise ründe (vt. 3.3.2) korral ei oleks süsteemi ründaja vastutusele võtmine praeguste seaduste alusel paraku võimalik, kuna tegu ei ole süsteemi sissemurdmisega ega andmete rikkumise või muutmisega. Kriminaalkoodeksis on kuriteona määratletud muuhulgas ka arvutisabotaaz, mis hõlmab andmete või programmide blokeerimist eesmärgiga takistada arvutisüsteemi tööd¹⁶. Teenusetõkestamise ründe puhul ei ole aga tegu andmete blokeerimisega, vaid suure hulga (õiguspärase) päringutega, millele süsteem ei jõua vastata. Kui aga rünne lähtuks välisriigist, siis tuleks rakendada rahvusvahelist õigust, milles sellealane praktika on veel olematu.

3. Valijate mõjutamise piiramine

Eestis on valimisagitatsioon keelustatud vaid valimiste päeval ning valimispunktides ja nende vahetus läheduses, kuid agitatsiooni eelhääletamise ajal ja internetis need sätted ei keelusta. Igasugune valimisagitatsioon peaks aga olema keelustatud mistahes ajahetkel, kui e-valimine on võimalik.

Keelatud surveavaldusest tuleb eristada lubatud valimispropagandat. Piiri tõmbamine nende vahele võib üksikjuhtudel osutuda keeruliseks. Lubatud on audiovisuaalne mõjutamine tele- ja raadiosaadetes ning sõnaline veenmine, mis ongi valimiskampaania olemuseks (2, lk 1).

Ka kandidaate tutvustavat faktilist infot võib esitada subjektiivse varjundiga. Seetõttu peaks süsteem sisaldama vaid kindlaksmääratud ankeetandmeid - Eesti seaduste kohaselt on kandidaatide kohta esitatavad andmed isikuandmed, erakondlik kuuluvus, lisaks soovi korral haridustase ja amet.

Piirata tuleks ka valimisreklaami edastamist e-maili teel. Need kandidaadid, kes on ennast reklaamiva e-maili saatnud valija postkasti, oleksid valimiste ajal kahtlemata eelisolukorras. Kuna aga kandidaatide arv on väga suur, siis mõjukuks taoliste reklaamide mass demokraatialle kahjustavalt - valija võib ärrituda ning üldse valimata jätta. Seetõttu tuleks valimisreklaami e-maili teel lugeda äärmiselt taunitavaks.

4. Õigusliku vaakumi välistamine

Tavapäraste valimissüsteemide plussiks on see, et eksimustest tulenevad vead omavad valimistulemuste skaalal väga väikest osakaalu. E-valimiste puudused võivad mõjutada valimistulemust palju suuremal määral. Tuleb arvestada võimalusega, et näiteks valimistulemusi mõjutanud viga süsteemis tuleb ilmsiks alles pärast valimisi. Juba eelnevalt tuleb võtta seisukoht, mida sellisel juhul teha, kes vastutaks ning kuidas see mõjutaks valimistulemusi. Ei tohi tekkida olukorda, kus valimistulemused on ebakindlad, keegi ei vastuta ja keegi ei tea mida järgmiseks ette võtta.

3. Tehnilised aspektid

E-valimiste läbiviimine ja usaldatavus sõltub ennekõike süsteemi reaalsest tehnilisest teostusest, selle haldamisest ja arusaadavusest. Valimiste salajasuse ja ühetaolisuse printsiibid on garanteeritud ainult piisavalt kõrgetasemelise süsteemiga. Arvesse tuleb võtta väga paljusid faktoreid ning vähendada

riske kaasaegseima tehnoloogia abil ja kogemustega spetsialistide koostöös.

Esmajoones peetakse tähtsaks alljärgnevate kriteeriumite tagatust:

- täpsus - valimise süsteem peab hääle moonutusteta talletama;
- kontrollitavus ja auditeeritavus - häält ei ole võimalik muuta, kustutada või võltsida ilma sellest jälge jätmata; peab olema kontrollitav, et iga antud häälega on lõpptulemuses arvestatud ning valimisandmete autentsus peab olema tagantjärele tõestatav;
- töökindlus - süsteem peab töötama ja talletama kõik hääled ka siis, kui on sõltumatutel välistel põhjustel osaliselt üle koormatud või muul viisil häiritud;
- paindlikus - programmid peavad töötama erinevatel platvormidel, olema tõlgitud erinevatesse keeltesse ning kasutatavad ka puuetega inimestele;
- kasutajamugavus - valijad peavad saama hääletada, omamata mingeid erioskusi või spetsiaalseid tehnilisi vahendeid;
- avatus - vaatlejatel ja avalikkusel peab olema võimalus veenduda, et süsteem vastab kõigile nõuetele.

Süsteemi tehnilisele teostusele peab eelnema standardite väljatöötamine.

1. Standardite väljatöötamine

Standardid annavad kindlad juhtnöörid, millistele tehnilistele nõuetele e-valimiste süsteem peab kõigi eelduste tagatuseks vastama. Neis peavad sisalduma üldised riistvara, tarkvara ja funktsionaalsuse spetsifikatsioonid, samuti juhiseid süstemaatiliseks testimiseks. Selliseid nõudeid on justiitsministeeriumi analüüsid üldjoontes juba ka kirjeldatud. (viited 6 ja 9).

2001. a. detsembris valmis Ühendriikide föderaalsete valimiskomisjoni koostatud väga põhjalik valimisstandardite projekt (vt. viide 16), millele toetudes formuleeris VoteHere 2002. aasta jaanuaris spetsiaalselt e-valimistele kohandatavad standardid (vt. viide 15).

Lisaks standarditele tuleks võimalikult täpselt määratleda võimalikud eriolukorrad, ning klassifitseerida süsteemi häired, vastavalt nendele tegutsemisjuhised ja tagajärjed - milline viga mõjutab valimistulemusi ja millisel määral. Valimiste õnnestumise formaalseid nõudeid ei pea samas olema ka liiga kõrgel - kui valimiste ajal valimisserver mõneks tunniks hooldustöödeks suletakse, siis ei tohiks see tähendada valimistulemuste tühistamist.

2. Süsteemi terviklus

Süsteemi terviklus (system integrity - andmete täielikkus ja vastuolude puudumine¹⁷) ehk süsteemi funktsioneerimine ja andmete säilimine ning taastatavus peab olema tagatud nii siseste kui väliste rünnakute ning muude häirete korral. Tehnilisi häireid võivad põhjustada ka süsteemist sõltumatud asjaolud, nagu arvutivõrgu tõrked või elektrikatkestus.

Teoreetiliselt võib süsteemide mitmekordse dubleerimise ja põhjaliku testimisega vigade esinemist redutseerida nullilähedaseks, kuid absoluutselt kõikide nüanssidega ei ole võimalik alati arvestada.

Mahukates infosüsteemides esineb paratamatult ka nõrku kohti. On väga tõenäoline, et e-valimiste süsteem langeb sagedaste ründekatsete ohvriks, mis võivad pärineda mistahes internetiühendusega arvutist maailmas. Majanduslikest huvidest motiveerituna võivad süsteemi kahjustamist üritada näiteks selle tehnilise teostaja konkurendid. Suuremastaabilise ründe toetamine ja rahastamine võib olla ka mõne välisriigi või terroriorganisatsiooni huvides, sest valimiste läbikukutamine või tulemuste moonutamine oleks demokraatlikule riigile tõsiseks löögiks. Enamasti ei ole aga häkkeritel vaja mingit erilist majanduslikku või poliitilist motiivi süsteemi ründamiseks - piisab sellest, kui on olemas väljakutse väidetavalt kõrge turvalisuse astmega programmi näol ning sissemurdmise õnnestumisel võimalus silma paista.

Isegi siis, kui valimisserveritesse sissetungimine on tarkvaraliselt kaitstud, võib ründaja häirida süsteemi stabiilsust viisil, mis võib oluliselt mõjutada e-valimiste tulemusi. 2000. aasta veebruaris pandi maailma suurimate e-teenuste pakujate vastu toime nn. hajutatud teenusetõkestamise rünne (Distributed Denial of Service attack). Yahoo, Amazon, eBay ja Buy.com serveritele saadeti paljude arvutite kaudu pseudopäringuid, millega põhjustati süsteemide ülekoormatus. Näiteks Yahoo-d külastab igas kuus enam kui 400 miljonit kasutajat ning selle taga on üks interneti võimsamaid serveriparke. Sellest hoolimata õnnestus ründajatel Yahoo seisata enam kui kolmeks tunniks. Nüüdseks on välja töötatud meetodeid taolise ründe takistamiseks, kuid siiski on see elav näide sellest, kui vähe pingutust on tegelikult süsteemi kahjustamiseks vaja. Nimetatud ründe korraldas tõenäoliselt väga väike grupp inimesi. Sarnase rünnaku kordamine ei vaja kuigi põhjalikke teadmisi ega keerukaid programme. Kui organiseerijaks on sihikindel ja asjatundlik rühmitus, siis ei ole teenusetõkestamise rünne spetsialistide arvates välistatav. Selliste probleemide vältimiseks peab valimiste ajal valmis olema hulk tehnilist personali, kes oleksid võimalused reageerima igale üksikule ründele, avastama ründe allika ning võtma viivitamatult tarvitusele vastumeetmed.

