<http://www.daring-dollface.com> <http://members.aol.com/dollfaceLL> yes i am the same person on all of the pages.....kiss,,jeanne:) aaarrrr, what was the question????? All I remember asking is why you don't make a nice showing of friends and scenery; nudity is not for everyone in Holland except in summer and the exceptions on top of that. We do have a famous coldbraver who takes trips into frigid extremes of it just to prove it and here in Holland there are 2 jockstrap maniac skaters; the one who is already in his 50s got arrested recently when he strayed to far from amsterdam.

To vwbev (check archives; see took her page down meanwhile): remember me recommending Graves? <http://chronicle.com/free/v47/i09/09a01601.htm> A Role Model for Jesus (via robotwisdom.com this article about some New Dead Sea Scroll inspired books reveal parallels (hard to prove plagiarisms?) to "king jesus" by Robert Graves ("In the Old Testament, sure, we see messianic figures," says Mr. Knohl. "Divine, et cetera, et cetera." In the Book of Isaiah, the character of a "suffering servant" appears. "But never a messiah and suffering. In the eyes of the Old Testament, a suffering messiah is a contradiction.") but of course one of the authors pride himself in (him and his colleague) reaching the conclusions "independently";

10/24 00:06 [Freeport-McMoRan, in a Hole in Indonesia, Can't Stop Digging](#) By Adam Majendie and Kate Linebaugh Timika, Indonesia, Oct. 24 (Bloomberg) Pollution and Pineapples San Francisco-based environmental group Project Underground says the tailings are "the biggest source of heavy metal pollution resulting from gold mining." Freeport says the tailings are not toxic, just unsightly, and it spends \$1 million a year to try to find a way to grow pineapples and other crops to cover the gray expanse once mining ends. An environmental audit in 1999 by Montgomery Watson supported Freeport's claim. Critics in the government want more. "I don't feel satisfied with their environmental management," said Surna Djajadiningrat, Indonesia's director general of mining in Jakarta. "Even at the current capacity, they cannot show us that they are able to manage that properly." On May 4 this year, Freeport's environmental record dramatically worsened. That night, after what the company says was a period of unusually high rainfall, a landslide of waste rock from Grasberg slid into nearby Lake Wanagon, sending a wall of water and rock down the valley below. Swept Away Four contractors camped below the lake were swept away and killed, along with the flood-warning system that

was supposed to alert the village of Banti, 10 miles down the valley. The river rose 20 feet and washed away pigsties and crops in Banti. "The lake's gone," said Tom Henderson, Grasberg mine superintendent. "You can't get it back." To the local Amungme tribe, who see the mountains as the head of their spiritual mother and the lakes and rivers as her hair, the destruction of the lake is a sacrilege. "I feel as if someone is tearing off my scalp," said Mama Yosepha, an Amungme leader. "This is a sacred place." For the first time since operations began in 1972, the mining ministry forced Freeport to cut output by limiting mining at the Grasberg pit to 200,000 tons a day from 230,000 before the landslide. The cut was made pending the results of an investigation that is now in the hands of Rizal Ramli, economic affairs minister, who took office in August. The local tribes blame Freeport and made it pay compensation. Johny Umaleng, 27, whose pigs were drowned by the deluge, says Freeport paid him 10 million rupiah (\$1,150) -- four times his monthly earnings as a contract worker at the mine. 'Morally Obligated' He says he feels the compensation is adequate. Freeport is moving Umaleng's family -- and 45 others that live near the river -- up the hill to new homes. "We've impacted their lives, so we are morally obliged to provide them safe housing," said the sociologist Batey, the Freeport manager in charge of community relations. For Umaleng and other Papuans, there is little alternative employment other than that generated by the mine, and families walk for days over the hills into the tribal lands of the Komoro and the Amungme looking for work. "The reality is that there is almost no other economic engine here in West Papua, and as long as this is the one place where you can get education and good treatment, people will continue to come," said the priest Lowry, Freeport's vice president of social and community affairs. Freeport donates money to the local communities through its so-called 1 percent fund, where about one-hundredth of its revenue from the mine -- \$14.4 million last year -- is spent for projects such as a 100-bed hospital. Bone to a Dog Many local people say that's not enough. "It's like throwing a dry bone to a dog," said Yohannes Deikme of the Amungme Tribal Association. Said Vanguard's French, "If you were a local tribesman and you suddenly saw this lovely golf course, you'd think you could take a bit of money out of the system, wouldn't you?" Batey acknowledges Freeport has made mistakes and says now the company must work to build respect with the Papuans. It has put tribesman Tom Beanal, a leader of the Papuan independence movement, on the board of its Indonesian unit. Beanal unsuccessfully tried to sue the company in 1996 for "cultural genocide" and has alleged that Freeport's private security force acted in concert with the military in violating human rights. Winning local confidence won't be easy. Accusations against Freeport go back decades and often stem from the company's government-mandated support for troops stationed in the area. Pipeline Cut In July 1977, when a Papuan independence group cut the slurry pipeline that carried Freeport's copper, the army retaliated by bombing the village of Banti -- then called Wa --destroying most of the 17 new houses Freeport had just built for the villagers. Tribal leaders such as Mama Yosepha and Deikme's tribal association allege Freeport was complicit in military torture, detention, and the murder of civilians; Freeport denies all such allegations. With a weakened central government in Jakarta, the company needs to gain the backing of pro-independence groups, which are gaining strength. In October, 30 people were killed in Wamena -- 150 miles east of the mine -- when the army tried to remove separatist flags raised in the town.

There is in this moment a conference going on in Vlodrup, Holland, organized by the Maharishi University of Management where Tribal Leaders are invited to become members of the World Federation of Traditional Leaders.

Ursula: I could make sure that those would become members who are the real ones. They also told me that they do not want appointed leaders, who have been appointed by missionaries and politicians, they want those who come from the line of the leaders and chosen by the council of elders. I find that we should have first our conference to find out who would be qualified if ever we go into that. But I have been so eager to do this conference in Cebu and this came as a welcome possibility. I share the same sentiments as you. But the government and the missionaries, miners etc are fielding their people and interfering, those people seem to have respect for the indigenous traditions, they want to revive the traditional ways of farming, combining it with ayurvedic approaches to assure a healthy food-supply, this is the main reason.

Rains: Who's going to be teaching who and who will be the winners. Sounds like it could be a raising call to all conference lions of the world, to attend another free get together. The trouble with this is, the ones that hear about it and attend are the western educated ones that seek....often personal ambition and financial gain, or have been brainwashed into some development agenda, by a corporate backed ngo.

me: haaah!!! Funny to see confusion about 'real ones' (Why not disqualify all delegates and call only those real who remain within sight of their territory (a live line to a huge screen webcamming feed back and so forth..) and remarks about freeloading 'conflions'. I does a misanthrope who has just read about a relatively more famous one (LFCeline, incidentally, he worked for the UN between WW's) a heap of good. :o(

Ya'a'tee FREEDOM magazines latest issue has an excellent article on the Big Mountain situation. **A TRUST BROKEN, A HERITAGE BETRAYED: Battle for Native American Rights** by Thomas G Whittle & Carlynn Lee McCormick is well researched, and the authors are not afraid to tell the truth. I HIGHLY RECCOMEND you read it and pass it on to as many as possible. You should find the article at freedommag.org or contact the editor at editor@freedommag.org. And as I have your attention for a moment, for those of you who feel like sending a fax to help us, please fax Hilary Clinton. Weaving For Freedom Foundation has been trying to arrange a meeting with Hillary and the Dine Weavers for seven and a half years. There seems to be openings in Hilary's schedule for December, so please ask that she take the time to meet with the Elders. send the fax to [attnPattySolisDoyle 202 456 5340](mailto:attnPattySolisDoyle@2024565340) For all my relations BoPeep Is this

following message containing misguided info??? Does it refer to an article of yours? I couldn't find it surfing your webpage. misguided about the message is that the article can be found on the website. Please provide us your surface mail address and we will mail you one. It isn't on the web site yet. Best, tom

Dear Poetpiet, Thank you very much. The only thing

Allow me to get mad at some Libertarian items here: ----- Voteauction.com reaps cynical voters Author: Justin Matlick "What Internet critics don't recognize is that sites like Voteauction are reflecting, not dictating, cultural attitudes. When hundreds of GenXers flout the law by putting their votes up for auction, they are opting out of the entire American political system." (10/18/00) pacificresearch.org/oped/101800jm.html Americans could not look hard enough to look for Indians willing to sell their land and now you are upset about something that is meaninglessly mercenary already????? ----- Embattled vote auction site returns to the Web Voteauction.com was apparently counted out too soon. The Austrian-based site, which lets Americans sell their votes to the highest bidder, has returned to the Web with a slightly toned-down message. (10/25/00) ----- Government accountability project In 1993 the federal government passed the Government Performance and Results Act. How are they doing at it? This project relies on the expertise of scholars, government and private sector leaders, and business experts to assess that. The Government Accountability Project's goal is to increase accountability and transparency to bring about more effective government. -mail: mercatus@gmu.edu URL: http://www.mercatus.org/policy/pslp.htm ----- Butterfly-adorned Libertarian creating a political flap San Francisco's once-moribund Libertarian Party organization has been revived in a very Bay Area-way, by party chairman Starchild, who's been known to appear in public in a butterfly costume. (10/24/00) www0.mercurycenter.com/columnists/chung/docs/chungstr24sf.htm ----- Is America losing its high-tech edge? Author: Aaron Lukas The U.S. high-tech industry has nothing to worry about as long as Europe continues its current tax and regulatory policies. (10/23/00) URL: cato.org/dailys/10-23-00.html ----- National treasures Author: Lew Rockwell "It is election time, which means open season on the well-to-do. We are supposed to favor expropriating them in (as much as their riches is due to expropriation you assholes!!!!!!) order to meet social needs to be provided by the government. ... It's all nonsense. The rich are the driving force behind wealth creation, economic innovation, job and income growth, and the improvement of living standards generally." (10/18/00) URL: ises.org/fullstory.asp?control=531&FS=National+Treasures ----- Stay and fight! Author: Lindsay Perigo "[T]o all of those understandably tempted to get off the planet because of...relentless nihilism, [Lindsay Perigo says] stay and fight!" (10/19/00) freeradical.co.nz/content/pishow/vol3/pi001019.html Yuuuukkk!!!!!! Schubart was right (while diagnosing) that love of the far off was a trait of nihilism and betrayal of your neighbours, nearests though obviously not dearest. You all turn that around but such of sleight of devious gland don't pass by me unnoted, does it? Well, herewith. cnn.com/2000/TECH/computing/10/24/vote.auction/index.html ----- Are politicians leaders? Author: William Anderson Elections don't choose society's authentic leaders, says Anderson. Real leaders emerge from within the ranks of the voluntary sector of society. (10/20/00) mises.org/fullstory.asp?control=532&FS=Are+Politicians+Leaders%3F

All the way to two thirds down this file: some typical (and here, probably temporary) **Nettime.org** (derived places and) posts from this month: a Luther Blissett spoofy one (if that's what you wanna call their insistence on being allowed ((posting)) their porn <<and probably beating it too>>); they seem to wanna be thought of as funny (but I feel like I wasted my time after reading one of their most often, nearly always; pretty frustatious that, but I'll try again on this piece; one of the links gave me a laugh .. just colours flashing across the screen). To: nettime-l@bbs.thing.net Subject: <nettime> NO PROTEST NO PROFIT From: snafu <snafu@kyuzz.org> Date: Thu, 19 Oct 2000 12:22:57 +0200 Delivered-To: nettime-archive@nettime.khm.de NO PROTEST NO PROFIT First International Competition of Net.Protest <<<CALL FOR ENTRIES>>> Following the recent cases of the Roman Civic Network censorships - the Luther Blissett's book "Let the little children..." and Francesca da Rimini's interview - The Thing Rome and 0100101110101101.ORG launch the First International Competition of Net.Protest. All the e-mails of protest sent to the City Council of Rome at the following addresses: Mariella Gramaglia mailto:m.gramaglia@comune.roma.it Mauro Biddau mailto:m.biddau@comune.roma.it Claudia De Paolis mailto:cored@comune.roma.it will be evaluated by an extraordinary

international panel composed by Natalie Bookchin (net.artist and teacher, School of Visual Art, Los Angeles), Steve Dietz (Walker Art Center, Minneapolis), Matthew Fuller (: 'artist and writer, London'), Tillman Baumgaertel (journalist and net.art critic, Berlin), Ricardo Dominguez (conceptual net-striker, New York). The Jury have fixed the following criteria of evaluation for the messages of protest: Text-only messages are evaluated on the following basis: a) the coherence with the reasons of the anti-censorship protest. b) the level of emotional charge. c) the capacity to sublimate the emotional charge into an artistic form of writing. Therefore, messages will be economically estimated in this way: Argumentative: 0.50 dollars Scandalized: 1 dollar | Aggressive: 2 dollars || Ironic/Sarcastic: 3 dollars ||| Paranoid: 4 dollars |||| Seductive: 5 dollars ||||| Erotic: 6 dollars ||||| Poetic: 7 dollars ||||| Surreal: 8 dollars ||||| Mytho-poetic: 9 dollars ||||| Other: to be estimated Original Ascii drawings get an extra bonus of 7 dollars. Attached images, animations, movies and sounds will be evaluated on the following criteria: a) Level of coherence or "resonance" with the subject and the body of the text. b) Capacity to drive the imagination of the censors in an uncensored world. The value of each of the attachments is fixed between 1 and 5 dollars. A maximum of 3 attachments per protest email will be evaluated. Attached scripts, applets and software will be evaluated on the following criteria: a) Conceptual interest of the anti-censorship interface. b) Formal interest of dynamic anti-censorship pages. Proprietary softwares are excluded from the competition. The value of original scripts, applets and softwares is estimated between 10 and 100 dollars and will be proportional to the complexity of the code. WARNING: Any message of protest should not be heavier than 1.5 Mb. This is NOT an e-mail bombing campaign, but a net.art competition. Each competitor can apply with only one message. The Thing Rome and 0100101110101101.ORG declines any responsibility for derogatory or offensive messages, which will be excluded from the competition. The Deadline for all the Net.Protest is fixed for the 30 of October. All of the messages (including the ones already sent) should be sent in BCC to <mailto:PROTEST=PROFIT@0100101110101101.ORG>

At the end of the competition the Jury will make a total estimation of the e-mails and will establish a final price, as a result of the addition of all the messages. This final price will fix the value of the net.artwork "NO PROTEST NO PROFIT". On the basis of this estimation, The Thing Rome will make an economical offer to the City of Rome, in order to buy the Inboxes and the Outboxes of Mariella Gramaglia, Mauro Biddau and Claudia De Paolis, in the period included between the 2nd and the 30th of October. An important cultural institution, still covered, will buy the right to use the artwork, for a major exhibition. The exhibition will be considered by no means a collective event, whose success will be divided amongst all the participants. The money that will come from the exhibition will be re-invested in the next protest. The authors (shareholders) of the artwork, will have the power to decide in which kind of protest to re-invest their money. The power of decision of each author will be proportional to the contribution (the economical value of the protest message) that each of them produced. In this way, at any new PROTEST, the PROFIT of the protesters will increase, demonstrating that the only way to increase your capital is to fight for it.

PROTEST! INVEST! The Thing Rome ecm.org/thingnet (this place is all in Italian so lemme add a linklist from A'dam with as many E as G ((and a few more languages)) links:) thing.desk.nl/

(one interesting link there: <http://bug.village.virginia.edu/waxweb>; a feature movie about bees and weapons(bit of a blasphemy to associate target dancers with target destroyers and paranoid superstitions if you ask me but I'm sure nobody will till it is too late for indignant inflections (???); if you look hard enough for it you may find the synopsis series, the 24th (halfway) of which reads: Jacob walks through the night, and the next morning arrives at White Sands, a huge stretch of white dunes made of gypsum particles eroded from a deposit miles away. There, in the dunes, oscillating shapes drop from the sky, breaking through the thin layers of time to show Jacob the variety of forms that the future dead can assume. During this show, the landscape fragments ; Jacob rides the pieces to a tower in the desert. This is a transit point, where he meets the Space Shuttle as it drops from the sky. The shuttle takes him back to his bed at the Garden of Eden, where there is a message waiting for him in his grandfather's diary, written by the dead. The message tells him that he will not be able to stop walking until he has found the victim that the future dead intend for him to kill, somewhere on another planet inside the earth.... the bees, waiting for him there, will identify the victim for him on his arrival. At the end of this communication, Jacob returns to the White Sands.) This is one of the larger sections; as a protest to the awkward forming I stuck the whole second half of the story [here \(temporarily\)](#).

To all the real bandits to all those who sense a bounty coming on their heads to all those who do not want to stay in the new economy saloon anymore load up your guns it's time to settle with the sheriff it's time to take by storm the diligence of institutions stop censorship now ! A NET STRIKE FOR BANDITS! Monday 23, October 2000 hours 14.00-17.00 (Greenwich Time) target: www.comune.roma.it/index.htm Bandits. Banned. On October 2 the City of Rome banned the webspace of the Rome City Network hosting the **AvAna.net** association. The group was blamed to have published materials "unfit" to a City Network, following an exposition by Father Fortunato Di Noto, a known pedophile-hunter priest, who claimed the Luther Blissett's book "Let the little children..." to be a text fostering pedophilia. Actually, the book - regularly sold in every bookstore of Italy - is just an inquiry on the issue of pedophilia and on the judicial

mistakes generated by an irrational and spectacular approach to the matter. Bandits. Banned. Two days later, the same City of Rome banned from the City Network a page of The Thing Rome website, showing an interview with Australian artist Francesca Da Rimini (aka Doll Yoko). The group was blamed to have used - as illustration of the article - images "unfit" to a City Network. The images were taken from Doll Space, a known web art work, financed by Australia Council, winner of two international prizes and bought by the University of Westminster. **The artist made these images by using a Dutch print dating back to 1789: one of the first illustration of Marquis De Sade's books.** Bandits. Banned. <<<<snip>>>> Some press: Telepolis: "Sex, Internet, Zensur und Markenzeichen" (german) <http://www.heise.de/tp/deutsch/inhalt/co/8935/1.html> ExibArt: "The City of Rome censors The Thing and AvAna Net" (italian) exibart.com/IDNotizia1451.htm Punto Informatico: "Blind censorship" (italian) <http://punto-informatico.it/p.asp?i=33519> Brainstorm: "Against the online Holy Inquisition" (italian) apogeeonline.com/berny/inquisizione.html Il manifesto: "censorship.com" and "The censored artist" (italian) <http://www.ilmanifesto.it/Quotidiano-archivio/14-Ottobre-2000/art28.htm> <http://www.ilmanifesto.it/Quotidiano-archivio/14-Ottobre-2000/art29.htm>

HTTP://WWW.0100101110101101.ORG/PROTEST=PROFIT Date: Thu, 19 Oct 2000 15:53:40 -0500 From: "Steve Dietz" steve.dietz@walkerart.org To: m.gramaglia@comune.roma.it, m.biddau@comune.roma.it, cored@comune.roma.it Subject: do not destroy NO PROTEST NO PROFIT messages Oct. 19, 2000 I am writing to remind you that related to unacceptable censorship actions against The Thing - Italy, the NO PROTEST NO PROFIT competition has been launched. In the net economy, control and restriction of access to information creates economic value--even if that is not the primary goal of the restrictions or the information creators. The messages you receive as part of NO PROTEST NO PROFIT have an economic value both because access to them--via access to your mailboxes--is restricted and because, collectively, they represent an "info-aesthetic" action/object (Manovich).

As an interested party in the evaluation and preservation of such works, I am asking you to save and collect these messages, which have significant economic and historical value in the context of the burgeoning field of net art. insincerely, Steve Dietz Director, New Media Initiatives Walker Art Center [subscribe Webwalker: http://www.walkerart.org/gallery9/webwalker](http://www.walkerart.org/gallery9/webwalker)

2 contributions on the well situated rich **on the well connected rich (3 entries): felix stadler ----- Halfway down it reads: The current buzzword may be "network", but although it conjures up dreams of social internationalism for some, it gives others - who are much more powerful - an appetite for mercantile interconnection. <<<<snip>>>> The current hotchpotch of journalistic clichés (e-democracy, e-voting, politics dot com, interactive citizens, and so on) is reminiscent of the debate on "free" radio stations in France in the 1970s. Despite their amateur, non-profit origins they could not resist the temptation of advertising revenue and stock market flotation for very long. Here again, the aim is apparently to boost the sagging legitimacy of an increasingly top-heavy, status-conscious system by recharging its civic and democratic batteries. As Armand Mattelart puts it, "The techno-utopia is a highly effective ideological weapon in the struggle to influence people and gain acceptance for the free-market vision of the world order. [...] Short-sighted techno-libertarians help to consolidate the simplistic representation of an abstract, evil state, in contrast with an idealised civil society in which truly sovereign individuals communicate freely" (8). >>>><<<<snip>>>>>> In a study of the 10,000 demonstrations held in France in 1980-90, Olivier Fillieule established that political involvement has changed less than was suggested. For one thing, protest activity is not characterised "by extreme fluidity, with individual involvement fluctuating as circumstances change". Moreover, militant action is not the work of people operating "outside the traditional movements", for "workers constitute the group most frequently involved in demonstrations." Last, "the largest gatherings are the ones defended by trade unions. The so-called 'post-materialist' movements are not really convincing, regardless of whether they focus on social mores, the environment, abortion rights, pacifism or even politics in general. These movements are generally supported by tiny groups" (14). Nicholas Negroponte (see article by Philippe Breton in this issue) recently said "We will socialise inside digital neighbourhoods where physical space is no longer relevant". Fortunately, protest action will very probably continue elsewhere. And it will involve the collective experiences of people acting together, in the same place, with meetings, demonstrations, meals, distribution of pamphlets and newspapers, crowds. As, for example, was the case with the non-digital demonstrations in France at the end of 1995. These gatherings will continue to occur in a given place, shaped by past history, acting for (and with) large social groups with low mobility and poor "connections". Nor do the latter imagine that new technology will put an end to their isolation. They will continue to resist, not because they are at last connected to some planetary network, but because their social experience, militant activity and understanding of the world have shown them how urgent it is to refuse a "digital" revolution whose main effect would be to perpetuate the power of the traders and masters. **cisler on the well connected rich At the MIT Media Lab's****

Digital Nations meeting in Cambridge, Massachusetts, we discussed this issue. Here's part of my forthcoming report: William Mitchell, whose book "City of Bits" was one of the first full text works on the World Wide Web, welcomed a group of several hundred consultants, educators, technocrats, government representatives, and company representatives to the Lab, whose director Nicholas Negroponte was recovering from a recent accident in Dublin, Ireland. Mitchell said that the fundamental paradox of technology was that the people, groups, and nations that benefited most were those that were the best educated, most affluent and most powerful. The technology adopted, whether it is an industrial processes, more deadly military hardware, or information systems give even more power to the groups and nations of privilege. Mitchell asked if we can design our way out of this problem? What are the kinds of policies and institutional structures that are needed? And what kind of technologies do we need? Technophobes like Jerry Mander think it's a losing battle, and he's embarrassed that his anti-globalization forum has a web page! Castells says that one option is to ride out the developments by isolating a society from the technological changes, as Bhutan did in the 1930's depression. However, we are so interconnected at some levels (finance, medicine, transport, fuel) that it's just about impossible. It's clear that not everyone is going to use the Internet, and 57% of those not online in the U. S. have no interest in doing so!

====forward by Phil Graham===== **Dromographic Stress Disorder: How E-Commerce Makes Survivors of Us All** by Steve Beard (on Virilio) This appeared in issue 18 of the UK "Critical/Information/Services" magazine Mute: Does Paul Virilio still have something to say about cyberspace now it has morphed from an electronic frontier into a 24/7 automated trading post? The wily French theorist has always been a bit of a doom-monger when it comes to new media but he has also been highly adept at making connections between the seductions of platform portability and the dangers of reflex cognitive-behavioural conditioning (have you checked your email/mobile/stock price yet? how long before you reply to an electronic message? the interval defines a breathing space). In fact his particular brand of apocalyptic Catholic moralising means he positively relishes the darkside of the virtual force. Virilio is the electronic desert prophet constantly warning of the "generalised accident" which waits at the end of the technological curve. In the dark days of nuclear deterrence this used to be the threat of extermination posed by the atomic bomb. But in the new times of engineered virtual enlightenment it is the "information bomb" which apparently threatens to exterminate us in something like a global stock market annihilation. Virilio is the great annunciator of the technological endtime, but as demand-management economist Joseph Maynard Keynes remarked long ago in the long term we are all dead anyway (life is determined by human reproduction and not by technological evolution). Virilio's new book *The Information Bomb* (Verso) is full of dire auguries and sees him beginning to clear new ground with distant early warnings about the dangers of genetic engineering. But it his pronouncements on the domain of e-commerce or what he calls the "global perception market" which are most interesting. Virilio's theoretical roots in Edmund Husserl and the French school of phenomenology means he is particularly well placed to understand that, as a post-nuclear medium of parallel processing and networked communication, the internet not only bypasses any root node of strategic command-and-control but also over-exposes the distributed perceptual cues of the survivors we have all become. In this scenario the spooky Echelon surveillance system is merely a retro-nuclear nostalgia cult while it is the live web-cams which dot the net which are actually doing the real business of turning us all into each other's keepers by heralding privileged "points of view" as future "points of sale" (get your JenniCam T-shirts here). Virilio himself may be nostalgic for what he regards as the unmediated sustainability of an inhabitable ecological niche, but he also understands that the information landscape is delivered through the "instantaneous superimposition of actual and virtual images." In other words, he understands that the web is a pure advertising medium whose condition of entry is that objects should become commodity-signs in an ecstatic cult of self-reflexive mourning. "Actual" things doubled up as their own "virtual" effigies are like second-hand items displayed in heat-sealed plastic bags: they recover a margin of untouchability whose fetishistic allure begins to incite the fashionable to play the familiar game of provoking death. From here on in it's all really just a matter of joining new media whores to old media punters through the data revenue stream generated by a transaction. What this means in banal terms is a movement towards the discipline of electronic customer relationship management and Virilio begins to hook up from the other side of his cautionary analysis (and probably much to his horror) with a gung-ho digital marketing guru like Seth Godin. Godin is the Vice President of Direct Marketing at the American portal Yahoo! and the author of the cult manual *Permission Marketing: Turning Strangers into Friends and Friends into Customers* (Simon & Schuster). He has argued persuasively that older media like magazines, radio and television depended upon a model of "interruption marketing" in which advertising messages appeared in the intervals between the flow of content. The web however explodes the interval into a new spacetime of instantaneous ubiquity in which the important thing for traffic analysts is not to increase click-through rates but to "make each click worth more." The click defines a hyper attention deficit which is capable of being leveraged by a new science of cognitive-behavioural therapy into an engineered perception of brand value. Godin acknowledges that the basis of permission marketing is "trust" and insists that "you can't market at people anymore: you have to market with them." What makes this functional are the new

techniques of data collection and analysis which allow the sustainability of engineered perceptual cues to be measured over the "lifetime value of the average customer." Virilio takes a less sanguine view of this kind of tactical databody capture when he links it to the commercial applications of the human genome map as a form of "cybernetic eugenicism". But what is fascinating is how far ahead the American is of Virilio's own thinking. Godin insists that interruption marketing is not web-friendly because it depends upon the one-to-many massifications of "demographic reach" whereas the secret of permission marketing is the one-to-one personalisation afforded by "frequency" (As he says: "Ten TV ads cost ten times as much as one TV ad. That's why permission marketers tend to focus on reach not frequency. But on the net frequency is free. The people who subscribe to your newsletter get it from you every week and it costs you nothing to send it out. Digital media have zero marginal cost and infinite potential frequency"). It is here that Godin sketches out a science of "dromographics" which succeeds Virilio's own art of "dromology". "Dromographics" might be considered the science of modelling relative analogue speed vectors within a digital spacetime whose absolute limit is defined by the speed of ones and zeros travelling along a fibre-optic cable. (Information now travels at the speed of light unlike the human capacity to process it.) In this sense Godin boundary-rides the flight of perceptions within Virilio's "light-time" of networked electronic commerce. Emergent platforms, file formats and protocols like WAP and MP3 in this scenario become technological vehicles which abstract the flux of disintermediated intersubjective communication in order to deliver new possibility spaces for arresting the structural play of value. This moment of totemic arrest can be identified as a "hit" or a "meme" or a "trend" and at the moment its sequencing still ghosts the older rites of negative taboo whose contours persist like core memory dumps in the information landscape (Virilio lists some of them as Heaven's Gate, Sensation!, Rape in the Highlands, the Museum of Eroticism and transgressive body art). But it seems that more familiar rites of positive taboo like the gift are just as effective for supporting the extraction of surplus value. Godin suggests that the web user will be gratified to offer up information about themselves in return for something like a free sample, a big discount or even a commodity up for grabs within a specified interval like a download time or an hour of the day. This however is no cybernetic registration of a communist utopia (English cyber-cult scholar Richard Barbrook's late notion of "cyber-communism" as an "evolving synthesis of gift and commodity within the net" is naturally a transparent apology for the Blairite mixed economy). Instead it reinscribes the circuit of profitable exchange within a post-nuclear medium by liquidating its depreciating military-industrial stockpiles of sink capital and reserve labour and flipping them into a chaotic regime of digital recombination where capital becomes human and labour becomes symbolic. What Virilio seems reluctant to admit is that when the nuclear apocalypse failed to occur it precisely detonated the information bomb within whose global impact zone of mutually assured production we all now compete. All of which is perhaps only another way of saying that the sticky path through the jungle of e-commerce leads directly from the start-up dream of an Initial Public Offering into the Xanadu of an interactive fall-out shelter. It looks as if advancing a credible exit strategy really is the only way of receding the symptoms of dromographic stress disorder. # archive: <http://www.nettime.org> contact: nettime@bbs.thing.net ===== "Nothing is true. Phil on the palestinians as myth: What a strange and confusing time. The concept of globalised humanity - once nothing but a Marxist utopia - is now being pushed most hard by institutions such as the WTO, UN, IMF, World Bank, etc, etc, as well as by the most right-wing commercial institutions (by which I mean weapons- and money-mongering monoliths) on whose behalf the former (legislative) group appears to work most successfully. On the one hand, there is the celebration of nationhood by self-professed leftists who would formerly have been committed to internationalisation; on the other, we see the disparagement of nation-states as a dangerous - if not evil - fiction by other self-professed leftists. Meanwhile, humanity has never seemed (at least to me) so destructive, nasty, or farcical in its endeavours, each apparent win signifying a defeat of another qualitative kind. Humanity in the abstract has only ever been of limited usefulness. This is true at any level: "the individual", "the family", "the organisation", "the nation", "the culture", "the ethnic group", "the religion" --- all hopeless abstractions after a certain, very simplistic level of conceptual application. Perhaps this is all we are capable of in the end. Pales was a god who took the form of a donkey. Palestine is the name of a geographically (i.e. geometrically) defined space, the nature of which, as we know, is as movable as collective (mis)understandings and (dis)agreements, which are almost always mediated by violence at some point in history. As far as Judaism goes, I understand it as a religion, and thus as a relation without geographical, ethnic, or cultural borders, like Islam or Catholicism or Buddhism or whatever. I am not sure that

juxtaposing the achievements of, say, Kosovars in surviving their own "rescue" by remote control carpet bombing on the part of the "forces for good" (I note Al Gore's statement in the third "debate" that 'not a single human life was lost in the Kosovo war A single American life') to the South African apartheid regime under the aegis of 'national self-determination' is useful or even vaguely commensurable. Put differently, "national self-determination" is an incomprehensible term in the first place. There is no such thing. Hasn't been for decades if there ever was (I very much doubt it). So I wonder what "national self-determination" might mean. I also wonder on what basis a group would claim nationhood in the first place, if not on cultural, ethnic, linguistic, colonial, geographical, militaristic, or religious bases. Which of these - or which collection of these - would be more legitimate bases for claiming nationhood?

It seems to me that we keep extrapolating clearly flawed and failed political models out to larger units of organisation, where now we can think of the earth as if we existed outside it (and some people do for periods of time), as if "it" (viz the whole of human activity) could be controlled from a few centres. Richard's comment about taking what many of us have for granted is quite clear and legitimate to my mind (but what is it that most of us have that those less fortunate do not?), especially in the context of the groups he listed.

I'm not sure how you relate that comment to a regime based on the assumption that certain "types" of human beings are not really human at all. People claim all sorts of abstract rationales for killing off or dehumanising other people: democracy, freedom, racial hygiene, evolutionary or technological inferiority, economic efficiency, etc. Thus, according to dominant definitions, some people can be bombed, deprived of resources, tortured, murdered, exploited, isparaged as less-than-human, uncared for, and so on. Like I said, weird times. I doubt if we have the language or conceptual ability to explain and comprehend what is going on.

regards, Phil
 Opinions expressed in this email are my own unless otherwise stated. Phil Graham, Lecturer (Communication), Graduate School of Management University of Queensland, Ph: 617 3381 1083; Fax: 617 3381 1083; Mobile 0401 737 315; homepage: www.uq.edu.au/~uqpggraha ----- In a bit on Nazi's (see previous issue for more on them) he wrote: Will the Balkan region suddenly become something more to the "west" than an advertising billboard for the latest weapons systems?

I sincerely hope so, but that will take more than merely sacrificing the "great men". I am also pleased Milosevic is gone. I never liked his wife either. My point, and I think F. Hartmann's too, is that we need to look beyond the great-villain/hero/liberator view of history that obscures the real relations that make mass murder possible and - quite obviously - desirable for *whole populations*. Otherwise we'll never understand it. Then we'll never be able to stop it.

I'll start quietly celebrating when there's no more loud noises. My subject to him: invitation to a quiet party of the dead resurectable (plus mailsig) a little while later: I offer material to help rectify your recent assertion your recent nettime post proves you have not followed my slightly less recent advice. oops, I guess I did not do a good job. What I mean to say is that your assertions: Humanity in the abstract has only ever been of limited usefulness. This is true at any level: "the individual", "the family", "the organisation", "the nation", "the culture", "the ethnic group", "the religion" --- all hopeless abstractions after a certain, very simplistic level of conceptual application. Perhaps this is all we are capable of in the end. <<<snip>>> Put differently,

"national self-determination" is an incomprehensible term in the first place. There is no such thing. Hasn't been for decades if there ever was (I very much doubt it). Ever is a too big word; surely noman's land has kept people out of each other's hair a lot no? Another reason to be wary of what Jared Diamond seems to believe is 'success' and 'luck' of mass societies ...appear completely false in the light of the likes of Ulrich von Beckerath; please pick on of 10 or so files containing his work for starters: On Sat, 28 Oct 2000 23:24:55 Phil Graham wrote: And you have proved my point by sending me to a website about money: i.e. alienated human life (past present and future).

Money in the way it would be set to work in Beckerath's (Bth) sense could telecast as well as microscope; Hello again: At 02:28 AM 29/10/00 -0700, you wrote: On Sat, 28 Oct 2000 23:24:55 Phil Graham wrote: Money can't do anything. People do things. Money is a technology, one of the few initially "neutral" ones. Its use is a symptom of human nature, not its structural characteristics. Money now functions like myth.

disperse (product and skill)info as well as ground it (focus on the whereabouts and quality thereof), harmonize outreach and coordinate allocation; par position and identify; discussion and decision. I can't think of a starker contrast to your depiction of bloodless and sterile megamonomaniacal zombiedom such as I myself have given the world an extra sample of recently (Vaneigem's money despising (cause misunderstanding) 'work'), you sound suspiciously much like him now Coincidence??? Mockery?

Hmmm ... --- errr .. neither coincidence nor mockery: misunderstanding on your part of what I am trying to say in too few words I would think. Thanks for the information anyway. Phil (concretely) part of the first exchange: The remedy does not lie in any of the symptoms; it is contained in the nature of the problem. Preproblematic nature is what you logically refer to. Problems are unnatural; the emblematicity of nature however is

indeed contained, continent and 'emittable, timable (as much as and why not paralelling and modeling for money ones???)'. **First, there is no such thing as "unnatural". Second this:** "the emblematicity of nature however is indeed contained, continent and 'emittable, timable (as much as and why not paralelling and modeling for money ones" is to me a bizarre way of thinking that seeks to reduce multidimensional complexity to banal measurement. It's like the problem with maps: they are models of the real which don't show the effects of floods or earthquakes or whatever. They are themed around very narrow aspects of the world and are thus of extremely limited use. Nature is not timeable, nor is it emblematic, not in any useful sense (other than to coordinate massified humanity on the one hand; and denaturalise nature on the other - by reducing it to an "emblem" of itself). Good luck with your journey. I think we see the world in entirely different ways. You think my view needs rectifying. I think yours is confused and over-simplistic (and thus could use some balance). Que sera. Thanks for your mail. Phil Thank you too for your efforts and I agree we disagree but won't admit we must (finding disagreement disagreeable and when it comes to basic extensions of the dull but comforting general platitudes like: all sentient creatures process oxygen ((who cares if they burn with desires as nonmutually as possible??? What decides the right of way when they compete with engines but barely becoming conscious of the indeed magnitude wise 'mythic' consequences) (entirely unnecessary and regrettable), since such types of potentially common sense would and could redeem a social graduation and stratification such as we are stacking up (against??? ahead of????) ourselves. Adament and hoping to be none to unsustainably imposing, piet On Mon, 30 Oct 2000 22:17:56 Phil Graham wrote: **I agree. And you are not unsustainably imposing in the least. All my best** well I know I am when I fuck up on my own iffily innovative brackets within brackets systemicism as I did in my last effort (.....(())(....) instead of the (.....(()).. ..) called for to not be unecessarily inconsequent. I had assumed a brachiology rather than a bracketectomy, thus the symbolism of open ended non-closure of meaning. If there's anything you want from the collection in the biblio, let me know and I can send attachments. Frankly, they give me a headache because they're all (or partly) wrong anyway. Even where they're okay I think they're too hard to read. What the hell. We can only try. You are sportily sparring and mity polite matey!!!! I'll be reading my netpicks of your work shortly. I have to be sport(ing/ily/ingly); it's a national obligation. Phil (matripatriotically) AND --- I very much like the French revolution/Robespierre angle -- in there somewhere is a thread (or at least an expression) of what I perceive to be the nature of the problems we face as a species. Not in money, but in human relationships (specifically value-relations which have nothing to do with money, at least not directly). Phil

Vaneigem

criticism will be here soon (I'm still reading him (again); see last issue); suffice it to say he does a lot of dualling and turning upside out starting from several perspectives of exact as well as human sciences, quite a wild ride; some of his assertions and formulas need only little tweaking for a turn from blackest reactionary bullflap into the right sorta loopsnap

Munck, Sr. After further study, based on the GPS readings given to me over the phone by Richard C. Hoagland on Friday, Feb.5, 1999 ... I have concluded that The Miami Circle site is a major part of the ancient planetary archaeomatrix, re- discovered by Carl P. Munck, Sr. It is becoming more and more apparent that there is a relationship between mathematical form and physical substance. The hard problem has been to identify a physical mechanism which could provide a connection between the universe of thought and the physical world. It is fairly clear that the ancients had some ideas about these connective structures. Modern science has also been searching for this connection. The quantum physicist David Bohm, toward the end of his life, became more and more convinced that there was a connection. He postulated a concept that he called the "implicate order" as the

source for this information field. Numerous other modern scientists have proposed similar ideas. Biologist Rupert Sheldrake calls this field of mind the "morphogenic field". Nobel laureate Brian Jospheon has instituted the Mind-Matter Unification Project at Cambridge University. I could list a dozen more world class scientists who are working on the same problem. In quantum physics, finding the connection between mind and matter has been called the "hard problem".

Dr. Philip Callahan, who in his early years tested chemical biocides for the US Department of Agriculture, noticed an interesting phenomena almost fifty years ago. Dr. Callahan noticed that certain soils were paramagnetic. Paramagnetic means that they have slight magnetic properties. Dr. Callahan also discovered that paramagnetic soils were much more productive in relation to the strength of their measured paramagnetic properties. The most paramagnetic soils were those which contained a high portion of volcanic or limestone based minerals. Dr. Callahan postulated that paramagnetic soils provided a better electromagnetic connection between the atmosphere and the plants growing on these soils. He also noticed another phenomena, certain agricultural fields in Ireland and other countries had cylindrical stone structures which seemed to promote the growth of plants in certain portions of the circle around these structures. Dr. Callahan got lung cancer in the early 1990s, probably as a result of his exposure to agricultural chemicals as a young scientist working for the USDA. Using his knowledge of paramagnetic forces, Dr. Callahan developed a treatment for his cancer which was so successful that when he went back to his doctor, his doctor said that he must have been misdiagnosed and could not have had lung cancer because the form of lung cancer that he was diagnosed with was invariably fatal. Dr. Callahan is now 75. He has been cancer free for over five years. His cure was what he calls "sackcloth and ashes". He has patented this product. The patent can be found at: http://www.patents.ibm.com/details?pn=US05247933__&language=en An excerpt from one of Dr. Callahan's books can be found at: [//members.tripod.com/~poetpiet/guest_appearances/paramagnetism.htm](http://members.tripod.com/~poetpiet/guest_appearances/paramagnetism.htm) Dr. Callahan claims that what cured his cancer was known in ancient Isreal aa the "shatnez". Here is Dr. Callahan's description of the shatnez: "The PICRAM is constructed by soaking wool-linen clothor burlap in seawater. In the top photograph, the cloth is connected to a simple banana plug at the corner and wrapped around the plastic of the plug where it is held in place by two rubber bands. Harry Kornburg, my patent co-author, translated the Hebrew which describes such a piece of cloth worn by the Jewish High Priest. It enhanced his immune system in order that he could safely examine lepers like those sent to him by Christ. The bible is by far the best science book for low energy systems ever written. The Hebrew name for my PICRAM ELF detector is Shatnez. It was worn as a long ribbon strap wrapped around the high priest's body." Another researcher, Don Gerrard published a book in 1990 called "The Paper Doctor". This book was so controversial with the medical establishment that it was promptly banned. In this book, Gerrard claimed that homeopathic medicines had an energy field around them the shape of which could be determined by dowsing. He also claimed that water placed over a shape which duplicated the shape that was dowsed would would assume the medicinal properties of the original homeopathic medicine. Though his book was banned, someone has kindly provided a copy of it on the internet. This can be found at: algonet.se/~johnnyfg/books/paperdoc/index.htm There is an ancient Hindu treatment which is quite similar to Gerard's. More information on this can be found at: http://www.oaktree.co.uk/mandala/sanjevini/bk_cover.htm Wherever we look we find evidence that pure form can influence many aspects of our material existence. But what is the physical mechanism which connects mind and matter? Are these just isolated anomolies or is there some common explanation for these phenomena?

In the late seventies an agricultural chemist and cotton farmer named David Hudson discovered some materials on his farm with very unusual properties. Over the course of the following decade, Hudson spent several million dollars and much of his time to find out the nature of these materials. In 1988 he filed for US and worldwide patents on these materials. He called them Orbitally Re-arranged Monoatomic Elements or ORMES for short. A couple of Hudson's patents can be found on the web at: triax.com/bmnfa/science/ORMUS/Patents/patents.htm Here is a partial list of the properties of these materials: They are superconductors at body temperature. It has long been suspected in the scientific community that body temperature superconductors exist. See: triax.com/bmnfa/science/ORMUS/research/research.htm lick on "Superconductors in the Brain". These materials are a monatomic or diatomic form of the precious metal elements. In this form they have an atomic weight which is only 5/9 of their weight in the metallic form. If ORME iridium is slowly heated and cooled it can be induced to have a weight ranging from 575% of normal to 25% less than nothing. A chart showing this phenomena accompanied Hudson's patent. This chart can be found at: triax.com/bmnfa/science/ORMUS/Patents/figur012.gif When the ORME iridium looses all weight, it also disappears. Where does it go? The theory is that it goes to a non-physical realm. There is other evidence that these materials might be the connectors between mind and matter. Hudson found that they ORME rhodium and iridium each composed about 2.5% of the dry matter weight of brain tissue. Hudson found that the ORME form of the precious metal elements is over 7000 times more common than these same elements in their metallic form. He found that they are most abundant in volcanic sources and in sedimentary materials. Other researchers have found that they are abundant in salt sea water. A chart which compares their abundance in sea water is available at: triax.com/bmnfa/science/ORMUS/ORMUS/ormus4.htm Hudson and others believe that the ORME materials are present in all water, even distilled water. We believe that they give water many of its properties. As you concentrate ORMES in water,

the water becomes more viscous, slipperier and weighs less. We suspect that the ORME materials are easily imprinted with the information inherent in form. Since they form a significant portion of the Earth's core, it is likely that structures which accumulate form energy on the Earth's surface would be able to modify the Earth's magnetic structure. When these elements are first exposed to moving magnetic fields they are paramagnetic, that is, they have a weak magnetic attraction. As exposure continues they become diamagnetic and are repelled by the fluctuating magnetic field. In Dr. Callahan's paramagnetic soils they would exhibit the paramagnetic property. In higher concentrations, with stronger magnetic fields they exhibit the diamagnetic levitation of superconductors. David Hudson also noticed historic connections relating to these materials. He discovered that they matched the properties of the alchemical white powder of gold. In developing his patented process for making these materials he borrowed heavily from alchemical processes. Other researchers have been able to duplicate ancient alchemical processes using an understanding gained from Hudson's theory. Hudson and other historic researchers have linked these materials to the Great Pyramid, Moses on Mt. Horab, manna, shewbread, Hindu and Chinese alchemy and the Essene community on the Dead Sea. Some of these links can be found at: triax.com/bmnfa/science/ORMUS/Historical/historic.htm Of particular interest are some recent lectures by Sir Laurence Gardner. Links to these lectures can be found at: geocities.com/CapitolHill/Congress/2301/Directory.html and at: peg.apc.org/~nexus/starfire1.html Our knowledge of these materials promises to revolutionize all areas of science and completely change our knowledge of ancient history. From working with these materials over the past few years I have found that they can bring about changes in consciousness and enhance psychic abilities. They really seem to be the link between mind and matter. Most of the public information on the ORME materials can be found from links at: triax.com/bmnfa/science/ORMUS/whatisit.htm This web site also has instructions for three different methods for obtaining these materials from natural sources. With kindest regards, Barry Carter <bcarter@igc.apc.org> Blue Mountain Native Forest Alliance WEB Page: triax.com/bmnfa/index.htm Voice: 541-523-3357 Fax: 541-523-9438 - ---- Help Protect America's Heritage Forests at <http://www.ourforests.org>

Ps couldn't find recent work of or by him

ecoworld.com/Trees/ecoworld_Water_Home.cfm is a faulty link I reported: Ps: nice site; I would like to work both ends of it. Out in the field propagating heirloom apples and updating/adding to a website such as yours; it's gonna be great, keep going!!!! How do you like mine? No comparison I know but what else?

on Philip Callahan see also: [\(about other rock powders\)](#) This pageseries is a long detailed polemic against 'Dallas's own **dirtdoctor.com** who's 'guru' is Callahan; in fact they are both contributors to **Acresusa.com** (STILL nothing much at their page, just subbing info; well worth it!!!! - this paper is nevertheless a hardy pioneer when it comes to truth-telling). "I (Field Roebuck?? No email address provided; he is a rose lover anyway) devote the second half of this website to informing the site visitor about our local source of chaff -- the curious and often ludicrous pronouncements of Dallas' own mountebank of misinformation, John Howard Garrett, the self-anointed and self-serving "Doctor of Dirt." "

Hi Don, Harry, Joanna and all other godchildren of the great late John Hamaker; as you might know there is a big climatodo in the Hague shortly. Is the new edition gonna be done by then Don??? Don't we all get (p)review copies first??? Bit of proofing won't hurt.

<http://forums.gardenweb.com/forums/load/sources/msg0811325114631.html> Posted by LES STAMPER - 7 (lesstamper@earthlink.net) on Sun, Aug 20, 00 at 11:32 Looking for a source for truck load quantities of rock powders. I live in Western North Carolina. Any help appreciated! LES The only one that I know of is "Peacefull Valley Supply Co." in California at www.Groworganic.com.

Heliocentricity My next batch of homing work: this sorta reminds me of a thought I had upon reading danwinter.com's latest wherein he speaks of an obscure (but to him necessary needed to get to the other side of the sun and not in half a years time but at a flash right through it;

I never suspected (or noticed before) that he has a sort of christian dogmatrace flashing through him at strikingly unknown speeds. Just a measure of his alienation and substance shun I guess. www.starcenter.com/ - 7k webworker.com/galactic/center.html - 11k - .. astroannie.com/curious_examples/helio_animation/ - 2k - heliocentric astrology... Heliocentric, As Seen From the Sun Here, the week is charted from a.....Here, the week is charted from a heliocentric perspective. Notice that. 11th go ogle result: [http://www.elysian.co.uk/reading.htm#Heliocentric Astrology](http://www.elysian.co.uk/reading.htm#Heliocentric_Astrology)The difference in interpretation is that a heliocentric placement in a sign indicates matters of public interest; geocentric positions are more concerned with private, subjective matters. Heliocentric planets describe our more public activities, alliances and actions. <http://www.saros.zynet.co.uk/galast.html#SIDEREAL> Galactic Astrology is relatively new, less than 15 years old as a technique. It is still developing and the body of experience that gives natal astrology its richness is still developing. But in application it has profound implications. It can allow the true path of an individual in the course of human history to be charted. For events, their place in history can be assessed and their long term consequences understood. And ultimately, no longer being exclusively Earth based, the principles can be applied to charts drawn up on other bodies in the Solar System, for that time when humanity may venture beyond the confines of Earth. To conclude, I would like to return to the origins of astrology to speculate on whether or not Galactic Astrology is really new. To the builders of the early stone circles and barrows, some five thousand years ago, the motions of the Sun and Moon seemed to be understood. Stone circles show alignments to key Sun and Moon positions, and the striking stone rows of Kintraw and Carnac point towards a simple but effective predictor of lunar eclipses. The motions of the planets may have been beyond them, and in appearance they would seem to be moving stars. But the stars themselves would have been very apparent, and the Milky Way even more so. Perhaps they related the Sun and Moon to the background of the stars and that rather striking band of the Milky Way. Perhaps they made larger arrangements of their monuments to mirror the stars. There are certainly many groupings of stone circles that seem to form a pattern that has not yet been explained. For example, three large circles in Derbyshire, Arbor Low, Bull Ring and Wet Withers, form a well defined triangle that is at the centre of a complex of many smaller stone circles. At about the time of their construction, Vega was the Pole star, much brighter than the current pole star. Near it, the bright stars of Deneb and Altair form a triangle that straddles the Milky Way. Perhaps those early builders created a model of the sky on the ground, to enable them to set up relationships on the physical plane that mirrored the stars, the realm of the Galaxy.

Correction: <http://www.redwoodcity.com/library/news/liblog/index.html> (librarylog; funny, one normally need not add such file names as this one to get where wants to go but here one MUST)

<http://www.daring-dollface.com> <http://members.aol.com/dollfaceLL> yes i am the same person on all of the pages.....kiss,,jeanne:) aaarrrr, what was the question????? All I remember asking is why you don't make a nice showing of friends and scenery; nudity is not for everyone in Holland except in summer and the exceptions on top of that. We do have a famous coldbraver who takes trips into frigid extremes of it just to prove it and here in Holland there are 2 jockstrap maniac skaters; the one who is already in his 50s got arrested recently when he strayed to far from amsterdam.

To vwbev (check archives; see took her page down meanwhile): remember me recommending Graves? <http://chronicle.com/free/v47/i09/09a01601.htm> A Role Model for Jesus (via robotwisdom.com this article about some New Dead Sea Scroll inspired books reveal parallels (hard to prove plagiarisms?) to "king jesus" by Robert Graves ("In the Old Testament, sure, we see messianic figures," says Mr. Knohl. "Divine, et cetera, et cetera." In the Book of Isaiah, the character of a "suffering servant" appears. "But never a messiah and suffering. In the eyes of the Old Testament, a suffering messiah is a contradiction.") but of course one of the authors pride himself in (him and his colleague) reaching the conclusions "independently";

Ledergürtel und Buckles aus der Lederwerkstatt

Handgefertigte Ledergürtel nach Maß (auch in XXL Übergröße bis 150cm Bauchumfang), amerik. u. engl. Buckles/Schnallen. Grosse Auswahl an Themen: Indianer, Staaten USA, Wild West, Country, Autos, Biker, Tiere, Fantasy, etc.

23.10.2000

Wahlstimmenauktion geht weiter

Nachdem ein US-Gericht das illegale Angebot der Auktion von Wahlstimmen unterbunden hatte, ist es jetzt mit leichten Veränderungen wieder eröffnet worden.

In der vergangenen Woche hat ein US-Gericht das Schließen einer Site, vote-auction.com, angordnet, auf der Wählerstimmen für die US-Präsidentschaftswahlen meistbietend versteigert werden sollten.

Jetzt ist die Site aber wieder da. Mit einem zusätzlichen Minuszeichen im Domainnamen und mit der Bitte um "Geldgeschenke" für die Wähler statt dem vorherigen Auktionsangebot.

Der ursprüngliche Domainname ist nicht mehr konnektiert und nach Angaben des österreichischen Domainbetreibers hat der amerikanische Hosting-Provider ein Abkommen mit dem Gericht getroffen, Konnektivitäts-Koordinationsanträge abzulehnen. Die Domain kann also nicht umziehen.

Die um ein Minuszeichen erweiterte Domain wird nun in Österreich gehostet und dort dürfte das Gericht aus Cook County (Illinois) es weitaus schwerer haben, den Provider zur Kooperation zu bewegen. So können jetzt weitere Interessenten entweder ihre "Absentee Ballots" (Briefwahlunterlagen) gegen Geldgeschenke anbieten oder solche Geschenkangebote unterbreiten.

Immerhin 21.000 Wähler haben sich bereits registriert. Ob allerdings aus Habgier oder eher aus der Lust heraus, sich an einem anarchischen Spiel zu beteiligen, ist schwer zu sagen.

Gegen das Motiv Habgier steht jedenfalls der Umstand, dass den bisher im günstigsten Fall gebotenen 20 Dollar pro Stimme eine Haftstrafe zwischen ein und drei Jahren wegen Wahlbetrugs entgegensteht.

Leather belt and Buckles from the leather workshop

Hand-made leather belts after measure (also in XXL oversizing to 150cm belly extent), amerik. and English Buckles/Schnallen. Large selection of topics: Indian, States of the USA, game west, Country, car, Biker, animals, Fantasy, etc..

23.10.2000

Vote auction continues

After a US court had prevented the illegal offer of the auction of votes, it was again opened now with easy changes.

In the past week a US court closing a Site, vote auction.com, angordnet, on which votes for the US presidency elections should be auctioneered by auction.

Now is the Site however again there. With an additional minus sign in the Domainnamen and with the request for "gratuities" for the voters instead of the previous auction offer.

The original Domainname is not konnektiert and according to data of the Austrian Domainbetreibers the American Hosting Provider an agreement with the court met no more to reject Konnektivitaets Koordinationsantraege. The Domain cannot move thus.

The Domain extended by a minus sign is gehostet now in Austria and there might by far more with difficulty have the court from Cook County (Illinois) it to induce the Provider to co-operation. So now further prospective customers can offer either its "Absentee Ballots" (letter choice documents) against gratuities or submit such gift offers.

Nevertheless 21,000 voters already registered themselves. Whether however from greed or rather from the desire to take part in a anarchischen play to say is with difficulty.

Against the motive greed stands anyhow the circumstance that dollar per voice a detention opposes the 20 ordered so far in the most favorable case between and three years because of electoral fraud.

Zum [Chaos Computer Club](#)

- Geschichte, Aufgabe und Funktion
 - 1981 Treff von Computerfreaks und Datenreisenden
 - seit 1984 Herausgabe Zeitschrift Datenschleuder und Veranstaltung des jährlichen Chaos Communication Congress
 - 1986 Gründung des Chaos Computer Club e.V. als Konsequenz des 2. WiKG (Regelung von Verantwortlichkeiten)
- Vereinsziele
 - Einsatz für ein Menschenrecht auf zumindest weltweite ungehinderte Kommunikation
 - Förderung von Informationsfreiheit und Transparenz (z.B. maschinenlesbare Regierung)
 - Auseinandersetzung mit gesellschaftlichen Folgen von Technologie (Restrisiken, Nebenwirkungen, Chancen)
- Praktische Arbeit / Organisationsform
 - Bundesweiter Verein, organisiert in Dezentralen, Erfa-Kreisen und Chaos-Treffs
 - Betrieb von Kommunikationsstrukturen und Medien (Datenschleuder, Web- & Listserver, CD-ROMs)
 - Durchführung & Teilnahme von/an Veranstaltungen (Congress & Camp, Workshops, Anhörungen, Sonstige)

Entwicklung der Netze

- Basisnetze
 - Telefonnetz; Echtzeitbandbreite und zeitabhängige Tarifierung
 - X.25 Modell; Datenübertragungsrate, paketorientierte Vermittlung und Abrechnung
 - ISDN; Digitalisierung und drastische Reduzierung der Vermittlungszeit. Abrechnung aber noch zeitabhängige Tarifierung
 - Standleitungen; Pauschale Leitungsmiete, technologieabhängige Bandbreitennutzung
- Overlay

- Mailboxen (stand alone, oftmals single user)
- Vernetzte Einzelsysteme (store and forward)
- Internet (online routing)

Entwicklung der Informatik

- Software
 - Datenverarbeitung und Übertragungsprotokolle; Vermittlung und Übertragung (RFC's -> TCP/IP)
 - Darstellung und Verknüpfung; Diensteintegration und Konvergenz (->HTTP, HTML)
- Möglichkeiten
 - Informationszugriff auf Basis eines gemeinsamen Informationspools
 - Kommunikationsräume durch bidirektionale Kommunikationsdienste

Entwicklung des Internet

- Offene Protokolle
 - UUCP (Mail, News)
 - TCP / IP und aufbauende Protokolle
- Adreßraum (gTLD / ccTLD mit jeweiligen Vergaberichtlinien; zunächst "first come first serve" á la Postel)
 - DNS auf Basis der Root-Zone-File Struktur (RFC 1591)
 - Wandel der Vergabeinstanz IANA zu ICANN (unter Umgehung der UN)
- Dienste
 - Telnet (remote access), FTP (file transfer) etc.
 - Gopher (Strukturierter Informationszugriff)
 - WWW ("Multimedia"; Verknüpfung von Dokumenten, Bild, Ton)

Entwicklung des menschlichen Verstandes I: Nutzungsgruppen

- Computerfreaks
- Wissenschaftler
- Kommunikationsfreaks
- Mäuseschubser & Legastheniker

Entwicklung des menschlichen Verstandes II: Anwendungen

- Informations-Sharing
- Soziale Vernetzung
- Gestaltung des virtuellen Raumes ("Cyberspace")
 - individueller / öffentlicher Kommunikationsraum
- Herangehensweisen
 - Öffentlicher Raum
 - Virtueller Marktplatz

Visionen, Leitbilder und die Paradigmafrage

- Kanalmodell (Fernseher)
 - Sender / Sauger ("Konsument")
 - z.B. Video on Demand / Menschenbild?
- Netzmodell (Internet)
 - Teilnehmeremanzipation -> Teilnehmer ist gleichberechtigt Sender und Empfänger
 - Niederschwelliger Zugang
- Kommunikationsnetz
 - Abbildung von und Wechselwirkungen mit gesellschaftlichen Realitäten
- Transaktionsnetz
 - Geschäftsmodelle auf Basis von Annahmen über die leichte Erreichbarkeit einer Vielzahl von Nutzern
 - Nutzung als Strukturverstärkung bei bestehenden Transaktionsvorgängen

"free flow of information" und andere Realitäten

- Medienparadigma Internet
 - Philosophie der Netzinfrastruktur
 - Offene auf- und ausbaufähige Standards
- Vernetzung unterschiedlicher Kulturräume
 - Nationale vs. globale Empfindlichkeiten
 - Prinzip der Verantwortung des Informationsanbieters
- Spielregeln im globalen Kulturraum Internet
 - Entwicklung globalen Bewußtseins
 - Gift-economy und öffentlicher Raum vs. geistiges Eigentum

Das Internet und das Netz der Begehrlichkeiten

- Nationale Ebene
 - Unstrittig: Verantwortung des Urhebers für die ins Netzgestellten Inhalte

- Partiiell sehr viel weitergehende Regulierung bis hin zu Zensurbehörden ("Informationsministerium" in China etc.)
- Inter-nationale Ebene
 - Beispielfälle Radikal / XS4ALL etc.
 - Urteil des deutschen Bundesgerichtshof vom Dezember 2000 und mögliche Auswirkung; Ausweitung nationalen Rechts
- Globale Ebene
 - Struktur, Konstruktionshintergrund und Ausrichtung ICANN
 - "Intellectual Property Constituency"; Konfrontationen von Marken- und Urheberrechtsgesetzen und dem Internet
 - ICANN: Vint Cerf und der Erörterungsbedarf in Sachen "stability"
 - Beispiel: Bisherige Vergaberichtlinien für die ccTLD-Registry, zukünftiges Modell der trilateralen Verträge

Kommunikationsfreiräume und Verteidigungsstrategien

- Definition von Zugangsrechten
 - Netzanschlüsse für Netzbürger vs. Touristenzugang für Konsumenten. Datenbürgersteige?
 - Gesellschaftliche Anforderungen vs. geistiges Eigentum / Urheberrechtsgesetzgebung
 - Recht des Bürgers auf die ihn betreffenden Informationen; maschinenlesbare Regierung
- Dezentralisierung
 - Stärkung der Diskutierbarkeit politischen Handelns auf lokaler Ebene
- Modell Sealand (Insellösung)
- Modell Cryptome (US-Lösung mit 1A - Anwaltsetat)
- Andere dezentral agierende Projekte

Aktuelle Entwicklungsstränge

- Partielle Eskalation der Auseinandersetzungen um geistiges Eigentum
 - DMCA (USA) vs. DeCSS, DMCA vs. SDMI
 - IFPI/RPS Initiative des "Bundesverbands phonographischer Industrie" vs. MP3
 - Derzeitige und wiederholte Adaption von DMCA-Paragrafen in EU-Gesetzesentwürfe
 - Entwicklung zukunftscompatibler Finanzierung der Kunst-Produktion?
- Globale Konfrontation im Bereich Markenrecht
 - Weltweit nicht einheitliche Markengesetzgebung und die Konfrontation mit dem DNS-System
 - Derzeit von ICANN entwickelter Lösungsansatz UDRP und die Folgen

in der Praxis

- Auseinandersetzungen um Inkompatibilitäten in inhaltlichen Fragen
 - Urteil des Bundesgerichtshofs in Sachen rechtsradikale Propaganda vom Dezember 2000 und Konsequenzen
 - Gerichtsurteil des US-Bundesstaates Minnesota gegen das österreichische Projekt "vote-auction.com"
- Zunehmende Entwicklung von Technologien zur politischen Kontrolle
 - Überwachungs- & Identifikationswerkzeuge für TK- und RL-Aktivitäten

Net visions and realities

[Andy Mueller Maguhn](#) ✉

Free net development and the net of the Begehrlichkeiten

To [the chaos computer club](#) 🌐

- History, task and function
 - 1981 Treff of Computerfreaks and data travelers
 - since 1984 publication magazine data centrifuge and meeting of the annual chaos Communication Congress
 - 1986 establishment of the chaos computer club e.V. as consequence 2. WiKG (regulation of responsibilities)
- Association goals
 - Employment for a human right on at least world-wide unhindered communication
 - Promotion of uninformativeness and transparency (e.g. machine-readable government)
 - Argument with social consequences of technology (residual risks, side effects, chances)
- Practical Arbyte/organization form
 - Country wide association, organizes in decentralized ones, Erfa circles and chaos Treffs
 - Enterprise of communication structures and media (data centrifuge, Web & list server, CD Rome)
 - Execution & participation von/an meetings (Congress & Camp, Workshops, hearings, other ones)

Development of the nets

- Basis nets
 - Telephone network; Real time range and time-dependent rating
 - X.25 model; Data transmission rate, package-oriented switching and account
 - ISDN; Digitization and drastic reduction of the switching time. Account however still time-dependent rating
 - Dedicated lines; Overall line leasing, technology-dependent range use
- Overlay
 - Mailboxes (alone stood, often for single user)

- Interlaced individual systems (net curtain and forward)
- InterNet (on-line routing)

Development of computer science

- Software
 - Data processing and transmission protocols; Switching and transmission (RFC's - > TCP/IP)
 - Representation and linkage; Service integration and convergence (- > HTTP, HTML)
- Possibilities
 - Information access to basis of a common information pool
 - Communication area by bi-directional communication services

Development of the InterNet

- Open minutes
 - UUCP (Mail, News)
 - TCP/IP and developing minutes
- Address area (gTLD/ccTLD with respective Vergaberichtlinien; zunaechst "roofridge come roofridge serve" á la Postel)
 - DNS on basis of the root zone file structure (RFC 1591)
 - Change of the assignment instance IANA to ICANN (under evasion of the UN)
- Services
 - Telnet (remote ACCESS), ftp (file transfer) etc..
 - Gopher (structured information access)
 - WWW ("Multimedia "; Linkage of documents, picture, clay/tone)

Development of the human understanding I: Groups of uses

- Computerfreaks
- Scientist
- Kommunikationsfreaks
- Maeuseschubser & Legastheniker

Development of the human understanding II: Applications

- Information sharing
- Social cross-linking
- Organization of the virtual area ("Cyberspace")
 - more individually/public communication area
- Herangehensweisen
 - Public area
 - Virtual market place

Visions, examples and the paradigm question

- Channel model (television)
 - Transmitter/Sauger ("consumer")
 - e.g.. Video on the and/people picture?
- Simulated network (InterNet)
 - Teilnehmeremanzipation - > participant is equally transmitter and receiver
 - Niederschwelliger entrance
- Communications network
 - Illustration of and reciprocal effects with social realities
- Transaction net
 - Business models on basis of acceptance over the easy accessibility of a multiplicity of users
 - Use as structure reinforcement with existing transaction procedures

"free flow OF information" and other realities

- Medium paradigm InterNet
 - Philosophy of the net infrastructure
 - Open one up and developable standards
- Cross-linking of different culture areas
 - National vs. global sensitivities
 - Principle of the responsibility of the information supplier
- Rules in the global culture area InterNet
 - Development of global consciousness
 - poison economy and public area vs. mental property

The InterNet and the net of the Begehrlichkeiten

- National level
 - Indisputably: Responsibility of the author for in contents net-posed
 - Partially very much large adjustment up to censorship authorities ("information Ministry "in China etc..)
- International level

- Cases of example radical/XSÄLL etc..
- Judgement German Federal High Court from December 2000 and possible effect; Expansion of national right
- Global level
 - Structure, construction background and adjustment ICANN
 - "Intellectual Property Constituency"; Confrontations of mark and copyright laws and the InterNet
 - ICANN: Vint Cerf and the discussion need in things "stability"
 - Example: Past assignment guidelines for the ccTLD Registry, future model of the trilateral contracts

Communication free spaces and paste strategies

- Definition of rights of access
 - Mains connections for net citizens vs. tourist entrance for consumers. Data sidewalks?
 - Social requirements vs. mental property/copyright law giving
 - Quite the citizen on the information concerning it; machine-readable government
- Decentralization
 - Stabilization of the discussing barness of political acting on local level
- Model sealing and (isolated solution)
- Model Cryptome (US solution with 1A - lawyer budget)
- Other decentralized acting projects

Current development strands

- Partial escalation of the arguments around mental property
 - DMCA (the USA) vs. DeCSS, DMCA vs. SDMI
 - IFPI/RPS initiative of the "Federal association phonographischer industry" vs. MP3
 - Present and repeated adaptation of DMCA paragraphs into European Union bills
 - Development of future-compatible financing of art production?
- Global confrontation within the range trademark law
 - World-wide not uniform mark legislation and the confrontation with the DNS system
 - At present solution UDRP and the consequences in practice, developed by ICANN
- Arguments around Inkompatibilitaeten in contentwise questions
 - Judgement of the Federal High Court in things right-wing extremist propaganda of December 2000 and consequences

- Court decision of the US Federal State Minnesota against the Austrian project "vote auction.com"
- Increasing development from technologies to political control
 - Monitoring & identification tools for Tk and RL activities

To: International Law Seminar Participants
From: Tim Wu
Date: Feb 11, 2005

What follows are four chapters from a book written by Jack Goldsmith and I. I have taken chapters 1, 2, 5 & 6. Chapters 5 and 6 are newer and more in need of feedback, though I appreciate comments on any part. This book is coming out under the trade press so you may find it slightly more narrative and more basic in its explanations than your average law review article.

This excerpt obviously leaves much of the argument out. If anyone is interested in reading the whole book please contact me.

TW

Chapter 1

Yahoo!

Marc Knobel is a French Jew who has devoted his young life to fighting the remnants of Nazism in the modern world. One day, in February 2000, he sat before his computer in Paris, typed in www.yahoo.com, clicked through to the auction page, and performed a simple search. To his horror he found himself looking at page after page of swastika arm bands, SS daggers, concentration camp photos, and even replicas of the Zyklon B gas canisters. He had found a vast collection of Nazi mementos, for sale and easily available in France, hosted in the United States by the Internet giant Yahoo.¹

Two years earlier, Knobel had threatened a public relations war against America Online. Browsing the Internet, using a computer in France, he discovered Nazi hate sites on AOL's servers in Virginia. AOL responded to his threats by closing the sites, and Knobel assumed that a similar threat against Yahoo! would have a similar effect. But he was wrong. AOL was atypical, it turned out. The location of AOL's corporate headquarters—in the suburbs of Washington, D.C.—made it sensitive to public relations and politics. Not surprisingly, it was more careful than most Internet companies when it came to the content it put on its site.

Yahoo!, by contrast, was rooted in Silicon Valley's turn-of-the-century libertarian bubble. Its executives thought government was dumb, and government-enforced speech restrictions dumber still. They were convinced that the borderless Internet had rendered national laws unenforceable. Confronted by an obscure activist who preached speech regulations and invoked French anti-Nazi laws, Yahoo! shrugged its high-tech shoulders. "We are not going to change the content of our sites in the United States just because someone in France is asking us to do so," said Yahoo!'s co-founder, Jerry Yang.²

So Knobel decided to sue Yahoo! in France. The organization he worked for, the International League Against Racism and Anti-Semitism, teamed up with a French Jewish Students' Association. Together, they charged that auctions running on Yahoo!'s servers in California violated the law against trafficking in Nazi paraphernalia, at least in so far as people in France could view these sites and make purchases on them.

In response, Yahoo argued that the French court had no power over an American corporation or a server located in the United States. It added that terrible consequences would flow from allowing national governments to regulate the Internet. If French regulations applied to a web site in America, then

presumably so would German and Japanese regulations, not to mention Iraqi and Chinese ones. Pretty soon, every web site would have to contend with dozens of competing national laws, making it impossible to operate. "It is very difficult to do business if you have to wake up every day and say 'Okay, whose laws do I follow?," said Heather Killen, a Yahoo! vice president.³ "We have many countries and many laws and just one Internet."⁴ Claude Stern, a Silicon Valley attorney, chimed in: "If all of the different countries imposed their laws on the Internet, you would have *anarchy*."⁵

* * *

Evoking the specter of "anarchy" was doubly ironic. Anarchy is the absence of law, not the overabundance of law. And Stern's argument was a premise for a type of anarchy that he and many others embraced—*cyberanarchy*.

Cyberanarchy is the view – dominant in the late 1990s – that territorial governments like France cannot, and should not, govern the Internet.⁶ Jerry Yang gave the French lawsuit the back of his hand because he believed that the French court could exercise power only in France, and thus could not control what Yahoo! put on its servers in California. Yang embraced the conventional view that State sovereignty extends to the State's borders, but not into the territory of another State. France thus had no power over what's on a computer in the United States, even if data on the computer was accessible in France.

But if France could not have stopped the Nazi web pages at their source in the United States, it also seemed powerless to keep the unwanted pages out of France. One of the Internet's defining features is a decentralized routing system that carries messages from point to point even if intermediate communication exchanges are blocked, damaged, or destroyed. "The net interprets censorship as damage, and routes around it," John Gilmore famously declared.⁷ To keep out the Nazi pages, France would have had to shut down every single Internet access point within its borders—a seemingly impossible task in the modern age. And even this wouldn't have worked, because determined users could have accessed the Net by a telephone call to an Internet access provider in another country. Nor, it seemed, could France have monitored and blocked the data from the U.S. servers at the French border. Unlike cars, wine, and other "real-space" goods, digital imports were hard to inspect at the border. Professors David Post and David Johnson, famous for their theory of cyberspace sovereignty, put it this way: "The volume of electronic communications crossing territorial boundaries is just too great in relation to the resources available to government authorities."⁸ And even if France had succeeded in blocking a web page, the same information could have been posted on an indefinite number of mirror sites outside France.

So the Internet seemed to place the State in a bind. Before the Internet, most activities a State cared about took place within its borders and thus under State control. The Internet has shattered this historical congruence between geographical activity and State power. Its architectural features--instantaneous universal communication, geographical anonymity, and decentralized routing--permitted data on any computer linked to the Net to zip anywhere around the globe, in an instant. And this, in turn, made it very easy for computer users *outside* a nation to do things *inside* the nation that are illegal there. As Marc Knobel discovered, images, texts, and pictures on a server in California can readily appear on a computer screen in France or any nation plugged in to the World Wide Web.

The problem is not, of course, limited to the sale of Nazi goods. If Nazi advertisements from California can appear in France, then people in Saudi Arabia can access porn sites from servers in Holland; Americans can bet on digital blackjack tables on computers in Antigua; Chinese citizens can view web sites with information critical of the Chinese government; students in copyright-restrictive countries can download music-swapping software from servers in the South Pacific; businesses can place their financial information and taxable assets offshore, beyond the reach of national tax authorities; a book banned in France can be placed on a web site outside France so that Frenchmen (and everyone else in the world) can view it;⁹ and a twenty-something in the Philippines can place a worm on the Net that causes billions of dollars in damages to computers in countries around the world.¹⁰

This is why the Internet seemed so threatening to State sovereignty in the late 1990s. States are sovereign to the extent that they control matters inside their borders—what is allowed, what is required, and what is prohibited. But Internet communications can originate anywhere and extend everywhere. Data on the Net can thus be sent from computers in places free from government restriction, undermining legal authority elsewhere. Jerry Yang was sanguine about this development, probably because it had convenient implications for his firm's operating costs. But many were alarmed. In the midst of the *Yahoo!* trial, Paul Krugman wrote a *New York Times* column about the Net's threat to traditional copyright and tax laws. Internet technology is "erasing boundaries" and undermining state power, he warned. "Something serious, and troubling, is happening -- and I haven't heard any good ideas about what to do about it."¹¹

The problem was not just that States couldn't control the Net. As Yahoo Vice President Killian suggested, if France could apply its laws to Yahoo!'s Nazi sites based on the sites' accessibility in France, then *every* nation could do so, for the Yahoo! site was accessible everywhere. The result would be a mess in which every State applies its laws to every Internet communication, strangling the Net

in conflicting rules and procedures. It would be as if all the nations of the world sat side-by-side on two-dimensional map, with the Internet hovering above as a separate space, coextensive with the world below. When the 180 or so nations lying below simultaneously interfere with the singular space above, the result would be a chaos that destroyed the Internet.¹²

Many believed these problems could only be solved by international laws that applied the same rule everywhere. The Vatican called for “international cooperation in setting standards and establishing mechanisms to promote and protect the public good.”¹³ David Johnson and David Post, who we met earlier, suggested a more imaginative and dynamic solution: “cyberspace sovereignty.” Cyberspace, they maintained should be conceived as a separate place with its own kind of sovereignty, and be governed by the “Netizens” around the world who would organize into “a-geographical, decentralized voluntary associations.”¹⁴

While there was disagreement on the proper form of post-territorial government, few disagreed with Frances Cairncross’s conclusion that the Internet would reduce the authority of the State and “shift power downward, to the individual.”¹⁵ In 1996, Nicholas Negroponte, the co-founder and Director of MIT’s Media Lab, cheerfully summed up the conventional wisdom: “It’s not that laws aren’t relevant, it’s that the nation-state is not relevant.” He concluded: “The Internet cannot be regulated.”¹⁶

* * *

Yahoo!’s arguments in the French court reflected this conventional wisdom. But it soon became clear that these arguments would not go uncontested in the French courtroom. Knobel and his friends countered that, though French law might not ordinarily extend to a U.S.-based server, it certainly allowed France to do anything within its power at home to block illegal content from abroad. They also pointed out how anomalous it would be to leave the Net unregulated. “The freedom of expression is not unlimited,” said Marc Levy, one of the anti-Nazi lawyers. French law “does not permit racism in writing, on television or on the radio, and I see no reason to have an exception for the Internet.”¹⁷

This simple statement seemed to pierce the heart of cyberanarchy. The Yahoo! official declared that there is “just one Internet,” as though this technological fact would win the legal argument. But the French plaintiffs demanded that the new technology respect France’s anti-racism laws. Yahoo!’s executives, in the grip of the belief that the Net is immune to territorial laws, couldn’t imagine that territorial law might trump technology. Once the argument was joined, however, Yahoo! faced hard questions. Why should an Internet company be more immune from regulations in different nations than

“real-space” multinational firms? If Ford Motor Company must comply with the varying safety and environmental laws of the many countries in which it sells cars, why should Yahoo! be exempt from similar regulations?

Yahoo! had a plausible response. Unlike Ford, Yahoo! could not control where in the world its products went. Ford could make special cars to comply with French regulations, and could send these cars only to France. If Ford found French environmental regulations too costly, it could simply stop making France-fitted cars without suffering harm in its other markets. At the same time, both Ford and France could be confident that a French citizen would find it difficult to buy a Ford car in America and to import it into France. Yahoo!’s situation seemed different. It had tried to accommodate France by maintaining a French-language web site (www.yahoo.fr) that complied with French law. But it also had a U.S. web site that French web surfers were choosing to visit. And unlike Ford, Yahoo! claimed not to be able to identify where in the world its “customers” were from, or to screen them out by geography. If Yahoo! was forced to comply with French law, it would have to remove Nazi items from its U.S. server, thereby depriving everyone everywhere from buying them, even in places where their purchase was legal.

This proved to be the key issue in the trial: What could a web site do to prevent surfers from across the world from visiting in defiance of their governments? In May 2000, Judge Jean-Jacques Gomez ruled preliminarily that Yahoo!’s U.S. web sites violated French law, and ordered Yahoo! to “take all measures to dissuade and make impossible” visits by French web surfers to the illegal Yahoo! Nazi auction sites.¹⁸ Yahoo! insisted that it was incapable of complying with the order. “Asking us to filter access to our sites according to the nationality of Web surfers is very naïve,” Jerry Yang declared.¹⁹ It was argued that cyberspace had no frontiers, and there was no way to prevent netizens from traveling wherever they wished. Yang seemed to have the support of the United States Supreme Court, which in an important First Amendment case two years earlier had determined that “once a provider posts its content on the Internet, it cannot prevent that content from entering any community.”²⁰ The high-tech industry supported Yang as well. “Suggesting that an online company prevent people from one country from viewing a Web site is near impossible,” insisted Joe McNamee, a spokesman for the European Internet Service Providers Association in Brussels.²¹

* * *

Yang’s argument again reflected turn-of-century assumptions about the architecture of the Internet. The Net was not built with physical geography in mind. Neither Internet Protocol Addresses (each computer’s Internet ID), nor

Internet domain names (such as mcdonalds.com or cnn.com), nor e-mail addresses, were designed to dependably indicate the geographical location of computers on the Net. Even domain names and e-mail addresses that contained geographical clues – such as www.toystore.co.uk, or alqaeda@afghanistan.gov--were unreliable geographical indicators. The web page might be located on a computer in Italy (and the data might be cached in dozens of nations), or might be sold or re-assigned to an entity outside the United Kingdom. And Bin Laden might have logged into his computer in Afghanistan from a hideout in the Sudan, and sent an e-mail from there.

These architectural “facts” meant that users of 1990s Internet technology could not know the geographical source or destination of their communications. E-mailers and web page operators didn’t know where in the world the messages and pages were being viewed, and thus what laws in which nations they may be violating. “[I]n Cyberspace, physical borders no longer function as signposts informing individuals of the obligations assumed by entering a new, legally significant, place,” noted cybersovereignists Johnson and Post in 1997.²² It seemed unfair to apply local laws to Internet users who didn’t know they were violating the law and thus could not actively comply with it. A New York court invalidated a Net anti-pornography law for just this reason, worrying that “a single actor might be subject to haphazard, uncoordinated, and even outright inconsistent regulation by states that the actor never intended to reach and possibly was unaware were being accessed.”²³

France’s attempt to govern Yahoo! seemed unfair for other reasons as well. Even if Yahoo! knew that its California site was being viewed by people in France, it couldn’t block the content to French viewers alone. Yahoo! could only comply with the French law by removing its Nazi sites from its California servers altogether, thereby depriving users in the United States and other countries of their legally protected rights to view the site. This seemed profoundly undemocratic. People outside France have no voice in the development or enforcement of French law, and thus should not be subject to it.

Despite this apparent unfairness, Net users confronted with a range of conflicting national laws could rationally be expected to comply with the strictest among them in order to avoid legal liability. The ultimate effect of territorial control of the Net seemed to be a tyranny of the unreasonable, or lowest common denominator. “We now risk a race to the bottom,” said Alan Davidson of the Center for Democracy and Technology about the *Yahoo!* case. “The most restrictive rules about Internet content – influenced by any country – could have an impact on people around the world.”²⁴ The situation was not unlike the old European joke: In Heaven, the French are the cooks, the Italians are the lovers, the English run the government, and the Swiss make everything run on

time; in Hell, the English are the cooks, the French run government, the Swiss are the lovers, and the Italians make everything run on time. Territorial control of the Internet portended a parallel version of Internet hell: A world of Singaporean free speech, American patent law, Russian commercial regulation, and Chinese civil rights.