Suur oht e-valimistele on mingil viisil automatiseeritud mastaapne valimispettus, millega muudetakse antud hääli mõne kandidaadi kasuks. On selge, et kui pettusi leiab aset tavavalimiste ajal, siis ollakse selleks valmis ka e-valimistel. Välistatud peab olema häälte muutmise selliselt, et sellest mingit märget ei jääks ning igast antud häälest peab säilima hääletamise transkriptsioon (vt. 4.5).. Piisavate andmete olemasolul on selliseid pettusi teatud seaduspärasuste alustel võimalik ka tagantjärele avastada.

Süsteemisise pettuse vältimiseks peab süsteem olema tehniliselt ja organisatoorselt teostatud selliselt, et kontroll selle üle jaguneks mitmete üksteisest sõltumatute üksuste vahel (distributed trust) (23, lk 1).

E-valimiste infosüsteem peab olema integreeritud tavalise valimissüsteemiga - peab olema kindlustatud, et kui isik on hääletanud elektrooniliselt, siis ei saa ta tavalist süsteemi kasutades hääletada topelt.

3. Süsteemi kontrollitavus

Süsteemi tervikluse kõrval peab see usaldusvääruse tagamiseks olema samas ka avatud väliseks kontrolliks. Ebakindluse kõrvaldamiseks valimiste legitiimsuse osas peaks igal huvitatud osapoolel olema võimalus osaleda süsteemi auditeerimises (vt. 4.5). Huvitatud isikutel peab olema võimalus

veenduda, kuidas süsteem funktsioneerib, millised protsessid selles aset leiavad ja kuidas toimub andmete töötlemine.

Otstarbekas oleks programmide lähtekoodi avaldamine, et sõltumatud asjatundjad saaksid sellega tutvuda ning parandusettepanekuid teha. Lähtekoodi avalikustamisega saavad muidugi teatavaks ka süsteemi nõrgad kohad, mida võib kasutada pahatahtlike rünnete eesmärgil. Tuleks siiski eeldada, et võimalike puuduste kõrvaldamine paljude spetsialistide kaasabiga on parem, kui nende varjamine. Tagasiside testijatelt on samuti oluline - programmi lähtekoodi avalikustamisel on ainult siis mõtet, kui kõiki teateid avastatud puudustest põhjalikult uuritakse ja vead parandatakse.

4. Valijate arvutite töökindlus

E-valimiste õnnestumine sõltub paljuski ka valijate arvutite turvalisusest ja töökindlusest, mida valimiste korraldajatel ei ole võimalik tagada. Näiteks võib just valimiste päevale ajastada mõne arvutiviiruse aktiveerumise. Isikutel, kes arvutile füüsiliselt ligi pääsevad, võib olla võimalus sisestatud info ja tehtud valikud varjatult salvestada ja sel viisil teada saada, kelle poolt hääletati. Avalikes valimiskohtades võib tööle panna varjatud programmid, mis teisendavad edastatava hääle.

Tugineda võib ainult üleüldisele keskmisele personaalarvutite turvalisuse tasemele, mida üldiselt peetakse väga madalaks. Avi Rubin, tunnustatud AT&T ekspert on avaldanud seisukoha, et personaalarvutid ja arvutivõrgud on niivõrd ebaturvalised, et e-valimiste jaoks on vajalik uue tehnilise infrastruktuuri loomine, millesse on integreeritud piisava turvalisuse tasemega ühenduskanalid ja riistvara.

Aja jooksul määrab turg sellise lahenduse otstarbekuse - võimalik et juba mõne aasta pärast lisanduvad arvutikomplektidele standardina ID-kaartide lugejad ning täiendavad turvaseadmed (31, lk 1).

5. Süsteemi kasutuslikkus

Kasutuslikkus tähendab eelkõige süsteemi kasutamise mugavust ja arusaadavust valijale. Valija puutub kokku üksnes kasutajaliidesega, mis tegelikult on vaid väike osa süsteemist, kuid omab valija seisukohalt e-valimiste kvaliteedi üle otsustamises kõige suuremat kaalu. Kasutajaliides peab olema hoolikalt ja atraktiivselt teostatud. E-valimiste kasutajaliidese visuaalses disainis tuleb arusaadavuse saavutamiseks abiks võtta kognitiivne psühholoogia. Näiteks võib ekraanil kujutada igapäevases elus harjumuseks saanud vahendite kujundeid - numbrite sisestamine toimuks "telefoniklahvidega", kandidaatidega tutvumine meenutaks raamatu lehitsemist. Ekraanivormid peavad olema kujundatud selgete ja üheste valikuvõimalustega. Kujunduselemendid, nagu värvid, pildid, vormid ja animatsioonid peavad kasutajat julgustama. Süsteemi kasutamist ja konkreetseid ekraanivorme tuleb tutvustada valimistele eelneva kampaania käigus.

Parim meetod tõelise hääletamise harjutamiseks on hääletusprotseduuri virtuaalne läbimängimine assistendi abiga. Katsetamise võimalus tuleks soovijaile tagada juba pikema perioodi vältel enne tegelikku hääletamist. Tagatud peab olema ka valijate konsulteerimine telefoni teel.

Arvutiga on kergem välistada ka inimlike eksimusi valimisel. On inimesi, kes ei suuda järgida ka kõige lihtsamaid juhtnööre hääletussedelite täitmisel. Näiteks, kui on palutud oma valikule ring ümber teha, siis võidakse selle asemel hoopis valikule joon alla tõmmata või ülejäänud kandidaadid läbi kriipsutada. Arvutiprogrammis on võimalik sellistele eksimustele koheselt tähelepanu juhtida ning neid parandada.

4. Majanduslikud aspektid

Valimised on oma olemuselt unikaalne nähtus, millele majanduses ega ühiskonnas üldse on raske leida analoogi. Kuna valimisi korraldatakse avalikes huvides ja kulud kaetakse riigieelarvest, siis on neile ettenähtud rahalised ressursid alati limiteeritud. Paratamatult seab see ka piirangud valimissüsteemi arendamisele. E-valimiste õnnestumine sõltub aga otseselt sellest, kui palju ollakse valmis kulutama. Olulise tähtsusega on seega finantsanalüüsid, mis peavad näitama e-valimiste tasuvust nii lühemas kui pikemas perspektiivis ning millele tuginedes saaks kulutusi õigustada.

E-valimiste süsteemilt oodatakse tavapärase valimistega võrreldes tuntavat kokkuhoidu, samas reaalseid kalkulatsioone ei ole keegi veel ebapiisavate faktiliste andmete puudumise tõttu võimeline tegema. Esimesel korral on e-valimiste organiseerimiseks, ühiskondliku selgitustöö tegemiseks ja tehnoloogiliste lahenduste väljatöötamiseks vajaminevad summad märksa suuremad kui tavapärasel valimistel. Hiljem on aga otseste kulutuste osas võimalik kokku hoida nii valimiste läbiviimiseks vajaliku personali töötasude, valimispunktide majandamise kui pabermaterjalide trükkimise arvelt. Kaudselt vähenevad kulutused ka valijate kokkuhoitud aja arvelt.

4. Elektroonilise valimise süsteemi üldiseloostus

Eelnevates peatükkides käsitletud nõuetega arvestades olen järgnevalt e-valimiste olemusest parema ülevaate andmiseks kirjeldanud e-valimise süsteemi peamisi elemente, pidades silmas eelkõige arusaadavust potentsiaalsele valijale.

Protseduuri üksikasjalik väljatöötamine vajab palju põhjalikumat uurimistööd, kui käesolev bakalaureusetöö võiks mahutada. Järgnev kirjeldus ei pretendeeri saajaprotsendilisele garantiile kõikide eelduste täitmiseks, vaid esitab visiooni sellest, millistele elementidele tegelikkuses rakendatav e-valimiste süsteem võiks teoreetiliselt rajatud olla. Praktikas tegelikult kasutusele võetavad lahendused tulevad ilmselt täiesti erinevad, kuid käsitlemist vajavad võtmeküsimused on neis enamasti sarnased.

1. Süsteemi elemendid

Tinglikult võib infosüsteemi jaotada neljaks osaks, mis ei pea tingimata paikema füüsiliselt ühes seadmes ning võivad olla allutatud erinevate üksuste kontrollile:

- avalike andmete infosüsteem, mis sisaldab kandidaatide nimekirja, kasutamishuiseid jms.;

valijate andmete haldamise süsteem ehk valijate register;

isikute digitaalse autentimise süsteem;

valimisserver, kus salvestatakse ja auditeeritakse hääled ning loetakse need kokku.

2. Valijate register

Valimisõiguse teostamiseks peab valija olema registreeritud valijate registris, mida Eestis valimisseaduste kohtaselt peetakse rahvastikuregistri andmete alusel. Registris olevale valijale saadetakse posti teel valijakaart, millel on kirjas valimiseks vajalikud andmed - ajavahemikud ja kohad hääletamiseks, internetiaardessid ning juhised.

Kui valijal oleks kohustus anda oma e-valimise soovist teada juba eelnevalt ja moodustuks niiöelda e-valijate register, siis vähendaks see võimalust, et e-valimistel tegelikult mittehääletanute hääled hääletena arvesse läheksid. Teisest küljest tähendab see valijale täiendavaid kohustusi ning vähendab üht peamist e-valimiste eelist - kasutajamugavust.

Tavalistel valimistel tehakse registrist väljavõte ning saadetakse valijate nimekirjad paber kandjatel valimisjaoskondadesse. Tegelikult on see registri dubleerimine - ka valimisjaoskondades saaks valimisõigust kontrollida keskregistriga ühenduses olevast arvutist. Nii ei oleks valija seotud ka oma valimisjaoskonnaga ja ta võiks hääletada mistahes jaoskonnast. Kandidaatide nimekiri, kelle poolt valija saaks hääle anda, antaks mõistagi elukohajärgselt.

Hääletamise järel tehakse keskregistrisse märke, et valija on hääletanud.

Sellises süsteemis tuleb eristada, kas valija on andnud oma hääle e-valimiste käigus või tavalistel valimistel valimispäeval. E-valimiste käigus antud häält võib tavaliste valimiste ajal muuta, tavavalimistel antud häält enam hiljem muuta ei saa.

3. Valimine

E-valimise keskkond jaguneb erineva turvalisuse tasemega osadeks. Kandidaatidega tutvumine, info kogumine ja kandidaadi väljavalimine võib toimuda avatud osas, mis ei pea olema otseselt seotud hääletusserveriga. Avatud osa võib kättesaadav olla juba enne valimisi ning see ei erineks muudest internetiserveritest.

Valimiseks siseneb valija süsteemi kõrgendatud turvalisusega osasse. Kui avatud keskkonnas on valija kandidaadi välja valinud, siis tuleb suletud keskkonda edastada turvaliselt kandidaadi number. Suletud keskkonda sisenemine eeldab valija autentimist.

Turvalises keskkonnas oleku aeg ja ühenduse kestvus valimisserveriga peaks riskide maandamiseks olema minimaalne. Valimisserveriga tuleks ühendust võtta vaid hetkel, kui valija on oma valiku teinud ja andmed teele saadab. Süsteemi eri osade vahel ühenduse loomisega ja andmete

transportimisega aga seonduvadki süsteemi suurimad turva- ja töökindluse riskid. Andmete edastamiseks kasutatakse krüptograafilist protokollit, mille eeldusi on oma analüüsis lähemalt kirjeldanud H. Lipmaa ja O. Mürk (6, lk 14).

1. Autentimine

Enda isikusamasuse tõestamiseks kasutab valija ID-kaarti ja kaardilugejat või digitaalallkirja ning sisestab salasõna. Autentimise järel saab süsteem isikusamasuse kinnituse autentimissüsteemilt (digitaalallkirja puhul sertifitseerimisteenuse pakkuvalt), misjärel pöördub valijate registri poole ning saab kinnituse ka sellest. Moodustub andmete pakett, milles häält saadavad autentimissüsteemi ja registri digitaalallkirjad või muu kodeering, mis võimaldab tuvastada hääle autentsust ja korrektsust.

Autentimine võib osutada inimestele, kes ei ole arvuti kasutamisega harjunud, üheks keerulisemaks protseduuriks e-valimiste käigus. Anonüümsuse tagamiseks ei tohiks keegi valijat autentimisel assisteerida, seega peavad üksikasjalikud juhised ilmuma ekraanile.

Autentimisele ja valijate registri kinnitusele järgneb valiku kontroll.

2. Valimise hetk

Valija jaoks peab valimise hetk olema selgelt määratletud. Hääl läheb teele alles siis, kui autenditud kasutaja on oma valiku kinnitanud - vastanud jaatavalt küsimusele "hääleta kandidaadi nr. poolt?". Pärast autentimist ei tohiks e-valimise keskkonnas teha muud, kui oma valikut etteantud aja jooksul kinnitada, või katkestada ja uus valik teha. Valiku kinnitamise järel andmed krüpteeritakse valija personaalse võtmega ja saadetakse krüptograafilise protokollit vahendusel serverisse. See peaks olema ka ainus hetk, kui valimisserveriga ühendust võetakse. Serveris andmed salvestatakse ning edastatakse info valijate registritesse, et sama valija enam teistkordselt elektrooniliselt hääletada ei saaks.

Pärast kasutaja arvutist väljumist läbivad andmeid sekundi murdosa vältel paljusid erinevaid arvutivõrke ja seadmeid. Valija jaoks toimub andmete edastamine momentaalselt, kuid tegelik valimise hetk vajab täpsustamist - et oleks selge, millal loetakse hääletamine toimunuks. Lähtuda tuleb seejuures hääle mõistest.

Hääl ei ole oma olemuselt märke paberil või bittide jada. Seda on defineeritud kui isiku tahteavaldust, milles sisalduva siduva potentsiaaliga annavad valijad kollektiivselt edasi oma otsustusõiguse (27, lk 1).

Valimise hetk peaks antud mõistest tulenevalt olema siis, kui tahteavaldus muutub siduvaks. Kui hääl on edastatud serverisse ja seal salvestatud, siis tähendab see vaid protseduuri sooritamist. Tegelikult salvestatakse serveris andmed, mis muutuvad siduvaks alles pärast valimise legitimatsiooniprotsessi läbimist (auditeerimine, kokkulugemine, avaldamine jne.) juhul, kui valija ei ole oma eelistust hiljem muutnud näiteks tavavalimistel uuesti hääletamisega. Valimisserver on seejuures vaid andmete talletamiskoht, nagu valimiskast tavavalimistel. Kui valimiskast hävineb või serveris olevad andmed muutuvad kasutamiskõlbmatuks, siis ei realiseeru ka häältes sisalduv potentsiaal ning valimine ei ole

toimunud. Seetõttu on vajalik süsteemi standardites kirjeldada muuhulgas hääle seisundit valimiste erinevates etappides ning lisaks määratleda süsteemi võimalike vigade tagajärjed valimiste legitiimsusele.

Kuidas saab kasutaja kindel olla, et vahepeal kusagil tema häält kinni püütud või kustutatud ei ole? Krüpteeritud hääle dekrüptimine ja teisendamine ei ole ilma võtmeta võimalik, küll aga võib takistada selle jõudmist valimisserverisse. Seetõttu on valija jaoks vajalik tagasiside, mis on kohustuslikuna sätestatud ka Eesti valimisseadustes.

3. Tagasiside

Pärast valimist saabub valimisserverilt teade hääle salvestamise kohta. Seejärel lahkub kasutaja turvalisest keskkonnast ning saab edasisi instruksioone, mida peab tegema, kui soovib enda hääle õiget kirjaminekut kontrollida või oma valikut muuta tavavalimiste teel.

Palju on vaieldud selle üle, kas tagaside peab kinnitama valija jaoks ainult hääle jõudmise valimisserverisse ja selle salvestamist, või peaks sisaldama infot ka selle kohta, milline oli salvestatud valiku sisu. Salajasuse tagamiseks ja mõjutamise vältimiseks valiku sisu enam näidata ei tohiks.

Nii saab valija kindel olla vaid selles, et tema antud hääl jõudis serverini ja läks arvesse, kuid lisaks peaks ta soovi korral saama kinnituse ka selle kohta, et salvestati samad andmed, mis ta oma arvutist teele läkitas. Süsteem peab võimaldama hääletamise järelkontrolli valijale ehk verifitseerimist.

4. Järelkontroll valijale

Tavapärastes valimissüsteemides on valijal endal võimatu hääle õiget kirjaminekut kontrollida - valimisedeli kasti laskmise järel muutub hääl anonüümseks. Valimise salajasuse põhimõte on seniste tehnilise võimaluste juures järelkontrolli välistanud.

Üheks esimeseks ja tunnustatuimaks e-valimiste analüüsiks on 2000 aasta alguses valminud California Internet Voting Task Force raport!(vt. viide 12), mis on saanud lähteallikaks kõikidele hilisematele uurimustele. Ettekandes toodud skeemis peaks hääletamise salajasuse tagamiseks hääl muutuma anonüümseks kohe pärast valimisserverisse jõudmist - valija andmed tuleks koheselt ja lõplikult häälest eraldada. Sel juhul oleks valijal küll võimalus hiljem kontrollida, kas tema häält on arvestatud, kuid tal ei ole võimalik näha, kelle poolt ta hääle andis. Hääletusotsustuse õiget salvestamist selline variant tegelikult ei tõesta.

Usaldusväärse järelkontrolli jaoks oleks vajalik, et hääl ei muutuks anonüümseks enne valimiste lõppu. Samas peab olema garanteeritud, et kellelgi peale valija enda ei oleks võimalust antud häält näha ja seda valijaga seostada.

Valimisserveris olevad andmed peaksid olema seega kuni valimiste lõpuni isikuga seostatavad, kuid ainult isiku enda algatusel. Seega tuleb hoida süsteemis krüpteeritud ka vastavaid seoseid, mis avanevad ainult isiku enda digitaalse võtmega või salasõnaga.

Need seosed võib kustutada pärast valimistulemuste kindlakstegemist, kuna valimisandmete arhiivi tuleb hilisemaks kontrollimiseks säilitada pikema aja vältel, mil võivad avaneda võimalused andmete dekrüptimiseks ilma võtmeda.