* * *

For these reasons, Yahoo! was confident it would eventually prevail before Judge Gomez. In the summer of 2000, any other result was unthinkable. But the events of that summer and fall would prove Jerry Yang, and not Judge Gomez, to be “very naïve.” Judge Gomez gave Yahoo! two months to figure out technical ways to block French surfers. During this recess, Cyril Houri, the founder of a fledgling American firm called Infosplit, e-mailed Ygal El Harrar, the head of the Jewish Students’ group that was the second party to the lawsuit.²⁵ He told el Harrar that his firm had developed a new technology that could identify and screen Internet content on the basis of its geographical source. Houri flew to Paris and met El Harrar in the offices of his lawyer, Stephane Lilti. He loaded the latest version of his software on to Lilti’s computer, and showed how it could identify the geographical location of web sites, first testing it on some he knew were run from servers located in France, and then on some he knew were located in the United States. He then visited Yahoo!’s auction servers. The three men blinked and peered into the screen, astonished: Yahoo!’s servers, which the firm had claimed were protected by the U.S. First Amendment, were actually located on a site in Stockholm! Yahoo! had apparently placed a constantly updated copy, or a “mirror” of its U.S. site in Sweden to make access to the site in Europe faster.²⁶

When the trial resumed on July 24, Yahoo! lawyers again asserted that it was technically impossible to identify and filter out French visitors to the firm’s U.S.-based web sites. Lilti objected that Yahoo! had not tried in good faith to find a technical solution. He then demonstrated Houri’s geo-location technology in the courtroom, and showed that the Yahoo! auctions in France were not in fact coming from servers in the United States. Lilti invited Judge Gomez to consider the technology’s profound significance: The nostrum that every web page was necessarily accessible to every computer user everywhere in the world was simply wrong. An e-firm could identify users by geography and, if it liked, screen them out. Judge Gomez responded cautiously to this seemingly audacious claim, and appointed three Internet experts—Vincent Cerf, the “father” of the Internet, Ben Laurie, a British Internet expert, and Francois Wallon, a French technology maven—to assess whether and to what extent Yahoo! could block transmissions into France. The experts confirmed that, given the state of technology in late 2000, Yahoo! could screen out 90% of French users

through a combination of Hourí's IP-identification technology and self-reporting about nationality.²⁷

That was good enough for Judge Gomez. In a landmark decision issued on November 20, 2000, he ruled that Yahoo! was "committing a wrong in the territory of France" by allowing Nazi goods to appear for sale on web pages there.²⁸ The Judge determined that the French court had power over Yahoo! and its servers because the company had taken conscious steps to direct the prohibited Nazi auction pages into France. He noted, for example, that Yahoo! greeted French visitors to its U.S. web site with French-language advertisements – a fact that showed both that Yahoo! was tailoring content for France, and that it could to some extent identify and screen users by geography.²⁹ The Court acknowledged that 100% blocking was impossible, and ordered Yahoo! to "take all measures to dissuade and make impossible" any visits by French surfers.³⁰ Taken in context, this order appeared to require Yahoo! to make a good-faith "best effort," to block every single determined French user. As Marc Knobel said in response to the expert's report, "We don't want a perfect solution, because a perfect solution does not exist."³¹

Yahoo! responded indignantly, claiming that it would ignore Judge Gomez's decision unless a U.S. court made it do otherwise.³² Two months later, however, Yahoo! pulled the Nazi material from its auction sites, weakly asserting that it was motivated by bad publicity from the Nazi auctions, and not the French ruling itself. The entire Yahoo! episode came as a shock to most Internet observers. The resulting confusion was summed up by Thomas Vartanian, the chairman of an American Bar Association committee that had just completed a two-year examination of the limitations of State control over the Net. "It's a little bit as if we've all been transported to Mars and now have to figure out new rules of engagement," he lamented.

* * *

Vartanian got it exactly backwards. The *Yahoo!* decision transports us not to Mars, but rather back down to earth, and helps us to see the many problems of Net governance in a more realistic and fruitful light. This book attempts to set out that more realistic vision. It shows that territorial states can and will govern the Net. And it argues that far from sewing confusion, territorial control can bring a useful order to Internet communications.

Vartanian thought *Yahoo!* required us to rethink Net governance because he erroneously believed that the Net was a borderless medium beyond State control. But as the *Yahoo!* decision shows, territorial States *can* control the Net. They do so not by going after offshore content providers directly, but rather by controlling people, firms, equipment, and events *within* their borders. Yahoo!

did business in France, and had assets and agents there. It probably capitulated because it knew that France could have seized the licensing fees it received from its French subsidiaries, or the payments it gets from its French-language advertisers.³³ Internet firms with a global presence will have these kinds of connections with many countries, any one of which could invoke threats against local assets and people as a basis for enforcing local laws. And as we will show in Chapter 4, there are many other means of effective local enforcement as well.

The *Yahoo!* decision also shows why territorial control of the Net often makes sense. When French citizens receive offshore communications that their government deems harmful, the form of the communication—digital bits, paper, radio waves, or TV broadcast—is irrelevant to France’s right, and indeed duty, to check and redress the harm. France’s action to protect its citizens does not imply that every state can regulate every internet transaction. France can do nothing directly against the vast majority of internet users—e-commerce buyers and sellers, porn purveyors and consumers, chat room participants, web-page owners, and the rest—who have no physical presence in France, such as assets, bank accounts or employees. Against this latter class of Internet users, the country must employ different strategies, such as clamping down on French end-users, French ISPs or financial intermediaries based in France.

The *Yahoo!* case also demonstrates some of the virtues of a bordered Internet. France and the United States are democracies with different conceptions of free speech based on different cultures and histories. Judge Gomez’s requirement that Yahoo! screen out the Nazi pages from the United States promotes self-governance by allowing the peoples in both places to reach different conclusions about the optimal level of speech regulation without imposing each State’s view of the matter on the other. The *Yahoo!* decision also shows how a bordered Internet helps avoid the tyranny of the unreasonable. Filtering technology allows a web operator to identify recipients of information by geography and screen out content to them. This puts the Yahoo!’s of the world in the same position as the Ford Motor Company’s of the world. Yahoo! need not bow to the most restrictive law to do business elsewhere. Just like Ford, it can avoid a presence in France and other places where its actions are illegal.

Geographical filtering technology is not perfect and never will be. But as we show in Chapter 4, it need not be perfect to have its desired effect on French consumption. The geographical screening requirement imposes costs on Yahoo! and might result in less content or higher prices for Yahoo! users in other nations. But as we explain in Chapter 5, these are ordinary, perfectly legitimate, and possibly even efficient consequences of international business. The requirement that firms like Yahoo! comply with local law will not, as many feared, destroy or even much affect the Internet. Governments, even oppressive ones, don’t want to control the vast majority of Internet communications any

more than they want to control the vast majority of “real-space” speech. Despite e-borders in certain areas, most of the Net will remain world-wide and borderless, as originally envisioned.

The *Yahoo!* model is not a panacea for every Internet governance challenge. The State asserts its control in different contexts in different ways and with different degrees of success. Deep structural issues of Net architecture, such as the uniform naming and numbering system that makes a global Internet possible, would seem to require a global rather than territorial solution. As we explain in Chapter 9, a special global system has developed in this context, but one cannot understand how this system works unless one sees that it is under the firm control of a single sovereign state--the United States. Peer-to-peer systems that have proven so frightful to the music industry are also a special challenge for State control, although as we argue in Chapter 7, not nearly so much of a challenge as is commonly thought.

International institutions and private groups will play an important role in Net governance, just as they do in real-space governance. As we explain in Chapter __, States sometimes delegate power downward to private parties or upward to international bodies, when it is an issues they care about. But even when this happens, the most important policy puzzles thrown up by the Internet—e-commerce and privacy, speech and pornography, intellectual property, cybercrime, and much more—cannot be understood or resolved unless we understand the territorial State’s central role. Until this role is fully understood, we cannot think clearly about the future of the Internet, nor indeed about the traumatic reshaping of the world called globalization. In this sense, the “borderless” Internet teaches valuable lessons about the abiding importance of territorial sovereignty in our tightly interconnected world.

Not all of these lessons are happy ones, however, as the denouement to the *Yahoo!* case reveals.

* * *

Soon after Judge Gomez’s decision, Yahoo!’s resistance to geographical screening began to wane. The company courted the International Olympic Committee in the hope of winning a contract to webcast the next games. To attract advertisers, and protect the IOC’s intellectual property rights, Yahoo! promised to use geo-identification software to segment its audience by country.³⁴ In June 2001, Yahoo! announced a deal with Akamai, a content delivery company, to use the firm’s geographical identification technology so that its portal could deliver geographically targeted advertising. Yahoo! claimed the move would allow it to “increase advertising relevance.”³⁵ One of Yahoo!’s lawyers, Mary Wirth, awkwardly tried to justify the apparent tension in the

firm's position. "We argued that . . . it's not a 100 percent accurate solution for the French court order because we would have to identify (French citizens) with 100 percent accuracy, and that's not possible...The technology is perfectly appropriate for ad targeting purposes."³⁶

A year later, Yahoo bowed to Chinese pressure and signed the Internet Society of China's *Public Pledge on Self-Discipline for the Chinese Internet Industry*. It pledged to "inspect and monitor the information on [Chinese] domestic and foreign Web sites ... and refuse access to those Web sites that disseminate harmful information to protect the Internet users of China from the adverse influences."³⁷ Ken Roth, the Executive Director of Human Rights Watch, complained that Yahoo! promised "to identify and prevent the transmission of virtually any information that Chinese authorities or companies deem objectionable."³⁸ To fulfill its obligations, Yahoo!, the one-time champion of free speech, hired a small army of censors whose job it is to monitor chat room conversations, block "harmful" comments, and report offenders to the Chinese internet police. By this point, Yahoo! had dropped all pretense about its inability to screen content by geography. Greg Wrenn, a Yahoo! attorney who had insisted that it was "impossible" for Yahoo! to comply with Judge Gomez's geographical filtering order in the *Yahoo!* case, now proclaimed that Yahoo! would conform to local laws in countries where it operated.³⁹ Said Wrenn "The restrictions on content contained in the pledge impose no greater obligation than already exists in laws in China."⁴⁰

* * *

Yahoo's capitulation in China reveals the darkest side of territorial Net control. Many believed that the Internet would end authoritarianism by empowering the people with the information and organization tools that would enable them to rise up against their oppressors. "Imagine if the Internet took hold in China. Imagine how freedom would spread," asserted George W. Bush in the December 1999 republican primary debates.⁴¹ The usually sober George Will was even more optimistic. Reflecting on the proliferation of Internet cafes in China, he predicted the end of authoritarian rule there: "Totalitarianism is rendered impossible, and perhaps even tyranny is rendered difficult, by technologies that make nations porous to information."⁴²

If only it were true. Unfortunately, the same territorial control that permits democratic France to exclude unwanted information from its territory permits authoritarian China to do the same. As we will see in Chapter __, the Beijing government successfully blocks out much of the content it views as unattractive, and uses the Net to shape its own political agenda. Following the April 2001 downing of an American spy plane in China, for example, the vast majority of Chinese Internet users heard only the Chinese, and not the American,

version of events. “By exposing people only to Official accounts about a hostile American intrusion, the government successfully stoked nationalist sentiment,” said Martin Regg Cohn.⁴³

Many claim that China’s surprising success in controlling the Net argues for eliminating territorial control of Net content. The China example is cause for regret. We assess this and other evils of territorial control throughout the book. But as we also explain, geographical control of the Net is inevitable. The State did not create the Internet geo-ID technology that China employs to keep unwanted content out. Rather, as we show in Chapter 3, the private sector created it in response to consumer demands that Net content be better tailored to suit individual interests—interests that, as a brute fact, often cluster by geography. And as the *Yahoo!* case shows, governments in democratic states are starting to demand that this technology be used to respond to entirely appropriate constituent demands to protect them not only from Nazi goods, but also from hate speech, credit card theft, invasions of privacy, sexual predators, spam, and much more. Technologies of control designed to serve legitimate and desired ends can rarely be limited to those ends, and will often be co-opted for illegitimate purposes. The Internet is no exception.

This book is a reminder that geography and geographical power continue to matter, even in an age of globalization. The Net will, as we will show, change some of the ways that territorial governments govern. Such changes are inevitable when the speed of communication dramatically increases and the cost of communication dramatically decreases. But changes in the way states govern will not, on the whole, diminish their central role in governance, including governance of the Net.

Chapter 2

Visions of a Post-Territorial Order

Twenty years before the *Yahoo!* case, two men in different parts of America began to use the Internet for the first time. One was Julian Dibbell of New York, a savvy cultural reporter for the *Village Voice*. The other was John Perry Barlow of Wyoming, a libertarian, lyricist, and free thinker who looked the years he had spent traveling with *The Grateful Dead*. Dibbell and Barlow were very different people. But they had this in common: Neither were native computer geeks, and both were lucid, even lyrical writers, who wanted to communicate the Internet experience to regular people.

Dibbell and Barlow became the Robert Stanleys of the Cyberspace age. Like Stanley in central Africa they had discovered an exotic place and wanted to tell us about it. Like any explorer, the stories they brought back from the frontier reflected their own experience and assumptions more than objective reality. Nonetheless, these stories articulated a powerful vision: a new frontier, where people lived in peace, under their own rules, free from the constraints of a repressed society, and free from government meddling. Their vision of a post-territorial, self-governing cyberspace would create the philosophical foundation for skepticism about territorial governance of the Net. It would have an enormous impact on Internet writers and thinkers, Internet firms, and even the U.S. Supreme Court. To understand the hidden virtues of territorialism, we must first understand the possibilities and attractions of post-territorial rule.

Confronting Mr. Bungle

In 1993, back when “Information Superhighway” was still a popular term, Julian Dibbell wrote the gripping and widely read *A Rape in Cyberspace*, a story about how “an Evil Clown, a Haitian Trickster Spirit, Two Wizards, and a Cast of Dozens Turned a Database Into a Society.”⁴⁴ The story’s central premise—that the Internet can evolve its own systems of governance superior to “real-space” governance—has had a lasting impact. As the influential Internet scholar Lawrence Lessig would say years later, “Dibbell’s story is why I teach cyberlaw.”⁴⁵

Dibbell taught about Net self-governance through the experiences of the virtual, interactive worlds called “multiple user dungeons,” or MUDs. MUDs, the predecessors of today’s hugely popular online games (like *EverQuest*, or *The Sims Online*), were text-based worlds accessible through the Internet. This was the golden age of the immersive internet, when people logged on to build on-line identities and virtual homes, and more importantly, to meet and hang out with

others netizens. Though you couldn't actually see or touch anything (other than a keyboard and screen), MUDs worked on something more powerful: collective imagination. Users sometimes called MUDs a "shared hallucination."⁴⁶

A Rape in Cyberspace is a history of a particular MUD called *LambdaMOO* that Dibbell described as "a very large and very busy rustic mansion built entirely of words."⁴⁷ It was here that a thousand or so regulars, logging in from all corners of the earth, became a virtual community. They all had made-up personalities, they generally interacted without rules, and, as Dibbell recounts, their lives in the MUD were vividly real, and in some senses more authentic than their real-space lives. Even Dibbell-the-observer began to love *LambdaMOO* and relish his life there.

Dibbell's story was about *LambdaMOO*'s very own "bad man," a kind of evil clown named Mr. Bungle. Mr. Bungle was a "fat, oleaginous, Bisquick-faced clown," who humiliated, and even "raped," other users. His tool was a tiny "voodoo doll" that allowed him to take control of people and make them do disgusting things. These were not real rapes in the sense of a physical violation of the humans typing at their keyboards in Seattle and Sydney. But they were painful nonetheless, as the debasement of a projected identity.

As Dibbell tells it, the antics and abuses of Mr. Bungle made MUD participants realize that their ungoverned world wasn't working. While they argued about what to do, a senior MUD administrator unilaterally decided to destroy the wanton Mr. Bungle by eliminating him from the community. The *LambdaMOO* users scattered around the globe then begin to realize that they needed rules to govern their virtual lives. Slowly, hesitantly, but with increasing deliberation and self-consciousness, they created a nascent political community untied to physical space but with basic rules of voting, conduct, and dispute resolution. Dibbell wrote optimistically about the moral of the story, concluding that it helped us "look without illusion upon the present possibilities for building, in the on-line spaces of this world, societies more decent and free than those mapped onto dirt and concrete and capital."⁴⁸

This first story of Cyberjustice captured two important ideas. The first was an influential and charismatic metaphor: The notion of Internet as a "place." This metaphor, which still pervades discussions of Internet governance, originated in the early days of the Net when it did genuinely feel removed from the real world. In those days (the late 1980s and early 1990s), people didn't use the Net to buy books or make airplane reservations. They used it to participate in communities of people who rarely met face-to-face but who got to know one another intimately. Whether it was participating in a MUD, playing online computer games, posting to "bulletin boards," or talking in early "chat"

programs, the experience was self-contained. Whatever the consequences “there,” from flirting, or swapping programming ideas, or arguing about the causes of World War I, there would be no consequences “here,” in what they called “meatspace.” This autonomous and often vibrant communal experience naturally led to the belief that this place could, and should, be governed by the users that constituted it.

Dibble’s parable was the beginnings of a constructive vision of governance liberated from national and physical identity – that is, from our actual bodies, and their physical location. These ideas may seem a bit abstract, even nutty. But for many early Internet users and thinkers, they marked the deepest promise of the Internet revolution. At its best, the aspiration was to better fulfill the promises of (philosophical) liberalism by eliminating the relevance of physical identity and the limits it places on individual freedom.

Everyone has a physical appearance, and everyone is born somewhere; these are two facts over which we have little control. Even in the most open real-space societies, where we are born and what we look like determine our life path and prospects – the kind of opportunities we get, how we are treated by others, the extent to which those around us share our values and commitments. A liberal view of the good society says that individuals should be able to shape their lives as they wish, provided that such choices respect the dignity of others. Just as you choose your mate, your job, and your favorite brand of soda-pop, you should be free to minimize the relevance of how you look and where you live.

This is very hard to do in real space, within the territorial state system. For most people, physical traits are difficult to alter, and moving to a different and more congenial geographical community – assuming one exists – is too expensive or psychologically difficult. But as the MUD experience showed, the Internet can render these morally irrelevant physical qualities *actually* irrelevant. Bodily appearance and geographical location were meaningless in *LambdaMOO*. You could alter nearly every aspect of your identity: you could be a man or a woman, young or old, bald or bearded, whatever. And with complete control over their identities, people could cluster with like-minded and congenial souls to create virtual communities, unconnected to physical space, that would be impossible to establish in the real world. This vision considered the dominant state governance paradigm at best irrelevant and at worst a hindrance.

The Education of John Perry Barlow

John Perry Barlow has been called many things: a cyber-libertarian, a visionary, a crazy man. In the 1990s, he was the best-known and most controversial exponent of a separate legal regime for Cyberspace. He styled

himself the Jefferson of his age, and for a while at least, the description seemed to fit.

Barlow, like Dibbell, was not a natural-born computer-geek. He didn't write code. He wrote lyrics for the Grateful Dead. And instead of spending time in engineering school, he raised cattle on his parents' farm in Wyoming. His first experiences with the online world came in 1987 when, in search of a Dead Head community, he tried out the early on-line bulletin board *Whole Earth 'Lectric Link* (WELL). As he spent time with people who lived on the Internet, he began to think of the Internet as more than a computer network. He began to think of it as a kind of a place – what he called an “electronic frontier.”⁴⁹ It reminded him of the American West: unspoiled, self-governing, and best left to inhabitants to run as they pleased.

In 1990 Barlow wrote a series of columns, in *Wired Magazine* and other publications, to explain the wonder of the Internet to regular people using regular language. These writings – and especially the notion of a “cyberspace” with its own rules – would become enormously influential. They also made the Internet, once strictly the preserve of nerds, seem cool, exciting, and intriguing.

Barlow frequently wrote in language that echoed Stanley's African diary. “Imagine” he said, “discovering a continent so vast that it may have no other side.” “Imagine a new world with more resources than all our future greed might exhaust, more opportunities than there will ever be entrepreneurs enough to exploit, and a peculiar kind of real estate which expands with development.” And “imagine a place where trespassers leave no footprints, where goods can be stolen an infinite number of times and yet remain in the possession of their original owners, where businesses you never heard of can own the history of your personal affairs, where only children feel fully at home, where the physics is psychology, and where everyone is as virtual as the shadows in Plato's cave.”⁵⁰

The frontier theme was pervasive. Barlow encouraged young Americans to make their homes in Cyberspace: “Jack in. Go to Cyberspace, and go with all the adrenaline and goofy optimism which ought to accompany frontier enterprise,” he said.⁵¹ Barlow cautioned that the Electronic Frontier was threatened by territorial government, the “last ditch efforts of the old Industrial Age powers to colonize and subdue Cyberspace.”⁵² He argued that the “The American Occupation Army of Cyberspace” (by which he meant the National Security Agency) “meticulously observes almost every activity undertaken [in cyberspace], and continuously prevents most who inhabit its domain from drawing any blinds against such observation.”⁵³

Just as important as Barlow's provocations to explore and defend the new frontier were the institutions he founded to protect this vision. Barlow befriended an important group of wealthy technological libertarians who shared his ideas: in particular, Mitch Kapor, the millionaire founder of Lotus 1-2-3, and John Gilmore, a wealthy libertarian who was the first programmer at Sun Microsystems. They founded the Electronic Frontier Foundation (EFF), designed to develop the legal conception of cyberspace as a separate place and to defend it from the intrusion of territorial government. As Kapor and Barlow wrote in announcing their establishment of the EFF on July 10, 1990, the EFF was designed to mediate the "inevitable conflicts [that] have begun to occur on the border between Cyberspace and the physical world."⁵⁴ It would also "help the folks who pass much of their lives there to find practical means for ordering their own affairs."⁵⁵

With the EFF, Barlow hit a nerve. He and Kapor succeeded in attracting some of the Silicon Valley elite who also happened to be some of the wealthiest political libertarians in the country. People like Bill Joy, the founder of Sun Microsystems, Doug Carlson, onetime CEO of Broderbund software, Rob Glaser, former Vice-President of Microsoft, and Rockport Shoes magnate Bruce Katz. All were board-members, donors, or both. In time, EFF also attracted major corporate donors too, and became for a time the lobbying voice of libertarian technologists on Capitol Hill. (It later abandoned its lobbying role as too corrupting of its original vision.) Companies like Microsoft, Hewlett Packard and others became major EFF donors. All were trying to build a legal wall that would separate and protect the burgeoning Internet from territorial government, and especially from the United States government.

The idea of a generalized cyberspace immunity sounded, to legal ears at least, a bit crazy at first. But the EFF had a very important law on its side. When it came time for EFF's lawyers to defend the idea of Cyberspace sovereignty, they found a powerful ally in the First Amendment to the United States Constitution. The First Amendment limits government's ability to regulate speech, and on a communications network like the Internet, *everything* is potentially "speech." A web site, e-mail, and even a MUD are all arguably expressive, and thus potentially protected by the First Amendment from government interference. In the 1990s the interface between the First Amendment and ideas of a sovereign cyberspace was exploited to great advantage.

In 1996 came what Barlow and others saw as the first great attack on Cyberspace. It came clothed as "indecentcy regulation," as was known first as the "Exxon Amendment" and later the "Communications Decency Act" (CDA). The CDA was in fact a very broad law. It applied to the entire internet, and punished all transmission of "indecent" sexual communications or images to minors using

the Internet.⁵⁶ In the view of some, it threatened to put the entire network under the constant scrutiny of the U.S. federal government.

To Barlow, this law, the CDA, was an incursion of liberty as offensive as the Stamp Act or the Boston Massacre. On the day President Clinton signed the Act into law, Barlow wrote an angry email to EFF members: "Well, fuck them. . . . Or more to the point, let us now take our leave of them. They have declared war on Cyberspace. Let us show them how cunning, baffling, and powerful we can be in our own defense."⁵⁷

Barlow then wrote and distributed his famous 16-paragraph *Declaration of Cyberspace Independence*.⁵⁸ Modeled after the American Declaration, it immodestly addressed the "Governments of the Industrial World, you weary giants of flesh and steel." It proclaimed: "I come from Cyberspace, the new home of Mind. On behalf of the future, I ask you of the past to leave us alone. You are not welcome among us. You have no sovereignty where we gather." The declaration recognized that Cyberspace had "real conflicts" and "wrongs," but insisted: "We will identify and address them by our means. We are forming our own Social Contract."

Echoing Dibbell, Barlow argued that the cyberspace legal order would reflect ethical deliberation instead of coercive power that characterized real-space governance. "Our identities have no bodies, so, unlike you, we cannot obtain order by physical coercion. We believe that from ethics, enlightened self-interest, and the commonweal, our governance will emerge. . . . We will create a civilization of the Mind in Cyberspace. May it be more humane and fair than the world your governments have made before."⁵⁹

Barlow had issued the call for action. But the Communications Decency Act required a concrete legal response. By now the EFF had a legal staff: EFF founder Mitch Kapor had found a lawyer named Mike Godwin posting interesting messages on an internet forum, and hired him as the EFF's first staff attorney.⁶⁰ The EFF, or at least Godwin, joined forces with the venerable ACLU to challenge the statute as a "facial violation" of the First Amendment. The case, styled *ACLU v. Reno*, went through the lower courts and quickly ascended to the United States Supreme Court. As Godwin later wrote, "Suddenly, the very legal status of cyberspace itself...[was] put to the test in a genuine constitutional battle."⁶¹

The litigation of *ACLU v. Reno* marked the coming together of a new community: a united internet-activist community. More than 20 groups, ranging from the American Library Association to the National Writers Union and the Safer Sex Page were named plaintiffs in the case. Dozens more groups

and academics wrote separately to support the lawsuit in a giant, collaborative effort. As Godwin wrote, “we included publishers, service providers, and individuals and organizations whose speech, while often provocative, was clearly central to the American public dialogue.”⁶²

On June 26, 1997, the Supreme Court announced its decision. By a vote of 7-2, the Court declared the entirety of the CDA unconstitutional. The Supreme Court invalidated the CDA on the somewhat narrow legal grounds: that the law was too vague and therefore unnecessarily “chilled” legal speech. But of more lasting import was the Court’s embrace of the concept of Cyberspace, and its apparent conferral of a special legal status for cyberspace communications.

Justice John Paul Stevens is old enough that he has actually met Babe Ruth and Charles Lingberg,⁶³ but that didn’t stop the 77-year old from seizing upon the Internet phenomenon with enthusiasm. He wrote for the Court that the Internet “constitute[s] a unique medium--known to its users as ‘cyberspace’ –located in no particular geographical location but available to anyone, anywhere in the world.”⁶⁴ Stevens characterized cyberspace as containing “vast democratic fora” that “ha[ve] not been subject to the type of government supervision and regulation that has attended the broadcast industry.”⁶⁵ The implication of *Reno v. ACLU* was that anything related to the Internet would be afforded the strongest possible First Amendment protection. As Justice Stevens concluded: “[T]he growth of the Internet has been and continues to be phenomenal. As a matter of constitutional tradition, in the absence of evidence to the contrary, we presume that governmental regulation of the content of speech is more likely to interfere with the free exchange of ideas than to encourage it.”⁶⁶ Justice Sandra Day O’Connor, like Barlow a retired rancher, seemed to confirm this interpretation in a separate opinion reminiscent of Julian Dibbell. “The electronic world” she concluded, “is fundamentally different.”⁶⁷ It was by its nature inherently anonymous: “Because it is no more than the interconnection of electronic pathways, cyberspace allows speakers and listeners to mask their identities... users can transmit and receive messages on the Internet without revealing anything about their identities or ages.”⁶⁸

With *ACLU v. Reno*, the idea of an unregulated and post-territorial Internet had migrated from kooky obscurity to the law of the United States as announced by America’s highest court. To some the Supreme Court seemed to erect a barrier to *all* U.S. laws that might affect the Internet. “[T]here is very little room for further regulation of the Internet,” declared EPIC attorney David Sobel. “[The court] clearly came down on the side of this being a new medium, that it is inappropriate to graft old broadcast laws onto the Internet.”⁶⁹ Barlow appeared to have found his border to cyberspace with assistance from a real-world authority. Not only was his *Declaration of Independence* vindicated: suddenly, it

had become the Supreme law of the land. As Mike Godwin said, on the day *Reno* was decided: “Today [is] the first day of a new American Revolution—a Digital American Revolution—a revolution built not on blood and conflict, but on language and reason and our faith in each other.”

Political Engineering

At the same time as John Perry Barlow and Julian Dibbell were trying to teach the world about Internet self-rule, a crucial group of non-state actors was already exercising extraordinary powers of Net governance. Unlike Barlow and Dibbell, these men weren’t newcomers to the Internet scene. They were as native to the Internet as it is possible to be, for these were the storied “founders” of the Internet itself—men like Larry Roberts, Robert Kahn, Vint Cerf, Jon Postel, and David Clark. Unlike Barlow and Dibbell, the founding engineers weren’t terribly interested in communicating to the public. Many of them viewed terms like “cyberspace” or “virtual reality” as the wild imaginings of the technologically illiterate. But their working methods and network designs nonetheless contributed to the growing sense that the Net would be ruled in an unprecedented way.

[Two sections omitted for workshop]

The Internationalists

Joseph Nye is an academic, former government official, and dean of the Kennedy School of Public Policy at Harvard University. He has spent much of his academic career predicting the impending decline of the nation-state, in favor of international and private organizations. As a result, in the late 1990s Nye and other internationalists interpreted the internet’s arrival differently than other people. It was the confirmation of a prophecy: a sign that era of the nation-state was finally coming to a close. As Nye wrote, the arrival of the internet signified of the “reversal of the modern centralized state that has dominated world politics for the past three and a half centuries.”⁷⁰ Its replacement, he foresaw, would be a system he called the “new cyberfeudalism” characterized by “overlapping communities and jurisdictions laying claims to multiple layers of citizens’ identities and loyalties.”

In short, *internationalists* like Nye took the Internet’s challenge to the State as part of a more the more general trend of globalization and nation-state erosion. The Internet’s ubiquitous nature, and the conflicts of territorial laws it generated, confirmed what the internationalists had been saying for a long time: Territorial rule must be supplemented, and eventually replaced, by international institutions.

The principal attraction of the internationalist strategy was its solution to the overabundance of territorial regulation and tyranny of the unreasonable introduced in Chapter 1. International law can apply everywhere in the world, as it does, for example, when it prohibits torture (The Torture Convention), establishes minimal rules of airline safety (the Convention on International Civil Aviation), and bans certain barriers to trade (the WTO). If the States of the world agree to a single global law for questions like libel, pornography, copyright, consumer protection, and the like, the lives of Internet users become much simpler: No conflicting laws, no worries about complying with 175 different legal systems, no race to the bottom. Legal compliance becomes like an all-inclusive resort in the Caribbean: pay one price, and everything is taken care of. As French Interior Minister, Jean-Pierre Chevènement explained in 2000, “The idea is to produce a global text so there cannot be ‘digital havens’ or ‘Internet havens’ where anyone planning some shady business could find the facilities to do it.”⁷¹

Not only would internationalism solve the problem of conflicting laws. It also offered the promise of *better* laws. States can be too close to (or too reflective of) their populations and their prejudices. They can be too likely to reject the rational or best solution in favor of a local tradition or in obedience to a powerful local interest group. Many believed that international standards applied to the Internet could eliminate the parochialism of territorial state legalism. International standards could reflect a kind of collection of best practices from around the world—the opposite of the tyranny of the unreasonable. An international approach could not only clear up confusion and conflict, but it could also wash clean the prejudice and ignorance hiding in the basement of the State.

Finally, internationalists took the economic logic of global unification as creating an inevitability. The argument was foreshadowed by Marx, who said that “a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe.”⁷² Translated to modern conditions, the argument is that the State’s death is inevitable because rational economic interests drive global political unification. Larger political units maximize wealth by maximizing gains from trade. The Internet, some believed, was a sign that things were moving to a further, and perhaps final level.

It wasn’t just academics or UN official who took these positions. Steve Case of AOL, for example, agreed with the political scientists that the Internet is “transforming the notion of national sovereignty.”⁷³ He argued that nations must “revis[e] outdated and ‘country-centric’ laws on telecommunications and taxes that could thwart the growth of the medium.”⁷⁴ He urged states to eliminate the morass of conflicting national laws and embrace “international standards—from security, to privacy, to taxation.”⁷⁵

* * *

It was just a new means of communication. Yet the arrival of the internet in the 1990s tapped into something much deeper. From actors as diverse as Jullian Dibbel to Joseph Nye came the hope that this brave new network might really change things, somehow liberate us from the world we live in, and even change basic parameters of the human condition. Behind every vision of Internet utopianism lay the hope was that by connecting every human on earth, the world might become a better place. Humanity united might do better than our lousy systems of government, throw away the construct of the nation state, and live in some different but better way.

To each of the visions, one thing was clear: the system of territorial government was broken, and needed desperately to be replaced. Whether it would be international organizations, self-governing communities, or the Internet engineers might not really matter. What was clear was that the State as Marx has suggested needed to melt away, extinguish itself, and leave the future alone. There was just one problem: the State was actually very much alive, and, it turned out, uninterested in assisting its own death.

Chapter 5

How States Rule the Net

In the winter of 1966, long before the advent of the Internet, a retired English Major named Paddy Roy Bates took a liking to an abandoned 6,000 square foot platform in the North Sea nick-named “Rough’s Tower.” Rough’s Tower was a World War II gun tower used by the British to fire at German bombers on their way to London. By 1966, nobody wanted the rusting contraption. Bates renamed it the Principality of Sealand, and asserted the principality’s independence from the United Kingdom—six miles away. He then awarded himself the title of Prince Roy, and proceeded to issue Sealand passports and Sealand stamps with pictures of his wife Joan, an ex-beauty queen.⁷⁶

For the next three decades or so, London journalists amused themselves telling the story of the eccentric Prince Roy and Princess Joan. The year the couple declared Sealand’s independence, Prince Roy fought off British army helicopters that strayed too near the platform. A decade later, German and Dutch diamond merchants mounted a helicopter attack when the prince was away, and succeeded in kidnapping his son, the Dauphin Michael. But the royal family struck back, reboarding the island by sliding down ropes from a helicopter and forcing the invaders to give in. One of the German merchants, who had been granted a Sealand passport in earlier and more cordial times, found himself captured and charged with treason by Prince Roy. He later received a royal pardon.⁷⁷

Until recently, nothing suggested that a chunk of concrete and steel off the English coast might play a role in the development of the Internet. But matters changed in the summer of 1999, when a server management firm named HavenCo invested millions of dollars to turn Sealand into a high-tech data haven loaded with computer servers linked to the Internet via microwave, satellite, and fiber-optic connections.⁷⁸ HavenCo’s idea was to rent data storage space on Sealand to people who wanted to run their web pages or place their data beyond the clutches of any government. It promised potential clients—porn purveyors, tax evaders, web gambling services, Chinese dissidents, and just about any other government-shy Internet user—that data on Sealand servers would be “physically secure against any legal action.”⁷⁹ The company boasted that Sealand was “the first place on earth where people are free to conduct business without someone looking over their shoulder.”⁸⁰ In the late 1990s, HavenCo generated enormous press buzz, claimed dozens of government-evading clients (all of whom remained anonymous), and seemed poised for enormous commercial success.

The HavenCo project was the apotheosis of the late-1990s belief in the essential powerlessness of the State. Anything a State might want to ban within its territory – offensive materials, illegal activity, harmful speech – could, in digital form, escape to a computer in a place where it is legal. The Net made every State a potential data haven, depending on what it permitted and forbade within its borders. The advantage of the ugly, man-made, server-festooned island was that it had no local restrictions. Thus, it might be a convenient venue for storing data beyond *every* government’s control.

HavenCo relied on the commonplace and seemingly irrefutable assumption that borders mark the limits of a State’s power. While a state might occasionally organize an invading army, such extra-territorial control was the rare exception. Usually, the State’s *legal* control extends only as far as its *physical* control, and not to the computer servers in other States. Duke Professor James Boyle summed up HavenCo’s premise when he said: “If the king’s writ reaches only as far as the king’s sword, then much of the content of the Net might be presumed to be free from the regulation of any particular sovereign.”⁸¹

HavenCo’s operating assumption should sound familiar. It was the same philosophy embraced by Jerry Yang when he called Judge Gomez’s initial decree “naïve.” And yet as we saw in Chapter 1, Judge Gomez effectively ended Yahoo!’s sale of Nazi goods in France, even though Yahoo! was a U.S. firm and even though its computer servers were in California.

This Chapter explains why Jerry Yang was wrong, and why HavenCo was premised on an error. States *can* control offshore Net communications because their effective power extends far beyond their territorial swords.

Beyond Borders

Many stores in New York’s Chinatown sell what look like Gucci bags and Rolex watches at a fraction of the usual cost. These are, of course, counterfeits. While some are junk, some of the more expensive counterfeits are of high enough quality to compete with the originals. They come from manufacturers overseas that might as well be in Sealand. Located in China, Thailand, or the Ukraine, they lie far beyond the territorial control of the United States. Since only a tiny fraction of these fakes can effectively be stopped at the border, Cyber-anarchic logic would suggest that the United States and other nations are powerless to stop the trade in counterfeits.

But the counterfeits story shows the opposite. It shows how States can control the illegal local effects of extra-territorial conduct, even when they lack power to punish overseas producers, the resources to stop the illegal goods at the border, or the will and resources to punish domestic consumers.

How? Primarily, the laws against counterfeits—trademark laws—target *local intermediaries*.⁸² If the fake Rolexes come from Thailand, it doesn't matter that the United States can't go after the Thai manufacturers, because Wal-mart won't sell you one. Wal-mart doesn't sell counterfeits because doing so would be an obvious breach of a law from which it cannot hide. Wal-mart's physical assets, its corporate headquarters, and its founding family all are in the United States, making it hard for the firm to evade government action. This is why trademark laws care very little about end-users. It isn't even illegal to own a counterfeit watch; it is only illegal for Wal-Mart to sell you one.⁸³

It is of course true that even by controlling the Wal-Mart, Macys', and Searses within its borders, the United States doesn't *eliminate* counterfeit goods completely. Gucci and Rolex lose millions of dollars in foregone income each year to counterfeit purchases. But it doesn't follow that the trademark laws are useless. The law need not be *absolutely* effective to be *sufficiently* effective.⁸⁴ We do not conclude from the persistence of occasional bank robberies that laws against theft are ineffective, or even sub-optimal. Similarly, the fact that there are sellers—like the stores in Chinatown—who are willing to assume the legal risk of selling counterfeits does not mean that the trademark laws are ineffective. To be effective, trademark law need only throw enough sand into the workings of the counterfeit market so that Gucci and Rolex continue to make smart profits. Yes, these companies could earn a higher return if the counterfeit market dried up altogether. And yes, the government could do more to dry up the market. For example, it could hire more enforcement officers, invest more in border control, criminalize the purchase of fake goods, or award punitive damages against those who sell fakes. But the system can be adequate to its task even though the government could do more, and even though compliance is not perfect. Government regulation works by cost and bother, not by hermetic seal.

The Rolex example teaches us two crucial lessons for State control of the Net. The first is *indirect extraterritorial control*. Just because Internet content originates from places outside a State's direct control, it does not follow that local laws are ineffective. The reason is that a State can regulate people, equipment, and activities within its territory to control the local effects of the extraterritorial activity. The regulation of local persons and property make it more costly, and thus more difficult, for in-state users to obtain content from, or transact with, regulation evaders using Sealand and other havens. States can indirectly influence the extraterritorial supply of prohibited content even though the source of the content is beyond its borders and even though it cannot easily stop the information at the border.

The second lesson is that to achieve indirect extraterritorial control, the most important local entities from the State's perspective are *local intermediaries*.

As the case of Wal-Mart in the Rolex example shows, the State does not always (or even usually) regulate individuals or firms directly, but rather acts through local intermediaries that have the power and the incentive to prevent or deter persons and firms from breaking the law. Intermediaries come in two general flavors. Some intermediaries in effect punish the individual on behalf of the State. An example is an employer who has a legal duty to prevent its employees from acts of sexual harassment. Other intermediaries act as gatekeepers to deny individuals and firms something essential to the illegal activity. A weapons dealer that has a legal duty to do background searches before selling a gun is a gatekeeper intermediary.

The combined effect of indirect extraterritorial control through local intermediaries is easy to miss, it isn't what most people have in mind when they think of "law." We tend to have a view of law that comes from the Ten Commandments or English jurist John Austin. It is a view of laws as a series of *commands* meant to control the primary conduct of *individuals* (or firms). We think of direct, individualized threats: thou shall not kill, steal, or bear false witness. Break the State's rule and face the consequences. But this view of law is misleading. It is easy to overlook how often the State controls behavior *collectively*.⁸⁵ Who does the most to prevent the use of illegal software at work? It is usually employers, not the government, because the state has put the company on the hook for its employees' misdeeds. Pharmacists and doctors are gatekeepers, charged with preventing certain forms of drug abuse. Much of what we do is controlled not by the State itself directly, but by what are effectively deputized third parties. When it comes to trying to stop extra-territorial conduct, it is to local intermediary control that the State usually turns.

Extra-Territorial Control Through Local Intermediaries

How precisely does local intermediary control relate to the State's ability to influence offshore content providers? Begin with a domestic version of our counterfeit example: A manufacturer in upstate New York makes fake Gucci bags that it sells to consumers through shops in Chinatown. Like most illegal acts, this one can be understood as a kind of transaction involving three relevant parties: the "source" (the manufacturer), an intermediary (the Chinatown shops), and a "target" (the purchasers):

Havens move the illegal source outside the limits of the State's physical control. A simple haven strategy can be pictured as follows:

This looks like our example of counterfeit Gucci bags. The source of the crime, the manufacturer of the counterfeit goods, has moved overseas. Yet, as we saw in that example, both the intermediaries and the targets remain within the physical control of the State. This leads to an important insight: Effective control over *any* of the three elements of the transaction permits the State to control conduct within its borders. In the counterfeit goods example, control over the intermediary sellers or (if the State had the resources) the actual purchasers could effectively regulate the illegal transaction.

One might think that the source can diminish the problem of State control by getting rid of the intermediaries. Such *disintermediation* what many the Internet is supposed to be all about. On the Net, after all, you don't need a stock broker to lose money in the market, and you don't need to visit a bookstore or airport to buy books and airplane tickets. That evasion technique, disintermediation, is pictured here:

In principle, this is a very powerful strategy. It leaves the State with the sole option of trying to hunt down the targets (i.e. end users), who might be numerous and expensive to find (more on this later). So, if the Internet, as advertised, is gradually eliminating intermediaries, doesn't this mean that State power is doomed?

The problem with this theory, which pervaded Internet thinking in the late 1990s, was its premise. The rise of networking did not eliminate intermediaries, but rather *changed* who they are, and how they behave. It has created a whole host of new intermediary parties, the most important of which

(for our purposes) are ISPs, search engines, browsers, the owners of the physical network, and the like. It is also too easy to forget that the rise of the Internet has made the network *itself* the intermediary for much conduct that we might previously had no intermediary at all. For example, to the extent that Internet chatting replaces face-to-face conversation, it does so with the help of a new, Internet-related intermediaries.

In 1999, Lawrence Lessig surprised many legal thinkers when he announced that “code is law.” Lessig’s adage was a shorthand for the idea that computer software and hardware could effect people the same way that traditional laws do. And this, in turn, would mean that we have to pay attention to who designs the architecture. One of Lessig’s aims was to throw cold water on the hyper-libertarianism of the early Internet days by showing that sometimes government does a better job than private firms (especially monopolies) of designing Code in ways that serve user interests. Whatever one thinks of Lessig’s thesis, he was speaking of “code” as a form of collective, intermediary control. The writers of software are a form of intermediary – they help you to do something you could not do without them. So, when the State commands that Internet telephony be designed to allow-wire tapping, it is using the same methods it uses when it tells your bartender to stop serving alcohol at 3 a.m.⁸⁶

If government acts through intermediaries, why not restructure conduct so as not to depend on any potentially regulable intermediaries? The answer, as it turns out, is that it is hard to get rid of intermediaries for a deeper reason having nothing to do with law. The elimination of intermediaries is in many cases the same thing as the elimination of the underlying conduct. Specialized intermediaries exist, after all, because they allow people to do things that would be difficult, or even impossible, for them to do themselves. It doesn’t make sense to speak of making telephone calls without some entity to connect calls. Gun-manufacturers specialize in making guns. While it might be possible for people to make guns on their own, it would be at great cost. To truly act without any intermediaries means acting by oneself. When you stop and think for a moment, there are very few things, indeed nearly nothing, that one can do without the direct or indirect assistance of someone else. In the Net context, scores of seemingly-invisible intermediaries are needed to make the Net experience work.

For related reasons, it is also not possible to move intermediaries offshore, beyond the range of government control. Here is what such a move would look like schematically:

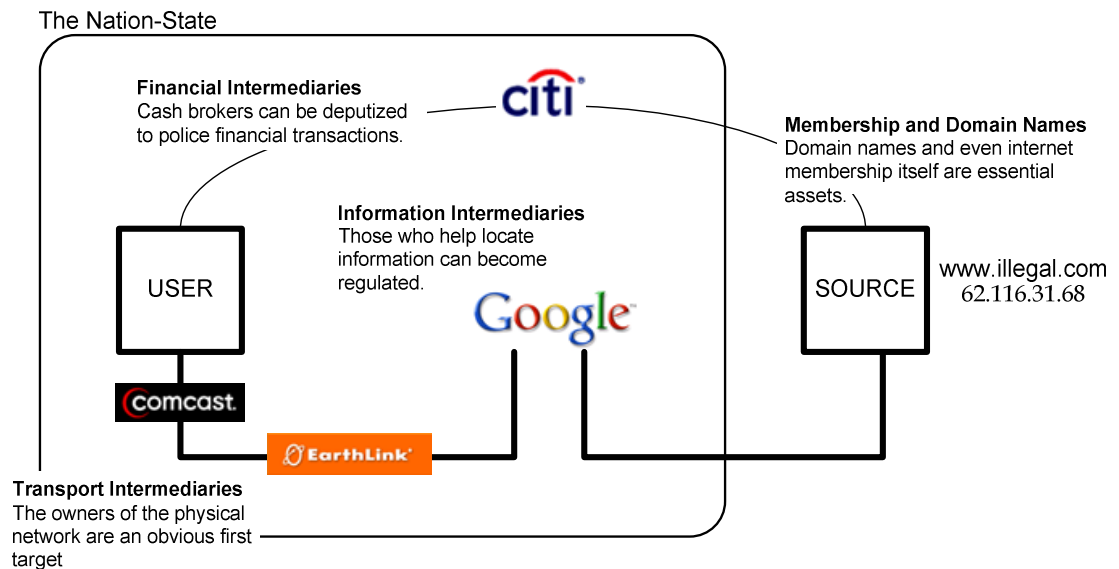

This model is no more realistic than the one that eliminates intermediaries altogether. In the Internet context, there are *always* local intermediaries. The most basic, of course, is the actual computer through which the Net is accessed. Behind that are many more: the owners of the physical communications lines, the owners of network nodes, search engines, and the like. If you try to access an unregulated offshore ISP through a long-distance telephone call, the phone system becomes an important intermediary. If you unplug your line and connect by Wi-Fi, the computer remains an intermediary, as does a physical network standing behind a W-Fi connection.

In sum, local intermediaries are an ineliminable aspect of the Internet. We now turn to how States can use these intermediaries to control offshore Net communications.

Finding the Internet's Intermediaries

The Internet has created new intermediaries that the State has just begun to regulate. The major categories are broken down in the following chart, followed by an analysis of each:

Transport. The spread of child pornography is an unfortunate consequence of the Internet's growth. In 2002, the State of Pennsylvania decide

to try to do something about the problem by enlisting the help of Internet Service Providers (ISPs), the companies that actually sell internet connections, like AOL or Earthlink. The law required ISPs to “remove or disable access to child pornography items residing on or accessible through its service in a manner accessible to persons located within this Commonwealth within five business days of when the internet service provider is notified by the Attorney General ...⁸⁷ In short, it required the Internet’s transport intermediaries, once notified, to filter or block content from a site containing child pornography. The Pennsylvania Attorney-General now regularly notifies service providers of sites they should take down, and after some initial hesitation, they now comply.

The Pennsylvania law shows why ISPs are the obvious first target for a strategy of intermediary control. It can be great fun to talk about the Internet as a formless cyberspace. But, as we saw in Chapter 3, underneath it all is an ugly physical transport infrastructure: copper wires, fiber optic cables, and the specialized “routers” and “switches” that send information from place to place. The physical network is by necessity a local asset, owned by phone companies, cable companies and other service providers who are already some of the most regulated companies on earth. This makes ISPs the most important and most obvious gatekeepers to the Internet.

The State can achieve a large degree of control by focusing on just a few of the most important ISPs, like AOL, Earthlink or Roadrunner. “While there are many ISPs, the vast majority of Internet subscribers in the United States obtain their access from a small handful of providers,” writes Harvard professor Jonathan Zittrain.⁸⁸ “[P]ressure applied strategically to the concentric ISPs serving smaller ISPs—one or two “dolls” up in a Matryoshka sequence of destination ISPs—can cover large swaths of subscribers.”⁸⁹ And as the text of the Pennsylvania law suggests, the control of ISPs can be directed at *preventing* materials from reaching end-users (filtering), or at forcing a site to take down child pornography. It is, therefore, a control either of the source or the targets of an illegal transaction.

Regulation-sensitive Americans are relatively new to the ISP-regulation game. As the *Yahoo!* case suggests, the command-and-control Europeans are, in the western world, pioneers. As far back as 1995, the Germans raided the Bavarian offices of Compuserve, and later indicted and tried the German manager of Compuserve Deutschland. The offense: failing to prevent child pornography from reaching German citizens.⁹⁰ In the late 1990s, the British government threatened British ISPs with criminal prosecution for distributing illegal adoption sites. Result: British ISPs blocked the sites to keep people in Great Britain from accessing them.⁹¹ Today, Germany, France and Great Britain

generally require local ISPs to screen out illegal content once they are notified of its existence.⁹²

But the true champions of Internet intermediary control, of course, are found in the East. In order of control, they include China, Saudi Arabia, and Singapore. In 2002, Zittrain and Ben Edelman found that Saudi Arabia, through a centralized set of servers, blocks access to thousands of web sites.⁹³ The blocking includes obvious targets like Amnesty International's Saudi Arabia pages, and the Queer Muslim home page, along with less obvious targets like www.tasteless-jokes.com. Particularly reflective of Saudi Arabia's preferences is the blocking of nearly every site promoting or discussing any religion, including all Christian, Jewish, and Ba'hai sites. China, as Chapter 6 will discuss in detail, has from the beginning, maintained extremely close control of its ISPs, far beyond what any Western nation has attempted. It runs a carefully calibrated country-wide filtering system designed to allow the government to block and unblock any materials it wants to, at any time.

Information Intermediaries. Norweigan Andreas Heldal-Lund describes himself as follows: "a skeptical atheistic freethinking pacifistic positive engaged and tolerant heathen who bases his life on modern secular humanism."⁹⁴ He lives in Norway, and is a member of both Hedningsamfunnet (The Norwegian Society of Heathens) and the Human-Etisk Forbund (a national secular humanist organisation). He is also perhaps the greatest living annoyance for the Church of Scientology. For Heldal-Lund has since 1996 devoted much time a website, "Operation Clambake" that exposes the deepest secrets of the Church and attempts to debunk its teachings.

For the Church of Scientology, Heldal-Lund's activities presented a serious problem of information control. A major benefit of rising through the ranks of the Church's strict internal hierarchy is access to carefully guarded teachings and writings. But in 2002 Operation Clambake's web site posted "the Secret Library of Scientology," containing many of the most important teachings of the Church.⁹⁵ Suddenly, writings that were meant to take years of preparation to read (and cost tens of thousands of dollars in training) were available to everyone on the World Wide Web.

Unable to shut down Clambake's Norwegian service provider, the Church turned to a different technique. It sent letters to Google.com, the web's most popular search engine, demanding that Google take down Clambake's sites under an American law, the Digital Millennium Copyright Act (DMCA).⁹⁶ According to the Church, Clambake's materials were an infringement of copyright that Google was legally obliged to block.⁹⁷ Google complied, meaning

that a search for “the secret library of Scientology” failed to deliver the results one would expect.

The Clambake story shed light on an under-recognized fact: Search engines like Google routinely take down links because of possible State action. As documented by the web site ChillingEffects.org, Google receives a constant stream of letters insisting that Google remove specified pages from its search results, usually because of alleged copyright or trademark infringement. Google complies with most. The result is something less than a neutral or comprehensive search.

This form of control is presently limited in several ways. In the United States at least, the take-down laws are focused on protecting intellectual property, not other State goals. In addition, search engines like Google matter only for the World Wide Web, not the whole Internet, and are rarely the only way of finding information. But the general technique of controlling information intermediaries has greater, and quite subtle potential for control. Consider how often you rely not just on search engines to find information, but also on “web-logs” (or “blogs”), online newspapers, and other intermediaries that point you in the direction of useful information. It is one thing for the State to openly crack down directly on forbidden information. But it can be harder to notice that information has become harder to find. It is hard, in other words, to know what you aren’t being told.

The Domain Name System & Internet Membership. In the fall of 2000, Al Gore and George W. Bush were fighting for the American presidency, aided by hundreds of millions in campaign contributions. That gave New York student James Baumgartner, at the Rensselaer Polytechnic Institute, a clever idea. As a commentary on the role of money in the election, he opened the web site *VoteAuction.com* as a place for otherwise disinterested voters to sell their votes to the highest bidder.⁹⁸ Its slogan: “Bringing Capitalism and Democracy Closer Together.” The idea was this: with so much money being spent trying to influence elections, why not just pay the money directly to the voter? Baumgartner billed Voteauction as “the only election platform channeling 'soft money' directly to the democratic consumer.”⁹⁹

The site actually took off: as the Chicago Tribune reported, in early October, 521 unidentified people in Illinois had agreed to sell their presidential votes. The top anonymous bid was \$ 8,500, or \$16.31 per vote.¹⁰⁰ While Baumgartner intended the site as satire, the Chicago Board of Election Commissioners decided there was nothing funny about offering to buy and sell votes, and it moved to shut down VoteAuction as quickly as possible. It chose a novel means: instead of targeting Baumgartner, or trying to hunt down the vote-

sellers themselves, it went after an essential asset—the name, “voteauction.com.”¹⁰¹

In short order, an Illinois judge imposed an injunction not on VoteAuction but on its U.S. domain name registry, Domain Bank, which had a standard domain name registration agreement prohibiting domain name use for “illegal purposes.”¹⁰² Domain Bank nixed voteauction.com’s domain name as if it were the itinerant Mr. Bungle, “shutting down voteauction.com all over the world.”¹⁰³ One week later, voteauction.com opened up under a new domain name, “vote-auction.com, registered in Switzerland with the International Council of Registrars (“CORE”).¹⁰⁴ But CORE too had a prohibition against illegal use in its standard domain name registration agreement, and after extensive telephone and e-mail discussions, vote-auction.com was shut down again.¹⁰⁵ Voteauction later began trying to publicize its numerical IP address, <http://62.116.31.68>, but by then the voting was over.¹⁰⁶

Control over domain names is another looming, and particularly effective way for nations to control Internet behavior. It is different from the other means of control surveyed here in a crucial respect: It relies on the basic architecture of the Internet *itself* as an intermediary for everything that is done on the Internet. It is a difficult concept to swallow, because we take it for granted that the Internet’s most basic protocols and membership policy are neutral as between every member of the network. But this, like others, is a contingent neutrality, already under attack from several quarters, and one that could gradually change.

Consider, for example, the matter of anonymity on the Internet. For years, pundits and theorists have predicted that robust “digital identification” was on its way. Soon, pundits warned, you’d never be able to do anything and remain anonymous. Lawrence Lessig wrote in 1999 that “When architectures accommodate users who come with a [digital] ID installed and make life difficult for users who refuse to bear an ID, certification will spread quickly.”¹⁰⁷

To nearly everyone’s surprise, it hasn’t happened. Microsoft Passport, the most powerful effort to create a universal digital ID, has failed to reach the usage levels that were predicted.¹⁰⁸ There are various reasons: People don’t trust Microsoft, and in general, a centralized identification system is something of a security risk. Some degree of anonymity, for whatever reasons, remains a feature of much Internet conduct.

But there is another way that the anonymity of the Internet could change. It could change if the conditions of *Internet membership* change. What’s that? Internet membership is something that most of us today take for granted; something that comes for free with a dial-up account. But the lack of

membership conditions is a fact that nation states, acting through a little-known organization named ICANN, have discussed trying to change. They realize that as a general matter, membership rules have always been a powerful means of control, whether it's at a country club or the World Trade Organization. There may come a time, and that time might be soon, when accurately disclosing who you are is a condition of Internet membership, or a condition of supplying Internet membership. As Chapter 7 suggests, there may come a time when abusing your privileges as a member of the Internet could lead to expulsion.

As these and other examples show, the State has many types of intermediaries it can use for indirect control. But none of this should obscure the most basic means of control: the direct physical coercion of individuals.

Targeting Individuals

Tore Tvedt ran a Norwegian neo-Nazi organization called *Vigrid*, devoted to the worship of Odin and other ancient Norse gods (The link between Odin and National Socialism was never entirely clear). Fearing Norwegian hate speech laws, Tvedt had a clever idea. He placed his anti-Semitic propaganda on a server in the United States, beyond the reach of Norwegian authorities. Unfortunately for Tvedt, he didn't do anything to put *himself* out of the reach of Norwegian authorities. One day, the Norwegian police simply arrested Tvedt and held him responsible for the contents of the Vigrid home page.¹⁰⁹

Despite the discourse of virtuality, direct physical coercion of individuals remains an important means of regulating internet conduct. The arrest of Tvedt shows the simplest way that nations control the flow of illegal digital content from abroad—arresting the locals. And the mistake Tvedt made is not uncommon. Jay Cohen, recently released from a U.S. prison, was the early operator of an Internet sports betting site who bet wrongly that he could beat a federal indictment for gambling.¹¹⁰ Tvedt and Cohen are also joined by an earlier generation of pornographers, like the Robert and Carleen Thomas, the couple who ran the “Amateur Action” porn system, and criminal hackers, like the famed Kevin Mitnick. All made the same mistake and all ended up in prison.

111

The physical arrest of individuals depends less on residency than travel patterns. For example, U.S. undercover agents have, on occasion, lured criminal hackers from Russia into the United States, where they were apprehended and convicted.¹¹² And one reason why Yahoo! cared about Judge Gomez's decision is that its executives fly through French airports and have meetings in France, and thus are subject to criminal enforcement actions there.

These kinds of crackdowns, while significant, are the easy cases. Tore Tvedt wasn't particularly clever, and he was just one person. What happens when the State is faced with the prospect of mass disobedience? Can it crack-down successfully, not on a single source, but on *millions* of people using the Internet who want to disobey a given law? Or might John Perry Barlow be right when he says "No law can be successfully imposed on a huge population that does not morally support it and possesses easy means for its invisible evasion?"
113

This is a big question, that matters for a whole range of contexts. Around the world, millions of new lawbreakers have been created by the Internet: copyright infringers, gamblers, consumers of pornography, and so on. We've seen that nations can use the tools of intermediary control to stop such activities indirectly. But what are the prospects for using direct punishment to stop a nation of lawbreakers?

While not a new question for legal theorists, end-user enforcement is nonetheless a hard one. It is the subject of dueling anecdotes, pitting the 1920s Prohibition (a failure) against laws regulating insider trading (a relative success). The starting point for any answer is the basic economic concept of deterrence, explained best by Nobel laureate Gary Becker.¹¹⁴ In the late 1960s, Becker first argued that lawbreakers were rational, and that their decisions to break laws reflected a calculation of costs and benefits. The State, therefore, doesn't need to actually catch every lawbreaker.: It just needs to increase punishments to the point where the costs of committing crime are less than the benefits.

The economics of deterrence led Becker to argue that the State shouldn't waste too much money looking for criminals, but instead just raise the sanctions for breaking the law. You might think more than twice about parking illegally if a parking ticket meant a few days in prison. The basic logic of deterrence based on economic models suggests an answer to the mass disobedience question. It suggests that for any law, penalizing select individuals severely should be enough to compel compliance.

But are things as simple as Becker suggests? Think to yourself: is fear of punishment really the only reason that you obey the law? Many of us, in fact probably don't steal as often as we'd get away with it. Reflecting this intuition, academic work since Becker's article has shed doubt on many elements of this simple economic conclusion. Economists point out that there are limits on the amount of deterrence that can be achieved just by increasing punishments. Some people, for example, are poor enough that they don't fear fines, or are so pessimistic about their future prospects that going to jail may not seem so bad. And, of course there's an upper limit on what the state can threaten. You can only kill someone once, and most countries ban things like torture that people might fear even more than death. Finally, if the State punishes relatively minor

wrongs (like Internet gambling) as severely as serious crimes (like bank robbery), the law loses its ability to send a message about what citizens should not do, and what they *really* should not do.¹¹⁵

Meanwhile, psychologists who study criminality think that there's a real limit to deterrence as well, but for different reasons. Psychologist Tom Tyler sees the perception of *legitimacy* as the key to understanding why people obey the law. In this view, even with tough criminal penalties, people will not obey a law that they think fundamentally illegitimate (like the ban on alcohol during the prohibition). Tyler's arguments are backed by empirical studies showing different patterns of compliance than simple economic theory would predict.¹¹⁶ These outcomes are mirrored by the work of legal theorists who study social norms, or informal rules that govern society. They believe that people generally follow social norms and for that reason, rather than the threat of legal punishment, obey the law.¹¹⁷

What this work suggests is that the likely effectiveness of targeting of end-users will depend on the law being enforced. For laws where the State can take advantage of a preexisting set of social norms or a moral code, the State will find its job easier. But for areas in a state of moral and ethical ambiguity, end-user sanction strategies will fail more often.

Today, the ethics and norms surrounding pornography are in flux. Some religious groups, feminist theorists and politicians view the creation and consumption of adult pornography as simply wrong, and obscenity laws also express that belief. But liberals and libertarians think otherwise, as do an otherwise silent majority. The result is that obscenity laws are routinely violated on the internet, and virtually nothing is done about it.¹¹⁸ This shows the degree to which moral ambiguity can dampen or even nullify the effects of laws on the books.

*

We have discussed the enforcement options that remain when the source of illegal materials moves overseas. But what if, in response to enforcement against end-users, they too leave the country? What if source, intermediaries and targets are all outside the nation state? This is the possibility of "total exit," pictured here.

The creation of an exile community is indeed a kind of final escape from undesirable laws. Moses and the Israelis fled Egypt in search of (among other things) a better legal system. And today, more prosaically, lovers of high-stakes gambling can move to Las Vegas, and serious marijuana users can make their home in Amsterdam and enjoy a different kind of life. But at some point, this becomes less of a challenge to State sovereignty, than an acceptance of it. If you move from the U.S. to Germany because you prefer a country with no speed limits, that is less what we think of as evasion, and more like what we think of as emigration.

Epilogue

On August 3, 2003, HavenCo founder and CTO Ryan Lackey went to Las Vegas to give an astonishing speech at *DefCon*, the annual convention for computer hackers. His talk was entitled: *HavenCo: What Really Happened*.¹¹⁹ HavenCo, he revealed to the world, had never been the success it was portrayed to be. The story of the giant server farm, hidden deep in the recesses of the island, was a lie: HavenCo's equipment consisted of "5 relay racks standing mostly empty."¹²⁰ The "dozens" of customers HavenCo claimed were, at the best of times, roughly 10, almost all online casinos.¹²¹ And now, Lackey reported to the crowd, HavenCo was dead. It was no more.

HavenCo died for two related reasons. The first was the absence of cooperative intermediaries, especially financial intermediaries. "[Sealand's] sovereignty ... has little value without commercial support from banks, etc."¹²² Banks wouldn't cooperate with HavenCo, one suspects, for the same reasons that U.S. financial institutions are not cooperating with Antiguan gambling sites: Local pressure on these crucial intermediaries influences how the intermediaries interact with offshore providers of information content.

Second, Sealand itself turned out to be an intermediary susceptible to the pressures of powerful states. More than anything else, Prince Michael, the ruler of Sealand, wanted recognition as an actual country. HavenCo's unseemly activities, he began to believe, were an impediment to that dream. The Prince

began to insist that HavenCo adhere to “norms of international practice and custom,” and demanded that nothing “offensive” be available from his Sovereign nation.¹²³ But of course, the hosting of potentially “offensive” content was the only reason for HavenCo’s existence. Without it, HavenCo was nothing. And so, the company sank into a slow decline, shedding customers and losing money, until finally came what Lackey called the “nationalization” of HavenCo in November, 2002, as Sealand kicked HavenCo off the island. Sealand today nominally owns what remains of HavenCo—a jumbled pile of network equipment, rotting and obsolete.

Arms Races

In 1995, the Attorney General of Minnesota was Hubert “Skip” Humphrey III. The son of Lyndon Johnson’s Vice-President, Humphrey was an old-style Minnesota democrat with a get-tough reputation and serious political ambitions. In 1995, with one eye on the governorship, he decided to try rid the state of all Internet gambling. He began by drafting a memorandum of law, warning all internet users that they were subject to Minnesota laws:

WARNING TO ALL INTERNET USERS AND PROVIDERS

PERSONS OUTSIDE OF MINNESOTA WHO TRANSMIT INFORMATION VIA THE INTERNET KNOWING THAT INFORMATION WILL BE DISSEMINATED IN MINNESOTA ARE SUBJECT TO JURISDICTION IN MINNESOTA COURTS FOR VIOLATIONS OF STATE CRIMINAL AND CIVIL LAWS.

GAMBLING APPEARS TO BE AN ESPECIALLY PROMINENT ASPECT OF CRIMINAL ACTIVITY ON THE INTERNET. THERE ARE A NUMBER OF SERVICES OUTSIDE OF MINNESOTA THAT OFFER MINNESOTA RESIDENTS THE OPPORTUNITY TO PLACE BETS ON SPORTING EVENTS, PURCHASE LOTTERY TICKETS, AND PARTICIPATE IN SIMULATED CASINO GAMES. THESE SERVICES ARE ILLEGAL IN MINNESOTA.¹²⁴

Humphrey wrote a New York Times Op-Ed arguing that states had a duty to stop Internet gambling. “Unchecked,” he said, online gambling “has the potential to turn every family room in America with a personal computer into an unregulated casino.”¹²⁵ He then brought a prominent lawsuit against a Las Vegas online casino operator named Kerry Rogers, whose site was accessible from Minnesota.¹²⁶ Rogers admitted that Minnesotans used his site to gamble, but argued that the lawsuit was an illegitimate regulation of interstate commerce. In 1998 Humphrey successfully convinced the Minnesota Supreme Court to exercise its jurisdiction.¹²⁷ Rogers complained that he was spending millions in legal fees. Humphrey appeared to be winning.

But this early success was misleading, for Humphrey’s bluff was called. The online casinos in the United States had always said that the lawsuits would drive them overseas. In the late 1990s, in response to lawsuits like Humphrey’s that’s what happened: the online sites and their owners moved overseas, mostly to the Caribbean nation of Antigua, to the tiny Isle of Man near Britain, and to Gibraltar off the southern coast of Spain. These nations welcomed the business. By early 2000, one in every thirteen Antiguans was employed in the e-gaming business. The Isle of Man even appointed an “E-Gaming Ambassador” named John Gilmore to promote online gambling.¹²⁸ Stressing their tight regulation of gambling, Gilmore said “the Island appeals greatly to businesses that need to

maintain a high quality image internationally.”¹²⁹ By 2001 the industry had reached nearly \$5 billion in worldwide revenue and was still growing.¹³⁰¹³¹

Meanwhile, Skip Humphrey still had much to say, but there wasn't much he could do. As Attorney-General of Minnesota he lacked the means to chase down the gambling sites overseas. An obvious alternative target was local citizens who gambled online, but Humphrey never discussed arresting individual citizens in their homes. Instead, he followed in his father's footsteps and in 1998 began his a long-awaited campaign for the governorship of Minnesota. Unfortunately for Humphrey, he chose a strange time to run, and was defeated by professional wrestler Jesse Ventura, a man with no political experience.

Regulatory Arms-Races

The story of Hubert Humphrey and the gambling exodus is a typical story of a regulatory arms-races in the Internet age. In this book we have learned of the ways—many more than was realized—that governments use to control conduct outside of their territory. But that isn't the end of the story. If you've ever downloaded music for free or gambled on-line, you know these methods of control are far from perfect. The targets themselves – like online casinos, can use the Internet to take evasive action. Users can also act en masse to get around government controls. When a group of people really want to ignore a law, and the State really wants to stop them, the result is a running battle, or a regulatory arms race.

Contests between law enforcement and outlaws are nothing new. But what is new is that law evasion has become a mass, collaborative project. Clever programmers like Justin Frankel, author of the Gnutella P2P file-sharing system, create tools that empower multitudes to get around unwanted laws like copyright. A very small group of programmers, or even a single person, can help hundreds of millions of people ignore a law they don't like. Classic outlaws like bank robbers mainly benefited themselves when they avoided the law. Today's technological evasion strategies can create “collective evasion” for a big group. As Justin Frankel said in a Rolling Stone interview, “Things I've done are often interpreted as anti-record-industry, but it's really about empowering people.”¹³²

Yet even given the possibilities of collective evasion, it would be a mistake to discount the State's power to respond. A powerful state has on its side the rhetoric of law, resources, and its reserved power of physical coercion. As we discussed in chapter 4, the language of legal compliance can be important: many people believe that even unreasonable laws should be obeyed. Second, all but the weakest states have resources that dwarf their targets. Online casinos, unlike

countries, do not have armies or billions of dollars in tax revenue. And as chapter 4 showed, the power of physical coercion exercised against intermediaries accounts for more compliance than anyone ever thought. In short, the power of the state makes the outcome of a technological arms race hard to predict. Simply pointing to the people like Frankel and the potential of collective evasion is not enough.

Instead, regulatory arms races are contests of *will* as opposed to *power*. The State has the advantages of resources, rhetoric, and physical force. But the exercise of State power is often brutal, unpopular, and expensive. What matters more than anything else is the State's normative commitments, or how badly it wants to win. We see this in the story of Skip Humphrey, who despite his bluster lacked the political nerve to arrest individual Minnesotans for gambling even if doing so might have been effective. Unfortunately for the casinos, while Humphrey was the first, he wasn't the only nor the most effective Attorney General with an urge fight online gambling.

Spitzer and Credit Cards

Eliot Spitzer, Harvard Law graduate and son of a wealthy New York real estate family, was elected New York's attorney general in 1998. He made his reputation bringing cases of national rather than local significance that no one else would touch. During the internet boom, when the stock market analysts could seemingly do no wrong, he went after Merrill Lynch, exposing what he called "a shocking betrayal of trust by one of Wall Street's most trusted names."¹³³ He later attacked the mutual fund industry, the trusted stewards of the billions of ordinary Americans, and later the insurance industry and the music industry. Spitzer has been called "the most powerful politician outside of Washington," and a man "temperamentally unable to stay out of the headlines." And in the early 2000s Spitzer began waging war on internet gambling.

Realizing the limits of his direct enforcement powers against overseas casinos, Spitzer and his Internet Bureau turned to a new strategy. Spitzer, steeped in Wall Street culture, noticed something that Humphrey didn't. He noticed that online casinos were dependent on American credit, and that every gambling session is effectively a transnational financial transaction.¹³⁴ It also happens that the State of New York, unlike Minnesota, has most of America credit-card issuing banks within its borders. Spitzer and his attorneys went to work. "We will cut off an enormous line of credit that was a jackpot for illegal offshore casinos."¹³⁵ announced Spitzer "Americans now waste \$4 billion a year on this pernicious form of gambling."

Spitzer and his team used the same techniques against the credit card companies that they used against Wall Street: trial by press release. Instead of threatening executives with indictment, Spitzer threatened them with press that would destroy their stock prices. As reporter Daniel Gross wrote, "the threat of Spitzer isn't jail time; it's a tanking stock. The very announcement of a Spitzer investigation is an excuse to sell and an invitation for shareholder lawsuits and proxy campaigns."¹³⁶

In June of 2002, Spitzer announced his first victory. A chastened Citibank appeared at a press conference to announce that its credit cards would no longer accept online gambling transactions. In penance, Citibank agreed to donate \$400,000 to various gambling addiction groups, and a further \$100,000 to the State of New York. As Ken Dreifach, head of New York's Internet Bureau warned, "We're trying to get the message out to intermediaries that there's real liability there. If you help to facilitate or promote gambling, you could be found guilty of breaking the law."¹³⁷

Spitzer's strategy was far more effective than Minnesota's. By early 2002, every major American credit card provider, including Citibank, Bank of America, Fleet, MBNA, and Chase Manhattan had established policies refusing to honor charges made for online bets.¹³⁸ Spitzer went a step further and subpoenaed PayPal, the electronic payment intermediary, to force it to stop allowing its customers to fund their online gambling. After negotiations Paypal agreed to stop all gambling transactions and disgorge \$200,000 in profits and penalties to the New York State treasury.¹³⁹

New York State seemed to be winning as Spitzer's efforts had a measurable impact on online gambling nationwide. As a 2002 Congressional report put it, "Despite attempts to circumvent these efforts... the success of these restrictions has caused gaming analysts to lower their 2003 revenue projections for the on-line gaming industry."¹⁴⁰ The attack on financial intermediaries in the U.S. drove over half of Antigua web gambling firms out of business. As Antigua Prime Minister Lester Bird complained, Spitzer's crackdown "left a significant, negative effect upon the economy."¹⁴¹

On the back of the internet and other successful efforts, Spitzer was by late 2004 the most popular elected official in New York State.¹⁴² What came next was a surprise to no one. On December 7, 2004 Spitzer announced his campaign for Governor of New York in the 2006 elections.

* * *

Spitzer and the State of New York effectively initiated a new round in the battle between governments and online casinos. This is a typical pattern for today's internet regulatory contests. They tend to consist of an ongoing series of moves and countermoves, almost like a form of ritualized combat.

A fanciful but useful model asks us to imagine the state and outlaws in a contest akin to a tug-of-war. At the beginning of the contest there will exist some equilibrium: the banned activity is carried out at some level. Even before internet gambling, for example, there was, of course, some level of illegal gambling. The contest begins when either government or the outlaws invest in new measures to either crackdown or avoid the law. Such investments either increase or decrease the activity level, just as a decision to tug harder pulls the rope in a tug-of-war toward one side or the other.

Once the contest begins, the other side must decide whether and how it wants to react. After an initial evasion that increases illegal activity, Government needs to decide whether it cares enough to invest in new enforcement efforts that might slow things down again. In response to the tug on the rope, Government needs to decide whether to accept a new equilibrium or to tug back. This structure of alternating rounds can be seen in the example of gambling in the following chart.

Round	Casinos Thrust	Government Parry
1	Setup Online Casinos in the United States	Sue Online Casinos in the United States
2	Move Online Casinos Overseas	Target major financial intermediaries (credit cards)
3	Adopt new financial intermediaries (Paypal, Wire services).	Target all credit intermediaries
4	Create overseas financial intermediaries, like NETeller iGmpay	(Target Banks or citizens?)

This tug-of-war model predicts an eventual endpoint, or new equilibrium. At some point one side or the other will simply give up, leaving a new equilibrium level of activity. When that will be depends on the benefits and costs to each side of ongoing investments in evasion and enforcement. .

How long will it take to reach that equilibrium? After an initial learning period, we should expect the necessary investment in enforcement or evasion to increase with each succeeding round, with less marginal evasion or enforcement achieved. Stated otherwise, the more each side pulls, the less effects they should realize. The reason is that the most obvious and cheapest tools of enforcement or evasion will be used up first, and each party will have to turn to increasingly esoteric or expensive ways of enforcing or evading the law, respectively. This pattern in both the gambling example in this chapter and the P2P example in the next. For the casinos moving overseas was the simplest evasion maneuver and brought the greatest returns. For government, suing local casinos and then shutting down the major credit card companies were relatively cheap (indeed, profitable). However from that point onward things become more challenging for each side. For government, trying to further increase the costs of newer overseas intermediaries will be yet more expensive. To make the example absurd but obvious, nations may be forced at some point to resort to military force, which can be far more expensive than filing a lawsuit. Meanwhile, online casinos are increasingly forced to create their own, entirely separate system of credit, which is a complicated proposition and much tougher than simply relying on credit cards.

As we've said, the outcome of regulatory contests between government and outlaws depends on the costs of new evasion and enforcement techniques but more fundamentally on what each side has to gain. For the outlaws, this is a relatively simple matter to understand. Avoiding the law offers whatever benefits from the conduct that the law banned. For casinos the potential upside is all of the revenue from American online gamblers, which is a gigantic lure. This helps explain, for example, why much less lucrative law evasion, like the Chinese Democracy movement discussed in chapter 8, is so easily shut down. Online Casinos with their massive profit margins and low overhead can be expected to stay in the law evasion business for the long haul.

But what about governments? What does a government gain from enforcing its laws? When do governments give up, and when do they redouble their efforts? These questions are much harder to answer. But we can offer a few speculations, as the next segment shows.

The Government's Interest

Story #1:

Well, the story is I am 19, and I am addicted to gambling, which is obviously why I am here. The one that is killing me is online poker. I win big now and again, but overall, it is totally fleecing me of all of my money. I am at university, 2nd year, all of my student loan has gone already, and I am in a situation where I have no cash, and cannot enjoy myself.

Story #2

For me it was one bad night with a few drinks inside me and I made a big loss, lol, in retrospect it was not a big loss but it was back then. I lost \$200 and went back in to chase my losses, on the tilt, more drinking, more trips to the cashier and \$1000 down for the night at which point I was at my monthly allowed withdrawal from the gambling site. Off to bed, depressed.

Over a period of around 6 months I barely slept and lost around \$55,000 which is mostly on credit cards, in the end I had them all at or over their limits and ran out of money to gamble with - if I had more money I presume I would have kept on going, however I was broke, I didn't have enough money in my account to cover the direct debits that were coming off the next day and I broke down on the steps of my house at around 2a.m. with grave thoughts in my head.¹⁴³

Story #3

The more money I lost, the more chips I would buy on the credit card to try to win them back. I was chasing my losses, very much so. One thing led to another, and within a period of just 3 weeks, I had maxed out my father's \$5,000 credit card. I was so distraught and scared that he would flip his lid when he found out what I was doing that I thought about suicide as an escape route for that. I was really depressed, nervous, and suicidal, distraught.

For people out there like myself who have a gambling problem, Internet gambling is very dangerous. It is too easy to gamble online from the comfort of your own home since all you need is a credit card, a computer, and Internet access. Like I said, the convenience of online gambling brought out an uncontrollable animal in me and I did not know when to stop. I am not obsessive-compulsive by any means, but the Internet combined with my passion for gambling, it made my behavior uncontrollable.¹⁴⁴

These anonymous confessions of online gamblers show us a motivation for fighting overseas lawbreaking: the protection of citizens from overseas harm. The oldest justification for the existence of government at all is security against internal and external threats. When faced with a foreign source of harm, we might expect it in the interest of a state to protect itself. Hence the U.S. strong interest in stopping online gambling.

The idea that governments fight gambling to protect their citizens is based on an optimistic view of government behavior. But even on a more cynical view the presence of local harms is not irrelevant. Elected officials are not unlike Roman generals of old: if they seek political power, they must first make their name and reputation fighting high profile battles that appeal to the imagination of the citizenry. Before online gambling, Skip Humphrey cut his teeth suing the tobacco industry, winning a historic multi-billion dollar settlement. And before Wall Street or online casinos, Spitzer made his name as a federal prosecutor when he defeated the Gambino family and ended its reign over the New York garment industry.¹⁴⁵ In this manner, the drive for political power may drive a regulatory contest for many years.

While glory and reputation may drive government action, it would be naïve to suggest that protecting citizens is the only reason government acts against an overseas harms. As those who study international trade know, it is often the influence of powerful local industries and that puts the iron in the Washington's backbone. Just as the president may act to protect American steel producers from the threat of cheap foreign imports, so too can an overseas internet site easily represent a threat to a local concern. For example, the overseas sites that sell cheap prescription drugs are a price threat to the American pharmaceutical industry, and Pharma's pressure for a crackdown is never-ending. Similarly the crackdown on overseas filesharing is driven by the recording industry itself, through the famous and vicious Recording Industry Association of America. And in the example of gambling itself it should never be forgotten that the United States has a domestic gambling industry whose pressure for more enforcement may have more weight than is made public.

We have focused on the interests of states who want to fight or stop overseas conduct. But with the exception of activity that is *hostis humanis generis*, (the enemy of all mankind) every activity that hurts one country will usually help another. As much as Humphrey professed to hate online gambling there are nation-states that love it and depend on it. With nation-states on both sides, a question of overseas law enforcement can become a problem of international relations, as the next segment shows.

* * *

The twin-island nation of Antigua and Barbuda has a population 67,000.¹⁴⁶ The weather, a favorable government and good connections to the U.S. have made it a favored destination for online casinos. At its height in the early 2000s the local internet gambling industry employed 5,000 people, or nearly 7.5% of the islands' population. But the American crackdown took its toll, putting more than half of the Island's operations out of business.¹⁴⁷ As Sir Ronald Sanders, an

Antiguan official complained "The effect of the US enforcement of its laws is to hurt the small economy of Antigua and Barbuda, which is struggling to survive in a world of intense competition in the trade of goods and services."¹⁴⁸

Antigua may be small, but it is a nation-state nonetheless and since 1995 a full-fledged member of the World Trade Organization.¹⁴⁹ In June 2003, Antigua filed a WTO complaint against the United States, arguing that the various U.S. actions against online gambling amounted to an illegal barrier to "trade in services." Suing the United States was a brave act but Antigua felt it had no choice. As Antigua's ambassador to the WTO put it "What we want is survival, not blood."¹⁵⁰

With the lawsuit, the question of online gambling became a problem of international relations and international law. Instead of just the United States and overseas business, the question was one of two nation-states with conflicting interests. Fortunately for Antigua the fight over online gambling was not a contest of military might. Instead, by invoking an unusually powerful international court and the broad treaty obligations that come with the WTO Antigua helped itself level the playing field.

In November, 2004, to the surprise of many observers, the World Trade Organization sided with Antigua.¹⁵¹ The three-member WTO dispute resolution panel agreed with Antigua that the enforcement of U.S. gambling laws unfairly favored local casinos over international, online imports. The specific legal question was whether the United States had, when it joined the WTO, agreed to open its gambling and betting sector to international competition. The panel ruled that it had.¹⁵² They also agreed that the United States enforced its gambling laws in a discriminatory fashion, targeting Antiguan online casinos with greater frequency than U.S. concerns. In the panel's judgment the American actions "constituted 'arbitrary and unjustifiable discrimination between countries where like conditions prevail' and/or a 'disguised restriction on trade.'"¹⁵³

Thanks to the intervention of Antigua and the WTO, the online casinos now had an order declaring the U.S. enforcement practices illegal. That isn't the end of the story: the United States in 2005 indicated that it will appeal the decision to the WTO appellate body, and rumor has it that Britain may intervene on behalf of the Antiguan. But what this shows how problems of internet law and evasion can be both transformed into and influenced by the conduct of international relations.

Wasteful or Healthy?

Can anything be said in favor of these regulatory contests? The ongoing battles over gambling or filesharing may strike most as highly wasteful. Government, outlaws and their supporters in other countries are pouring money into these contests: wouldn't it be better if they could be avoided? There may however be some benefits in regulatory contests for a domestic legal system that may not be clear on first inspection.

Every legal system is full of dead wood. One category are unpopular laws passed in another era that would never be passed today. Legal theorists call the existence of such laws part of the problem of "generational sovereignty."¹⁵⁴ How can we, the living, rule ourselves if so many of our laws are passed by people who are dead? A famous example involves the laws banning contraceptives. These were laws were enacted in another age, but they survived well into the 1960s.¹⁵⁵ One thing that a regulatory arms race can do is reopen debate on such laws, and leading to results more in conformity with the will of present generation, whatever that may be.

This is the forest fire model of legal change. Much as experts believe the occasional fire keeps forests healthy by burning dead wood,¹⁵⁶ so too can a technological shock that challenges an unpopular law help maintain a healthy legal system. It is true that much lawbreaking is just destructive behavior in new forms, like online fraud or child pornography. But sometimes a technological challenge to a law can force us to ask whether that law in question is imposing costs that can no longer be justified. When political dissidents invest in new efforts to break China's control over speech, it says something about the justifiability of those laws. When Voice over IP companies provide cheaper telephone service by avoiding complex FCC rules, the need for those rules comes into question. When millions of citizens use the internet to import prescription drugs, it prompts lawmakers to ask whether domestic drug prices are too high. So too has the technological challenge to copyright, as we will see in Chapter 7, prompted much new thinking on how the copyright laws deal with new technologies for delivering content.

The answer won't necessarily be to discard the law: we may find that there are good reasons for the laws that come under challenge. Take for example the twin challenge to pornography and gambling laws in the 1990s and 2000s. Whether either should be banned by government is a question that depends on your underlying belief in the appropriate role of government. Should government ban that which is potentially dangerous and addictive but consumed voluntarily?

We nonetheless seem to have an initial verdict. We continue to think gambling harmful enough to invest in an ongoing campaign block its

accessibility around the country, we have committed substantial resources to that cause. Meanwhile, faced with pornography governments seem happy simply to make sure it stays away from primetime television in general and the Superbowl in particular. Why exactly things have turned out this way is hard to say. Yet from this process something has been gained: our country has been asked to examine what we are regulating, and why, and to justify our rules all over again.

Epilogue

Hub Arkush lives in Chicago and publishes the magazine *Pro Football Weekly*. He does not operate a casino, yet in September 2003 he found himself facing a federal subpoena for involvement in gambling. The stated crime? His magazine runs advertisements for online casinos. Arkush quickly caved and dropped the ads, forfeiting millions in revenue.¹⁵⁷ Cases like Arkush's marked a new development in the casino contest: the delayed entry of the United States federal government into the regulation of online gambling.

In 2003 and 2004 federal prosecutors across the United States began their crackdown on online gambling. Ignoring the lack of a specific federal law banning online gambling, they targeted advertisers of all kinds and came on strong. Where Spitzer demanded settlements in the thousands, federal prosecutors demanded millions. In July 2003, the U.S. Attorney for Michigan assessed a \$10 million fine against PayPal for alleged violations of the USA Patriot Act and the Wire Wager Act.¹⁵⁸ In April of 2004, Justice seized a further \$3.25 million from Discovery Communications. It also announced settlements with Infinity Broadcasting and Clear Channel Communications.¹⁵⁹

In the 2000s the Justice Department also began going to Congress to ask for new and tougher laws. In testimony officials from the Justice Department seized on the potential for compulsive gambling, gambling by minors, and money laundering and fraud. Said one official, "like scam telemarketing operations, on-line gambling establishments appear and disappear with regularity, collecting from losers and not paying winners, and with little fear of being apprehended and prosecuted."¹⁶⁰

These federal measures have taken their toll. In the early 2000s, some casinos began screening U.S. customers to avoid liability or losing their licenses in the United States. Some conceded defeat and closed their doors. The MGM Mirage Online, once located on the Isle of Man, has cashed in its chips.¹⁶¹

But the size of the American online gambling market was attractive enough for some casinos to go back and reinvest in new circumvention measures. Blocked from most American credit cards and U.S. credit services like

Paypal, in 2004 online casinos began to build their own, alternative system of overseas credit. A consortium of online casinos set up credit systems with names like NETeller and iGM-Pay. Instead of relying on credit cards, the new systems draw money directly from clients' chequing accounts. Here's how one casino, Empire Poker, explained its system to customers whose credit cards were blocked:

From: info@paypro.com
To: wu@pobox.com
Subject: Credit Card Transfer Failed - Try iGM-Pay and get 20% Extra.

Dear Player,

We noticed that you were unable to deposit funds to your account with www.empirepoker.com using your credit card earlier. If all the information you entered was correct, the reason you are getting declined is your credit card company does not allow you to make direct purchases with eGaming sites.

We are sure you would like to get back to playing as soon as possible, so we are writing to introduce you to our new player favorite and offer you a 20% on your first purchase using iGM-Pay!

Write us a check electronically with eChecks by iGM-Pay, using the information printed on your regular checks (US bank accounts only). Once you become a verified user, you can also receive your cash outs directly to your bank account it's secure, fast and free!

To face the ban on advertising, casinos spent time and doing anything possible to bolster their respectability within the United States and hopefully make themselves a domestic player able to influence the political calculus. One strategy was to try and attract respectable celebrities to endorse online casinos. For a short time in 2000, an online casino named PlaceThatBet.com convinced Yankee Star Reggie Jackson to host a web site named ReggieJacksonCasino.com. After an uproar, Jackson claimed he never intended to endorse a site that offered sports betting and pulled his name.¹⁶² In December of 2004, Gibraltar-based Empire Poker, one of the larger online casinos, offered to finance the Washington Nationals move from Montreal the District of Columbia. It offered up to \$500 million to help the Nationals set up shop. Neither the District nor Congress responded to the offer.¹⁶³

The new equilibrium between the U.S. government, the casinos and the countries that love them has not been reached. But in the decade to come it will be. We will know the limits of government's power to stop a lucrative internet vice. We will learn along the way something about how hard, in the end, Americans want it to be to get to a casino.

What follows are four chapters from a book written by Jack Goldsmith and I. I have taken chapters 1, 2, 5 & 6. Chapters 5 and 6 are newer and more in need of feedback, though I appreciate comments on any part. This book is coming out under the trade press so you may find it slightly more narrative and more basic in its explanations than your average law review article.

This excerpt obviously leaves much of the argument out. If anyone is interested in reading the whole book please contact me.

TW

Chapter 1

Yahoo!

Marc Knobel is a French Jew who has devoted his young life to fighting the remnants of Nazism in the modern world. One day, in February 2000, he sat before his computer in Paris, typed in www.yahoo.com, clicked through to the auction page, and performed a simple search. To his horror he found himself looking at page after page of swastika arm bands, SS daggers, concentration camp photos, and even replicas of the Zyklon B gas canisters. He had found a vast collection of Nazi mementos, for sale and easily available in France, hosted in the United States by the Internet giant Yahoo. 1

Two years earlier, Knobel had threatened a public relations war against America Online. Browsing the Internet, using a computer in France, he discovered Nazi hate sites on AOL's servers in Virginia. AOL responded to his threats by closing the sites, and Knobel assumed that a similar threat against Yahoo! would have a similar effect. But he was wrong. AOL was atypical, it turned out. The location of AOL's corporate headquarters—in the suburbs of Washington, D.C.—made it sensitive to public relations and politics. Not surprisingly, it was more careful than most Internet companies when it came to the content it put on its site.

Yahoo!, by contrast, was rooted in Silicon Valley's turn-of-the-century libertarian bubble. Its executives thought government was dumb, and government-enforced speech restrictions dumber still. They were convinced that the borderless Internet had rendered national laws unenforceable. Confronted by an obscure activist who preached speech regulations and invoked French anti-Nazi laws, Yahoo! shrugged its high-tech shoulders. "We are not going to

change the content of our sites in the United States just because someone in France is asking us to do so," said Yahoo!'s co-founder, Jerry Yang.

2

So Knobel decided to sue Yahoo! in France. The organization he worked for, the International League Against Racism and Anti-Semitism, teamed up with a French Jewish Students' Association. Together, they charged that auctions running on Yahoo!'s servers in California violated the law against trafficking in Nazi paraphernalia, at least insofar as people in France could view these sites and make purchases on them.

In response, Yahoo argued that the French court had no power over an American corporation or a server located in the United States. It added that terrible consequences would flow from allowing national governments to regulate the Internet. If French regulations applied to a website in America, then

2

Page 3

presumably so would German and Japanese regulations, not to mention Iraqi and Chinese ones. Pretty soon, every web site would have to contend with dozens of competing national laws, making it impossible to operate. "It is very difficult to do business if you have to wake up every day and say 'Okay, whose laws do I follow?," said Heather Killen, a Yahoo! vice president.

³ "We have

many countries and many laws and just one Internet."

⁴ Claude Stern, a Silicon

Valley attorney, chimed in: "If all of the different countries imposed their laws on the Internet, you would have anarchy."

⁵

* * *

Evoking the specter of "anarchy" was doubly ironic. Anarchy is the absence of law, not the overabundance of law. And Stern's argument was a premise for a type of anarchy that he and many others embraced—cyberanarchy.

Cyberanarchy is the view – dominant in the late 1990s – that territorial governments like France cannot, and should not, govern the Internet.

⁶ Jerry

Yang gave the French lawsuit the back of his hand because he believed that the French court could exercise power only in France, and thus could not control what Yahoo! put on its servers in California. Yang embraced the conventional view that State sovereignty extends to the State's borders, but not into the territory of another State. France thus had no power over what's on a computer in the United States, even if data on the computer was accessible in France.

But if France could not have stopped the Nazi webpages at their source in the United States, it also seemed powerless to keep the unwanted pages out of France. One of the Internet's defining features is a decentralized routing system that carries messages from point to point even if intermediate communication exchanges are blocked, damaged, or destroyed. "The net interprets censorship as damage, and routes around it," John Gilmore famously declared. To keep out the Nazi pages, France would have had to shut down every single Internet access point within its borders—a seemingly impossible task in the modern age. And even this wouldn't have worked, because determined users could have accessed the Net by a telephone call to an Internet access provider in another country. Nor, it seemed, could France have monitored and blocked the data from the U.S. servers at the French border. Unlike cars, wine, and other "real-space" goods, digital imports were hard to inspect at the border. Professors David Post and David Johnson, famous for their theory of cyberspace sovereignty, put it this way: "The volume of electronic communications crossing territorial boundaries is just too great in relation to the resources available to government authorities." And even if France had succeeded in blocking a webpage, the same information could have been posted on an indefinite number of mirror sites outside France.

⁷ To keep out

8

3

Page 4

So the Internet seemed to place the State in a bind. Before the Internet, most activities a State cared about took place within its borders and thus under State control. The Internet has shattered this historical congruence between geographical activity and State power. Its architectural features—instantaneous universal communication, geographical anonymity, and decentralized routing—permitted data on any computer linked to the Net to zip anywhere around the globe, in an instant. And this, in turn, made it very easy for computer users outside a nation to do things inside the nation that are illegal there. As Marc Knobel discovered, images, texts, and pictures on a server in California can readily appear on a computer screen in France or any nation plugged in to the World Wide Web.

The problem is not, of course, limited to the sale of Nazi goods. If Nazi advertisements from California can appear in France, then people in Saudi Arabia can access porn sites from servers in Holland; Americans can bet on digital blackjack tables on computers in Antigua; Chinese citizens can view web sites with information critical of the Chinese government; students in copyright-restrictive countries can download music-swapping software from servers in the

SouthPacific;businesses can place theirfinancial information and taxable assets offshore, beyond the reach of national taxauthorities;a book banned in France can be placed on a website outside France sothat Frenchmen (and everyone else in the world) can view it; ⁹ and a twenty-something in the Philippines can place a worm on the Net that causes billions of dollars in damages to computers in countries around the world. ¹⁰

This is why the Internet seemed sothreatening toState sovereignty in the late 1990s. States are sovereign tothe extent that they control matters inside their borders—what is allowed, what is required, and what is prohibited. But Internet communications can originate anywhere and extend everywhere. Data on the Net can thus be sent from computers in places free from government restriction, undermining legal authority elsewhere. Jerry Yang was sanguine about this development, probably because it had convenient implications forhis firm’s operating costs. But many were alarmed. In the midst of the Yahoo!trial, Paul Krugman wrote a New YorkTimescolumn about the Net’s threat to traditional copyright and tax laws. Internet technology is “erasing boundaries” and undermining state power, he warned. “Something serious, and troubling, is happening -- and I haven’t heard any good ideas about what todoabout it.” ¹¹

The problem was not just that States couldn’t control the Net. As Yahoo Vice President Killian suggested, if France could apply its laws toYahoo!’s Nazi sites based on the sites’ accessibility in France, then every nation could do so, for the Yahoo!site was accessible everywhere. The result would be a mess in which every State applies its laws toevery Internet communication, strangling the Net

4

Page 5

in conflicting rules and procedures. It would be as if all the nations of the world sat side-by-side on two-dimensional map, withthe Internet hovering above as a separate space, coextensive with the world below. When the 180orsonations lying below simultaneously interfere with the singularspace above, the result would be a chaos that destroyed the Internet. ¹²

M any believed these problems could only be solved by international laws that applied the same rule everywhere. The Vatican called for“international cooperation in setting standards and establishing mechanisms to promote and protect the public good.” ¹³ David Johnson and David Post, whoe met earlier, suggested a more imaginative and dynamic solution: “cyberspace sovereignty.” Cyberspace, thy maintained should be conceived as a separate place withits own

kind of sovereignty, and be governed by the “Netizens” around the world who would organize into “a-geographical, decentralized voluntary associations.”

While there was disagreement on the proper form of post-territorial government, few disagreed with Frances Cairncross’s conclusion that the Internet would reduce the authority of the State and “shift power downward, to the individual.”¹⁵ In 1996, Nicholas Negroponte, the co-founder and Director of MIT’s Media Lab, cheerfully summed up the conventional wisdom: “It’s not that laws aren’t relevant, it’s that the nation-state is not relevant.” He concluded: “The Internet cannot be regulated.”¹⁶

* * *

Yahoo!’s arguments in the French court reflected this conventional wisdom. But it soon became clear that these arguments would not go uncontested in the French courtroom. Knobel and his friends countered that, though French law might not ordinarily extend to a U.S.-based server, it certainly allowed France to do anything within its power at home to block illegal content from abroad. They also pointed out how anomalous it would be to leave the Net unregulated. “The freedom of expression is not unlimited,” said Marc Levy, one of the anti-Nazi lawyers. French law “does not permit racism in writing, on television or on the radio, and I see no reason to have an exception for the Internet.”¹⁷

This simple statement seemed to pierce the heart of cyberanarchy. The Yahoo! official declared that there is “just one Internet,” as though this technological fact would win the legal argument. But the French plaintiffs demanded that the new technology respect France’s anti-racism laws. Yahoo!’s executives, in the grip of the belief that the Net is immune to territorial laws, couldn’t imagine that territorial law might trump technology. argument was joined, however, Yahoo! faced hard questions. Why should an Internet company be more immune from regulations in different nations than

Once the

“real-space” multinational firms? If Ford Motor Company must comply with the varying safety and environmental laws of the many countries in which it sells cars, why should Yahoo! be exempt from similar regulations?

Yahoo! had a plausible response. Unlike Ford, Yahoo! could not control where in the world its products went. Ford could make special cars to comply

with French regulations, and could send these cars only to France. If Ford found French environmental regulations too costly, it could simply stop making France-fitted cars without suffering harm in its other markets. At the same time, both Ford and France could be confident that a French citizen would find it difficult to buy a Ford car in America and to import it into France. Yahoo!'s situation seemed different. It had tried to accommodate France by maintaining a French-language web site (www.yahoo.fr) that complied with French law. But it also had a U.S. website that French web surfers were choosing to visit. And unlike Ford, Yahoo! claimed not to be able to identify where in the world its "customers" were from, or to screen them out by geography. If Yahoo! was forced to comply with French law, it would have to remove Nazi items from its U.S. server, thereby depriving everyone everywhere from buying them, even in places where their purchase was legal.

This proved to be the key issue in the trial: What could a website do to prevent surfers from across the world from visiting in defiance of their governments? In May 2000, Judge Jean-Jacques Gomez ruled preliminarily that Yahoo!'s U.S. web sites violated French law, and ordered Yahoo! to "take all measures to dissuade and make impossible" visits by French web surfers to the illegal Yahoo! Nazi auction sites.

¹⁸ Yahoo! insisted that it was incapable of complying with the order. "Asking us to filter access to our sites according to the nationality of web surfers is very naïve," Jerry Yang declared.

¹⁹ It was argued

that cyberspace had no frontiers, and there was no way to prevent netizens from traveling wherever they wished. Yang seemed to have the support of the United States Supreme Court, which in an important First Amendment case two years earlier had determined that "once a provider posts its content on the Internet, it cannot prevent that content from entering any community."

²⁰ The high-tech

industry supported Yang as well. "Suggesting that an online company prevent people from one country from viewing a Website is near impossible," insisted Joe McNamee, a spokesman for the European Internet Service Providers Association in Brussels.

²¹

* * *

Yang's argument again reflected turn-of-century assumptions about the architecture of the Internet. The Net was not built with physical geography in mind. Neither Internet Protocol Addresses (each computer's Internet ID), nor

addresses, were designed to dependably indicate the geographical location of computers on the Net. Even domain names and e-mail addresses that contained geographical clues – such as www.toystore.co.uk, oralqaeda@afghanistan.gov – were unreliable geographical indicators. The web page might be located on a computer in Italy (and the data might be cached in dozens of nations), or might be sold or re-assigned to an entity outside the United Kingdom. And Bin Laden might have logged into his computer in Afghanistan from a hideout in the Sudan, and sent an e-mail from there.

These architectural “facts” meant that users of 1990s Internet technology could not know the geographical source or destination of their communications. E-mailers and webpage operators didn’t know where in the world the messages and pages were being viewed, and thus what laws in which nations they may be violating. “[I]n Cyberspace, physical borders no longer function as signposts informing individuals of the obligations assumed by entering a new, legally significant, place,” noted cybersovereignists Johnson and Post in 1997. It seemed unfair to apply local laws to Internet users who didn’t know they were violating the law and thus could not actively comply with it. A New York court invalidated a Net anti-pornography law for just this reason, worrying that “a single actor might be subject to haphazard, uncoordinated, and even outright inconsistent regulation by states that the actor never intended to reach and possibly was unaware were being accessed.”²³

22 It

France’s attempt to govern Yahoo! seemed unfair for other reasons as well. Even if Yahoo! knew that its California site was being viewed by people in France, it couldn’t block the content to French viewers alone. Yahoo! could only comply with the French law by removing its Nazi sites from its California servers altogether, thereby depriving users in the United States and other countries of their legally protected rights to view the site. This seemed profoundly undemocratic. People outside France have no voice in the development or enforcement of French law, and thus should not be subject to it.

Despite this apparent unfairness, Net users confronted with a range of conflicting national laws could rationally be expected to comply with the strictest among them in order to avoid legal liability. The ultimate effect of territorial control of the Net seemed to be a tyranny of the unreasonable, or lowest common denominator. “We now risk a race to the bottom,” said Alan Davidson of the Center for Democracy and Technology about the Yahoo! case. “The most restrictive rules about Internet content — influenced by any country — could have an impact on people around the world.”²⁴ The situation was not unlike the old European joke: In Heaven, the French are the cooks, the Italians are the lovers, the English run the government, and the Swiss make everything run on

time; in Hell, the English are the cooks, the French run government, the Swiss are the lovers, and the Italians make everything run on time. Territorial control of the Internet portended a parallel version of Internet hell: A world of Singaporean free speech, American patent law, Russian commercial regulation, and Chinese civil rights.

* * *

For these reasons, Yahoo! was confident it would eventually prevail before Judge Gomez. In the summer of 2000, any other result was unthinkable. But the events of that summer and fall would prove Jerry Yang, and not Judge Gomez, to be “very naïve.” Judge Gomez gave Yahoo! two months to figure out technical ways to block French surfers. During this recess, Cyril Hourie, the founder of a fledgling American firm called Infosplit, e-mailed Ygal El Harrar, the head of the Jewish Students’ group that was the second party to the lawsuit. He told El Harrar that his firm had developed a new technology that could identify and screen Internet content on the basis of its geographical source. Hourie flew to Paris and met El Harrar in the offices of his lawyer, Stephane Lilti. He loaded the latest version of his software on to Lilti’s computer, and showed how it could identify the geographical location of web sites, first testing it on some he knew were run from servers located in France, and then on some he knew were located in the United States. He then visited Yahoo!’s auction servers. The three men blinked and peered into the screen, astonished: Yahoo!’s servers, which the firm had claimed were protected by the U.S. First Amendment, were actually located on a site in Stockholm! Yahoo! had apparently placed a constantly updated copy, or a “mirror” of its U.S. site in Sweden to make access to the site in Europe faster.

25

When the trial resumed on July 24, Yahoo! lawyers again asserted that it was technically impossible to identify and filter out French visitors to the firm’s U.S.-based websites. Lilti objected that Yahoo! had not tried in good faith to find a technical solution. He then demonstrated Hourie’s geo-location technology in the courtroom, and showed that the Yahoo! auctions in France were not in fact coming from servers in the United States. Lilti invited Judge Gomez to consider the technology’s profound significance: The nostrum that every web page was necessarily accessible to every computer user everywhere in the world was simply wrong. An e-firm could identify users by geography and, if it liked, screen them out. Judge Gomez responded cautiously to this seemingly audacious claim, and appointed three Internet experts—Vincent Cerf, the “father” of the Internet, Ben Laurie, a British Internet expert, and Francois Wallon, a French technology maven—to assess whether and to what extent Yahoo! could block transmissions into France. The experts confirmed that, given

26

the state of technology in late 2000, Yahoo! could screen out 90% of French users

through a combination of Hourie's IP-identification technology and self-reporting about nationality. ²⁷

That was good enough for Judge Gomez. In a landmark decision issued on November 20, 2000, he ruled that Yahoo! was "committing a wrong in the territory of France" by allowing Nazi goods to appear for sale on web pages there. ²⁸ The Judge determined that the French court had power over Yahoo! and its servers because the company had taken conscious steps to direct the prohibited Nazi auction pages into France. He noted, for example, that Yahoo! greeted French visitors to its U.S. website with French-language advertisements – a fact that showed both that Yahoo! was tailoring content for France, and that it could to some extent identify and screen users by geography.

²⁹ The Court

acknowledged that 100% blocking was impossible, and ordered Yahoo! to "take all measures to dissuade and make impossible" any visits by French surfers.

30

Taken in context, this order appeared to require Yahoo! to make a good-faith "best effort," to block every single determined French user. As Marc Knobel said in response to the expert's report, "We don't want a perfect solution, because a perfect solution does not exist." ³¹

Yahoo! responded indignantly, claiming that it would ignore Judge Gomez's decision unless a U.S. court made it do otherwise.

³² Two months later,

however, Yahoo! pulled the Nazi material from its auction sites, weakly asserting that it was motivated by bad publicity from the Nazi auctions, and not the French ruling itself. The entire Yahoo! episode came as a shock to most Internet observers. The resulting confusion was summed up by Thomas Varanian, the chairman of an American Bar Association committee that had just completed a two-year examination of the limitations of State control over the Net. "It's a little bit as if we've all been transported to Mars and now have to figure out new rules of engagement," he lamented.

* * *

Varanian got it exactly backwards. The Yahoo! decision transports us not to Mars, but rather back down to earth, and helps us to see the many problems of Net governance in a more realistic and fruitful light. This book attempts to set out that more realistic vision. It shows that territorial states can and will govern the Net. And it argues that far from sowing confusion, territorial control can bring a useful order to Internet communications.

Vartanian thought Yahoo! required us to rethink Net governance because he erroneously believed that the Net was a borderless medium beyond State control. But as the Yahoo! decision shows, territorial States can control the Net. They do not by going after offshore content providers directly, but rather by controlling people, firms, equipment, and events within their borders. Yahoo!

did business in France, and had assets and agents there. It probably capitulated because it knew that France could have seized the licensing fees it received from its French subsidiaries, or the payments it gets from its French-language advertisers. ³³ Internet firms with a global presence will have these kinds of connections with many countries, any one of which could invoke threats against local assets and people as a basis for enforcing local laws. And as we will show in Chapter 4, there are many other means of effective local enforcement as well.

The Yahoo! decision also shows why territorial control of the Net often makes sense. When French citizens receive offshore communications that their government deems harmful, the form of the communication—digital bits, paper, radiowaves, or TV broadcast—is irrelevant to France's right, and indeed duty, to check and redress the harm. France's action to protect its citizens does not imply that every state can regulate every internet transaction. France can do nothing directly against the vast majority of internet users—e-commerce buyers and sellers, porn purveyors and consumers, chat room participants, web-page owners, and the rest—who have no physical presence in France, such as assets, bank accounts or employees. Against this latter class of Internet users, the country must employ different strategies, such as clamping down on French end-users, French ISPs or financial intermediaries based in France.

The Yahoo! case also demonstrates some of the virtues of a bordered Internet. France and the United States are democracies with different conceptions of free speech based on different cultures and histories. Judge Gomez's requirement that Yahoo! screen out the Nazi pages from the United States promotes self-governance by allowing the peoples in both places to reach different conclusions about the optimal level of speech regulation without imposing each State's view of the matter on the other. The Yahoo! decision also shows how a bordered Internet helps avoid the tyranny of the unreasonable. Filtering technology allows a web operator to identify recipients of information by geography and screen out content to them. This puts the Yahoo!'s of the

world in the same position as the Ford Motor Company's of the world. Yahoo! need not bow to the most restrictive law to do business elsewhere. Just like Ford, it can avoid a presence in France and other places where its actions are illegal.

Geographical filtering technology is not perfect and never will be. But as we show in Chapter 4, it need not be perfect to have its desired effect on French consumption. The geographical screening requirement imposes costs on Yahoo! and might result in less content or higher prices for Yahoo! users in other nations. But as we explain in Chapter 5, these are ordinary, perfectly legitimate, and possibly even efficient consequences of international business. The requirement that firms like Yahoo! comply with local law will not, as many feared, destroy or even much affect the Internet. Governments, even oppressive ones, don't want to control the vast majority of Internet communications any

more than they want to control the vast majority of "real-space" speech. Despite e-borders in certain areas, most of the Net will remain world-wide and borderless, as originally envisioned.

The Yahoo! model is not a panacea for every Internet governance challenge. The State asserts its control in different contexts in different ways and with different degrees of success. Deep structural issues of Net architecture, such as the uniform naming and numbering system that makes a global Internet possible, would seem to require a global rather than territorial solution. As we explain in Chapter 9, a special global system has developed in this context, but one cannot understand how this system works unless one sees that it is under the firm control of a single sovereign state--the United States. Peer-to-peer systems that have proven so frightful to the music industry are also a special challenge for State control, although as we argue in Chapter 7, not nearly so much of a challenge as is commonly thought.

International institutions and private groups will play an important role in Net governance, just as they do in real-space governance. As we explain in Chapter __, States sometimes delegate power downward to private parties or upward to international bodies, when it is an issue they care about. But even when this happens, the most important policy puzzles thrown up by the Internet—e-commerce and privacy, speech and pornography, intellectual property, cybercrime, and much more—cannot be understood or resolved unless we understand the territorial State's central role. Until this role is fully understood, we cannot think clearly about the future of the Internet, nor indeed about the traumatic reshaping of the world called globalization. In this sense, the

“borderless” Internet teaches valuable lessons about the abiding importance of territorial sovereignty in our tightly interconnected world.

Not all of these lessons are happy ones, however, as the denouement to the Yahoo! case reveals.

* * *

Soon after Judge Gomez’s decision, Yahoo!’s resistance to geographical screening began to wane. The company courted the International Olympic Committee in the hope of winning a contract to webcast the next games. To attract advertisers, and protect the IOC’s intellectual property rights, Yahoo! promised to use geo-identification software to segment its audience by country. In June 2001, Yahoo! announced a deal with Akamai, a content delivery company, to use the firm’s geographical identification technology so that its portal could deliver geographically targeted advertising. Yahoo! claimed the move would allow it to “increase advertising relevance.”
lawyers, Mary Wirth, awkwardly tried to justify the apparent tension in the

34

35 One of Yahoo!’s

firm’s position. “We argued that . . . it’s not a 100 percent accurate solution for the French court order because we would have to identify (French citizens) with 100 percent accuracy, and that’s not possible. . . . The technology is perfectly appropriate for ad targeting purposes.”

36

A year later, Yahoo bowed to Chinese pressure and signed the Internet Society of China’s Public Pledge on Self-Discipline for the Chinese Internet Industry. It pledged to “inspect and monitor the information on [Chinese] domestic and foreign Web sites . . . and refuse access to those Web sites that disseminate harmful information to protect the Internet users of China from the adverse influences.”³⁷ Ken Roth, the Executive Director of Human Rights Watch, complained that Yahoo! promised “to identify and prevent the transmission of virtually any information that Chinese authorities or companies deem objectionable.”³⁸ To fulfill its obligations, Yahoo!, the one-time champion of free speech, hired a small army of censors whose job it is to monitor chat room conversations, block “harmful” comments, and report offenders to the Chinese internet police. By this point, Yahoo! had dropped all pretense about its inability to screen content by geography. Greg Wrenn, a Yahoo! attorney who had insisted that it was “impossible” for Yahoo! to comply with Judge Gomez’s geographical filtering order in the Yahoo! case, now proclaimed that Yahoo!

would conform to local laws in countries where it operated. restrictions on content contained in the pledge impose no greater obligation than already exists in laws in China.”⁴⁰

³⁹ Said Wrenn “The

* * *

Yahoo’s capitulation in China reveals the darkest side of territorial Net control. Many believed that the Internet would end authoritarianism by empowering the people with the information and organization tools that would enable them to rise up against their oppressors. “Imagine if the Internet took hold in China. Imagine how freedom would spread,” asserted George W. Bush in the December 1999 republican primary debates.⁴¹ The usually sober George Will was even more optimistic. Reflecting on the proliferation of Internet cafes in China, he predicted the end of authoritarian rule there: “Totalitarianism is rendered impossible, and perhaps even tyranny is rendered difficult, by technologies that make nations porous to information.”⁴²

If only it were true. Unfortunately, the same territorial control that permits democratic France to exclude unwanted information from its territory permits authoritarian China to do the same. As we will see in Chapter __, the Beijing government successfully blocks out much of the content it views as unattractive, and uses the Net to shape its own political agenda. Following the April 2001 downing of an American spy plane in China, for example, the vast majority of Chinese Internet users heard only the Chinese, and not the American,

12

Page 13

version of events. “By exposing people only to official accounts about a hostile American intrusion, the government successfully stoked nationalist sentiment,” said Martin Regg Cohn.⁴³

Many claim that China’s surprising success in controlling the Net argues for eliminating territorial control of Net content. The China example is cause for regret. We assess this and other evils of territorial control throughout the book. But as we also explain, geographical control of the Net is inevitable. The State did not create the Internet geo-ID technology that China employs to keep unwanted content out. Rather, as we show in Chapter 3, the private sector created it in response to consumer demands that Net content be better tailored to suit individual interests—interests that, as a brute fact, often cluster by geography. And as the Yahoo! case shows, governments in democratic states are starting to demand that this technology be used to respond to entirely

appropriate constituent demands to protect them not only from Nazi goods, but also from hate speech, credit card theft, invasions of privacy, sexual predators, spam, and much more. Technologies of control designed to serve legitimate and desired ends can rarely be limited to those ends, and will often be co-opted for illegitimate purposes. The Internet is no exception.

This book is a reminder that geography and geographical power continue to matter, even in an age of globalization. The Net will, as we will show, change some of the ways that territorial governments govern. Such changes are inevitable when the speed of communication dramatically increases and the cost of communication dramatically decreases. But changes in the way states govern will not, on the whole, diminish their central role in governance, including governance of the Net.

Chapter 2

Visions of a Post-Territorial Order

Twenty years before the Yahoo! case, two men in different parts of America began to use the Internet for the first time. One was Julian Dibbell of New York, a savvy cultural reporter for the Village Voice. The other was John Perry Barlow of Wyoming, a libertarian, lyricist, and free thinker who looked the

years he had spent traveling with TheGratefulDead. Dibbell and Barlow were very different people. But they had this in common: Neither were native computer geeks, and both were lucid, even lyrical writers, who wanted to communicate the Internet experience to regular people.

Dibbell and Barlow became the Robert Stanleys of the Cyberspace age. Like Stanley in central Africa they had discovered an exotic place and wanted to tell us about it. Like any explorer, the stories they brought back from the frontier reflected their own experience and assumptions more than objective reality. Nonetheless, these stories articulated a powerful vision: a new frontier, where people lived in peace, under their own rules, free from the constraints of a repressed society, and free from government meddling. Their vision of a post-territorial, self-governing cyberspace would create the philosophical foundation for skepticism about territorial governance of the Net. It would have an enormous impact on Internet writers and thinkers, Internet firms, and even the U.S. Supreme Court. To understand the hidden virtues of territorialism, we must first understand the possibilities and attractions of post-territorial rule.

Confronting Mr. Bungle

In 1993, back when “Information Superhighway” was still a popular term, Julian Dibbell wrote the gripping and widely read *A Rape in Cyberspace*, a story about how “an Evil Clown, a Haitian Trickster Spirit, Two Wizards, and a Cast of Dozens Turned a Database Into a Society.”⁴⁴ The story’s central premise—that the Internet can evolve its own systems of governance superior to “real-space” governance—has had a lasting impact. As the influential Internet scholar Lawrence Lessig would say years later, “Dibbell’s story is why I teach cyberlaw.”⁴⁵

Dibbell taught about Net self-governance through the experiences of the virtual, interactive worlds called “multiple user dungeons,” or MUDs. MUDs, the predecessors of today’s hugely popular online games (like *EverQuest*, or *The Sims Online*), were text-based worlds accessible through the Internet. This was the golden age of the immersive internet, when people logged on to build on-line identities and virtual homes, and more importantly, to meet and hang out with

others netizens. Though you couldn’t actually see or touch anything (other than a keyboard and screen), MUDs worked on something more powerful: collective

imagination. Users sometimes called MUDs a “shared hallucination.”

A Rapein Cyberspaceis a history of a particularMUD called LambdaMOO that Dibbell described as “a very large and very busy rustic mansion built entirely of words.”⁴⁷ It was here that a thousand orso regulars, logging in from all corners of the earth, became a virtual community. They all had made-up personalities, they generally interacted without rules, and, as Dibbell recounts, their lives in the MUD were vividly real, and in some senses more authentic than their real-space lives. Even Dibbell-the-observer began to love LambdaMOO and relish his life there.

Dibbell’s story was about LambdaMOO’s very own “bad man,” a kind of evil clown named Mr. Bungle. Mr. Bungle was a “fat, oleaginous, Bisquick-faced clown,” who humiliated, and even “raped,” other users. His tool was a tiny “voodoo doll” that allowed him to take control of people and make them do disgusting things. These were not real rapes in the sense of a physical violation of the humans typing at their keyboards in Seattle and Sydney. But they were painful nonetheless, as the debasement of a projected identity.

As Dibbell tells it, the antics and abuses of Mr. Bungle made MUD participants realize that their ungoverned world wasn’t working. While they argued about what to do, a senior MUD administrator unilaterally decided to destroy the wanton Mr. Bungle by eliminating him from the community. The LambdaMOO users scattered around the globe then begin to realize that they needed rules to govern their virtual lives. Slowly, hesitantly, but with increasing deliberation and self-consciousness, they created a nascent political community untied to physical space but with basic rules of voting, conduct, and dispute resolution. Dibbell wrote optimistically about the moral of the story, concluding that it helped us “look without illusion upon the present possibilities for building, in the on-line spaces of this world, societies more decent and free than those mapped onto dirt and concrete and capital.”⁴⁸

This first story of Cyberjustice captured two important ideas. The first was an influential and charismatic metaphor: The notion of Internet as a “place.” This metaphor, which still pervades discussions of Internet governance, originated in the early days of the Net when it did genuinely feel removed from the real world. In those days (the late 1980s and early 1990s), people didn’t use the Net to buy books or make airplane reservations. They used it to participate in communities of people who rarely met face-to-face but who got to know one another intimately. Whether it was participating in a MUD, playing online computer games, posting to “bulletin boards,” or talking in early “chat”

programs, the experience was self-contained. Whatever the consequences “there,” from flirting, or swapping programming ideas, or arguing about the causes of World War I, there would be no consequences “here,” in what they called “meatspace.” This autonomous and often vibrant communal experience naturally led to the belief that this place could, and should, be governed by the users that constituted it.

Dibble’s parable was the beginnings of a constructive vision of governance liberated from national and physical identity—that is, from our actual bodies, and their physical location. These ideas may seem a bit abstract, even nutty. But for many early Internet users and thinkers, they marked the deepest promise of the Internet revolution. At its best, the aspiration was to better fulfill the promises of (philosophical) liberalism by eliminating the relevance of physical identity and the limits it places on individual freedom.

Everyone has a physical appearance, and everyone is born somewhere; these are two facts over which we have little control. Even in the most open real-space societies, where we are born and what we look like determine our life path and prospects—the kind of opportunities we get, how we are treated by others, the extent to which those around us share our values and commitments. A liberal view of the good society says that individuals should be able to shape their lives as they wish, provided that such choices respect the dignity of others. Just as you choose your mate, your job, and your favorite brand of soda-pop, you should be free to minimize the relevance of how you look and where you live.

This is very hard to do in real space, within the territorial state system. For most people, physical traits are difficult to alter, and moving to a different and more congenial geographical community—assuming one exists—is too expensive or psychologically difficult. But as the MUD experience showed, the Internet can render these morally irrelevant physical qualities actually irrelevant. Bodily appearance and geographical location were meaningless in LambdaMOO. You could alter nearly every aspect of your identity: you could be a man or a woman, young or old, bald or bearded, whatever. And with complete control over their identities, people could cluster with like-minded and congenial souls to create virtual communities, unconnected to physical space, that would be impossible to establish in the real world. This vision considered the dominant state governance paradigm at best irrelevant and at worst a hindrance.

The Education of John Perry Barlow

John Perry Barlow has been called many things: a cyber-libertarian, a visionary, a crazy man. In the 1990s, he was the best-known and most controversial exponent of a separate legal regime for Cyberspace. He styled

himself the Jefferson of his age, and for a while at least, the description seemed to fit.

Barlow, like Dibbell, was not a natural-born computer-geek. He didn't write code. He wrote lyrics for the Grateful Dead. And instead of spending time in engineering school, he raised cattle on his parents' farm in Wyoming. His first experiences with the online world came in 1987 when, in search of a Dead Head community, he tried out the early on-line bulletin board World Electric Link (WELL). As he spent time with people who lived on the Internet, he began to think of the Internet as more than a computer network. He began to think of it as a kind of a place—what he called an “electronic frontier.”⁴⁹ It reminded him of the American West: unspoiled, self-governing, and best left to its inhabitants to run as they pleased.

In 1990 Barlow wrote a series of columns, in Wired Magazine and other publications, to explain the wonder of the Internet to regular people using regular language. These writings—and especially the notion of a “cyberspace” with its own rules—would become enormously influential. They also made the Internet, once strictly the preserve of nerds, seem cool, exciting, and intriguing.

Barlow frequently wrote in language that echoed Stanley's African diary. “Imagine” he said, “discovering a continent so vast that it may have no other side.” “Imagine a new world with more resources than all our future greed might exhaust, more opportunities than there will ever be entrepreneurs enough to exploit, and a peculiar kind of real estate which expands with development.” And “imagine a place where trespassers leave no footprints, where goods can be stolen an infinite number of times and yet remain in the possession of their original owners, where businesses you never heard of can own the history of your personal affairs, where only children feel fully at home, where the physics is psychology, and where everyone is as virtual as the shadows in Plato's cave.”⁵⁰

The frontier theme was pervasive. Barlow encouraged young Americans to make their homes in Cyberspace: “Jack in. Go to Cyberspace, and go with all the adrenaline and goofy optimism which ought to accompany frontier enterprise,” he said.⁵¹ Barlow cautioned that the Electronic Frontier was threatened by territorial government, the “last ditch efforts of the old Industrial Age powers to colonize and subdue Cyberspace.”⁵² He argued that the “The American Occupation Army of Cyberspace” (by which he meant the National

Security Agency) “meticulously observes almost every activity undertaken [in cyberspace], and continuously prevents most who inhabit its domain from drawing any blinds against such observation.”

53

17

Page 18

Just as important as Barlow’s provocations to explore and defend the new frontier were the institutions he founded to protect this vision. Barlow befriended an important group of wealthy technological libertarians who shared his ideas: in particular, Mitch Kapor, the millionaire founder of Lotus 1-2-3, and John Gilmore, a wealthy libertarian who was the first programmer at Sun Microsystems. They founded the Electronic Frontier Foundation (EFF), designed to develop the legal conception of cyberspace as a separate place and to defend it from the intrusion of territorial government. As Kapor and Barlow wrote in announcing their establishment of the EFF on July 10, 1990, the EFF was designed to mediate the “inevitable conflicts [that] have begun to occur on the border between Cyberspace and the physical world.”⁵⁴ It would also “help the folks who pass much of their lives there to find practical means for ordering their own affairs.”⁵⁵

With the EFF, Barlow hit a nerve. He and Kapor succeeded in attracting some of the Silicon Valley elite who also happened to be some of the wealthiest political libertarians in the country. People like Bill Joy, the founder of Sun Microsystems, Doug Carlson, one-time CEO of Broderbund software, Rob Glaser, former Vice-President of Microsoft, and Rockport Shoes magnate Bruce Katz. All were board-members, donors, or both. In time, EFF also attracted major corporate donors too, and became for a time the lobbying voice of libertarian technologists on Capitol Hill. (It later abandoned its lobbying role as too corrupting of its original vision.) Companies like Microsoft, Hewlett Packard and others became major EFF donors. All were trying to build a legal wall that would separate and protect the burgeoning Internet from territorial government, and especially from the United States government.

The idea of a generalized cyberspace immunity sounded, to legal ears at least, a bit crazy at first. But the EFF had a very important law on its side. When it came time for EFF’s lawyers to defend the idea of Cyberspace sovereignty, they found a powerful ally in the First Amendment to the United States Constitution. The First Amendment limits government’s ability to regulate speech, and on a

communications network like the Internet, everything is potentially “speech.” A website, e-mail, and even a MUD are all arguably expressive, and thus potentially protected by the First Amendment from government interference. In the 1990s the interface between the First Amendment and ideas of a sovereign cyberspace was exploited to great advantage.

In 1996 came what Barlow and others saw as the first great attack on Cyberspace. It came clothed as “indecent regulation,” as was known first as the “Exxon Amendment” and later the “Communications Decency Act” (CDA). The CDA was in fact a very broad law. It applied to the entire internet, and punished all transmission of “indecent” sexual communications or images to minors using

18

Page 19

the Internet. ⁵⁶ In the view of some, it threatened to put the entire network under the constant scrutiny of the U.S. federal government.

To Barlow, this law, the CDA, was an incursion of liberty as offensive as the Stamp Act or the Boston Massacre. On the day President Clinton signed the Act into law, Barlow wrote an angry email to EFF members: “Well, fuck them. . . . Or more to the point, let us now take our leave of them. They have declared war on Cyberspace. Let us show them how cunning, baffling, and powerful we can be in our own defense.” ⁵⁷

Barlow then wrote and distributed his famous 16-paragraph Declaration of Cyberspace Independence. ⁵⁸ Modeled after the American Declaration, it modestly addressed the “Governments of the Industrial World, you weary giants of flesh and steel.” It proclaimed: “I come from Cyberspace, the new home of Mind. On behalf of the future, I ask you of the past to leave us alone. You are not welcome among us. You have no sovereignty where we gather.” The declaration recognized that Cyberspace had “real conflicts” and “wrongs,” but insisted: “We will identify and address them by our means. We are forming our own Social Contract.”

Echoing Dibble, Barlow argued that the cyberspace legal order would reflect ethical deliberation instead of coercive power that characterized real-space governance. “Our identities have no bodies, so, unlike you, we cannot obtain order by physical coercion. We believe that from ethics, enlightened self-interest, and the commonweal, our governance will emerge. . . . We will create a civilization of the Mind in Cyberspace. May it be more humane and fair than the world your governments have made before.” ⁵⁹

Barlow had issued the call for action. But the Communications Decency Act required a concrete legal response. By now the EFF had a legal staff: EFF founder Mitch Kapor had found a lawyer named Mike Godwin posting interesting messages on an internet forum, and hired him as the EFF's first staff attorney.⁶⁰ The EFF, or at least Godwin, joined forces with the venerable ACLU to challenge the statute as a "facial violation" of the First Amendment. The case, styled *ACLU v. Reno*, went through the lower courts and quickly ascended to the United States Supreme Court. As Godwin later wrote, "Suddenly, the very legal status of cyberspace itself...[was] put to the test in a genuine constitutional battle."⁶¹

The litigation of *ACLU v. Reno* marked the coming together of a new community: a united internet-activist community. More than 20 groups, ranging from the American Library Association to the National Writers Union and the Safer Sex Page were named plaintiffs in the case. Dozens more groups

and academics wrote separately to support the lawsuit in a giant, collaborative effort. As Godwin wrote, "we included publishers, service providers, and individuals and organizations whose speech, while often provocative, was clearly central to the American public dialogue."⁶²

On June 26, 1997, the Supreme Court announced its decision. By a vote of 7-2, the Court declared the entirety of the CDA unconstitutional. The Supreme Court invalidated the CDA on the somewhat narrow legal grounds: that the law was too vague and therefore unnecessarily "chilled" legal speech. But of more lasting import was the Court's embrace of the concept of Cyberspace, and its apparent conferral of a special legal status for cyberspace communications.

Justice John Paul Stevens is old enough that he has actually met Babe Ruth and Charles Lingberg,⁶³ but that didn't stop the 77-year-old from seizing upon the Internet phenomenon with enthusiasm. He wrote for the Court that the Internet "constitute[s] a unique medium--known to its users as 'cyberspace'—located in no particular geographical location but available to anyone, anywhere in the world."⁶⁴ Stevens characterized cyberspace as containing "vast democratic fora" that "ha[ve] not been subject to the type of government supervision and regulation that has attended the broadcast industry."⁶⁵ The implication of *Reno v. ACLU* was that anything related to the

Internet would be afforded the strongest possible First Amendment protection. As Justice Stevens concluded: “[T]he growth of the Internet has been and continues to be phenomenal. As a matter of constitutional tradition, in the absence of evidence to the contrary, we presume that governmental regulation of the content of speech is more likely to interfere with the free exchange of ideas than to encourage it.”⁶⁶ Justice Sandra Day O’Connor, like Barlow a retired rancher, seemed to confirm this interpretation in a separate opinion reminiscent of Julian Dibbell. “The electronic world” she concluded, “is fundamentally different.”⁶⁷ It was by its nature inherently anonymous: “Because it is no more than the interconnection of electronic pathways, cyberspace allows speakers and listeners to mask their identities... users can transmit and receive messages on the Internet without revealing anything about their identities or ages.”

68

With *ACLU v. Reno*, the idea of an unregulated and post-territorial Internet had migrated from kooky obscurity to the law of the United States as announced by America’s highest court. To some the Supreme Court seemed to erect a barrier to all U.S. laws that might affect the Internet. “[T]here is very little room for further regulation of the Internet,” declared EPIC attorney David Sobel. “[The court] clearly came down on the side of this being a new medium, that it is inappropriate to graft old broadcast laws onto the Internet.”⁶⁹ Barlow appeared to have found his border to cyberspace with assistance from a real-world authority. Not only was his Declaration of Independence vindicated: suddenly, it

69 Barlow appeared

had become the Supreme law of the land. As Mike Godwin said, on the day *Reno* was decided: “Today [is] the first day of a new American Revolution—a Digital American Revolution—a revolution built not on blood and conflict, but on language and reason and our faith in each other.”

Political Engineering

At the same time as John Perry Barlow and Julian Dibbell were trying to teach the world about Internet self-rule, a crucial group of non-state actors was already exercising extraordinary powers of Net governance. Unlike Barlow and Dibbell, these men weren’t newcomers to the Internet scene. They were as native to the Internet as it is possible to be, for these were the storied “founders” of the Internet itself—men like Larry Roberts, Robert Kahn, Vint Cerf, Jon Postel, and David Clark. Unlike Barlow and Dibbell, the founding engineers weren’t terribly interested in communicating to the public. Many of them viewed terms like

“cyberspace” or “virtual reality” as the wild imaginings of the technologically illiterate. But their working methods and network designs nonetheless contributed to the growing sense that the Net would be ruled in an unprecedented way.

[Two sections omitted for workshop]

The Internationalists

Joseph Nye is an academic, former government official, and dean of the Kennedy School of Public Policy at Harvard University. He has spent much of his academic career predicting the impending decline of the nation-state, in favor of international and private organizations. As a result, in the late 1990s Nye and other internationalists interpreted the internet's arrival differently than other people. It was the confirmation of a prophecy: a sign that era of the nation-state was finally coming to a close. As Nye wrote, the arrival of the internet signified of the “reversal of the modern centralized state that has dominated world politics for the past three and a half centuries.”⁷⁰ Its replacement, he foresaw, would be a system he called the “new cyberfeudalism” characterized by “overlapping communities and jurisdictions laying claims to multiple layers of citizens' identities and loyalties.”

In short, internationalists like Nye took the Internet's challenge to the State as part of a more the more general trend of globalization and nation-state erosion. The Internet's ubiquitous nature, and the conflicts of territorial laws it generated, confirmed what the internationalists had been saying for a long time: Territorial rule must be supplemented, and eventually replaced, by international institutions.

The principal attraction of the internationalist strategy was its solution to the overabundance of territorial regulation and tyranny of the unreasonable introduced in Chapter 1. International law can apply everywhere in the world, as it does, for example, when it prohibits torture (The Torture Convention), establishes minimal rules of airline safety (the Convention on International Civil Aviation), and bans certain barriers to trade (the WTO). If the States of the world agree to a single global law for questions like libel, pornography, copyright, consumer protection, and the like, the lives of Internet users become much simpler: No conflicting laws, no worries about complying with 175 different legal systems, no race to the bottom. Legal compliance becomes like an all-inclusive

resort in the Caribbean: pay one price, and everything is taken care of. As French Interior Minister, Jean-Pierre Chevènement explained in 2000, “The idea is to produce a global text so there cannot be ‘digital havens’ or ‘Internet havens’ where anyone planning some shady business could find the facilities to do it.”

71

Not only would internationalism solve the problem of conflicting laws. It also offered the promise of better laws. States can be too close to (or too reflective of) their populations and their prejudices. They can be too likely to reject the rational or best solution in favor of a local tradition or in obedience to a powerful local interest group. Many believed that international standards applied to the Internet could eliminate the parochialism of territorial state legalism. International standards could reflect a kind of collection of best practices from around the world—the opposite of the tyranny of the unreasonable. An international approach could not only clear up confusion and conflict, but it could also wash clean the prejudice and ignorance hiding in the basement of the State.

An

Finally, internationalists took the economic logic of global unification as creating an inevitability. The argument was foreshadowed by Marx, who said that “a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe.”⁷² Translated to modern conditions, the argument is that the State’s death is inevitable because rational economic interests drive global political unification. Larger political units maximize wealth by maximizing gains from trade. The Internet, some believed, was a sign that things were moving to a further, and perhaps final level.

It wasn’t just academics or UN officials who took these positions. Steve Case of AOL, for example, agreed with the political scientists that the Internet is “transforming the notion of national sovereignty.”⁷³ He argued that nations must “revis[e] outdated and ‘country-centric’ laws on telecommunications and taxes that could thwart the growth of the medium.”⁷⁴ He urged states to eliminate the morass of conflicting national laws and embrace “international standards—from security, to privacy, to taxation.”⁷⁵

* * *

It was just a new means of communication. Yet the arrival of the internet in the 1990s tapped into something much deeper. From actors as diverse as Jullian Dibbel to Joseph Nye came the hope that this brave new network might

really change things, somehow liberate us from the world we live in, and even change basic parameters of the human condition. Behind every vision of Internet utopianism lay the hope was that by connecting every human on earth, the world might become a better place. Humanity united might do better than our lousy systems of government, throw away the construct of the nation state, and live in some different but better way.

To each of the visions, one thing was clear: the system of territorial government was broken, and needed desperately to be replaced. Whether it would be international organizations, self-governing communities, or the Internet engineers might not really matter. What was clear was that the State as Marx has suggested needed to melt away, extinguish itself, and leave the future alone. There was just one problem: the State was actually very much alive, and, it turned out, uninterested in assisting its own death.

Chapter 5

How States Rule the Net

In the winter of 1966, long before the advent of the Internet, a retired English Major named Paddy Roy Bates took a liking to an abandoned 6,000 square foot platform in the North Sea nick-named “Rough’s Tower.” Rough’s Tower was a World War II gun tower used by the British to fire at German bombers on their way to London.

By 1966, nobody wanted the rusting contraption. Bates renamed it the Principality of Sealand, and asserted the principality’s independence from the United Kingdom—six miles away. He then awarded himself the title of Prince Roy, and proceeded to issue Sealand passports and Sealand stamps with pictures of his wife Joan, an ex-beauty queen. ⁷⁶

For the next three decades or so, London journalists amused themselves telling the story of the eccentric Prince Roy and Princess Joan. The year the couple declared Sealand’s independence, Prince Roy fought off British army helicopters that strayed too near the platform. A decade later, German and Dutch diamond merchants mounted a helicopter attack when the prince was away, and succeeded in kidnapping his son, the Dauphin Michael. But the royal family struck back, reboarding the island by sliding down ropes from a helicopter and forcing the invaders to give in. One of the German merchants, who had been granted a Sealand passport in earlier and more cordial times, found himself captured and charged with treason by Prince Roy. He later received a royal pardon. ⁷⁷

Until recently, nothing suggested that a chunk of concrete and steel off the English coast might play a role in the development of the Internet. But matters changed in the summer of 1999, when a server management firm named HavenCo invested millions of dollars to turn Sealand into a high-tech data haven loaded with computer servers linked to the Internet via microwave, satellite, and fiber-optic connections. ⁷⁸

HavenCo’s idea was to rent data storage space on Sealand to people who wanted to run their webpages or place their data beyond the clutches of any government. It promised potential clients—porn purveyors, tax evaders, webgambling services, Chinese dissidents, and just about any other government-shy Internet user—that data on Sealand servers would be “physically secure against any legal action.” ⁷⁹

The company boasted that Sealand was “the first place on earth where people are free to conduct business without someone looking over their shoulder.” ⁸⁰

In the late 1990s, HavenCo generated enormous press buzz, claimed dozens of government-evading clients (all of whom remained anonymous), and seemed poised for enormous commercial success.

The HavenCoproject was the apotheosis of the late-1990s belief in the essential powerlessness of the State. Anything a State might want to ban within its territory—offensive materials, illegal activity, harmful speech—could, in digital form, escape to a computer in a place where it is legal. The Net made every State a potential data haven, depending on what it permitted and forbade within its borders. The advantage of the ugly, man-made, server-festooned island was that it had no local restrictions. Thus, it might be a convenient venue for storing data beyond every government's control.

HavenCo relied on the commonplace and seemingly irrefutable assumption that borders mark the limits of a State's power. While a state might occasionally organize an invading army, such extra-territorial control was the rare exception. Usually, the State's legal control extends only as far as its physical control, and not to the computer servers in other States. Duke Professor James Boyle summed up HavenCo's premise when he said: "If the king's writ reaches only as far as the king's sword, then much of the content of the Net might be presumed to be free from the regulation of any particular sovereign."

81

HavenCo's operating assumption should sound familiar. It was the same philosophy embraced by Jerry Yang when he called Judge Gomez's initial decree "naïve." And yet as we saw in Chapter 1, Judge Gomez effectively ended Yahoo!'s sale of Nazi goods in France, even though Yahoo! was a U.S. firm and even though its computer servers were in California.

This Chapter explains why Jerry Yang was wrong, and why HavenCo was premised on an error. States can control offshore Net communications because their effective power extends far beyond their territorial swords.

Beyond Borders

Many stores in New York's Chinatown sell what look like Gucci bags and Rolex watches at a fraction of the usual cost. These are, of course, counterfeits. While some are junk, some of the more expensive counterfeits are of high enough quality to compete with the originals. They come from manufacturers overseas that might as well be in Sealand. Located in China, Thailand, or the Ukraine, they lie far beyond the territorial control of the United States. Since only a tiny fraction of these fakes can effectively be stopped at the border, Cyber-anarchic logic would suggest that the United States and other nations are powerless to stop the trade in counterfeits.

But the counterfeits story shows the opposite. It shows how States can

control the illegal local effects of extra-territorial conduct, even when they lack the resources to stop the illegal goods at the border, or the will and resources to punish domestic consumers.

How? Primarily, the laws against counterfeits—trademark laws—target local intermediaries.⁸² If the fake Rolexes come from Thailand, it doesn't matter that the United States can't go after the Thai manufacturers, because Wal-mart won't sell you one. Wal-mart doesn't sell counterfeits because doing so would be an obvious breach of a law from which it cannot hide. Wal-mart's physical assets, its corporate headquarters, and its founding family all are in the United States, making it hard for the firm to evade government action. This is why trademark laws care very little about end-users. It isn't even illegal to own a counterfeit watch; it is only illegal for Wal-Mart to sell you one.

83

It is of course true that even by controlling the Wal-Mart stores, Macy's, and Sears within its borders, the United States doesn't eliminate counterfeit goods completely. Gucci and Rolex lose millions of dollars in foregone income each year to counterfeit purchases. But it doesn't follow that the trademark laws are useless. The law need not be absolutely effective to be sufficiently effective. do not conclude from the persistence of occasional bank robberies that laws against theft are ineffective, or even sub-optimal. Similarly, the fact that there are sellers—like the stores in Chinatown—who are willing to assume the legal risk of selling counterfeits does not mean that the trademark laws are ineffective. To be effective, trademark law need only throw enough sand into the workings of the counterfeit market so that Gucci and Rolex continue to make smart profits. Yes, these companies could earn a higher return if the counterfeit market dried up altogether. And yes, the government could do more to dry up the market. For example, it could hire more enforcement officers, invest more in border control, criminalize the purchase of fake goods, or award punitive damages against those who sell fakes. But the system can be adequate to its task even though the government could do more, and even though compliance is not perfect. Government regulation works by cost and bother, not by hermetic seal.

84 We

The Rolex example teaches us two crucial lessons for State control of the Net. The first is indirect extraterritorial control. Just because Internet content originates from places outside a State's direct control, it does not follow that local laws are ineffective. The reason is that a State can regulate people, equipment,

and activities within its territory to control the local effects of the extraterritorial activity. The regulation of local persons and property make it more costly, and thus more difficult, for in-state users to obtain content from, or transact with, regulation evaders using Sealand and other havens. influence the extraterritorial supply of prohibited content even though the source of the content is beyond its borders and even though it cannot easily stop the information at the border.

States can indirectly

The second lesson is that to achieve indirect extraterritorial control, the most important local entities from the State's perspective are local intermediaries.

As the case of Wal-Mart in the Rolex example shows, the State does not always (or even usually) regulate individuals or firms directly, but rather acts through local intermediaries that have the power and the incentive to prevent or deter persons and firms from breaking the law. Intermediaries come in two general flavors. Some intermediaries in effect punish the individual on behalf of the State. An example is an employer who has a legal duty to prevent its employees from acts of sexual harassment. Other intermediaries act as gatekeepers to deny individuals and firms something essential to the illegal activity. A weapons dealer that has a legal duty to do background searches before selling a gun is a gatekeeper intermediary.

The combined effect of indirect extraterritorial control through local intermediaries is easy to miss, it isn't what most people have in mind when they think of "law." We tend to have a view of law that comes from the Ten Commandments or English jurist John Austin. It is a view of laws as a series of commands meant to control the primary conduct of individuals (or firms). We think of direct, individualized threats: thou shall not kill, steal, or bear false witness. Break the State's rule and face the consequences. But this view of law is misleading. It is easy to overlook how often the State controls behavior collectively. ⁸⁵ Who does the most to prevent the use of illegal software at work? It is usually employers, not the government, because the state has put the company on the hook for its employees' misdeeds. Pharmacists and doctors are gatekeepers, charged with preventing certain forms of drug abuse. Much of what we do is controlled not by the State itself directly, but by what are effectively deputized third parties. When it comes to trying to stop extra-territorial conduct, it is to local intermediary control that the State usually turns.

Extra-Territorial Control Through Local Intermediaries

How precisely does local intermediary control relate to the State's ability to influence offshore content providers? Begin with a domestic version of our

counterfeit example: A manufacturer in upstate New York makes fake Gucci bags that it sells to consumers through shops in Chinatown. Like most illegal acts, this one can be understood as a kind of transaction involving three relevant parties: the “source” (the manufacturer), an intermediary (the Chinatown shops), and a “target” (the purchasers):

27

Page 28

Havens move the illegal source outside the limits of the State’s physical control. A simple haven strategy can be pictured as follows:

This looks like our example of counterfeit Gucci bags. The source of the crime, the manufacturer of the counterfeit goods, has moved overseas. Yet, as we saw in that example, both the intermediaries and the targets remain within the physical control of the State. This leads to an important insight: Effective control over any of the three elements of the transaction permits the State to control conduct within its borders. In the counterfeit goods example, control over the intermediary sellers or (if the State had the resources) the actual purchasers could effectively regulate the illegal transaction.

One might think that the source can diminish the problem of State control by getting rid of the intermediaries. Such disintermediation, what many the Internet is supposed to be all about. On the Net, after all, you don’t need a stock

broker to lose money in the market, and you don't need to visit a bookstore or airport to buy books and airplane tickets. That evasion technique, disintermediation, is pictured here:

In principle, this is a very powerful strategy. It leaves the State with the sole option of trying to hunt down the targets (i.e. end users), whom might be numerous and expensive to find (more on this later). So, if the Internet, as advertised, is gradually eliminating intermediaries, doesn't this mean that State power is doomed?

The problem with this theory, which pervaded Internet thinking in the late 1990s, was its premise. The rise of networking did not eliminate intermediaries, but rather changed who they are, and how they behave. It has created a whole host of new intermediary parties, the most important of which

28

Page 29

(for four purposes) are ISPs, search engines, browsers, the owners of the physical network, and the like. It is also too easy to forget that the rise of the Internet has made the network itself the intermediary for much conduct that we might previously have had no intermediary at all. For example, to the extent that Internet chatting replaces face-to-face conversation, it does so with the help of a new, Internet-related intermediaries.

In 1999, Lawrence Lessig surprised many legal thinkers when he announced that "code is law." Lessig's adage was a shorthand for the idea that computer software and hardware could effect people the same way that traditional laws do. And this, in turn, would mean that we have to pay attention to how designs the architecture. One of Lessig's aims was to throw cold water on the hyper-libertarianism of the early Internet days by showing that sometimes government does a better job than private firms (especially monopolies) of designing Code in ways that serve user interests. Whatever one thinks of Lessig's thesis, he was speaking of "code" as a form of collective, intermediary control. The writers of software are a form of intermediary—they help you do something you could not do without them. So, when the State commands that

Internet telephony be designed to allow wire tapping, it is using the same methods it uses when it tells your bartender to stop serving alcohol at 3 a.m.

If government acts through intermediaries, why not restructure conduct so as not to depend on any potentially regulable intermediaries? The answer, as it turns out, is that it is hard to get rid of intermediaries for a deeper reason having nothing to do with law. The elimination of intermediaries is in many cases the same thing as the elimination of the underlying conduct. Specialized intermediaries exist, after all, because they allow people to do things that would be difficult, or even impossible, for them to do themselves. It doesn't make sense to speak of making telephone calls without some entity to connect calls. Gun-manufacturers specialize in making guns. While it might be possible for people to make guns on their own, it would be at great cost. To truly act without any intermediaries means acting by oneself. When you stop and think for a moment, there are very few things, indeed nearly nothing, that one can do without the direct or indirect assistance of someone else. In the Net context, scores of seemingly-invisible intermediaries are needed to make the Net experience work.

For related reasons, it is also not possible to move intermediaries offshore, beyond the range of government control. Here is what such a move would look like schematically:

This model is no more realistic than the one that eliminates intermediaries altogether. In the Internet context, there are always local intermediaries. The most basic, of course, is the actual computer through which the Net is accessed. Behind that are many more: the owners of the physical communications lines,

the owners of network nodes, search engines, and the like. If you try to access an unregulated offshore ISP through a long-distance telephone call, the phone system becomes an important intermediary. If you unplug your line and connect by Wi-Fi, the computer remains an intermediary, as does a physical network standing behind a Wi-Fi connection.

In sum, local intermediaries are an ineliminable aspect of the Internet. We now turn to how States can use these intermediaries to control offshore Net communications.

Finding the Internet's Intermediaries

The Internet has created new intermediaries that the State has just begun to regulate. The major categories are broken down in the following chart, followed by an analysis of each:

Transport. The spread of child pornography is an unfortunate consequence of the Internet's growth. In 2002, the State of Pennsylvania decided

to try to do something about the problem by enlisting the help of Internet Service Providers (ISPs), the companies that actually sell internet connections, like AOL or Earthlink. The law required ISPs to "remove or disable access to child pornography items residing on or accessible through its service in a manner accessible to persons located within this Commonwealth within five business days of when the internet service provider is notified by the Attorney General

... ⁸⁷ In short, it required the Internet's transport intermediaries, once notified, to filter or block content from a site containing child pornography.

The

Pennsylvania Attorney-General now regularly notifies service providers of sites they should take down, and aftersome initial hesitation, they now comply.

The Pennsylvania law shows why ISPs are the obvious first target fora strategy of intermediary control. It can be great fun totalk about the Internet as a formless cyberspace. But, as we saw in Chapter3, underneathit all is an ugly physical transport infrastructure: copper wires, fiber optic cables, and the specialized "routers" and "switches" that send information from place toplace. The physical network is by necessity a local asset, owned by phone companies, cable companies and otherservice providers whoare already some of the most regulated companies on earth. This makes ISPs the most important and most obvious gatekeepers tothe Internet.

The State can achieve a large degree of control by focusing on just a few of the most important ISPs, like AOL, Earthlink orRoadrunner. "While there are many ISPs, the vast majority of Internet subscribers in the United States obtain their access from a small handful of providers," writes Harvard professor Jonathan Zittrain. ⁸⁸ "[P]ressure applied strategically to the concentric ISPs serving smaller ISPs—one or two "dolls" up in a M atryoshka sequence of destination ISPs—can coverlarge swaths of subscribers."

⁸⁹ And as the text of the Pennsylvania law suggests, the control of ISPs can be directed at preventing materials from reaching end-users (filtering), orat forcing a site to take down child pornography. It is, therefore, a control eitherof the source orthe targets of an illegal transaction.

Regulation-sensitive Americans are relatively new to the ISP-regulation game. As the Yahoo!case suggests, the command-and-control Europeans are, in the western world, pioneers. As far back as 1995, the Germans raided the Bavarian offices of Compuserve, and later indicted and tried the German manager of Compuserve Deutchland. The offense: failing to prevent child pornography from reaching German citizens.

⁹⁰ In the late 1990s, the British government threatened British ISPs with criminal prosecution fordistributing illegal adoption sites. Result: British ISPs blocked the sites to keep people in

Great Britain from accessing them. ⁹¹ Today, Germany, France and Great Britain

generally require local ISPs to screen out illegal content once they are notified of its existence. ⁹²

But the true champions of Internet intermediary control, of course, are found in the East. In order of control, they include China, Saudi Arabia, and Singapore. In 2002, Zittrain and Ben Edelman found that Saudi Arabia, through a centralized set of servers, blocks access to thousands of web sites. blocking includes obvious targets like Amnesty International's Saudi Arabia pages, and the Queer Muslim home page, along with less obvious targets like www.tasteless-jokes.com. Particularly reflective of Saudi Arabia's preferences is the blocking of nearly every site promoting or discussing any religion, including all Christian, Jewish, and Bahai sites. China, as Chapter 6 will discuss in detail, has from the beginning, maintained extremely close control of its ISPs, far beyond what any Western nation has attempted. It runs a carefully calibrated country-wide filtering system designed to allow the government to block and unblock any materials it wants to, at any time.

93 The

Information Intermediaries. Norwegian Andreas Heldal-Lund describes himself as follows: "a skeptical atheistic freethinking pacifistic positive engaged and tolerant heathen who bases his life on modern secular humanism." lives in Norway, and is a member of both Hedningsamfunnet (The Norwegian Society of Heathens) and the Human-Etisk Forbund (a national secular humanist organisation). He is also perhaps the greatest living annoyance for the Church of Scientology. For Heldal-Lund has since 1996 devoted much time to a website, "Operation Clambake" that exposes the deepest secrets of the Church and attempts to debunk its teachings.

94 He

For the Church of Scientology, Heldal-Lund's activities presented a serious problem of information control. A major benefit of rising through the ranks of the Church's strict internal hierarchy is access to carefully guarded teachings and writings. But in 2002 Operation Clambake's website posted "the Secret Library of Scientology," containing many of the most important teachings of the Church. ⁹⁵ Suddenly, writings that were meant to take years of preparation to read (and cost tens of thousands of dollars in training) were available to everyone on the World Wide Web.

Unable to shut down Clambake's Norwegian service provider, the Church turned to a different technique. It sent letters to Google.com, the web's most popular search engine, demanding that Google take down Clambake's sites under an American law, the Digital Millennium Copyright Act (DMCA). According to the Church, Clambake's materials were an infringement of copyright that Google was legally obliged to block. ⁹⁷ Google complied, meaning

96

that a search for “the secret library of Scientology” failed to deliver the results one would expect.

The Clambake story shed light on an under-recognized fact: Search engines like Google routinely take down links because of possible State action. As documented by the web site ChillingEffects.org, Google receives a constant stream of letters insisting that Google remove specified pages from its search results, usually because of alleged copyright or trademark infringement. Google complies with most. The result is something less than a neutral or comprehensive search.

This form of control is presently limited in several ways. In the United States at least, the take-down laws are focused on protecting intellectual property, not other State goals. In addition, search engines like Google matter only for the World Wide Web, not the whole Internet, and are rarely the only way of finding information. But the general technique of controlling information intermediaries has greater, and quite subtle potential for control. Consider how often you rely not just on search engines to find information, but also on “weblogs” (or “blogs”), online newspapers, and other intermediaries that point you in the direction of useful information. It is one thing for the State to openly crack down directly on forbidden information. But it can be hard to notice that information has become hard to find. It is hard, in other words, to know what you aren’t being told.

The Domain Name System & Internet Membership. In the fall of 2000, Al Gore and George W. Bush were fighting for the American presidency, aided by hundreds of millions in campaign contributions. That gave New York student James Baumgartner, at the Rensselaer Polytechnic Institute, a clever idea. As a commentary on the role of money in the election, he opened the web site VoteAuction.com as a place for otherwise disinterested voters to sell their votes to the highest bidder.⁹⁸ Its slogan: “Bringing Capitalism and Democracy Closer Together.” The idea was this: with so much money being spent trying to influence elections, why not just pay the money directly to the voter? Baumgartner billed VoteAuction as “the only election platform channeling ‘soft money’ directly to the democratic consumer.”⁹⁹

The site actually took off: as the Chicago Tribune reported, in early October, 521 unidentified people in Illinois had agreed to sell their presidential votes. The top anonymous bid was \$ 8,500, or \$16.31 per vote. Baumgartner intended the site as satire, the Chicago Board of Election Commissioners decided there was nothing funny about offering to buy and sell votes, and it moved to shut down VoteAuction as quickly as possible. It chose a

novel means: instead of targeting Baumgartner, or trying to hunt down the vote-

sellers themselves, it went after an essential asset—the
“voteauction.com.”¹⁰¹

name,

In short order, an Illinois judge imposed an injunction not on VoteAuction but on its U.S. domain name registry, Domain Bank, which had a standard domain name registration agreement prohibiting domain name use for “illegal purposes.”¹⁰² Domain Bank nixed voteauction.com’s domain name as if it were the itinerant Mr. Bungle, “shutting down voteauction.com all over the world.”¹⁰³

One week later, voteauction.com opened up under a new domain name, “**vote-auction.com**,” registered in Switzerland with the International Council of Registrars (“CORE”).¹⁰⁴ But CORE too had a prohibition against illegal use in its standard domain name registration agreement, and after extensive telephone and e-mail discussions, **vote-auction.com** was shut down again.¹⁰⁵ Voteauction later began trying to publicize its numerical IP address, <http://62.116.31.68>, but by then the voting was over.¹⁰⁶

Control over domain names is another looming, and particularly effective way formations to control Internet behavior. It is different from the other means of control surveyed here in a crucial respect: It relies on the basic architecture of the Internet itself as an intermediary for everything that is done on the Internet. It is a difficult concept to swallow, because we take it for granted that the Internet’s most basic protocols and membership policy are neutral as between every member of the network. But this, like others, is a contingent neutrality, already under attack from several quarters, and one that could gradually change.

Consider, for example, the matter of anonymity on the Internet. For years, pundits and theorists have predicted that robust “digital identification” was on its way. Soon, pundits warned, you’d never be able to do anything and remain anonymous. Lawrence Lessig wrote in 1999 that “When architectures accommodate users who come with a [digital] ID installed and make life difficult for users who refuse to bear an ID, certification will spread quickly.”¹⁰⁷

To nearly everyone’s surprise, it hasn’t happened. Microsoft Passport, the most powerful effort to create a universal digital ID, has failed to reach the usage levels that were predicted.¹⁰⁸ There are various reasons: People don’t trust Microsoft, and in general, a centralized identification system is something of a

security risk. Some degree of anonymity, for whatever reasons, remains a feature of much Internet conduct.

But there is another way that the anonymity of the Internet could change. It could change if the conditions of Internet membership change. What's that? Internet membership is something that most of us today take for granted; something that comes for free with a dial-up account.

But the lack of

membership conditions is a fact that nation states, acting through a little-known organization named ICANN, have discussed trying to change. They realize that as a general matter, membership rules have always been a powerful means of control, whether it's at a country club or the World Trade Organization. There may come a time, and that time might be soon, when accurately disclosing who you are is a condition of Internet membership, or a condition of supplying Internet membership. As Chapter 7 suggests, there may come a time when abusing your privileges as a member of the Internet could lead to expulsion.

As these and other examples show, the State has many types of intermediaries it can use for indirect control. But none of this should obscure the most basic means of control: the direct physical coercion of individuals.

Targeting Individuals

Tore Tvedt ran a Norwegian neo-Nazi organization called Vigrid, devoted to the worship of Odin and other ancient Norse gods (The link between Odin and National Socialism was never entirely clear). Fearing Norwegian hate speech laws, Tvedt had a clever idea. He placed his anti-Semitic propaganda on a server in the United States, beyond the reach of Norwegian authorities. Unfortunately for Tvedt, he didn't do anything to put himself out of the reach of Norwegian authorities. One day, the Norwegian police simply arrested Tvedt and held him responsible for the contents of the Vigrid home page.

Despite the discourse of virtuality, direct physical coercion of individuals remains an important means of regulating internet conduct. The arrest of Tvedt shows the simplest way that nations control the flow of illegal digital content from abroad—arresting the locals.

And the mistake Tvedt made is not uncommon. Jay Cohen, recently released from a U.S. prison, was the early operator of an Internet sports betting site who bet wrongly that he could beat a federal indictment for gambling.

earlier generation of pornographers, like the Robert and Carleen Thomas, the couple who ran the “AmateurAction” porn system, and criminal hackers, like the famed Kevin Mitnick. All made the same mistake and all ended up in prison.

111

The physical arrest of individuals depends less on residency than travel patterns. For example, U.S. undercover agents have, on occasion, lured criminal hackers from Russia into the United States, where they were apprehended and convicted.¹¹² And one reason why Yahoo! cared about Judge Gomez’s decision is that its executives fly through French airports and have meetings in France, and thus are subject to criminal enforcement actions there.

35

Page 36

These kinds of crackdowns, while significant, are the easy cases. Tore Tvedt wasn’t particularly clever, and he was just one person. What happens when the State is faced with the prospect of mass disobedience? Can it crack-down successfully, not on a single source, but on millions of people using the Internet who want to disobey a given law? Or might John Perry Barlow be right when he says “No law can be successfully imposed on a huge population that does not morally support it and possesses easy means for its invisible evasion?”

113

This is a big question, that matters for a whole range of contexts. Around the world, millions of new lawbreakers have been created by the Internet: copyright infringers, gamblers, consumers of pornography, and so on. We’ve seen that nations can use the tools of intermediary control to stop such activities indirectly. But what are the prospects for using direct punishment to stop a nation of lawbreakers?

While not a new question for legal theorists, end-user enforcement is nonetheless a hard one. It is the subject of dueling anecdotes, pitting the 1920s Prohibition (a failure) against laws regulating insider trading (a relative success). The starting point for any answer is the basic economic concept of deterrence, explained best by Nobel laureate Gary Becker.

¹¹⁴ In the late 1960s, Becker first argued that lawbreakers were rational, and that their decisions to break laws reflected a calculation of costs and benefits. The State, therefore, doesn’t need to actually catch every lawbreaker. It just needs to increase punishments to the point where the costs of committing crime are less than the benefits.

The economics of deterrence led Becker to argue that the State shouldn't waste too much money looking for criminals, but instead just raise the sanctions for breaking the law. You might think more than twice about parking illegally if a parking ticket meant a few days in prison. The basic logic of deterrence based on economic models suggests an answer to the mass disobedience question. It suggests that for any law, penalizing select individuals severely should be enough to compel compliance.

But are things as simple as Becker suggests? Think to yourself: is fear of punishment really the only reason that you obey the law? Many of us, in fact probably don't steal as often as we'd get away with it. Reflecting this intuition, academic work since Becker's article has shed doubt on many elements of this simple economic conclusion. Economists point out that there are limits on the amount of deterrence that can be achieved just by increasing punishments. Some people, for example, are poor enough that they don't fear fines, or are so pessimistic about their future prospects that going to jail may not seem so bad. And, of course there's an upper limit on what the state can threaten. You can only kill someone once, and most countries ban things like torture that people might fear even more than death. Finally, if the State punishes relatively minor

wrongs (like Internet gambling) as severely as serious crimes (like bank robbery), the law loses its ability to send a message about what citizens should not do, and what they really should not do.

Meanwhile, psychologists who study criminality think that there's a real limit to deterrence as well, but for different reasons. Psychologist Tom Tyler sees the perception of legitimacy as the key to understanding why people obey the law. In this view, even with tough criminal penalties, people will not obey a law that they think fundamentally illegitimate (like the ban on alcohol during the prohibition). Tyler's arguments are backed by empirical studies showing different patterns of compliance than simple economic theory would predict. These outcomes are mirrored by the work of legal theorists who study social norms, or informal rules that govern society. They believe that people generally follow social norms and for that reason, rather than the threat of legal punishment, obey the law.

What this work suggests is that the likely effectiveness of targeting of end-users will depend on the law being enforced. For laws where the State can take advantage of a preexisting set of social norms or a moral code, the State will find its job easier. But for areas in a state of moral and ethical ambiguity, end-user

sanction strategies will fail more often.

Today, the ethics and norms surrounding pornography are in flux. Some religious groups, feminist theorists and politicians view the creation and consumption of adult pornography as simply wrong, and obscenity laws also express that belief. But liberals and libertarians think otherwise, as do an otherwise silent majority. The result is that obscenity laws are routinely violated on the internet, and virtually nothing is done about it. towwhichmoral ambiguity can dampen oeven nullify the effects of laws on the books.

¹¹⁸ This shows the degree

*

We have discussed the enforcement options that remain when the source of illegal materials moves overseas. But what if, in response to enforcement against end-users, they too leave the country? What if source, intermediaries and targets are all outside the nation state? This is the possibility of “total exit,” pictured here.

Source

Intermediary

Targets

Nation-State

The creation of an exile community is indeed a kind of final escape from undesirable laws. Moses and the Israelis fled Egypt in search of (among other things) a better legal system. And today, more prosaically, lovers of high-stakes gambling can move to Las Vegas, and serious marijuana users can make their

home in Amsterdam and enjoy a different kind of life. But at some point, this becomes less of a challenge to State sovereignty, than an acceptance of it. If you move from the U.S. to Germany because you prefer a country with no speed limits, that is less what we think of as evasion, and more like what we think of as emigration.