Mõjutamise ja häälte ostmise välistamiseks peaks järelkontroll toimuma spetsiaalses häälte kontrollimise kohas ja valimisametnike järelvalve all. Ühetaolisuse printsiibi tagamiseks peaks ka järelkontroll olema võimalik kõigile valijatele, mis on mõistagi päris kulukas.

Kui elektroonilised valimised toimuvad ainult eelhääletamise ajal, nagu Eesti seadused ette näevad, siis järelkontroll saaks toimuda valimiste päeval. Valimispunktidesse tuleks selleks paigaldada internetiühendusega arvutid, mida saab üksi ja anonüümselt kasutada.

Kui valija järelkontrolli käigus avastab, et tema hääl on tõepoolest muutunud, siis on tal võimalus tavavalimiste teel uuesti hääletada. Muutumise tõestamine on aga tõenäoliselt võimatu, kui süsteemis selle kohta jälgi pole. Kuna valijal puudub igasugune võimalus oma esialgset salajas tehtud valikut tõestada, siis on tõestamine teoreetiliselt võimalik ainult juhul, kui valija on hääletanud tunnistajate juuresolekul..

Tuleb aga ette näha ka võimalust, et näiteks arvestatav hulk valimistel kaotajaks jäänud poliitiliste jõudude pooldajaid pärast valimisi kinnitab, et nende hääl läks valesti kirja. Valimiste salajasust arvestades ei pea nad isegi avaldama, kelle poolt nad tegelikult hääletasid. Ainuke võimalus nende väidete alusetuse tõestamiseks on tugineda süsteemis salvestatud hääletuse transkriptsioonile (vt. 4.5). Transkriptsioon peab saama formaalselt kõrgeima õigusjõuga tõendiks valimiseelsete kohta. See eeldab ühiskonna suurt usaldust e-valimiste süsteemi vastu. Eesti seadusandja on juba aktsepteerinud tehnoloogilist lahendust tõendina, andes digitaalallkirjale tavalise allkirjaga võrdse õigusjõu.

5. Süsteemi auditeerimine

Lisaks järelkontrollile valija enda poolt on vajalik ka valimiste süsteemi üldine auditeerimine valimisametnike ja spetsialistide poolt. Auditeerimise eesmärk on avalikkusele tõestada, et kõiki valimistele seatud tingimusi on järgitud ning valimistulemused on autentsed ja legitiimsed. Tavavalimistel on võimalik valimistulemusi auditeerida hääletussedelite mitmekordse ülelugemise teel. Piisava usaldusmäära olemasolul ei ole see tavaliselt vajalik, kuid sarnast auditeerimisvõimalust peetakse üheks peamiseks e-valimiste eelduseks.

Valimiste protsessi demokraatlikust jälgivad tavavalimistel välisvaatlejad, siseriiklikult kontrollivad valimiste korraldamist valimiskomisjonid. Ka e-valimistel on kontrollijad ja välisvaatlejad valimiste kvaliteedi hindajateks, kuid nende tegevusala peab olema tunduvalt laiem ning eeldab neilt põhjalikumaid teadmisi. Eeldatavasti saavad e-valimiste tehnilist järelevalvet teostada vaid väga hästi tasustatud spetsialistid ning see omakorda tähendab täiendavaid kulutusi. Kontrollimi jaoks tuleb anda erinevatele üksustele vastavad volitused ning need täpselt piiritleda.

E-valimiste süsteemi auditeerimine hõlmab väga paljusid erinevaid komponente. Eristatakse andmete auditeerimist ja protsessi auditeerimist. Andmete auditeerimine fokuseerub valimiste käigus kogutud

andmetele, protsessi auditeerimine keskendub valimiste organisatoorsele protsessile ning inimestele, programmidele ja seadmetele, mis neid andmeid töötlevad.

Tavalistel valimistel toimub protsessi auditeerimine, mida teostavad valimisametnikud valimispunktides ning hiljem häälte kokkuarvestamisel. Olemuslikult on see kaudne meetod, kuna vaatljad saavad kinnitada hulka üksikjuhte valimiste õigsuse kohta, millest indutseeritult järeldatakse valimistulemuste õigsust. Konkreetne tõendamine, et valimissedeliga antud hääl läks arvesse selliselt, nagu valija hääletas, ei ole tavavalimiste süsteemi anonüümsuse tõttu võimalik.

Tavaliste valimiste korral on andmete auditeerimise meetodiks hääletussedelite mitmekordne ülelugemine. Häälte ülelugemine elektroonilises süsteemis tõestab aga ainult seda, et kasutatav programm jõuab häälte kokkuarvutamisel alati ühesugusele tulemusele. Valimistulemuste kohta see tegelikult kinnitust ei anna.

Kindlaim võimalus tavavalimiste auditeerimiseks, mida kasutatakse näiteks ka Eestis presidendivalimistel, on hääletamine ja häälte ülelugemine kõikide huvitatute silme ees. Igal juuresviibijal on võimalus veenduda, et ühtki häält ei muudetud ning kõiki antud häáli on arvesse võetud. Elektroonilistel valimistel on auditeerimise mõte sama - üks internetti ühendatud "valimiskast" on ainuke häälte deponoorium, mis asendab detsentraliseeritud ringkondade süsteemi ning millega kaob vajadus häälte füüsiliseks ülelugemiseks ja protokollimiseks. Igal soovijal peaks olema võimalus auditeerimises osaleda (vt. 3.3).

Erinevalt tavalistest valimiskastidest, mille käitlemist on võimalik füüsiliselt jälgida, on arvutid täiesti "läbipaistmatud" ning elektroonilisi andmeid on tunduvalt lihtsam suures koguses muuta või hävitada, kui füüsilisi hääletussedeleid. Seadmete ja inimeste kontrollist ei piisa, kui andmetele on võimalik ligipääs igast maailma nurgast. E-valimistel on võimalused protsessi auditeerimiseks piiratud, kuna valimisametnikel ei ole võimalik hääle liikumist ja töötlemist vahetult kontrollida. Keskendumata peab elektrooniliste andmete auditeerimisele.

Andmete auditeerimiseks peab olema jälgitav konkreetse hääle tee alates selle sisestamisest valija poolt kuni salvestamiseni valimisserveris. Seda teed kirjeldavaid andmeid nimetatakse hääletuse transkriptsiooniks (election transcript) (25, lk 3). Üldjoontes tähendab see seda, et salvestatakse andmed iga etapi kohta, mida elektrooniliselt antud hääl läbib. Süsteemi erinevad osad annavad iga valijaga ja tema antava häälega seotud andmete kogumile kaasa end identifitseerivad koodid, mille abil on võimalik tuvastada, et see kogum on kogu süsteemi (näiteks valija enda arvuti, autentimissüsteemi, valijate registri jne.) nõuetekohaselt läbinud. Transkriptsioon sisaldab infot ka andmete muutmise kohta. Kui andmeid on süsteemi mistahes osas muudetud või töödeldud, siis on võimalik neid muudatusi tagantjärele jälgida.

E-valimiste tehnoloogia tugineb eeldusele, et vead transkriptsioonis on sajabrotsendiliselt välistatud. On kaks võimalust - kas süsteem on sajabrotsendiliselt turvaline või ta ei ole seda üldse. Kui ühe hääle andmetes esineb viga või on andmeid võimalik ebaseaduslikult töödelda, siis on see tõenäoliselt võimalik ka kõikide teiste häältega. Võrrelda võib seda digitaalallkirjaga, mille turvalisust peetakse nii absoluutseks, et sellega hakatakse teostama kõikvõimalikke tehinguid ning riigihaldust.

Andmete auditeerimisele aitab kaasa ka kronoloogiliselt jäädvustatud sündmuseandmete kogu (event log). Süsteemis genereeritakse standardites määratletud sündmuste kohta andmebaasikanded, millega on võimalik taastada sündmuste käik ja ajaline järjekord. Lõplik valimistulemuste legitiimsuse hindamine baseerub valimiste andmete transkriptsioonil ja sündmuste logil.

Legitiimsuse tagamiseks peab saama tõestada valija otsust konkreetse kandidaadi poolt hääletada. Andmeid ja valijat ei tohi seejuures otseselt seostada. Ülesanne tundub esmapilgul paradoksaalne - kuidas saab kontrollida, kuidas valija kellegi poolt hääletas, kui isikut häälega seostada ei tohi? Keerukate algoritmide abil on see siiski saavutatav. Näiteks on kirjeldatud süsteemi, milles individuaalsetes hääldes sisalduvad kontrollarvud summeeritakse neid dekrüptimata ning kogumi verifitseeritavuseni jõutakse lõpliku kontrollsumma dekrüptimisega (33, lk 1).

Kuigi tegu on ühe peamise komponendiga süsteemi usaldusväarsuse tõestamisel, ei mahu edasine tehniline kirjeldus käesoleva töö piiridesse. Spetsialistid kinnitavad, et krüpteeringu ja digitaalallkirja võimaluste abil on e-hääletamise legitiimsus tõestatav ilma valimise salajasuse printsiipi kahjustamata. Paraku on ilmselt võrdlemisi raske tavalisele valijale arusaadavalt selgitada nt. homomorfse krüpteeringu toimimist. Põhjaliku ülevaate selle kohta leiab näiteks H. Lipmaa ja O. Mürgi analüüsist (6, lk 25). E-valimiste auditeerimisele on pööratud palju tähelepanu ka T. Tammeti ja H. Krosingu töös (9, lk 32).

Kuigi arvutite abil saab valimiste elektroonilisi andmeid töödelda märksa lihtsamalt ja efektiivsemalt kui füüsiliste meetoditega, on arvutid üksnes nii usaldusväärsed, kui neid haldavad inimesed ning andmeid töötlevad seadmed ja programmid. Seega on vajalik ka seadmete, süsteemi funktsioonide ja inimeste kontroll, ehk protsessi auditeerimine (25, lk 5). Siin ongi spetsialistidest vaatlejate koht, kellel peab olema võimalus jälgida kogu süsteemi tööd ning kõike seda, mis leiab aset programmides ja andmebaasides. Selleks peaks valimisandmeid töötlevate programmide lähtekoodid ning süsteemi muud parameetrid olema eelnevalt avalikustatud, tagatud peab olema ligipääs monitooringusüsteemidele ning seadmetele. Spetsialistide ülesanne on kontrollida, et kasutatakse ikka sedasama avalikustatud koodi ning et viiakse läbi ainult neid toiminguid, mis on vajalikud õiguspäraste valimistulemuste saavutamiseks.

6. Hääletamise lõpp ja häälte kokkuarvestamine

Hääletamine lõpeb kindlaksmääratud ajahetkel, mil süsteem katkestab välisühendused ning valimisserver isoleeritakse avatud arvutivõrgust. Pärast valimiste lõpphetke ei tohi ükski hääle enam muutuda. Auditeeritud andmed arvestatakse kokku ning väljastatakse valimistulemused. Pärast auditeerimist võib isikut häälega seostavad andmed eemaldada. Info talletatakse andmekandjatele ning arhiveeritakse hilisema kontrolli tarbeks turvalises kohas.

5. E-valimiste projektid välisriikides

Õiguslikult siduvaid, riigivõimu korraldatud üldiseid internetivalimisi ei ole tänaseks päevaks veel kusagil läbi viidud. Seetõttu on järgnevas empiirilises osas lähtutud senistest pilootprojektidest, mis

on Eestis kavandatavatele e-valimistele olemuslikult sarnased. Käesolevas peatükis ei tähista mõiste "e-valimised" ainult internetivalimisi, vaid ka valimisi elektrooniliste seadmete abil, mis ei ole tingimata ühendatud internetiga.

Väiksemaid projekte on arvukalt katsetatud juba mitmel pool; järgnev valik on tehtud riikidest, mille e-valimise süsteemide kohta õnnestus leida seadusandlikku materjali või mis on e-valimise arengu seisukohalt olulisema tähtsusega.

1. Ameerika Ühendriigid

Ameerika Ühendriikides muutus küsimus valimise süsteemi reformimisest aktuaalseks 2000 aasta presidendivalimiste järel Florida osariigis toimunu tõttu. Ühendriikides on probleemiks ka madal valimisaktiivsus - 2000. aasta valimistel käis valimas vaid umbes 51% hääleõiguslikest kodanikest.

Florida valimiste protseduuris ilmsid vastuolud, mis põhjustasid valimistulemuste kokkuarvestamisel viienädalase hilinemise. Kui kandidaatide vahe on marginaalne, siis saab Ühendriikide seaduste järgi nõuda häälte teistkordset ülelugemist. Probleemide ilmnemisel on kohtutel õigus tulemused tühistada.

Segaduse keskmeks oli aastakümnete vanune valimiskaartide süsteem. Hääletamiseks tuli valijal sedel õigest kohast augustada, kuid kuna kaardi formaadi suurus oli piiratud ja tekst sellel kokku surutud, ei olnud valikut võimalik masinatega üheselt kindlaks teha. Hääletussedelid üle lugeda käsitsi ja viimaks tunnistati kehtetuks 19 000 hääletussedelit, kusjuures valimistulemuses sai lõpuks otsustavaks 400-hääleline häälteenus. Häälte korduvat ülelugemist esines ka teistes osariikides.

Valimise süsteemis esines teisigi puudusi. Paljud hääleõiguslikud kodanikud, kes soovisid hääletada, ei saanud seda teha probleemide tõttu valijate registreerimisel. Suurt osa hääletussedelitest ei arvestatud, kuna need ei olnud korrektselt täidetud. Neist umbes neljandik oli rikutud tahtlikult, ülejäänud loeti kehtetuks valijate eksimuste tõttu. Vähemalt 500 000 häält läks kaduma probleemide tõttu valimispunktidega - peamiselt pikkade järjekordade, ebasobivate lahtiolekuaegade või asukohtade tõttu. Valimiste protseduuriliste puuduste tõttu võis ühtekokku kaduma minna 4-6 miljonit häält (10, lk 10).

Ühendriikide Kaitseministeerium korraldas 2000. aastal internetivalimise umbes 350-le välisriikides asuvale sõjaväelasele ning nende lähikondlasele. Interneti kaudu koduarvutitest antud hääled läksid hääletustulemuses ka arvesse, kuid eksperimendis osalenud pidid tagantjärele edastama oma hääle ka posti teel. Valijate isikusamasuse eest vastutas Kaitseministeerium. Hääli ei kogutud kesksesse andmebaasi, vaid saadeti valimisjaoskondadesse, kus neid käsitleti tavaliste kirja teel saabunud häältena.¹⁸

Kokkuvõttes loeti eksperiment õnnestunuks ning sama süsteemi on kavas kasutada kõikidele välismaal viibivatele kodanikele valimisvõimaluse andmiseks - neid on potentsiaalselt üle 6 miljoni. Sel viisil antud häälte legitiimsusesse suhtusid paljud siiski skeptiliselt, kuna valijate anonüümsus ei olnud täielikult tagatud.

Arizona osariigis viidi väidetavalt läbi esimesed õiguslikult siduvad e-valimised. 2000. a. märtsis, kui Demokraatlik Partei valis osariigis enda presidendikandidaati, anti umbes 36 000 häält internetis. Tegu ei olnud siiski valimistega riigi tasemel, valida said ainult partei liikmed.

Hääletamine toimus nelja päeva vältel election.com kodulehel. Valijate identifitseerimine toimus nende isikuandmete ja postiga saadud PIN-koodiga. Kuigi valimised kuulutati kordaläinuks, esines tegelikkuses mitmeid probleeme erineva tarkvaraga arvutitel. Samuti ei olnud PIN-koodide saatmine organiseeritud piisavalt turvaliselt.

Valijate õiguste eest seisev Voting Integrity Project üritas valimisi blokeerida kohtu kaudu. Hageja väitel eelistas valimissüsteem ilmselgelt valge nahavärviga ja rikkamaid inimesi. Elektroonilisi valimisi võrreldi kunagise kirjaoskuse testiga, mille eesmärgiks oli mustanahaliste eemale tõrjumine valimistest (14, lk 12). Lõpuks lahendati asi kohtuväliselt ja valimiste korraldajad rajasid täiendavaid valimispunkte etnilistele vähemustele.

Californiat peetakse üheks silmapaistvaimaks e-valimiste propageerijaks, eelkõige seal moodustatud tööühiku ja nende põhjaliku uurimuse tõttu (vt. viide 12), mille järeldused on ka käesolevas töös lähtekohtadeks.

2000. aasta novembris testiti Californias e-valimiste süsteemi õiguslikult mittesiduvatel küsitlusel. Sama aasta septembris soovisid neli maakonda süsteemi ka reaalse valimiste käigus katsetada, kuid algatus keelustati põhjusel et väidetavalt ei olnud tagatud süsteemi piisav turvalisus ja valimispettuse välistamine (14, lk 12).

Riverside'i maakonnas kasutati 715-s valimispunktis puutetundliku ekraaniga valimisarvutit. Ühe spetsiaalse valimisarvuti ja selle arvutivõrku ühendamine maksis keskmiselt umbes 50 000 krooni. Samas on väidetud, et kui ka Floridas oleks kasutatud sarnast süsteemi, siis ei oleks seal ilmselt segadusi tekkinud ning kulutused oleksid end õigustanud (21, lk 1).

Enam kui pooled Ühendriikide osariigid on e-valimiste võimaluse praeguseks seadustanud. Eeldatavasti kasutatakse esimesi e-valimiste süsteeme järgmistel üleriigilistel valimistel 2004. aastal (14, lk 12).

2. Austraalia

Elektroonilise valimise ja häälte lugemise võimaluste väljaselgitamiseks moodustati Austraalias 1998. aastal spetsiaalne komisjon. 1999. aasta detsembris saavutas komisjon valitsuse toetuse enda väljatöötatud süsteemi mudelile ning selle elluviimiseks hakati ette valmistama seadusandlust.

Skeemi kohaselt on kolmenädalasel eelhääletamise perioodil ja valimispäeval võimalik valimispunktides elektrooniliselt hääletada. Soovi korral saab anda hääle ka hääletussedeliga.