Epilogue

On August 3, 2003, HavenCo founder and CTO Ryan Lackey went to Las Vegas to give an astonishing speech at DefCon, the annual convention for computer hackers. His talk was entitled: HavenCo: What Really Happened. HavenCo, he revealed to the world, had never been the success it was portrayed to be. The story of the giant server farm, hidden deep in the recesses of the island, was a lie: HavenCo's equipment consisted of "5 relay racks standing mostly empty."¹²⁰ The "dozens" of customers HavenCo claimed were, at the best of times, roughly 10, almost all online casinos.¹²¹ And now, Lackey reported to the crowd, HavenCo was dead. It was no more.

119

HavenCo died for two related reasons. The first was the absence of cooperative intermediaries, especially financial intermediaries. "[Sealand's] sovereignty ... has little value without commercial support from banks, etc." Banks wouldn't cooperate with HavenCo, one suspects, for the same reasons that U.S. financial institutions are not cooperating with Antiguan gambling sites: Local pressure on these crucial intermediaries influences how the intermediaries interact with offshore providers of information content.

122

Second, Sealand itself turned out to be an intermediary susceptible to the pressures of powerful states. More than anything else, Prince Michael, the ruler of Sealand, wanted recognition as an actual country. HavenCo's unseemly activities, he began to believe, were an impediment to that dream. The Prince

began to insist that HavenCo adhere to "norms of international practice and custom," and demanded that nothing "offensive" be available from his Sovereign nation.¹²³ But of course, the hosting of potentially "offensive" content was the only reason for HavenCo's existence. Without it, HavenCo was nothing. And so, the company sank into a slow decline, shedding customers and losing money, until finally came what Lackey called the "nationalization" of HavenCo in November, 2002, as Sealand kicked HavenCo off the island. Sealand today nominally owns what remains of HavenCo—a jumbled pile of network

equipment, rotting and obsolete.

Arms Races

In 1995, the Attorney General of Minnesota was Hubert “Skip” Humphrey III. The son of Lyndon Johnson’s Vice-President, Humphrey was an old-style Minnesota democrat with a get-tough reputation and serious political ambitions. In 1995, with one eye on the governorship, he decided to try to rid the state of all Internet gambling. He began by drafting a memorandum of law, warning all internet users that they were subject to Minnesota laws:

WARNING TO ALL INTERNET USERS AND PROVIDERS

PERSONS OUTSIDE OF MINNESOTA WHO TRANSMIT INFORMATION VIA THE INTERNET KNOWING THAT INFORMATION WILL BE DISSEMINATED IN MINNESOTA ARE SUBJECT TO JURISDICTION IN MINNESOTA COURTS FOR VIOLATIONS OF STATE CRIMINAL AND CIVIL LAWS.

GAMBLING APPEARS TO BE AN ESPECIALLY PROMINENT ASPECT OF CRIMINAL ACTIVITY ON THE INTERNET. THERE ARE A NUMBER OF SERVICES OUTSIDE OF MINNESOTA THAT OFFER RESIDENTS THE OPPORTUNITY TO PLACE BETS ON SPORTING EVENTS, PURCHASE LOTTERY TICKETS, AND PARTICIPATE IN SIMULATED CASINO GAMES. THESE SERVICES ARE ILLEGAL IN MINNESOTA.

MINNESOTA

124

Humphrey wrote a New York Times Op-Ed arguing that states had a duty to stop Internet gambling. “Unchecked,” he said, online gambling “has the potential to turn every family room in America with a personal computer into an unregulated casino.”¹²⁵ He then brought a prominent lawsuit against a Las Vegas online casino operator named Kerry Rogers, whose site was accessible from Minnesota.¹²⁶ Rogers admitted that Minnesotans used his site to gamble, but argued that the lawsuit was an illegitimate regulation of interstate commerce. In 1998 Humphrey successfully convinced the Minnesota Supreme Court to exercise its jurisdiction.¹²⁷ Rogers complained that he was spending millions in legal fees. Humphrey appeared to be winning.

But this early success was misleading, for Humphrey’s bluff was called. The online casinos in the United States had always said that the lawsuits would drive them overseas. In the late 1990s, in response to lawsuits like Humphrey’s that’s what happened: the online sites and their owners moved overseas, mostly to the Caribbean nation of Antigua, to the tiny Isle of Man near Britain, and to Gibraltar off the southern coast of Spain. These nations welcomed the business. By early 2000, one in every thirteen Antiguans was employed in the e-gaming business. The Isle of Man even appointed an “E-Gaming Ambassador” named John Gilmore to promote online gambling.¹²⁸ Stressing their tight regulation of gambling, Gilmore said “the Island appeals greatly to businesses that need to

maintain a high quality image internationally.”
reached nearly \$5 billion in worldwide revenue and was still growing.

129 By 2001 the industry had
130131

Meanwhile, Skip Humphrey still had much to say, but there wasn't much he could do. As Attorney-General of Minnesota he lacked the means to chase down the gambling sites overseas. An obvious alternative target was local citizens who gambled online, but Humphrey never discussed arresting individual citizens in their homes. Instead, he followed in his father's footsteps and in 1998 began his long-awaited campaign for the governorship of Minnesota. Unfortunately for Humphrey, he chose a strange time to run, and was defeated by professional wrestler Jesse Ventura, a man with no political experience.

Regulatory Arms-Races

The story of Hubert Humphrey and the gambling exodus is a typical story of a regulatory arms-race in the Internet age. In this book we have learned of the ways—many more than was realized—that governments use to control conduct outside of their territory. But that isn't the end of the story. If you've ever downloaded music for free or gambled on-line, you know these methods of control are far from perfect. The targets themselves – like online casinos, can use the Internet to take evasive action. Users can also act en masse to get around government controls. When a group of people really want to ignore a law, and the State really wants to stop them, the result is a running battle, or a regulatory arms race.

Contests between law enforcement and outlaws are nothing new. But what is new is that law evasion has become a mass, collaborative project. Clever programmers like Justin Frankel, author of the Gnutella P2P file-sharing system, create tools that empower multitudes to get around unwanted laws like copyright. A very small group of programmers, or even a single person, can help hundreds of millions of people ignore a law they don't like. Classic outlaws like bank robbers mainly benefited themselves when they avoided the law. Today's technological evasion strategies can create “collective evasion” for a big group. As Justin Frankel said in a Rolling Stone interview, “Things I've done are often interpreted as anti-record-industry, but it's really about empowering people.”

132

Yet even given the possibilities of collective evasion, it would be a mistake to discount the State's power to respond. A powerful state has on its side the rhetoric of law, resources, and its reserved power of physical coercion. As we discussed in chapter 4, the language of legal compliance can be important: many people believe that even unreasonable laws should be obeyed. Second, all but the weakest states have resources that dwarf their targets. Online casinos, unlike

countries, do not have armies or billions of dollars in tax revenue. And as chapter 4 showed, the power of physical coercion exercised against intermediaries accounts for more compliance than anyone ever thought. In short, the power of the state makes the outcome of a technological arms race hard to predict. Simply pointing to the people like Frankel and the potential of collective evasion is not enough.

Instead, regulatory arms races are contests of will as opposed to power. The State has the advantages of resources, rhetoric, and physical force. But the exercise of State power is often brutal, unpopular, and expensive. What matters more than anything else is the State's normative commitments, or how badly it wants to win. We see this in the story of Skip Humphrey, who despite his bluster lacked the political nerve to arrest individual Minnesotans for gambling even if doing so might have been effective. Unfortunately for the casinos, while Humphrey was the first, he wasn't the only nor the most effective Attorney General with an urge to fight online gambling.

Spitzer and Credit Cards

Eliot Spitzer, Harvard Law graduate and son of a wealthy New York real estate family, was elected New York's attorney general in 1998. He made his reputation bringing cases of national rather than local significance that no one else would touch. During the internet boom, when the stock market analysts could seemingly do no wrong, he went after Merrill Lynch, exposing what he called "a shocking betrayal of trust by one of Wall Street's most trusted names."¹³³ He later attacked the mutual fund industry, the trusted stewards of the billions of ordinary Americans, and later the insurance industry and the music industry. Spitzer has been called "the most powerful politician outside of Washington," and a man "temperamentally unable to stay out of the headlines." And in the early 2000s Spitzer began waging war on internet gambling.

Realizing the limits of his direct enforcement powers against overseas casinos, Spitzer and his Internet Bureau turned to a new strategy. Spitzer, steeped in Wall Street culture, noticed something that Humphrey didn't. He noticed that online casinos were dependent on American credit, and that every gambling session is effectively a transnational financial transaction. It also happens that the State of New York, unlike Minnesota, has most of America's credit-card issuing banks within its borders. Spitzer and his attorneys went to

work. “We will cut off an enormous line of credit that was a jackpot for illegal offshore casinos.”¹³⁵ announced Spitzer “Americans now waste \$4 billion a year on this pernicious form of gambling.”

42

Page 43

Spitzer and his team used the same techniques against the credit card companies that they used against Wall Street: trial by press release. Instead of threatening executives with indictment, Spitzer threatened them with press that would destroy their stock prices. As reporter Daniel Gross wrote, “the threat of Spitzer isn’t jail time; it’s a tanking stock. The very announcement of a Spitzer investigation is an excuse to sell and an invitation for shareholder lawsuits and proxy campaigns.”¹³⁶

In June of 2002, Spitzer announced his first victory. A chastened Citibank appeared at a press conference to announce that its credit cards would no longer accept online gambling transactions. In penance, Citibank agreed to donate \$400,000 to various gambling addiction groups, and a further \$100,000 to the State of New York. As Ken Dreifach, head of New York’s Internet Bureau warned, “We’re trying to get the message out to intermediaries that there’s real liability there. If you help to facilitate or promote gambling, you could be found guilty of breaking the law.”¹³⁷

Spitzer’s strategy was far more effective than Minnesota’s. By early 2002, every major American credit card provider, including Citibank, Bank of America, Fleet, M BNA, and Chase Manhattan had established policies refusing to honor charges made for online bets.¹³⁸ Spitzer went a step further and subpoenaed PayPal, the electronic payment intermediary, to force it to stop allowing its customers to fund their online gambling. After negotiations PayPal agreed to stop all gambling transactions and disgorge \$200,000 in profits and penalties to the New York State treasury.¹³⁹

New York State seemed to be winning as Spitzer’s efforts had a measurable impact on online gambling nationwide. As a 2002 Congressional report put it, “Despite attempts to circumvent these efforts... the success of these restrictions has caused gaming analysts to lower their 2003 revenue projections for the on-line gaming industry.”¹⁴⁰ The attack on financial intermediaries in the U.S. drove over half of Antigua web gambling firms out of business. As

Antiguan Prime Minister Lester Bird complained, Spitzer's crackdown "left a significant, negative effect upon the economy."¹⁴¹

On the back of the internet and other successful efforts, Spitzer was by late 2004 the most popular elected official in New York State.¹⁴² What came next was a surprise to no one. On December 7, 2004 Spitzer announced his campaign for Governor of New York in the 2006 elections.

* * *

Spitzer and the State of New York effectively initiated a new round in the battle between governments and online casinos. This is a typical pattern for today's internet regulatory contests. They tend to consist of an ongoing series of moves and countermoves, almost like a form of ritualized combat.

A fanciful but useful model asks us to imagine the state and outlaws in a contest akin to a tug-of-war. At the beginning of the contest there will exist some equilibrium: the banned activity is carried out at some level. Even before internet gambling, for example, there was, of course, some level of illegal gambling. The contest begins when either government or the outlaws invest in new measures to either crackdown or avoid the law. Such investments either increase or decrease the activity level, just as a decision to tug harder pulls the rope in a tug-of-war toward one side or the other.

Once the contest begins, the other side must decide whether and how it wants to react. After an initial evasion that increases illegal activity, Government needs to decide whether it cares enough to invest in new enforcement efforts that might slow things down again. In response to the tug on the rope, Government needs to decide whether to accept a new equilibrium or to tug back. This structure of alternating rounds can be seen in the example of gambling in the following chart.

This

Round	Casinos Thrust	Government Parry
--------------	---------------------------	-----------------------------

1	Setup Online Casinos in the United States	Sue Online Casinos in the United States
2	Move Online Casinos Overseas	Target major financial intermediaries (credit cards)
3	Adopt new financial intermediaries (Paypal, Wire services).	Target all credit intermediaries
4	Create overseas financial intermediaries, like NETeller iGMPay	(Target Banks or citizens?)

This tug-of-war model predicts an eventual endpoint, or new equilibrium. At some point one side or the other will simply give up, leaving a new equilibrium level of activity. When that will be depends on the benefits and costs to each side of ongoing investments in evasion and enforcement. .

How long will it take to reach that equilibrium? After an initial learning period, we should expect the necessary investment in enforcement or evasion to increase with each succeeding round, with less marginal evasion or enforcement achieved. Stated otherwise, the more each side pulls, the less effects they should realize. The reason is that the most obvious and cheapest tools of enforcement or evasion will be used up first, and each party will have to turn to increasingly esoteric or expensive ways of enforcing or evading the law, respectively. This pattern in both the gambling example in this chapter and the P2P example in the next. For the casinos moving overseas was the simplest evasion maneuver and brought the greatest returns. For government, suing local casinos and then shutting down the major credit card companies were relatively cheap (indeed, profitable). However from that point onward things become more challenging for each side. For government, trying to further increase the costs of newer overseas intermediaries will be yet more expensive. To make the example absurd but obvious, nations may be forced at some point to resort to military force, which can be far more expensive than filing a lawsuit. Meanwhile, online

casinos are increasingly forced to create their own, entirely separate system of credit, which is a complicated proposition and much tougher than simply relying on credit cards.

As we've said, the outcome of regulatory contests between government and outlaws depends on the costs of new evasion and enforcement techniques but more fundamentally on what each side has to gain. For the outlaws, this is a relatively simple matter to understand. Avoiding the law offers whatever benefits from the conduct that the law banned. For casinos the potential upside is all of the revenue from American online gamblers, which is a gigantic lure. This helps explain, for example, why much less lucrative law evasion, like the Chinese Democracy movement discussed in chapter 8, is so easily shut down. Online Casinos with their massive profit margins and low overhead can be expected to stay in the law evasion business for the long haul.

But what about governments? What does a government gain from enforcing its laws? When do governments give up, and when do they redouble their efforts? These questions are much harder to answer. But we can offer a few speculations, as the next segment shows.

The Government's Interest

45

Story #1:

Well, the story is I am 19, and I am addicted to gambling, which is obviously why I am here. The one that is killing me is online poker. I win big now and again, but overall, it is totally fleecing me of all of my money. I am at university, 2nd year, all of my student loan has gone already, and I am in a situation where I have no cash, and cannot enjoy myself.

Story #2

For me it was one bad night with a few drinks inside me and I made a big loss, lol, in retrospect it was not a big loss but it was back then. I lost \$200 and went back in to chase my losses, on the tilt, more drinking, more trips to the cashier and \$1000 down for the night at which point I was at my monthly allowed withdrawal from the gambling site. Off to bed, depressed.

Over a period of around 6 months I barely slept and lost around

\$55,000 which is mostly on credit cards, in the end I had them all at or over their limits and ran out of money to gamble with – if I had more money I presume I would have kept on going, however I was broke, I didn't have enough money in my account to cover the direct debits that were coming off the next day and I broke down on the steps of my house at around 2a.m. with grave thoughts in my head. ¹⁴³

Story #3

The more money I lost, the more chips I would buy on the credit card to try to win them back. I was chasing my losses, very much so. One thing led to another, and within a period of just 3 weeks, I had maxed out my father's \$5,000 credit card. I was so distraught and scared that he would flip his lid when he found out what I was doing that I thought about suicide as an escape route for that. I was really depressed, nervous, and suicidal, distraught.

For people out there like myself who have a gambling problem, Internet gambling is very dangerous. It is too easy to gamble online from the comfort of your own home since all you need is a credit card, a computer, and Internet access. Like I said, the convenience of online gambling brought out an uncontrollable animal in me and I did not know when to stop. I am not obsessive-compulsive by any means, but the Internet combined with my passion for gambling, it made my behavior uncontrollable. ¹⁴⁴

These anonymous confessions of online gamblers show us a motivation for fighting overseas lawbreaking: the protection of citizens from overseas harm. The oldest justification for the existence of government at all is security against internal and external threats. When faced with a foreign source of harm, we might expect it in the interest of a state to protect itself. Hence the U.S. strong interest in stopping online gambling.

The idea that governments fight gambling to protect their citizens is based on an optimistic view of government behavior. But even on a more cynical view the presence of local harms is not irrelevant. Elected officials are not unlike Roman generals of old: if they seek political power, they must first make their name and reputation fighting high profile battles that appeal to the imagination of the citizenry. Before online gambling, Skip Humphrey cut his teeth suing the tobacco industry, winning a historic multi-billion dollar settlement. And before Wall Street or online casinos, Spitzer made his name as a federal prosecutor when he defeated the Gambino family and ended its reign over the New York

garment industry. In this manner, the drive for political power may drive a regulatory contest for many years.

While glory and reputation may drive government action, it would be naïve to suggest that protecting citizens is the only reason government acts against an overseas harm. As those who study international trade know, it is often the influence of powerful local industries and that puts the iron in the Washington's backbone. Just as the president may act to protect American steel producers from the threat of cheap foreign imports, so too can an overseas internet site easily represent a threat to a local concern. For example, the overseas sites that sell cheap prescription drugs are a price threat to the American pharmaceutical industry, and Pharma's pressure for a crackdown is never-ending. Similarly the crackdown on overseas file sharing is driven by the recording industry itself, through the famous and vicious Recording Industry Association of America. And in the example of gambling itself it should never be forgotten that the United States has a domestic gambling industry whose pressure for more enforcement may have more weight than is made public.

We have focused on the interests of states who want to fight or stop overseas conduct. But with the exception of activity that is hostile to humanis generis, (the enemy of all mankind) every activity that hurts one country will usually help another. As much as Humphrey professed to hate online gambling there are nation-states that love it and depend on it. With nation-states on both sides, a question of overseas law enforcement can become a problem of international relations, as the next segment shows.

* * *

The twin-island nation of Antigua and Barbuda has a population 67,000.

¹⁴⁶ The weather, a favorable government and good connections to the U.S. have made it a favored destination for online casinos. At its height in the early 2000s the local internet gambling industry employed 5,000 people, or nearly 7.5% of the islands' population. But the American crackdown took its toll, putting more than half of the Island's operations out of business.

¹⁴⁷ As Sir Ronald Sanders, an

Antiguan official complained "The effect of the US enforcement of its laws is to hurt the small economy of Antigua and Barbuda, which is struggling to survive in a world of intense competition in the trade of goods and services."

Antigua may be small, but it is a nation-state nonetheless and since 1995 a full-fledged member of the World Trade Organization.¹⁴⁹ In June 2003, Antigua filed a WTO complaint against the United States, arguing that the various U.S. actions against online gambling amounted to an illegal barrier to “trade in services.” Suing the United States was a brave act but Antigua felt it had no choice. As Antigua’s ambassador to the WTO put it “What we want is survival, not blood.”¹⁵⁰

With the lawsuit, the question of online gambling became a problem of international relations and international law. Instead of just the United States and overseas business, the question was one of two nation-states with conflicting interests. Fortunately for Antigua the fight over online gambling was not a contest of military might. Instead, by invoking an unusually powerful international court and the broad treaty obligations that come with the WTO Antigua helped itself level the playing field.

In November, 2004, to the surprise of many observers, the World Trade Organization sided with Antigua.¹⁵¹ The three-member WTO dispute resolution panel agreed with Antigua that the enforcement of U.S. gambling laws unfairly favored local casinos over international, online imports. The specific legal question was whether the United States had, when it joined the WTO, agreed to open its gambling and betting sector to international competition. The panel ruled that it had.¹⁵² They also agreed that the United States enforced its gambling laws in a discriminatory fashion, targeting Antiguan online casinos with greater frequency than U.S. concerns. In the panel’s judgment the American actions “constituted ‘arbitrary and unjustifiable discrimination between countries where like conditions prevail’ and/or a ‘disguised restriction on trade.’”¹⁵³

Thanks to the intervention of Antigua and the WTO, the online casinos now had an order declaring the U.S. enforcement practices illegal. That isn’t the end of the story: the United States in 2005 indicated that it will appeal the decision to the WTO appellate body, and rumor has it that Britain may intervene on behalf of the Antiguan. But what this shows how problems of internet law and evasion can be both transformed into and influenced by the conduct of international relations.

Wasteful or Healthy?

Can anything be said in favor of these regulatory contests? The ongoing battles over gambling or file sharing may strike most as highly wasteful. Government, outlaws and their supporters in other countries are pouring money into these contests: wouldn't it be better if they could be avoided? There may however be some benefits in regulatory contests for a domestic legal system that may not be clear on first inspection.

Every legal system is full of dead wood. One category are unpopular laws passed in another era that would never be passed today. Legal theorists call the existence of such laws part of the problem of "generational sovereignty." How can we, the living, rule ourselves if so many of our laws are passed by people who are dead? A famous example involves the laws banning contraceptives. These were laws that were enacted in another era, but they survived well into the 1960s. ¹⁵⁵ One thing that a regulatory arms race can do is reopen debate on such laws, and leading to results more in conformity with the will of present generation, whatever that may be.

154

This is the forest fire model of legal change. Much as experts believe the occasional fire keeps forests healthy by burning dead wood, technological shock that challenges an unpopular law help maintain a healthy legal system. It is true that much lawbreaking is just destructive behavior in new forms, like online fraud or child pornography. But sometimes a technological challenge to a law can force us to ask whether that law in question is imposing costs that can no longer be justified. When political dissidents invest in new efforts to break China's control over speech, it says something about the justifiability of those laws. When Voice over IP companies provide cheaper telephone service by avoiding complex FCC rules, the need for those rules comes into question. When millions of citizens use the internet to import prescription drugs, it prompts lawmakers to ask whether domestic drug prices are too high. So too has the technological challenge to copyright, as we will see in Chapter 7, prompted much new thinking on how the copyright laws deal with new technologies for delivering content.

¹⁵⁶ so too can a

The answer won't necessarily be to discard the law: we may find that there are good reasons for the laws that come under challenge. example the twin challenge to pornography and gambling laws in the 1990s and 2000s. Whether either should be banned by government is a question that depends on your underlying belief in the appropriate role of government. Should government ban that which is potentially dangerous and addictive but consumed voluntarily?

Take for

We nonetheless seem to have an initial verdict. We continue to think gambling harmful enough to invest in an ongoing campaign to block its

accessibility around the country, we have committed substantial resources to that cause. Meanwhile, faced with pornography governments seem happy simply to make sure it stays away from primetime television in general and the Superbowl in particular. Why exactly things have turned out this way is hard to say. Yet from this process something has been gained: our country has been asked to examine what we are regulating, and why, and to justify our rules all over again.

Epilogue

Hub Arkush lives in Chicago and publishes the magazine Pro Football Weekly. He does not operate a casino, yet in September 2003 he found himself facing a federal subpoena for involvement in gambling. The stated crime? His magazine runs advertisements for online casinos. Arkush quickly caved and dropped the ads, forfeiting millions in revenue.¹⁵⁷ Cases like Arkush's marked a new development in the casino contest: the delayed entry of the United States federal government into the regulation of online gambling.

In 2003 and 2004 federal prosecutors across the United States began their crackdown on online gambling. Ignoring the lack of a specific federal law banning online gambling, they targeted advertisers of all kinds and came on strong. Where Spitzer demanded settlements in the thousands, federal prosecutors demanded millions. In July 2003, the U.S. Attorney for Michigan assessed a \$10 million fine against PayPal for alleged violations of the USA Patriot Act and the Wire Wager Act.¹⁵⁸ In April of 2004, Justice seized a further \$3.25 million from Discovery Communications. It also announced settlements with Infinity Broadcasting and Clear Channel Communications.¹⁵⁹

In the 2000s the Justice Department also began going to Congress to ask for new and tougher laws. In testimony officials from the Justice Department seized on the potential for compulsive gambling, gambling by minors, and money laundering and fraud. Said one official, "like scam telemarketing operations, on-line gambling establishments appear and disappear with regularity, collecting from losers and not paying winners, and with little fear of being apprehended and prosecuted."¹⁶⁰

These federal measures have taken their toll. In the early 2000s, some casinos began screening U.S. customers to avoid liability or losing their licenses in the United States. Some conceded defeat and closed their doors. The MGM Mirage Online, once located on the Isle of Man, has cashed in its chips.

But the size of the American online gambling market was attractive enough for some casinos to go back and reinvest in new circumvention measures. Blocked from most American credit cards and U.S. credit services like

50

Page 51

Paypal, in 2004 online casinos began to build their own, alternative system of overseas credit. A consortium of online casinos set up credit systems with names like NETeller and iGM -Pay. Instead of relying on credit cards, the new systems draw money directly from clients' chequing accounts. Here's how one casino, Empire Poker, explained its system to customers whose credit cards were blocked:

From: info@paypro.com
To: wu@pobox.com
Subject: Credit Card Transfer Failed - Try iGM-Pay and get 20% Extra.

Dear Player,

We noticed that you were unable to deposit funds to your account with www.empirepoker.com using your credit card earlier. If all the information you entered was correct, the reason you are getting declined is your credit card company does not allow you to make direct purchases with eGaming sites.

We are sure you would like to get back to playing as soon as possible, so we are writing to introduce you to our new player favorite and offer you a 20% on your first purchase using iGM-Pay!

Write us a check electronically with eChecks by iGM-Pay, using the information printed on your regular checks (US bank accounts only). Once you become a verified user, you can also receive your cash outs directly to your bank account it's secure, fast and free!

To face the ban on advertising, casinos spent time and doing anything possible to bolster their respectability within the United States and hopefully make themselves a domestic playerable to influence the political calculus. One

strategy was to try and attract respectable celebrities to endorse online casinos. For a short time in 2000, an online casino named PlaceThatBet.com convinced Yankee Star Reggie Jackson to host a website named ReggieJacksonCasino.com. After an uproar, Jackson claimed he never intended to endorse a site that offered sports betting and pulled his name.¹⁶² In December of 2004, Gibraltar-based Empire Poker, one of the larger online casinos, offered to finance the Washington Nationals move from Montreal to the District of Columbia. It offered up to \$500 million to help the Nationals set up shop. Neither the District nor Congress responded to the offer.¹⁶³

The new equilibrium between the U.S. government, the casinos and the countries that love them has not been reached. But in the decade to come it will be. We will know the limits of government's power to stop a lucrative internet vice. We will learn along the way something about how hard, in the end, Americans want it to be to get to a casino.

Upfront

Editorial: [linda carroli\(l.carroli@eudoramail.com\)](mailto:linda.carroli@eudoramail.com)

This month, I accidentally attended part of CHOGM, the Commonwealth Heads of Government Meeting.

The event, originally scheduled for October last year, was postponed after September 11. It was held at a luxury resort in Coolum on Queensland's Sunshine Coast, north of Brisbane. Development, globalisation and terrorism featured prominently on the agenda for the 'commonwealth', comprised of those countries once colonised by Britain (including Britain). Of the 54 members, 50 are designated 'developing' countries and three of the heads of government are women.

Driving along the Sunshine Motorway, we spotted the Queen's royal blue royal rolls stranded as its chauffeur changed a blown out tyre. Passersby stopped to take photos of the sombre car. Of course, she wasn't waiting patiently inside the vehicle because she'd commuted to the coast by plane: the car will transport her from the airport to CHOGM's venue. Driving into Coolum, the streets were lined with barricades, police, protestors and royal spotters (those living evidence of Australia's failure to vote for a republic). Falun Gong members silently protested their persecution in China. Others called for peace; an end to the civil war and slavery in Sudan; the return of the Elgin Marbles to Greece; and the erasure of Third World debt. Others drew attention to Australia's treatment of refugees and highlighted human rights abuses worldwide. There were literally busloads of riot police waiting for trouble that never arrives and I later learned that sharp shooters were hidden throughout the venue. We had photo ID passes that were flashed at every entry or checkpoint.

Incidentally, I helped my partner, John, with an exhibition of Aboriginal and Torres Strait Islander artworks at the Media Centre where about 1000 members of the global press took up residence to report on this confused and contradictory event. While we weren't officially invited, independent media - like public radio 4ZZZ-FM and Crikey.com - were present. The media was kept at arms length with only selected representatives invited to some sessions (including the Opening Ceremony) and occasional bans on the accoutrements of reporting (no cameras,

notebooks or recording equipment were permitted at the Secretary-General's reception). The rest of the press watched the event unfold through the host media's live feed to Channel CHOGM and an intranet where press releases, documentation and photos were published. The Australian Foreign Minister's press office had been busily printing off media statements including an information paper titled, "Unauthorised Arrivals and Detention". Statements and glossy brochures applauding Australia's cultural diversity were also available. In this context, 'multiculturalism' is code for the migrants who arrive and live here 'legally'. Amnesty International, one of the few NGOs in attendance, issued press releases urging the commonwealth member nations to consider human rights. British PM Tony Blair rattled his sabre towards Zimbabwean President Robert Mugabe and lobbied for economic sanctions.

There was strange jostling for identity in this conference, refutation of criticism questioning the relevance of the gathering and an uncomfortable level of self-justification of the commonwealth 'family'. The spread of democracy and capitalism, apparently, warrants it. Opening speeches repeatedly reminded us that the commonwealth is comprised of some very rich but predominantly very poor nations. While Australian PM John Howard lauded free trade, South African PM Thabo Mbeki sought "the improvement of the living conditions and fulfilment of the dreams and aspirations of the ordinary masses of our people". For Mbeki, diversity serves "the struggle against racism, racial and gender discrimination and xenophobia". Secretary-General Rt Hon Donald McKinnon said that "as we democratise globalisation, we must also continue to globalise democracy". I bet there's international aid money tied to that expression of neo-colonialism.

In this bumper issue of fineArt forum, jay koh addresses Art Activism and Cross-cultural Projects in Thailand and Myanmar. In our text section, Selma Stern discusses 'Droite de Suite' (resale rights of artists) and Glen Wetherall reports on the Brisbane leg of Nina Czegledy's speaking tour. Our book reviews include Brenda Laurel's Utopian Entrepreneur from Geert Lovink, Creative Evolutionary Systems from Gavin Sade, Stephen Wilson's Information Arts from Deb Polson and The Vagina Monologues from Linda Carroli. We also take a look at artwork and music: Mez plays with jodi's _untitled-game_, and Joseph Nechvatal attends QUARTET V1.5.

Subject: **NEMO New Media Showcase 2002 cfp**
12-13 April 2002
Boston, US

The NEMO New Media Showcase 2002 to be hosted at the Swissttel, Boston on 12-13 April is calling for participation. Produced by METAVERA, the two-day NEMO Conference / Trade Show will consist of new media screenings, exhibits, demonstrations and panels. The

event will showcase artists who employ digital and traditional technologies to create innovative films, music, visual and interactive art.

The New Media Showcase is the latest addition to the NEMO Music Conference and Showcases, one of North America's premier music industry events. As this is the first year for the new media event, there is no publicized open submission policy for artists. The organizer is contacting art, film, and new media groups and organizations worldwide and asking for their participation. This can include submission of work for exhibit / display, proposals for performances on the New Media Showcase main stage, or participation in a panel session, demonstration or presentation.

Members of the new media industry are invited to share their knowledge and participate in panel sessions, demonstrations or presentations. Various topics such as the merging of music and new media, as well as technical seminars, and product development clinics will be offered. Interested parties please contact carrie@metavera.net.

Subject: **Turing Day cfp**
Lausanne, Switzerland

To commemorate the 90th anniversary of Alan Mathison Turing's birthday, the Swiss Federal Institute of Technology Lausanne (EPFL) will be holding a one-day workshop on 28 June. The goal of this special day is to remember Alan Turing, whom is being considered one of the most creative thinkers of the 20th century, and to revisit his contributions to computing science.

The workshop will consist of a series of invited talks given by Internationally renowned experts in the field including B. Jack Copeland, Martin Davis, Andrew Hodges, Douglas R. Hofstadter, Tony Sale, Jonathan Swinton, Gianluca Tempesti and Christof Teuscher. Besides, there will have a display and demonstration of an original Enigma machine, exhibition of historical computers (Bolo's Computer Museum), demonstration of Turing's neural networks on the BioWall, and demonstration of a self-replicating universal Turing machine.

To register, please use the fax registration form on the Turing Day website at <http://lslwww.epfl.ch/turingday>

Subject: **New book by Cliff Pickover**

Through an inventive blend of science, history, philosophy, science fiction, and mind-stretching brainteasers, Dr Cliff Pickover unfolds the paradoxes of God in his new book "The Paradox of God and the Science of Omniscience". In exploring the concept of omniscience, he presents startling paradoxes that challenge our deepest notions about God, while revealing both the awesome powers and limitations of omniscient beings.

Dr Pickover is the author of over twenty highly acclaimed books, such as Time "A Traveler's Guide" and "Computers, Pattern, Chaos, and Beauty". He has written on diverse topics including computers and creativity; art, mathematics and astronomy; human behavior and intelligence; time travel and alien life.

Subject: **fAf 15th Anniversary Screening**

The fineArt forum (fAf) 15th Anniversary Travelling Screening Program has been completed successfully in Hong Kong. Screening at Videotage Hong Kong on 21 February 2002, the programme features 14 culturally rich works by 14 young filmmakers from Australia, France, Malaysia, New Zealand, Philippines, Singapore and Taiwan. A post-screening discussion with two leading Hong Kong video artists Hung Wing-Kit and Tsing Au Yeung, has been held after the screening.

The program premiered at the Brisbane Multimedia Art Asia Pacific Festival and Digital Media Festival (Manila) in October 2001, and travels to various global venues before closing in Singapore later this year. Hong Kong is the fourth international showcase venue in the series.

Subject: **Position in Art, Technology and Culture**

The Faculty of Fine Arts of Concordia University seeks applications for a Canada Research Chair Tier II, tenure track position in Art, Technology and Culture.

Concordia has recently launched an innovative multi-university research environment, Hexagram: The Institute of Research and Creation in Media Arts and Technologies. (<http://www.hexagram.org>) The Chair is expected to contribute to the dynamic activities in Hexagram and the academic programs, including teaching and supervision of graduate students.

Candidates must hold a PhD or terminal degree in an appropriate field. They will identify a program of scholarly research located at the intersection of culture, theory and technology as related to the Fine Arts, and must demonstrate the potential to achieve international recognition as a leader in the field in the next five years. Applications from scholars and /or practitioners engaged in digital arts theory are welcome. Bilingualism (French/English) is considered an asset.

Applications must include a CV, a research plan, the names and addresses of three references, examples of publications and other research activity. Materials are to be sent to:

Barbara Layne,
Chair, CRC Committee,
Faculty of Fine Arts,
Concordia University, VA 250

Subject: **The Uncanny: Experiments in Cyborg Culture and STELARC**

"The Uncanny: Experiments in Cyborg Culture", presented by the Vancouver Art Gallery from 9 February to 26 May, is a wide-ranging exhibition that explores historical and contemporary representation of the cybernetic body in the visual arts and popular culture.

Key historical works include a 19th century automaton, 19th century scientific photography and early 20th artworks by Marcel Duchamp, Pablo Picasso, Fernand L'Éger and Francis Picabia. The exhibition also includes contemporary works by Tony Oursler, Moriko Mori, Gary Hill, Takashi Murakami, Lee Bul, Survival Research Lab and many more. Both sections will be supplemented with popular cultural representations of the cyborg ranging from 19th century illustrations and prints to contemporary film and Japanese anime, literature, comic books and

illustrations.

From: geert lovink

Subject: **Peek-a-booty**

Peekabooty is a newly launched software that enables people inside countries where the Web is censored to bypass censorship measures, in particular the firewall, by providing an alternate intermediary to the World Wide Web.

A user in a country that censors the Internet connects to the ad hoc network of computers running Peekabooty. A small number of randomly selected computers in the network retrieves the web pages and relays them back to the user. Hence, the user is simply accessing some computers not on its "banned" list. The retrieved web pages are encrypted using the de facto standard for secure transactions in order to prevent the firewall from examining the web pages' contents. Since the encryption used is a secure transaction standard, it will look like an ordinary e-business transaction to the firewall. Users in countries where the Internet is censored merely need to make a simple change to their Internet settings so that their access to the World Wide Web is mediated by the Peekabooty network, although installing the software makes the process of connecting to the Internet simpler and allows users to take fuller advantage of the Peekabooty network. The Peekabooty Project is currently staffed by volunteers: Paul Baranowski, Joey deVilla and Chris Cummer.

Subject: **Journal of Digital Creativity cfp**

The Journal of Digital Creativity is calling for papers for its special issue on generative computation and the arts, to be published in early 2003 with Paul Brown as guest editor.

Submitted articles may address current practice (individual works or group exhibitions) or document historical developments. They may be theoretical, practical or pedagogical. In particular, essays that discuss work in areas other than the visual arts (e.g. sound/music, performance, writing/literature, etc), as well as multi- and inter-disciplinary collaborations (including art, science and technology) are encouraged.

Full articles, will be reviewed by two international referees, should be about 4-5,000 words in length and contain substantial new material and should not have been published elsewhere. Shorter articles and notes will be considered where appropriate. Essays and notes should be illustrated wherever possible.

Intending authors should submit a short abstract (100 words) by 1 May 2002 while full papers are required by 1 August. Notes and shorter articles may be submitted at any time up to 1st August. All material should be sent to Paul Brown (paul@paul-brown.com), who will be happy to discuss proposals prior to submission.

2. Photoshop Instructor Position for "At-Risk" Teens

Where: Pasadena

When: Spring/Summer, 6 weeks and above

Pay: negotiable

CORAL Center in Pasadena is seeking a qualified instructor to teach all things Photoshop to "tough students" from local community. Email resume and cover letter to Mr Joel Glassman at jmedp@pacbell.net.

From: Andrea Blum

Subject: **New in LDR**

Leonardo Digital Reviews' newest category is called Review Articles. The existing categories of Books, CDs, Films, events and websites appear as usual but some links now go directly to an article by one of the review panel. This represents a move that has been anticipated in LDR towards responses to material that synthesize and analyze the interventions in the field. Single item reviews will continue as before and these are intended to be reactive, informative and analytical as far as possible within the terms laid down by the author or artist and to situate the material within an existing body of practice or bibliography. A Review Article for LDR on the other hand

is one that normally deals with two or more items.

Using them as the primary data source they will show the significance or otherwise of the material to the reviewer's own intellectual position and research interests relative to the Leonardo project. Initially review articles will be subject to a process of informal review before publication on the website and it is anticipated that if the initiative takes off then we will move to some process of peer review using panel members.

Subject: **Art, Technology, Consciousness**

Art, Technology, Consciousness now in paperback, presents the most up-to-date discussions in the intersection between Art, Technology and Consciousness and brings a whole new set of perspectives to this complex and compelling field.

Developing on the studies published in Roy Ascott's Successful Reframing Consciousness, this volume documents the very latest work from those connected with the internationally acclaimed CAiiA-STAR centre. Art, Technology, Consciousness will be published in 2002.

Upfront

Editorial: linda carroli(l.carroli@eudoramail.com)

This month, I accidentally attended part of CHOGM, the Commonwealth Heads of Government Meeting.

The event, originally scheduled for October last year, was postponed after September 11. It was held at a luxury resort in Coolum on Queensland's Sunshine Coast, north of Brisbane. Development, globalisation and terrorism featured prominently on the agenda for the 'commonwealth', comprised of those countries once colonised by Britain (including Britain). Of the 54 members, 50 are designated 'developing' countries and three of the heads of government are women.

Driving along the Sunshine Motorway, we spotted the Queen's royal blue royal rolls stranded as its chauffeur changed a blown out tyre. Passersby stopped to take photos of the sombre car. Of course, she wasn't waiting patiently inside the vehicle because she'd commuted to the coast by plane: the car will transport her from the airport to CHOGM's venue. Driving into Coolum, the streets were lined with barricades, police, protestors and royal spotters (those living evidence of Australia's failure to vote for a republic). Falun Gong members silently protested their persecution in China. Others called for peace; an end to the civil war and slavery in Sudan; the return of the Elgin Marbles to Greece; and the erasure of Third World debt. Others drew attention to Australia's treatment of refugees and highlighted human rights abuses worldwide. There were literally busloads of riot police waiting for trouble

that never arrives and I later learned that sharp shooters were hidden throughout the venue. We had photo ID passes that were flashed at every entry or checkpoint.

Incidentally, I helped my partner, John, with an exhibition of Aboriginal and Torres Strait Islander artworks at the Media Centre where about 1000 members of the global press took up residence to report on this confused and contradictory event. While we weren't officially invited, independent media - like public radio 4ZZZ-FM and Crikey.com - were present. The media was kept at arms length with only selected representatives invited to some sessions (including the Opening Ceremony) and occasional bans on the accoutrements of reporting (no cameras, notebooks or recording equipment were permitted at the Secretary-General's reception). The rest of the press watched the event unfold through the host media's live feed to Channel CHOGM and an intranet where press releases, documentation and photos were published. The Australian Foreign Minister's press office had been busily printing off media statements including an information paper titled, "Unauthorised Arrivals and Detention". Statements and glossy brochures applauding Australia's cultural diversity were also available. In this context, 'multiculturalism' is code for the migrants who arrive and live here 'legally'. Amnesty International, one of the few NGOs in attendance, issued press releases urging the commonwealth member nations to consider human rights. British PM Tony Blair rattled his sabre towards Zimbabwean President Robert Mugabe and lobbied for economic sanctions.

There was strange jostling for identity in this conference, refutation of criticism questioning the relevance of the gathering and an uncomfortable level of self-justification of the commonwealth 'family'. The spread of democracy and capitalism, apparently, warrants it. Opening speeches repeatedly reminded us that the commonwealth is comprised of some very rich but predominantly very poor nations. While Australian PM John Howard lauded free trade, South African PM Thabo Mbeki sought "the improvement of the living conditions and fulfilment of the dreams and aspirations of the ordinary masses of our people". For Mbeki, diversity serves "the struggle against racism, racial and gender discrimination and xenophobia". Secretary-General Rt Hon Donald McKinnon said that "as we democratise globalisation, we must also continue to globalise democracy". I bet there's international aid money tied to that expression of neo-colonialism.

In this bumper issue of fineArt forum, jay koh addresses Art Activism and Cross-cultural Projects in Thailand and Myanmar. In our text section, Selma Stern discusses 'Droite de Suite' (resale rights of artists) and Glen Wetherall reports on the Brisbane leg of Nina Czegledy's speaking tour. Our book reviews include Brenda Laurel's Utopian Entrepreneur from Geert Lovink, Creative Evolutionary Systems from Gavin Sade, Stephen Wilson's Information Arts from Deb Polson and The Vagina

Subject: **NEMO New Media Showcase 2002 cfp**
12-13 April 2002
Boston, US

The NEMO New Media Showcase 2002 to be hosted at the Swissttel, Boston on 12-13 April is calling for participation. Produced by METAVERA, the two-day NEMO Conference / Trade Show will consist of new media screenings, exhibits, demonstrations and panels. The event will showcase artists who employ digital and traditional technologies to create innovative films, music, visual and interactive art.

The New Media Showcase is the latest addition to the NEMO Music Conference and Showcases, one of North America's premier music industry events. As this is the first year for the new media event, there is no publicized open submission policy for artists. The organizer is contacting art, film, and new media groups and organizations worldwide and asking for their participation. This can include submission of work for exhibit / display, proposals for performances on the New Media Showcase main stage, or participation in a panel session, demonstration or presentation.

Members of the new media industry are invited to share their knowledge and participate in panel sessions, demonstrations or presentations. Various topics such as the merging of music and new media, as well as technical seminars, and product development clinics will be offered. Interested parties please contact carrie@metavera.net.

Subject: **Turing Day cfp**
Lausanne, Switzerland

To commemorate the 90th anniversary of Alan Mathison Turing's birthday, the Swiss Federal Institute of Technology Lausanne (EPFL) will be holding a one-day workshop on 28 June. The goal of this special day is to remember Alan Turing, whom is being considered one of the most creative thinkers of the 20th century, and to revisit his contributions to computing science.

The workshop will consist of a series of invited talks given by Internationally renowned experts in the field including

B. Jack Copeland, Martin Davis, Andrew Hodges, Douglas R. Hofstadter, Tony Sale, Jonathan Swinton, Gianluca Tempesti and Christof Teuscher. Besides, there will have a display and demonstration of an original Enigma machine, exhibition of historical computers (Bolo's Computer Museum), demonstration of Turing's neural networks on the BioWall, and demonstration of a self-replicating universal Turing machine.

To register, please use the fax registration form on the Turing Day website at <http://lslwww.epfl.ch/turingday>

Subject: **BEAP 2002 update**

The inaugural thematic focus for Biennale of Electronic Arts Perth (BEAP) 2002 is LOCUS, where we find ourselves virtually connected yet physically isolated. BEAP examines the explosion of activities at the intersection of art, science, and technology, including practitioners in the field of developing electronic technologies from Australia and around the world.

To be held from 1 August to 15 September, BEAP 2002 program will include an exhibition at the John Curtin Gallery; Screen, an multimedia/film based exhibition curated by Pauline Williams; Bio-Feel exhibition curated by Oron Catts; the Fourth International CAiiA-STAR Research Conference "Consciousness Reframed 2002: Non-Local, Non-linear, Non-Ordinary"; SymbioticA Symposium "The Aesthetics of Care"; and an ACUADS Forum for Electronic Arts Research "Teaching in the Digital Domain". Visit BEAP's website for details.

Subject: **New book by Cliff Pickover**

Through an inventive blend of science, history, philosophy, science fiction, and mind-stretching brainteasers, Dr Cliff Pickover unfolds the paradoxes of God in his new book "The Paradox of God and the Science of Omniscience". In exploring the concept of omniscience, he presents startling paradoxes that challenge our deepest

notions about God, while revealing both the awesome powers and limitations of omniscient beings.

Dr Pickover is the author of over twenty highly acclaimed books, such as Time "A Traveler's Guide" and "Computers, Pattern, Chaos, and Beauty". He has written on diverse topics including computers and creativity; art, mathematics and astronomy; human behavior and intelligence; time travel and alien life.

Subject: **fAf 15th Anniversary Screening**

The fineArt forum (fAf) 15th Anniversary Travelling Screening Program has been completed successfully in Hong Kong. Screening at Videotage Hong Kong on 21 February 2002, the programme features 14 culturally rich works by 14 young filmmakers from Australia, France, Malaysia, New Zealand, Philippines, Singapore and Taiwan. A post-screening discussion with two leading Hong Kong video artists Hung Wing-Kit and Tsing Au Yeung, has been held after the screening.

The program premiered at the Brisbane Multimedia Art Asia Pacific Festival and Digital Media Festival (Manila) in October 2001, and travels to various global venues before closing in Singapore later this year. Hong Kong is the fourth international showcase venue in the series.

Subject: **Boat People Day**
29 March

An expanding group of media activists, artists, videographers, webheads, writers and designers in Australia has set 29 March 2002 as Boat People Day and invites all concerned Australians to take part in the campaign. The group is making media and cultural actions to call on the Australian government and opposition parties to change their cold hearted and unsustainable approach to the global refugee crisis. Boat People Day is to remind the government and people everywhere that all (non-indigenous) Australians are in fact 'Boat People'.

Subject: **Position in Art, Technology and Culture**

The Faculty of Fine Arts of Concordia University seeks applications for a Canada Research Chair Tier II, tenure track position in Art, Technology and Culture.

Concordia has recently launched an innovative multi-university research environment, Hexagram: The Institute of Research and Creation in Media Arts and Technologies. (<http://www.hexagram.org>) The Chair is expected to contribute to the dynamic activities in Hexagram and the academic programs, including teaching and supervision of graduate students.

Candidates must hold a PhD or terminal degree in an appropriate field. They will identify a program of scholarly research located at the intersection of culture, theory and technology as related to the Fine Arts, and must demonstrate the potential to achieve international recognition as a leader in the field in the next five years. Applications from scholars and /or practitioners engaged in digital arts theory are welcome. Bilingualism (French/English) is considered an asset.

Applications must include a CV, a research plan, the names and addresses of three references, examples of publications and other research activity. Materials are to be sent to:

Barbara Layne,
Chair, CRC Committee,
Faculty of Fine Arts,
Concordia University, VA 250
1395 Rene Levesque O, Montreal, QC H3G 2M5.

Deadline: 8 April, 2002

Subject: **The Uncanny: Experiments in Cyborg Culture and STELARC**

"The Uncanny: Experiments in Cyborg Culture", presented by the Vancouver Art Gallery from 9 February to 26 May,

is a wide-ranging exhibition that explores historical and contemporary representation of the cybernetic body in the visual arts and popular culture.

Key historical works include a 19th century automaton, 19th century scientific photography and early 20th artworks by Marcel Duchamp, Pablo Picasso, Fernand LÉger and Francis Picabia. The exhibition also includes contemporary works by Tony Oursler, Moriko Mori, Gary Hill, Takashi Murakami, Lee Bul, Survival Research Lab and many more. Both sections will be supplemented with popular cultural representations of the cyborg ranging from 19th century illustrations and prints to contemporary film and Japanese anime, literature, comic books and illustrations.

Subject: **LMJ 11**

Leonardo Music Journal 11 includes a double audio CD, "Not Necessarily 'English Music'" curated by musician, composer, writer and sound curator David Toop. The CDs feature pieces from pioneering UK composers and performers from the late 1960s through the mid-1970s.

isast@well.com <http://mitpress2.mit.edu/Leonardo/lmj/>

From: geert lovink

Subject: **Peek-a-booty**

Peekabooty is a newly launched software that enables people inside countries where the Web is censored to bypass censorship measures, in particular the firewall, by providing an alternate intermediary to the World Wide Web.

A user in a country that censors the Internet connects to the ad hoc network of computers running Peekabooty. A small number of randomly selected computers in the network retrieves the web pages and relays them back to the user. Hence, the user is simply accessing some computers not on its "banned" list. The retrieved web pages are encrypted using the de facto standard for secure transactions in order to prevent the firewall from examining the web pages' contents. Since the encryption used is a secure transaction standard, it will look like an ordinary e-business

transaction to the firewall. Users in countries where the Internet is censored merely need to make a simple change to their Internet settings so that their access to the World Wide Web is mediated by the Peekabooby network, although installing the software makes the process of connecting to the Internet simpler and allows users to take fuller advantage of the Peekabooby network. The Peekabooby Project is currently staffed by volunteers: Paul Baranowski, Joey deVilla and Chris Cummer.

From: Jinna

Subject: **Journal of Digital Creativity cfp**

The Journal of Digital Creativity is calling for papers for its special issue on generative computation and the arts, to be published in early 2003 with Paul Brown as guest editor.

Submitted articles may address current practice (individual works or group exhibitions) or document historical developments. They may be theoretical, practical or pedagogical. In particular, essays that discuss work in areas other than the visual arts (e.g. sound/music, performance, writing/literature, etc), as well as multi- and inter-disciplinary collaborations (including art, science and technology) are encouraged.

Full articles, will be reviewed by two international referees, should be about 4-5,000 words in length and contain substantial new material and should not have been published elsewhere. Shorter articles and notes will be considered where appropriate. Essays and notes should be illustrated wherever possible.

Intending authors should submit a short abstract (100 words) by 1 May 2002 while full papers are required by 1 August. Notes and shorter articles may be submitted at any time up to 1st August. All material should be sent to Paul Brown (paul@paul-brown.com), who will be happy to discuss proposals prior to submission.

Subject: **CIRAC Seminar Series**

Creative Industries Research and Applications Centre

(CIRAC) of the Queensland University of Technology (QUT) will be presenting the first of the CIRAC Seminar Series for 2002. Runs from 1-22 March 2002, the four-week seminar series "Festival Culture in a Global Perspective" will be based on a research collaboration between Professor Willmar Sauter, Head of Theatre Studies at the University of Stockholm as Visiting QUT Fellow and CIRAC.

The Festival Culture seminar series builds on research undertaken by Jacqueline Martin, Rod Wissler, Georgia Seffrin and QPAT with ARC support and will address Professor Sauter's key questions inviting contribution from a range of disciplinary fields. It is expected to result in a proposal for further research on Festival Culture to include international festivals with ARC support.

The seminars will be held at QUT's Gardens Point campus and Kelvin Grove campus.

Subject: **Digital Art Teaching Jobs**

Currently there are two vacancies being posted at the Side Street Job Bank:

1. Digital Photography Instructor Position

Where: San Marino High School

When: Starts in September, Tuesdays & Thursdays, 6:30 - 9pm

Pay: US\$22/hr

Night education program for varying age levels in Digital Photography seeking qualified instructor. 5 years professional field experience in photography/digital media is required. Teaching experience helpful. Strong potential to transition from part-time to full-time. Email resume and cover letter (addressed to the attention of Mr Joel Glassman) to Side Street Projects at sidest@ix.netcom.com.

2. Photoshop Instructor Position for "At-Risk" Teens

Where: Pasadena

When: Spring/Summer, 6 weeks and above

Pay: negotiable

CORAL Center in Pasadena is seeking a qualified instructor to teach all things Photoshop to "tough students" from local community. Email resume and cover letter to Mr Joel Glassman at jmedp@pacbell.net.

From: Andrea Blum

Subject: New in LDR

Leonardo Digital Reviews' newest category is called Review Articles. The existing categories of Books, CDs, Films, events and websites appear as usual but some links now go directly to an article by one of the review panel. This represents a move that has been anticipated in LDR towards responses to material that synthesize and analyze the interventions in the field. Single item reviews will continue as before and these are intended to be reactive, informative and analytical as far as possible within the terms laid down by the author or artist and to situate the material within an existing body of practice or bibliography. A Review Article for LDR on the other hand is one that normally deals with two or more items.

Using them as the primary data source they will show the significance or otherwise of the material to the reviewer's own intellectual position and research interests relative to the Leonardo project. Initially review articles will be subject to a process of informal review before publication on the website and it is anticipated that if the initiative takes off then we will move to some process of peer

review using panel members.

Subject: **Shiny New Net Art**

An online exhibition of special commissions of web-based art by 12 hot digital artists, including Shu Lea Cheang, Netomat's Maciej Wisniewski and Rhizome's own Mark Tribe, is currently available at "Shine". This exhibition also celebrates the 40th anniversary of Amnesty International, the human rights advocacy organization. All the work relates to the theme of "light," as in the candle flame that serves as Amnesty International's logo.

From: Kathryn Smith

Subject: **[f]originals**

The Premises will be presenting an exhibition 8-23 March that features [f]original (fake - originals) legal documents and products from various and ongoing digital legal activities by the ubermorgen group. This unique and exclusive show is curated by Marcus Neustetter and financed by the Ministry for Energy and the Justice Department of South Africa.

The byproducts of ubermorgen's digital legal art projects often exist in the form of printed documents as well as photocopies, making the distinction between originals and fakes very difficult. This exhibition evolves out of this process and focuses on the legal documentation resulting from www.vote-auction.net, where they offered US voters the opportunity of selling their votes online during the last general election, which saw George W. Bush elected as president.

The Premises
Johannesburg Civic Theatre

Subject: **Control panels. programming as an artistic practice**

"Control panels. programming as an artistic practice" is the first German exhibition of international software art. The exhibition, opens from 5 April to 5 May 2002, is developed in cooperation with transmediale Berlin and art.net.dortmund.de, and comprises ten current software art productions.

Presented by hartware medien kunst verein and curated by Andreas Broeckmann (Director of transmediale) and Matthias Weiss (hartware), the exhibition will be displayed at hartware medien kunst verein as well as in parts on the net art platform "art.net.dortmund.de".

Subject: **net.art 2.0**

New art expert Tilman Baumg"rtel has come up with the "sequel" to his 1999 German book "net.art - Materialien zur Netzkunst." Appropriately titled "net.art 2.0" (published in both German and English), the new publication explores the latest developments in online art, yet also looks further into the past by consulting Nam June Paik and Douglas Davis, among other pioneers in the field. The author addresses a series of works challenging the computer itself as an artistic medium, making for some perhaps provocative reading. The format of the book is basically a series of interviews with big names like Julia Scher, Jodi, etoy, Ken Goldberg. A handy appendix helps readers easily access the artists'

Subject: **Launch of Code Red**

"Code Red: Progressive Politics in the Digital Age" is the first in a series of discussion and policy papers to be

published by the ippr's Digital Society Programme and will be launched in March 2002. The book casts the net wide and examines the big picture of digital change in the UK today. It seeks to examine both existing trends in government policy and underlying changes in the character of the Internet and evaluates both against core centre-left values.

The launch will be held on 19 March 2002 at the Design Council, 34 Bow Street, WC2E, UK. Confirmed speakers include Douglas Alexander MP, Minister for E-Commerce and Competitiveness, and Ian Kearns, author of Code Red.

Subject: **Support Arundhati Roy**

On 6 March 2002 the Supreme Court of India will be delivering a judgment in the Criminal Contempt of Court case against Arundhati Roy, author of the "God of Small Things", "The Greater Common Good" and "End of Imagination". The maximum sentence for criminal contempt of court is six months imprisonment.

Anyone who is concerned about the threat to free speech in India today is invited to participate in a campaign to give support to Roy. You may disseminate the information widely (it would be great if you can write in media), write articles, letter to editors and email messages. You may also initiate discussions on related issues among your groups and through the Internet. You may join the demonstration planned on March 6 at 10:30am, outside the Indian Law Institute on Bhagwan Das Road which is outside the Supreme Court.

From: Jose-Carlos Mariategui

Subject: **Ingrid Mwangi, Performance Premier**

The Edith Russ Site for Media Art is presenting a three part series of events on the subject of "the stranger". Titled "Outside, Inside and In between-The stranger as a projection of the self" the artists invited include Lisl Ponger (A), Marcel Odenbach (D) and Ingrid Mwangi (Nairobi).

As the last date in this three part series (February 15, 2002) Ingrid Mwangi (born in Nairobi, lives in Paris) will premier a new performance titled 'A Woman in Purdah'. Her work integrates personal experience and reactions based on racist positions: how strangers are viewed, how 'others' are dealt with and especially the gaze toward foreign, exotic women. Ingrid Mwangi studied New Artistic Media with Prof. Ulrike Rosenbach in Saarbrücken. Mwangi has been awarded many prizes and stipends since she began exhibiting her work in 1997.

"Word-of mouth was always the strongest form of advertising from the day Adam and Eve had somebody else to talk to."

Lester Wunderman, Wunderman

Als Erfinder des Direkt Marketing und als Gründer der gleichnamigen Agentur hat Lester Wunderman seine Spuren in der Marketing- und Werbewelt hinterlassen. 1998 wurde er aufgrund seiner Verdienste in die "Advertising Hall of Fame" aufgenommen. Wunderman, Jahrgang 1920, reist auch heute noch unermüdlich wie ein Missionar um die Welt, um seine Botschaft zu verbreiten. Im März 2004 machte er in Prag Station. Dort trafen wir ihn und führten ein interessantes und kontroverses Gespräch über Virales Marketing, in dessen Verlauf uns Wunderman ganz nebenbei seine persönliche Marketing-Geheimformel verriet.

Wenn Alle mit Allen

Mit p2p zu einem neuen Internet?

"Napster - das ist nichts anderes als Diebstahl" schimpft Hilary Rosen, Chef des Verbandes der US-Plattenindustrie RIAA. Im amerikanischen Dauerwahlkampf war denn auch schon von "Kriminellen" die Rede, "die endlich hinter Gitter gehören". An Stammtischen und in Rechtsanwaltskanzleien gehen die Wogen hoch - doch bei DV-Strategen innerhalb und außerhalb der großen Unternehmen wird das Napster-Prinzip "jeder mit jedem" sehr aufmerksam betrachtet: Vielleicht bietet es die Chance, die Internet-Technik auf eine neu Grundlage zu stellen - ohne ständig überlastete Server als Engpässe im Datenstrom.

P2p heißt der neue Trend - und schon der Versuch, die Abkürzung aufzudröseln, läßt ahnen, daß die Sache nicht so einfach ist. "Peer to peer" entschlüsseln die einen - das zielt eher auf die technische Ebene und meint, daß Computer in einem Netzwerk die Daten "von gleich zu gleich" austauschen, ohne Zentrale. Person to person ist die andere Lesart. Sie meint technisch das gleiche, betrachtet die Sache aber unter dem Aspekt, was Menschen damit für tolle Dinge anstellen können - napstern zum beispiel, ganz ohne Rücksicht auf Urheberrecht und ausgefeilte Vertriebsstrategien der Plattenlabels.

Dabei ist Napster noch nicht einmal "echtes" p2p - es gibt immer noch eine Zentrale, die man schließen und damit das ganze System abschalten kann. Damit ähnelt Napster übrigens dem Internet insgesamt, das zwar nach seiner technischen Grundstruktur ein Netz aus gleichberechtigten Computern ist, dessen praktische Nutzbarkeit aber von vielerlei Knotenpunkten und Zentralrechnern abhängt.

Ohne den zentral und streng hierarchisch organisierten Domain Name Service (DNS) könnten wir nicht einfach fr-aktuell anwählen, sondern müßten uns mit Zahlenmonstern wie 194.175.173.20 herumärgern. Kein Wunder also, daß die US-Regierung den DNS fest im Griff hält und ab und zu auch mal dafür sorgt, daß eine unliebsame Adresse aus diesem Verzeichnis gestrichen wird. Etwa der Satireserver "Vote-Auction.com", der derzeit nur unter <http://62.116.31.68> erreichbar ist. Ohne zentrale Datenbanken bei Yahoo, Altavista oder Google hätten wir kaum eine Möglichkeit, unter Milliarden Webseiten die gesuchte Information zu finden. Und ohne die Vermittlungsdienste der Napster-Zentrale wüßten wir nicht, bei wem die gesuchten Soundfiles liegen - die wir dann, wenn wir es erst einmal wissen, direkt und ohne besondere Vermittlung dort abholen, so weit es im Internet überhaupt "direkt" zugehen kann.

[Gnutella](#) braucht keine Zentrale. Deshalb wird das System gerne als möglicher Nachfolger für einen von der Musikindustrie abgeschalteten Napster genannt wird. Gnutella (der Name hat übrigens weniger mit Brotaufstrich zu tun als mit der [GNU](#) (Gnu is Not Unix)-Lizenzregelung der Free Software Foundation) ist eine "echte" p2p-Anwendung. Alle Teilnehmer, die gerade am Netz angeschlossen sind, bilden die Knoten eines Netzes, die sich mittels kurzer Botschaften untereinander verständigen. Da diese Botschaften vielfach Handlungsanweisungen, also Programme enthalten, nenn man sie auch "agents", Agenten. Und wenn ein Teilnehmer etwas sucht - bei Gnutella müssen das keine Musikfiles sein, das System sucht und findet im Prinzip alles - schickt er Agenten an seine Nachbarn. Jeder davon schickt dann automatisch Agenten mit dem gleichen Suchauftrag an seine entfernteren Nachbarn - und so weiter. Früher oder später wird ein Agent fündig, macht sich mit der Adresse der Fundstelle auf den Rückweg und stellt die direkte Verbindung zur Übertragung her.

Das klingt genial - aber: Erstens erfolgt der Einsatz der Agents zumindest nach derzeitigen Verfahren ziemlich unrationell - da können gewaltige Schwärme entstehen, die sich gegenseitig auf die Füße treten und die Übertragungsleistung des Netzes überfordern. Genau das ist im Frühjahr dieses Jahres bereits mehrfach geschehen. Zweitens hat sich gezeigt, daß es in solchen

Systemen des "Gemeineigentums" anscheinend immer mehr Leute gibt, die etwas herausholen wollen, als solche, die etwas hereinstecken. Teilnehmer, die sich ausgenutzt fühlen, verlassen das System eher früher als später - das Netzwerk trocknet aus.

An diesen Schwachstellen setzen zwei weitere dezentralisierte Systeme an, die beide noch im Erprobungsstadium stehen: "[Grove](#)" und "[Mojo Nation](#)". Groove ist dezentralisiert wie Gnutella, doch anders als dort und bei Napster geht es hier nicht darum, eine möglichst große Zahl von Teilnehmern miteinander zu verbinden, sondern um kleine Gruppen, die Umfang und Zusammensetzung selbst bestimmen. Es geht auch keinesfalls nur um den Tausch von Musik, sondern um die Bildung gemeinsamer "Webspaces", in denen man gemeinsam arbeitet, Nachrichten und Dateien austauscht, sogar gemeinsames Surfen im Netz (d.h., alle sehen in ihrem Browser, was ihnen einer zeigen will) ist möglich. Ein ideales Werkzeug für die Online-Kooperation in kleinen Gruppen - wenn alles so funktioniert, wie die Entwickler sich das vorstellen.

"Mojo Nation" - das klingt wie ein Indianerstamm, zumindest nach Stadtindianer. Ist es aber nicht. Dieses System zielt auf größere Gruppen als Groove und widmet sich mit besonderem Nachdruck dem lästigen Problem der Trittbrettfahrer. In diesem Netzwerk kostet jede Transaktion die Teilnehmer einen bestimmten Betrag in der fiktiven Währung "Mojo", und um "Mojos" zu bekommen, muß man entweder etwas in das Netzwerk hineinstecken (Speicherplatz über Übertragungskapazität) oder man muß die Mojos kaufen - gegen gute Dollars.

Wer daraus schließt, daß die Mojo-Leute einen hochentwickelten Geschäftssinn haben, könnte richtig liegen. Jedenfalls legen sie ihr System so aus, daß damit nicht nur private Transaktionen person to person vorgenommen werden können, sondern daß es in entsprechenden Sonderausführungen auch für das Management und den Austausch großer Mengen von Dokumenten im Rahmen eines global agierenden Großunternehmens taugt. Peer to peer eben.

Mojo Nation verringert auch die Bedeutung der problematischen Agents von Gnutella. Es setzt stärker auf interne, allerdings wiederum teilzentralisierte Informationsdatenbanken, zusätzlich auf den informellen Austausch zwischen den Anwendern. Außerdem berücksichtigt Mojo einen Schwachpunkt, der bisher noch gar nicht benannt wurde: Vertraulichkeit und Sicherheit der Daten. Alle Dateien werden aufgeteilt und verschlüsselt - die einzelnen Teile werden auf verschiedenen Rechnern abgelegt, so daß kein Außenstehender durch den Angriff auf einen Rechner herausbekommen kann, welche Mojo-Daten dort abgelegt sind. Allerdings kommen dadurch erneut Zentralisierungselemente in das System - die sogenannten "publication Tracker", die den Überblick darüber behalten, was wo untergebracht ist. Außerdem setzt die verteilte Lagerung der Dateibruchstücke voraus, daß mindestens die Hälfte der Rechner, auf denen die Datei-Bruchstücke abgelegt sind, auch dann in Betrieb ist, wenn sie wieder zusammengesetzt werden soll. Man sieht: Mojo Nation ist jedenfalls nicht in dem Sinne für person to person ausgelegt, daß auch private Rechner mitspielen könnten, die nur für ein paar Stunden am Tag Netzanschluss haben.

Verschlüsselung der Informationen ist bei Mojo Nation eher eine technisch bedingte Begleiterscheinung der verteilten Ablage von Dateien. Im Vordergrund des Konzeptes steht das Geben und Nehmen innerhalb des Netzwerkes. Bei anderen Systemen geht es genau um die Verschlüsselung, aber nicht etwa mit dem Ziel, Information im Netz gegenüber unerwünschten Mitlesern geheimzuhalten, sondern darum, zu verschleiern, wer eine Information ins Netz gestellt hat, auf welchem Server sie physikalisch liegt, und wie man sie wieder löschen bzw. die Netzbenutzer vom Zugang ausschließen kann. Die Entwickler dieser Systeme reagieren damit auf die Tendenz vieler Regierungen, das Internet in einer Weise zu zensieren und unter Polizeiaufsicht zu stellen, die sich die Bürger ihrer Staaten als Brief- oder Zensurzensur nie gefallen lassen würden.

Die bekanntesten dieser Projekte laufen unter dem Namen [Freenet](#) und "[Publius](#)" (dort auch Hinweise zu weiteren Projekten) Diese Projekte haben sich nichts geringeres vorgenommen, als, auf der technischen Grundlage des bestehenden Internets ein völlig neuartiges System zu etablieren. Dieses neue System speichert Inhalte so auf einer Vielzahl von Servern ab, daß es praktisch unmöglich ist, zu sagen, wo sie liegen. Einige Systeme sind sogar so ausgelegt, daß noch nicht einmal feststellbar sein soll, ob ein bestimmter Server daran teilnimmt oder nicht. Es ist auch nicht feststellbar, wer etwas hochgeladen hat, und nur der Urheber kann die Information verändern oder löschen. Der Zugang zu den Informationen beruht auf einem eigenständigen System von Adressen. Jeder, der die Zugangssoftware installiert hat, kann alles sehen, was im "neuen Internet" veröffentlicht ist - und niemand kann den Zugang sperren.

Eine Zeitlang sah es so aus, als ob Big Money mit hochglanzpolierten Webkatalogen und die Regierungen mit ihren Zensurgelüsten die Zukunft des Internets alleine bestimmen könnten. Mit p2p - gleichgültig, wie man das nun aufschlüsselt und welche Systeme sich schließlich durchsetzen - sieht die Netzwelt wieder ganz anders aus.. [\[F\]](#)

*

Anmerkung

• Dieser lange Text ist natürlich keine Netgeschichte. Aber da er zum Thema gehört und ebenfalls in der FR erschienen ist, passt er hier ganz gut hin.

Ferrero greift an:

Mit Datum vom 19. Februar 2001 erließ die 31. Zivilkammer des Landgerichts Köln auf Antrag der Ferrero-Anwälte eine einstweilige Verfügung, in der der Betreiber der Domain www.gnutella.de unter Androhung eines Ordnungsgeldes von bis zu 500.000 Mark aufgefordert wird, die Domain weder zu benutzen noch sie an Dritte zu veräußern.

Die Schokoladenverkäufer begründeten Ihren Antrag damit, daß sie als Inhaber der Markenrechte an Nutella nicht zulassen könnten, daß ihr guter Name in Verbindung mit einer Einrichtung gebracht werde, über die Raubkopien und Kinderpornos getauscht würden.

Und das Kölner Landgericht, entgegenkommend wie immer, sah prompt "Gefahr im Verzuge".

If all with all

With p2p to a new InterNet?

"Napster - that is nothing one but theft" grumbles Hilary roses, boss of the federation of the US disk industry RIAA. In the American continuous election campaign the speech was, "finally behind lattices already belongs" from "criminal ones". At tables reserved for regulars and in law offices lift-off the waves - nevertheless with data processing strategists within and outside of the large enterprises the Napster principle of "everyone is very attentively regarded with everyone": Perhaps it offers the chance to place again the InterNet technology on one to basis - without constantly overloaded servers as bottlenecks in the data stream.

P2p is called the new trend - and already the attempt, the abbreviation aufzudroeseln, gives an idea of that the thing is not so simple. "Peer tons more peer" decode the one - it aims rather at the technical level and means that computers in a network exchange the data "from same to directly", without center. Person ton of person is the other Lesart. She means the same technical, regards the thing however under the aspect, which humans thereby can employ for mad things - napstern for example, completely without consideration for copyright and sophisticated selling strategies of the disk labels.

Napster is not even "genuine" p2p - there is still a center, which one can close and switch off thus the whole system. Thus Napster resembles by the way the InterNet altogether, which is after its technical essential structure a net from equal computers, whose practical serviceability depends however on various junctions and central computers.

Without that central and strictly hierarchically Domain Name could we did not organize service (DNS) simply fr-up-to-date select, but would have us with number monsters like 194,175,173,20 annoy. No miracle thus that the US government keeps the DNS firm in the grasp and from time to time also times ensures that an unpleasant address from this listing is painted. For instance the satire server "Vote Auction.com", which is attainable under <http://62.116.31.68> only at present. Without we would have to find central data bases with Jahoo, Alta Vista or Google hardly a possibility, under billion web pages the looked for information. And without vermittlungsdienste Napster center would know we not, with which the looked for lie sound files - which we fetch there then, if if we know it only, directly and without special switching, so far it in the Interent at all "directly" to happen can.

[Gnutella](#) " does not need a center. Therefore will the system is called gladly as possible successors for a Napster switched off of the music industry. Gnutella (the name a "genuine" p2p-Anwendung has to do by the way less with [bread upstroke](#) than with the GNU (Gnu is emergency university x) license regulation of the Free software Foundation) is. All participants, who are attached at the net straight, form the knots of a net, which inform themselves by means of short messages among themselves. Since these messages contain often procedural instructions, thus programs, call one them also "agents", agents. And if a participant looks for somewhat - with Gnutella that does not have to be music files, the system looks for and finds in principle everything - sends it agents to its neighbours. Everyone of it sends then automatically agents with the same search order to its more distant neighbours - and so on. Sooner or later an agent becomes fuendig, makes themselves with the address of the place of discovery on the way back and makes the direct connection to the transmission.

That sounds ingeniously - however: First of all the employment of the Agents takes place at least in present procedures rather inefficiently - there enormous swarms can develop, which step themselves mutually on the feet and which make excessive demands of transmission rate of the net. Exactly that happened already several times in the spring of this yearly. Secondly it showed up that

there are more people, which want to take something out in such systems of the "common property" apparent ever than such, which put something. Participants, who feel used, leave the system rather in former times as later - the network drains.

At these weak points two further decentralized systems set, which both still in the testing phase: "[Grove](#)" and "[Mojo nation](#)". Groove is decentralized like Gnutella, but differently than there and with Napster it concerns here not to interconnect as large a number of participants but around small groups as possible, which determine extent and composition. It does not concern also under any circumstances only the exchange from music, but around the education of common "Web spaces", in which one works together, messages and files exchanges, even common Surfen in the net (i.e., all see in their Browser, which wants to show them one) is possible. Ideal a tool for on-line co-operation in small groups - if everything functions in such a way, as the developers imagine that.

"Mojo nation" - which sounds like an Indian trunk, at least after city Indian. Is however not it. This system aims at larger Gruppen than Groove and dedicates themselves with special reproduction to the annoying problem of the free riders. In this network each transaction costs a certain amount in the fictitious currency "Mojo" the participants, and in order "Mojos" to get, one must put either something into the network (storage location of ueder transmission capacity) or one must buy the Mojos - against good dollars.

Who concludes from the fact that the Mojo people have a highly developed sense of business, could lie correctly. Anyhow they lay their system out in such a way that thereby private transactions person ton of person cannot only be made, but that it is suited in appropriate special equipments also for the management and the exchange of large quantities of documents in the context of a large-scale enterprise global acting. Peer ton more peer evenly.

Mojo nation reduces also the meaning of the problematic Agents of Gnutella. It sets more strongly on internal, however again part-centralized information data bases, additionally on the informal exchange between the users. In addition Mojo considers a weak point, which was not designated so far yet at all: Privacy and security of the data. All files are divided and coded - the individual parts are put down on different computers, so that no outstanding one can out-get by the attack on a computer, which Mojo data are put down there. However by it centralization elements come again into the system - which so-called "publication tracker", which keep the overview of it, what is accommodated where. Asserdem presupposes distributed storage file fragments that at least half of the computers, on which the file fragments are put down is also in enterprise if it is to be built up again. One sees: Mojo nation is not appropriate anyhow in the sense for person ton of person that also private computers could along-play, which only for few hours on the day a mains connection has.

Coding of the information is with Mojo nation rather a technically caused accompaniment of the distributed file of files. Of the concept giving and taking are the center within the network. With other systems it concerns exactly the coding, but not with the goal of keeping information secret in the net opposite unwanted Mitlesern but therefore, of masking who placed information in the net, on which server it physically lies, and as one can delete it again and/or exclude the net users from the entrance. The developers of these systems react with it to the tendency of many governments to censor and place under polizeiaufsicht the InterNet in a way, the citizens of their states would never let themselves which be pleased as letter or newspaper censorship.

The most well-known these projects do not run under the name "[freenet](#)" and "[Publius](#)" (there also references to further projects) these projects anything smaller planned, than, to establish on the technical basis of the existing Internets a completely new system. This new system stores contents in such a way on a multiplicity from servers that it is practically impossible to say where they lie. Some systems are even in such a way laid out that it should not even to be able be recognized whether a certain server participates in it or not. It is not feststellbar also, who high-loaded something, and only the author can change or delete the information. The entrance to the information is based on its own system of addresses. Everyone, which installed the entrance software, can see everything, what is published in the "new InterNet" - and nobody can close the entrance.

For a while it looked in such a way, as if Big Money with highly polished Web catalogs and the governments with their Zensur geluesten could determine the future of the Internets alone. With p2p - indifferent, as one now classifies and which systems finally intersperses themselves - the net world sees again completely differently out. 

*

Note

• This long text is naturally no Netgeschichte. But since it belongs likewise to the topic and in the FR appeared, it fits here completely well.

Ferrero attacks:

With date from 19 February 2001 issued the 31. Civil court of the regional court Cologne upon the request of the Ferrero lawyers a provisional order, in which the operator of the Domain www.gnutella.de under menace of an order money is requested by up to 500.000 Marks to use the Domain neither nor to sell her on third.

The chocolate salesmen justified your request with the fact that they could not permit as owners of the trademark laws at Nutella that their good name is brought in connection with a mechanism, over the pirat copies and Kinderpornos were exchanged.

And Cologne regional courts, accomodating like always, "danger in the delay" saw prompt.

[Warum und wieso?](#)

Wenn Alle mit Allen

Mit p2p zu einem neuen Internet?

"Napster - das ist nichts anderes als Diebstahl" schimpft Hilary Rosen, Chef des Verbandes der US-Plattenindustrie RIAA. Im amerikanischen Dauerwahlkampf war denn auch schon von "Kriminellen" die Rede, "die endlich hinter Gitter gehören". An Stammtischen und in Rechtsanwaltskanzleien gehen die Wogen hoch - doch bei DV-Strategen innerhalb und außerhalb der großen Unternehmen wird das Napster-Prinzip "jeder mit jedem" sehr aufmerksam betrachtet: Vielleicht bietet es die Chance, die Internet-Technik auf eine neu Grundlage zu stellen - ohne ständig überlastete Server als Engpässe im Datenstrom.

P2p heißt der neue Trend - und schon der Versuch, die Abkürzung aufzudröseln, läßt ahnen, daß die Sache nicht so einfach ist. "Peer to peer" entschlüsseln die einen - das zielt eher auf die technische Ebene und meint, daß Computer in einem Netzwerk die Daten "von gleich zu gleich" austauschen, ohne Zentrale. Person to person ist die andere Lesart. Sie meint technisch das gleiche, betrachtet die Sache aber unter dem Aspekt, was Menschen damit für tolle Dinge anstellen können - napstern zum beispiel, ganz ohne Rücksicht auf Urheberrecht und ausgefeilte Vertriebsstrategien der Plattenlabels.

Dabei ist Napster noch nicht einmal "echtes" p2p - es gibt immer noch eine Zentrale, die man schließen und damit das ganze System abschalten kann. Damit ähnelt Napster übrigens dem Internet insgesamt, das zwar nach seiner technischen Grundstruktur ein Netz aus gleichberechtigten Computern ist, dessen praktische Nutzbarkeit aber von vielerlei Knotenpunkten und Zentralrechnern abhängt.

Ohne den zentral und streng hierarchisch organisierten Domain Name Service (DNS) könnten wir nicht einfach fr-aktuell anwählen, sondern müßten uns mit Zahlenmonstern wie 194.175.173.20 herumärgern. Kein Wunder also, daß die US-Regierung den DNS fest im Griff hält und ab und zu auch mal dafür sorgt, daß eine unliebsame Adresse aus diesem Verzeichnis gestrichen wird. Etwa der Satireserver "**Vote-Auction.com**", der derzeit nur unter <http://62.116.31.68> erreichbar ist. Ohne zentrale Datenbanken bei Yahoo, Altavista oder Google hätten wir kaum eine Möglichkeit, unter Milliarden Webseiten die gesuchte Information zu finden. Und ohne die Vermittlungsdienste der Napster-Zentrale wüßten wir nicht, bei wem die gesuchten Soundfiles liegen - die wir dann, wenn wir es erst einmal wissen, direkt und ohne besondere Vermittlung dort abholen, so weit es im Interent überhaupt "direkt" zugehen kann.

"[Gnutella](#)" braucht keine Zentrale. Deshalb wird das System gerne als möglicher Nachfolger für einen von der Musikindustrie abgeschalteten Napster genannt. Gnutella (der Name hat übrigens weniger mit Brotaufstrich zu tun als mit der [GNU](#) (Gnu is Not Unix)-Lizenzregelung der Free Software Foundation) ist eine "echte" p2p-Anwendung. Alle Teilnehmer, die gerade am Netz angeschlossen sind, bilden die Knoten eines Netzes, die sich mittels kurzer Botschaften untereinander verständigen. Da diese Botschaften vielfach Handlungsanweisungen, also Programme enthalten, nennt man sie auch "agents", Agenten. Und wenn ein Teilnehmer etwas sucht - bei Gnutella müssen das keine Musikfiles sein, das System sucht und findet im Prinzip alles - schickt er Agenten an seine Nachbarn. Jeder davon schickt dann automatisch Agenten mit dem gleichen Suchauftrag an seine entfernteren Nachbarn - und so weiter. Früher oder später wird ein Agent fündig, macht sich mit der Adresse der Fundstelle auf den Rückweg und stellt die direkte Verbindung zur Übertragung her.

Das klingt genial - aber: Erstens erfolgt der Einsatz der Agents zumindest nach derzeitigen Verfahren ziemlich unrationell - da können gewaltige Schwärme entstehen, die sich gegenseitig auf die Füße treten und die Übertragungsleistung des Netzes überfordern. Genau das ist im Frühjahr dieses Jahres bereits mehrfach geschehen. Zweitens hat sich gezeigt, daß es in solchen Systemen des "Gemeineigentums" anscheinend immer mehr Leute gibt, die etwas herausholen wollen, als solche, die etwas hereinstecken. Teilnehmer, die sich ausgenutzt fühlen, verlassen das System eher früher als später - das Netzwerk trocknet aus.