Hääletamise lõppedes sisestatakse elektroonilisse süsteemi ka hääletussedelitega antud hääled ja loetakse koos elektrooniliselt antud häältega kokku. 2000. aasta detsembris võeti vastu süsteemi võimaldavad seadusemuudatused.19

Elektrooniliseks valimiseks ja häälte kokkuarvestamiseks valitava arvutiprogrammi kinnitamise volitused on antud riiklikule valimiskomisjonile. Seaduses on loetletud ka nõuded, millele programm peab vastama:

- valimistulemuste õigsuse kontroll elektrooniliselt peab andma sama kindla tulemuse, nagu valimistel tavalistel hääletussedelitega;
- hääletamine toimub järjestikustel ekraanivormidel edasiliikumise ja lõpeb valiku kinnitamisega;
- programm peab võimaldama valijale eksimuste parandamist enne hääle lõplikku salvestamist;
- programm peab võimaldama hääle sisestamist, mis ei sisalda eelistust ühegi kandidaadi kohta;
- programm peab tagama, et ükski kõrvaline isik saaks valija eelistustest teada;
- programm peab väljastama häälte jaotumuse suvalisel ajahetkel pärast hääletuse lõppemist ning ka hiljem, valimistulemuste ametliku väljakuulutamise järel.

Valimisedelitega antud häälte arvutisse sisestamise korra kinnitab valimiskomisjon. Ühtlasi peab komisjon tagama seadmete ja programmide turvalisuse ning andmete varukoopiate säilitamise vähemalt kuni eelhääletamise alguseni järgmistel valimistel.

Seadus määratleb ka seosed ja erisused võrreldes tavaliste valimistega - muudetud on sätteid, mis puudutavad hääletussedeli käitlemist ning rikutud sedelite eristamist ning häälte korduvat ülelugemist. Korduv ülelugemine võib seisneda varukoopiatele salvestatud elektrooniliste andmete kontrollimises, vajadusel lisaks ka hääletussedelite käsitsi ülelugemises.

Lisatud on võimalusi valimistulemuste vaidlustamiseks elektroonilise süsteemi iseärasuste tõttu. Vaidlustada saab ainult programmide täpsust ning selle hindamiseks moodustatakse erikohus. Valimise seadmete ja programmide rikkumise või nende töö häirimise kvalifitseerib seadus õigusrikkumiseks.

20. oktoobril 2001 said valijad Austraalia neljas suuremas linnas hääletada elektrooniliste seadmete abil. Hinnang Austraalia elektroonilise valimise efektiivsusest avaldatakse hiljem käesoleval aastal aadressil <http://www.elections.act.gov.au/elecvote.html> .

3. Brasiilia

Brasiilias, kus valimine on kodanikele kohustuslik, on arvuteid häälte kokkuarvestamisel kasutatud juba üle kümne aasta. 1990. aastal kandsid valimisametnikud pärast hääletamist hääled arvutisse ning edastasid andmed riigi kesksesse valimiskomisjoni. Valimiste legitiimsus seati esimesel korral esinenud probleemide tõttu kahtluse alla, kuid nüüdseks on vigadest õpitud. Tänapäevaks on arvutite kasutamine Brasiilia valimistel muutunud massiliseks.

1998. aastal valis rahvas Brasiilias elektrooniliste seadmete vahendusel ligi 1700 rahvaesindajat ja riigi presidendi. Ligi 3000-s Brasiilia linnas oli valimispunktides IP-võrku ühendatud enam kui 12 000 arvutit.

Valimispunktis kontrollis valimisametnik esmalt valija andmeid andmebaasist ning sisestas valimisarvutisse valija koodi. Allkirja andmise järel läks valija eraldatud kabiini ning kandis arvutisse kandidaadi numbri. Enne valiku lõplikku kinnitamist kuvati valijale kandidaadi andmed ja foto. Valik salvestati kolmele erinevale andmekandjale (arvutisse lukustatud floppy, kõvakettale ja flash-mäluseadmele). Kui mõnes valimispunktis kasutati valimissedeleid, siis nendel sisalduva valiku sisestasid hiljem valimisametnikud. Hääletamise lõppedes edastati hääletustulemused keskserverisse ning valimistulemuste kokkuarvutamise järel avaldati info internetis.

Väidetavalt oli süsteem vähemalt sama turvaline kui tavalistel valimistel. Ligipääsu valimiste arvutivõrgule omasid ainult jaoskondade süsteemihaldurid, kes said vajalikeks toiminguteks ühekordselt kasutatava parooli valimiste keskosakonnast. Ligipääsu keskserveritele kontrolliti ka füüsiliselt. Süsteemis töötas auditeerimistarkvara, mis jälgis kõikvõimalikke päringuid arvutitele ja andmebaasidele ning kõiki programmide operatsioone.

Süsteem põhines Windows NT tarkvaral, mida täiendati spetsiaalsete auditeerimisprogrammidega. Selle töötas välja Brasiilia valitsuse lepinguline partner, riigi juhtivamaid IT-turvalisuse firmasid - Modulo. Lisaks programmide väljatöötamisele rajas Modulo turvalise arvutivõrgu infrastruktuuri ning koolitas 550 administraatorit ja tehnikut, kes seda haldasid.

2000. aastal sõlmis Brasiilia valitsus valimiste süsteemi uuendamiseks kokkuleppe Ühendriikide firmaga SafeVote. Sama aasta oktoobris viidi läbi valimised, milles riigi territooriumile oli paigutatud 326 000 ATM-tüüpi valimisterminali. Valida sai isegi keset Amazonase džunglit, kus elektri puudumisel töötasid terminalid patareidel. Info edastati telefoniliine pidi keskserverisse hiljem.

Järgmised üleriigilised valimised toimuvad Brasiilias käesoleval aastal ning siis loodetakse valimised läbi viia saajaprotsendiliselt arvutite abiga (13, lk 1).

4. Suurbritannia

Suurbritannias korraldati 2002. aasta mais kohalike omavalitsuste valimistel mitmeid pilootprojekte valimiste süsteemi reformimiseks, sealhulgas ka esimesi internetivalimiste katsetusi. Esmaste hinnangute kohaselt anti 12 protsenti 21000-st häälest elektrooniliselt ning üldine valimisaktiivsus tõusis 4 protsenti.

Liverpools oli võimalik valida internetiühendusega teleri vahendusel. Valijad sisestasid oma isikukoodi ning valijakaardil oleva PIN-koodi. Valitud hääled saadeti krüpteeritult keskserverisse.

Sheffieldis said valijad valida mobiiltelefoniga, saates vastavale numbrile etteantud formaadis tekstisõnumi koos oma PIN-koodiga ja kandidaadi numbriga. Valimistulemuse salvestamise või selle ebaõnnestumise kohta saadeti valija telefonile teade (32, lk 1).

Swindon oli üks 9-st omavalitsusest, kus oli võimalik valida interneti vahendusel. Valija läks vastavale veebilehele ja sisestas oma valijanumbri ning koodi, mille ta oli saanud erilises turvaümbrikus. Valija identifitseerimise järel kontrollis süsteem valimisõigust ning esitas valija elukohajärgsed valikuvariandid. Valiku tegemise ja kontrolli järel saadeti hääled krüpteeritult mitmete

tulemüüride ja teiste turvasüsteemidega kaitstud keskserverisse.

Kokku viidi läbi kolmkümmend erinevat katsetust, milles valida sai interneti või posti teel, või kus hääli arvestati kokku arvutitega. Pilootprojektide eesmärk oli Suurbritannias planeeritavate esimeste üleriigiliste e-valimiste ettevalmistamine 2006 aastaks.

5. Prantsusmaa

Prantsusmaal testiti e-valimiste süsteeme esmakordselt käesoleva aasta aprillis ja mais toimunud presidendivalimistel. Merignac's said valijad proovida elektroonilisi valimiskaarte, mis sisaldasid peale muude isikuandmete ka infot valija sõrmejäljest. Autentimiseks sisestas isik kaardi kaardilugejasse ning asetas sõrme identifitseerimisseadmele. Valimiskabiini sissepääsu filmiti, et välistada ebaseaduslikke mõjutusi.

Kuna Prantsusmaal puudub seni e-valimisi võimaldav seadusandlus, siis ei olnud süsteemi testimisel antud hääled õiguslikult siduvad; testides osalejad peavad hääletama ka tavalisel teel (20, lk. 1).

2002. a. juunis katsetatakse sama süsteemi ka parlamendivalimistel, lisaks testitakse pimedatele inimestele mõeldud helilist assisteerimissüsteemi. Süsteem on osa Euroopa liidu rahastatavast E-poll'i projektist20, mida 2001. aastal testiti ka Itaalias referendumil.

6. Euroopa Parlamendi valimised

1999. a. Euroopa Parlamendi valimistel oli valimisaktiivsus vaid 49.8%, Suurbritannias seejuures vaid 24%. Saksa valitsuse ja mitmete erafirmade initsiatiivil on valimisaktiivsuse kasvatamiseks algatatud projekt, mille eesmärk on viia Euroopa Parlamendi valimised interneti juba 2004. aastal. E-valimiste elluviimiseks on rajatud sihtasutus "European eVote Foundation".

Süsteemi nimetusega i-Vote21, mis on ühtlasi Saksamaa rahvusliku e-valimiste projekti tuumaks, katsetati edukalt esmakordselt 2000.. aastal Osnabrücki ülikoolis (17, lk 1).

Euroopa Parlamendi e-valimistega kaasnevad ka mitmed juriidilised probleemid - eelkõige on küsimus selles, millised on Euroopa Liidu tasemel valimiste mõjud kohalikele valimise süsteemidele ning milliste seaduste alustel hakkaks valimine toimuma. Nimetatud küsimusi arutatakse 11 ja 12 mail 2002. a. Itaalias aset leidval rahvusvahelisel konverentsil "E-voting and the European Parliamentary elections".²²

6. Lõppjärelused

Iga päevaga suureneb inimeste hulk, kelle jaoks internet on osa nende igapäevasest elust. Seetõttu sobiksid internetivalimised igati tänapäeva infoühiskonda, mida iseloomustab lihtne juurdepääs kõikvõimalikele teenustele.

Paraku on esialgseid optimistlikke plaane nii Eestis kui mitmetes teistes riikides hakatud edasi lükkama. Veel 2001. aasta sügisel, kui käesoleva töö teema valisin, oli Eesti valitsusel kindel kavatsus e-valimisi katsetada 2002. aastal toimuvatel kohalike omavalitsuste valimistel või hiljemalt 2003. aasta Riigikogu valimistel. Nüüdseks on Kohalike omavalitsuste volikogude valimise seadusega võetud vastu otsus, et enne 2005-ndat aastat e-valimisi Eestis ei korraldata. Selleks ajaks on tõenäoliselt töökindlad süsteemid välja arendatud, interneti kättesaadavus paranenud, ühiskonna meelestatus e-valimistele vastuvõtlikum ning korraldamiskulutused tunduvalt madalamad.

Edasilükkumise põhjused on aga ilmselged - esmapilgul võrdlemisi lihtsana tundunud süsteemi väljatöötamine osutus lähemal uurimisel palju keerukamaks ning vajalike suurte kulutuste tegemist ei peetud nähtavasti õigustatuks. Ettevalmistusaja pikendamisest hoolimata on aga autori seisukoht, et juba praegu tuleks alustada tööga ning määratleda lähtealused ja kaugemad eesmärgid. Näiteks Suurbritannia, kus veel sügisel peeti võimalikuks üleriigilisi e-valimisi järgmisel aastal, on käesoleval kevadel korraldanud väga ulatuslikke eksperimente, kuid sellest hoolimata ei loodeta üleriigilise e-valimiste süsteemi valmimist enne 2006-ndat aastat.

Ka Eestis tuleks juba järgmistel valimistel läbi viia õiguslikult mittesiduvaid projekte, milles saaks vabatahtlikult katsetada e-valimist avalikes internetipunktides. Katsetused tuleks läbi viia etapiviisiliselt, lülitades järk-järgult süsteemi uusi elemente. Esimesel korral ei ole üldise ettekujutuse saamiseks veel vaja seoseid näiteks autentimissüsteemi või valijate registriga. Kui internetis oleks kättesaadav kasvõi lihtne infosüsteem süsteemi visuaalseks tutvustamiseks ning kandidaatide nimekirjad, siis annaks see avalikkusele arusaama, et projektiga juba tegeldakse ning 2005-ndaks aastaks kasvaks inimeste kindlustunne selle võrra suuremaks. Vajadust pilootprojektide järele on rõhutanud ka kõik teised senised analüüsid.

Infotehnoloogia, ja eriti kõik mis puudutab e-valimisi, on tänapäeval tormilise kiirusega arenev valdkond. Igal nädalal avaldatakse internetis erinevates riikides väbi viidud uusi analüüse. Käesoleval kevadel toimuvad Euroopas mitmete riikide spetsialistide kohtumised ja elektroonilist demokraatiat ning e-valimisi puudutavad konverentsid.

Seadusandlus seevastu reageerib ühiskonnas aset leidvatele arengutele palju aeglasemalt. Eesti valimisseaduste elektroonilist valimist reguleeriv osa annab küll üldise raamistiku e-valimiste läbiviimiseks, kuid autori hinnangul oleks vajalik tunduvalt detailsem regulatsioon, kasvõi eraldi elektrooniliste valimiste seaduse näol, mis käsitleksid seni lahtiseid küsimusi (vt. 3.2).. Uued valimisseadused loovad e-valimiste korraldamisele küll õigusliku aluse, kuid kui midagi peaks e-valimistel valesti minema, siis järgneks tõenäoliselt segadus, mis võib väga kergesti viia kahtlemiseni valimistulemuste legitiimsuses ning isegi tulemuste tühistamiseni.

Küsimus e-valimiste otstarbekusest seisneb ennekõike selles, kas süsteemi eelised ületavad võimalikke puudusi ning kas uuele süsteemile üleminekust saadav kasu on proportsioonis tehtavate kulutustega ning võimalike riskidega. Järgnevalt on toodud kokkuvõtlik loetelu peamistest eelistest ja puudustest, mida e-valimistele üleminekuks tuleks kaaluda:

Eelised

- E-valimiste peamiseks eeliseks peetakse ennekõike hääletamise mugavust valijatele, mis eeldatavasti kasvatab oluliselt valimisaktiivsust.
- Hääletamine ei oleks enam seotud valija asukohaga. Ka välismaal või oma kodukohast eemal viibijatel oleks võimalik valida. Puuetega inimesed ja haiged saaksid valida omas kodus. Kaasaja tehnoloogilised vahendid võimaldaksid hääletamist isegi pimedatele.
- Hääletamine ning häälte kokkulugemine muutub kiiremaks ja täpsemaks. Süsteem võimaldab välistada inimlikke eksimusi hääletamisel ning vähendada sellega häälte kaotsiminekut. Valimistulemused selguksid juba mõne minuti jooksul pärast hääletamise lõppu.
- Hääletamise aeg oleks paindlikum - e-valimistel ei nõuaks valimisperioodi pikendamine võrreldes tavavalimistega täiendavaid kulutusi ning valida saaks kasvõi öösel.
- Pikemas perspektiivis kujuneksid e-valimised odavamaks kui tavalised valimised.
- Sõltuvalt teostusest võib e-valimiste süsteem võimaldada valijal kontrollida tema hääle õiget arvestamist, mis tavavalimiste anonüümsuse tõttu ei ole võimalik;
- Kodanikud harjuksid enda poliitilist võimu teostama interneti vahendusel. E-valimised oleks esimeseks etapiks elektroonilise demokraatia arengul. Süsteemi infrastruktuuri saaks võrdlemisi väheste kulutustega kasutada sagedastel valimistel ja rahvahääletustel, seda saaks kohandada rahvaalgatuse korras seadusandluse algatamiseks ning poliitilises diskussioonis osalemiseks.
- Esimeste e-valimiste eduka läbiviijana oleks riigil võimalik positiivselt silma paista, läbikukkumine aga oleks tagasilöögiks sarnastele projektidele kogu maailmas. Riigi maine seisukohalt on sellel väga suur kaal. Õnnestunud e-valimised leiaksid kahtlemata kajastamist maailma pressis ning saadud kogemustele viidataks meedias veel aastakümneid. Juba praegu viidatakse paljudes eri riikide uurimustes Eesti edusammudele.

Puudused

- E-valimiste süsteem on võrreldes tavavalimistega tunduvalt keerukam. Valimiste legitiimsuse tõendamine on seetõttu raskem ning valimistulemuste vaidlustamiseks on palju rohkem võimalusi.
- Väheneb süsteemi avatus ja selle jälgimine muutub komplitseeritumaks. Valijate hääletamisõiguse kontrollimine, häälte salvestamine ja ülelugemine ning valimistulemuste kokkuarvutamine on vaadeldavad ainult eriteadmistega isikutele.
- Süsteem muutub tsentraliseeritumaks, selle haldajate kätte koonduvad suuremad õigused ja vastutus. Häälte võltsimine või süsteemi vead võivad mõjutada valimistulemusi palju suuremas ulatuses, kui tavalistel valimistel.
- Ligipääs internetile ei ole kõigile ühesuguselt tagatud, mis võib viia sotsiaalse killustatuseni erinevate ühiskonnakihtide vahel. Palju on inimesi, kes ei ole harjunud arvutite ega interneti kasutamisega.
- Ühekordsed kulutused süsteemi väljatöötamisele ületaksid tunduvalt tavalistele valimistele kuluvad summasid.

Valijate arvutite töökindlust ei saa tagada ning nende ebaseaduslikku jälgimist ei ole võimalik välistada.

Süsteemi töökindlus ei ole asjatundliku rünnaku vastu kaitstud.

E-valimise süsteemide praeguse arengutaseme juures saaks valimisi korraldada ainult piiratud ulatuses ja suunatult väiksele valijate grupile, et ebaõnnestumine ei tooks kaasa suuri tagasilööke. Otstarbekas oleks kavandatava üleriigilise e-valimise süsteemi komponente katsetada eelnevalt näiteks üliõpilasesinduste, ametiühingute juhtide või erakondade juhatuste valimistel ning rahvaküsitlustel, nii nagu mujal maailmas seda seni on tehtud. Rakendada võiks juba ka valijate elektroonilist keskregistrit (vt. 4.2), mis võimaldaks valijal hääletada suvalisest valimispunktist.