An diesen Schwachstellen setzen zwei weitere dezentralisierte Systeme an, die beide noch im Erprobungsstadium stehen: "[Grove](#)" und "[Mojo Nation](#)". Grove ist dezentralisiert wie Gnutella, doch anders als dort und bei Napster geht es hier nicht darum, eine möglichst große Zahl von Teilnehmern miteinander zu verbinden, sondern um kleine Gruppen, die Umfang und Zusammensetzung selbst bestimmen. Es geht auch keinesfalls nur um den Tausch von Musik, sondern um die Bildung gemeinsamer "Webspaces", in denen man gemeinsam arbeitet, Nachrichten und Dateien austauscht, sogar gemeinsames Surfen im Netz (d.h., alle sehen in ihrem Browser, was ihnen einer zeigen will) ist möglich. Ein ideales Werkzeug für die Online-Kooperation in kleinen Gruppen - wenn alles so funktioniert, wie die Entwickler sich das vorstellen.

"Mojo Nation" - das klingt wie ein Indianerstamm, zumindest nach Stadtindianer. Ist es aber nicht. Dieses System zielt auf größere Gruppen als Grove und widmet sich mit besonderem Nachdruck dem lästigen Problem der Trittbrettfahrer. In diesem Netzwerk kostet jede Transaktion die Teilnehmer einen bestimmten Betrag in der fiktiven Währung "Mojo", und um "Mojos" zu bekommen, muß man entweder etwas in das Netzwerk hineinstecken (Speicherplatz über Übertragungskapazität) oder man muß die Mojos kaufen - gegen gute Dollars.

“l'Unità”, 23 luglio 2003

Estetiche della rete: da South Park alla disobbedienza elettronica

In “Net.art - L'arte della connessione”, Marco Deseriis e Giuseppe Marano disegnano una panoramica sulla produzione artistica in Internet

Di Andrea Natella

Se non ci fosse stata Internet un cartone animato come South Park forse non sarebbe mai nato o non avrebbe avuto il successo che il pubblico gli ha riservato. South Park è infatti il prodotto che meglio riesce a sintetizzare le nuove estetiche della rete: dialoghi veloci e taglienti come quelli di una chat room, disegno essenziale e movimenti semplici di un'animazione in Flash. South Park è riuscito a portare sul più generalista dei mezzi di comunicazione l'accelerazione visiva e l'iperlocuzione verbale propria delle culture della rete.

Le tecnologie digitali hanno ormai trasformato le estetiche contemporanee e la diffusione di massa di programmi per la manipolazione delle immagini sta creando una diversa sensibilità iconica. Il luogo in cui più naturalmente hanno trovato spazio questi tentativi di sperimentazione artistica è ovviamente la rete. Se però esiste una specifica forma del sentire relativa alle nuove tecnologie digitali questa non può ridursi al solo ambito della rappresentazione visiva. Le arti dovrebbero soprattutto indagare quel radicale mutamento delle relazioni umane nel metaverso incorporeo della rete. Identità, virtualità e replicabilità disegnano un nuovo paradigma della conoscenza e della comunicazione ed è questo il campo definito dall'etichetta “net.art”, lanciata nel 1996 da un manipolo di creativi e critici della cultura digitale su liste di discussione come Nettime e Syndicate.

Di questo si occupa il libro Net.art - L'arte della connessione di Marco Deseriis e Giuseppe Marano, fondatori del nodo italiano di The Thing (<http://www.thething.it>) e animatori della scena net.artistica internazionale. Il libro edito dalla milanese Shake (224 pagine, 15 euro) dipinge il vasto panorama della net.art individuando continuità storiche e tematiche in quell'arcipelago variegato di artisti, attivisti, intellettuali e programmatori che continua a sfidare il mondo dell'arte tradizionale. Gli autori individuano nella capacità di riconcatenamento creativo delle interfacce (tecniche o sociali che siano) un fondamentale valore aggiunto per lo sviluppo democratico delle tecnologie.

Il presupposto è che la rete sia innanzitutto un ambiente e non un mezzo di comunicazione, e quindi

un'arte della rete non può caratterizzarsi solo attraverso un'aggiunta di digitalità alle estetiche che l'hanno preceduta. Secondo Alexei Shulgin, uno dei pionieri della net.art, l'arte in rete è solo “documentazione di arte che non viene creata in rete, ma al di fuori di essa e, in termini di contenuto, non vi stabilisce alcuna relazione”, la net.art invece “funziona solo in rete e prende la rete o il mito della rete come tema. Ha spesso a che vedere con concetti strutturali: un gruppo o un individuo progetta un sistema che può essere espanso da altre persone”.

Intorno a questa serie di principi di base, si sono sviluppate negli ultimi anni una molteplicità eterogenea di sperimentazioni che hanno estremizzato la dimensione di interattività della rete usando spesso il paradosso come stilema artistico. Nel loro libro Deseriis e Marano hanno individuato un comune sentire tra pratiche apparentemente distanti come la programmazione di un browser web in cui le pagine html sono presentate nella forma di cerchi e con linee-link che le uniscono (Web Stalker dei londinesi I/O/D), le azioni di disobbedienza elettronica come quelle di chi ha realizzato un falso sito per la compravendita di voti elettorali (**Vote Auction**) o le beffe degli YesMen che dopo aver clonato il dominio della World Trade Organization sono riusciti a farsi invitare in importanti convegni internazionali nelle vesti di rappresentanti del Wto per poi esibirsi in deliranti presentazioni. Tutti artisti che lavorano a far saltare quel meccanismo subliminale che sembra trasformare un'interfaccia artificiale nel più naturale dei mondi. Da questo punto di vista il libro Net.art è una vera e propria bibbia di interventi radicali e azioni intelligenti che all'insegna dell'ironia e del divertissement fanno emergere gli usi più improbabili e imprevedibili delle nuove tecnologie.

Una serie di pratiche che ha ottenuto importanti riscontri sul piano istituzionale con premi per opere di net.art offerti da importanti musei e la creazione di centri di cultura digitale e media lab nelle principali città europee. Un panorama che vede protagonisti i paesi dell'Europa centrale e del nord, e in cui i paesi dell'ex-Jugoslavia brillano per attenzione, mentre in Italia nonostante la presenza di artisti di indiscusso valore internazionale come gli 01001011101010 ed epidemiC, si iniziano a muovere i primi passi solo negli ultimi tempi. Tra i punti di riferimento per inoltrarsi in questo mondo la mailing list AHA (<http://www.strano.net/bazzichelli>) curata da Tatiana Bazzichelli e il sito Random (<http://random.exibart.com>) di Valentina Tanni.

With special care when you think the *ftf* it introduced, Nifty which is the main [server because](#) of maintenance, renewal did not become way. Angry hmm.

Upper ,Ð -.

From present afternoon [becoming](#) the *ftf*, is.

Modification procedure it does in the provider forgetting, the ,Ä, not being able to connect, you were hasty, is.

The , -, with this the news it can renew to noon Japan and China from the *fRf*, don't you think? it is is. Ukekekeke!

- Perhaps, whether, a how from ,¹ this it becomes faster CATV, however it is is, don't you think?!

The 64kbps how you obtain slowly and are slow obtaining! Don't you think? the ,Ä you say, or in the speed aspect were not impressed at all. It is the case that it is the opportunity how plate which nowadays experiences a faster environment and.

Oh, but how much it is slow with say, it keeps connecting as for ,Á ,Ä it is good. Keeps connecting ,Á ,Ä feeling is good. Keeps connecting ,Á ,Ä is warm, there is a sense of relief, body temperature is felt.

When story goes to strange direction with, how without report end.

*f*sf"fof|[f"fo and pin fo pawn fo, fE•[f]•[f,•[f" •ô

f%ofCfffw•[fC, f%ofCff|[f€ and fJf"f_fj|[f" •ô

It is the ,Ó -, it is cartridge viewing. High. It keeps connecting. , as for , , .

Note

* **J- phone Tokai, " J-SH05 " of folding type and " J-N03 " (k tie Watch)**

* **The official contents of all colors finally break 400 contents concerning the official contents of the J-sky November first half! Is, so. fnfA. Such a fVf‡f{ it is and so distantly it is the thinking which is meaning in the color of 256 colors or, as for everyone of the J-PHONE staff. [Contents details: [Annex 1 annex 2 annex 3 annex 4 annex 5](#)]**

* **NFL official sight establishment official information of the NFL in the J- sky concerning, the J - the sky monopoly offer! So, " downloading the logograph of the NFL each team, it can set the main contents to the expecting picture of the portable telephone. " " Information offer of the up-to-date game result and up-to-date news et cetera " and " introduction of all the 31 teams " is, so. Obtaining - with, the football ,Á ,Ä to be good the ,í can well it does the webmaster. How good kana, with. Well, such a thing it does not have to be. As expected the J-PHONE! If we want NFL information, don't you think? carrying is the rule with the J-PHONE! J-PHONE hurray! The J-PHONE highest! [Related article: [In J- sky NFL official sight opening](#) (k tie Watch)]**

* **Business * solution program " JCSP " start industry beginning! It is release, so it does, the development support program in the WEB but. In the webmaster meaning of the word, " business * solution " being the fCf}fCf` precisely not to be able to grasp, it is the new business which it is unable to comment at all. The solution ,Á ,Ä it is the solution and namely " the solution " " the solution method " ,Á ,Ä in sense but. The ,Ü - in a word ", when you used as Japanese " something with word ,Á ,Ä thing of lie smells. In regard to this case how it is good, is. High and the next. [Related article: [J- phone, for enterprise support program of solution offer trader](#) (k tie Watch)]**

* **Concerning the start of request of sky melody request in the home page of the J- phone with entire country acceptance start! [Related article: [J- phone, request acceptance of sky melody start](#) (k tie Watch)]**

* **Mitsubishi entire research, for carrying test use of intramural information service start (k tie Watch) [[Mitsubishi entire research news release](#)]**

* **The new service which can search the portable sight with information seeking and the mail** (the k tie Watch) inputting keyword of the information which we would like to know into the text of the mail, when it transmits to the kensaku@m.infoseek.co.jp, the searching result it replies as a mail, so is. In this searching service and the J-Sky do not correspond, so. The corresponding type temporarily is the EZweb and the i-mode, so. With being the case that it is said, for the time being how it is good, is.

* **Casio, casual fffWfJf• " LV-10 " approximately of 10000 Yen** (the k tie Watch) and the digital turtle ,Á ,Ä of such convenient price of the ,Á ,Ï it is good with the weight 120g, don't you think?. You probably will buy? But, if the fRfœ you buy, [whether](#) the J-SH04 it does also the air which is said and.

001030.mon

The ,Û, such [mono](#) adhering forever, it is helpless, it is with. News renewal reopening.

Note

* **The Japanese Telecom " J-STYLE "**, the **J- sky contents transmission** (the k tie Watch) with the L-mode opposite disagreeing with for the PC, it is thing? As for fRfœ.

* **As for the J-PHONE and 16 chord + sampling sound audition** corner webmaster arrival sound with type something which is used with while it is normal electronic sound. Extremely, how it is good, is. Well, when rashly it is strange arrival sound, it is shy it is with hobby exposure.

- The J-T04 which presently is [in the midst of](#) using corresponding 16 chords or. It is -, as for sampling sound, however you are attracted well enough, well. War movie " captain! It is urgent entrance electricity! When it designates that " we would like to see, are as arrival sound of the mail, parenthesis I I... the ,Á ,Ä, it probably is to call such hobby exposure. [Related article: [J- phone east Japan, on home page experience corner of 16 chords](#) (k tie Watch)]

* **The mail and the web of the J- sky, morning of 10/28 o'clock of 9 around 15 minutes - morning o'clock of 11 there was an obstacle, in** around 50 minutes, so is.

It is -? The ,Á , - which is? The webmaster message being not to feel, how is good, is. - You forgot the thing of such former times.

* **The k tie Watch, news access of last week (2000/10/23 - 10/29)** (the k tie Watch) news to access several superior 15 ranks are reported, but we as for J-PHONE-RELATED news in 15 cases barely one case, " [at the J- phone northeast * Niigata area on November 16th just the news,](#) " J-PE03s " sale ". The body cod , -, that 12 rank in 15 rank.

And it probably is ,Á ,Ï J-PHONE ,Á ,Ä useless what? It probably is minor what? It probably is rubbish what? It probably is kudzu what? There is no value which uses it is probably will be? Having, even personality of the ,é person, it probably is portable telephone kind of what which is doubted? The TVCM to strike it probably is what too much in the habit which either great share is not? Fujiwara period fragrance buying, antipathy the ,é it is probably will be? The webmaster message Fujiwara period fragrance is not accustomed to the favorite, is. The ,° which will be replaced to another person. Kato brown. Kato. If the personal computer you do, it probably will go to the fAfrfo. If that useless Asano loyal trust. That it is, already Fujiwara period fragrance the strange woman of the K-1 f}fjf., which is said it is useless what. If times you mention the color printer with the color printer, if there is love at Xerox, you say it is possible to be that, mono is not, it is is. With lie to look at actuality sweetly with deception that it can keep with just love living how, because the ,ç ,á it is not good, the ,° which will appoint Asano loyal trust to the cm of J-PHONE. Don't you think? well, J-PHONE Tokyo. Being appointed at other area, the thing which the webmaster sees it not being possible, being to be trivial. It was the webmaster of the Asano loyal trust fan with the Kato brown fan.

If [addition] it is from laughing direction, with the super great man rather, it is dense dearly or and per master what whether to be, the ,µ,ê,Û,¹,ñ. With favorite something. The all Osaka and Kobe giant many lintels to be, the ,µ,ê,Û,¹,ñ. Or freely using the CG, to come easily, revival. When that it is, not only Kato brown, making also Arai note revive, adding also will village, the fhfšft the image character. The being disgusted ,á which is useless. It fell highly and cleanly. - Don't you think? the anchor and, you age recently and truly it is with increase densely.

*** If 75% input & the picture of the portable user it is improved, information utilization it increases,** (the internet.com) certainly. But most, fee lower temporarily from that. That low level that price is the *fIfWfTf“frfbfNfŠ* with service.

*** " As for the possibility of President Nokia portable telephone infinity " * World Council of Management (NIKKEI)** certainly. 001031.tue

せっかくフレッツ導入したと思ったら、メインサーバである[ニフティがメンテナンス](#)の為、更新がままなりませんでした。カッパン。

うえひー。

今日の午後から[フレッツ](#)になりましたですよ。

プロバイダに変更手続きするのとか忘れてて、接続できなくて焦ったですよ。

あー、これでコレからは昼日中にnews更新できるんですね。ukekekekeke!!

つーか、どうせこれからもっと速いCATVになるかもしれないんですけどね!!

64kbpsなんて遅えよ遅え! ていうか、速度的な面では全然感動しませんでしたね。今時もっと速い環境を体験する機会なんてザラにあるわけですし。

いやあ、しかしいくら遅いとは言え、繋ぎっぱなしってのはいいなあ。繋ぎっぱなしってのは気持ちいいよな。繋ぎっぱなしってのは暖かいよな安心感があるよな体温を感じるよな。

と、なんとなく妙な方向に話が行った辺りで報告終わり。

ピングポーン、ピングポーン、ウーマーヤーン

ライドヘーイ、ライドポーム、カンダニーン

んふー、たまらんです。ハイ。繋ぎっぱなし。はあはあはあ。

note

[__](#) J-フォン東海、折りたたみ型の「J-SH05」と「J-N03」(ケータイWatch)

[__](#) J-スカイ11月前半のオフィシャルコンテンツについて **全てカラーのオフィシャルコンテンツがついに400コンテンツを突破!** だそうです。ハア。あんなショボい256色のカラーにそんなに意味があるとお思いなんですか、J-PHONEスタッフの皆様は。[コンテンツ詳細: [別紙1](#)、[別紙2](#)、[別紙3](#)、[別紙4](#)、[別紙5](#)]

[__](#) J-スカイでのNFL公式サイト開設について **NFLの公式情報をJ-スカイが独占提供!**

で、主なコンテンツは「NFL各チームのロゴをダウンロードして、携帯電話の待ち受け画面に設定できる。」、「最新ゲーム結果、最新ニュースなどの情報提供」、「全31チームの紹介」だそうです。えーと、webmasterはフットボールってよくわかんねえし。どうでもいいかな、と。いや、そんなコトを言うてはいけないな。流石はJ-PHONE! NFL情報が欲しいなら携帯はJ-PHONEで決まりだね! J-PHONE万歳! J-PHONE最高! [関連記事: [J-スカイでNFL公式サイトがオープン](#)(ケータイWatch)]

[__](#) ビジネス・ソリューションプログラム「JCSP」開始 **業界初! WEBにおける開発支援プログラムを公開** だそうです。webmasterには「ビジネス・ソリューション」という言葉の意味

がイマイチ的確に掴めないのになんともコメントしかねる新事業です。ソリューションってな solutionであり即ち「解決」とか「解決法」ってな意味なんです。まー要するに「日本語として使った場合は」なんか嘘臭い類の言葉ってコトで。本件に関してはどうでもいいです。ハイ、次。[関連記事：[J-フォン、企業向けソリューション提供業者のサポートプログラム](#)(ケータイWatch)]

__スカイメロディのリクエスト開始について [J-フォンのホームページでのリクエストを全国で受付開始!](#) [関連記事：[J-フォン、スカイメロディのリクエスト受付を開始](#)(ケータイWatch)]

__三菱総研、携帯向け学内情報サービスの試験運用を開始(ケータイWatch) [[三菱総研ニュースリリース](#)]

__インフォseek、メールで携帯サイトが検索できる新サービス(ケータイWatch) 知りたい情報のキーワードをメールの本文に入力して、kensaku@m.infoseek.co.jpに送信すると、検索結果がメールとして返信されるそうです。が、この検索サービス、J-Skyには対応してないそうで。対応機種はとりあえずEZwebとi-modeだそうで。というわけで、当面どうでもいいです。

__カシオ、重量120gで1万円前後のお気軽デジカメ「LV-10」(ケータイWatch) やっぱこういうお手頃価格のデジカメっていいよね。買おうか。しかし、コレ買うなら[J-SH04](#)かという気もするし。

001030.mon

ま、いつまでも[こんなモノ](#)にこだわっていても仕方ないんで。news更新再開。

note

__日本テレコム「J-STYLE」、J-スカイコンテンツをPC向けに配信(ケータイWatch) L-modeとやらに対抗ってコトですか。コレは。

__J-PHONE、16和音+サンプリングサウンド試聴コーナー webmasterは着信音とかは普通の電子音のままで使うタイプなんで。割とどうでもいいです。いや、なまじ変な着信音だと趣味丸出しで恥ずかしいじゃんよ。

つーか、現在使用中の[J-T04](#)じゃ16和音とか対応してないし。んー、サンプリングサウンドは結構惹かれますけどねえ。戦争映画とかの「大尉! 緊急入電です!」みたいなのをメールの着信音にしたりしたらカッコイイ...って、そういうのを趣味丸出しと言うのでしょうか。[関連記事:[J-フォン東日本、ホームページ上に16和音の体験コーナー](#)(ケータイWatch)]

__J-スカイのmailとweb、10/28の午前9時15分頃~午前11時50分頃に障害 が、あったそうです。

んー? あったっけ? webmasterはあんま感じなかったのどうでもいいです。つーか、そんな昔のコトは忘れました。

__ケータイWatch、先週のニュースアクセス(2000/10/23~10/29)(ケータイWatch) アクセス数上位15位までのニュースをレポートしていますが、我々がJ-PHONE関連ニュースは15件中わずかに一件、「[J-フォン東北・新潟エリアで11月16日に「J-PE03s」発売](#)」というニュースだけ。それも15位中12位という体たらく。

やっぱJ-PHONEってダメなんですか。マイナーなんですか。ゴミなんですか。クズなんですか。使う価値無いんでしょうか。持ってる奴の人格すら疑われてしまうような携帯電話なんですか。大したシェアも無い癖にTVCM打ち過ぎなんですか。藤原紀香が反感買ってるんでしょうか。webmasterもあんま藤原紀香は好きになれないです。別の奴に代えようぜ。加藤茶とか。加藤。パソコンやるならアビバに行こう。それがダメなら浅野忠信とか。それだよ、もう藤原紀香とかいうK-1マニヤの変な女じゃダメなんだ。時代はカラープリンタでカラープリンタと言えればゼロックスで愛があればそれでいいというモノではないんだ。愛だけで生きていけるなんてのは嘘でまやかして現実を甘く見ちゃいけないので、浅野忠信をJ-PHONEのCMに起用しようぜ。ああ、J-PHONE東京ね。他の地域で起用されてもwebmasterが見るコト出来なくてつまらないので。加藤茶ファンで浅野忠信ファンのwebmasterでした。

[追加]お笑い方面からというコトであれば、いっそ超大物というコトで、いとしいし師匠あたりなんかいいかもしれませんな。好きなんで。オール阪神巨人なんかもいいかもしれませんな。もしくはCGを駆使してやすきよ復活とか。それだったら加藤茶だけでなく、荒井注も復活させて、志村も加えてドリフがイメージキャラクターとか。ダメだこりゃ。ハイ、綺麗に落ちました。つーか、いかりや、最近本当に老けこんでますね。

__携帯利用者の75%入力&画面改善されれば情報利用増やす(internet.com) 確かに。しかしとりあえずそれよりなにより、料金下げろよ。あの低レベルなサービスであの値段とはオジサンビックリだ。

__ノキア社長「携帯電話の可能性は無限」・世界経営者会議(NIKKEI) 確かに。将来的には「携帯電話」という形をとらなくなるかもしれませんが、もはや個人用の携帯通信機器は一般的なモノになりつつありますからな。

__個人の移動電話利用割合、1年で10ポイント増・野村総研調べ(NIKKEI) 多分、パケット代が大きく影響していたりするんでしょうな。多分。

__古河電など、携帯電波の弱い地域にレーザー無線通信(NIKKEI) ふーん、技術的なコトはよくわからないけど、とにかく便利になるならばそれでいいよ。

__携帯電話向け太陽電池開発・エム・エステクノロジー(NIKKEI) 携帯に日光浴させる光景が近い未来そここで見受けられる、とかなるんでしょうか。

__京セラ、携帯周辺機器拡充・携帯電話で画像やりとり(NIKKEI)

__日立、MPEG4対応携帯向け動画の画質向上(NIKKEI)

__携帯子会社の売却、ボーダフォンと交渉・アイルランドの大手通信(NIKKEI)

__ブロードバンド・インターネット時代の新サービス「Broadband@nifty」提供開始 [関連記事:[ニフティ、ブロードバンド向けコンテンツ配信サービス](#)(internet.com)]

__EUと米国、通信の監督機能分離を要求(NIKKEI)

__Nintendo Powerの12月書き換え開始ソフトの情報 めぼしい作品は新作の[メタルスレイダーグロリーディレクターズカット](#)だけですかね。えーと、これってNP版だけ?と思ったら!ちゃんと[プリライト版](#)もあるようです。しかも、NPのお約束「値の張るプリライト版のほうがNP版より数日先にリリース」もしっかり。プリライト版引渡し日は11/29、\5780。NP版書き換え開始は12/1、\2000。\3780余分に払えば、二日早く遊べるわけです。

で、そのプリライト版は予約受け付け期間が10/1-10/31。って、明日までじゃん。欲しい人はとっととローソンへGO!プリライト版は特典として「特製ポストカード5枚付き」だそうです。まー、いわゆる「ファンなら買い」って奴でしょう。プリライト版は例によって数量限定らしいので、その内秋葉の中古屋とかで、微妙な高値をつけられて販売する光景をみかけるでしょうな。webmasterは特別ファンじゃないのでどうでもいいです。明日までにローソン行くなんてかったるいし。

__任天堂、ゲームボーイ25%増産・年末商戦控え(NIKKEI)

__ドリームキャスト用周辺機器「メモリーカード4X(フォーエックス)」新発売のお知らせ 12/14発売、\4800。

従来のVMの4倍の容量で云々・・・と言うコトですが、ネクサスとか買った方がいいんじゃないかと思えます。メリットは「純正品」というコトだけですね。きっと、サードパーティ製のストレージよりムキャストの親和性が高いですよ。いやあ、すごいメリットだなあ。値段が高いのなんか全然関係無いね。欲しいよ、欲しい。

すいません、嘘つきました。心が痛いです。こんなヘタレたストレージ、欲しくもなんともないです。

__セガ、矢口事業所の閉鎖ならびに希望退職募集について

__セガの今期連結、赤字200億円・ゲーム機値下げ響く(NIKKEI)

__新社名「セガ」、11月1日から正式に採用(ZDNet) なんでもいいからさっさと[VF-X](#)出せや。あと、ムキャ版FV2。

__懐かしの喫茶店ゲーム機の興奮をふたたび(WIRED) ポン製作者であるノーラン・ブッシュネル氏がなんか作ったそうで。要するにシステム基板込みのアーケード用筐体作ったってコトでしようかね?

なんでもいいからガントレットをアップライト筐体込みで欲しいなあ。欲しいなあ。

__ AOL対MSN、新『ブラウザ大戦争』勃発か(上)(WIRED) AOL対MSNエクスペローラ
じゃあなんか燃えないなあ。やっぱ「ネスケ対なにか」でなきゃ。

__ ドイツに移った「票のオークション」サイト(WIRED) ドイツにドメインを移して、メリケン国内からの法的追求を避けるつもりようです。なんかしらんが頑張れvote-auction.com。
ところでこのvote-auction.comサイトのアドレスどなたかご存知ありませんか。最後を[http://
voteauction.de/](http://voteauction.de/)とかしてみたんですけど、どうも関係ないサイトっぽいし。見つかりません。

__ 神棚用の榊をネット販売・ケイフローリスト(NIKKEI) あの、榊ってそんなに需要があるモンなんですか。うーん、そんなに需要がないからこそ、店舗を構える必要のないオンライン販売にしてみた、と言う理由も考えられますが。まーなんにせよ面白い時代ですね。

001029.sun

主よ、今日も迷える子羊に安息を与えて下さりありがとうございます。

[このような暴力的かつ全能たるあなたを恐れぬ内容のゲーム](#)が私めの身辺に出現するコトなきようにとのお取り計らい、感謝の念をあなたに捧げずにはおられません。
[あのようなふざけたゴンポリムビーゲー](#)は近々あなたの教えを伝え、そしてその最も忠実な僕である法王様が閲覧禁止の旨を全世界に向けて発せられる筈ですが、それまではあなたの比類なきお力で悪しき存在が私めに近付かぬようにお守り下さい。

ああ、今日は安息日でしたね。
あなたの教えどおり、一切の仕事を行わず、一日をすべてあなたへの祈りに捧げます。
ですので、当然news更新はありません。

001028.sat

webmasterは本日も[バンダイ社製のたわけたデジタルコンテンツパッケージ](#)を入手するコト能ず。

「リアルタイムあべしシステム」などとイカしたセンスで消費者の購買意欲を煽っておきながら、十全足る生産及び販売体制を整えるコトなく当該製品の販売に踏み切った[バンダイ社](#)の営業方針には怒りを覚える。社会正義に悖る怠惰な行為は許されるものではない。

[バンダイ社](#)に猛省を求めるとともに、消費者の要望への早急なる対応を求める。
なお、抗議の意思の表れとして、本日も当webページのnews更新を休止させて頂く。

001027.fri

__ドコモ、料金割引を改定。パケット料金を無料通話分に含める(ケータイWatch) つーか、パケット代そのものを安くするコトの方が先決じゃないの？ドコモがボヤボヤしているうちにそれをやってアドバンテージを稼ぐんだJ-PHONE！なんだったらEZwebでもいいぞ！とにかくNTTは気に入らねえ！

__政府は「IT革命」よりも「通信料値下げ」を(internet.com) そうですねえ。確かに。それと、webmasterとしてはやっぱり現在の携帯電話の通話料(含むパケット代)ってかなり法外だと思っんですよ。それを何とかして欲しいですねえ。モリヨシローさん。無理だろうけど。今日も夜まで国会でなんかやりましたねえ。

__通信、独占企業に新規制・郵政省方針NTTコムなど対象(NIKKEI) ペッ！ザマーミロNTT！つーか、もっと強く締め付けろや！そりゃ無理か！なんつっても天下り先だモンなあ！guhehe!!

__放送された音楽を瞬時に検索・NTTコム(NIKKEI) へー、NTTコミュニケーションって、NTTコムって略すんですね。知らなかった。NTT関連はなんでもかんでも気に食わないwebmasterですが、しばらく前にやっていた山下達郎のBGMで、稲森いずみ？が出てるあのCMは好きでしたねえ。で、この話に特にオチはありません。

__NTT東西、ISDN利用など新セット割引導入(NIKKEI) 「ISDNとかが安くなるんかね？」とか思った僕が馬鹿でした。すっげーどうでもいい、NTT様の新商品です。

__サーバー内のポルノ画像を検出する新フィルター(CNET)

__「罪と罰 地球の継承者」公式サイト 11/21発売。N64用ソフト。予価\6800。製作がトレジャーなので、またひねくれたようなアクションゲームなのでしょう。楽しみ。ところで主人公の名前はやっぱりラスコーリニコフだったりするんでしょうか。そりゃないか。

001024.tue

note

__無料グループウェアサービス「ケースケ」がJ-スカイに対応(ケータイWatch) 「ケースケ」は、携帯電話だけでグループが形成でき、伝言版・スケジューラー・行先案内板などのグループウェア機能が利用できるサービスで、PCからの利用も可能。J-スカイ版のサービス開始により、iモード・J-スカイ・PC間でデータの共有が可能となった。というコトで、PCとi-modeとJ-Skyでアーキテクチャを超えて利用可能ならば結構実用性は高そうですね。「今日の飲み会の集合場所の告知に」「大事な会議に遅れそうな時に」みたいな感じがあ？いやあ、便利便利。

__オフィスノア、リアルタイム動画を携帯電話に配信するシステム(ケータイWatch)

__テレビ朝日、携帯向けサイトをリニューアルして有料化(ケータイWatch) テレビ朝日は、現在iモード・J-スカイ向けに無料で提供しているサイトを「テレ朝 com・plete」として、月額280円の有料サービスでリニューアルオープンするそうで。J-Sky版のサービス開始が11/1から。i-modeは11/6、EZwebではauが11/7、ツーカーが11/2だそうです。従来の無料サイトは、J-Skyとi-mode用のみは並列して存続だそうですが、EZweb版は有料サイトのみになるそうです。えー、多分廃れますね。有料版だけだと。こういうのは無料だから客がくるんだってばさ。

__米国ではiモードは流行らない?(WIRED) 日本語読めないし、第一NTTがないしねえ。違うか。

確かに、あの太くて早い回線を常時接続で、デカくて綺麗なディスプレイを悠々と使っているメリケン国の方々には携帯電話みたいな遅くて小さいモノは我慢出来ないでしょうな。「太くて早い」VS「遅くて小さい」。うーん、後者の方がテクニシャンって感じですか？いや、別になんとなくフとそんなコト思っただけで発言に特に含みなどは一切ありませんが。テクニシャンの方がいいよね。でも、結局最後は愛か？愛だろ、愛。とかいうTVCMもあったしなあ。で、なんの話でしたっけ？

ああそうそう、何故メリケン国でi-modeが流行らないか、とかいうテーマでしたっけ。米国人は携帯電話でフルモーション映像を観ることに興味がないからだ。だそうで。つーか、webmasterもそういうのには興味ないですが、その前に現在のi-modeだとまだそんなコト出来てねえよ、っていうか。近々出来るようになってもやっぱり別に観たくないですがね。大体僕は携帯でwebみるコトすら嫌なのに(お金がかかるから)、そんなタリイコト誰がやるかっての。

__携帯電話やPDAがジュエリーに(WIRED) 携帯機能付きのイヤリング、PDA機能の付いた時計、MP3プレイヤーのタイピン、とか作っちゃったらしいです。IBMが。

webmasterは最初この記事のタイトルを見た時に「携帯ががアクセサリか。そうだなー、時計なんて機能より見た目優先で選んでる人はいっぱいいるしな。携帯ももうそこまでこなれた使われ方するレベルにまで来てるのかな」とか思ったんですが、どうやらIBMの連中はwebmasterより一枚上手だったようです。つーか、多分そういうスパイグッズみたいのはあんまり流行らないから安心して部門を縮小した方がいいと思うよ> IBM

とか言ったら、もしかして流行ったりしてな。それならそれで愉快的な世の中ですが。つーか、webmasterはあんまアクセサリとかつけない人なんでどうでもいいですが。人からシルバーとか貰ってもつけねえし。

__ギガフロップス、携帯サイトの人気ランキングをメールで毎日配信(ケータイWatch)

__MTI、iモードコンテンツをEZweb向けに自動変換するサービス(ケータイWatch) あー、こういうのいいね。気に食わないi-modeサイトをクラックして全部J-SkyWeb完全対応にしちゃうとか。ところでこのサービス、どうもパーソナルユーズ向けではなく、業者向けっぽいんで、大抵の人にはあんまり関係ないみたいです。多分。

__ACCESS、米KOPIN社と提携して小型モバイル端末を開発(ケータイWatch) 商品名

は"BrowserScope"。以前あった、京セラのDataScopeと名前が似てますな。この端末、MPEG-4とかも再生出来ちゃうようで。だから、携帯端末で動画とか観たくねっつ。実用レベルならいいけどよ。どうせそうじゃねえんだろ。

__京セラ米子会社と米Lucent、第3世代「CDMA」で提携(ケータイWatch) ところでこういうニュースってさ、一応知った風な顔でnewsとして流してるけど、全然わかってないのよね。あはははは。なによ、DMAって？デオキシリボ核酸？DNAですな。ああ、HDDのアレ？Direct Memory Accessだっけ？つーわけで、織田裕二には悪いけどなんのコトやらサパリーね。

__公取委、NTT東日本を事情聴取 DSL参入妨害の疑い(asahi) まったく、図体デカイ癖にやるコトはこすっからくてケチ臭い、いかにも親方日の丸野郎といった感じですな。クソNTT。

__広帯域はクラッカー天国？(上)(WIRED)

__「票のオークション」サイトが閉鎖(WIRED) 衆愚政治に陥っているかもしれないとは言え、現代社会システムの最高峰である民主主義。その根幹を成す選挙権の一票をオークションで売ろうと考えるたあ。流石に自由の国メリケンですな。とか、ベタなコトしか考え付かなかったんですが、やっぱなんつーか、自分の一票はもう少しマシなコトに使った方がいいよね、とか死ぬ程まともな考えを述べてみたり。ああダメだ、webmasterは根が善良で善良で仕方が無い人間なので、こういう時はつい正論をぶちまけてしまいますよ。やっぱ男は(女も)白票でしょう！もしくはテメエで立候補しときなさい。で、オークションサイトで票を買って当選しなさい。あ、潰れたのかこのサイト。自分で運営して自分で買いなさい。それなら万事解決。

__メーカー直販で購入希望8割。ただし、「安ければ」(internet.com) メーカー直販って、安くなければ、普通は特にメリットありませんからねえ。まー、自作機を製作可能なレベルのユーザに限っての話ですが。ちなみにwebmasterはGateway2kのG6-350なる型番のレディメイドPCをメインで使用しています。具合悪いです。ガワが特に。お金が出来たらチョボチョボパーツ入れ替えして行きたいと思います。

__セガのオンラインショッピングサイト、売上好調(internet.com) [Dreamcast DIRECT](#)のコトですが...。みんな、何買ってるの？買うモノなんかないじゃん。ムキャ関連製品って。シェンムーとかTURBとか買ってんのか？まさか。いや、嫌いじゃないですけどね。ムキャ。ただ、そんな「好調」って程、何が売れてるのかな～、と。

__任天堂「パーフェクトダーク」公式サイト更新

__「脳ペースメーカー」で鬱病治療(WIRED) 「脳にペースメーカー入れる」ってだけでかなり気分悪くなるんですが。鬱病の人にそんなコト言ったらショックで自殺する人とか出ねえか？

001023.mon

note

__腕時計型デジカメでミニスカ盗撮、陸上自衛隊二曹を逮捕(ZAKZAK) ウム！機材を臨機応変に駆使して行くその創意！戦場においては柔軟性こそがなにより役に立つ！お国の為役に立てよ！つーか、なかなかこの人も頭いいですね。女性(31)のミニスカート内に腕を入れ、手に持った腕時計型デジカメで盗み撮りした疑い。なんだ、誉めて損したよ。タダの頭悪い人じゃん。容疑者は福岡県春日市の陸自福岡駐屯地で不発弾処理の研修を受けた帰りだった。記事の最後にこの文章があるんですが、その不発弾処理とリストカメラで盗撮ってのはなんか関連性があるんですか。「人を殺した後はシヨンベンをしたくなる(c)北斗の拳」のと同じように「不発弾処理をした後は盗撮をしたくなる」んでしょうか。ところでこのリストカメラは恐らく[カシオのアレ](#)でしょうな。webmasterも前から欲しかったんですけどね～。こんな使い方があったとは。いや、別に真似する訳じゃないですが。待てよ、J-PHONEユーザが今そのリリースを心待ちにしている[J-SH04](#)は、「携帯電話 + ディ

ジカメ」だし、似たようなカモフラージュが可能だね！バッグかポケットにでもしまえばいいのに、何故か携帯を手に持って街中歩いている奴とか結構いるしさ！激写激写！しかもカシオのアレと違ってこっちゃカラーだぜ！そんでもって撮ったら即座にサイトにアップだ！アクセスもウナギ昇り！

つーか、なんかかなりいいアイデア過ぎて、これは実行する奴いそうだよな～、という感じなんですけどどうでしょうか。賭けましょうか。類似犯が出るかどうか。出る方にうまい棒(めんたいこ味)一本+フィリックス君ガム二つ。時価およそ\30といったところですか。

__丸紅テレコム、携帯の待ち受け画面保管サービス(internet.com)

__丸紅テレコム、携帯電話向けのディスクスペースサービスpandoru.com(ケータイWatch) iモード、EZweb、J-スカイの各端末に対応するディスクスペースサービス。自作の待受画面や着信メロディなどのデータをメールに添付して送信することで、サーバー上で5MBまで保存しておくことができる。画像データの表示については、各端末向けに自動的にファイル形式やサイズを調整する機能も備えている。

携帯向けのストレージサービスですか。便利そうですね。しかし、5MBも転送するとしたらポケット代が恐ろしくてかなわないでしょうな。サービス開始は10/25。[<http://www.pandoru.com/>]

__携帯電話からホームページに簡単アクセス「ワンコールネット」(ケータイWatch)

ユーザーが番号通知機能がついた携帯電話からサーバーに電話をかけ、呼び出し音を聞いて電話を切ると、サーバーから携帯端末宛てにメールが届く。届いたメールには、ホームページのアドレスが掲載されており、ユーザーはURL部分を選択するだけで簡単にアクセスすることができる。

ふんふん、確かに携帯のテンキーで長ったらしいURLを入力するのは骨ですからな。

webmasterはやったコトないけど。

サーバーへの通話料は無料だが、同サービスを利用するには、メールアドレスが電話番号のまま、番号通知設定をオンにしている必要がある。また、ワンコールネットへの掲載については、サイトオーナーより月額5000円程度の料金を徴収。

なるほどほど。利用者側は恐らく無料で利用できるんでしょうな。まあ、面白い試みかもしれませんが。対応端末はJ-Skyとi-mode。サービス開始は来年1月を予定。

__マキシーの恋愛サポートサービスがJ-スカイに対応(ケータイWatch)

__ノエルのビジュアル系アーティスト情報サイトがJ-スカイに対応(ケータイWatch)

__NTT、次世代ブロードバンド通信の実験に成功(NIKKEI) ISDNが遅い、と感じる証拠。一波長の光で送信できる情報量は毎秒1テラビット超、現在の伝送可能距離は約70kmだそう

で。
新技術は光通信で一般的に使われている波長1.55マイクロ(1マイクロは100万分の1)メートルのレーザー光を利用する。研究グループは山のような形をした光信号のすそ野(パルス幅)

が380フェムト(1フェムトは1000兆分の1)秒という極めて短い光信号を作りだし、この信号を極めて短い間隔で送り出した。

__シャープ、衝撃に耐える業務用ザウルス(NIKKEI)

__森首相外交、「びっくり発言」次々 たびたび自ら窮地に(asahi)

__「バッシングだ」 森首相、母校の早大でぼやく(asahi) そんなに自分で首相に向いてないと自覚しているならば、さっさと辞めろよ。ああ、利権がたまんねえだろうからな。やめられねえよな。webmasterも一度首相になってみたいものです。

001021.sat

note

__Gratzer2.74リリース 定番MP3プレイヤー。今回はWinMeに対する動作確認などが為されたようです。最近WinMeを正式にサポートするソフトも増えていますが、そもそもWinMeというOS自体はどうなんでしょうね。「バグだらけ」とかも聞きますが、そんなんだったら別にWin9x系も同じだしなあ。やっぱNTかUNIX系辺りのOSですかね。乗りかえるなら。安定しててよさそうだし。うん、MacもMac OS Xなら既にアレは一応UNIX系の亜種と言えないコトもないし選択肢に入りますなあ。うむうむうむ。

最近本気で新機種導入(asメイン使用OS乗換え)を考えているwebmasterです。つーか、お金無いから新しいモノ買うなんてなかなか出来ないけどね！haha

__任天堂の今西紘史取締役広報室長にインタビュー(mainichi)

001020.fri

で、結局news更新出来ませんでした。[10/22未明記入]

さー、今日こそきちんと更新したいモンですね。コメントが命の当サイト、とにかくたわけたコメントを付けたいモノです。[朝]

001019.thu

午後三時頃、[携帯](#)の音で目が冷めたら知人から「家の電話通じないよ」とありがたいお知らせが。

つーわけで、日中の更新は出来ませんでした。すいません。現在10/20のAM06:55。いわゆる「あした」です。

朝で~す。未明で~す。そろそろ日の出で~す。

やーすんません。15日の更新をしている途中でWindozeが死んじゃいまして。

「政府モード」とか呼称される謎のシステム監察モードすらたちあがらず、「えー、Win再インストールするの面倒臭いな~。ていうか、C:\のバックアップとってなくて困ったな~。つーか、ブックマークだけでも救助してから再構築すっか。でも面倒~」とか思ってたらあつという間に3日ばかり経ってしまいまして。えっへっへ。今週ももう木曜ですね。つーか、実はまだきちんと復旧してません。

今回のトラブルは、ネスケ4.73とWWWでwebを巡回している最中に、Iria ver.1.06を起動したら何故かHIMEM.SYSがブツ壊れちゃったらしく、Win98起動ディスクからHIMEM.SYSだけをC:\にcopyしたら、何事も無かったかのように、割とあっさり起動してくれちゃったりしたので、「ん~、大丈夫かな?」とか思いつつ恐る恐る使ってます。でも、結構大丈夫臭いのでまたシステム吹っ飛ばすまで再インストールするつもりは無かったり。適当webmaster。

しかしこんなに簡単に復旧できるなら3日も放っとくんじゃなかったなあ。あっはっは。

001015.sun

日曜だし、どうせnews無いよね。

今日は寒いね。

当サイト、最近のレファ 最近やたらとJ-PHONEづいているせいか、[J-PE03](#)で検索をかけ

た結果、当サイトに辿り着いてしまった哀れな人がそれなりにいっぱいいるみたいです。なーんも、有用な情報はありませんよ。すいませんね。パクリニュースばっかで。で、えーと、訪問者の具体的な数字を言うと日に10人くらい。あんまり多くないか。でも、当サイトにしてみれば、10人は多いほうなのです。あっはっは。つーか、webmasterのネスケだと、上記検索結果9件のアンカーすべてが「10日以内に訪問済み」な色になっていて、なんかこいつJ-PHONE好きだなあ、とか自分で思います。

ところでその先日10/13に発売されたJ-PE03、どうなんでしょうね。実際。とりあえず2chの携帯PHS掲示板にあったスレッドを二つ。[J-PE03どーですか？](#)、[J-PE03を](#)。どちらもかなり寂しいスレッドですね。

webmaster思いまするに、携帯はやはりある程度ボタンが多くあった方がいいのではないかと。

「電話機として必要なボタン(10キー+リダイヤル履歴)」、「メールボックス呼出ボタン」、「www接続ボタン」、「4方向程度のカーソルキー」。ボタンはこれくらいは欲しいですな。それと、出来る限り大きな液晶画面。電池の持ち。どーも、現在のJ-PHONEの新型機種はボタンが少ない奴が多くていけません。J-PE03然り。やっば、J-SHシリーズはなんだかんだでなかなかいいシリーズなのかも知れません。デジタルメ付きの[J-SH04](#)に大期待！

2chを色々みていたら、[SH05情報GET!!](#)などというアホスレを見つけてしまいました。流石2ch。11月発売はないだろ。来月だぜ。

[J-スカイ「ステーション」](#)対応機[J-PE03\(by Pioneer\)](#) 本日発売!eSHOPで[新規加入](#)を開始しました はーいお待たせ。J-Skyステーション対応機種がまた新たにリリース。店頭での実勢価格はどんなモンなんでしょね。売れ行きとか。

今更[J-T04](#)使用レポ 今日webmasterは、なんか初期不良っぽかった[J-SH02](#)から[J-T04](#)に機種変更しました。前機種使用6ヶ月以上+J-PHONE CLUB加入で、機種変更料金は\4200+消費税\210の計\4410でした。機種変更の申し込み日は今週日曜日の10/8。J-T04の使用感はえーと、割と悪いです。ボタンのクリック感が死ぬ程イマイチで、しっかりボタンを押し込まないと反応してくれません。特に4方向に別れているマルチファンクションボタンあたりは最悪。お金が出来次第とっとと近日発売予定の[J-SH04](#)に乗換えたいと思います。J-T04独自の「お楽しみ機能(Skyウォーカーの送受信回数に応じて徐々に機能追加)」ってのはそれなりに面白いと思いますが、そんなん出来るんだったら最初から使用可能にしとけよなというか。しかも、この機能はJ-T04含む東芝機間でのみ有効な機能が多いので、他社製の筐体を使用している人とのメールのやり取りじゃあんまり関係なかったり。ちょっとナニな機能です。

...いや、ここはやはり逆境を逆手に取り「メル友募集！J-PHONEの方に限ります！出来れば東芝機種の方でお願いします！」とかするべきなのではいでしょうか。 :-<

__ J-スカイ端末価格調査10/12版：東京でカラー機含む4機種値下げ(ケータイWatch) J-SH04の発売が間近になり、多少値下げが行われたようです。

__ iモードはメール端末？有料コンテンツ利用者は2割弱(internet.com) オイラァJ-PHONEユーザーだからi-modeなんて知らねえや。つーか、やっぱ普通有料コンテンツなんてアクセスしないよな。高いし、無線だから接続超不安定だし。大体速度も携帯だから9600だしな。

__ 【CEATEC JAPAN】cdma2000対応ゲーム端末、DC用無線通信ユニットなど(eg)

__ 広島・紀藤と中日・鶴田の交換成立 えっ、紀藤マジで行っちゃうの？つーか昨日戦力外通知出されてたけど急な話だな。交換相手は鶴田か～。なんかかなり微妙なセンですね。年に一度だけスーパーモードになる紀藤の方がまだいいんじゃないかな、とか思わないでも。紀藤は愛知出身なんで里帰りですな。ああ、カープ一筋の男がまた一人いなくなる。[\[スポニチ\]](#)

金本3割30本30盗塁達成！ 行って来ました最終戦@神宮。
やりましたよ、知憲(ともあき)は！打ちやがりました第二打席で。ライトスタンドに飛び込む見事な弾丸ライナーでした。辛抱たまらん感じで思わずnoise氏大興奮でした。とりあえず知り合いにメールうちまくりの電話しまくりでした。あはははは。[TERRAZIさん](#)にも電話して「速報で載せとけコラ」などと思わず口走ってしまいご迷惑おかけしました。まあいいじゃないの、ダイエーは優勝したんだし(TERRAZIさんはダイエーファン)。これくらいの迷惑かけられても当然だよあははは。

試合的には、

- ・横山が1失点の完投で、最終戦で今季初勝利という微妙な勝利を記録
- ・ヤクルト先発は今季限りで引退の岡本が1回表をピシャリ(岡林最後の対戦打者は町田。遊飛)
- ・2回表からは最優秀防御率のタイトルがかかる石井がリリーフしそのまま1回1/3イニングスを抑え最優秀防御率のタイトルを手中にし即座に降板
- ・4回表の先頭打者、金本がここでソロホームランを放ち史上7人目の3割30本30盗塁達成(ちなみに前回達成者は1995年の野村。カープでワンツー)
- ・馬場も引退試合(馬場のプロ最後の打席はライトフライ。町田がもぎとりました)
- ・[広島がヤクルトに4年ぶり勝ち越し](#)(しかも今日の勝利なんか「魔の神宮」ですよ！)

という感じでした。

まー先日順位が確定した後の最終戦と言うコトもあり、緊張感に欠けたせいか間抜けなプレーも目立ちましたが、10月にしては暖かい気候でしたし、金本の記録、石井の記録、岡本&馬場の引退試合&セレモニーなんて、歴史的な瞬間にも立ち会えた訳ですし、なかなか楽しめる野球観戦ではありました。ペナントレース真っ最中に怒号を放ち青筋立てて応援するのも面白いですが、こういうのんびり観戦できる試合もいいもんです。達川も最後が勝利でよかったな。

コレで今シーズンの僕の野球は終了。後はストーブリーグだけが楽しみです。日本シリーズなんてなあ…。来季はナゴヤドームで中日戦がスタートですな。

[関連リンク:[金本30号](#)、[金本は3割、30本、30盗塁 - セ全日程終了](#)、[ヤクルト - 広島最終戦](#)、]

__J-スカイ向けファッション情報サイト「SHIBUYA109」(ケータイWatch) 月額\270。

「画面を見せると割引が受けられるクーポン発行」とかやるようです。つーか、そういうクーポンって使ってる人を見たことないんですけど。あ、テレビのレポート番組とかでわざとらしく「本当に使えるんですかねえ」とか言ってやらせっぽく使用できてるのはよくみるんですけど。

だって、割引してもらおうと思って、携帯の液晶見せたら店員に「ハア？」とか言われたらいやじゃん！ねえ？

つーか、このサイトってば109のサイトだから首都圏の人間以外に利用価値ないじゃん。ダメじゃん。

__NEC、Handheld PC 2000搭載の「モバイルギアII」2機種(ケータイWatch) DOSの入ってないモバギなんてウンコ。やーい、死んじゃえ。つーか、最近はWinCEもちったあマシになってきてるんですかね。「MS製品はver.3から」というジंकスをわざわざ再現せんでもいいのになあ。つーか、携帯マシンにGUIは必要ないよ。常々思うけど。現時点じゃGUIベース

でバランスのいい製品作るの無理でしょ。

note

暴落しているApple株を買ってみよう！ 昨日「Apple株を買ってみたいけど買い方よくわかんない～ん」と財テク全盛の昨今(嘘)で大恥を掻いてしまったwebmaster。チラッと調べてみました。[1株.com](#)なるダッサイ名前のオンラインショップがあるようです。「Appleの！ピクサーの！ディズニーの株を所持してみたいけどやり方わからん！」という人の為に一株だけ購入して額縁に入れて郵送してあげるヨ、というサービスを展開しているお店のようです。えーと、値段を見てみたのですが、素人目に見ても「Appleの株が一株で三万円近くするのは高すぎねえ？」という感じなので多分お勧めできません<本当に素人判断ですのであまり鵜呑みにすんじゃねえぞコラ<途中から何故かガラが悪い

コレだったら、[Yahoo!のApple株関連掲示板](#)でも見た方がまだいいかもしれません。ここ数日「株買ってみたいけどよくわかんねえ」という人達の質疑応答がなされていますので。

で、Yahoo!の掲示板によると、ゼロからの状態で株を購入したい場合は、証券会社に新規に口座を開設する必要があるそうで、それが数日間(?)くらい時間がかかるそうで、思い立って即日株を買えると言うようなモノではないらしいです。

Apple株は外国の株なんでどこの証券会社でも買えるという訳ではないそうで。大和証券のダイワダイレクト部でなら購入可能だそうです。他は知りません。

webmasterも結局なんだかよくわかっていないのですが、Apple株が安い内にほんの少しいいからオーナーになってみたいものです。そんでもって業績報告書とかもらってみよう！

んー、やっぱ株やってる知人にでも聞くのが一番手っ取り早そうですね。

そういえば、[ビーム](#)で連載している桜玉吉漫画で「アスキー株を買おう！」みたいな企画ありましたね。アレを参考にすればいいのか！...って、あんま参考にならなさそうだなあ。

[__](#) 公取委、独禁法違反の疑いでアップルに警告(ZDNet) よっ！公取屋！ハイハイハイ、Apple株を買おうかな、とか思ってるwebmasterには朗報と言えましょう。hehehe

[__](#) J-スカイ対応機、全国で300万台突破 「サービス全国化から約6か月で300万台を突破」だそうです。が、これは「J-Sky対応機の販売台数」であって「J-PHONEユーザのweb利用者数」ではないのです。

[__](#) J-PHONEとJR東日本が提携、音楽配信プラットフォームを共同で構築 J-PHONEも音楽配信ですか。webmasterの考えとしては今のところ[9/29付けでお伝えしたfeel H](#)のnewsで言った通り、今のところ携帯と音楽配信を結びつけたガジェットにはやや懐疑的ですんで別にどうでもいいです。大体ウチ、田舎だしなあ。新宿渋谷池袋でサービス開始したってあんまり関係ないのよ。つーかやっぱどう考えても電池もたないでしょ。普通に通話とメール使ってるだけで、夕方頃には電池表示がピンチ気味になるのに(使用機種は[J-SH02](#))、その上更にスピーカから音鳴らすなんて自殺行為としか。携帯メーカは、新機能追加はいいから、基本的なポテンシャル上げるコトもきっちり研究しなさい。使用電力と、メモリ管理ユーティリティとか、日本語FEPの品質の向上とか。

[__](#) [CEATEC JAPAN 2000レポート]J-フォン、位置情報サービスをアピール(ケータイWatch) 写真が荒くてなんだかわかんねーよ>元記事

[__](#) インターネット人口は2414万人 30代女性ほぼ倍増(asahi) 携帯電話の影響でしょうな。以前は「あんな小さい端末でwebなんて...ハッ」と冷笑していたwebmasterですが、最近考えを改めまして、微力ながらJ-PHONEの尖兵として日々J-PHONE関連newsをお伝えする毎日であります。

[__](#) PDAと携帯電話の一体型機器は成功するか(上)

[__](#) PDAと携帯電話の一体型機器は成功するか(上)

[__](#) 家電各社が描く次世代ビデオレコーダーの姿(ZDNet) webmaster、実はアナログビデオ

デッキなるものを所持したコトがありません。勿論日常的に使ったコトもありません。どうもあんまりテープメディアって好きになれないのよね。マイコンの記録媒体と音楽用のカセットテープくらいなら使いましたが。ストリーマは憧れでしたな。まあ、どうでもいい話です。これからはDVD!なんですかね。

__ シャープ、携帯情報端末「ザウルス」にキーボード標準装備(NIKKEI) マジ? キーボード標準装備のザウカ。んー、ちょっと興味覚えますね。

__ 「日本語.com」可能に、米NSIが登録開始へ(NIKKEI)

カーブ、今季Bクラス確定 [CCC](#)でわかりやすく説明されているので引用。 [横浜が阪神に勝利](#)。ヤクルトが中日に勝利。阪神は7 6 敗で、広島が残り6 試合に全敗しても7 5 敗であるため、阪神の単独最下位、広島の単独5 位以上が確定。横浜は6 6 勝で、広島は残り試合に全勝しても6 6 勝止まり。ヤクルトは6 3 勝で、横浜との残り試合が4。横浜が残り試合に全敗するとすれば、ヤクルトが6 7 勝を挙げてしまうため、広島は3 位以上に上がることができない。このため広島の単独4 位以下が確定した。だそうで、非常に残念なコトです。まー最下位回避できたからいいか。こういうのをブービー賞ってんだね。やったぜカーブ! 詳しい順位表をご覧になりたい方は[Yahoo! Sportsの順位表](#)をじっくりとみて再度ご確認ください。

webmasterも何度も計算し直してみましたが、どうあがいてもカーブのAクラス入りは無理でした。ぬう。

なお、今季のカーブの関東での試合は、

10/04(水) ヤクルト戦 神宮 18:20プレイボール

10/11(水) ヤクルト戦 神宮 18:20プレイボール

の、2試合を残すのみとなりました。10/11の試合は恐らく今季の最終戦でもあるので、暇だったら観戦に行こうかと思えます。秋風吹く神宮はさぞかし寒いでしょうな。

001002.mon

あーはいはいはいはい。今から更新するからまってろよ、私の可愛い小ネズミちゃんたち。こういう場合は普通「子猫ちゃん」か。

note

広島東洋カープ、今季単独最下位は回避 現在セ・リーグ5位のカープは60勝69敗1分で残り6試合。6位のタイガースは今日の敗戦(対ヤクルト。0-3)で、57勝75敗1分で残り3試合。よって、カープが残り試合を全敗しても現時点でのタイガースの敗戦数に並ぶ75敗で最悪同率最下位。

いくらなんでも今から全敗は考えにくいので、カープは今シーズンの最下位ほぼ回避と見てオッケーでしょう！

先月中頃までは、再びの3位浮上なども垣間見えていましたが、結局今シーズンはほぼ5位確定ですね。4位ヤクルトが62勝64敗1分残り9試合ですので、最高にコトがうまく運んで、カープが4勝2敗ヤクルトが2勝7敗で終われば、同率4位。カープヤクルト両チームの勝敗数が一つずつひっくり返れば当然順位もひっくり返し、カープ4位ヤクルト5位もありえます。

まず無理でしょうけど、この小さな希望だけを心の支えに秋風が身に染みる10月前半を精一杯生きて行こうと思うwebmasterでした。

カープファンの心の支え 金本3割30本30盗塁。日本プロ野球史上7人目の。これだけだ。盗塁は後ひとつ、ホームランは後2本。なんとかやってくれ頼むぞ。

盗塁王は結局石井が現在34盗塁と、結局順当に軽く金本を抜き去りましたからねえ。ミンチーの最多勝もここ2試合負け続け+昨日バンチが14勝目ゲットで、追いつくには残り試合6ではちょっとなあ、な感じでコレは完全に諦めるしか。

というわけで今年は金本アンタしかいないんだ。がんばってください。

__J-フォン東京は、J-フォン東日本へ。 本日10/1から、J-PHONE北海道、東北、東京が合併してJ-PHONE東日本という名前に。新サイトのアドレスは<http://www.j-phone-east.com/>だそう。即ちJ-PHONE East。イースト。カタカナで書くと、パンの材料みたいでなんだか締まらない名前ですが、慣れてしまえば多分なんてことはないでしょう。各エリア毎の窓口サイトなんてのが[北海道](#)、[東北](#)、[東京](#)、にわかれてあるようで、まだ合併って言ってもどうも組織的

に上手く機能していないような感じがあります。

__ J-PHONE東京、エリア別情報配信サービス「ステーション」本日サービスイン このJ-Sky「ステーション」では、要するに無料のメールマガジンみたいなモンです。情報の内容によって、無料のモノと有料のモノがあります。有料の方の料金は、月額\100でそれ以外の料金(通信費とか情報量とか)は一切発生しないので、内容によっては結構面白いサービスになるかもしれません。

ただ、今のところこのサービスに対応している機種が[J-D03](#)、[J-K03](#)、[J-PE03](#)の三つだけなので、真価を発揮するのはしばらく先でしょうかね。

あっ、そうか。昨日は[J-T04](#)安いいいよな、とか思ってたけどこのJ-Skyステーションがあったか。うーむ、やっぱ機種交換はしばらく「待ち」か。安いからとりあえず[J-T04](#)買って、暫くしたら[J-SH04](#)に乗換えるって手もあるか。

__ 東京・大手町に高速接続のネットカフェ誕生(NIKKEI) ネットカフェ。割と死語っぽいと思うのはwebmasterだけでしょうか。ま、ネットカフェはともかく、従来の公衆電話のようにweb端末が設置されると世の中便利でしょうな。[フランスのコレ](#)みたいにするとか。

__ KDDI、携帯で動画本格伝送・世界最速、2002年開始(NIKKEI)

__ 富士通、携帯電話の通信インフラを仏社から受注(NIKKEI)

__ a u、アナログ方式の携帯電話サービス終了(NIKKEI)

Injunction generator

From Wikipedia, the free encyclopedia.

The Injunction Generator ^[1] (*http://ipnic.org*) is a artistic software module which claims to generate on request legal injunctions and personalized documentation in .rtf/.pdf format to force a site into taking its contents offline.

Carrying on with their principles of 'radical corporative marketing strategy' ([Media Hacking](#)), the artists group [ubermorgen](#) has produced an effective and credible interface which helps creating one's own documented cease-and-desist request, which is also automatically sent to the DNS administrators, to the site's owner and to some journalists to trick them into supporting the 'public trial'.

The project is published on the IP-NIC domain ipnic.org ^[2] (*http://ipnic.org*), an acronym which mimics the official protocols (Internet Protocol - Network Information Center), revisited as 'Internet Partnership for No Internet Content'.

This sarcastic provocation (a 'public shutdown service') was conceived after experiencing a similar mishap for the [Voteauction](#), which invited American citizens to put up their vote for auction. At the time (2000) an email injunction by an American court was sent to the swiss provider hosting the site, who took them immediately offline even though email documents aren't legally considered official and even though Swiss is outside of American jurisdiction.

giovedì 24 ottobre 2002

Dopo Bologna, Milano e Barcellona, *d-i-n-a* abbandona le rotte consuete e si sposta nell'inaspettata Campobasso. L'evento, che per tre giorni vedrà alternarsi dibattiti, conferenze e proiezioni, è organizzato da un network di artisti, critici e ricercatori che si auto-definisce "un circo itinerante dedicato alla cultura di rete, alla net.art e all'uso tattico e impreveduto dei nuovi media". Intorno al gruppo base infatti, composto dal duo di net artisti 0100101110101101.ORG, e dai critici Marco Deseriis (Snafu) e Vanni Brusadin, si addensano volta per volta

politik-digital - www.politik-digital.de

politik-digital ist eine parteienunabhängige Informations- und Kommunikationsplattform zum Themenfeld Internet und Politik, getragen von der Idee, dass das Internet der Politik neue Impulse verleihen kann. politik-digital dokumentiert und analysiert mit Hilfe zahlreicher Experten aus Politik, Wissenschaft und Multimedia den fortschreitenden Einfluss von New Media und digitaler Vernetzung auf die Politik.

Von Svenja Falk

Alles umsonst? Wahlkampf im Internet - zahlen sich die Investitionen aus?

Erfahrungen aus den Vereinigten Staaten und Großbritannien zeigen, dass der Wahlkampf im Cyberspace derzeit noch weit weniger spektakulär ist als gemeinhin angenommen. Dennoch spricht vieles dafür, daß die Bedeutung des Internets für politische Kommunikation jedweder Art steigen wird. Die deutschen Parteien können im Vorfeld der Bundestagswahl 2002 von den Erfahrungen der Angelsachsen nur lernen.

Das war teuer! Insgesamt 45 Entwickler, zehn eCampaigner und fünf Grafikdesigner haben in monatelanger Kleinarbeit am Internetauftritt GeorgeWBush.com gebastelt, der im Juli 2000 in Austin, Texas vorgestellt wurde. George Dabbelju ließ sich die ganze Sache eine Million Dollar kosten und ist ja dann auf gerichtlichen Umwegen zum Präsidenten der Vereinigten Staaten von Amerika gemacht worden. Der Aufwand hat sich also gelohnt. Oder auch nicht?

Politikerbesuch

Am Tag des Launch der Webseite des republikanischen Präsidentschaftskandidaten stieg die Anzahl der Besucher nach Angaben von Media Metrix um über 500 Prozent. Allein in den ersten zwei Wochen des Oktober wurden fünf Millionen Zugriffe gezählt. Zusätzlich gingen über die Website zwei Millionen email pro Woche ein. Einladend war die Seite wahrscheinlich nicht nur wegen der heimeligen live webcasts von George & Laura, sondern aufgrund der Möglichkeit, dass im Zentrum des republikanischen Wahlkampfs stehende Steuergeschenk online durchzurechnen. ECards, Online-Videos, die Möglichkeit zur in den USA notwendigen Wahlregistrierung und herunterladbare Informationen zu allen heißen Themen ergänzten das Angebot. Die Gäste kamen auch nicht mit leeren Händen: Insgesamt 40.000 öffneten ihre Geldbörse online und spendeten rund sechs Millionen Dollar. Ohne ausreichende Wahlspenden kann auch der engagierteste Kandidat in den Vereinigten Staaten nichts werden: rund 90 Prozent der Kandidaten für den amerikanischen Senat stellten sich 2000 mit einer eigenen Website vor, sicher auch, um Wählerzuspruch in barer Münze zu fördern.

Wer kommt online vorbei?

Im August 2000 besuchten 467000 Personen die Bush-Seite, 350000 (s.o.) den Auftritt von Gore. Lediglich 60000 Personen klickten auf je beide Seiten. Vieles spricht also dafür, dass die Seite eines ungeliebten Kandidaten kaum aufgesucht wird. Es klicken und bleiben diejenigen, die sich der Partei oder dem Kandidaten ohnehin verbunden fühlen. Nach einer Studie des Pew Centers for the People and the Press informierten sich rund 18 Prozent der Wahlbürger online - allerdings nicht bei Parteien oder Kandidaten selbst, sondern eher auf den Seiten angesehener Nachrichtensender wie etwa CNN.com.

Politische Portale wie etwa grassroots.com, speakout.com, politics.com oder voter.com, häufig mit starker finanzieller Unterstützung aufgebaut, wurden kaum frequentiert. Darüber hinaus mussten sich viele Portalbetreiber nach Verbrauch des Venture-Kapital fragen lassen, womit sie eigentlich Geld verdienen wollen. Politics.com etwa schaltete seine Seite am Wahltag ab und verkaufte die URL. Politische Seiten werden nach Untersuchungen der englischen Hansard Society vor allem von jenen Bürgern besucht, die ohnehin starkes Interesse an Politik haben. Das von den Portalbetreibern antizipierte Interesse der Wahlbürger an ausgewogener und vorselektierter Information existiert in dieser Form nicht. Der politisch mündige Bürger sucht sich auch online seine Informationsquellen selbst aus.

Partizipation erhöht?

In den amerikanischen Präsidentschaftswahlen erhöhte sich die Wahlbeteiligung das erste Mal seit über vierzig Jahren auf für europäische Verhältnisse bescheidene 51 Prozent, im britischen Wahlkampf dagegen war die Beteiligung die niedrigste seit 1918. Das Internet hat die Regeln der physischen Welt nicht außer Kraft gesetzt: Online wie offline erhöht sich die Wahlbeteiligung eben nur dann, wenn es sich um ein spannendes Kopf-an-Kopf-Rennen handelt, der Wandel gewünscht wird oder der Nation spaltenden Fragen zur Disposition stehen. Auch die Debatten im Netz zeichnen sich weder durch besonders viel Geist oder gar die vormals ausgeschlossenen Gruppen aus. Stephen Coleman von der Hansard Society untersuchte während des britischen Wahlkampfes die drei Chat-Foren It's your Parliament, Today und Guardian und kam zu ernüchternden Ergebnissen: Über 97 Prozent der Debattierer sind männlich, selten fand ein faktenbasierter Austausch statt, von herrschaftsfreiem Diskurs ganz zu schweigen. Ohne Moderator, so Coleman, sei mit einer intellektuellen Bereicherung wohl nicht zu rechnen.

Neue politische Öffentlichkeit?

Dennoch passiert viel im politischen Netz. Auf <http://www.opensecret.com> etwa ließ sich der Spendenfluss während des amerikanischen Wahlkampfes verfolgen. Mit einem Klick ließ sich nachlesen, wer Republikanern und Demokraten gegenüber am großzügigsten war: Mit über 220.000 USD griff die MBNA Bank am tiefsten in die Tasche, Ernst & Young unterstützte Gore mit fast 132.000 USD. Weniger sympathisch sind dagegen Seiten wie etwa die vom New York University Studenten James Baumgartner ins Leben gerufene Webseite zur Stimmenversteigerung: <http://www.vote-auction.com>. Rund 6000 Amerikaner boten hier ihre demokratischen Rechte feil: Durchschnittlich 20 USD wurden geboten. Stimmen in Kalifornien wurden dabei viermal höher gehandelt als in Texas. Am interessantesten sind jedoch Entwicklungen wie das erstmals, anlässlich der amerikanischen Präsidentschaftswahlen und später zu den Wahlen des House of Commons in Großbritannien, praktizierte Voteswapping. Im britischen First-Past-The-Post-Wahlsystem (relative Mehrheitswahl im Einerwahlkreis) wird jener Kandidat aus den 659 Wahlkreisen in das Parlament entsandt, der die meisten Stimmen im Wahlkreis auf sich vereinigt - auch wenn dies weniger als 50 Prozent der in diesem Wahlkreis abgegebenen Stimmen sind. Alle anderen Stimmen sind "verloren". Anhänger der wenig aussichtsreichen Liberaldemokraten im Wahlkreis Wimbledon schießen also ihre Stimme "in den Wind", ebenso wie Unterstützer von Labour im Bezirk Kingston & Surbiton: in diesem Wahlkreis haben Liberale die Tories bei den Unterhauswahlen 1997 knapp geschlagen, und Labour spielt praktisch keine Rolle. Auf <http://www.tacticalvoter.com> können sich wahlberechtigte Bürger zum Stimmentausch registrieren lassen und werden über email miteinander in Kontakt gebracht. Auf diese Weise lassen sich die zwei normalerweise verlorenen Stimmen retten - Vertragstreue natürlich vorausgesetzt. In zwei Wahlkreisen ging die Rechnung auf: In Cheadle und in Dorset South wurde die Wahl des konservativen Kandidaten durch den

elektronischen Stimmentausch verhindert.

Bundestagswahlkampf 2002 online?

Mittlerweile sind fast die Hälfte aller wahlberechtigten Bürger in der Bundesrepublik online - Tendenz steigend. Vieles spricht dafür, dass das Internet zukünftig eines der wichtigsten Kanäle zum Bürger wird. Dafür sollten sich die Parteien schon heute rüsten: Ein professioneller Internetauftritt gilt als Unterscheidungskriterium im Wettbewerb um die Wählergunst. Dabei ist einiges zu beachten: die online und offline Wahlkampagnen sollten strategisch aufeinander abgestimmt, die Webseiten so interaktiv wie möglich sein. Tagesaktuelle, personalisierbare Informationen zu Personen und Inhalten laden zum wiederholten Besuch ein. Wird lediglich das Wahlprogramm und das Bild des Spitzenkandidaten nebst Gattin veröffentlicht, kann kaum mit großem Zuspruch gerechnet werden.

politics-digitally - www.politik digital.de

politics-digitally an party-independent information and communication platform are carried about InterNet and politics, by the idea that the InterNet of the policy can lend new impulses. politics-digitally documents and analyzes with the help of numerous experts from politics, science and Multimedia the progressive influence of new Media and digital cross-linking on the policy.

Of Svenja Falk

Everything in vain? Election campaign in the InterNet - do the investments disburse themselves?

Experiences from the United States and Great Britain show that the election campaign is still far less spectacular in the Cyberspace at present than generally accepted. Much speaks nevertheless for the fact that the meaning of the Internets for political communication of jedweder kind will rise. The German parties can only learn fishing rod Saxonia in the apron of the election to the Bundestag 2002 of the experiences that.

That was expensive! Altogether 45 developers, ten more eCampaigner and five diagram designers tinkered in months-long detailed work at the InterNet appearance GeorgeWBush.com, which was introduced in July 2000 in Austin, Texas. George Dabbelju let itself cost the whole thing one million dollar and on judicial detours the president of the United States by America was then made. The expenditure was thus worthwhile itself. Or also not?

Politician attendance

On the day of the Launch of the web page of the republican presidency candidate the number of visitors rose according to data of Media Metrix over over 500 per cent. However in the first two weeks Octobers were counted five million access. Additionally were received over the Website two million email per week. Inviting the side was probably not only because of the home leagues live webcasts from George & Laura, but due to the possibility to calculate that in the center of the republican election campaign standing tax gift on-line. ECards, on-line videos, the possibility for the choice registration necessary in the USA and downloadable information for all hot topics supplemented the offer. The guests did not come also with empty hands: Altogether 40,000 opened its purse on-line and donated approximately six million dollar. Without sufficient choice donations also the most engaged candidate in the United States cannot become anything: approximately 90 per cent of the candidates for the American senate imagined 2000 with an own Website, probably also, in order to promote voter saying in cash coin.

Who goes past on-line?

In August 2000 467000 persons visited the Bush side, 350000 (s.o.) the appearance of Gore. Only 60000 persons clicked on ever two sides. Much speaks thus for the fact that the side of a ungeliebten candidate is hardly visited. Click and remain those, which feel anyway connected the party or the candidate. According to a study of the Pew of center for the People and the press informed approximately 18 per cent of the choice citizens on-line - however not with parties or candidates themselves, but rather on the sides of outstanding news stations as for instance CNN.com.

Political portals as for instance grassroots.com, speakout.com, politics.com or voter.com, frequently with strong financial support developed, were hardly frequented. Beyond that many portal operators had for consumption venture capital be asked to let themselves, with which they want to actually make money. Politics.com about switched its side off on the choice day and sold those URL political sides after investigations of the English Hans pool of broadcasting corporations Society particularly by that citizens is visited, who have anyway strong interest in politics. The interest of the choice citizens in balanced and pre-selected information, antizipierte by the portal operators, does not exist in this form. The citizen politically of age selects itself also on-line its sources of information themselves.

Partizipation increases?

In the American presidency elections the election turnout the first time increased for over forty years to for European conditions modest 51 per cent, in the British election campaign against it was the participation the lowest since 1918. The InterNet did not set the rules of the physical world out of strength: On-line one like off-lines increases the election turnout evenly then only if it concerns an exciting head on head running, to which change is wished or which nation splitting questions for arrangement. Also the debates in the net are characterised neither by particularly much spirit or the before times excluded groups. Stephen Coleman of the Hans pool of broadcasting corporations Society examined the three Chat forums It's during the British election campaign your Parliament, Today and Guardian and came to ernuechternden results: Over 97 per cent of the Debattierer are male, rarely took place a fact-based exchange to be silent from rule-free discourse completely. Without moderator, so Coleman, is to be counted on an intellectual enriching probably not.

New political public?

Much happens nevertheless in the political net. On <http://www.opensecret.com> about the donation river could be pursued during the American election campaign. With one click leave reread themselves, who opposite republicans and democrats was most generous: Also over 220.000 USD the MBNA bank reached most deeply into the bag, Ernst & Young supported Gore with nearly 132,000 USD. few pleasantly is against it sides as for instance the web page called of the New York University student James Baumgartner in the life for voice auction: http://www.vote_auction.com. Approximately 6000 Americans offered here their democratic rights for sale: On the average 20 USD were ordered. Voices in California were four times more highly acted thereby than in Texas. Most interesting however developments are later like that for the first time, on the occasion of the American presidency elections and to the elections of the House OF Commons in Great Britain, practiced Voteswapping. In the British roofridge Past The post office Wahlsystem (relative majority choice in the a constituency) that candidate from the 659 constituencies is sent into the parliament, who most voices in the constituency on itself united - are even if this little than 50 per cent of the voices delivered in this constituency. All other voices are "lost". Trailers of the little promising liberal democrats in the constituency Wimbledon shoot thus their voice "into the wind", just like supporters of labour in the district Kingston & Surbiton: in this constituency liberals struck the Tories with the House of Commons elections 1997 scarcely, and labour plays practically no role. On <http://www.tacticalvoter.com> citizens entitled to vote can let themselves be registered the voice exchange and become over email brought in contact with one another. In this way the two normally lost voices can be saved - loyalty to a contract naturally presupposed. In two constituencies the calculation came up: In Cheadle and in Dorset South the choice of the conservative candidate by the electronic voice exchange one prevented.

Election to the Bundestag fight 2002 on-line?

Meanwhile are nearly half of all citizens entitled to vote in the Federal Republic of on-line - tendency rising. Much speaks for the fact that the InterNet becomes in the future one of the most important channels the citizen. But the parties should prepare already today: A professional InterNet appearance is considered as distinction criterion in the competition around the voter favour. Some is to be considered: the on-line and off-line election campaigns should be as interactive strategically one on the other co-ordinated, the web pages as possible. Up to date, personalisierbare information to persons and contents invites to the repeated attendance. If the electioneering program and the picture of the leading candidate are only published together with wife, can hardly be counted on large zuspruch.

politik-digital - www.politik-digital.de

politik-digital ist eine parteienunabhängige Informations- und Kommunikationsplattform zum Themenfeld Internet und Politik, getragen von der Idee, dass das Internet der Politik neue Impulse verleihen kann. politik-digital dokumentiert und analysiert mit Hilfe zahlreicher Experten aus Politik, Wissenschaft und Multimedia den fortschreitenden Einfluss von New Media und digitaler Vernetzung auf die Politik.

Von Svenja Falk

Alles umsonst? Wahlkampf im Internet - zahlen sich die Investitionen aus?

Erfahrungen aus den Vereinigten Staaten und Großbritannien zeigen, dass der Wahlkampf im Cyberspace derzeit noch weit weniger spektakulär ist als gemeinhin angenommen. Dennoch spricht vieles dafür, daß die Bedeutung des Internets für politische Kommunikation jedweder Art steigen wird. Die deutschen Parteien können im Vorfeld der Bundestagswahl 2002 von den Erfahrungen der Angelsachsen nur lernen.

Das war teuer! Insgesamt 45 Entwickler, zehn eCampaigner und fünf Grafikdesigner haben in monatelanger Kleinarbeit am Internetauftritt GeorgeWBush.com gebastelt, der im Juli 2000 in Austin, Texas vorgestellt wurde. George Dabbelju ließ sich die ganze Sache eine Million Dollar kosten und ist ja dann auf gerichtlichen Umwegen zum Präsidenten der Vereinigten Staaten von Amerika gemacht worden. Der Aufwand hat sich also gelohnt. Oder auch nicht?

Politikerbesuch

Am Tag des Launch der Webseite des republikanischen Präsidentschaftskandidaten stieg die Anzahl der Besucher nach Angaben von Media Metrix um über 500 Prozent. Allein in den ersten zwei Wochen des Oktober wurden fünf Millionen Zugriffe gezählt. Zusätzlich gingen über die Website zwei Millionen email pro Woche ein. Einladend war die Seite wahrscheinlich nicht nur wegen der heimeligen live webcasts von George & Laura, sondern aufgrund der Möglichkeit, dass im Zentrum des republikanischen Wahlkampfes stehende Steuergeschenk online durchzurechnen.

ECards, Online-Videos, die Möglichkeit zur in den USA notwendigen Wahlregistrierung und herunterladbare Informationen zu allen heißen Themen ergänzten das Angebot. Die Gäste kamen auch nicht mit leeren Händen: Insgesamt 40.000 öffneten ihre Geldbörse online und spendeten rund sechs Millionen Dollar. Ohne ausreichende Wahlspenden kann auch der engagierteste Kandidat in den Vereinigten Staaten nichts werden: rund 90 Prozent der Kandidaten für den amerikanischen Senat stellten sich 2000 mit einer eigenen Website vor, sicher auch, um Wählerzuspruch in barer Münze zu fördern.

Wer kommt online vorbei?

Im August 2000 besuchten 467000 Personen die Bush-Seite, 350000 (s.o.) den Auftritt von Gore. Lediglich 60000 Personen klickten auf je beide Seiten. Vieles spricht also dafür, dass die Seite eines ungeliebten Kandidaten kaum aufgesucht wird. Es klicken und bleiben diejenigen, die sich der Partei oder dem Kandidaten ohnehin verbunden fühlen. Nach einer Studie des Pew Centers for the People and the Press informierten sich rund 18 Prozent der Wahlbürger online - allerdings nicht bei Parteien oder Kandidaten selbst, sondern eher auf den Seiten angesehener Nachrichtensender wie etwa CNN.com.

Politische Portale wie etwa grassroots.com, speakout.com, politics.com oder voter.com, häufig mit starker finanzieller Unterstützung aufgebaut, wurden kaum frequentiert. Darüber hinaus mussten sich viele Portalbetreiber nach Verbrauch des Venture-Kapital fragen lassen, womit sie eigentlich Geld verdienen wollen. Politics.com etwa schaltete seine Seite am Wahltag ab und verkaufte die URL. Politische Seiten werden nach Untersuchungen der englischen Hansard Society vor allem von jenen Bürgern besucht, die ohnehin starkes Interesse an Politik haben. Das von den Portalbetreibern antizipierte Interesse der Wahlbürger an ausgewogener und vorselektierter Information existiert in dieser Form nicht. Der politisch mündige Bürger sucht sich auch online seine Informationsquellen selbst aus.

Partizipation erhöht?

In den amerikanischen Präsidentschaftswahlen erhöhte sich die Wahlbeteiligung das erste Mal seit über vierzig Jahren auf für europäische Verhältnisse bescheidene 51 Prozent, im britischen Wahlkampf dagegen war die Beteiligung die niedrigste seit 1918. Das Internet hat die Regeln der physischen Welt nicht außer Kraft gesetzt: Online wie offline erhöht sich die Wahlbeteiligung eben nur dann, wenn es sich um ein spannendes Kopf-an-Kopf-Rennen handelt, der Wandel gewünscht wird oder der Nation spaltenden Fragen zur Disposition stehen. Auch die Debatten im Netz zeichnen sich weder durch besonders viel Geist oder gar die vormals ausgeschlossenen Gruppen aus. Stephen Coleman von der Hansard Society untersuchte während des britischen Wahlkampfes die drei Chat-Foren It's your Parliament, Today und Guardian und kam zu ernüchternden Ergebnissen: Über 97 Prozent der Debattierer sind männlich, selten fand ein faktenbasierter Austausch statt, von herrschaftsfreiem Diskurs ganz zu schweigen. Stimmenkauf

Zum Ersten, zum Zweiten: Eine Gruppe von Internetaktivisten neppt das US-Wahlsystem

von JÖRG STREICHERT

Mit den US-Wahlen stimmt etwas nicht. Zwar gibt es äußerst geldintensive Wahlkampagnen und einen gigantischen Medienrummel. Aber die Wahlbeteiligung ist gering. Den Finger mitten in die Wunde legte jetzt eine findige Gruppe Internetexperten aus Österreich: Auf der Seite www.vote-auction.com können US-Bürger ihre Stimme auf einer Art Wahlstimmenbörse zum Verkauf an spendable Interessengruppen anbieten.

Das geht so: Die Wähler offerieren ihre Stimmen, aufgeteilt nach Bundesstaaten, bei vote-auction, und die potentiellen Käufer bieten am Wahltag dafür Geldbeträge. Bei erfolgreichem Gebot könnten dann beispielsweise die Lobbyisten von Al Gore 7.000 Wählerstimmen aus Florida für 80.000 Dollar erwerben. Der Gewinn soll gerecht unter den Anbietern aufgeteilt werden.

Allerdings ist die provokante Aktion für eine der Verantwortlichen, Lizvlx, mit bürgerlichem Namen Elisabeth Haas, eher "ein inszeniertes Experiment", mit dem man Kapitalismus und Demokratie enger zusammenführen wolle. Ein Spiel mit virtueller Realität und Käuflichkeit, das man in der Tradition linker Hacker wie des "Chaos Computer Clubs" (CCC) ansiedeln könnte. Aber die Gruppe will auch kritisieren: "das Aufzeigen des indirekten Wählerstimmenkaufs via von Lobbyisten finanzierter Wahlkampagnen", erläutert Lizvlx.

Momentan ist die Website von [vote-auction.com](http://www.vote-auction.com)

1.000 Abos bis zum 30. Juni

jedoch nicht zu erreichen. Denn jemand hat im Root-DNS-Directory, der Zentrale für Web-Adressen, schlicht den Domainnamen gelöscht. Sowohl der Stimmenverkauf als auch die dabei ausgeübte Vermittlerrolle sind nach US-Recht nämlich strafbar. Da hilft es auch nicht, sich auf freie Meinungsäußerung zu berufen oder den Stimmenkauf als "Spende" zu deklarieren, wie es die Österreicher versucht haben. Sie gehen davon aus, dass die gleichen Menschen für das Löschen des Namens verantwortlich sind, die auch mehrere Gerichtsverfahren gegen die Initiatoren der Website angestrengt haben.

Das ganze Unterfangen hat immerhin eine Menge Aufruhr in den US-Medien erregt: Auf CNN diskutierten Rechtsexperten wie der Chefankläger des Staates Kalifornien mit den Internetaktivisten in einer 20-minütigen Sendung mit dem Thema "Bidding for ballots" (Bieten für Stimmzettel).

Aber für Initiatorin Lizvxl ist die Sache trotzdem ein Erfolg: "Auf diese Weise ist auch für andere Medien die Möglichkeit entstanden, über Korruption im US-Wahlssystem zu sprechen", erklärt sie.

Aufgrund der Medienpräsenz sei es schon zu über 50.000 Stimmofferten auf der Website gekommen. Aber die Aufmerksamkeit hat auch zu Hackangriffen geführt, möglicherweise vom FBI, spekuliert Lizvxl, um an die Userdaten zu kommen.

"Wir werden jetzt natürlich alle Vorbereitungen treffen, um am Wahltag ganz sicher präsent zu sein.", sagt Lizvxl (<http://62.116.31.68>). Was an diesem Tag genau passieren wird, ist nicht klar: "Wir planen, fiktive Geldbeträge zu verschieben. Man kann das Auktionsspiel spielen ..."

Welche Folgen das haben wird, ist ungewiss. "Die Offenlegung der US-Korruption, ein Präzedenzfall für das Rechtssystem, aber auch ein künstlerischer Ansatz." Alles ist möglich.

Buying of votes

To first, to second: A group of InterNet activists nept the US choice system

from **JOERG STREICHERT**

With the US elections is not correct somewhat. There is extremely money-intensive election campaigns and a gigantic Medienrummel. But the election turnout is small. Now a findige group of InterNet experts from Austria in the middle put the finger into the wound: On the side [www.vote auction.com](http://www.voteauction.com) US citizen can offer their voice on a kind to vote stock exchange for the sales to spendable groups of interests.

That can be done in such a way: The voters offer their voices, divided after Federal States, with vote auction, and the potential buyers offer money on the choice day for it. With successful requirement then for example the lobbyists of aluminium Gore could acquire 7,000 votes from Florida for 80,000 dollar. The profit is to be divided fairly among the offerers.

However the provokante action for one the responsible person, Lizvlx, with civil name Elizabeth Haas, rather "a produced experiment", is with which one and democracy want to unite capitalism more closely. A play with virtual reality and availableness, which one could to be settled in the tradition of left hackers as the "chaos computer club" (CCC). But the group wants to also criticize: "pointing the indirect vote purchase out via of lobbyists of financed election campaigns", describes Lizvlx.

Momentary cannot be attained the Website of vote auction.com however. Because someone deleted the Domainnamen in the root DNS directory, the

Cultivated consume with the taz map - the new Abopraemie for cross mountain.

Read taz the 10 weeks long for 60 euro. Ours **thank-beautifully** for it:

center for Web addresses, simply. Both the voice sales and the role of mediator exercised thereby are punishable after US right. There it does not help to appoint themselves also, to free expression of opinion too or to define the buying of votes as "donation", as the Austrians tried it. They assume the same humans are responsible for the deletion of the name, who exerted also several legal proceedings against the initiators of the Website.

The whole venture nevertheless excited a quantity riot in the US media: On CNN right experts discussed like the chief prosecutor of the State of California with the InterNet activists in a 20-minuetigen transmission with the topic "Bidding for ballots" (offer for voting cards).

But for initiatorin Lizvxl is the thing nevertheless a success: "in this way also for other media the possibility developed, about corruption in the US choice system of speaking", explains it.

Due to the medium operational readiness level it came already too over 50.000 being correct offers on the Website. But the attention led also to chopping attacks, possibly from the FBI, speculates to Lizvxl, in order to come to the user data.

"we will naturally meet all preparations now, over on the choice day to be completely surely present", say Lizvxl (<http://62.116.31.68>). Which will happen exactly on this day, is not clear: "we flat to shift fictitious money. One can play the auction play... "

That will have which consequences, is uncertain. "the disclosure of the US corruption, a precedent for the juridical system, in addition, an artistic beginning." Everything is possible.

Section 1: Introduction

My argument is that the barrier that once stood between fine art conceptual thought and design conceptual thinking is being broken down as a result of globalisation. "The main historical thrust of neoliberal economic globalisation is to bring about a situation in which private capital and 'the market' alone

determine the restructuring of economic, political and cultural life, making alternative values or institutions subordinate. Rather than capital and 'the economy' being embedded in society and harnessed to serve social ends, 'the economy' becomes the master of society and of all within it, and society exists to serve the ends of capital and its need for self-expansion. It is a necessary aspect of this process that 'politics' itself, and 'democracy' in particular, should become increasingly formalistic, stripped of substantive radical, revolutionary, or even reformist content, any of which might challenge the consolidation of the hegemony of capital over society". What does this mean? It means instead of society running the economy, the economy runs society. This affects us in terms of people having to pay for everything; the doctor, the hospital, etc. The government no longer pays in other words we become a user pays society. Social values are not as important as money. This means that money is valued more than people (Gills 2002). I intend to study this by comparing the conceptual thoughts and theories of an internationally recognised fine art master (Joseph Beuys) with the work of a modern day multimedia designer, artist, hacker, performer and genius (Hans Bernhard). Joseph Beuys said this (De Domizio 1997:51): "Democratic Creativity is increasingly compromised by the progress made on the part of bureaucracy, coupled with the savage proliferation of an international mass culture. Political creativity continues to be reduced to the simple delegation of decisions and power. The imposition of a cultural and economic dictatorship throughout the whole world, thanks to the economic trusts, which are in continuous expansion, leads to loss of articulation, ability to

learn, and verbal expression".

De Domizio (1997:115) believes that Beuys's thought was humanist thought and that it will continue to grow, because today we have concentrated too much on science and technology, neglecting true human relationships. The Internet has unquestionably been a major catalyst of globalisation and its wide spread reach to the four corners of society. Hans Bernhard was asked if the Internet has made the world a better place? To which he replied: "No, just a faster and smaller place" [Design Indaba Magazine 2001]

Section 2: A Master

Joseph Beuys (Fig.1) was born in Krefeld on 12 May 1921 (Stachelhaus 1991:9). He grew up in a strongly catholic petit bourgeois environment near Kleve where he spent the first years of his life.

Throughout history, this region has been torn by countless wars, from Roman times up to the world wars of the twentieth century (Stachelhaus 1991:9). Numerous historical figures are bound up with this territory, and some of them cast powerful spells upon Beuys's imagination. Among them (Stachelhaus 1991:9), Johann Moritz von Nassau, of the House of Orange in the 17th Century, attempted building an ideal city of the soul in Kleve. Another was Anacharsis Cloots, an ardent intellectual and revolutionary guillotined for his efforts

defending the ideas of the French Revolution in Europe. This region at the time, was predominantly Dutch and Catholic, and placed little if any importance on borders (De Domizio 1997:17).

According to Heiner Stachelhaus (1991:9), Beuys did not have a close relationship with his parents and took care of himself from an early age. Beuys, remembered (De Domizio 1997:18) that for years he acted the part of a Shepard walking around with a sort of "Eurasian staff" and a flock gathered around him exploring everything in the vicinity. At 17 he set up a well-equipped laboratory at home and engaged in scientific experiments. Together with his innate talent for natural sciences, Beuys showed a passion for sculpture (De Domizio 1997:19).

Announcing only a few days before his own death on 23 January 1986, Beuys honoured and thanked the man he considered his "Master" (De Domizio 1997:77), the late Wilhelm Lehmbruck, and then told of his first introduction to Lehmbruck and Lehmbruck's work. Beuys (as quoted in De Domizio 1997:77) continued that one day by mere chance, he laid his hands on a publication lying on a table with many others. Opening it he saw a sculpture by Lehmbruck, and an idea flashed through his mind, the idea that everything was a sculpture. He saw a flaming torch and heard a voice telling him to protect it. This event accompanied him through World War II and eventually spurred him on to pursue it (De Domizio 1997:77). His favourite topics in literature were philosophy, anthropology, folklore, Nordic Mythology (De Domizio 1997:19; Stachelhaus 1991:11-14) and other subjects that were forbidden by the Nazis.

He remained a detached spectator of the Nazi years, and as a

sideline his love of music took him to cello and piano lessons (Stachelhaus 1991:12). Despite his love of art, he took his diploma and became a paediatrician in 1940. From there, his strong interest in science and technology lead him to join the German air force in 1941. After being shot down, badly wounded five times, and captured once, he returned to Kleve in 1946. Sitting in a lecture one day he recognised the limitations of science, and decided to dedicate the rest of his life to art, leaving his grim experiences of war behind him (De Domizio 1997:20-22).

At this time Jack Moffit (1997) believes Beuys discovered, explored and transformed Austrian philosopher Rudolph Steiner's anthroposophy theory into his own theory of art. Robert Allan (2000:55) defines Anthroposophy as a system of belief, which holds that there is a spiritual world that can be perceived by faculties latent in human beings and that these latent faculties can be developed by systematic training. According to Alan Bullock & Stephen Trombley (1999:37), Steiner claimed to derive his teachings "from spiritual research based on an exact scientific mode of supersensible perception".

Beuys (as quoted in De Domizio 1997:24) reveals later that in 1951, in a state of depression, he literally began questioning everything including his own life. Seeking the most profound elements in life, art and science, he began seeking a completely different theory of art, science, life, democracy, capital, economics, culture and freedom. During this time he managed to establish the outlines of a larger theory of art that involved social structures as a whole, the revolution and evolution of all human development, and an anthropological idea of human

creativity.

Between 1962 and 1965 (De Domizio 1997:28), Beuys was part of the Fluxus movement, which based itself on a connection between art and life and was directed towards a new order of human society. Often working with the concept of chaos Beuys awoke to the idea that a new situation could be created from it.

Another idea of Beuys's by which art is available to everyone and useable anywhere and everywhere came from this period (De Domizio 1997:28), namely vehicle art.

Beuys, according to De Domizio (1997:34) never demanded a specific knowledge or particular reaction from the public to his work, but instead sought out the energy points within the field of human power and understanding with the belief that man must complete himself through his own efforts (De Domizio 1997:81).

In a certain sense, Beuys was an anarchist (Stachelhaus 1991:106). He had no time for the mind-set of democratic compromise, but was rather interested in breaking through the limitations that had been imposed on democracy. Beuys meant very seriously when he said (Stachelhaus 1991:106) that he had nothing to do with politics but that he only knew art, this keeping within the principles of his expanded concept of art, the idea that art is the primary factor governing our existence and our actions.

In 1964 right-wing students accused Beuys of pursuing revolutionary goals, while in 1969 a group of left-wing students interrupted an action of his in Berlin and instead accused him of being a reactionary (De Domizio 1997:38). But despite these accusations, Beuys (De Domizio 1997:38) felt that belonging to the left,

right or center no longer meant much because the so-called
parliamentarian
democracy was being questioned as a whole. Beuys had defined his
objectives as
early as 1967 with the formation of the German Student Party [DSP]
(Stachelhaus
1991:107). The DSP emerged from the great public debates that
Beuys regularly
held in his class at the Dusseldorf Academy. Commenting on the DSP's
establishment, according to Stachelhaus (1991:107), Beuys simply
stated: "I want
into parliament!". To broaden the horizons of the German Student
Party, Beuys
founded the "Organisation for Non-Voters and Free Referendum" in
1970. Beuys
explains (De Domizio 1997:42): "The educational concept refers to
the fact that
man is a creative being. It is important to be aware of this: to
create an
awareness of the fact that he is a creative being and a free being
and that for
these reasons he must inevitably behave in an anti-authoritarian
fashion. The
concept of perception theory confirms that only the creative man
can change
history, can use his creativity in a revolutionary way. To go back
to my
educational concept, this would mean the following: Art =
creativity = freedom of
man [freedom being one of his main motivations]". Beuys goes on
explaining that a
revolution is within ourselves, and that the only possible
revolution lies in our
ideas, therefore "We are the revolution" and only in our behaviour
is there
evolution (De Domizio 1997:47).

From here on his work revolved around many interesting and
different points of
view, with subject titles that were not directly a reflection of
what we see, but
asked the question of what there was to see (De Domizio 1997:43).

According to De Domizio (1997:7) as early as the 70's, Beuys warned
in "Aufruf
zur Alternative" (Appeal for the Alternative) and "Aktion Dritter

Weg Ð
Aufbauninitiative" (Third Way Action Ð Promotional Initiative) Ð
that the human
race was condemned to sink even deeper into ecological crisis; to be
defencelessly exposed to a wild growing threat of war: to stand by
impotently as
the rift between rich and poor nations continues to grow; to be
persistently
tormented by racial hate, religious struggle, and nationalism, by
exploitation
and oppression, by humiliation and violence, by the dictates of
political and
economic power, and by biological and social manipulation. Beuys
(De Domizio
1997:8) was the artist who, more than any other, wanted and was
capable of going
beyond art by directing all his efforts towards the utopian
territories of
natural energy and spiritual communication: reality as a
phenomenological specter
of human possibilities.

In 1974 Beuys (De Domizio 1997:49), together with the Nobel Prize
Winner Heinrich
Boll, established what could be considered the artist's most
important creation,
aimed at a real form of progress with respect to existing
educational
institutions: the "Free International University", (Luckenbach
1997) which
admitted all students and function outside of the existing academic
system.
Often using the blackboard as a demonstrative tool, his actions
became lectures
in which he directly addressed his audiences.

Joseph Beuys's two most singular aspects of thought were
reappropriation and free
creativity (De Domizio 1997:9), the former consisting of a rare
attitude with
regards to reconstruction rather than conquest, towards discovery
rather than
invention and therapeutic improvement as opposed to substitution,
in this sense
the need to speak and necessity of communication. The second
aspect is

characterised by that famous free human creativity that he preached and taught.

Beuys (De Domizio 1997:67) versed his free creativity theory in Bolognani 1984:

"ÉThe only thing that each one of us can do is to begin with the study of his or her own anthropological powersÉ[for] the development of human beings on this planet [it] is a question of freeing ourselves from all dependencies of the past.

We now must face the realization that it is no longer possible simply to follow a leader [or] a political ideologyÉand that the time has come for us to begin to make full use of the most important of all our powers: the power of creativity (Creativity is a matter of the possibility of thinkingÉor thinking power and the level of the creativity of the feelings)É[and it's] most authentic partÉfreedomÉIt is our duty to show what we have produced with our freedomÉ[since] Freedom mostly means the freedom of others. When we know that we are cooperating together as free individuals, then we are also much closer to the creation of a real and concrete democracy [as] democracy structures have to be a result of freethinking and of our equality as thinking individualsÉthe basis upon which we can then establish a constitution".

Another large part of Beuysian thought was the concept of "Social Sculpture" (De Domizio 1997:83), whereby art is a daily act, a broadened and dilated action, not localised, not univocal, not limited to the relative content of the art object but art as the creative commitment of living, entirely incarnated in behaviour. A way of transforming the world into "Social Sculpture", in which no man needs to acknowledge himself, but rather is and acts as an "artist", the demiurge of every moment of his life (De Domizio 1997:83).

Being considered as an avant-garde artist probably meant nothing to Beuys

explains De Domizio (1997:82), though he became a media icon partly of his own making (Luckenbach 1997). Constantly being photographed and videotaped, he promoted the ideological causes that made his art a vehicle to bring about discourse (Luckenbach 1997). Others called him a charlatan, a diseased preacher, and even a crafty buffoon, yet some would place Beuys on an artistic altar (De Domizio 1997:81). In truth however, he was a tireless agitator, who provoked and challenged continuously for what he so strongly believed in, crossing the traditional frontiers of art to open the doors of the ghetto in which it had been impounded (De Domizio 1997:82).

Well remembered for a popular image of being the man with the felt hat he explained its significance (De Domizio 1997:2): "A rabbit isn't a rabbit without ears [so] Beuys isn't Beuys without the hat".

Section 3: An Apprentice

Hans Bernhard (Fig.2) was born in New Haven Connecticut in 1973 (Bernhard 2002) and studied Visual Media Art at the University of Applied Arts in Vienna with a professor Peter Weibel (MFA Degree 1999). He is currently working on his PHD in Media Hacking (Bernhard 2002).

Bernhard found himself on the Internet for the very first time in 1993 (Design

Indaba Magazine 2001). Sitting in front of three shells (telnet-sessions) he asked himself where he was, where he was physically, and where he was mentally? Not knowing if he was on a server in Tokyo, in Vienna or on a machine in Cape Town, he got nervous and began to sweat heavily. Sparks were exploding in his brain and immediately he knew that this was it, that this was his future now, and that this was the future (Design Indaba Magazine 2001). That same year, funded by Japanese venture capital, in a Swiss mountain training facility, Bernhard and six other hackers (Fig.3) distributed across Europe founded the multi award winning and much talked about "Etoy.com" (Bernhard 2002). Etoy's goals were to smash the boring style of electronic traffic channels; to stretch reality by leaving it behind; and to play the game between business, art, and entertainment, by kidnapping web-crawling humans and injecting a little uncertainty into life on the web (Etoy 2002). Knowing that the highlighting of corporate abuse would cause such controversy, they began the Etoy tanksystem in 1994 with the very symptomatic slogan: "Etoy: the pop-star is the pilot is the coder is the designer is the architect is the manager is the system is Etoy (Bernhard 2002). The corporate identity and panic management strategies were central to their high-pressure explorations. They used the web as a stage to disrupt the data flow, abuse technology, and promote pop-music (Bernhard 2002). It ran from 1993 to 1996, a time when the world-wide-web was unknown to the general public (Bernhard 2002), yet Etoy was awarded the Golden Nica first prize of the ARS Electronica festival for new media in 1996 (Bernhard 2002). In 1996, pop star singer Bjork from Iceland said the following (Bernhard 2002): "Éand all our

children will be playing in the garden of joy surrounded by glamour and perverted disco tunesÉeto, immature digital priests from another world". Etoy operated until 1999, when due to personal conflicts, the board split into two parts (Design Indaba Magazine 2001).

Today Bernhard and three other founding members are running the Etoy-holdings company which holds major and minor stakes in all other Etoy companies (Bernhard 2002). Bernhard's involvement is purely profit orientated since Etoy-holdings deals with financial, legal, trademark, buying and strategic planning (Bernhard 2002).

In 1999, together with his partner Maria Haas, he founded a network holding of companies in Germany, Austria, Switzerland, and Bulgaria called Ubermorgen (Bernhard 2002). These are heavily involved in software development, licensing deals, fine art, applied design and even high-end consulting services for global multinationals such as the Allianz Insurance Corporation. Bernhard's intentions at the time were to research and investigate global corporations ["Émonsters of the universeÉ"] just like it (Bernhard 2002). Hosting their server farm from their bedroom, Ubermorgen has completed an amazing amount of legal articles, projects, lawsuits, and publications using global mass media as an art form, as a fine art, and as a business strategy (Bernhard 2002).

Hans Bernhard has often been called subversive because of the things that he says he likes doing and the way that he goes about doing them (Design Indaba Magazine 2001). Bernhard explains (Design Indaba Magazine 2001) that he loves the thrill, the style, and the aesthetics of action. Going directly to prison or being

immediately killed are the dangers associated with the supposedly illegal measures that he takes. But it is this reality (Design Indaba Magazine 2001) that he feeds off of and craves Ð not the threat of dying or a prison sentence Ð but that he can show people that certain things [like attacking corporations and governments] thought illegal, can actually be done or opposed legally, and most of all, extremely effectively. This draws relevance from Joseph Beuys's theory of free creativity, how freedoms should be shared and displayed as a duty to mankind, as freedom more often than not means the freedom of others and not just the individual (Section 2 page 5). Yet Bernhard claims only to be as anti-establishment as anybody else is (Design Indaba Magazine 2001). He does not regard his "anti-motives" as a result of his work, but merely as a natural motivation for an individual surviving (Design Indaba Magazine 2001).

Money, as much as it might appear at first glance, is not Bernhard's real motivation (Bernhard 2002). He needs it to live and finance his research and art ventures but otherwise sees it as a distraction (Bernhard 2002). Bernhard explains (Bernhard 2002): "My true motivations are freedom. [T]he freedom to research what and how and when and where I want. [T]o publish where and what I want, to say what I want, where and how I want it. [T]hat is my pure and true motivation".

Beuys shared a similar thought to creative freedom (Section 2 Page 5).

What Bernhard believes drives him into the right topics, pictures, words and content is his honesty with himself in constantly thinking about getting more

money and fame (Design Indaba Magazine 2001). Bernhard intentionally does not only focus on visual aspects, but on what he calls gesamtkunstwerk, which means the overall art concept (Design Indaba Magazine 2001). This acts as a meta-level (similar anthroposophy theory of Beuys) that brings all his legal, corporate, and aesthetic art forms and activities together (Design Indaba Magazine 2001). In general his core focus is on global structures but also on the production and maintenance of them. Firstly looked at from a business, financial and profit driven angle and secondly from a purely artistic one (Bernhard 2002).

Bernhard has been called a maverick businessman, the Etoy promotions hammer and even the "nasty shock marketing maniac" by media platforms such as Wired magazine, the Washington Post, underground Italian magazines and German theoretical publications (Ubermorgen 2002). Old-school corporations willing to pay their excessive fees have gotten some of Ubermorgens communications strategies better known as a character marketing, drama marketing and most effective shock marketing by which you shock the user, and due to this shock the users channels are wide open so any information can be fed into the users brain (Design Indaba Magazine 2001). The Internet today is structured in such a way, that shock marketing can be used by artists; activists; terrorists; and by any of the other millions of naive users that surf it each day (Design Indaba Magazine 2001). Ubermorgens approach and projects are so dangerous and radical that possible areas of attack by enemy companies or governments need to be distributed for liability reasons, so a series of Ubermorgen holding companies were established in Vienna, Austria; and in Sofia, Bulgaria

(Bernhard 2002).

French philosopher Jean Baudrillard said in Cannes 2000 that

(Bernhard 2002):

"Übermorgen means the day after tomorrow, a slight tip towards their aesthetic and activist vision and prejudice, they are hardcore and radical in their actions and they are extremely strange and highly intelligent people".

Bernhard however prefers the term uniqueness, unique not because of what

Übermorgen does but because how, when and where they do it

(Bernhard 2002).

Übermorgen's über-slogan originates from a CNN interview questioning the Vote

Auction simulations that Bernhard pursued: "its different because its

fundamentally different" (Design Indaba Magazine 2001).

Section 4: The Workplace

The author of this essay believes that these two individuals can only be likened

and compared in context. The state of the world and its politics; the degree of

globalisation development; and the combined cost of the above to humanity and

human relationships at the same time, are the three most pivotal factors that

need understanding. Beuys's vision of the future from back in the 70's (Section 2

page 4) can still be seen as impressively intuitive, but Bernhard's is far more

accurate and/or up to date. Bernhard believes that mankind is looking at and

living in a highly political decade (Bernhard 2002) where global wars will only

get worse. Military conflicts between the police [USA] and resisting forces [nations, institutions, networks] will heat up, while conflicts between Europe and the US will arise (Bernhard 2002).

Beuys was an artist who displayed, performed, and exhibited his works and beliefs in galleries and institutions, to groups who still relied on the spoken word of mouth and the live real-time experience. Others interested would visit his exhibitions to interact and experience his work for themselves. However as time has unfolded, the growth of globalisation and its trends have decreased personal interaction with human beings and real live experiences drastically - to the point where greeting grocery store staff is unnecessary thanks to shopping online, and the adventure of experiencing overseas or the outdoors is lost by downloads available on screen at home for nothing more than the price of a phone call. Beuys elucidated the passage (of his work) from a personal experience to a more fundamental and universal human experience that is paradigmatic of his work on the whole (Luckenbach 1997). The author of this essay believes that a similar description could be given to that of Bernhard's work across world media. Today, Bernhard, through media hacking likes causing chaos by misusing the "pseudo" freedom of the net (Design Indaba Magazine 2001). Media hackers exploit weak spots within social, commercial, political and technical networks implementing disinformation via these subverted interfaces. Completely different to Beuys, media hackers, like Bernhard, have dealt with the effects of globalisation on human communications by forcing their work and beliefs on people via the systems (world wide web and media) that they depend on most (Design Indaba Magazine

2001).

In Joseph Beuys's discovery of performance art, he combined the theatrical elements of time and space with props and a directional score (Luckenbach 1997).

His own function as the artist shifts into a new dimension as a performer-shaman. Layering and manipulating "fragments", he acted out a ritual, which simultaneously is the creation of a new work of art (Luckenbach 1997). Beuys's goal was to erase the line separating art and life in the tradition of the radical modernists Marcel Duchamp and Bertold Brecht, whose evolutionary steps led to the erasure of this line. But Beuys's "gesamtkunstwerk" (total art work) was the creation of a symbiotic whole in art as a model for life (Luckenbach 1997).

For a period of four months in 1996, the Etoy gang legally hacked into five major search engines devising a trap for net travellers and technology tourists of the time (Bernhard 2002). With the twilight zone of the medium forming the place of action, search engines were transformed into a stage, designed as a merger between a Hollywood action movie script and a real life airplane hijacking (Bernhard 2002). This was a shocking experience and a violent attack on the innocent Internet user of the time. It became known as the digital hijack (Fig.4) and the members of Etoy as the first street gang on the information super highway (Fig.5) (Etoy 2001). The role of a performance remains very similar as it occurs here through time and space on the internet, only the stage has evolved and changed as a result of technology, into a stage on screen. Where Beuys used art to create a model for life, Bernhard and other Etoy operators used art (design and hacking) to insert some humane uncertainty of life

back into the inhuman, super reliable, information super highway (Etoy 2002). Bernhard illustrated the "performer-shaman" understanding of Beuys in another work of his. During a presentation, at the Design Indaba 2002 in Cape Town, of a CNN exclusive video interview with Hans Bernhard on his Vote Auction project, Bernhard had arranged for two designers from very different institutions, namely Joshua Davies from Praystation and Tom Roope of Tomato, to assist him in shaving his head clean on stage in front of the audience (Bernhard 2002). The Ubermorgen group then approached the Museum of Modern Art with the shaved hair of Bernhards as a first ever collaboration artwork between Praystation and Tomato (Bernhard 2002).

In language, semantics are the vehicle by which sounds are given form and thoughts are given meaning, allowing communication to take place (Luckenbach 1997). Beuys equated the phenomenon of language with evolution, as a catalyst that moulds and propels human society (Luckenbach 1997). Believing that the concept of people is elementally coupled with its language, the looming horrors of World War II aided Beuys' choice of sculpture (as it starts with speaking and thinking), to provide for ideas to take shape through the forward looking images that present themselves through it as a result (Luckenbach 1997). Bernhard again has a likeness to this line of thinking only his work has an extremely controversial (unpopular reaction) and deliberate motive behind it. However he develops it further, instead of just providing a vehicle for his ideas to generate on or take shape through, he set up a simulation of his work and let its trial in reality prove his controversial message correct. In

spring 2000, an American art student invented a platform for American citizens to offer and sell their individual votes during the US presidential election that same year (Bernhard 2002). On November 7th companies, political parties, and individuals could then auction off these votes via the Vote-Auction website and buy whole states. But due to heavy government official pressure, James Baumgartner (the inventor) offered the then very small venture to the Ubermorgen group (Bernhard 2002). Ubermorgen, at the time, had no idea that this was the pay dirt that they had been looking for. Ubermorgen then took control over Vote-Auction (Fig.6) and pushed the limits, in terms of shock marketing and public relations to a global mass media level never seen before with the core message "bringing capitalism and democracy closer together!" (Bernhard 2002) American principles of capitalism and democracy were already tightly intertwined, like most democratic countries corruption of the election process was legal for large corporations but illegal for individuals (Bernhard 2002). Vote-Auction just wanted a perfect market for votes, it would never be political, just purely business, art and market orientated, with no underlying ideology, just a strong belief in declaration (Fig.7) (Design Indaba Magazine 2001). For liability reasons Ubermorgen immediately set up Vote-Auction LTD in Bulgaria even though most lawsuits were on Bernhard and Baumgartner alone (Bernhard 2002). During those four months temporary injunctions, court complaints and many other legal threats were received from thirteen state attorneys. Federal attorney Janet Reno, along with the Central Intelligence Agency, the Federal Bureau of Investigation, and the National Security Agency investigated the case. Ubermorgen

suspected a break
and entry into their own servers and questioned why two domains
were illegally
shutdown by United States authorities (Bernhard 2002). The term
Media hacking
came about while Ubermorgen were developing the story in real-time
and watching
it later or the next morning on CNN world report (Bernhard 2002).
During those
four months an expected 500 million people were reached with the
Vote-Auction
brand and pervert commercial message (Design Indaba Magazine 2001).
All that
amassed was an endless story without any proof of illegal
activities, all
Vote-Auction representatives were only named plaintiffs (Bernhard
2002). E-mails
from veterans of World War II read about the aesthetics of the war
for democracy
and how Vote-Auction was destroying it. Amongst these came the
occasional death
threat, mainly because of the very painful visuals inserted by
Ubermorgen into
the initial website design which was not manipulated much in order
to keep it
authentic (Bernhard 2002). The global media, played the ultimate
pop soundtrack
to this techno-political-action-thriller (Bernhard 2002). Beuysian
thought on
Social Sculpture (Section 2 Page 5) seems far from a reality after
an experiment
like this proves itself successful. Vote-Auction becomes a digital
sculptural
vehicle upon which ideas can formulate for an answer to a polluted
society. After
a project like this Bernhards view on corporate censorship remains
senseless,
saying that sometimes it makes no sense to talk about the ethical
values of a
semi-technical action as censorship, as the technical aspect
overrules the
ethical one. What he prefers, is the practical (or pragmatic)
approach (Design
Indaba Magazine 2001).

However, within Beuys's work, language and communication were often

entirely
discrete entities (Luckenbach 1997). Language was one possible
vehicle for
communication; it functioned as a catalyst, whereas communication
was more
profound, elemental, and universal Ð fundamentally biological
(Luckenbach 1997).
Beuys's Multiples were devices of communication, vehicles for the
distribution of
ideas that could reach an even wider group of people than could a
single work of
art (Luckenbach 1997). Yet all of Beuys's objects had meaning only
in relation to
his ideas; the objects, however widely distributed, always return
to the maker.
This created a circular motion consisting of Beuys's art, his
persona, and the
metaphors that weave in and out of his work (Luckenbach 1997). One
vehicle for
the distribution of ideas that supersedes all others is that of the
Internet.
Hans Bernhard continuously hijacks this vehicle for the very reason
that it
allows him to express himself, through his projects, and the
concepts behind
them. Characteristically of Bernhard, his use of a "Beuys like
multiples"
approach also had a subversive tilt. Running as an experiment on
the rate of
viral distribution on the net, a staged conspiracy on the biggest
PC software
manufacturer was used to attract attention to a website and project
of the
Übermorgen group. Bernhard explains (Design Indaba Magazine 2001):
Media hackers
cannot be afraid of playing with information and information
distribution, but
rather have to be able to witfully play with these mechanisms.

In 1999 a press release was issued in the name of the jury of the
ARS Electronica
in Linz. Being the most important new media art festival and new
media art
award, Übermorgen's initial press release was headlined "Linux wins
pris ars
electronica due to Microsoft intervention". Sent out in the name

of the head of
the Jury to journalists, media and cultural people in the global
tech-community,
the e-mail was very detailed and in-depth and described the
potential bribery of
the net capital jury. Six hours after the release the first
stories claiming
this e-mail to be a fake appeared in international media-art and
technology
publications, but this was even to late, the virus had been
spread. On the
opening Monday morning of the festival over 250 journalists
requested information
concerning this press release. Multiplication of the e-mail had
gone into the
two digit million figure by viral distribution. Not even the
obvious fake
character of this message could stop hundreds of articles being
published about
it worldwide. Representatives of the Etoy-corporation were
questioned
aggressively of any responsibility for this act. This was just a
teaser action
to show off Ubermorgens capabilities in terms of communications and
perversion.
In fact, the use of these guerrilla marketing tactics was merely
just to soft
launch the brand Etxtreme.ru and co-brand it with Linux. Etxtreme
(Fig.8) was
one of the early content creations of the Ubermorgen group.

Section 5: Conclusion

Time seems to be all that stands between these two individuals,
however, what has
happened and changed in the world during that time seems to make
the short

distance between them seem a little further than it really is. Beuys came across to the world with greater ease and less tension, never "attacking" anyone and therefore was always seen as a fairly passive artist with potentially revolutionary beliefs - but never as a serious threat to any governments or institutions. Where presently, Bernhard is seen entirely as a threat as he lashes out and attacks those government institutions with his potentially revolutionary actions. Beuys and Bernhard have very similar long-term goals and motivations but their places in time/history don't allow for that likeness to be seen easily.

Realistically designers are fundamentally different to artists in some ways, for example: designers and architects are normally more constructive and/or goal orientated with what they do, often demanding or needing feedback and some response to work that they have completed, as they do have responsibilities as designers to sell or make immediate contact/impact. Whereas an artist, is more concerned with the message that they leave from themselves within their artwork, and not necessarily with what they get out of it.

Beuys' dream of a singular social structure has arrived, only at a very heavy price. People in general have lost their individuality and freedoms & as political and capitalist ventures control and regulate almost everything. Though those individuals that have not lost their will to embrace those freedoms (Bernhard) are seen as going against the grain, in effect being labelled troublemakers. Bernhard ideally, if not intentionally through his work, is only searching for the freedom that Beuys once had dressed as a Shepard boy in his

youth wandering the hillsides. Old popularity of gallery exhibitions moved online into the world-wide-web as mankind continues to surround and engross himself with such technologies. This can explain why Bernhard continuously looks for the loopholes within the globalisation-trend-bubble and then exploits them. Though globalisation has not only made the current world smaller and faster but it has also blurred the distance between the past and present.

Beuys placed so much importance on language and communication that it could be understood as a growing interest in the history of graphic design (these two being the main aspects of graphic design history). Globalisation might not have been as active as it is today but this interest of Beuys suggests that the conceptual barrier between art and design was being broken down even then.

In a world where physically coming closer together is actually driving us personally further apart, communication of any sort becomes increasingly important whether you are a designer, artist or just someone asking for directions on a street corner.

Ultimately, the quest for communicating effectively with ourselves, and the world around us might be the cataclysmic goal that designers and artists must reach together, in order for any such barriers between art and design to ever be cleared for good.

Section 1: Introduction

My argument is that the barrier that once stood between fine art conceptual thought and design conceptual thinking is being broken down as a result of globalisation. "The main historical thrust of neoliberal economic globalisation is to bring about a situation in which private capital and 'the market' alone determine the restructuring of economic, political and cultural life, making alternative values or institutions subordinate. Rather than capital and 'the economy' being embedded in society and harnessed to serve social ends, 'the economy' becomes the master of society and of all within it, and society exists to serve the ends of capital and its need for self-expansion. It is a necessary aspect of this process that 'politics' itself, and 'democracy' in particular, should become increasingly formalistic, stripped of substantive radical, revolutionary, or even reformist content, any of which might challenge the consolidation of the hegemony of capital over society". What does this mean? It means instead of society running the economy, the economy runs society. This affects us in terms of people having to pay for everything; the doctor, the hospital, etc. The government no longer pays in other words we become a user pays society. Social values are not as important as money. This means that money is valued more than people (Gills 2002). I intend to study this by comparing the

conceptual thoughts and theories of an internationally recognised fine art master (Joseph Beuys) with the work of a modern day multimedia designer, artist, hacker, performer and genius (Hans Bernhard). Joseph Beuys said this (De Domizio 1997:51): "Democratic Creativity is increasingly compromised by the progress made on the part of bureaucracy, coupled with the savage proliferation of an international mass culture. Political creativity continues to be reduced to the simple delegation of decisions and power. The imposition of a cultural and economic dictatorship throughout the whole world, thanks to the economic trusts, which are in continuous expansion, leads to loss of articulation, ability to learn, and verbal expression".

De Domizio (1997:115) believes that Beuys's thought was humanist thought and that it will continue to grow, because today we have concentrated too much on science and technology, neglecting true human relationships. The Internet has unquestionably been a major catalyst of globalisation and its wide spread reach to the four corners of society. Hans Bernhard was asked if the Internet has made the world a better place? To which he replied: "No, just a faster and smaller place" [Design Indaba Magazine 2001]

Section 2: A Master

Joseph Beuys (Fig.1) was born in Krefeld on 12 May 1921 (Stachelhaus 1991:9). He grew up in a strongly catholic petit bourgeois environment near Kleve D where he spent the first years of his life.

Throughout history, this region has been torn by countless wars, from Roman times up to the world wars of the twentieth century (Stachelhaus 1991:9). Numerous historical figures are bound up with this territory, and some of them cast powerful spells upon Beuys's imagination. Among them (Stachelhaus 1991:9), Johann Moritz von Nassau, of the House of Orange in the 17th Century, attempted building an ideal city of the soul in Kleve. Another was Anacharsis Cloots, an ardent intellectual and revolutionary guillotined for his efforts defending the ideas of the French Revolution in Europe. This region at the time, was predominantly Dutch and Catholic, and placed little if any importance on borders (De Domizio 1997:17).

According to Heiner Stachelhaus (1991:9), Beuys did not have a close relationship with his parents and took care of himself from an early age. Beuys, remembered (De Domizio 1997:18) that for years he acted the part of a Shepard walking around with a sort of "Eurasian staff" and a flock gathered around him exploring everything in the vicinity. At 17 he set up a well-equipped laboratory at home and engaged in scientific experiments. Together with his innate talent for natural sciences, Beuys showed a passion for sculpture (De Domizio 1997:19). Announcing only a few days before his own death on 23 January 1986, Beuys honoured and thanked the man he considered his "Master" (De Domizio 1997:77), the late Wilhelm Lehmbruck, and then told of his first introduction to Lehmbruck and Lehmbruck's work. Beuys (as quoted in De Domizio 1997:77)

continued that one day by mere chance, he laid his hands on a publication lying on a table with many others. Opening it he saw a sculpture by Lehmbruck, and an idea flashed through his mind, the idea that everything was a sculpture. He saw a flaming torch and heard a voice telling him to protect it. This event accompanied him through World War II and eventually spurred him on to pursue it (De Domizio 1997:77). His favourite topics in literature were philosophy, anthropology, folklore, Nordic Mythology (De Domizio 1997:19; Stachelhaus 1991:11-14) and other subjects that were forbidden by the Nazis.

He remained a detached spectator of the Nazi years, and as a sideline his love of music took him to cello and piano lessons (Stachelhaus 1991:12). Despite his love of art, he took his diploma and became a paediatrician in 1940. From there, his strong interest in science and technology lead him to join the German air force in 1941. After being shot down, badly wounded five times, and captured once, he returned to Kleve in 1946. Sitting in a lecture one day he recognised the limitations of science, and decided to dedicate the rest of his life to art, leaving his grim experiences of war behind him (De Domizio 1997:20-22).

At this time Jack Moffit (1997) believes Beuys discovered, explored and transformed Austrian philosopher Rudolph Steiner's anthroposophy theory into his own theory of art. Robert Allan (2000:55) defines Anthroposophy as a system of belief, which holds that there is a spiritual world that can be perceived by faculties latent in human beings and that these latent faculties can be developed by systematic training. According to Alan Bullock & Stephen Trombley (1999:37),

Steiner claimed to derive his teachings "from Ôspiritual researchÕ based on an exact ÔscientificÕ mode of supersensible perception".

Beuys (as quoted in De Domizio 1997:24) reveals later that in 1951, in a state of depression, he literally began questioning everything including his own life. Seeking the most profound elements in life, art and science, he began seeking a completely different theory of art, science, life, democracy, capital, economics, culture and freedom. During this time he managed to establish the outlines of a larger theory of art that involved social structures as a whole, the revolution and evolution of all human development, and an anthropological idea of human creativity.

Between 1962 and 1965 (De Domizio 1997:28), Beuys was part of the Fluxus movement, which based itself on a connection between art and life and was directed towards a new order of human society. Often working with the concept of chaos Beuys awoke to the idea that a new situation could be created from it. Another idea of BeuysÕ by which art is available to everyone and useable anywhere and everywhere came from this period (De Domizio 1997:28), namely vehicle art.

Beuys, according to De Domizio (1997:34) never demanded a specific knowledge or particular reaction from the public to his work, but instead sought out the energy points within the field of human power and understanding Ð with the belief that man must complete himself through his own efforts (De Domizio 1997:81).

In a certain sense, Beuys was an anarchist (Stachelhaus 1991:106). He had no time for the mind-set of democratic compromise, but was rather interested in

breaking through the limitations that had been imposed on democracy. Beuys meant very seriously when he said (Stachelhaus 1991:106) that he had nothing to do with politics but that he only knew art, this keeping within the principles of his expanded concept of art, the idea that art is the primary factor governing our existence and our actions.

In 1964 right-wing students accused Beuys of pursuing revolutionary goals, while in 1969 a group of left-wing students interrupted an action of his in Berlin and instead accused him of being a reactionary (De Domizio 1997:38). But despite these accusations, Beuys (De Domizio 1997:38) felt that belonging to the left, right or center no longer meant much because the so-called parliamentary democracy was being questioned as a whole. Beuys had defined his objectives as early as 1967 with the formation of the German Student Party [DSP] (Stachelhaus 1991:107). The DSP emerged from the great public debates that Beuys regularly held in his class at the Dusseldorf Academy. Commenting on the DSP's establishment, according to Stachelhaus (1991:107), Beuys simply stated: "I want into parliament!". To broaden the horizons of the German Student Party, Beuys founded the "Organisation for Non-Voters and Free Referendum" in 1970. Beuys explains (De Domizio 1997:42): "The educational concept refers to the fact that man is a creative being. It is important to be aware of this: to create an awareness of the fact that he is a creative being and a free being and that for these reasons he must inevitably behave in an anti-authoritarian fashion. The concept of perception theory confirms that only the creative man can change history, can use his creativity in a revolutionary way. To go back to my educational concept, this would mean the following: Art =

creativity = freedom of man [freedom being one of his main motivations]". Beuys goes on explaining that a revolution is within ourselves, and that the only possible revolution lies in our ideas, therefore "We are the revolution" and only in our behaviour is there evolution (De Domizio 1997:47).

From here on his work revolved around many interesting and different points of view, with subject titles that were not directly a reflection of what we see, but asked the question of what there was to see (De Domizio 1997:43).

According to De Domizio (1997:7) as early as the 70s, Beuys warned in "Aufbruch zur Alternative" (Appeal for the Alternative) and "Aktion Dritter Weg" (Third Way Action Promotional Initiative) that the human race was condemned to sink even deeper into ecological crisis; to be defencelessly exposed to a wild growing threat of war: to stand by impotently as the rift between rich and poor nations continues to grow; to be persistently tormented by racial hate, religious struggle, and nationalism, by exploitation and oppression, by humiliation and violence, by the dictates of political and economic power, and by biological and social manipulation. Beuys (De Domizio 1997:8) was the artist who, more than any other, wanted and was capable of going beyond art by directing all his efforts towards the utopian territories of natural energy and spiritual communication: reality as a phenomenological specter of human possibilities.

In 1974 Beuys (De Domizio 1997:49), together with the Nobel Prize Winner Heinrich Boll, established what could be considered the artist's most important creation, aimed at a real form of progress with respect to existing educational

institutions: the Free International University, (Luckenbach 1997) which admitted all students and function outside of the existing academic system.

Often using the blackboard as a demonstrative tool, his actions became lectures in which he directly addressed his audiences.

Joseph Beuys two most singular aspects of thought were reappropriation and free creativity (De Domizio 1997:9), the former consisting of a rare attitude with regards to reconstruction rather than conquest, towards discovery rather than invention and therapeutic improvement as opposed to substitution, in this sense the need to speak and necessity of communication. The second aspect is characterised by that famous free human creativity that he preached and taught.

Beuys (De Domizio 1997:67) versed his free creativity theory in Bolognano 1984:

"The only thing that each one of us can do is to begin with the study of his or her own anthropological powers [for] the development of human beings on this planet [it] is a question of freeing ourselves from all dependencies of the past.

We now must face the realization that it is no longer possible simply to follow a leader [or] a political ideology and that the time has come for us to begin to make full use of the most important of all our powers: the power of creativity (Creativity is a matter of the possibility of thinking or thinking power and the level of the creativity of the feelings) [and it's] most authentic part freedom It is our duty to show what we have produced with our freedom [since] Freedom mostly means the freedom of others. When we know that we are cooperating together as free individuals, then we are also much closer to the creation of a real and concrete democracy [as] democracy structures have to be a result of freethinking and of our equality as thinking individuals the basis upon

which we can then establish a constitution".

Another large part of Beuysian thought was the concept of "Social Sculpture" (De Domizio 1997:83), whereby art is a daily act, a broadened and dilated action, not localised, not univocal, not limited to the relative content of the art object but art as the creative commitment of living, entirely incarnated in behaviour. A way of transforming the world into "Social Sculpture", in which no man needs to acknowledge himself, but rather is and acts as an "artist", the demiurge of every moment of his life (De Domizio 1997:83).

Being considered as an avant-garde artist probably meant nothing to Beuys explains De Domizio (1997:82), though he became a media icon partly of his own making (Luckenbach 1997). Constantly being photographed and videotaped, he promoted the ideological causes that made his art a vehicle to bring about discourse (Luckenbach 1997). Others called him a charlatan, a diseased preacher, and even a crafty buffoon, yet some would place Beuys on an artistic altar (De Domizio 1997:81). In truth however, he was a tireless agitator, who provoked and challenged continuously for what he so strongly believed in, crossing the traditional frontiers of art to open the doors of the ghetto in which it had been impounded (De Domizio 1997:82).

Well remembered for a popular image of being the man with "the felt hat" he explained its significance (De Domizio 1997:2): "A rabbit isn't a rabbit without ears. [so] Beuys isn't Beuys without the hat".

Section 3: An Apprentice

Hans Bernhard (Fig.2) was born in New Haven Connecticut in 1973 (Bernhard 2002) and studied Visual Media Art at the University of Applied Arts in Vienna with a professor Peter Weibel (MFA Degree 1999). He is currently working on his PHD in Media Hacking (Bernhard 2002).

Bernhard found himself on the Internet for the very first time in 1993 (Design Indaba Magazine 2001). Sitting in front of three shells (telnet-sessions) he asked himself where he was, where he was physically, and where he was mentally? Not knowing if he was on a server in Tokyo, in Vienna or on a machine in Cape Town, he got nervous and began to sweat heavily. Sparks were exploding in his brain and immediately he knew that this was it, that this was his future now, and that this was the future (Design Indaba Magazine 2001). That same year, funded by Japanese venture capital, in a Swiss mountain training facility, Bernhard and six other hackers (Fig.3) distributed across Europe founded the multi award winning and much talked about "Etoy.com" (Bernhard 2002). Etoy's goals were to smash the boring style of electronic traffic channels; to stretch reality by leaving it behind; and to play the game between business, art, and entertainment, by kidnapping web-crawling humans and injecting a little uncertainty into life on the web (Etoy 2002). Knowing that the highlighting of corporate abuse would cause such controversy, they began the Etoy tanksystem in 1994 with the very

symptomatic slogan: "Etoy: the pop-star is the pilot is the coder is the designer is the architect is the manager is the system is Etoy (Bernhard 2002). The corporate identity and panic management strategies were central to their high-pressure explorations. They used the web as a stage to disrupt the data flow, abuse technology, and promote pop-music (Bernhard 2002). It ran from 1993 to 1996, a time when the world-wide-web was unknown to the general public (Bernhard 2002), yet Etoy was awarded the Golden Nica first prize of the ARS Electronica festival for new media in 1996 (Bernhard 2002). In 1996, pop star singer Bjork from Iceland said the following (Bernhard 2002): "Éand all our children will be playing in the garden of joy surrounded by glamour and perverted disco tunesÉetoymature digital priests from another world". Etoy operated until 1999, when due to personal conflicts, the board split into two parts (Design Indaba Magazine 2001).

Today Bernhard and three other founding members are running the Etoy-holdings company which holds major and minor stakes in all other Etoy companies (Bernhard 2002). Bernhard's involvement is purely profit orientated since Etoy-holdings deals with financial, legal, trademark, buying and strategic planning (Bernhard 2002).

In 1999, together with his partner Maria Haas, he founded a network holding of companies in Germany, Austria, Switzerland, and Bulgaria called Ubermorgen (Bernhard 2002). These are heavily involved in software development, licensing deals, fine art, applied design and even high-end consulting services for global multinationals such as the Allianz Insurance Corporation. Bernhard's intentions

at the time were to research and investigate global corporations ["Émonsters of the universeÉ"] just like it (Bernhard 2002). Hosting their server farm from their bedroom, Ubermogen has completed an amazing amount of legal articles, projects, lawsuits, and publications using global mass media as an art form, as a fine art, and as a business strategy (Bernhard 2002).

Hans Bernhard has often been called subversive because of the things that he says he likes doing and the way that he goes about doing them (Design Indaba Magazine 2001). Bernhard explains (Design Indaba Magazine 2001) that he loves the thrill, the style, and the aesthetics of action. Going directly to prison or being immediately killed are the dangers associated with the supposedly illegal measures that he takes. But it is this reality (Design Indaba Magazine 2001) that he feeds off of and craves Ð not the threat of dying or a prison sentence Ð but that he can show people that certain things [like attacking corporations and governments] thought illegal, can actually be done or opposed legally, and most of all, extremely effectively. This draws relevance from Joseph BeuysÕ theory of free creativity, how freedoms should be shared and displayed as a duty to mankind, as freedom more often than not means the freedom of others and not just the individual (Section 2 page 5). Yet Bernhard claims only to be as anti-establishment as anybody else is (Design Indaba Magazine 2001). He does not regard his Ôanti-motivesÕ as a result of his work, but merely as a natural motivation for an individual surviving (Design Indaba Magazine 2001).

Money, as much as it might appear at first glance, is not BernhardÕs real motivation (Bernhard 2002). He needs it to live and finance his

research and art ventures but otherwise sees it as a distraction (Bernhard 2002). Bernhard explains (Bernhard 2002): "My true motivations are freedom. [T]he freedom to research what and how and when and where I want. [T]o publish where and what I want, to say what I want, where and how I want it. [T]hat is my pure and true motivation".

Beuys shared a similar thought to creative freedom (Section 2 Page 5).

What Bernhard believes drives him into the right topics, pictures, words and content is his honesty with himself in constantly thinking about getting more money and fame (Design Indaba Magazine 2001). Bernhard intentionally does not only focus on visual aspects, but on what he calls gesamtkunstwerk, which means the overall art concept (Design Indaba Magazine 2001). This acts as a meta-level (similar anthroposophy theory of Beuys) that brings all his legal, corporate, and aesthetic art forms and activities together (Design Indaba Magazine 2001). In general his core focus is on global structures but also on the production and maintenance of them. Firstly looked at from a business, financial and profit driven angle and secondly from a purely artistic one (Bernhard 2002).

Bernhard has been called a maverick businessman, the Etoy promotions hammer and even the "nasty shock marketing maniac" by media platforms such as Wired magazine, the Washington Post, underground Italian magazines and German theoretical publications (Ubermorgen 2002). Old-school corporations willing to pay their excessive fees have gotten some of Ubermorgens communications strategies better known as a character marketing, drama marketing

and most effective shock marketing by which you shock the user, and due to this shock the users channels are wide open so any information can be fed into the users brain (Design Indaba Magazine 2001). The Internet today is structured in such a way, that shock marketing can be used by artists; activists; terrorists; and by any of the other millions of naive users that surf it each day (Design Indaba Magazine 2001). Ubermorgens approach and projects are so dangerous and radical that possible areas of attack by enemy companies or governments need to be distributed for liability reasons, so a series of Ubermorgen holding companies were established in Vienna, Austria; and in Sofia, Bulgaria (Bernhard 2002). French philosopher Jean Baudrillard said in Cannes 2000 that (Bernhard 2002): "Ubermorgen means the day after tomorrow, a slight tip towards their aesthetic and activist vision and prejudice, they are hardcore and radical in their actions and they are extremely strange and highly intelligent people".

Bernhard however prefers the term uniqueness, unique not because of what Ubermorgen does but because how, when and where they do it (Bernhard 2002). Ubermorgens uber-slogan originates from a CNN interview questioning the **Vote Auction** simulations that Bernhard pursued: "its different because its fundamentally different" (Design Indaba Magazine 2001).

Section 4: The Workplace

The author of this essay believes that these two individuals can only be likened and compared in context. The state of the world and its politics; the degree of globalisation development; and the combined cost of the above to humanity and human relationships at the same time, are the three most pivotal factors that need understanding. Beuys's vision of the future from back in the 70's (Section 2 page 4) can still be seen as impressively intuitive, but Bernhard's is far more accurate and/or up to date. Bernhard believes that mankind is looking at and living in a highly political decade (Bernhard 2002) where global wars will only get worse. Military conflicts between the police [USA] and resisting forces [nations, institutions, networks] will heat up, while conflicts between Europe and the US will arise (Bernhard 2002).

Beuys was an artist who displayed, performed, and exhibited his works and beliefs in galleries and institutions, to groups who still relied on the spoken word of mouth and the live real-time experience. Others interested would visit his exhibitions to interact and experience his work for themselves. However as time has unfolded, the growth of globalisation and its trends have decreased personal interaction with human beings and real live experiences drastically - to the point where greeting grocery store staff is unnecessary thanks to shopping online, and the adventure of experiencing overseas or the outdoors is lost by downloads available on screen at home for nothing more than the price of a phone call. Beuys elucidated the passage (of his work) from a personal experience to a more fundamental and universal human experience that is paradigmatic of his work

on the whole (Luckenbach 1997). The author of this essay believes that a similar description could be given to that of Bernhard's work across world media. Today, Bernhard, through media hacking likes causing chaos by misusing the "pseudo" freedom of the net (Design Indaba Magazine 2001). Media hackers exploit weak spots within social, commercial, political and technical networks implementing disinformation via these subverted interfaces. Completely different to Beuys, media hackers, like Bernhard, have dealt with the effects of globalisation on human communications by forcing their work and beliefs on people via the systems (world wide web and media) that they depend on most (Design Indaba Magazine 2001).

In Joseph Beuys's discovery of performance art, he combined the theatrical elements of time and space with props and a directional score (Luckenbach 1997). His own function as the artist shifts into a new dimension as a "performer-shaman". Layering and manipulating "fragments", he acted out a ritual, which simultaneously is the creation of a new work of art (Luckenbach 1997). Beuys's goal was to erase the line separating art and life in the tradition of the radical modernists Marcel Duchamp and Bertold Brecht, whose evolutionary steps led to the erasure of this line. But Beuys's "gesamtkunstwerk" (total art work) was the creation of a symbiotic whole of art as a model for life (Luckenbach 1997).

For a period of four months in 1996, the Etoy gang legally hacked into five major search engines devising a trap for net travellers and technology tourists of the time (Bernhard 2002). With the twilight zone of the medium forming the place of action, search engines were transformed into a stage, designed as a

merger

between a Hollywood action movie script and a real life airplane hijacking (Bernhard 2002). This was a shocking experience and a violent attack on the innocent Internet user of the time. It became known as the digital hijack (Fig.4) and the members of Etoy as the first street gang on the information super highway (Fig.5) (Etoy 2001). The role of a "performance" remains very similar as it occurs here through time and space on the internet, only the stage has evolved and changed as a result of technology, into a stage on screen. Where Beuys used art to create a model for life, Bernhard and other Etoy operators used art (design and hacking) to insert some humane uncertainty of life back into the inhuman, super reliable, information super highway (Etoy 2002). Bernhard illustrated the "performer-shaman" understanding of Beuys in another work of his. During a presentation, at the Design Indaba 2002 in Cape Town, of a CNN exclusive video interview with Hans Bernhard on his **Vote Auction** project, Bernhard had arranged for two designers from very different institutions, namely Joshua Davies from Praystation and Tom Roope of Tomato, to assist him in shaving his head clean on stage in front of the audience (Bernhard 2002). The Ubermorgen group then approached the Museum of Modern Art with the shaved hair of Bernhards as a first ever collaboration artwork between Praystation and Tomato (Bernhard 2002).

In language, semantics are the vehicle by which sounds are given form and thoughts are given meaning, allowing communication to take place (Luckenbach 1997). Beuys equated the phenomenon of language with evolution, as a catalyst that moulds and propels human society (Luckenbach 1997). Believing

that the concept of people is elementally coupled with its language, the looming horrors of World War II aided Beuys's choice of sculpture (as it starts with speaking and thinking), to provide for ideas to take shape through the forward looking images that present themselves through it as a result (Luckenbach 1997). Bernhard again has a likeness to this line of thinking only his work has an extremely controversial (unpopular reaction) and deliberate motive behind it. However he develops it further, instead of just providing a vehicle for his ideas to generate on or take shape through, he set up a simulation of his work and let its trial in reality prove his controversial message correct. In spring 2000, an American art student invented a platform for American citizens to offer and sell their individual votes during the US presidential election that same year (Bernhard 2002). On November 7th companies, political parties, and individuals could then auction off these votes via the **Vote-Auction** website and buy whole states. But due to heavy government official pressure, James Baumgartner (the inventor) offered the then very small venture to the Ubermorgen group (Bernhard 2002). Ubermorgen, at the time, had no idea that this was the pay dirt that they had been looking for. Ubermorgen then took control over **Vote-Auction** (Fig.6) and pushed the limits, in terms of shock marketing and public relations to a global mass media level never seen before with the core message "bringing capitalism and democracy closer together!" (Bernhard 2002) American principles of capitalism and democracy were already tightly intertwined, like most democratic countries corruption of the election process was legal for large corporations but illegal for individuals (Bernhard 2002). Vote-Auction just wanted

a perfect market for votes, it would never be political, just purely business, art and market orientated, with no underlying ideology, just a strong belief in declaration (Fig.7) (Design Indaba Magazine 2001). For liability reasons Ubermorgen immediately set up **Vote-Auction** LTD in Bulgaria even though most lawsuits were on Bernhard and Baumgartner alone (Bernhard 2002). During those four months temporary injunctions, court complaints and many other legal threats were received from thirteen state attorneys. Federal attorney Janet Reno, along with the Central Intelligence Agency, the Federal Bureau of Investigation, and the National Security Agency investigated the case. Ubermorgen suspected a break and entry into their own servers and questioned why two domains were illegally shutdown by United States authorities (Bernhard 2002). The term Media hacking came about while Ubermorgen were developing the story in real-time and watching it later or the next morning on CNN world report (Bernhard 2002). During those four months an expected 500 million people were reached with the **Vote-Auction** brand and pervert commercial message (Design Indaba Magazine 2001). All that amassed was an endless story without any proof of illegal activities, all **Vote-Auction** representatives were only named plaintiffs (Bernhard 2002). E-mails from veterans of World War II read about the aesthetics of the war for democracy and how **Vote-Auction** was destroying it. Amongst these came the occasional death threat, mainly because of the very painful visuals inserted by Ubermorgen into the initial website design which was not manipulated much in order to keep it authentic (Bernhard 2002). The global media, played the ultimate pop soundtrack to this techno-political-action-thriller (Bernhard 2002). Beuysian

thought on
Social Sculpture (Section 2 Page 5) seems far from a reality after
an experiment
like this proves itself successful. **Vote-Auction** becomes a digital
sculptural
vehicle upon which ideas can formulate for an answer to a polluted
society. After
a project like this Bernhards view on corporate censorship remains
senseless,
saying that sometimes it makes no sense to talk about the ethical
values of a
semi-technical action as censorship, as the technical aspect
overrules the
ethical one. What he prefers, is the practical (or pragmatic)
approach (Design
Indaba Magazine 2001).

However, within Beuys's work, language and communication were often
entirely
discrete entities (Luckenbach 1997). Language was one possible
vehicle for
communication; it functioned as a catalyst, whereas communication
was more
profound, elemental, and universal. It is fundamentally biological
(Luckenbach 1997).

Beuys's Multiples were devices of communication, vehicles for the
distribution of
ideas that could reach an even wider group of people than could a
single work of
art (Luckenbach 1997). Yet all of Beuys's objects had meaning only
in relation to
his ideas; the objects, however widely distributed, always return
to the maker.
This created a circular motion consisting of Beuys's art, his
persona, and the
metaphors that weave in and out of his work (Luckenbach 1997). One
vehicle for
the distribution of ideas that supersedes all others is that of the
Internet.
Hans Bernhard continuously hijacks this vehicle for the very reason
that it
allows him to express himself, through his projects, and the
concepts behind
them. Characteristically of Bernhard, his use of a Beuys-like
multiples approach also had a subversive tilt. Running as an experiment on

the rate of viral distribution on the net, a staged conspiracy on the biggest PC software manufacturer was used to attract attention to a website and project of the Übermorgen group. Bernhard explains (Design Indaba Magazine 2001): Media hackers cannot be afraid of playing with information and information distribution, but rather have to be able to witfully play with these mechanisms.

In 1999 a press release was issued in the name of the jury of the ARS Electronica in Linz. Being the most important new media art festival and new media art award, Übermorgen's initial press release was headlined "Linux wins pris ars electronica due to Microsoft intervention". Sent out in the name of the head of the Jury to journalists, media and cultural people in the global tech-community, the e-mail was very detailed and in-depth and described the potential bribery of the net capital jury. Six hours after the release the first stories claiming this e-mail to be a fake appeared in international media-art and technology publications, but this was even to late, the virus had been spread. On the opening Monday morning of the festival over 250 journalists requested information concerning this press release. Multiplication of the e-mail had gone into the two digit million figure by viral distribution. Not even the obvious fake character of this message could stop hundreds of articles being published about it worldwide. Representatives of the Etoy-corporation were questioned aggressively of any responsibility for this act. This was just a teaser action to show off Übermorgens capabilities in terms of communications and perversion. In fact, the use of these guerrilla marketing tactics was merely just to soft launch the brand Etxtreme.ru and co-brand it with Linux. Etxtreme

(Fig.8) was one of the early content creations of the Ubermorgen group.

Section 5: Conclusion

Time seems to be all that stands between these two individuals, however, what has happened and changed in the world during that time seems to make the short distance between them seem a little further than it really is. Beuys came across to the world with greater ease and less tension, never "attacking" anyone and therefore was always seen as a fairly passive artist with potentially revolutionary beliefs - but never as a serious threat to any governments or institutions. Where presently, Bernhard is seen entirely as a threat as he lashes out and attacks those government institutions with his potentially revolutionary actions. Beuys and Bernhard have very similar long-term goals and motivations but their places in time/history don't allow for that likeness to be seen easily.

Realistically designers are fundamentally different to artists in some ways, for example: designers and architects are normally more constructive and/or goal orientated with what they do, often demanding or needing feedback and some response to work that they have completed, as they do have responsibilities as designers to sell or make immediate contact/impact. Whereas an artist, is more

concerned with the message that they leave from themselves within their artwork, and not necessarily with what they get out of it.

Beuys's dream of a singular social structure has arrived, only at a very heavy price. People in general have lost their individuality and freedoms as political and capitalist ventures control and regulate almost everything. Though those individuals that have not lost their will to embrace those freedoms (Bernhard) are seen as going against the grain, in effect being labelled troublemakers. Bernhard ideally, if not intentionally through his work, is only searching for the freedom that Beuys once had dressed as a Shepard boy in his youth wandering the hillsides. Old popularity of gallery exhibitions moved online into the world-wide-web as mankind continues to surround and engross himself with such technologies. This can explain why Bernhard continuously looks for the loopholes within the globalisation-trend-bubble and then exploits them. Though globalisation has not only made the current world smaller and faster but it has also blurred the distance between the past and present.

Beuys placed so much importance on language and communication that it could be understood as a growing interest in the history of graphic design (these two being the main aspects of graphic design history). Globalisation might not have been as active as it is today but this interest of Beuys's suggests that the conceptual barrier between art and design was being broken down even then.

In a world where physically coming closer together is actually driving us personally further apart, communication of any sort becomes increasingly important as whether you are a designer, artist or just someone

asking for
directions on a street corner.

Ultimately, the quest for communicating effectively with ourselves,
and the world
around us might be the cataclysmic goal that designers and artists
must reach
together, in order for any such barriers between art and design to
ever be
cleared for good.

Attack on Democracy by Übermorgen. Bulls and Bears on the electoral market

Über die Aktion "[V]ote-Auction"

lizvlx

(Resümee von Michael Pfister unter Verwendung der Website vote-auction.net)

Im Sommer 2000 übernahm die Netzkunstfirma übermorgen ein Projekt, das im Rahmen der Diplomarbeit eines New Yorker Studenten entstanden war. "[V]ote-Auction" wurde von Übermorgen internationalisiert, ausgebaut und mit einem auf die Zielgruppe zugeschnittenen Web-Design ausgestattet. Es handelt sich um ein Forum, das Demokratie und Kapitalismus einander näher bringen will. Im Vorfeld der US-amerikanischen Präsidentschaftswahl 2000 wurden Wähler eingeladen, ihre Stimme zur Versteigerung freizugeben. Jeweils die angebotenen Stimmen eines ganzen Staates sollten dem Meistbietenden verkauft und der entsprechende Anteil am Erlös den Stimmenverkäufern ausbezahlt werden. übermorgen als Betreiberin des Forums war an diesen Transaktionen finanziell nicht beteiligt. Sie machten geltend, dass diese Methode für die Finanzierung von Kampagnen bedeutend billiger sei als die herkömmlichen Spenden und Werbe-Aktionen. Die Geschichte des Stimmenkaufs wird auf www.vote-auction.net dokumentiert, beispielsweise mit der bedeutenden Alkoholspende des 1757 für einen Sitz im Virginia House of Burgesses kandidierenden George Washington an die 391 Wähler seines Bezirkes. übermorgen macht geltend, dass das Auktionsforum "[V]ote-Auction" ein "neues Paradigma" in der Tradition des Stimmenkaufs in Demokratien darstellt. In juristischer Hinsicht

wird darauf hingewiesen, dass das "Ausgeben von Geld zur Beeinflussung von Wählern durch die Klausel ueber freie Meinungsaeusserung im First Amendment der amerikanischen Verfassung geschuetzt" werde. Neben dem Betreiben der Website lancierte uebermorgen einige breit gestreute Pressemitteilungen inklusive intensiver internationaler Nachbetreuung, die ein grosses Echo ausloesten. Insgesamt sollen 450 Millionen Medienkonsumenten von der Aktion erfahren haben. In den drei Monaten vor der Bush-Gore-Wahl gab uebermorgen 3-5 Radio- und TV-Interviews und 10-20 Email und Telefoninterviews pro Tag. In den USA kam es zu zwanzig angedrohten und vier wirklich durchgefuehrten Rechtsstreiten. Aufgrund eines Richterspruchs in Illinois wurde die Domain der Website zweimal gesperrt, konnte aber unter leicht veraendertem Namen jeweils wieder rechtzeitig fuer die Wahlen selbst aufgeschaltet werden. uebermorgens Ziel ist es stets, die "weltweiten" Moeglichkeiten des Internet optimal zu nutzen. Eines der beruehmtesten "weltweiten" Medien, der Fernsehsender CNN, berichtete siebenmal ueber "vote-auction" und widmete dem Thema am 24. Oktober 2000 eine halbstuendige Folge der Justiz-Sendung "Burden of Proof" unter dem Titel "Bidding for Ballots: Democracy on the Block". Auf www.vote-auction.net findet sich ein Link zu einem vollstaendigen Transkript der von lizvlx an Bord der Arteplage Mobile du Jura samt Werbebloecken gezeigten, ueberaus paradoxen Sendung. Zwei Moderatoren, drei per Bildschirm zugeschaltete Gespraechspartner und fuenf Rechtsexperten im Studio eroerterten den Fall. Hans Bernhard von uebermorgen stand telefonisch Rede und Antwort. "Hans, warum in aller Welt glauben Sie, sich einfach so in die amerikanische Wahl einmischen zu duerfen?" wollte Moderatorin Greta van Susteren

von ihm wissen. Seine Antwort: "Wir moechten ein Forum bieten, um einen perfekten Markt zu schaffen. Unser Slogan besagt, dass wir Kapitalismus und Demokratie zusammenbringen wollen. Wir sehen das als weltweite Aufgabe, und die US-Wahl ist nur ein Testfall." Die harsche Reaktion eines kalifornischen Staatsbeamten, der bekanntgab, in Kalifornien wuerde polizeilich gegen moegliche Stimmenverkaeuer ermittelt, wurde nach geraumer Zeit von einem Professor fuer Buergerrechte etwas relativiert, der zu bedenken gab, dass "vote-auction" eventuell eine Form von "Satire oder Strassentheater" sei und in diesem Fall vom First Amendment geschuetzt werde. Die Rechtsexperten zeigten sich allerdings nicht beschwichtigt: "Wenn es als Cartoon in einer Wochenendausgabe erscheinen wuerde, koennte man es als Spass verstehen. Gewissen Berichten zufolge sollen aber drei- bis viertausend Angebote zum Stimmenverkauf eingegangen sein."

Im Anschluss an die Video-Vorfuehrung berichtete lizvlx von den zweifelhaften Methoden, mit denen die US-Justiz gegen "[V]ote-Auction" vorging. Der Staat Missouri etwa klagte nicht wegen Stimmenverkauf, sondern aus Konsumentenschutzgruenden, wegen falscher Versprechungen ð weil "[V]ote-Auction" etwas verkaufe, was gar nicht verkauft werden koenne. Der Nachbarstaat klagte gerade wegen dieses VerkaufsÉ Das "legal spamming", das per Fax ueber uebermorgen hereinbrach, nahmen die KuenstlerInnen zum Anlass fuer eine neue Aktion namens "Injunction Generator", mit dem "einstweilige Verfuegungen" gegen Websites und Domains nach US-Recht erstellt und verschickt werden koennen. Dabei interessiert uebermorgen vor allem, welche Gruende angefuehrt werden, um eine Website zu schliessen, und in welchen Laendern es am besten funktioniert. uebermorgen selber denkt daran, in Zukunft von Kasachstan aus zu operieren, weil dort

der

Ansprechpartner fehle, um eine Website abschalten zu lassen. Die Motivation, "[V]ote-Auction" zu machen, betonte lizvlx, sei nicht, "aufzuzeigen: ach, es ist so schlimm, alle werden gekauft, und die Demokratie ist in Gefahr. Amerika ist kein demokratisches Land, ich habe es nie so empfunden. Ich kenne auch nicht besonders viele demokratische Laender, insofern ist es kein grober Vorwurf. Was soll daran schlimm sein, wenn man Demokratie und Kapitalismus einander naeher bringt? Wir glauben doch an beides so sehr, also muss es noch viel besser sein, wenn beides zusammenkommt. Die Heirat der beiden Goetter der aktuellen Welt. Ich glaube nicht, dass wir ein neues System brauchen, es geht eher um die Zerstoerung der alten Systeme. Die Faulheit, die es obsolet macht, ueber Demokratie zu diskutieren, ist die gleiche Faulheit, die es auch moeglich macht, dass man Wahlbeteiligungen hat, wo man sagen koennte: Machen wir es doch wieder wie die alten Griechen, und schliessen wir die Leute aktiv von der Wahl aus und nicht sozusagen passiv, weil sie selber nicht gehen. Ich habe insofern eine sehr negative Einstellung gegenueber der Demokratie, als sie einfach nicht funktioniert. Ich waere dafuer, wenn man die Leute zwingen wuerde, waehlen zu gehen. In Amerika gehen 25% der wahlfaehigen Leute waehlen, und dann wird der Typ Praesident, der nicht die Mehrheit der Stimmen bekommen hat. Da ist mir die Anarchie schon lieber, oder auch das nette kleine Beispiel der Monarchie [Anm.: Liechtenstein], weil wir da eine klare Ansage haben. Die einzige Demokratie, die ich schaeetze, ist die der kapitalistischen Maerkte, weil es die einzige ist, wo man eine echte ..ffentlichkeit hat, die eine Kontrolle ausuebt. Nicht nur alle vier Jahre, wenn gewaehlt wird, sondern staendig, indem das Produkt

gekauft wird oder
eben nicht. Insofern bringt es etwas, ueber Kapitalismus zu
diskutieren, wenn man
ueber Demokratie diskutiert. Diese beiden Dinge sind naemlich schon
lange
ausgewechselt worden, nicht etwa zusammengewachsen, sondern
ineinander verkehrt.
Interessant ist nicht die Hierarchie \mathbb{D} dass die internationalen
Unternehmen die
Demokratie ueberrannt haben \mathbb{D} , sondern diese Vertauschung. Ein
demokratischer
Mensch muesste eine gute Auswahl an Produkten treffen und die
richtigen Marken
kaufen. Dazu sind aber die richtigen Demokraten zu faul, es
funktioniert also
auch nicht richtig. Ich bin Kuenstlerin und keine Politikerin, und
das macht mich
froh. Fuer mich ist es keine Sackgasse, sondern eher eine Freude
und ein Anreiz zu
neuen Arbeiten."

Attack on Democrazy by Ubermorgen. Bulls and Bears on the electoral market

Über die Aktion "[V]ote-Auction"

lizvix

(Resumee von Michael Pfister unter Verwendung der Website **vote-auction.net**)

Im Sommer 2000 uebernahm die Netzkunstfirma ubermorgen ein Projekt, das im Rahmen der Diplomarbeit eines New Yorker Studenten entstanden war. "[V]ote-Auction" wurde von Ubermorgen internationalisiert, ausgebaut und mit einem auf die Zielgruppe zugeschnittenen Web-Design ausgestattet. Es handelt sich um ein Forum, das Demokratie und Kapitalismus einander naeher bringen will. Im Vorfeld der US-amerikanischen Praesidentschaftswahl 2000 wurden Waehler eingeladen, ihre Stimme zur Versteigerung freizugeben. Jeweils die angebotenen Stimmen eines ganzen Staates sollten dem Meistbietenden verkauft und der entsprechende Anteil am Erloes

den Stimmenverkaeufnern ausbezahlt werden. uebermorgen als
Betreiberin des Forums
war an diesen Transaktionen finanziell nicht beteiligt. Sie machten
geltend, dass
diese Methode fuer die Finanzierung von Kampagnen bedeutend
billiger sei als die
herkoemmlichen Spenden und Werbe-Aktionen. Die Geschichte des
Stimmenkaufs wird
auf www.vote-auction.net dokumentiert, beispielsweise mit der
bedeutenden
Alkoholspende des 1757 fuer einen Sitz im Virginia House of
Burgesses
kandidierenden George Washington an die 391 Waehler seines
Bezirktes. uebermorgen
macht geltend, dass das Auktionsforum "[V]ote-Auction" ein "neues
Paradigma" in
der Tradition des Stimmenkaufs in Demokratien darstellt. In
juristischer Hinsicht
wird darauf hingewiesen, dass das "Ausgeben von Geld zur
Beeinflussung von
Waehlern durch die Klausel ueber freie Meinungsaeusserung im First
Amendment der
amerikanischen Verfassung geschuetzt" werde. Neben dem Betreiben
der Website
lancierte uebermorgen einige breit gestreute Pressemitteilungen
inklusive
intensiver internationaler Nachbetreuung, die ein grosses Echo
ausloesten.
Insgesamt sollen 450 Millionen Medienkonsumenten von der Aktion
erfahren haben.
In den drei Monaten vor der Bush-Gore-Wahl gab uebermorgen 3-5
Radio- und
TV-Interviews und 10-20 Email und Telefoninterviews pro Tag. In den
USA kam es zu
zwanzig angedrohten und vier wirklich durchgefuehrten
Rechtsstreiten. Aufgrund
eines Richterspruchs in Illinois wurde die Domain der Website
zweimal gesperrt,
konnte aber unter leicht veraendertem Namen jeweils wieder D
rechtzeitig fuer die
Wahlen selbst D aufgeschaltet werden. uebermorgens Ziel ist es
stets, die
"weltweiten" Moeglichkeiten des Internet optimal zu nutzen. Eines
der beruehmtesten
"weltweiten" Medien, der Fernsehsender CNN, berichtete siebenmal
ueber

"**vote-auction**" und widmete dem Thema am 24. Oktober 2000 eine halbstuendige Folge der Justiz-Sendung "Burden of Proof" unter dem Titel "Bidding for Ballots: Democracy on the Block". Auf www.vote-auction.net findet sich ein Link zu einem vollstaendigen Transkript der von lizvlx an Bord der Arteplage Mobile du Jura samt Werbebloecken gezeigten, ueberaus paradoxen Sendung. Zwei Moderatoren, drei per Bildschirm zugeschaltete Gespraechspartner und fuenf Rechtsexperten im Studio eroerterten den Fall. Hans Bernhard von ubermorgen stand telefonisch Rede und Antwort. "Hans, warum in aller Welt glauben Sie, sich einfach so in die amerikanische Wahl einmischen zu duerfen?" wollte Moderatorin Greta van Susteren von ihm wissen. Seine Antwort: "Wir moechten ein Forum bieten, um einen perfekten Markt zu schaffen. Unser Slogan besagt, dass wir Kapitalismus und Demokratie zusammenbringen wollen. Wir sehen das als weltweite Aufgabe, und die US-Wahl ist nur ein Testfall." Die harsche Reaktion eines kalifornischen Staatsbeamten, der bekanntgab, in Kalifornien wuerde polizeilich gegen moegliche Stimmenverkaeuer ermittelt, wurde nach geraumer Zeit von einem Professor fuer Buergerrechte etwas relativiert, der zu bedenken gab, dass "**vote-auction**" eventuell eine Form von "Satire oder Strassentheater" sei und in diesem Fall vom First Amendment geschuetzt werde. Die Rechtsexperten zeigten sich allerdings nicht beschwichtigt: "Wenn es als Cartoon in einer Wochenendausgabe erscheinen wuerde, koennte man es als Spass verstehen. Gewissen Berichten zufolge sollen aber drei- bis viertausend Angebote zum Stimmenverkauf eingegangen sein."