Millised peaksid olema edasised uurimissuunad? E-valimised hõlmavad väga paljusid erinevaid valdkondi ning eeldavad aeganõudvat ja igakülgset uurimist. Igakülgse uurimise seisukohalt vajaliku interdistsiplinaarse lähenemise jaoks oleks tähtis, et e-valimiste ettevalmistamisest võtaksid osa politoloogid, sotsiaalteadlased, tehnikaspetsialistid, psühholoogid, õigusteadlased, kommunikatsiooniekspertid, majandusteadlased jne., kes peaksid oma töös arvestama ka kõikide teiste valdkondade aspektidega. Uurimismeetoditeks on seejuures küsitlused ja andmete analüüsid, mujal läbi viidud pilootprojektide analüüsid ning e-valimiste mudelite katsetamine. Esmasteks eesmärkides peaksid seejuures olema:

- süsteemi põhiprintsiipide paikapanek, eesmärkide ja nende saavutatavuse analüüs;
- tehniliste standardite koostamine ja nende pinnalt realselt töötava mudeli loomine;
- mudeli katsetamine õiguslikult mittesiduvates eksperimentides;
- süsteemi erinevate osade järk-järguline inkorporeerimine tavaliste valimiste süsteemi;
- sotsioloogiliste uuringute korraldamine e-valimisteks valimisoleku selgitamiseks, rahva peamiste kartuste kindlakstegemine ning nende vähendamine;
- seaduste ettevalmistamine, mis vastaks konkreetse süsteemi iseärasustele või delegeeriks volitused detailsemaks reguleerimiseks vastavatele ametnikele;
- tuleb propageerida e-valimise süsteemi toetavaid struktuure, nagu ID-kaart ja digitaalallkiri;
- tuleb tagada interneti kättesaadavuse ning inimeste arvutihariduse stabiilne kasv.

Üleminek e-valimiste süsteemile eeldab ühiskondlikku valmisolekut. Mõnedest demokraatlikest valimisprintsiipidest tuleb teha järeleandmisi, teised demokraatia kvaliteediomadused seevastu paraneksid. Paratamatute järeleandmiste määr sõltub tehnoloogia arengust ja süsteemi ülesehitamiseks kasutatavatest ressurssidest.

Vaieldamatu on aga see, et elektroonilises demokraatias sisaldub aukartustäratav potentsiaal, mille avaldumisega muutuvad paljuski senised arusaamad poliitikast ja rahva osast valitsemises. Rääkida võib demokraatia olemuse murrangulisest teisenemisest. Seni on rahvas enda põhiseadusest tulenevat võimu saanud realselt teostada vaid perioodilistel valimistel ning harvadel referendumitel. Uued kommunikatsioonitehnoloogiad avavad aga seni kättesaamatuid võimalusi riigihalduses osalemiseks ja iseotsustamiseks. Juba järgmisel aastakümnel võib elektrooniline otsedemokraatia saada mitmetes riikides igapäevaelu harjumuspäraseks osaks ning praegusest esindusdemokraatia kriisist räägitakse vaid kui tervendavast õppetunnist.

.....

7. Electronic Elections. Summary

Voting is the cornerstone in the foundation of democracy. It should be the goal of every democratic country to maximize the quality of voting, which is directly determined by voter turnout and the legitimacy of election results. Application of new communication technologies, such as the Internet, is a natural course for increasing those standards. The main challenge here is not planning or creating the system, but achieving public confidence and trust in it.

The proponents of e-voting see enhanced accessibility, accuracy and reduced costs as the main advantages of the system. Opponents argue, that current technology does not provide effective enough measures to cope with the privacy requirements, the Internet is not accessible for all voters and proving the legitimacy of the procedure to the public would be much more difficult than in traditional elections.

Estonia has undertaken the goal to be among the first states to hold nation-wide online elections. New election laws have been enacted that lay the ground rules for holding online elections, using remote Internet voting, in the year 2005. It may seem a distant future, but preparations, like pilot projects, voter education and Internet accessibility programs should begin immediately. Also, more detailed regulation is needed, concerning jurisdiction over e-voting issues, criminalizing specific offences like Distributed Denial of Service Attacks, addressing responsibility and redefining the substance of prohibited voter influence.

The main objective of this report is to analyze possible problem areas, mainly the legal aspects of electronic voting and its influences to democracy. The conception of electronic democracy and the position of electronic elections in democratic theory have also been examined.

In regard to democratic election principles set forth in international law and the Estonian Constitution, the system on e-voting must fulfill the following basic principles:

- The principle of “general” elections - to safeguard the electoral rights of all eligible voters.
- “Free elections” - The principle of free elections stipulates that the electoral process has to be free of violence and private pressure. The voter must be able to fill out the ballot paper personally and without extraneous influence.
- “Equal elections” - The principle of electoral equality is rooted in the principle that all citizens are politically equal. Electoral equality means first and foremost that every eligible voter may exercise in elections his right to share in state power in a formally equal manner, and that all votes cast by the electorate have the same influence, i.e. the same numerical value.
- “Secret elections” - When the votes are finally counted, the voting behavior of the individual voters must be untraceable.

One of the largest concerns is maintaining voter privacy. The enhancement of current encryption

techniques should provide more security that a vote is private. It is important to educate the public on the issues concerning privacy and the Internet in such a way that it is understood and helps to eliminate fears. The system must be at least as secure as corresponding traditional voting procedures. In Estonia, digital signatures and electronic ID-cards will be used for authentication in e-voting procedure.

The second chapter examines potential social, legal and financial issues, which need to be resolved. Large concern with online voting is accessibility. It has been suggested that e-voting creates a potential "digital divide".. According to several studies, those least likely to have access to the Internet are the rural poor. Creating an election environment that only allows people to vote via the Internet would clearly be unconstitutional. About 39 percent of Estonians use the Internet frequently and additional 20% would have access, if desired.

In Estonia, e-voting is introduced as an addition to traditional voting procedures, allowing electronic voting in pre-election period and changing the vote during election day, to reduce the risks of illegal influence and vote trading.

In the third chapter the key elements of an electronic voting system have been analyzed - such as voter authentication, system auditing and data transportation issues. Finally, the last chapter examines some of the notable trials on electronic voting systems held around the world.

In conclusion - much work is to be done to make e-voting possible in 2005. There are important aspects to keep in mind when making any policy changes. User acceptance is crucial to achieve successful implementation of e-voting. If the public is not properly educated and informed, the benefits of online voting will not be fully realized. But clearly, electronic voting and electronic democracy in general, contain potential that may enhance democracy in unforeseeable ways.

Google Advertising Programs

[Home](#) | [About Google](#)

For Advertisers: [Google AdWords](#)

Reach people when they are actively looking for information about your products and services online, and send targeted visitors directly to what you are offering. With AdWords cost-per-click pricing, it's easy to control costs—and you only pay when people click on your ad.

Apply Online: Create ads and start managing your account—takes just minutes. [Learn more.](#)

Contact Sales: Find out how our sales team can help you reach your online advertising goals. [Learn more.](#)

Google Advertising Professionals: Become a better AdWords client manager with free online training & tools. [Learn more.](#)

For Web Publishers: [Google AdSense](#)

Earn more revenue from your website, while providing visitors with a more rewarding online experience. Google AdSense™ delivers ads targeted to your content pages and, when you add Google WebSearch to your site, AdSense delivers targeted ads to your search results pages too. With AdSense you earn more ad revenue with minimal effort—and no additional cost.

Apply Online: Maximize your revenue with relevant ads—takes just minutes. [Learn more.](#)

Contact Sales: If your site receives more than 20 million page views a month, our sales team can help customize the AdSense program for you. [Learn more.](#)

Google Business Solutions

Maximize your revenue

Google AdSense

Earn more revenue from your website, while providing visitors with a more rewarding online experience. Google AdSense™ delivers ads that are relevant to your content pages and, when you add Google WebSearch to your site, AdSense delivers targeted ads to your search results pages too. With AdSense you earn more ad revenue with minimal effort—and no additional cost.

- Discover more revenue with [Google AdSense](#)

If your site receives more than 20 million page views a month, our sales team can help [customize](#) the AdSense program for you.

If you have parked domain pages, learn more about [AdSense for domains](#)

Show ads relevant to the content on your site

Make corporate search easier

Google Search Appliance and Google Mini

No matter what your company's size, you can have the power of Google search on your corporate intranet and public websites. The Google Search Appliance and the Google Mini connect your employees, partners and customers to the information they need.

- [Learn more](#) about Google search solutions for your company

Add search to your site

Google WebSearch

Enable your online visitors to search the web with Google WebSearch. Google indexes billions of pages, images, and documents in hundreds of file types to help people find what they want.

And with Google WebSearch, they can find what they want from your website.

- Learn more about how to [add WebSearch to your site](#)

Take Google with you

Mobile Solutions

With Google Mobile WebSearch, your users can search not just the Mobile Web but the entire web. No other search engine can provide this service.

- Find out how you can offer [Google Mobile WebSearch](#)