Im Anschluss an die Video-Vorfuehrung berichtete lizvlx von den zweifelhaften Methoden, mit denen die US-Justiz gegen "[V]ote-Auction" vorging. Der Staat

Missouri etwa klagte nicht wegen Stimmenverkauf, sondern aus Konsumentenschutzgründen, wegen falscher Versprechungen und weil "[Vote-Auction] etwas verkaufe, was gar nicht verkauft werden koennte. Der Nachbarstaat klagte gerade wegen dieses Verkaufs. Das "legal spamming", das per Fax ueber uebermorgen hereinbrach, nahmen die KuenstlerInnen zum Anlass fuer eine neue Aktion namens "Injunction Generator", mit dem "einstweilige Verfuegungen" gegen Websites und Domains nach US-Recht erstellt und verschickt werden koennen. Dabei interessiert uebermorgen vor allem, welche Gruende angefuehrt werden, um eine Website zu schliessen, und in welchen Laendern es am besten funktioniert. uebermorgen selber denkt daran, in Zukunft von Kasachstan aus zu operieren, weil dort der Ansprechpartner fehle, um eine Website abschalten zu lassen. Die Motivation, "[Vote-Auction] zu machen, betonte lizvlx, sei nicht, "aufzuzeigen: ach, es ist so schlimm, alle werden gekauft, und die Demokratie ist in Gefahr. Amerika ist kein demokratisches Land, ich habe es nie so empfunden. Ich kenne auch nicht besonders viele demokratische Laender, insofern ist es kein grober Vorwurf. Was soll daran schlimm sein, wenn man Demokratie und Kapitalismus einander naeher bringt? Wir glauben doch an beides so sehr, also muss es noch viel besser sein, wenn beides zusammenkommt und die Heirat der beiden Goetter der aktuellen Welt. Ich glaube nicht, dass wir ein neues System brauchen, es geht eher um die Zerstoerung der alten Systeme. Die Faulheit, die es obsolet macht, ueber Demokratie zu diskutieren, ist die gleiche Faulheit, die es auch moeglich macht, dass man Wahlbeteiligungen hat, wo man sagen koennte: Machen wir es doch wieder wie die alten Griechen, und schliessen wir die Leute aktiv von der Wahl aus und nicht sozusagen passiv, weil sie selber nicht gehen. Ich habe insofern

eine sehr negative Einstellung gegenüber der Demokratie, als sie einfach nicht funktioniert. Ich wäre dafür, wenn man die Leute zwingen würde, wählen zu gehen. In Amerika gehen 25% der wahlfähigen Leute wählen, und dann wird der Typ Präsident, der nicht die Mehrheit der Stimmen bekommen hat. Da ist mir die Anarchie schon lieber, oder auch das nette kleine Beispiel der Monarchie [Anm.: Liechtenstein], weil wir da eine klare Ansage haben. Die einzige Demokratie, die ich schätze, ist die der kapitalistischen Märkte, weil es die einzige ist, wo man eine echte Öffentlichkeit hat, die eine Kontrolle ausübt & nicht nur alle vier Jahre, wenn gewählt wird, sondern ständig, indem das Produkt gekauft wird oder eben nicht. Insofern bringt es etwas, über Kapitalismus zu diskutieren, wenn man über Demokratie diskutiert. Diese beiden Dinge sind nämlich schon lange ausgewechselt worden, nicht etwa zusammengewachsen, sondern ineinander verkehrt. Interessant ist nicht die Hierarchie & dass die internationalen Unternehmen die Demokratie überrannt haben &, sondern diese Vertauschung. Ein demokratischer Mensch müsste eine gute Auswahl an Produkten treffen und die richtigen Marken kaufen. Dazu sind aber die richtigen Demokraten zu faul, es funktioniert also auch nicht richtig. Ich bin Künstlerin und keine Politikerin, und das macht mich froh. Für mich ist es keine Sackgasse, sondern eher eine Freude und ein Anreiz zu neuen Arbeiten."

INKE ARNS ODPRLA LETOŠNJI SEMINAR :: 10/10/2004

PREDAVANJE INKE ARNS NA SEMINARJU

Prvo javno predavanje v okviru seminarja sodobnih scenskih umetnosti bo 18. oktobra ob 18. uri v Cankarjevem domu, dvorana M3/4. Predavala bo Inke Arns, medijska teoreticarka in kustosinja iz Berlina. Naslov predavanja: Potrditev in/kot Odpor: O strategiji subverzivne potrditve v sodobnih medijskih aktivističnih umetnostih

Seminar sodobnih scenskih umetnosti letos poteka pod naslovom Strategije neprilagojenosti. Osredotočen bo na aktivistične, necivilne in neprilagojene prakse v sodobni umetnosti, ter na prepoznavanje podobnih pristopov v sodobnih scenskih umetnostih. Seminar bo s svojim predavanjem pričela Inke Arns, medijska teoretikarka in kustosinja iz Berlina. Spregovorila bo o novomedijskih in gledaliških projektih, ki uporabljajo strategije subverzivne potrditve, da bi s pomočjo njih razgrnili podobo svojega nasprotnika. Njeni primeri so projekti Deportation Class, Please love Austria!, Vote-auction. com in The Yes Men, ki so vsi prevzemali taktike odpora skozi navidezno potrditev in zavezništvo ter korporativno identiteto njihovih nasprotnikov. Če danes lahko opišemo dominantni politični in ekonomski sistem kot tistega, ki prevzema in prilagaja tudi sebi kritična stališča, potem se kritična distanca ne kaže več kot učinkovita strategija. V predavanju bo avtorica spregovorila o tem, kako so prav taktike subverzivne potrditve tiste, ki umetnikom vendarle ponujajo mesto v sodobnem socialnem, političnem in ekonomskem diskursu na način, da ga prevzemajo, prilagajajo in v njem sodelujejo, a ga obenem tudi spodnašajo.

O PREDAVATELJICI

Inke Arns je medijska teoretikarka in kustosinja iz Berlina. Je poznavalka slovenske sodobne umetnosti (med drugim je pripravila razstavo skupine Irwin in doktorirala na temo vzhodno evropskih avantgard), aktivistka in ena od vodilnih strokovnjakinj na področju medijskih umetnosti. Bila je med ustanovitelji mreže e Syndicate (1996-2001) mikro (Berlin 1998), Spectre (2001). Organizirala je številne razstave, med drugim: OStranenie (Dessau 1993), Minima Media: Medienbiennale Leipzig 1994, discord. sabotage of realities (Hamburg 1996/97), body of the message (Berlin 1998), Body and the East (Ljubljana 1998), Kinetographien (Berlin 2001), Social Technologies (Essen 2003), Irwin: Retroprincip 1983-2003 (Berlin, Hagen in Beograd 2003-2004), Public Library (Berlin 2004) and Where am I (and who are all these people)? (Peja, Kosovo 2004). Publikacije: Netzkulturen (Hamburg 2002), Neue Slowenische Kunst (Regensburg 2002) in Objects May Be Closer Than They Appear: The Avant-Garde in the Rear-View Mirror (2004/5). <http://www.v2.nl/~arns>.

Grandes momentos en la trayectoria de [@TMark](#)**[JOSE LUIS DE VICENTE](#) | BARCELONA**

Especial para EL MUNDO

En 1998, [@Tmark](#) fueron invitados por el prestigioso festival de nuevas artes [Ars Electronica](#) a formar parte del jurado de uno de sus premios. Cuando conocieron que el jurado en la categoría de animación por ordenador iba premiar a la compañía que había creado los efectos especiales de "Titanic", entraron en cólera. La película de James Cameron había sido filmada en un pequeño pueblo pesquero de México, Popotla. Un gigantesco muro construido por la productora del film había cerrado el acceso a la playa a los habitantes, y las filtraciones de agua procedentes del inmenso tanque en el que se simulaba el naufragio contaminaron los bancos de pesca. La respuesta de Popotla fue decorar aquel muro con basura; la de [@Tmark](#), ignorar los avanzados proyectos tecnológicos presentados al festival y conceder el premio al "mural" creado por el pueblo mejicano, que empleó la dotación económica para pavimentar sus calles.

**[Barbies con voz de legionario](#)**

Fue el primer gran éxito mediático del grupo, antes de que centrasen sus actuaciones en la Red. En 1993, utilizaron una donación de 8000 dólares realizada por un grupo de veteranos de guerra para financiar las actividades de la "Organización por la Liberación de Barbie", una misteriosa banda de activistas dedicados a denunciar las maneras en que la industria de los juguetes fomenta los estereotipos sexistas. La OLB compró cientos de Barbies y figuras de acción diseñadas para emitir palabras, intercambió sus chips de voz, y consiguió devolverlos a las tiendas. La incredulidad de los medios fue sólo comparable a la sorpresa de los niños al ver que sus aguerridos soldados decían cosas como "vámonos de compras", y sus femeninas muñecas insistían en que no quedara ni un solo enemigo vivo.

"¡Estoy enfermo!"

En todo el mundo, el primero de mayo es festivo para conmemorar la muerte de diez obreros americanos que perdieron sus vidas luchando por la jornada laboral de ocho horas. En todo el mundo, menos en Estados Unidos. Para denunciar el progresivo empeoramiento de las condiciones laborales y la manera en que las grandes compañías pisotean los derechos de sus empleados, ® Tmark se han empeñado en que el uno de mayo, todos los trabajadores estadounidenses telefonen a sus lugares de trabajo para comunicar que, desgraciadamente, ese día no podrán cumplir con sus obligaciones porque están enfermos. En el resto de países, el día "estoy enfermo" se celebra el dos de mayo.

La Guerra de los Juguetes

Aunque no les gusta que se les adjudiquen todos los méritos, ® Tmark desempeñaron un papel fundamental en la "guerra de los juguetes". En 1999, una compañía de venta de juguetes por Internet, [eToys](#), demandó al grupo artístico [eToy](#) porque consideraba que la confusión entre ambos nombres de dominio perjudicaba a su negocio; muchos padres se dirigían a esta dirección buscando juguetes, y lo que encontraban era "arte violento y pornográfico". Por supuesto, la compañía no mencionaba que eToy llegaron a Internet dos años antes que ellos, ni que la demanda era resultado de la frustración que les producía que el grupo de artistas suizos rechazase sus ofertas para comprarles el dominio. El 29 de Noviembre de 1999, un juez decretó que eToy no podían seguir usando su nombre. La comunidad artística de la Red, centralizada a través de la maquinaria de ® Tmark y de la web [Toywar](#),

emprendió una campaña para salvar a eToy, organizando "sentadas virtuales" que bloquearon los servidores de la multinacional. El 25 de enero de este año, eToys retiró su demanda, consciente de que no la ganarían. Perdieron cientos de millones en costes judiciales, y sus acciones se desplomaron en la bolsa.

El otro George Bush

En Abril de 1999, ®TMark lanzaron [GWBush.com](#). A primera vista, muchos creyeron que se trataba nada menos que de la web oficial del candidato republicano a la presidencia de los Estados Unidos. Una observación más detallada revelaba que era una réplica muy creíble de la [página auténtica de Bush](#), a la que se le habían realizado algunos cambios. Mientras que en la verdadera página oficial se puede encontrar el programa electoral del candidato, en la creada por ®TMark podemos hacernos con el famoso video doméstico grabado en una boda en la que el gobernador de Texas aparece con varias -demasiadas- copas de más. Bush ha emprendido medidas legales para cerrar el sitio, pero de momento sigue ahí, y se ha convertido en uno de los más exitosos casos de "avergonzamiento táctico" promovidos por ®Tmark. El nerviosismo de Bush al ser preguntado por la página le hizo decir esta frase ante una sala llena de periodistas: "la libertad de expresión debería tener límites".

Vende tu voto

Es la más reciente de sus acciones subversivas, y quizás sea la que mayor repercusión mediática ha obtenido en la historia de ®Tmark. Dado que la financiación de las campañas políticas por parte de las corporaciones supone un serio problema en todas las democracias, ®Tmark promueven en [Vote Auction](#) una solución idónea. En vez de pagar grandes cantidades a demócratas y republicanos, las multinacionales pueden influir en el resultado de las elecciones sencillamente dirigiéndose a esta página, donde los ciudadanos ponen públicamente sus votos a la venta, a disposición del mejor postor. El escándalo ha sido tal que la junta electoral americana ya se ha encargado de cerrar el sitio, aunque posteriormente ha renacido en un servidor austriaco. Nunca pretendió ser más que una broma que invitase a reflexionar sobre el siguiente problema: Si los políticos venden sus votos, ¿por qué no pueden hacerlo los ciudadanos?

La OMC de pega

Cuando en 1995 el tratado comercial del GATT decidió cambiar de nombre y convertirse en la Organización Mundial del Comercio, sus responsables cometieron un error imperdonable: no comprar los nombres de dominios de la organización antigua. ®Tmark. no podían pasar por alto esta torpeza, y a finales del año pasado, con ocasión de las protestas de Seattle, lanzaron Gatt.org, donde van a parar todos los incautos que siguen pensando que el Gatt y la OMC son la misma cosa. En este caso, detectar el engaño no es nada fácil: la estética de ambas páginas es idéntica, y la ironía empleada por ®Tmark lo suficientemente fina como para que muchos abogados y expertos en derecho mercantil se dirijan a esta página para invitar a Mike Moore, director de la OMC, a participar en foros y reuniones.

Great moments in the trajectory of [@TMark](#)

[JOSE LUIS DE VICENTE](#) | BARCELONA

Special for the WORLD

In 1998, @ Tmark was invited by the prestigious festival of new arts [Ars Electronica](#) to comprise of the jury of one of their prizes. When they knew that the jury in the category of animation by computer went to award to the company that had created the special effects of "Titanic", they entered rage. The film of James Cameron had been filmed in a small fishing town of Mexico, Popotla. A gigantic wall

constructed by the producer of the film had closed the access to the beach to the inhabitants, and the water filtrations coming from the immense tank in which the shipwreck was simulated contaminated the fishing banks. The answer of Popotla was to decorate that wall with sweepings; the one of @ Tmark, to ignore the advanced technological projects presented/displayed to the festival and to grant the prize to the "mural" created by the Mexican town, that used the economic dowry to pave its streets.

[Barbies with legionary voice](#)

It was the first great mediatic success of the group, before they centered his performances in the Network. In 1993, they used a donation of 8000 dollars made by a group of veterans military to finance the activities of the "Organization by the Liberation of Barbie", a mysterious band of dedicated activists to denounce the ways in which the industry of the toys foments the sexistas stereotypes. The OLB bought hundreds of Barbies and figurasde action designed to emit words, it interchanged its Chips of voice, and was able to give back them to the stores. The incredulity of means was only comparable to the surprise of the children when seeing that their seasoned soldiers said things as "vámonos of purchases", and their feminine wrists insisted on which it was not left nor a single enemy alive.

["I am ill"](#)

Anywhere in the world, first of May he is festive to commemorate the death of ten American workers who were killed their fighting by the labor day of eight hours. Anywhere in the world, less in the United States. In order to denounce the progressive worsening of the labor conditions and the way in which the great companies pisotean the rights of their employees, @ Tmark has insisted on which the one of May, all the American workers telephone to their places of work to communicate that, unfortunately, that day they will not be able perform one's duty because they are ill. In the rest of countries, the day "I am ill" is celebrated the two of May.

The War of the Toys

Although they do not like that all the merits are adjudged to them, ® Tmark played a fundamental role in the "war of the toys". In 1999, a company of sale of toys by Internet, eToys, demanded to the artistic group eToy because it considered that the confusion between both names of dominion harmed its business; many parents went to this direction looking for toys, and what they found it was "violent and pornographic art". Of course, the company did not mention that eToy arrived at Internet two years before they, nor who the demand was result of the frustration that produced to them that the group of Swiss artists rejected his supplies to buy the dominion to them. The 29 of November of 1999, a judge decreed that eToy could not continue using their name. The artistic community of the Network, centralized through the machinery of ® Tmark and the Web Toywar, launched a campaign to save to eToy, organizing "seated virtual" that blocked the servants of the

multinational. The 25 of January of this year, eToys retired its demand, conscious that they would not gain it. They lost hundreds of million in judicial costs, and their actions collapsed in stock-market.

Other George Bush

In April of 1999, ®TMark sent GWBush.com. At first sight,

many thought that nothing was less than the official Web of the republican candidate to the presidency of the United States. One more a detailed observation revealed that it was a very credible retort of the authentic page of Bush, to which had been made him some changes. Whereas in the true official page the program electoral of the candidate can be found, in the created one by ®Tmark we can do to us with the famous recorded domestic video in a wedding in which the governor of Texas appears with several - too many glasses of more. Bush has undertaken legal measures to close the site, but at the moment it follows there, and it has become one of the most successful cases of "tactical avergonzamiento" promoted by ®Tmark. The nervousness of Bush to the being asked for the page made say this phrase him before a full room of journalists: "the freedom of expression must have limits".

It sells your vote

He is most recent of its subversive activities, and perhaps she is the one that greater mediatic repercussion has obtained in the history of ®Tmark. Since the financing of the political campaigns on the part of the corporations supposes a serious problem in all the democracies, ®Tmark a suitable solution promotes in Votes Auction. Instead of paying to great amounts to democrats and republicans, the multinationals can influence simply in the result of the elections going to this page, where the citizens put publicly their votes on sale, to disposition of the best postor. The scandal has been so that the American electoral meeting already has been in charge to close the site, although later has appeared again in an Austrian servant. It never tried to be more than a joke than invited to reflect on the following problem: If the politicians sell their votes, why cannot make it the citizens?

The OMC of beats

When in 1995 the commercial treaty of the GATT decided to change of name and to become the World-wide Organization of Comercio, their people in charge committed an unforgivable error: not to buy the names of dominions of the old organization. ®Tmark. they could not ignore this stupidity, and at the end of the last year, with occasion of the protests of Seattle, they sent Gatt.org, where they are going to stop all the incautos that follow thought that the GATT and the OMC are the same thing. In this case, to detect the deceit is not far from easy: the aesthetic one of both pages is identical, and the irony used by ®Tmark the sufficiently fine thing like so that many lawyers and experts in

mercantile right they go to this page to invite to Mike Moore, director of the OMC, to participate in forums and meetings.

Grandes momentos en la trayectoria de [®TMark](#)

[JOSE LUIS DE VICENTE](#) | BARCELONA

Especial para EL MUNDO

En 1998, [® Tmark](#) fueron invitados por el prestigioso festival de nuevas artes [Ars Electronica](#) a formar parte del jurado de uno de sus premios. Cuando conocieron que el jurado en la categoría de animación por ordenador iba premiar a la compañía que había creado los efectos especiales de "Titanic", entraron en cólera. La película de James Cameron había sido filmada en un pequeño pueblo pesquero de México, Popotla. Un gigantesco muro construido por la productora del film había cerrado el acceso a la playa a los habitantes, y las filtraciones de agua procedentes del inmenso tanque en el que se simulaba el naufragio contaminaron los bancos de pesca. La respuesta de Popotla fue decorar aquel muro con basura; la de [® Tmark](#), ignorar los avanzados proyectos tecnológicos presentados al festival y conceder el premio al "mural" creado por el pueblo mejicano, que empleó la dotación económica para pavimentar sus calles.

[Barbies con voz de legionario](#)

Fue el primer gran éxito mediático del grupo, antes de que centrasen sus actuaciones en la Red. En 1993, utilizaron una donación de 8000 dólares realizada por un grupo de veteranos de guerra para financiar las actividades de la "Organización por la Liberación de Barbie", una misteriosa banda de activistas dedicados a denunciar las maneras en que la industria de los juguetes fomenta los estereotipos sexistas. La OLB compró cientos de Barbies y figuras de acción diseñadas para emitir palabras, intercambió sus chips de voz, y consiguió devolverlos a las tiendas. La incredulidad de los medios fue sólo comparable a la sorpresa de los niños al ver que sus aguerridos soldados decían cosas como "vámonos de

compras", y sus femeninas muñecas insistían en que no quedara ni un solo enemigo vivo.

"¡Estoy enfermo!"

En todo el mundo, el primero de mayo es festivo para conmemorar la muerte de diez obreros americanos que perdieron sus vidas luchando por la jornada laboral de ocho horas. En todo el mundo, menos en Estados Unidos. Para denunciar el progresivo empeoramiento de las condiciones laborales y la manera en que las grandes compañías pisotean los derechos de sus empleados, ® Tmark se han empeñado en que el uno de mayo, todos los trabajadores estadounidenses telefoneen a sus lugares de trabajo para comunicar que, desgraciadamente, ese día no podrán cumplir con sus obligaciones porque están enfermos. En el resto de países, el día "estoy enfermo" se celebra el dos de mayo.

La Guerra de los Juguetes

Aunque no les gusta que se les adjudiquen todos los méritos, ® Tmark desempeñaron un papel fundamental en la "guerra de los juguetes". En 1999, una compañía de venta de juguetes por Internet, [eToys](#), demandó al grupo artístico [eToy](#) porque consideraba que la confusión entre ambos nombres de dominio perjudicaba a su negocio; muchos padres se dirigían a esta dirección buscando juguetes, y lo que encontraban era "arte violento y pornográfico". Por supuesto, la compañía no mencionaba que eToy llegaron a Internet dos años antes que ellos, ni que la demanda era resultado de la frustración que les producía que el grupo de artistas suizos rechazase sus ofertas para comprarles el dominio. El 29 de Noviembre de 1999, un juez decretó que eToy no podían seguir usando su nombre. La comunidad artística de la Red, centralizada a través de la maquinaria de ® Tmark y de la web [Toywar](#),

emprendió una campaña para salvar a eToy, organizando "sentadas virtuales" que bloquearon los servidores de la multinacional. El 25 de enero de este año, eToys retiró su demanda, consciente de que no la ganarían. Perdieron cientos de millones en costes judiciales, y sus acciones se desplomaron en la bolsa.

El otro George Bush

En Abril de 1999, ®TMark lanzaron [GWBush.com](#). A

primera vista, muchos creyeron que se trataba nada menos que de la web oficial del candidato republicano a la presidencia de los Estados Unidos. Una observación más detallada revelaba que era una réplica muy creíble de la [página auténtica de Bush](#), a la que se le habían realizado algunos cambios. Mientras que en la verdadera página oficial se puede encontrar el programa electoral del candidato, en la creada por ®TMark podemos hacernos con el famoso video doméstico grabado en una boda en la que el gobernador de Texas aparece con varias -demasiadas- copas de más. Bush ha emprendido medidas legales para cerrar el sitio, pero de momento sigue ahí, y se ha convertido en uno de los más exitosos casos de "avergonzamiento táctico" promovidos por ®Tmark. El nerviosismo de Bush al ser preguntado por la página le hizo decir esta frase ante una sala llena de periodistas: "la libertad de expresión debería tener límites".

Vende tu voto

Es la más reciente de sus acciones subversivas, y quizás sea la que mayor repercusión mediática ha obtenido en la historia de ®Tmark. Dado que la financiación de las campañas políticas por parte de las corporaciones supone un serio problema en todas las democracias, ®Tmark promueven en [Vote Auction](#) una solución idónea. En vez de pagar grandes cantidades a demócratas y republicanos, las multinacionales pueden influir en el resultado de las elecciones sencillamente dirigiéndose a esta página, donde los ciudadanos ponen públicamente sus votos a la venta, a disposición del mejor postor. El escándalo ha sido tal que la junta electoral americana ya se ha encargado de cerrar el sitio,

aunque posteriormente ha renacido en un servidor austriaco. Nunca pretendió ser más que una broma que invitase a reflexionar sobre el siguiente problema: Si los políticos venden sus votos, ¿por qué no pueden hacerlo los ciudadanos?

[La OMC de pega](#)

Cuando en 1995 el tratado comercial del GATT decidió cambiar de nombre y convertirse en la [Organización Mundial del Comercio](#), sus responsables cometieron un error imperdonable: no comprar los nombres de dominios de la organización antigua. @Tmark. no podían pasar por alto esta torpeza, y a finales del año pasado, con ocasión de las protestas de Seattle, lanzaron [Gatt.org](#), donde van a parar todos los incautos que siguen pensando que el Gatt y la OMC son la misma cosa. En este caso, detectar el engaño no es nada fácil: la estética de ambas páginas es idéntica, y la ironía empleada por @Tmark lo suficientemente fina como para que muchos abogados y expertos en derecho mercantil se dirijan a esta página para invitar a Mike Moore, director de la OMC, a participar en foros y reuniones.

(((el portàtil ha sigut la manera que els homes portin bolso :))))))

Haeckcenter

L'habitació de les dones. Muntant ordinadors, posant memòria amb les llargues ungles pintades de negre. Primer any que hi ha una habitació especial i gran només per a dones. A la porta, cartells que recorden que els homes no hi són permesos. Fet que provoca que sigui constant l'afluència de tios que hi treuen el nas, els ulls ben oberts i la timidesa de sentir a la pell el que senten elles quan s'acosten als seus clans onlymen. Pocs entren. Pocs seuen a les conferències paralel.les -que no para lelas :) - els primers dies. Després, quan es vegi que les ties no toquen l'ordinador si no és en l'estricta intimitat, la sala de les hackwomen es va convertint en una espècie de centre de relacions socials, on els agosarats entren a parlar amb les amigues o a aprendre a fer massatges. Genials, els massatges, només a la mà que agafa el mouse i a les cervicals, per relaxar-les.

També hi haurà tallers de hard, GNU/Linux, Perl, PGP, MUDs...

Organitzat per una trentena de dones alemanyes, a través d'una llista de correu

Debat on drets amb representants of discogràfiques i two editorials is artistes that fan music i puts it in MP3 .

- Bàsicament is dedicate to anar against representant of indústria. L'audiència conclou that is not prunes to fer you leak, that indústria tea CAP oportunitat not to control-ho. Them companyies do not tenen fantasia, have to trobar camins intel.ligents, two tot is that ningú dels bàndols not troba solució.

- S'ha to d'afavorir els artistes, però you do not crash nor els to them diners to per them companyies

2001 Space Odissey . How no.

Reason for the congress of this year, the 17, was indeed the HAL image, under phrase EXPLICIT LYRICS. In the washbasins somebody hung amused posters of ZERO GRAVITY TOILET.

Also 1984

www.transmediale.de

www.lockpicking.org

A French, more than found out on infowar, requested to him to one of the faces of the organization if somebody of the group could go to Paris to give a lecture, within the framework of a seminary or thus. The German responded to him that he would not go to France because, nothing else to put the feet in that country, you behind have the secret investigation, that that was a last one, that for two years a member of the Chaos was stopped in France when he was going to give a lecture. That they do not go there. That hackers of France is darkest for that reason.

Haeckcenter

L'habitació de les dones. Muntant ordinadors, posant memòria amb les llargues uncles pintades de negre. Primer any que hi ha una habitació especial i gran només per a dones. A la porta, cartells que recorden que els homes no hi són permesos. Fet que provoca que sigui constant l'afluència de tios que hi treuen el nas, els ulls ben oberts i la timidesa de sentir a la pell el que senten elles quan s'acosten als seus clans onlymen. Pocs entren. Pocs seuen a les conferències paralel·les -que no para lelas :) - els primers dies. Després, quan es vegi que les ties no toquen l'ordinador si no és en l'estricta intimitat, la sala de les hackwomen es va convertint en una espècie de centre de relacions socials, on els agosarats entren a parlar amb les amigues o a aprendre a fer massatges. Genials, els massatges, només a la mà que agafa el mouse i a les cervicals, per relaxar-les.

També hi haurà tallers de hard, GNU/Linux, Perl, PGP, MUDs...

Organitzat per una trentena de dones alemanyes, a través d'una llista de correu

Lecturas de guerra

El lenguaje de los medios tácticos

De medios tácticos y conocimientos tácticos

Notas traidoras

Raúl Perrone: Una enunciación artesanal

NOTAS TRAI DORAS

Las 'notas de traducción', de los textos que se presentan en este numero, pueden servir como glosario para ubicar el contexto de los medios tacticos.

Por **Gustavo Crembil**

[1] Joane Richardson, nació en Bucharest, Rumania, y creció en New York. Teórica de los medios, organizadora free-lance y ex-filósofa. Trabaja entre Rumania, Hungría y Croacia con diversos centros de la región. Es co-organizadora, en Croacia, de ASU2 (Art Servers /Streamers /Spaces Unlimited) junto con Multimedia Institute y Reality Check for Cyber Utopia. Es editora del webzine SUBSOL y autora de diversos ensayos sobre nuevos medios, cultura y política. Este ensayo fue publicado por la revista (sobre medios tácticos) Balkon, y también distribuido por Nettime el 3 de julio, 2002.

[2] Tactical Media Crew es un colectivo autónomo, con base en Roma, que brinda acceso a Internet a diferentes grupos sociales (centros sociales autogestionados, radios del movimiento, grupos feministas, sindicatos, entre otros) que integran el 'movimiento antagonista'. Sostienen que gran parte del poder del capital está en la información, pero que su fragilidad es la misma información; y que cada día se descubren más 'puntos frágiles' dentro del capitalismo mediante las posibilidades que las nuevas tecnologías ofrecen para la circulación de ideas. Sitio-web >>> www.tmcrew.org

[2] Michel de Certeau (1925-1986) , teórico francés que, combinando psicoanálisis, mística, ciencias sociales y relatos de viajes, ha centrado su atención en lo cotidiano. Jesuita, viajero incansable, miembro de la Escuela Lacaniana de París, antropólogo, lingüista, profesor universitario, historiador, participante de la Reforma Universitaria francesa impulsada por Edgar Faure, gestor de grupos de investigación en Francia y en el exterior (valorizaba el trabajo colectivo). Entre su libros, aparte de la 'La invención de lo cotidiano' se encuentran 'La fábula mística', 'La escritura de la historia', 'La toma de la palabra

y otros escritos políticos', e 'Historia y psicoanálisis'.

[3] The Practice of Everyday Life (University of California Press, 1984) es la versión inglesa de 'La Invención de lo Cotidiano' (México, 1996) en cuyo Tomo I (Artes de hacer), De Certeau plantea la noción de 'uso táctico'.

[3] Adbusters es una red internacional de artistas, activistas, escritores, estudiantes, académicos y emprendedores que, preocupados por cómo las fuerzas comerciales erosionan el medio ambiente natural y cultural, buscan desarrollar un nuevo movimiento social para la era de la información. Mediante acciones de 'cultural jamming' [embotellamiento cultural] buscan modificar el modo en que la información circula, la manera en que las instituciones empuñan el poder, cómo se manejan las estaciones de TV, cómo establecen sus agendas las industrias de la alimentación, moda, deportes, música y cultura. Pero sobre todo, buscan cambiar el modo en que se construye sentido en la sociedad. Desde su base en Canadá editan una revista, (Adbusters Magazine), un sitio web, y controlan una agencia publicitaria propia (PowerShift) que articula sus campañas, como 'Buy Nothing Day (El Día del No Compre Nada), TV Turnoff Week (La Semana de la TV Apagada), Reclaiming Urban Space (Reclamando Espacio Urbano). Sitioweb >>> www.adbusters.org

[4] 0100101110101101 es un grupo de 'hack-art' con base en Bolonia que cuestiona 'la simulación mediática extendida en nuestra sociedad, la capacidad de la red para adaptarse al tradicional mercado del arte y el mito de la accesibilidad y la privacidad de la información'. Se hicieron conocidos en 1999 por 'robar' el primer museo de net-art, Hell.com (en donde se debía pagar una entrada), haciendo una versión espejo de acceso libre. El sitio web del grupo muestra sus tres áreas de interés: 'Simulación', en la que se presenta la página del inexistente artista serbio Danko Manver y una peculiar versión de la web del Vaticano; 'Duplicación' en la que se ofrece acceso a la galería de Art.Teleportacia, al sitio de JODI, el mencionado Hell.con, y versiones 'remixadas' de conocidos sitios de net-art; y por último 'Acceso' o 'life-sharing' (anagrama por filesharing) en donde permiten a los visitantes ingresar en la computadora del grupo para que copien lo que quieran. En el 2001 participaron de la Bienal de Venecia, pero dentro del pabellón de Eslovenia, diseminando un virus desarrollado junto con el grupo epidemiC, y en el Korean WebArt Festival donde hackearon el sitio del mismo festival alterando su información. Sitio web >> www.0100101110101101.org

[5] ®Tmark son un grupo de 'artistas' que proponen la acción directa como arte. Organizados como corporación para protegerse individualmente y, a la vez, demostrar la inimputabilidad de los que dirigen las grandes empresas, declaran que son 'una máquina de mejorar la cultura y la vida de sus accionistas (a menudo en detrimento de las opulencias)'. Apoyan 'la alteración informativa de productos corporativos, desde muñecas a instrumentos didácticos infantiles o videojuegos'. Han sustituido productos de las góndolas comerciales (soldados que

piden 'ir de compras' y Barbies que gritan 'mátenlos a todos'); y desarrollado una serie de sitios de apariencia 'oficial' como el de GWBush.com (mas creíble que la auténtico) y la de la oficina del Gatt de la OMC (que transfirieron a los Yes Men). Tuvieron un rol fundamental en la ToyWar (Guerra de los Juguetes) en defensa de Etoy. Recientemente han lanzado Vote-Auction, un sitio en donde los ciudadanos pueden subastar sus votos (Si los políticos venden sus votos, ¿por qué no pueden hacerlo los ciudadanos?). El sitio fue cerrado por la Junta Electoral americana, pero se volvió a abrir desde un servidor austríaco. Para más información se recomienda el [artículo](#) y [entrevista](#) aparecidos en el Diario El Mundo (España), o el propio sitio del grupo. Sitioweb >>> www.rtmark.com

[6] The Yes Men son una asociación informal mundial de impostores que usan cualquier medio necesario para poder ingresar dentro de las 'fortalezas' del comercio con el fin ofrecer al público una mirada tras las bambalinas del mundo de los negocios. En 1999 ®Tmark les transfirió el control de www.gatt.org (que a primera vista, el sitio 'oficial' de una de las ramas de la OMC) al cual llevan adelante con 'eficiencia y seriedad' hasta al punto de ser invitados en el 2000 a un seminario internacional cerrado sobre libre comercio en Austria. Concurren a este evento y brindan una 'honesto y franca' presentación de la OMC a la vez que instalan un cámara para poder grabar a todos los concurrentes y difundirlo posteriormente. Para más información ir a: theyesmen.org/ y theyesmen.org/wto/

[7] mainstream: término en inglés de difícil traducción. Refiere a la 'corriente principal' en relación a productos culturales masivos, oficiales, genéricos. Se contrapone a lo alternativo.

[8] Geert Lovink y David García, teóricos y activistas europeos de los nuevos medios. Geert Lovink, formado en ciencias políticas, fue uno de los fundadores de la pionera Digital City (Amsterdam) y coordinador del proyecto Hybrid WorkSpace de la Documenta X (1997, Kassel). En 1995 fundó con Pit Schultz, el círculo internacional Nettime, una lista de correo y una serie de eventos que buscan desarrollar una 'net-crítica'. David García, artista y escritor que definió en los '90 el concepto de 'medios tácticos'; muchas de sus obras involucran el desarrollo de 'clusters' de medios, como televisión, radio y streaming de redes informáticas, buscando amplificar las cualidades de la comunicación cara-a-cara y el debate público. Desde 1993, Lovink y García forman parte de la organización del festival The Next Five Minutes (N5M, ver nota más abajo). Su manifiesto el 'El ABC de los Medios Tácticos', ayudó a establecer la base para un nuevo tipo de prácticas críticas que se producían en la confluencia entre arte, comunicación y política. Se puede consultar una traducción en betatest.ubp.edu.ar .

[9] Indymedia es un vasto entramado independiente de medios 'globofóbicos'. Según sus propias palabras son 'una red de medios manejados colectivamente que busca crear relatos apasionados, precisos y radicales de la verdad' , que se organiza 'por el amor y la inspiración de gente que continúa trabajando para

hacer un mundo mejor, más allá de las distorsiones de los medios corporativos y su falta de voluntad para cubrir los esfuerzos por liberar la humanidad'. Hicieron su primera aparición durante los enfrentamientos en Seattle y su rápido crecimiento es consecuencia de un manejo experto e intuitivo de medios digitales (video, internet, etc.) por parte de sus reporteros/militantes. Sitio web >>> www.indymedia.org

[10] Letristas, grupo pos-surrealista fundado en 1945 por la rumana Jean-Isidore Isou como reacción al control autoritario de Andre Breton dentro del Surrealismo y al abandono de los orígenes conceptuales dadaístas por el misticismo. Proponían el reemplazo de la civilización occidental por un festival sin fin. Consideraban que el 'tipo', la letra, era la base del lenguaje visual. Isou, junto a Maurice Lemaître, creó una notación -el alfabeto sónico 'Lexique Des Lettres Nouvelles'- que tenía cerca de 130 sonidos que les permitía ejecutar sus poesías en performances junto con grupos vocales. El órgano de difusión letrista fue su revista 'Potlach' que se publicó desde 1954 hasta 1957, fecha en que los Letristas se integran a la Internacional Situacionista.

[11] La Internacional Situacionista [IS] se crea en 1957 como producto de la confluencia de la Internacional Letrista, la Bauhaus Imaginista, y el grupo COBRA, con el propósito de crear un arte total (arquitectura, cine, poesía, urbanismo, etc.) que superase el 'estancamiento' surrealista. Proponen 'la organización autónoma de los productores de la nueva cultura, independiente de las organizaciones políticas y sindicales que existen en este momento, porque les negamos la capacidad de organizar algo que no sea el acondicionamiento de lo existente'. Tendrían una activa participación en los sucesos previos al Mayo Francés. (1968).

[12] detournement (desviamiento): tergiversación situacionista del texto o la imagen. Según Ana María Guasch es 'una utilización conjunta de partes en la que los elementos tergiversados pierden su importancia y su significación inicial, constituyéndose en otro conjunto significativo que enriquece la suma de los tergiversados..'.

[13] Mark Dery, escritor y crítico cultural dedicado a culturas de borde, tecnología, medios de masa y arte. Ha escrito para The New York Times, Rolling Stone, Wired, Mondo 2000, Interview, The Village Voice, entre otros. Es autor de 'Culture Jamming' y de 'Escape Velocity: Cyberculture at the End of the Century' (publicado como 'Velocidad de escape. La cibercultura en el final del siglo', por Siruela, Madrid, 1998).

[14] Etoy, grupo de artistas suizos que realiza proyectos críticos en internet que cuestionan el poderío de las grandes corporaciones de la red. Fueron premiados en 1996 en Ars Electronica (Austria) por un proyecto de pirateo virtual que consistía en la generación de cientos 'páginas trampa' mediante agentes de

software que contenían las palabras claves más usadas y se inscribían automáticamente en los buscadores. En 1997 fueron obligados judicialmente a cerrar su sitio y a abandonar el nombre Etoy por una demanda de etoys.com, una juguetería virtual. Pero la protesta pública por esta demanda, obligó a parar la acción judicial a la compañía. Esta quebraría poco tiempo después a causa del colapso de la economía digital. Sitioweb >>>

[15] Critical Art Ensemble (CAE) es un grupo de cinco artistas y activistas (Steve Barnes, Dorian Burr, Steve Kurtz, Hope Kurtz y Beverly Schlee) fundado en 1987 que se dedica a explorar las intersecciones entre arte, tecnología política radical y teoría crítica. Han desarrollado el concepto de 'Desobediencia Civil Electrónica' y se concentran en Proyectos Tácticos, buscando incentivar el uso de los medios para 'crear intervenciones moleculares y shocks semióticos' para confrontar el autoritarismo. Recientemente han comenzado trabajar en Proyectos Bio-tecnológicos. Sus textos y libros ('The Electronic Disturbance', 'Electronic Civil Disobedience', 'Flesh Machine', 'Digital Resistance' y 'Molecular Invasion') representan una importante contribución crítica que argumenta el ataque contra el autoritarismo del orden social y la ideología del poder. Para más información se recomiendan las entrevistas aparecidas en Nettime, CAE interview I y CAE interview II (en inglés) en donde hablan sobre su trayectoria y sus métodos de trabajo. Sitio-web >> www.critical-art.net

[16] Brigadas Rojas, grupo extremista italiano surgido en 1969 que proponía la separación de Italia de la OTAN. Entre otras, el asesinato y el secuestro (Aldo Moro, ex-primer ministro y líder de la Democrazia Cristiana) es una de sus operaciones más conocidas. Recientemente se han atribuido el asesinato de Marco Biagi, asesor económico del Presidente Berlusconi. En 1984 se dividió en 2 facciones: el Partido Comunista Combativo (BR-PPC) y la Unión de Comunistas Combativos (BR-UCC). Se cree el N.A.P. (Nuclei Armati Proletari) y 'Prima Linea' son otros de sus desprendimientos.

[16] Weather Underground Organization (or The Weatherman), grupo extremista estadounidense surgido de la frustración estudiantil estadounidense por la guerra de Vietnam y el racismo endémico. Nacen en 1969 de una fractura dentro de los Students for a Democratic Society (SDS) y, tras algunos actos públicos, pasan a la clandestinidad con una serie de atentados incendiarios. Tras re-evaluar los 'errores militares' de un fallido atentado en New York en donde mueren algunos de sus miembros, el grupo se radicaliza aun más, organizándose en 'focos' de células únicamente femeninas, y cometen atentados contra el Capitolio y el Pentágono, entre otros. Tras la victoria vietnamita de 1975 la organización implosionó ante la imposibilidad de re definir su programa. Pese de su pequeño tamaño, el grupo ocupó el debate, y de algún modo, forzó la dirección de la New Left americana durante los 1970s.

[17] Carl von Clausewitz (1780 -1831) militar prusiano; fue uno de los más

importantes teóricos sobre estrategia militar. Su controvertida obra aun continúa siendo una de las más citadas y está presente dentro de las políticas nacionales. Para Clausewitz 'la guerra no es sólo un acto político, sino un instrumento político real, una continuación de la política comercial por otros medios...'

[18] Sun Tzu (o Sun Tzi), militar chino que vivió alrededor del Siglo V AC. Se le atribuye el tratado más antiguo que se conoce sobre el arte de la guerra. El núcleo de su filosofía se basa en dos principios: 1) Todo el Arte de la Guerra se basa en el engaño, y 2) El supremo Arte de la Guerra es someter al enemigo sin luchar. Sus ideas se extendieron por el resto de Asia hasta llegar a Japón en donde fueron rápidamente adoptadas y, posiblemente, ampliadas. La primera versión occidental es una breve traducción realizada por el jesuita J. J. M. Amiot y data del periodo anterior a la Revolución Francesa. En la actualidad su obra se ha filtrado dentro del lenguaje de los negocios, el deporte, la diplomacia e, inclusive, el comportamiento personal.

[19] 4th Next 5 Minutes Festival [N5M] es un importante festival sobre medios tácticos que se realiza en diversos sitios del mundo. Se origina en Amsterdam, donde aun tiene su base, y convoca experiencias de prácticas distintas pero superpuestas --el activismo social y cultural, las artes visuales, la experimentación radical con medios de comunicación electrónicos, y la teoría critica-- que se pueden reconocer bajo el patrón de los 'medios tácticos'. Del 12 al 14 de Septiembre de 2003 se realizará la 4ta edición (N5M4), cuyo programa y contenido han sido elaborados a través de una serie de Talleres de Medios Tácticos (TML: Tactical Media Labs) organizados localmente en las más diversas ciudades del mundo. Los informes, ensayos y otros materiales de estos encuentros pueden encontrarse en el sitio web de N5M. Sitio-web >>> www.n5m.org y www.n5m4.org

[20] TIC: sigla que se usa para designar a las 'tecnologías de la información y la comunicación'.

[21] Jean-Luc Godard (1930), director de cine francés, uno de los cineastas más influyentes de la segunda mitad del siglo XX. Tras ser crítico en la revista Cahiers du Cinema, se dedicará a al cine, atravesando no menos de 4 periodos artísticos diferentes: como parte de la 'Nouvelle Vague' (1959 a 1967, aun el más influyente), el 'revolucionario' (1968 a 1972, que incluye el trabajo como integrante del Grupo Dziga-Vertov), el 'videasta' (desde la formación de Sonimage con A.M. Mieville hasta 1978); y finalmente el 'contemplativo' (desde 1980) con el retorno al largometraje. Godard, dotado de un prodigioso sentido de la exploración, considera el lenguaje mismo del cine es el elemento esencial de la narrativa.

[21] 'Ici et Ailleurs' (55 minutos, 1977), película originalmente encargada por la OLP al Grupo Dziga Vertov, del que Godard formaba parte, con el propósito de

mostrar la vida en los campos palestinos. Fue realizada junto con Jean-Pierre Gorin en 1970. Cuando Godard volvió a editarlo con Anne-Marie Mieville, varios años después, tras la derrota palestina en la Guerra de los Seis Días, se convirtió en un 'ensayo', en una meditación sobre cómo el cine documenta la historia y construye sentido. Godard contrasta a una familia francesa (Aquí) con una Palestina (Allá) reflejada y transmitida a través de la televisión, libros y fotos. Esta obra marca el inicio de la etapa 'videasta radical' de Godard.

[22] McKenzie Wark, pionero australiano de la teoría de los nuevos medios. Ha publicado varios libros como autor ('Virtual Geography', 'The Virtual Republic' y 'Celebrities, Culture and Cyberspace') y compilador (Cultural Diversity in the Global Village; Flesh; Leftwright). Ha sido co-editor de Readme!, la antología de textos de la lista Nettime. Es profesor de Macquarie University (Australia), SUNY Binghamton (EEUU) y New York University. Uno de sus textos más conocidos, 'A Hacker Manifesto', se puede consultar (inglés) en: www.feelergauge.net

[23] Geer Lovink y David García. Ver nota [8]

[24] Nosotros versus Ellos. Wedom versus Theydom en el original: El dominio de nosotros vs. el dominio de ellos. Las noticias operan en el borde de "nuestra" comunidad -creando historias sobre "ellos".

[25] The Nation, diario progresista estadounidense, fundado en 1865, dedicado a noticias y análisis de la política y la cultura desde la perspectiva de la 'izquierda' estadounidense. Sitioweb >>>

[26] Alexandre Kluge (Halberstadt, 1932), cineasta alemán. Estudió Derecho, Historia y Música Sacra en la Universidad de Marburgo. En el Instituto de Investigaciones Sociales conoció a Adorno quien, a finales de los '50, lo pone en contacto con Fritz Lang. Inicia su carrera cinematográfica en 1960 y a mediados de los '80 comienza a producir programas culturales para la televisión. Para más información leer 'Papa Kino Its Tod (El cine de papá ha muerto)' de Ma. Eloísa Oliva en betatest.ubp.edu.ar.

[27] Gilles Deleuze (1925-1995), filósofo francés. A partir de una interpretación crítica de Spinoza y Nietzsche hace un profundo ataque a la racionalidad modernista. Como Foucault, Deleuze fue un crítico agudo de las teorías neo-Freudianas de Jacques Lacan. En colaboración con el psicoanalista Felix Guattari, publicó 'El Anti-Edipo: Capitalismo y Esquizofrenia' y 'Mil Mesetas', una crítica extensa de las estructuras políticas contemporáneas, y '¿Qué es Filosofía?'. Desarrolla sus propias teorías de significado e interpretación en sus libros 'Diferencia y Repetición' y 'La Lógica de los Sentidos'.

[28] Paul Virilio (1932), francés. Según la revista El Paseante: 'uno de los pensadores más sugerente y personales de nuestra época'. Arquitecto y

Urbanista, fue Director de la Ecole Speciale d'Architecture de París desde 1972 hasta 1975, en donde sigue enseñando. Autor de diversos libros, entre otros 'Bunker Archeologie', 'La inseguridad del Territorio', 'Velocidad y Política', 'La Estética de la Desaparición', 'La Política de la Percepción' y 'El Espacio Crítico', así como de varios libros sobre tecnología y teoría.

[29] Antonio Gramsci (1891-1937), filósofo social italiano. Desde sus 'Quaderni del carcere' (1929-1935 defendía una versión humanística de la filosofía política de Marx como alternativa al fascismo italiano. Como Corce, ha criticado los gobiernos autoritarios de la más diversa variedad y argumenta que las clases sociales son formadas tanto por sus patrones característicos de pensamiento como por sus circunstancias materiales.

[30] Herbert Schiller (1919-2000), estadounidense; especialista en comunicación y teórico de los medios. Educado como economista, contribuyó al debate público sobre el rol de los medios en la sociedad moderna. Fue uno de los primeros en advertir los problemas de la nueva economía digital, aun antes de su efímero suceso. En sus textos advierte sobre la privatización del espacio público y de las instituciones públicas, y sobre la dominación de las corporaciones estadounidenses de la vida cultural, particularmente en las naciones en desarrollo. Afirma que los medios de masa fracasan en su rol de proveer un foro democrático y que lo que hacen es vigilar los intereses corporativos al estar comprometidos con los centros económicos y políticos; esta situación se radicalizaría con la llegada de la era de la información.

[40] Stuart Hall, uno de los teóricos más importantes de los 'Estudios Culturales'. Hall usa el concepto de hegemonía --la aceptación voluntaria de un grupo social de la dominación y control de otro-- dentro un abordaje más complejo de estructura social desarrollada dentro de la tradición Gramsciana por teóricos como Laclau y Mouffe. Presenta a los individuos "simultáneamente como hacedores y consumidores de cultura, que participan en esa cultura de acuerdo a su lugar en la estructura política y económica." Desarrolla una teoría de la recepción, un abordaje al análisis textual que le permite a la audiencia cierta lectura "negociada" o "oposicional" del texto. En ella, la audiencia no acepta totalmente el significado textual que pretende el productor o editor, sino que negocia el significado del texto tomando algo de lo supuestamente embebido en él, pero también introduce algo de su propio significado dentro del texto. Según su background cultural, algunos aceptarán todo el mensaje de los medios, mientras otros lo rechazarán casi en su totalidad, prefiriendo una lectura oposicional del texto.

TREASONOUS NOTES

The ' notes of traduccion', of the texts that appear in this I number, can serve like glossary to locate the context of the average taticos.

By **Gustavo Crembil**

[1] **Joane Richardson** , was born in Bucharest, Rumania, and grew in New York. Theoretics of means, organizer free-sends and ex--filosofa. It works between Rumania, Hungary and the Croatia with diverse centers of the region. She is Co-organizer, in the Croatia, of ASU2 (Art Server/Streamers/Spaces Unlimited) along with Multimedia Institute and Reality for Check Cyber Utopia. She is publisher of webzine SUBSOL and author of diverse tests on new means, culture and policy. This test was published by the magazine (on tactical means) Balkon, and also distributed by Nettime the 3 of July, 2002.

[2] **Tactical Average Crew** is an independent group, with base in Rome, that offers access to Internet to different social groups (social centers self-managed, feministas radios of the movement, groups, unions, among others) that integrate the ' movement antagonista. They maintain that great part of the power of the capital is in the information, but that its fragility is the same information; and that every day is discovered more ' points fráigiles' within Capitalism by means of the possibilities that the new technologies offer for the circulation of ideas. Site-Web > > > www.tmcrew.org

[2] Michel de Certeau (1925-1986), French theoretician who, combining social psychoanalyses, mystic, sciences and stories of trips, has focused his attention on the daily thing. Jesuita, untiring traveller, member of the Lacaniana School of Paris, anthropologist, linguist, university professor, historian, participant of the French University Reformation impelled by Edgar Faure, manager of groups of investigation in France and the outside (it valorized the collective work). Between their books, aside from ' the invention of cotidianó are ' the fable mística, ' the writing of historiá, ' the taking of the word and other writings políticos', and '

History and psicoanálisis'.

[3] The Practice of Everyday Life (University of Californian Press, 1984) is the English version of ' the Invention of the Cotidianó (Mexico, 1996) in whose Volume I (Arts to do), Of Certeau tácticó raises the notion of ' use.

[3] Adbusters is an international network of artists, activists, writers, students, academic and enterprising whom, worried about how the commercial forces erode the natural and cultural medio.ambiente, they look for to develop a new social movement for the era of the information. By means of actions of ' cultural jamming' [embotellamiento cultural] looks for to modify the way in that the information circulates, the way in which the institutions grasp the power, how the TV stations are handled, how the industries of the feeding, fashion, sports, music and culture establish their agendas. But mainly, they look for to change the way in that sense in the society is constructed. From its base in Canada they publish a magazine, (Adbusters Magazine), a Web site, and control an own advertising agency (PowerShift) that articulates its campaigns, as ' Buy Nothing Day (the Day of Does not buy Anything), TV Turnoff Week (the Week of the Dull TV), Reclaiming Urban Space (Demanding Urban Space). Sitioweb > > > www.adbusters.org

[4] 0100101110101101 is a group of ' hack-art' with base in Bologna that questions ' the extended mediatic simulation in our society, the capacity of the network to adapt to the traditional market of the art and the myth of the accessibility and the privacy of información'. They became in 1999 by ' robar' well-known the first museum of net-art, Hell.com (in where an entrance was due to pay), making a version mirror of free access. The Web site of the group shows its three areas of interest: ' Simulación', in which the page of the nonexistent Serbian artist Danko Manver appears and a peculiar version of the Web of the Vatican; ' Duplicación' in which access is offered to the gallery of Art.Teleportacia, to the site of JODI, the mentioned Hell.com, and versions ' remixadas' of well-known sites of net-art; and finally ' Accesó or ' life-sharing' (anagram by filesharing) in where allows the visitors to enter the computer of the group so that they copy what they want. In the 2001 they participated in the Biennial of Venice, but within the pavilion of Slovenia, scattering a virus developed along with the group epidemiC, and in the Korean WebArt Festival where they hackearon the site of the same festival altering its information. Web site > > www.0100101110101101.org

[5] ®Tmark is a group of ' artistas' that proposes the direct action like art. Organized like corporation to protect itself individually and, simultaneously, to demonstrate to the inimputabilidad of which they direct the great companies, they declare that they are ' a machine to improve the culture and the life of its shareholders (often in damage of the opulencias) '. They support ' the informative corporative product alteration, from wrists to infantile didactic instruments or videojuegos'. Commercial products of gondo them have replaced

(welded that request ' to go of compras' and Barbies that shouts ' mátenlos to all '); and developed to a series of appearance sites ' oficial' like the one of GWBush.com (but credible that the authentic one) and the one of the office of the GATT of the OMC (that they transferred to the Yes Men). They had a fundamental roll in the ToyWar (War of the Toys) in defense of Etoy. Recently they have sent Vote-Auction , a site in where the citizens can auction their votes (If the politicians sell their votes, why the citizens cannot do it). The site was closed by the American Electoral Meeting, but it became to open from an Austrian servant. For more information it is recommended I [articulate](#) and [interviews](#) appeared in the Newspaper the World (Spain), or the own site of the group. Sitioweb > > > www.rtmart.com

[6] The Yes Men is world-wide an informal association of imposters who use any means necessary to be able to enter within ' fortalezas' of the commerce with the aim to offer to the public a glance after the borders of the world of the businesses. In 1999 @Tmark them transfirió the control of www.gatt.org (that at first sight, the site ' oficial' of one of the branches of the OMC) to which they take ahead with ' efficiency and seriedad' until a the point of being invited in the 2000 to a closed international seminary on free commerce in Austria. They concur to this event and they simultaneously offer ' honest and francá presentation of the OMC that installs a camera to be able to record all the contenders and to spread it later. More information to go a: theyesmen.org/ and theyesmen.org/wto/

[7] mainstream: term in English of difficult translation. It refers to the ' current principal' in relation to massive, official, generic products cultural. It is opposed to the alternative thing.

[8] Geert Lovink and David Garci'a, theoreticians and European activists of new means. Geert Lovink, formed in political sciences, was one of the founders of the Digital pioneer City (Amsterdam) and coordinator of the project Hybrid WorkSpace of Documenta X (1997, Kassel). On 1995 it founded with Pit Schultz, the international circle Nettime, a list of mail and a series of events that they look for to develop one ' net-crítica. David Garci'a, artist and writer whom it defined in the ' 90 ' the tactical ' means concept; many of their works involve the development of ' clusters' of means, like television, radio and streaming of computer science networks, looking for to amplify the qualities of the communication face-to-face and the public debate. From 1993, Lovink and the Garci'as comprise of the organization of the festival The Next Five Minutes (N5M, to see note more down). Its manifesto ' the ABC of the Tácticos' Means, helped to establish the base for a new type of practices critics that took place in the confluence between art, communication and policy. A translation in betatest.ubp.edu.ar can be consulted .

[9] Indymedia is a vast independent means framework ' globofóbicos'. According to his own words are ' network of means handled collectively that it

looks for to create enthusiastic stories, precise and radical of verdad', that organizes ' by the love and the inspiration of people that continue working to make a world better, beyond the distortions of corporative means and their lack of will to cover the efforts to release humanidad'. They did his first appearance during the confrontations in Seattle and its fast growth is consequence of an expert handling and intuitive of average digitalises (video, Internet, etc.) on the part of its reporteros/militantes. Web site > > > www.indymedia.org

[10] Letristas, pos-surrealista group founded on 1945 by the Rumanian Jean-Isidore Isou like reaction to the authoritarian control of Andre Breton within the Surrealismo and to the abandonment of the dadaístas conceptual origins by the misticismo. They proposed the replacement of the western civilization by an endless festival. They considered that ' tipó, the letter, was the base of the visual language. Isou, next to Maurice Lemaitre, created an annotation - the sonic alphabet ' Lexique DES Lettres Nouvelles ' - that it had near 130 sounds that allowed them to execute their poetries in performances along with vocal groups. The organ of letrista diffusion was its magazine ' Potlach' that was published from 1954 to 1957, date in which the Letristas is integrated to the Situacionista International.

[11] the Situacionista International [IS] is believed in 1957 like product of the confluence of the Letrista International, the Bauhaus Imaginista, and the group COBRA, in order to create a total art (architecture, cinema, poetry, urbanism, etc.) that it surpassed ' estancamientó surrealista. They propose ' the independent organization of the producers of the new culture, independent of the political and union organizations who exist at this moment, because we denied the capacity to them to organize something that is not the preparation of existenté. They would have one active participation in the previous events to French May. (1968).

[12] detournement (desviamiento): situacionista distortion of the text or the image. According to Ana Maria Guasch it is ' a joint use of parts in which the distorted elements lose their importance and its initial meaning, constituting itself in another significant set that the sum of the distorted ones enriches.'

[13] Mark Dery, writer and I criticize cultural dedicated to cultures of edge, technology, means of mass and art. It has written for The New York Times, Rolling Stone, Wired, Clean 2000, Interview, The Village Voice, among others. She is author of ' Culture Jamming' and ' Velocity Escape: Cyberculture AT the End of the Century' (published as ' Speed of escape. The cibercultura in the end of sigló, for Siruela, Madrid, 1998).

[14] Etoy, grupo de artistas suizos que realiza proyectos críticos en internet que cuestionan el poderío de las grandes corporaciones de la red. Fueron premiados en 1996 en Ars Electronica (Austria) por un proyecto de pirateo virtual que

consistía en la generación de cientos 'páginas trampa' mediante agentes de software que contenían las palabras claves más usadas y se inscribían automáticamente en los buscadores. En 1997 fueron obligados judicialmente a cerrar su sitio y a abandonar el nombre Etoy por una demanda de etoys.com, una juguetería virtual. Pero la protesta pública por esta demanda, obligó a parar la acción judicial a la compañía. Esta quebraría poco tiempo después a causa del colapso de la economía digital. Sitioweb >>>

[15] Critical Art Ensemble (CAE) es un grupo de cinco artistas y activistas (Steve Barnes, Dorian Burr, Steve Kurtz, Hope Kurtz y Beverly Schlee) fundado en 1987 que se dedica a explorar las intersecciones entre arte, tecnología política radical y teoría crítica. Han desarrollado el concepto de 'Desobediencia Civil Electrónica' y se concentran en Proyectos Tácticos, buscando incentivar el uso de los medios para 'crear intervenciones moleculares y shocks semióticos' para confrontar el autoritarismo. Recientemente han comenzado trabajar en Proyectos Bio-tecnológicos. Sus textos y libros ('The Electronic Disturbance', 'Electronic Civil Disobedience', 'Flesh Machine', 'Digital Resistance' y 'Molecular Invasion') representan una importante contribución crítica que argumenta el ataque contra el autoritarismo del orden social y la ideología del poder. [26] Alexandre Kluge (Halberstadt, 1932), cineasta alemán. Estudió Derecho, Historia y Música Sacra en la Universidad de Marburgo. En el Instituto de Investigaciones Sociales conoció a Adorno quien, a finales de los '50, lo pone en contacto con Fritz Lang. Inicia su carrera cinematográfica en 1960 y a mediados de los '80 comienza a producir programas culturales para la televisión. Para más información leer 'Papa Kino Its Tod (El cine de papá ha muerto)' de Ma. Eloísa Oliva en betatest.ubp.edu.ar.

[27] Gilles Deleuze (1925-1995), filósofo francés. A partir de una interpretación crítica de Spinoza y Nietzsche hace un profundo ataque a la racionalidad modernista. Como Foucault, Deleuze fue un crítico agudo de las teorías neo-Freudianas de Jacques Lacan. En colaboración con el psicoanalista Félix Guattari, publicó 'El Anti-Edipo: Capitalismo y Esquizofrenia' y 'Mil Mesetas', una crítica extensa de las estructuras políticas contemporáneas, y '¿Qué es Filosofía?'. Desarrolla sus propias teorías de significado e interpretación en sus libros 'Diferencia y Repetición' y 'La Lógica de los Sentidos'.

[28] Paul Virilio (1932), francés. Según la revista El Paseante: 'uno de los

pensadores más sugerente y personales de nuestra época'. Arquitecto y Urbanista, fue Director de la Ecole Speciale d'Architecture de París desde 1972 hasta 1975, en donde sigue enseñando. Autor de diversos libros, entre otros 'Bunker Archeologie', 'La inseguridad del Territorio', 'Velocidad y Política', 'La Estética de la Desaparición', 'La Política de la Percepción' y 'El Espacio Crítico', así como de varios libros sobre tecnología y teoría.

[29] Antonio Gramsci (1891-1937), filósofo social italiano. Desde sus 'Quaderni del carcere' (1929-1935 defendía una versión humanística de la filosofía política de Marx como alternativa al fascismo italiano. Como Corce, ha criticado los gobiernos autoritarios de la más diversa variedad y argumenta que las clases sociales son formadas tanto por sus patrones característicos de pensamiento como por sus circunstancias materiales.

[30] Herbert Schiller (1919-2000), estadounidense; especialista en comunicación y teórico de los medios. Educado como economista, contribuyó al debate público sobre el rol de los medios en la sociedad moderna. Fue uno de los primeros en advertir los problemas de la nueva economía digital, aun antes de su efímero suceso. En sus textos advierte sobre la privatización del espacio público y de las instituciones públicas, y sobre la dominación de las corporaciones estadounidenses de la vida cultural, particularmente en las naciones en desarrollo. Afirma que los medios de masa fracasan en su rol de proveer un foro democrático y que lo que hacen es vigilar los intereses corporativos al estar comprometidos con los centros económicos y políticos; esta situación se radicalizaría con la llegada de la era de la información.

[40] Stuart Hall, uno de los teóricos más importantes de los 'Estudios Culturales'. Hall usa el concepto de hegemonía --la aceptación voluntaria de un grupo social de la dominación y control de otro-- dentro un abordaje más complejo de estructura social desarrollada dentro de la tradición Gramsciana por teóricos como Laclau y Mouffe. Presenta a los individuos "simultáneamente como hacedores y consumidores de cultura, que participan en esa cultura de acuerdo a su lugar en la estructura política y económica." Desarrolla una teoría de la recepción, un abordaje al análisis textual que le permite a la audiencia cierta lectura "negociada" o "oposicional" del texto. En ella, la audiencia no acepta totalmente el significado textual que pretende el productor o editor, sino que negocia el significado del texto tomando algo de lo supuestamente embebido en él, pero también introduce algo de su propio significado dentro del texto. Según su background cultural, algunos aceptarán todo el mensaje de los medios, mientras otros lo rechazarán casi en su totalidad, prefiriendo una lectura oposicional del texto.

NOTAS TRAIADORAS

Las 'notas de traducción', de los textos que se presentan en este numero, pueden servir como glosario para ubicar el contexto de los medios tacticos.

Por **Gustavo Crembil**

[1] Joane Richardson, nació en Bucharest, Rumania, y creció en New York. Teórica de los medios, organizadora free-lance y ex-filósofa. Trabaja entre Rumania, Hungría y Croacia con diversos centros de la región. Es co-organizadora, en Croacia, de ASU2 (Art Servers /Streamers /Spaces Unlimited) junto con Multimedia Institute y Reality Check for Cyber Utopia. Es editora del webzine SUBSOL y autora de diversos ensayos sobre nuevos medios, cultura y política. Este ensayo fue publicado por la revista (sobre medios tácticos) Balkon, y también distribuido por Nettime el 3 de julio, 2002.

[2] **Tactical Media Crew** es un colectivo autónomo, con base en Roma, que brinda acceso a Internet a diferentes grupos sociales (centros sociales autogestionados, radios del movimiento, grupos feministas, sindicatos, entre otros) que integran el 'movimiento antagonista'. Sostienen que gran parte del poder del capital está en la información, pero que su fragilidad es la misma información; y que cada día se descubren más 'puntos frágiles' dentro del capitalismo mediante las posibilidades que las nuevas tecnologías ofrecen para la circulación de ideas. Sitio-web >>> www.tmcrew.org

[2] Michel de Certeau (1925-1986) , teórico francés que, combinando psicoanálisis, mística, ciencias sociales y relatos de viajes, ha centrado su atención en lo cotidiano. Jesuita, viajero incansable, miembro de la Escuela Lacaniana de París, antropólogo, lingüista, profesor universitario, historiador, participante de la Reforma Universitaria francesa impulsada por Edgar Faure, gestor de grupos de investigación en Francia y en el exterior (valorizaba el trabajo colectivo). Entre su libros, aparte de la 'La invención de lo cotidiano' se encuentran 'La fábula mística', 'La escritura de la historia', 'La toma de la palabra y otros escritos políticos', e 'Historia y psicoanálisis'.

[3] The Practice of Everyday Life (University of California Press, 1984) es la versión inglesa de 'La Invención de lo Cotidiano' (México, 1996) en cuyo Tomo I (Artes de hacer), De Certeau plantea la noción de 'uso táctico'.

[3] Adbusters es una red internacional de artistas, activistas, escritores, estudiantes, académicos y emprendedores que, preocupados por cómo las fuerzas comerciales erosionan el medio ambiente natural y cultural, buscan desarrollar un nuevo movimiento social para la era de la información. Mediante acciones de 'cultural jamming' [embotellamiento cultural] buscan modificar el modo en que la información circula, la manera en que las instituciones empuñan el poder, cómo se manejan las estaciones de TV, cómo establecen sus agendas las industrias de la alimentación, moda, deportes, música y cultura. Pero sobre todo, buscan cambiar el modo en que se construye sentido en la sociedad. Desde su base en Canadá editan una revista, (Adbusters Magazine), un sitio web, y controlan una agencia publicitaria propia (PowerShift) que articula sus campañas, como 'Buy Nothing Day (El Día del No Compre Nada), TV Turnoff Week (La Semana de la TV Apagada), Reclaiming Urban Space (Reclamando Espacio Urbano). Sitioweb >>> www.adbusters.org

[4] 0100101110101101 es un grupo de 'hack-art' con base en Bolonia que cuestiona 'la simulación mediática extendida en nuestra sociedad, la capacidad de la red para adaptarse al tradicional mercado del arte y el mito de la accesibilidad y la privacidad de la información'. Se hicieron conocidos en 1999 por 'robar' el primer museo de net-art, Hell.com (en donde se debía pagar una entrada), haciendo una versión espejo de acceso libre. El sitio web del grupo muestra sus tres áreas de interés: 'Simulación', en la que se presenta la página del inexistente

artista serbio Danko Manver y una peculiar versión de la web del Vaticano; 'Duplicación' en la que se ofrece acceso a la galería de Art.Teleportacia, al sitio de JODI, el mencionado Hell.con, y versiones 'remixadas' de conocidos sitios de net-art; y por último 'Acceso' o 'life-sharing' (anagrama por filesharing) en donde permiten a los visitantes ingresar en la computadora del grupo para que copien lo que quieran. En el 2001 participaron de la Bienal de Venecia, pero dentro del pabellón de Eslovenia, diseminando un virus desarrollado junto con el grupo epidemiC, y en el Korean WebArt Festival donde hackearon el sitio del mismo festival alterando su información. Sitio web >> www.0100101110101101.org

[5] ®Tmark son un grupo de 'artistas' que proponen la acción directa como arte. Organizados como corporación para protegerse individualmente y, a la vez, demostrar la inimputabilidad de los que dirigen las grandes empresas, declaran que son 'una máquina de mejorar la cultura y la vida de sus accionistas (a menudo en detrimento de las opulencias)'. Apoyan 'la alteración informativa de productos corporativos, desde muñecas a instrumentos didácticos infantiles o videojuegos'. Han sustituido productos de las góndolas comerciales (soldados que piden 'ir de compras' y Barbies que gritan 'mátenlos a todos'); y desarrollado una serie de sitios de apariencia 'oficial' como el de GWBush.com (mas creíble que la auténtico) y la de la oficina del Gatt de la OMC (que transfirieron a los Yes Men). Tuvieron un rol fundamental en la ToyWar (Guerra de los Juguetes) en defensa de Etoy. Recientemente han lanzado **Vote-Auction**, un sitio en donde los ciudadanos pueden subastar sus votos (Si los políticos venden sus votos, ¿por qué no pueden hacerlo los ciudadanos?). El sitio fue cerrado por la Junta Electoral americana, pero se volvió a abrir desde un servidor austríaco. Para más información se recomienda el [artículo](#) y [entrevista](#) aparecidos en el Diario El Mundo (España), o el propio sitio del grupo. Sitioweb >>> www.rtmark.com

[6] The Yes Men son una asociación informal mundial de impostores que usan cualquier medio necesario para poder ingresar dentro de las 'fortalezas' del comercio con el fin ofrecer al público una mirada tras las bambalinas del mundo de los negocios. En 1999 ®Tmark les transfirió el control de www.gatt.org (que a primera vista, el sitio 'oficial' de una de las ramas de la OMC) al cual llevan adelante con 'eficiencia y seriedad' hasta al punto de ser invitados en el 2000 a un seminario internacional cerrado sobre libre comercio en Austria. Concurren a este evento y brindan una 'honesto y franca' presentación de la OMC a la vez que instalan un cámara para poder grabar a todos los concurrentes y difundirlo posteriormente. Para más información ir a: theyesmen.org/ y theyesmen.org/wto/

[7] mainstream: término en inglés de difícil traducción. Refiere a la 'corriente principal' en relación a productos culturales masivos, oficiales, genéricos. Se contrapone a lo alternativo.

[8] Geert Lovink y David García, teóricos y activistas europeos de los nuevos medios. Geert Lovink, formado en ciencias políticas, fue uno de los fundadores de

la pionera Digital City (Amsterdam) y coordinador del proyecto Hybrid WorkSpace de la Documenta X (1997, Kassel). En 1995 fundó con Pit Schultz, el círculo internacional Nettime, una lista de correo y una serie de eventos que buscan desarrollar una 'net-crítica'. David García, artista y escritor que definió en los '90 el concepto de 'medios tácticos'; muchas de sus obras involucran el desarrollo de 'clusters' de medios, como televisión, radio y streaming de redes informáticas, buscando amplificar las cualidades de la comunicación cara-a-cara y el debate público. Desde 1993, Lovink y García forman parte de la organización del festival The Next Five Minutes (N5M, ver nota más abajo). Su manifiesto el 'El ABC de los Medios Tácticos', ayudó a establecer la base para un nuevo tipo de prácticas críticas que se producían en la confluencia entre arte, comunicación y política. Se puede consultar una traducción en betatest.ubp.edu.ar .

[9] Indymedia es un vasto entramado independiente de medios 'globofóbicos'. Según sus propias palabras son 'una red de medios manejados colectivamente que busca crear relatos apasionados, precisos y radicales de la verdad' , que se organiza 'por el amor y la inspiración de gente que continúa trabajando para hacer un mundo mejor, más allá de las distorsiones de los medios corporativos y su falta de voluntad para cubrir los esfuerzos por liberar la humanidad'. Hicieron su primera aparición durante los enfrentamientos en Seattle y su rápido crecimiento es consecuencia de un manejo experto e intuitivo de medios digitales (video, internet, etc.) por parte de sus reporteros/militantes. Sitio web >>> www.indymedia.org

[10] Letristas, grupo pos-surrealista fundado en 1945 por la rumana Jean-Isidore Isou como reacción al control autoritario de Andre Breton dentro del Surrealismo y al abandono de los orígenes conceptuales dadaístas por el misticismo. Proponían el reemplazo de la civilización occidental por un festival sin fin. Consideraban que el 'tipo', la letra, era la base del lenguaje visual. Isou, junto a Maurice Lemaître, creó una notación -el alfabeto sónico 'Lexique Des Lettres Nouvelles'- que tenía cerca de 130 sonidos que les permitía ejecutar sus poesías en performances junto con grupos vocales. El órgano de difusión letrista fue su revista 'Potlach' que se publicó desde 1954 hasta 1957, fecha en que los Letristas se integran a la Internacional Situacionista.

[11] La Internacional Situacionista [IS] se crea en 1957 como producto de la confluencia de la Internacional Letrista, la Bauhaus Imaginista, y el grupo COBRA, con el propósito de crear un arte total (arquitectura, cine, poesía, urbanismo, etc.) que superase el 'estancamiento' surrealista. Proponen 'la organización autónoma de los productores de la nueva cultura, independiente de las organizaciones políticas y sindicales que existen en este momento, porque les negamos la capacidad de organizar algo que no sea el acondicionamiento de lo existente'. Tendrían una activa participación en los sucesos previos al Mayo Francés. (1968).

[12] detournement (desviamiento): tergiversación situacionista del texto o la imagen. Según Ana María Guasch es 'una utilización conjunta de partes en la que los elementos tergiversados pierden su importancia y su significación inicial, constituyéndose en otro conjunto significativo que enriquece la suma de los tergiversados..'.

[13] Mark Dery, escritor y crítico cultural dedicado a culturas de borde, tecnología, medios de masa y arte. Ha escrito para The New York Times, Rolling Stone, Wired, Mondo 2000, Interview, The Village Voice, entre otros. Es autor de 'Culture Jamming' y de 'Escape Velocity: Cyberculture at the End of the Century' (publicado como 'Velocidad de escape. La cibercultura en el final del siglo', por Siruela, Madrid, 1998).

[14] Etoy, grupo de artistas suizos que realiza proyectos críticos en internet que cuestionan el poderío de las grandes corporaciones de la red. Fueron premiados en 1996 en Ars Electronica (Austria) por un proyecto de pirateo virtual que consistía en la generación de cientos 'páginas trampa' mediante agentes de software que contenían las palabras claves más usadas y se inscribían automáticamente en los buscadores. En 1997 fueron obligados judicialmente a cerrar su sitio y a abandonar el nombre Etoy por una demanda de etoys.com, una juguetería virtual. Pero la protesta pública por esta demanda, obligó a parar la acción judicial a la compañía. Esta quebraría poco tiempo después a causa del colapso de la economía digital. Sitioweb >>>

[15] Critical Art Ensemble (CAE) es un grupo de cinco artistas y activistas (Steve Barnes, Dorian Burr, Steve Kurtz, Hope Kurtz y Beverly Schlee) fundado en 1987 que se dedica a explorar las intersecciones entre arte, tecnología política radical y teoría crítica. Han desarrollado el concepto de 'Desobediencia Civil Electrónica' y se concentran en Proyectos Tácticos, buscando incentivar el uso de los medios para 'crear intervenciones moleculares y shocks semióticos' para confrontar el autoritarismo. Recientemente han comenzado trabajar en Proyectos Bio-tecnológicos. Sus textos y libros ('The Electronic Disturbance', 'Electronic Civil Disobedience', 'Flesh Machine', 'Digital Resistance' y 'Molecular Invasion') representan una importante contribución crítica que argumenta el ataque contra el autoritarismo del orden social y la ideología del poder. Para más información se recomiendan las entrevistas aparecidas en Nettime, CAE interview I y CAE interview II (en inglés) en donde hablan sobre su trayectoria y sus métodos de trabajo. Sitio-web >> www.critical-art.net

[16] Brigadas Rojas,. grupo extremista italiano surgido en 1969 que proponía la separación de Italia de la OTAN. Entre otras, el asesinato y el secuestro (Aldo Moro, ex-primer ministro y líder de la Democrazia Cristiana) es una de sus operaciones más conocidas. Recientemente se han atribuido el asesinato de Marco Biagi, asesor económico del Presidente Berlusconi. En 1984 se dividió en 2 facciones: el Partido Comunista Combativo (BR-PPC) y la Unión de Comunistas

Combativos (BR-UCC). Se cree el N.A.P. (Nuclei Armati Proletari) y 'Prima Linea' son otros de sus desprendimientos.

[16] Weather Underground Organization (or The Weatherman), grupo extremista estadounidense surgido de la frustración estudiantil estadounidense por la guerra de Vietnam y el racismo endémico. Nacen en 1969 de una fractura dentro de los Students for a Democratic Society (SDS) y, tras algunos actos públicos, pasan a la clandestinidad con una serie de atentados incendiarios. Tras re-evaluar los 'errores militares' de un fallido atentado en New York en donde mueren algunos de sus miembros, el grupo se radicaliza aun más, organizándose en 'focos' de células únicamente femeninas, y cometen atentados contra el Capitolio y el Pentágono, entre otros. Tras la victoria vietnamita de 1975 la organización implosionó ante la imposibilidad de re definir su programa. Pese de su pequeño tamaño, el grupo ocupó el debate, y de algún modo, forzó la dirección de la New Left americana durante los 1970s.

[17] Carl von Clausewitz (1780 -1831) militar prusiano; fue uno de los más importantes teóricos sobre estrategia militar. Su controvertida obra aun continúa siendo una de las más citadas y está presente dentro de las políticas nacionales. Para Clausewitz 'la guerra no es sólo un acto político, sino un instrumento político real, una continuación de la política comercial por otros medios...'.

[18] Sun Tzu (o Sun Tzi), militar chino que vivió alrededor del Siglo V AC. Se le atribuye el tratado más antiguo que se conoce sobre el arte de la guerra. El núcleo de su filosofía se basa en dos principios: 1) Todo el Arte de la Guerra se basa en el engaño, y 2) El supremo Arte de la Guerra es someter al enemigo sin luchar. Sus ideas se extendieron por el resto de Asia hasta llegar a Japón en donde fueron rápidamente adoptadas y, posiblemente, ampliadas. La primera versión occidental es una breve traducción realizada por el jesuita J. J. M. Amiot y data del periodo anterior a la Revolución Francesa. En la actualidad su obra se ha filtrado dentro del lenguaje de los negocios, el deporte, la diplomacia e, inclusive, el comportamiento personal.

[19] 4th Next 5 Minutes Festival [N5M] es un importante festival sobre medios tácticos que se realiza en diversos sitios del mundo. Se origina en Amsterdam, donde aun tiene su base, y convoca experiencias de prácticas distintas pero superpuestas --el activismo social y cultural, las artes visuales, la experimentación radical con medios de comunicación electrónicos, y la teoría crítica-- que se pueden reconocer bajo el patrón de los 'medios tácticos'. Del 12 al 14 de Septiembre de 2003 se realizará la 4ta edición (N5M4), cuyo programa y contenido han sido elaborados a través de una serie de Talleres de Medios Tácticos (TML: Tactical Media Labs) organizados localmente en las más diversas ciudades del mundo. Los informes, ensayos y otros materiales de estos encuentros pueden encontrarse en el sitio web de N5M. Sitio-web >>> www.n5m.org y www.n5m4.org

[20] TIC: sigla que se usa para designar a las 'tecnologías de la información y la comunicación'.

[21] Jean-Luc Godard (1930), director de cine francés, uno de los cineastas más influyentes de la segunda mitad del siglo XX. Tras ser crítico en la revista Cahiers du Cinema, se dedicará a al cine, atravesando no menos de 4 periodos artísticos diferentes: como parte de la 'Nouvelle Vague' (1959 a 1967, aun el más influyente), el 'revolucionario' (1968 a 1972, que incluye el trabajo como integrante del Grupo Dziga-Vertov), el 'videasta' (desde la formación de Sonimage con A.M. Mieville hasta 1978); y finalmente el 'contemplativo' (desde 1980) con el retorno al largometraje. Godard, dotado de un prodigioso sentido de la exploración, considera el lenguaje mismo del cine es el elemento esencial de la narrativa.

[21] 'Ici et Ailleurs' (55 minutos, 1977), película originalmente encargada por la OLP al Grupo Dziga Vertov, del que Godard formaba parte, con el propósito de mostrar la vida en los campos palestinos. Fue realizada junto con Jean-Pierre Gorin en 1970. Cuando Godard volvió a editarlo con Anne-Marie Mieville, varios años después, tras la derrota palestina en la Guerra de los Seis Días, se convirtió en un 'ensayo', en una meditación sobre cómo el cine documenta la historia y construye sentido. Godard contrasta a una familia francesa (Aquí) con una Palestina (Allá) reflejada y trasmitida a través de la televisión, libros y fotos. Esta obra marca el inicio de la etapa 'videasta radical' de Godard.

[22] McKenzie Wark, pionero australiano de la teoría de los nuevos medios. Ha publicado varios libros como autor ('Virtual Geography', 'The Virtual Republic' y 'Celebrities, Culture and Cyberspace') y compilador (Cultural Diversity in the Global Village; Flesh; Leftwright). Ha sido co-editor de Readme!, la antología de textos de la lista Nettime. Es profesor de Macquarie University (Australia), SUNY Binghamton (EEUU) y New York University. Uno de sus textos más conocidos, 'A Hacker Manifesto', se puede consultar (inglés) en: www.feelergauge.net

[23] Geer Lovink y David García. Ver nota [8]

[24] Nosotros versus Ellos. Wedom versus Theydom en el original: El dominio de nosotros vs. el dominio de ellos. Las noticias operan en el borde de "nuestra" comunidad -creando historias sobre "ellos".

[25] The Nation, diario progresista estadounidense, fundado en 1865, dedicado a noticias y análisis de la política y la cultura desde la perspectiva de la 'izquierda' estadounidense. Sitioweb >>>

[26] Alexandre Kluge (Halberstadt, 1932), cineasta alemán. Estudió Derecho, Historia y Música Sacra en la Universidad de Marburgo. En el Instituto de Investigaciones Sociales conoció a Adorno quien, a finales de los '50, lo pone en

contacto con Fritz Lang. Inicia su carrera cinematográfica en 1960 y a mediados de los '80 comienza a producir programas culturales para la televisión. Para más información leer 'Papa Kino Its Tod (El cine de papá ha muerto)' de Ma. Eloísa Oliva en betatest.ubp.edu.ar.

[27] Gilles Deleuze (1925-1995), filósofo francés. A partir de una interpretación crítica de Spinoza y Nietzsche hace un profundo ataque a la racionalidad modernista. Como Foucault, Deleuze fue un crítico agudo de las teorías neo-Freudianas de Jacques Lacan. En colaboración con el psicoanalista Felix Guattari, publicó 'El Anti-Edipo: Capitalismo y Esquizofrenia' y 'Mil Mesetas', una crítica extensa de las estructuras políticas contemporáneas, y '¿Qué es Filosofía?'. Desarrolla sus propias teorías de significado e interpretación en sus libros 'Diferencia y Repetición' y 'La Lógica de los Sentidos'.

[28] Paul Virilio (1932), francés. Según la revista El Paseante: 'uno de los pensadores más sugerente y personales de nuestra época'. Arquitecto y Urbanista, fue Director de la Ecole Speciale d'Architecture de París desde 1972 hasta 1975, en donde sigue enseñando. Autor de diversos libros, entre otros 'Bunker Archeologie', 'La inseguridad del Territorio', 'Velocidad y Política', 'La Estética de la Desaparición', 'La Política de la Percepción' y 'El Espacio Crítico', así como de varios libros sobre tecnología y teoría.

[29] Antonio Gramsci (1891-1937), filósofo social italiano. Desde sus 'Quaderni del carcere' (1929-1935 defendía una versión humanística de la filosofía política de Marx como alternativa al fascismo italiano. Como Corce, ha criticado los gobiernos autoritarios de la más diversa variedad y argumenta que las clases sociales son formadas tanto por sus patrones característicos de pensamiento como por sus circunstancias materiales.

[30] Herbert Schiller (1919-2000), estadounidense; especialista en comunicación y teórico de los medios. Educado como economista, contribuyó al debate público sobre el rol de los medios en la sociedad moderna. Fue uno de los primeros en advertir los problemas de la nueva economía digital, aun antes de su efímero suceso. En sus textos advierte sobre la privatización del espacio público y de las instituciones públicas, y sobre la dominación de las corporaciones estadounidenses de la vida cultural, particularmente en las naciones en desarrollo. Afirma que los medios de masa fracasan en su rol de proveer un foro democrático y que lo que hacen es vigilar los intereses corporativos al estar comprometidos con los centros económicos y políticos; esta situación se radicalizaría con la llegada de la era de la información.

[40] Stuart Hall, uno de los teóricos más importantes de los 'Estudios Culturales'. Hall usa el concepto de hegemonía --la aceptación voluntaria de un grupo social de la dominación y control de otro-- dentro un abordaje más complejo de estructura social desarrollada dentro de la tradición Gramsciana por

teóricos como Laclau y Mouffe. Presenta a los individuos "simultáneamente como hacedores y consumidores de cultura, que participan en esa cultura de acuerdo a su lugar en la estructura política y económica." Desarrolla una teoría de la recepción, un abordaje al análisis textual que le permite a la audiencia cierta lectura "negociada" o "oposicional" del texto. En ella, la audiencia no acepta totalmente el significado textual que pretende el productor o editor, sino que negocia el significado del texto tomando algo de lo supuestamente embebido en él, pero también introduce algo de su propio significado dentro del texto. Según su background cultural, algunos aceptarán todo el mensaje de los medios, mientras otros lo rechazarán casi en su totalidad, prefiriendo una lectura oposicional del texto.

Puerto Ricans' lawsuit seeks right to vote for president

By CNN Correspondent Maria Hinojosa

October 24, 2000

SAN JUAN, Puerto Rico (CNN) -- As an American citizen, Jose Lausel served in the U.S. Air Force. But as a resident of Puerto Rico, Lausel may have to sit out the presidential election.

"Anyplace in the world, I'm an American and I can vote," Lausel said. "But not here."

Puerto Ricans are U.S. citizens by birth, but have never been allowed to vote for president while living in the island territory. Lausel and several others are trying to change that, filing a lawsuit in federal court to get the names of Republican Texas Gov. George W. Bush and Democratic Vice President Al Gore on the November 7 ballot.

A federal judge in San Juan ruled in Lausel's favor, and Puerto Rico began printing up the ballots. Lausel and 10 other plaintiffs from the town of Aquadilla began putting up their posters.

But later, an appellate court in Boston ruled only residents of states can vote. Now, Lausel and the others are preparing for a Supreme Court battle to seek the right of Puerto Rico's three million voters to have a voice in the presidential election.

"The Supreme Court has established very clearly that the right to vote flows to the people because of citizenship," plaintiff's lawyer Gregorio Igartua said. "So we are citizens of the United States, and we are being discriminated (against)."

But in Puerto Rico, political confrontation can be

Mississippi flag initiative cleared for potential vote

October 24, 2000
Web posted at: 9:36 AM EDT (1336 GMT)

JACKSON, Miss. (AP) -- A judge ruled Monday that Mississippi voters should be allowed to decide whether the embattled state flag, which incorporates the Confederate battle banner, stays or goes.

The question could be on a statewide ballot in 2002, Hinds County Circuit Judge Swan Yerger said Monday.

Flag opponents, who say the Confederate banner is a racist symbol, were looking to Gov. Ronnie Musgrove's 17-member commission to propose alternative designs and called the ruling unfortunate.

"Gov. Musgrove has put into motion a process by which people can talk about this business of the flag without it becoming a simple thumbs up, thumbs down proposition," said Richard Howorth, a bookstore owner in Oxford who had challenged the initiative as unconstitutional.

Flag supporters said the judge's decision is a victory for the democratic process and Southern heritage.

"If you don't like the flag the way it is, or if you do like the flag, you'll get to vote on it," said Greg Stewart, an attorney and member of the Sons of Confederate Veterans, who sought to place the issue before voters.

The question he wants asked on the ballot: Should "the flag adopted in 1894 and used continuously thereafter be the official state flag."

Stewart and initiative backers still must get the signatures of about 90,000 registered voters to place the measure on the ballot.

Attorney General Mike Moore said gaining those signatures could be a major challenge for initiative supporters, saying "it's a pretty high mark."

The governor's commission still plans to recommend to the Legislature whether the flag should be changed. Its public hearings to gauge citizens' views on the flag began last week in Tupelo, where sentiment was overwhelmingly in favor of keeping the flag.

Other Southern states have also had flag controversies. There have been protests in Georgia over the Rebel flag's inclusion in that state's flag, and boycotts were held in South Carolina before leaders agreed to remove a Confederate flag from atop the Statehouse.

Mississippi flag initiative cleared for potential vote

October 24, 2000
Web posted at: 9:36 AM EDT (1336 GMT)

JACKSON, Miss. (AP) -- A judge ruled Monday that Mississippi voters should be allowed to decide whether the embattled state flag, which incorporates the Confederate battle banner, stays or goes.

The question could be on a statewide ballot in 2002, Hinds County Circuit Judge Swan Yerger said Monday.

Flag opponents, who say the Confederate banner is a racist symbol, were looking to Gov. Ronnie Musgrove's 17-member commission to propose alternative designs and called the ruling unfortunate.

"Gov. Musgrove has put into motion a process by which people can talk about this business of the flag without it becoming a simple thumbs up, thumbs down proposition," said Richard Howorth, a bookstore owner in Oxford who had challenged the initiative as unconstitutional

Flag supporters said the judge's decision is a victory for the democratic process and Southern heritage.

"If you don't like the flag the way it is, or if you do like the flag, you'll get to vote on it," said Greg Stewart, an attorney and member of the Sons of Confederate Veterans, who sought to place the issue before voters.

The question he wants asked on the ballot: Should "the flag adopted in 1894 and used continuously thereafter be the official state flag."

Stewart and initiative backers still must get the signatures of about 90,000 registered voters to place the measure on the ballot.

Attorney General Mike Moore said gaining those signatures could be a major challenge for initiative supporters, saying "it's a pretty high mark."

The governor's commission still plans to recommend to the Legislature whether the flag should be changed. Its public hearings to gauge citizens' views on the flag began last week in Tupelo, where sentiment was overwhelmingly in favor of keeping the flag.

Other Southern states have also had flag controversies. There have been protests in Georgia over the Rebel flag's inclusion in that state's flag, and boycotts were held in South Carolina before leaders agreed to remove a Confederate flag from atop the Statehouse.

David Vs. Goliath

Ziberartisten kolektiboak erraldoia mendean hartu zueneko

Iazko hasieran, Interneten bidez jostailuak saltzen dituen amerikar enpresa erraldoia (etoys.com) ohartu zen bazela etoy.com izeneko webgune bat. Berehala epaitegietara jo zuen Goliathetik, etoy.com horrek bere marka eskubideak urratzen zituelakoan.

Etoys-ek ez zuen kontutan hartu etoy.com ez zela bere lehiakidea, Suitzako artisten kolektibo ez komertziala baizik. Eta ez zuen kontutan hartu etoy.com-ek bere domeinua bi urte lehenagotik hartua zuela, artean eToys sortu gabe zegoelarik. Epaileek, momentuko, etoy.com-en webgunea ixtea agindu zuten.

Baina salaketa jaso eta ez zen David begira geratu, ez. Megakorporazioen aurkako jarrera garatuta zuten ordurako etoy.com-eko artista-aktibista hauek eta ekintzara pasatu ziren. Hasteko, New York-eko MOMAn prentsaurrekoa eman zuten euren kasua salatzeke. Beste leku batean behin behineko webgunea zabaltu zuten eta sarean eToys-en aurkako kanpaina jarri zuten abian. Bitartean, eToys hazi eta hazi ari zen, Amazon eta eBay-ren atzetik sare osoko hirugarren merkatalgunea izateraino.

Atzekimendu kanpaina abiatzearekin batera, eToys-en aurkakoari ekin zioten eta online jokoa asmatu zuten: jokalariek enpresa suntsitu behar zuten. Benetako helburua enpresa handiaren irudia kaltetuz, eToys-en akzioak jaitsi eragitea zen. Horretarako, enpresari buruzko informazioa biltzeari ekin zioten, arduradunen informazio pertsonala, enpresaren kontuen gainekoa, antzeko aferen artxiboa... Eta helburua lortu zuten, eToys denen aurrean zen bezala aurkeztuz.

Azkenik, eToys-ek erabaki zuen bere salaketa erretiratzea eta artistei hainbat kalteordain ordaintzea. Gatazka horretan Davidek irabazi zuen baina orohar sarea gero eta gehiago erraldoien eremu bilakatzen ari da.

A somewhat lame report from a pre-S11 show of some subversive art. My faves are Tom Sachs offering his audience a bowl of bullets as candy, Janice Kerbel's bank heist plan (knocking down the stereotype of the male archcriminal even as she makes off with the loot), the famous BLO voice-box switch, and Ubermorgen's vote auction website which reminded me of a BBC2 show I saw once where a guy waving a wad of 100's walked into DC lobbying firms asking "How much democracy can I buy for \$5000?".

REPORT FROM RIDGEFIELD
Outlaws in Art Land

Bad was good in a recent show at the Aldrich Museum of Contemporary Art in Connecticut, where a score of feisty artists tested the limits of the legally permissible.

BY SARAH VALDEZ

Like a clubhouse for miscreant youth, the Aldrich Museum of Contemporary Art—a white-paneled colonial house with rolling green lawns in Ridgefield, Conn.—was recently overrun by 22 contemporary artists who transgress rules and push boundaries with their work. "Art at the Edge of the Law," curated by the museum's assistant director, Richard Klein, featured mind-altering drugs, marketplace pranks and strategic appropriation among its many quasi-illicit treats. Local Ridgefield police and a lawyer were consulted to protect the museum from potential litigation. Cautionary security procedures were advised and undertaken. Signs warning parents to preview the exhibition before bringing in children were set out in the admissions area. The show was, in fact, a bit of a three-ring circus. But even so, superficial shock value was (mostly) avoided, while heavy-hitting issues like freedom of expression, individual autonomy and the relationship between imagination and reality were raised.

"If I were to curate a show, it would look a lot like this one," artist Tom Sachs told A.i.A. He contributed assemblage works incorporating homemade, functioning pistols and shotguns to "Art at the Edge." Sachs's dealer, Mary Boone, was arrested in 1999 on charges stemming from a show of similar work (which included two such guns, eventually confiscated by

police) and a publicity stunt that allowed gallery-goers to help themselves to 9mm cartridges set out like after-dinner mints in a bowl on the gallery's front desk [see A.i.A., Nov. '99]. According to Klein, the presence of such firearms in the Aldrich exhibition was legally permissible because "there's a gray area in Connecticut law. Guns that are historical, or being exhibited, are pretty much overlooked so long as the public can't get access to them. If you go to the Wadsworth Atheneum in Hartford, you'll see they have a big collection of Colt firearms. The Colt Company is there, you know."

Gregory Green contributed a two-part installation. In the attic, he set up a low-powered pirate television station (replete with dirty laundry and coffee cups littering the floor) to broadcast news coverage, on a 13-minute loop, of the fracas caused by his 1995 installation, 10,000 Doses, at Feigen Gallery in Chicago. When first shown, the work comprised 12 antique apothecary bottles filled with yellow liquid and a recipe for LSD. Provoked, Chicago police seized Green's bottles and tested the substance; when results came back identifying the liquid as acid, they arrested gallery director Lance Kinz. With mounting pressure due to media attention, a second test was performed. The liquid turned out to be distilled morning glory seeds, which contain traces of lysergic acid. The police said they'd made a mistake and Kinz was released.

The second component of Green's Aldrich piece was a re-creation of the installation (with two of the bottles "damaged," i.e., opened by authorities), accompanied by documents pertaining to the seizure and arrest.

A television was added to the installation to receive the programming from upstairs. As a way of transmitting information, Green's illegal broadcast (unsanctioned by the FCC) was a bit more complicated than, say, just using a VCR. But exerting effort impractically was one of this show's most prevalent art-making practices. Intentionally unproductive labor can come off as meditative, anti-capitalist or anti-elitist. In this instance, however, it mostly has to do with invading "private" public space (the air-waves) and daring the authorities to do something about it. To date, however, the range of Green's several pirate broadcast setups has been too limited to attract regulatory ire.

British artist Janice Kerbel showed *Bank Job*, a project a bit more likely to make law enforcement itch. For two years, she carefully researched everything required to rob a private investment institution in London's financial district, photographing the bank and its environs, taking notes, studying floor plans and otherwise casing the place. She stopped just short of the actual heist. Kerbel's documents have serious criminal potential, but in and of themselves are "just" art.

Jeffrey Hatfield, presently enrolled in Hunter College's MFA program, heightened the exhibition's unruly vibe by presenting a large, functioning moonshine still. Its network of copper pipes connected to heating and cooling tanks; water trickled down a trio of brightly colored baby pools on shelves, suggesting a crude yet gleeful fountain. The contraption yielded actual white lightning of around 100 proof, which Hatfield packaged in antique glass bottles and sold-embedded in law books-as limited-edition,

souvenir art works.

"In Connecticut, it's legal to make beer and wine," Klein explained, "but you're not really supposed to make distilled spirits. And technically, you need a liquor permit to sell liquor to the public. But if you wanted to go and get drunk, you probably wouldn't buy Hatfield's sauce. It's \$400 for one bottle." As if winking approval for Hatfield's delightful machine, a few of Fred Tomaselli's pill "paintings" hung near-by-happy, hippie-style designs made out of an assortment of multicolored pharmaceuticals set in shiny black polyester resin.

Elaborating on his curatorial strategy for the show, Klein commented, "The public seems primarily concerned with nudity." Richard Prince furnished the only example of such. His *Untitled (Publicity)*, 2000, features appropriated, autographed photographs of a demure, blonde, bare-breasted Playboy playmate from 1969. As nakedness goes, the piece is a fairly tame, unobjectionable example.

"Art is business, business is war, war is advertising and advertising is art," begins San Francisco-based punk band Negativland's 270-page tome, *Fair Use: The Story of the Letter U and the Numeral 2*. They wrote the book following an intellectual property battle with Island Records over their single "U2/Negativland," which samples music from and appropriates the name of the megaband U2. In an unpublished interview for the cyberpunk magazine *Mondo2000* arranged by editor R.U. Sirius, Negativland band member Don Joyce explained to U2 band member The Edge, "The idea that [someone else's work] could become part of your own work is perfectly appropriate, and

is, in fact, necessary self-defense against the coercion that media has become."

[1]

The Edge agreed, responding "yeah? But Island sued anyway, and in an out-of-court settlement eventually recouped the legal costs incurred attacking the small-fry West Coast musicians. At the Aldrich, a Negativland album cover with "U2" writ large across its pale pink front was shown. Wall text told the tale.

The art collective known as the Barbie Liberation Organization (BLO) enacted Operation Newspeak in 1993-94, invading toy stores across the nation to subvert gender stereotypes. The group bought hundreds of Teen Talk Barbies (who are wont to make such observations as "Math is hard!") and GI Joes (programmed to utter "Dead men tell no lies."), took them to their headquarters, switched their voiceboxes and "shopgifted" them back into stores to be repurchased by unsuspecting consumers. BLO Nightly News, a fuzzy video of the covert transplanting project, was screened in the museum.

J.S.G. Boggs's art also makes its presence felt in the consumer realm [see A.i.A., Jan. '88]. Today, the artist's intricate drawings of currency are less faithful than his earlier works and may include such alterations as a portrait of Harriet Tubman, the denomination of "FUN" instead of "ONE," or having the note signed by the "Secretary of the Measury." Rather than selling his work, the artist spends his "Boggs Bills" on real-world items and services. Sometimes art collectors follow in Boggs's footsteps, purchasing the "cash" from those who accepted it from the artist as legitimate tender. The ongoing art project has gotten Boggs arrested in

Australia and England; his studio has also been raided by the U.S. Secret Service, which confiscated some of his work. On a more macro scale, Mark Lombardi's flowchart-style diagrams of various, nefarious associations and occurrences—such as Bill Clinton, The Lippo Group and Jackson Stephens of Little Rock, Arkansas (5th Version)—span the globe with alarmingly few degrees of separation.

Chicago-based artists Michael Hernandez de Luna and Michael Thompson design faux postage stamps with a range of illustrations too nervy and stylish—cockroaches, condoms and pinup girls—to have been commissioned by the U.S. government. One Thompson-designed example, bearing the image of a pistol, reads "Kill All Artists," referring to a 1994 manifesto written by a cultural organization known as "The New York City Militia":

If art were illegal and punishable by death, only those willing to risk their lives for their work would prevail. . . . The spirit of originality or the right to dream have [sic] been quashed and replaced by the remixing and rehashing of the styles of yesterday in a failing attempt to recreate an originality that was never there to begin with. In the midst of it all, there lie we. Our role, friends, in order to create once again is to: KILL ALL ARTISTS! [2]

Hernandez de Luna and Thompson mailed letters to themselves, to friends and to their gallery with their stamps—sometimes successfully, so that postal workers' complicity in the prank can be inferred. An ill-gotten postmark is a trophy, a sign of life garnered from the systematized void of the postal system. At the Aldrich, sheets of stamps (minus the ones

used) were displayed in frames, next to envelopes that successfully made their way back home.

An Austrian "art company" called Ubermorgen gave people the "chance to take part in the U.S. election industry" during the last U.S. presidential election. Their [V]ote-auction.com was a Web site that hypothetically facilitated the purchase and sale of votes. The domain was shut down by InterNIC, the main American company that stores service records for .com/.net/.org names. In the museum, the project took the form of a bunch of legal papers and a video of CNN's Burden of Proof on which the Web site was discussed. Esthetically speaking, there wasn't much to look at here. But that the artists took a democratic election as a potential medium to manipulate overtly is, one must admit, intriguing. It's a little more high-concept than, say, oil on canvas.

Michael Oatman's entire existence appears to be but the sum of senseless transgressions as he serially confesses his paltry, generally unremarkable sins in a nearly two-hour-long video. The piece is surprisingly stirring, given the low-energy, self-centered nature of his idea. His sequence of drol-ly admitted violations, interspersed with flickering mug shots of various 19th-century criminals, has the capacity to plunge a viewer into a certain existential angst.

Steven Turlentes has traveled the country and often trespassed to make his black-and-white night-time photographs of prisons that carry out the death penalty. As an art project, the series is admittedly a one-liner, but

chilling nonetheless. The documentary photographs are technically very good but mostly function as the optical equivalent of a high-pitched drone: overwhelming yet oddly silent, the irreversible starkness of death drowning out the relative insignificance of everything else.

A lock of Charles Manson's hair, toilet paper from Gianni Versace's bathroom and a piece of a restraint strap from "Old Sparky," a Tennessee electric chair used in 125 executions, are among the talismanic objects amassed by Barton Lidice Benes for his miniature curio cabinet called FOUL Play (2000). One wonders whether these objects are what Benes labeled them as, and even if one is bored by supposedly shocking items like a kit for shooting up heroin and a facecloth taken from Robert Downey, Jr's Palm Springs hotel room the night before he was arrested for drug possession, the matter of collecting things based on aura as a way to express meaning (or lack thereof) is fascinating. Benes also showed a piece incorporating a syringe full of his own HIV-positive blood, At the Aldrich, visitors tended to fall silent, standing before the object in a swirl of horror, grief, embarrassment and veneration.

In 1982, Benes and his partner, Howard Meyer, obtained a bunch of finely shredded money from the Federal Reserve Board. The couple searched through the heap of scraps to reassemble three whole one-dollar bills, which are shown pressed in Plexiglas, atop a couple of large, hay-bale-sized blocks of shredded cash. It's a soulful thing, evidencing the duo's stubborn, patient, life-affirming act of uselessness. Particularly given the couple's affliction with a deadly virus, their gesture points to the crassness of any

moment in which money is prioritized over life.

"Art at the Edge of the Law" is of the variety of cultural undertaking that may seem inappropriate in the post-September 11 cultural climate. It might not, for instance, seem particularly interesting at present to have a gun in a museum, or to taunt law enforcement with conceptual high jinks. Irony has been proclaimed "over," patriotism is back, and many people appear willing to trade in civil liberties for an illusion of security. But before resigning ourselves to this new, depressed, frightened point of view, it's worth pausing to recognize the hope inherent in playful, spirited rebellion. The idealistic message underlying most of the work in "Art at the Edge" couldn't be more serious or poignant right now: life isn't worth much without liberty.

1. Interview mediated by R.U. Sirius, September 1992, published at <http://www.12g.to/negativland/u2/the-edge-interview.html>.
2. <http://207.69.247.167/letters/manifesto.html>.

"Art at the Edge of the Law" appeared at the Aldrich Museum of Contemporary Art in Hartford, Conn. [June 3- Sept. 9].

"Art at the Edge of the Law" is of the variety of cultural undertaking that may seem inappropriate in the post-September 11 cultural climate. It might not, for instance, seem particularly interesting at present to have a gun in a museum, or to taunt law enforcement with conceptual high jinks. Irony has been proclaimed "over," patriotism is back, and many people appear willing to trade in civil liberties for an illusion of security. But before resigning ourselves to this new, depressed, frightened point of view, it's worth pausing to recognize the hope inherent in playful, spirited rebellion. The idealistic message underlying most of the work in "Art at the Edge" couldn't be more serious or poignant right now: life isn't worth much without liberty.

1. Interview mediated by R.U. Sirius, September 1992, published at <http://www.12g.to/negativland/u2/the-edge-interview.html>.
2. <http://207.69.247.167/letters/manifesto.html>.

"Art at the Edge of the Law" appeared at the Aldrich Museum of Contemporary Art in Hartford, Conn. [June 3- Sept. 9].

WORLDWIDE PRESCRIPTIVE JURISDICTION IN INTERNET CONTENT CONTROVERSIES: A COMPARATIVE ANALYSIS*

YULIA A. TIMOFEEVA

1 INTRODUCTION

The global medium of the Internet offers global challenges. “While some of the conflicts now arising in cyberspace bear a familiar aspect, such as those arising in the course of electronic commerce, and require little more than mere technical adjustment of rules or methods applicable in analogous real-world situations, a growing number of conflicts involve clashing fundamental public values in the international arena.”¹ This is particularly true for Internet content regulation.

In respect of the Internet activities there are multiple overlapping conflicting jurisdictions² and the discussion is heated on how far the state can go in exercising its authority over authors of online material. On the one hand, it is asserted that “under the objective territorial principle, a court cannot assert extraterritorial jurisdiction over a foreign national simply on the basis that the foreign national's website contains images or data that violate the forum state's laws and that are accessible to users within the forum state;”³ on the other hand it has already happened, supported by the arguments that “it seems clear that customary international law, . . . permits a nation to apply its law to extraterritorial behavior with substantial local effects.”⁴

* *Forthcoming: Connecticut Journal of International Law, Volume 20 (Fall 2004)*

⁴ Jack L. Goldsmith, *Against Cyberanarchy*, 65 U. CHI. L. REV. 1199, 1208 (1998).

Interestingly, exactly Western states provided first examples on subjecting to their laws users from foreign jurisdictions. The first case was initiated by Germany that prosecuted Toben, an Australian national, on his short trip to Germany for Holocaust denial online.⁵ The example was followed by France,⁶ Italy,⁷ Canada⁸ and Australia that went even further and delivered defamation judgment when the respondent was not even present in the country except on the Internet.⁹ At the same time this approach was not unquestionably followed everywhere. For example, in the online defamation controversy similar to the Australian one, the US court refused to hear the case for lack of jurisdiction.¹⁰

As Cassese noticed, “international law is a realistic legal system. It takes account of existing power relationships and endeavors to translate them into legal rules.”¹¹ No doubt, the argument of Goldsmith that “there is nothing extraordinary or illegitimate about unilateral regulation of transnational activity that affects activity and regulation in other countries”¹² is absolutely true but another question is whether the Internet jurisdiction should develop to sustain the pervasive version of it, especially in speech-related controversies.

This article examines the cases that appeared on the international arena in the area of Internet content regulation paying attention to the current legal debate and to emerging rules, and offers suggestion on the possible limits of extraterritorial jurisdiction in Internet content cases – it demonstrates the necessity for the states to accept the role of the Internet as a borderless medium and to keep their judicial activities within reasonable limits. The article argues for limitation of the effects principle when applied to Internet content controversies and claims that wide application of the territorial and active nationality principles of jurisdiction provides adequate and sufficient means to deal with objectionable Internet content. The discussion is not deliberately limited to particular

states but the US and Germany are in the focus of the comparative analysis as representatives of two different legal systems.

2 APPLICATION OF TRADITIONAL PRINCIPLES

“International law sets little or no limit on the jurisdiction which a peculiar state may arrogate to itself;”¹³ however, several established principles are more or less recognized by all. The Internet, the borderless medium, challenges traditional views and calls for the necessity to revisit and reinterpret the doctrines, first of all because of the geographically unlimited effects of Internet activities. No doubt, “a similar phenomenon occurs in many domestic and international conflicts contexts”¹⁴ but one can hardly disagree that the Internet raised it to the qualitatively new level.

In spite of many claims at the beginning of the Internet wide usage that cyberspace avoids traditional regulation methods,¹⁵ many states were reluctant to make “an exception of the Internet” in their control of domestic activities as well as of foreign activities with local effects. Disregarding practical complications, the states persistently asserted jurisdiction in Internet-related disputes extending traditional principles of jurisdiction and modifying legal theory to meet to the emerging cyber-environment. Some Internet controversies fit perfectly to the traditional principles; for example, states' rights to exercise jurisdiction over their nationals wherever they are is a long established nationality principle for exercising jurisdiction over the person; similarly, the situation when material was put online on the server in the state's territory fits nicely in the traditional territorial principle. However, several particular problems remain; the most outraging among them is the extension of the effects principle to assert jurisdiction over a foreign national for the material placed on the server abroad but as the Internet makes unavoidable accessible for local users. As a result, a mere webpage may be enough to be subjected to jurisdiction of every state.

¹³ J. G. STARKE, STARKE'S INTERNATIONAL LAW 183-84 (11th ed., 1994).

¹⁴ Goldsmith, *supra* note 4, at 1211.

¹⁵ For more detailed description of the early debate *see*, generally Goldsmith, *supra* note 4.

2.1 Territorial Principle

The territorial principle of jurisdiction “originally derived from an assumption about the absoluteness of boundaries and sovereign power within them.”¹⁶ The state territory was a natural limitation to the state authority to prescribe law, providing opportunity to define addressees of the norms and to ensure foreseeability of legal order.¹⁷ Under the territorial principle a state has jurisdiction over property, persons, acts, events within its territory.¹⁸ This principle produces little controversy for no one questions the power of the state to prescribe laws to the conduct in its territory.¹⁹ At the beginning there were several attempts to reduce application of the territorial principle to cyber-activities but they were quickly rejected by courts. For example, the British court easily asserted jurisdiction over a UK citizen who tried to argue that the pornographic content placed on the US server “was outside British jurisdiction.”²⁰ All over the world the early arguments that activity occurs in “cyberspace,” which is different from physical space and thereby avoids regulatory claims did not succeed.

The issue of jurisdiction under the territorial principle is double-sided. On the one hand, it seems that it does not give much power to the state for control of Internet activity, most of which occurs transnationally with participation of foreign actors without any tangible contact with a given forum. On the other hand, the territorial principle should not be underestimated. First, it confers jurisdiction over residents of the state, both individual users and corporations, the latter ranging from online businesses to ISPs that may be held liable for hosting of or for providing access to objectionable material. Further, financial intermediaries (such as credit card companies, etc.) can also be obliged

¹⁷ See, e.g., KARSTEN BREMER, STRAFBARE INTERNET-INHALTE IN INTERNATIONALER HINSICHT: IST DER NATIONALSTAAT WIRKLICH ÜBERHOLT? [CRIMINALIZED INTERNET CONTENT IN INTERNATIONAL RESPECT: IS THE NATION-STATE REALLY OUTDATED?] 114-15 (2001).

¹⁸ See, Restatement (Third) of Foreign Relations Law 402 (1987) [hereinafter Restatement of Foreign Relations]; § 3 STRAFGESETZBUCH [Penal Code (of Germany)] [hereinafter StGB]; STARKE, *supra* note 13, at 184-87.

¹⁹ The sub-set of the territorial principle that covers harmful effects produced on the territory on the state (the effects principle) is examined separately in Part 2.3.

²⁰ Chris Nuttall, *Police hail Net porn ruling*, BBC NEWS, July 1, 1999, available at <http://news.bbc.co.uk/2/hi/science/nature/382152.stm> (last visited April 26, 2004).

to act in accordance with local policies abstaining from facilitating infringement on them.²¹ Second, namespace provides a tool for regulation.²² Although theoretical grounds for this conclusion were not extensively addressed in legal discussion, the authority of a country to administer its own Country-Code Top-Level-Domain space (ccTLD) may fall under the territorial principle of jurisdiction. Even ICANN, the main body on Internet names management does not have a big say in how a state should manage its ccTLD.²³ “By threatening to exclude namespace users and service providers that do not adhere to namespace contracts or policies, namespace providers can enforce their interests in an over-efficient manner.”²⁴ Registrars of domain names can cancel them following the court order or informal request extending territorial jurisdiction as was done, for example, in respect of the sites `vote-auction.com` and `voteauction.com` – the registering US company cancelled the name as a co-defendant of a lawsuit, the Swiss registrar did the same after informal request.²⁵ Quite logically, registrars of ccTLD have to comply with the official country policy in most cases; for example, the manager of the German ccTLD “de.” would not register domain name `www.heil-hitler.de` or the like.²⁶

2.2 Nationality Principle

Nationality (or personality) principle allows the state to exercise jurisdiction irrespective of the territory where the act was committed because of the nationality of the actor (active nationality principle) or because of the nationality of the victim (passive nationality principle).²⁷

²¹ See, e.g., Jack Goldsmith, *Unilateral Regulation of the Internet: A Modest Defence* 11 EJIL 135, 137 (2000).

2.2.1 Active

Active nationality principle is recognized in many legal systems. For example, according to the US Restatement of Foreign Relations a state has jurisdiction to prescribe the activities, interests, status, or relations of its nationals outside as well as within its territory;²⁸ German criminal law prescribes liability for a limited number of acts committed abroad if the offender is a German national (such as trade in human organs,²⁹ sex tourism,³⁰ and some others).³¹

The ambition of states to have full control over its nationals is not surprising; indeed, as Shapiro commented, “many governments will be reticent about letting their citizens go online if they believe that they have no jurisdiction over what their citizens do there.”³² Nevertheless, active nationality principle is not a generally applicable rule but rather depends on the type of activity. For example, by engaging in child sex tourism a person may be liable upon return under the laws of home country,³³ in gambling usually not.³⁴ Both approaches deserve consideration.

On the one hand, proposal to make citizens liable for their Internet activities wherever they are³⁵ would solve many problems. It would help Europeans in combating hate speech³⁶ without intrusion into expression preferences of others (considering that many of the US-based white supremacist sites are managed by German neo-Nazis); it would exclude forum-shopping³⁷ and lessen spillover effects of prosecution into other jurisdictions.³⁸ “At least one country, Australia, has made Internet casino gambling legal for everyone except its own citizens.”³⁹ This approach equals the Internet to a new independent space, like the Moon or the Antarctic region where exercise of jurisdiction is

³⁸ See, e.g., *id.* at 240.

³⁹ Cowan, *supra* note 27, at 267.

based on the active nationality principle.⁴⁰ On the other hand, there is an argument for restrained application of the active nationality principle – a person can integrate into foreign legal system without fearing prosecution of his motherland.⁴¹

Anyway, even if the active nationality principle is somewhat problematic it is less problematic than extending jurisdiction to everyone. Application of the active nationality principle to Internet-related controversies is furthermore convenient because whatever the preference of a particular state is, whether for broad or restricted interpretation of this principle, all approaches can coexist since the actor is supposed to be familiar with the laws of his or her home country and at the same time it does not produce spillover effects on other actors.

2.2.2 Passive

The passive nationality principle is applied quite rarely, often on a condition that the act is criminalized both in the prosecuting state and in the state where the offense was committed.⁴² Besides, it is hardly applicable to Internet communication and so far there have been no cases where it would be applied to extraterritorial Internet content controversies.⁴³ In case when a victim of the Internet communication is a real person – defamation, for example, – the courts tend to determine jurisdiction according to the effects principle discussed in the next Part.

2.3 *Effects principle*

The effects principle allows the state to exercise jurisdiction if the conduct has a substantial effect within the state's territory.⁴⁴ Although it was derived from the territorial

⁴³ To the best of knowledge of the author.

⁴⁴ See, e.g., Restatement of Foreign Relations, *supra* note 18, 402 (1) c; § 9 (1) StGB.

principle and is often regarded as its subset,⁴⁵ the meaning of the effects principle is crucial and independent, particularly for the borderless communication enabled by the Internet. On the international level the principle was recognized by the Permanent Court of Justice in S.S. Lotus case;⁴⁶ on the national level it is also widely accepted and most jurisdictions consider their laws applicable to extraterritorial Internet content cases on its basis.⁴⁷

The main question is how far the state would go in interpreting the effects principle. The US offers “reasonableness” requirement as a yardstick for applicability of national law to extraterritorial activities.⁴⁸ German scholars sometimes mention “reasonable link” when constructing the “harmful effect” clause⁴⁹ for application of the German law to the acts committed abroad.⁵⁰ In practice, in several cases involving objectionable Internet content the courts tend to apply the effects principle broadly, easily subjecting Internet content publishers to their jurisdiction.

2.3.1 Germany

Germany was among the first to deal with the Internet content illegal under its laws but perfectly legal abroad where it was hosted and made accessible via the Internet. In 1998 it prosecuted and sentenced Felix Somm, the manager of a subsidiary of the American company CompuServe, for distribution of online pornography in its newsgroups.⁵¹ In 1999, however, the case was reversed on the appeal on the grounds that the manager was totally subordinated to the mother company and could not technically restrict access to the illegal content.⁵² The case got much attention and caused

⁵² LG München, Entscheidung vom 17.11.1999, NJW 2000, 1051 [München Land Court, decision of Nov. 11, 1999].

CompuServe to alter its content policy to some extent⁵³ but it was not particular surprising in respect of jurisdiction. Quite naturally that Germany asserted jurisdiction over its national for actions that were presumably committed on its territory (even if content was on the servers of the mother company) apart from any harmful effects. Much more controversial was the Toben case,⁵⁴ which got somewhat less publicity in the US, probably due to involvement of non-US actors only.

On the trip to Germany Frederick Toben, an Australian citizen, was prosecuted and sentenced for Holocaust denial on the Internet – he was the author of various revisionist articles placed on the site of Adelaide Institute located on the Australian server. The case passed several judicial instances and ended up in the German Federal Court of Justice that upheld the conviction and elaborated most thoroughly on the effects principle as applied in the case. The Court started by determining that the content of the website passed exactly to what was covered by section 130 of the German Penal Code – ranging from clearly untrue statements of facts (Toben claimed that not more than 800 thousand Jews died in the Holocaust) to seditious and insulting statements capable to wake negative feelings to Jews in general and to German Jews in particular (such as assertions that Jews were using the Holocaust to enslave Germans in the feeling of guilt, etc.).⁵⁵ Because of the dissemination opportunities of the Internet this illegal content was easily accessible in Germany.⁵⁶ Interesting, one of the elements of the offense prescribed by section 130 is the actual ability of the communication to disturb public peace⁵⁷ and the court took pains to find it in the case. It examined the legislative intent of the norm, which was to avoid contamination of the political climate by belittlement of Nazi crimes;⁵⁸ it explained that the reasonable fear that the communication would disturb public trust in common security would be sufficient to fulfill the requirement;⁵⁹ it established that the addressees of the revisionist articles were Germans (notwithstanding

⁵³ For example, newsgroups containing child pornography were removed in the result of publicity, *see id.* “Tatbestand” [Facts].

⁵⁴ BGH 46, 212, Urteil vom 12.12.2000 [Decision of the Federal Court of Justice of Dec. 12, 2000] [hereinafter Toben case].

the fact that the articles were in English);⁶⁰ and, finally, it concluded that the harmful effect was present and it was legitimate to assert jurisdiction under sections 3 and 9 of the German Penal Code⁶¹ (combination of the territorial and effects principles).

The German legal theory distinguishes the so called “abstract danger offences” that can happen on the Internet without obvious effect on the territory – such as dissemination of pornography, racist materials, extreme violence, etc.⁶² Scholars are divided on the proper interpretation. Some stand for the “restrictive theory” – since such offences do not have a specific location where effect took place, jurisdiction should be restricted to the actual place of action of offender; others support “extensive theory” – effect should be considered to happen everywhere where the abstract danger could realize;⁶³ there are also suggestions to seek for the objective link; to examine the final interest of the actor; and to introduce the push-pull test similar to the US targeting requirement.⁶⁴ The Toben Court was most close to the extensive theory, although it classified section 130 as “the abstract-concrete danger offence” because of the requirement of actual ability for disturbance of peace;⁶⁵ the Court even mentioned that theoretically it was possible to argue that the Holocaust denying statement did not have this ability⁶⁶ but provided no hint as to what kind of argument that could be. Thus, there is no clear guidance, except that the author of a website illegal under German laws will be prosecuted if he or she appears within Germany’s reach.

2.3.2 France

Article 113-2 of the French Criminal Code makes French criminal law applicable to all offenses that are committed within its territory, hereby it is not necessary that the offence is committed exclusively on the French territory, it is enough that one of its constituting elements is present.⁶⁷ This provision subjects the majority of Internet

activities to French jurisdiction. The most notorious illustration of this principle is the Yahoo! case.⁶⁸ The case ended up in the Californian court that refused to enforce the French order on the First Amendment grounds, yet a brief overview of the reasons the French court used in exercising jurisdiction over Yahoo! is meaningful for the present analysis.

In the first instance the justification for exercising jurisdiction was quick and not at all problematic for the French court – it dedicated one paragraph to criminalization of the sale of Nazi memorabilia objects and another short paragraph to the conclusion that the harm was present on the French territory since French users could easily view the auction site.⁶⁹ On the appeal the court elaborated a little more thoroughly. It acknowledged that the Yahoo site “is in general directed principally at surfers based in the United States having regard notably to the items posted for sale, the methods of payment envisaged, the terms of delivery, the language and the currency used;” nevertheless, it refused to develop the argument further, stating that “the auctioning of objects representing symbols of Nazi ideology... may be of interest to any person”⁷⁰ and “the simple act of displaying such objects in France constitutes a violation of Article R645-1 of the Penal Code and therefore a threat to internal public order.”⁷¹ For the court it was a sufficient basis to assert jurisdiction over the case and to rule on the matter.

Interestingly, it was pointed out in the proceedings to the possible enforcement problems. The court refused to consider seriously this argument – “any possible difficulties in executing our decision in the territory of the United States,... cannot by

⁷¹ *Id.*

themselves justify a plea of incompetence.”⁷² What are the practical consequences of such a judgment is examined later in Part 3.1 of the article.

2.3.3 Australia

In the presumably first Internet defamation with a foreign defendant that was not present in the country except on the Internet the High Court of Australia dealt thoroughly with jurisdiction concerns.⁷³ The case involved defamatory statements with regard to Joseph Gutnick, an Australian resident, that appeared on the Internet site of the US-based magazine *Baron's Online*.⁷⁴ The Australian court asserted the jurisdiction under the effects principle – “activities that have effects beyond the jurisdiction in which they are done may properly be the concern of the legal systems in each place.”⁷⁵

More particularly, in determining jurisdiction the court looked at two issues. First, it examined what was the place of publication of the statements of which Mr. Gutnick complained.⁷⁶ For the analysis the court distinguished between two meanings of “publishing” – “the (publisher's) act of publication and the fact of publication (to a third party)”⁷⁷ and asked, “[i]f the place in which the publisher acts and the place in which the publication is presented in comprehensible form are in two different jurisdictions, where is the tort of defamation committed?”⁷⁸ The conclusion was that since any material placed on the Internet “is not available in comprehensible form until downloaded on to the computer of [the end user, i]t is where that person downloads the material that the damage to reputation may be done.”⁷⁹ Consequently, the tort of defamation may be considered committed in Australia. The second issue the court dealt with was whether it was necessary to create the exception of the Internet.⁸⁰ The court answered in the negative, noticing that “[w]hilst the Internet does indeed present many novel

⁸⁰ *Id.* § 123-38.

technological features, it also shares many characteristics with earlier technologies that have rapidly expanded the speed and quantity of information distribution throughout the world... Generally speaking, it is undesirable to express a rule of the common law in terms of a particular technology.”⁸¹

Like the French colleagues, the Australian court remained unimpressed by the enforcement argument of the appellant that the difficulty or impossibility of enforcement the judgment in another jurisdiction “may amount to a practical reason for providing relief to the objecting foreign party on one or more of the grounds of objection raised in this case.”⁸²

2.3.4 Canada

Most recently the Ontario Superior Court of Justice followed the similar logic in *Bangoura v. Washington Post*⁸³ explicitly mentioning the Australian decision.⁸⁴ The court asserted jurisdiction over the US defendant Washington Post with no assets in Canada but with articles published on the Internet. The court started carefully, mentioning that “the mere fact that communication to a third party occurs in a particular jurisdiction does not as such make that jurisdiction the place of tort... There must be a substantial connection between the tort and the jurisdiction as well.”⁸⁵ But at the end the court had no difficulty in finding the connection – the plaintiff resided in Canada for two years even though he was not present at time of publication and the impact on his reputation would be in Canada;⁸⁶ besides, according to the court, there was no unfairness to the US defendant since “the Post is a newspaper with an international profile”⁸⁷ and it “should have reasonably foreseen that the story would follow the plaintiff wherever he resided.”⁸⁸

⁸¹ *Id.* § 125.

⁸² *Id.* § 121.

⁸³ Decision of Jan. 27, 2004, available at <http://www.scrawford.net/courses/Bangoura%20v.%20Washington%20Post.html> (last visited April 26, 2004).

⁸⁴ *Id.* § 19 (8).

⁸⁵ *Id.* § 15.

⁸⁶ *Id.* § 18.

⁸⁷ *Id.* § 19 (3).

⁸⁸ *Id.* § 19 (2).

Thus, the Canadian court in its turn established a precedent that “[t]he dissemination of defamatory statements over the Internet can give jurisdiction to the court where damage is sustained by the plaintiff no matter where publication has taken place.”⁸⁹ *Inter alia*, the court produced one remarkable statement, “publishers are not obliged to publish on the Internet. If the potential reach is uncontrollable then the greater the need to exercise care in publication”⁹⁰ – surprisingly speech-chilling argument.

As in the extraterritorial cases described above, the enforcement argument was rejected, “the Washington Post defendants' home jurisdiction's unwillingness to enforce such an order is not determinative of whether the court should assume jurisdiction... It is for the plaintiffs to weigh the advantages and disadvantages of commencing an action in Ontario knowing that it may not be enforced.”⁹¹

2.3.5 Italy

One more country that employed the effects principle for asserting jurisdiction in the Internet content case was Italy. The Italian case originated because of online publications injurious to reputation and privacy of Dulberg Moshe and his two daughters, presumably posted online in Israel by Moshe’s ex-wife and her husband.⁹² The court of the first instance did not assert jurisdiction over the case because the statements under discussion were published abroad, i.e. the offence was committed outside the national territory.⁹³ The Court of Cassation disagreed and remanded the case for further consideration in accordance with its guidelines.⁹⁴

Like the Australian court, the Italian Court of Cassation makes a distinction between the act of the sender publishing defamatory statements online and the perception of these statements by a third party.⁹⁵ Further, mere availability of the injurious statements on the Internet is not sufficient, actual perception of them by a third person is

⁸⁹ *Id.* § 16.

required.⁹⁶ Hypothetically it is possible to argue that the offence is not committed even if the material is online if, for example, nobody visits the web-site.⁹⁷ This is of course a very hard thing to argue and in practice it does not narrow the final conclusion of the court. Once “‘perception’ of the injurious contents of the messages took place in Italy, the offence must be deemed to have been perpetrated on the national territory”⁹⁸ and the Italian state is entitled to jurisdiction.⁹⁹

2.3.6 Findings

Currently the effects principle as applied in asserting jurisdiction in Internet content controversies is employed most broadly, capable to justify almost anything. It knows no limits and it offers no support for legal certainty or foreseeability of online communication activities. If the Internet content falls within concerns of a particular country, its accessibility alone provides a sufficient link for jurisdiction according to the interpretation of the effects principle of many national courts.

2.4 USA: Targeting-Based Analysis

The targeting-based analysis is not a completely new doctrine, it was already applied in defamation cases in printed media both in the US¹⁰⁰ and Europe.¹⁰¹ In the Internet settings, however, the United States alone favors its application. The Restatement of Foreign Relations provides that the jurisdiction in extraterritorial disputes must be reasonable.¹⁰² The comprehensive description of the factors to determine reasonableness offered by the Restatement is neither exhaustive nor mandatory,¹⁰³ and the targeting-

¹⁰³ *Id.* comments a & b.

based analysis accepted in interstate disputes by many US courts following *Zippo*¹⁰⁴ is likely to be applied in international disputes as well.¹⁰⁵

The *Zippo* court reflected on jurisdiction issue in an interstate trademark dispute. Most importantly, it stated that a “passive Web site that does little more than make information available to those who are interested in it is not grounds for the exercise personal jurisdiction,”¹⁰⁶ and distinguished two other categories – when there is “the knowing and repeated transmission of computer files over the Internet, personal jurisdiction is proper;”¹⁰⁷ in the middle “a user can exchange information with the host computer [and] the exercise of jurisdiction is determined by examining the level of interactivity and commercial nature of the exchange of information”¹⁰⁸ – also called the “sliding scale” analysis.¹⁰⁹

The test was developed further in numerous US interstate cases.¹¹⁰ For example, in *Young v. New Haven Advocate* the Virginian court did not assert jurisdiction over Connecticut newspapers in respect of online articles defaming a Virginian prison warden;¹¹¹ in *Neogen Corp. v. Neo Gen Screening, Inc.* the court concluded that the granting of passwords to and collecting personal information of Michigan users was sufficient proof of purposeful availment of the privilege of conducting activities within the forum and asserted jurisdiction over the Pennsylvania corporation.¹¹² Not all cases are consistent and there are some additional problems in international respect. For example, the Canadian Internet broadcaster iCraveTV had sought to limit its distribution to Canadians by conditioning access on passing through three stages of verifications and clickwrap agreements; nevertheless it was dragged into the US court.¹¹³ Besides, there are

many examples of the US prosecuting foreign actors for computer crimes.¹¹⁴ Certainly, copyright or computer system security issues are different from content-related controversies but they are not completely irrelevant. At the moment there is not a big probability of an international Internet content dispute originated in the US due to the strong First Amendment protection but the possibility is not unimaginable – for example, in respect of child pornography or obscenity if the COPA or its successor passes the Supreme Court.

2.4.1 Discussion

Is the targeting-based analysis an adequate approach for determining jurisdiction in Internet content controversies? For some authors, “targeting is a key ingredient in the effects test.”¹¹⁵ Indeed, many would readily agree that “if an Internet content provider has taken some action to target citizens of a particular country, that country may assert jurisdiction for the content placed on that website.”¹¹⁶ Targeting is relatively easy to detect when commercial activity takes place but when a passive website merely provides information on objectionable subjects the targeting of a particular jurisdiction is far from obvious. What objectively perceivable factors can be distinguished for the targeting analysis of mere expression?

Interactivity or “the willingness to deal with persons in the forum state”¹¹⁷ could be appropriate for the analysis of commercial transactions but it is hardly applicable to a static website. Another proposal is to regard the use of a foreign language as “a primary test for a non-interactive web site... that would indicate a desire for citizens of a foreign jurisdiction to read the web page.”¹¹⁸ This one is certainly more suitable for

¹¹⁴ See, e.g., U.S. Department of Justice, *Russian Man Sentenced for Hacking into Computers in the United States*, Press Release, July 25, 2003, at <http://www.usdoj.gov/criminal/cybercrime/ivanovSent.htm> (last visited April 26, 2004) [hereinafter U.S. Department of Justice Press Release 2003]; U.S. Department of Justice, *Russian Computer Hacker Sentenced to Three Years in Prison*, Press Release, Oct. 4, 2002, at <http://www.usdoj.gov/criminal/cybercrime/gorshkovSent.htm> (last visited April 26, 2004) [hereinafter U.S. Department of Justice Press Release 2002].

¹¹⁸ Henn, *supra* note 45, at 175.

communication analysis but there are several problems as well. First, there are languages officially used in many jurisdictions (English, Spanish, etc.) and it would be problematic to determine, for example, whether an English-language website targets the US, the UK, Australia, or a number of other countries. Second, the globalization process on the Internet is prominent and the use of several languages for a website is not unusual, even without particular targeting intent. Anyway, the language factor would offer at least some restriction of unlimited application of the effects principle.

One more sound proposal is that “a web site that uses software technologies to target advertising toward the specific user should also be considered to have submitted to the jurisdiction of the specific user.”¹¹⁹ Quite logical, targeting advertising helps to derive financial and other benefits from a particular location and thus provides a link to foreign jurisdiction. Notably, there are many otherwise passive websites that have commercial advertising banners on them.

Targeting-based analysis could be a solution to the unlimited application of the effects principle if the courts could agree to accept it in a consistent form. However, currently there is not much prospect of it. European courts refuse to consider the use of foreign language as a factor for restricting jurisdiction (Toben and Yahoo case); for the US courts the problem is on the side of recognition of foreign judgments – Yahoo! used geographic identification technologies to target French citizens with French language banner advertisements but the French decision was not enforced by the US court.¹²⁰ Besides, there are still too many sites that do not expressly target anyone but welcome all interested surfers. Targeting-based analysis would exempt them from the states' control – the result the states cannot assent to.

2.5 *Protective Principle*

According to the protective principle a state can exercise jurisdiction over activities of non-nationals whether these activities occur inside or outside its territory for

¹¹⁹ *Id.*

¹²⁰ *Id.* at 176.

protection of important state interests, usually security or economy of the state.¹²¹ The application of the protective principle is quite limited, for example, in the US it covers conduct “directed against the security of the state or against a limited class of other state interests,”¹²² in Germany the offences that can be prosecuted under protective principle – “conduct directed against internal interests of the state” – are specifically enumerated in the Penal Code.¹²³ In the Toben case, for example, the German Federal Court of Justice mentioned that the international law allowed to assert jurisdiction for protection of important internal interests¹²⁴ but did not really rely on it.

In fact, if the protective principle were to apply broadly, many communication activities on the Internet would fall under jurisdiction of some state of the world. For example, insult of the Federal president is among offences specifically enumerated for application of protective principle in Germany,¹²⁵ bomb-making information on the Internet infringes on the laws and security interests of the United States.¹²⁶

2.6 Universal Jurisdiction

The universal jurisdiction is recognized by international law for protection of international interests only in very limited, even unique occasions, such as piracy, war crimes and some others – “conduct sufficiently heinous to violate the laws of all states.”¹²⁷ The application of the universal jurisdiction to Internet content controversies could arguably be conceivable when the Internet is used, for example, to incite genocide in violation of international law.¹²⁸ The scope of crimes covered by the universal jurisdiction is not strictly determined. The best international codification effort so far is the UNO of Draft Code of Crimes against the Peace and Security of Mankind;¹²⁹ national laws can expand the scope. Thus, German law justifies universal jurisdiction in several

additional cases, including distribution of violent, animal and child pornography¹³⁰ – no doubt applicable to Internet communications as well but not yet tested in real life prosecution of a foreign offender.

3 INTERNET-SPECIFIC CONSIDERATIONS

3.1 *Jurisdiction to Enforce*

The power to prescribe the law and adjudicate the dispute does not always correlate with the possibility to enforce the judgment. Among the three layers of jurisdiction - jurisdiction to prescribe, jurisdiction to adjudicate, and jurisdiction to enforce¹³¹ – the weakest layer in respect of Internet controversies that actually limits the power of the state to regulate Internet communication is undoubtedly jurisdiction to enforce. As Goldsmith convincingly argues, “the true scope and power of a nation's regulation is measured by its enforcement jurisdiction, not its prescriptive jurisdiction.”¹³²

“In general a nation can only enforce its laws against: (i) persons with a presence or assets in the nation's territory; (ii) persons over whom the nation can obtain personal jurisdiction and enforce a default judgment against abroad; or (iii) persons whom the nation can successfully extradite.”¹³³ “In the real world, discrepancy between prescription and enforcement traditionally causes various inefficiencies, including evasion of the law,”¹³⁴ in cyberspace the effect is even more extreme. First, in Internet disputes the proportion of persons with a presence or assets in the nation's territory in comparison to all involved is remarkably low so that a state is often not capable to enforce the judgment without external help.¹³⁵ Second, extradition for enforcement is rare, mostly based on

¹³⁰ § 6 (6) StGB.

¹³¹ See, e.g., Restatement of Foreign Relations, *supra* note 18, 401.

¹³² As described by Matthew Fagin, *Regulating Speech Across Borders: Technology vs. Values*, 9 MICH. TELECOMM. & TECH. L. REV. 395, 417 (2003).

¹³³ Goldsmith, *supra* note 4, at 1216.

¹³⁴ Watt, *supra* note 1, at 690.

¹³⁵ There are areas of criminal law where the US tries to enforce its laws by all means, up to setting up a fake firm to get the criminals on the US sole but it is not likely to happen in speech cases. See U.S. Department of Justice Press Release 2002, *supra* note 114. “This prosecution demonstrates the ability and resolve of the Department of Justice to vigorously investigate and pursue cybercriminals who attack

treaties and almost never of a state's own national; besides it is even less likely to occur in speech disputes because of costs and values clashes.¹³⁶ The third point of enforcement of a judgment abroad deserves particular consideration.

3.1.1 Enforcement of Foreign Judgments

There is no general obligation of states to enforce foreign judgments under international law,¹³⁷ although there are several international and regional conventions and treaties addressing the issue.¹³⁸ Usually the judgment will be enforced if a number of prerequisites are present. The most common are that the foreign judgment is rendered under proper jurisdiction;¹³⁹ in compliance with procedural rules of the issuing court that are compatible with general requirements of due process of law;¹⁴⁰ reciprocity is often required.¹⁴¹ There are also differences from country to country; for example, the US would rather enforce a foreign money judgment than a foreign injunction¹⁴² the latter being considered “far more difficult and intrusive upon a national sovereignty”¹⁴³ but for Germany or France the distinction does not matter.¹⁴⁴ On the other hand, American

American computer systems. We are committed to tracking down and prosecuting those individuals wherever they may be”, see U.S. Department of Justice Press Release 2003, *supra* note 114.

¹³⁶ For example, on the extradition request of the Thai government in respect of a Thai woman who displayed the Thai national flag on her pornographic website in the UK it was commented, “it is unlikely the British government would not take action over such minor charges”. See Silicon.com, *Porn web woman faces extradition from Britain*, Dec. 08 2003, at <http://www.silicon.com/networks/webwatch/0,39024667,39117237,00.htm> (last visited April 26, 2004).

¹³⁷ See, e.g., Lothar Determann & Saralyn M. Ang-Olson, *Recognition and Enforcement of Foreign Injunctions in the US*, SEVENTH ANNUAL INTERNET LAW INSTITUTE 189, 191 (2003).

¹³⁸ See, e.g., list of Hague Conventions on Private International Law, available at <http://www.hcch.net/e/conventions/index.html> (last visited April 26, 2004).

¹³⁹ For Germany see § 328 (1) 1 ZIVILPROZESSORDNUNG [Civil Process Code] [hereinafter ZPO]. For the US discussion see, e.g., Molly S. Van Houweling, *Enforcement of Foreign Judgments, The First Amendment, And Internet Speech: Notes for the Next Yahoo! v. Licra*, 24 Mich. J. Int'l L. 697, 699 (2003); *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1875-76.

¹⁴⁰ For Germany see § 723 (2) ZPO [the decision must legally in force in compliance with rules of the court that made it], § 328 ZPO (1) 2 [the defendant was not properly served], § 328 ZPO (1) 3 [no contradiction with previous decisions] or generally see Determann & Ang-Olson, *supra* note 137, at 197. For the US discussion see, e.g., Houweling, *supra* note 139, at 699; *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1875-76.

¹⁴¹ See, e.g., § 328 ZPO (1) 5.

¹⁴² See Determann & Ang-Olson, *supra* note 137, at 193.

¹⁴⁴ *Id.* at 198.

punitive damages are not accepted in Germany.¹⁴⁵ But the particular problem of enforcement of foreign judgments in context of Internet content controversies is represented by the public policy exception secured in many legal cultures.¹⁴⁶ The US is especially well-known for its reluctance to enforce foreign judgments in speech cases due to the First Amendment protection¹⁴⁷ thereby considerably limiting the enforcement expectations of other states – frequently one of the parties in Internet content controversies resides in the US.

3.1.2 Should Prescribe If Cannot Enforce?

The courts are aware of the practical limits of enforcement of judgments entered against persons abroad, nevertheless, they expressively reject the enforcement argument.¹⁴⁸ They feel reluctant to openly admit the limits of their power but the reality prevails and judgments remain unenforced. Remarkably, after the Yahoo! successful litigation in the US that declared unenforceable the order of the French court, there was a twist of the French anti-racist policy and the approach to Internet content controversies changed in practice – the efforts to ensure the hate-free society and the hate-free Internet for local users concentrated on local ISPs instead of on foreign content providers. Thus, in 2001 a case appeared in a French court with plaintiffs almost identical to in the Yahoo! case that complained of the accessibility in France of a number of white-supremacy sites, particularly to those hosted under www.front14.org.¹⁴⁹ This time the anti-racist organizations did not venture into the meaningless race after the American hosting provider. Rather, that wanted to judicially oblige French ISPs to block access to the

¹⁴⁵ See HAIMO SCHACK, INTERNATIONALES ZIVILVERFAHRENSRECHT [INTERNATIONAL CIVIL PROCEDURE LAW] 373 (2003).

¹⁴⁶ For Germany see § 328 ZPO (1) 4 that secures protection of fundamental principles of German law, particularly when in connection to basic human rights. For the US discussion see, e.g., Houweling, *supra* note 139, at 699; and *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1875-76.

¹⁴⁷ See, e.g., Houweling, *supra* note 139, at 700-01.

¹⁴⁸ *Inter alia*, in the above described cases.

French Association of Internet Access and Service (AFA), 13

site.¹⁵⁰ Considering technical limits of effective blocking measures the litigation resulted in a general obligation on French ISPs to work out a workable technical solution in cooperation with the plaintiffs.¹⁵¹ Interestingly, before going to court LICRA and other plaintiffs contacted the Alaska-based host ISP that agreed to terminate hosting of hateful material.¹⁵² However, the site found another host in Boston that remained insensitive to LICRA's demands.¹⁵³

The practice proves that impossibility to enforce is a highly important matter; the question, however, is how to use this conclusion. On the one hand, there are suggestions that inability to enforce may amount to a practical reason for not extending jurisdiction too much;¹⁵⁴ on the other hand, there are views that on the contrary it may serve as justification for extensive prescriptive jurisdiction – since most entities have no assets other than in their “home” territory, there is no reason to worry and to exaggerate spillover effects of broad prescriptive jurisdiction.¹⁵⁵

One could question, what is the purpose of useless prescription? It produces litigation costs and no real result. Policy and value statements of the country are anyway apparent from criminal codes and other laws. At the same time worldwide jurisdiction contributes to legal uncertainty – even if it is not a meaningful factor anymore,¹⁵⁶ it remains a value. The powerless victims of the worldwide jurisdiction would be end-users that would have to check the laws of every country they travel to if they happen to have placed something on the Internet.

The point is, one have to look reality in the face. The courts regard it beyond their dignity to accept the enforcement argument; however, for a change they could worry on recognition of and respect to their judgments. The French court stated that it could not create exception of the Internet but ended up in measures on home ISPs. The ability to

enforce should always be taken into consideration when asserting jurisdiction. It remains to hope that common sense prevails and courts would listen to the arguments similar to this one of a German commentator, “enforcement of German law against content providers abroad is illusionary... In the long run the capitulation before the power of reality and the adjustment of German law to the internationally enforceable minimal standards are unavoidable.”¹⁵⁷

3.2 *Consent to Jurisdiction*

Within the discussion on jurisdiction in cyberspace there are suggestions that private regulations will be crucial not only in determining jurisdiction as well as in Internet dispute resolution altogether.¹⁵⁸ “A more formal method to establish private legal orders in cyberspace is to condition access to particular networks on consent to a particular legal regime.”¹⁵⁹ Two main problems arise from this suggestion, one of a general character, the other relating to the subject matter of the article (Internet content controversies).

First, “[t]he validity of [the] contract, in which no positive assent is obtained and the Web site visitor is unlikely to have read the terms, stands on shakier ground.”¹⁶⁰ It is very doubtful that legal notices hidden among thousands of pages like “by accessing this web site both you and Netscape agree that the statutes and laws of the state of California, without regard to the conflicts of laws principles thereof, will apply to all matters relating to use of this web site,”¹⁶¹ may constitute informed consent. The user may not even be aware that there is such a notice. (In fact, the author of this article was not able to find this statement independently starting from the Netscape home page and had to follow the link provided in another article.)¹⁶² Several US courts already held that “it cannot be said that merely putting the terms and conditions in this fashion necessarily creates a contract

¹⁵⁷ Höernle, *supra* note 154, at 1013.

¹⁶² August, *supra* note 2, at 546-47, footnote 85.

with any one using the web site.”¹⁶³ Moreover, even in clearly contractual matters clickwrap agreement is not always valid. “In business-to-business contracts, choices of forum clauses are generally enforced in the United States, the E.U., and Japan. Their validity, however, may be problematic when one party is a consumer.”¹⁶⁴ Thus, EU regulation allows a consumer to bring a suit in the courts of a place where the consumer is domiciled.¹⁶⁵

Second, disputes involving Internet content controversies are clearly distinct from commercial transactions. Usually they involve either defamation lawsuit or criminal prosecution by the state for dissemination of illegal material where contractual consent doesn't play any role. Even Goldsmith, one of the main proponents of the “consent” approach mentions that “it is doubtful whether these private regulations will accord with the mandatory laws of territorial governments,” and it is not really a panacea.¹⁶⁶ Certainly, it doesn't matter for the government if it is asserted that the criminal act was committed under the laws specified on the respective webpage and it doesn't matter for a claim of a third-party who did not agree to any terms. In short, consent theory does not help in Internet content controversies.

3.3 Zoning Argument: Technology

In the recent years there appeared a wave of technology arguments led by Goldsmith claiming that “it is already possible for content providers to take measures to achieve significant control over information flows... As such control becomes more feasible and less costly, personal jurisdiction over cyberspace activities will become functionally identical to personal jurisdiction over real- space activities.”¹⁶⁷ According to them, the law should not be alone in protecting local values, “once harnessed to the law, technology can facilitate the exercise of prescriptive jurisdiction in the international arena, by providing the means to ensure perfect compliance with regulatory claims over

¹⁶³ Ticketmaster Corp. v. Tickets, 2000 U.S. Dist. LEXIS 4553, 8; the same conclusion was held in *Mendoza v. AOL*, 90 Cal. App. 4th 1. (Cal.App. 1 Dist. 2001) on the terms of AOL member agreement.

¹⁶⁴ *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1860.

¹⁶⁶ Goldsmith, *supra* note 21, at 146.

cyberspace, by the use of filtering techniques¹⁶⁸ An interesting issue comes up, is it an argument for responsibility *if zone* or for obligation *to zone*? In the former case it would be an additional helpful factor for determining targeting within the effects test; in the latter case, however, it would require transformation of the Internet as we know it.

Obviously, for many commentators there is nothing extravagant in the obligation to zone, for them the claim that content providers should not be liable for harms everywhere where the content appears is justified only as long as “the content provider cannot control the geographical and network distribution of his information flows.”¹⁶⁹ Once adequate means to control information flows are available, they must be employed and the provider cannot complain of liability in a foreign state.¹⁷⁰

Today it is not contested that the quality of the Internet as a free borderless medium does not lie in its “nature“ but is determined by the computer code.¹⁷¹ There are various tools to identify the geographical location of the user¹⁷² and many companies routinely do that for targeting advertising purposes. Moreover, some companies already exercise regional self-censorship – Google and Yahoo were forced to stop running online casinos advertisements under the US prosecution threat but Yahoo limited this decision for the US territory.¹⁷³ Undoubtedly, “the rapid development of filtering and “zoning“ techniques, now used for purely commercial reasons such as targeting advertising to a particular public, provides clear evidence that geographical indeterminacy on the Internet is not inevitable, but results from ideological choice.”¹⁷⁴

Some fear that “to effectively prevent materials from entering states where they are not permitted will require “extensive self-identification of users before they receive access to information.”¹⁷⁵ In fact, this concern could be avoided with a slight change in

the architecture of the Web, for example, introduction of geographical indicator in the IP number of every computer would enable an easy check of the location of every site visitor and could make the site inaccessible for users from specific jurisdictions. The only real question is whether the Internet architecture should develop in this direction, which is a policy question. Throughout the recent history the Western world tried to promote its ideas to those who did not have access to them. The zoning argument, on the contrary, totally disregards the effect on freedom of speech.

3.4 *Costs and Effect on Speech*

Whether broad prescriptive jurisdiction in respect of Internet content cases may be effectively realized or not, is not the only question that should be examined. “Without assessing [other] factors [such as costs, overall impact on speech, and democracy] the impact of prescriptively legitimate unilateral exercises of jurisdiction upon the on-line community remains unclear.”¹⁷⁶ What would happen if states continue to insist on broad exercise of jurisdiction in Internet content matters?

3.4.1 **With Zoning Technologies**

In one scenario, broad exercise of jurisdiction would undoubtedly be legitimate if cyberspace were zoned and every author could control the spread of it creation. From the technical point of view, the architecture of the Internet is developed by people and any direction of its development is possible.¹⁷⁷ But do we really want, do we really need the “zoned” cyberspace? “Since the 1940's the United States has deployed anti-jamming technologies to make Voice of America and other United States government sponsored broadcasting available to people in nations with governments that seek to block news and information.”¹⁷⁸ Similarly, twice in the past three years the US Congress dealt with the bill on Global Internet Freedom proposed for the same purpose – to promote freedom of

¹⁷⁶ *Id.* at 421.

¹⁷⁸ Elaine M. Chen, *Global Internet Freedom: Can Censorship and Freedom Coexist?* 13 DePaul-LCA J. Art & Ent. L. 229, 233 (2003).

expression on the Internet.¹⁷⁹ Zoning of the Internet would lead to an exactly opposite result. Not only would it make much of valuable content unavailable but it would also significantly raise the costs of Internet activities for all concerned – “in order to implement this technological solution, a multi-national actor must reconsider its relationships with *all* its users, regardless of national origin.”¹⁸⁰ That could lead to a particular speech-averse result - “assuming that technology continues to improve, it may become easier to withhold speech from foreign countries than to sort out inconsistent foreign laws that specify what counts as harmful where.”¹⁸¹

The insistence on general zoning would completely alter the current status of the Internet as a cheap, easily accessible medium enabling free flow of ideas worldwide as we know it and as many cherish it. The Internet would stop to be the medium of users – few private authors have the means to control the spread of their work and few Internet companies would provide free or cheap services when burdened by the obligation to employ geographical filtering in respect of content placed by their customers. Fortunately, this dark development is not probable to occur on a big scale;¹⁸² first of all because the US companies that enjoy the First Amendment protection are not likely to assume the additional costs without effective enforcement threats. Nevertheless some regional adjustments are possible and already in force, mainly due to regional business interests.¹⁸³

3.4.2 Without Zoning Technologies

In another scenario which is more similar to what is happening today, the courts will continue exercising worldwide jurisdiction but with limited success mainly due to the enforcement problem. One could reflect what would subjecting users to the laws of every country lead to? Would it lead to less objectionable content on the Internet? It is

¹⁷⁹ The bills were not adopted but the fact is significant anyway. See H.R. Res. 12, 107th Cong. (2001); H.R. Res. 48, 108th Cong. (2003).

¹⁸⁰ Yochai Benkler, *Internet Regulation: A Case Study in the Problem of Unilateralism*, 11 EJIL 171, 174 (2000).

¹⁸¹ Houweling, *supra* note 139, at 714-15.

¹⁸² See, e.g., Fagin, *supra* note 132, at 415.

¹⁸³ Human Rights Watch, *Yahoo! Risks Abusing Rights in China* (August 9, 2002), at <http://www.hrw.org/press/2002/08/yahoo080902.htm> (last visited April 26, 2004).

very doubtful, considering that the user is innocent under his or her local laws (if otherwise, the problem may be solved by the respective state, on the state's own initiative or on the notice of others). The only thing it can lead to would be the increasing amount of warnings like they appeared after the Toben case – “Travelers alert!... Stay out of prison! Stay out of Germany!”¹⁸⁴

Under the logic of effects principle as applied by many Western states in asserting jurisdiction over out-of-state actors, producers of swimming suits fashion or erotic could be arrested on their trip to Islamic states as infringing the morality of the country.¹⁸⁵ In fact, journalists, politicians, scholars, writers, enthusiasts, and anyone speaking in cyberspace would face the same risk – multiplied by the fact that it is not always obvious that the speech is objectionable and where exactly it is objectionable. Perhaps, one could maintain a database of all possible objectionable topics to make it certain not to experience prosecution process on a vacation trip. Irony apart, so far Islamic states did not to extend jurisdiction to foreigners with no connection to a state¹⁸⁶ fighting with objectionable content by local filtering measures but would they refrain from it long if Western states provide so many examples? It appears, Western states are less tolerant to Internet speech than Islamic societies traditionally criticized for oppression of freedom of expression.

3.5 *International Solution*

International agreement on jurisdiction in Internet-related issues would certainly be the best choice. One of the challenges for negotiating such an agreement is that the Internet activities involve too many topics (commerce, speech, criminal, civil, etc.) that were traditionally dealt with by different means. So far, there are many conventions on jurisdiction in non-Internet-related issues, all of them quite specific and not particularly

¹⁸⁴ See, e.g., statement at <http://www.zensurfrei.com/germanyinformation/> (last visited April 26, 2004).

¹⁸⁵ HERBERT TRÖNDLE, STRAFGESETZBUCH UND NEBENGESETZE [PENAL CODE AND RELEVANT LAWS] 60 (2003).

¹⁸⁶ BREMER, *supra* note 17, at 122.

applicable to Internet controversies.¹⁸⁷ The Internet jurisdiction was shortly addressed by the Convention of Cybercrime but in no clear way.¹⁸⁸

The situation is further aggravated by the fact that among other topics speech issues imply clashes of values. Even regional cooperation efforts that are looked upon as a possible guidance¹⁸⁹ have their shortcoming for application on the international level. Thus, the EU E-Directive offers a combination of home country control (the website operator will be liable in the home state)¹⁹⁰ with an override procedure (the state can assert control over a foreign operator in enumerated exceptions (like public policy issues) but before taking measures should contact another Member State and notify the EU Commission).¹⁹¹ It may be a good solution for a region with more or less commonly shared values but it would hardly work for the whole world¹⁹² – there is little prospect to agree on something when countries do not have much in common from the beginning. Moreover, negotiations between governments on every Internet dispute involving public policy will be too burdensome. The conclusion seems to be that the solution may be found on the national level only, the world is not ready for the international solution yet.¹⁹³ The realistic goal could be to concentrate on harmonization of existing and developing rules in respect to jurisdiction in Internet disputes and to try generalizing them into customs of international law, establishing common principles not from “above” but from below.¹⁹⁴

3.6 *Towards Clarity of Rules*

¹⁸⁷ See, e.g., Henn, *supra* note 45, at 173, see also *supra* note 138.

¹⁸⁸ Thus, art. 22 (4) of the Convention on Cybercrime provides that the “Convention does not exclude any criminal jurisdiction exercised in accordance with domestic law”.

¹⁸⁹ See, generally, Mark F. Kightlinger, *A Solution to the Yahoo! Problem? The EC E-Commerce Directive as a Model for International Cooperation on Internet Choice of Law*, 24 MICH. J. INT'L L. 719 (2003).

¹⁹⁰ Directive 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market (‘Directive on electronic commerce’), art. 3 § 1, 2000 O.J. (L 178), available at <http://europa.eu.int> (last visited April 26, 2004).

¹⁹¹ *Id.* art. 3 § 4.

¹⁹² See, e.g., Kightlinger, *supra* note 189, at 747.

¹⁹³ See BREMER, *supra* note 17, at 242.

¹⁹⁴ See *id.* 176-77, 201.

Foreseeability of rules and of the governing law is not a popular argument in discussing Internet transnational issues nowadays¹⁹⁵ but it used to be important. “Asserting jurisdiction over a nonresident or a person not physically within the state would “offend traditional notions of fair play and substantial justice,” the court said once.¹⁹⁶ The statement is not completely outdated.

“All other things being equal, companies large and small generally prefer predictable legal environments to unpredictable environments,”¹⁹⁷ the same being true for private users as well. As David Post argued, “[s]cale matters... Rules and principles that may be quite reasonable at one scale may become incoherent and unreasonable at another.”¹⁹⁸ In a more recent decision the same idea was expressed by the court – “it does not make sense to adopt a rule that could lead to the liability of countless parties whose role in the infringement is nothing more than setting up and operating a system that is necessary for the functioning of the Internet.”¹⁹⁹

Since every state has its own local policy to protect “all should be ready to subscribe, *ex ante*, to a rule of reason, under which the benefit from being able to ensure protection of local policies should balance out the concessions made to other States' conflicting regulatory claims.”²⁰⁰ The pragmatic question whether a state *can* unilaterally prescribe laws governing Internet activities can be answered in the affirmative – yes, it can though with very limited success. But it is not enough; the second question should follow, whether a state *should* do it. “Jurisdiction should not be exercised merely because it is permissible under principles of international law.”²⁰¹

4 CONCLUSION

With several exceptions, states tend to apply the effects principle in asserting jurisdiction over foreign actors in Internet content controversies. A little simplified, the justification provided is as follows – “what you say matters to us. Since we can hear it we have jurisdiction.” While the validity of the effects principle as such is not contested, it is necessary to revisit its meaning in respect of Internet content disputes. “A world in which the Effects Principle returns the result “No Substantial Effects Outside the Borders“ when applied to the vast majority of events and transactions is not “functionally identical“ to a world in which application of the same principle to the vast majority of events and transactions returns the opposite result.”²⁰² Potential accessibility of a website is not a proper link for application of national law.²⁰³

The US interstate cases with targeting-based analysis provide only limited guidance. First, interstate jurisdiction is different from international extraterritorial jurisdiction, primarily because of the absence of enforcement concern. Second, it is not clear what would be the application in extraterritorial criminal cases, such as child pornography or obscenity prosecution (the latter being a theoretical example so far). Targeting-based analysis could help but even in the US it is not used consistently. Besides, there are not too many objective indicators of targeting and the risk of their arbitrary application reducing the outcome to nothing cannot be ignored.

The realistic proposal would be to apply the territorial principle and the active nationality principle for determining jurisdiction in Internet content matters. They both can be interpreted quite broadly comprising hosting ISPs and content providers on the state’s territory (from businesses to private users), registrars of respective ccTLD names and nationals of the state, thereby giving substantial playground to the state to protect its interests. It would provide foreseeability of legal order and at the same time it would adequately answer the enforcement concern limiting the jurisdiction to the controversies that the state can effectively enforce.

Before the Internet raised many new legal issues the universal jurisdiction was recognized on very limited occasions. Now many states refuse to see the limits of their authority in Internet speech regulation and unrestrained application of the effects

²⁰² Post, *supra* note 198, at 1383 (2002).

²⁰³ See Sieber, *supra* note 50, at 2068.

principle equals pure speech to the most hideous crimes. Even if some Internet content could arguably fall within the universal jurisdiction (such as child pornography), it should not be generalized to cover any case when Internet content is not in line with local preferences.

WORLDWIDE PRESCRIPTIVE JURISDICTION IN INTERNET CONTENT CONTROVERSIES: A COMPARATIVE ANALYSIS *

YULIA A. TIMOFEEVA

1 INTRODUCTION

The global medium of the Internet offers global challenges. “While some of the conflicts now arising in cyberspace bear a familiar aspect, such as those arising in the course of electronic commerce, and require little more than mere technical adjustment of rules or methods applicable in analogous real-world situations, a growing number of conflicts involve clashing fundamental public values in the international arena.”¹ This is particularly true for Internet content regulation.

In respect of the Internet activities there are multiple overlapping conflicting jurisdictions² and the discussion is heated on how far the state can go in exercising its authority over authors of online material. On the one hand, it is asserted that “under the objective territorial principle, a court cannot assert extraterritorial jurisdiction over a foreign national simply on the basis that the foreign national's website contains images or data that violate the forum state's laws and that are accessible to users within the forum state;”³ on the other hand it has already happened, supported by the arguments that “it seems clear that customary international law, ... permits a nation to apply its law to

extraterritorial behavior with substantial local effects.”

Interestingly, exactly Western states provided first examples on subjecting to their laws users from foreign jurisdictions. The first case was initiated by Germany that prosecuted Toben, an Australian national, on his short trip to Germany for Holocaust denial online. ⁵ The example was followed by France, ⁶ Italy, ⁷ Canada ⁸ and Australia that went even further and delivered defamation judgment when the respondent was not even present in the country except on the Internet. ⁹ At the same time this approach was not unquestionably followed everywhere. For example, in the online defamation controversy similar to the Australian one, the US court refused to hear the case for lack of jurisdiction. ¹⁰

As Cassese noticed, “international law is a realistic legal system. It takes account of existing power relationships and endeavors to translate them into legal rules.” ¹¹ No doubt, the argument of Goldsmith that “there is nothing extraordinary or illegitimate about unilateral regulation of transnational activity that affects activity and regulation in other countries” ¹² is absolutely true but another question is whether the Internet jurisdiction should develop to sustain the pervasive version of it, especially in speech-

related controversies.

This article examines the cases that appeared on the international arena in the area of Internet content regulation paying attention to the current legal debate and to emerging rules, and offers suggestion on the possible limits of extraterritorial jurisdiction in Internet content cases – it demonstrates the necessity for the states to accept the role of the Internet as a borderless medium and to keep their judicial activities within reasonable limits. The article argues for limitation of the effects principle when applied to Internet content controversies and claims that wide application of the territorial and active nationality principles of jurisdiction provides adequate and sufficient means to deal with objectionable Internet content. The discussion is not deliberately limited to particular

states but the US and Germany are in the focus of the comparative analysis as representatives of two different legal systems.

2 APPLICATION OF TRADITIONAL PRINCIPLES

“International law sets little or no limit on the jurisdiction which a peculiar state may arrogate to itself;”¹³ however, several established principles are more or less recognized by all. The Internet, the borderless medium, challenges traditional views and

calls for the necessity to revisit and reinterpret the doctrines, first of all because of the geographically unlimited effects of Internet activities. No doubt, “a similar phenomenon occurs in many domestic and international conflicts contexts”¹⁴ but one can hardly disagree that the Internet raised it to the qualitatively new level.

In spite of many claims at the beginning of the Internet wide usage that cyberspace avoids traditional regulation methods,¹⁵ many states were reluctant to make “an exception of the Internet” in their control of domestic activities as well as of foreign activities with local effects. Disregarding practical complications, the states persistently asserted jurisdiction in Internet-related disputes extending traditional principles of jurisdiction and modifying legal theory to meet to the emerging cyber-environment. Some Internet controversies fit perfectly to the traditional principles; for example, states' rights to exercise jurisdiction over their nationals wherever they are is a long established nationality principle for exercising jurisdiction over the person; similarly, the situation when material was put online on the server in the state's territory fits nicely in the traditional territorial principle. However, several particular problems remain; the most outrageous among them is the extension of the effects principle to assert jurisdiction over a foreign national for the material placed on the server abroad but as the Internet makes unavoidable accessible for local users. As a result, a mere webpage may be enough to be subjected to jurisdiction of every state.

¹³ J. G. S TARKE , STARKE 'S INTERNATIONAL LAW 183-84 (11th ed., 1994).

¹⁴ Goldsmith, *supra* note 4, at 1211.

¹⁵ For more detailed description of the early debate *see*, generally Goldsmith, *supra* note 4.

2.1 Territorial Principle

The territorial principle of jurisdiction “originally derived from an assumption about the absoluteness of boundaries and sovereign power within them.”¹⁶ The state territory was a natural limitation to the state authority to prescribe law, providing opportunity to define addressees of the norms and to ensure foreseeability of legal order.¹⁷ Under the territorial principle a state has jurisdiction over property, persons, acts, events within its territory.¹⁸ This principle produces little controversy for no one questions the power of the state to prescribe laws to the conduct in its territory.¹⁹ At the beginning there were several attempts to reduce application of the territorial principle to cyber-activities but they were quickly rejected by courts. For example, the British court easily asserted jurisdiction over a UK citizen who tried to argue that the pornographic content placed on the US server “was outside British jurisdiction.”²⁰ All over the world the early arguments that activity occurs in “cyberspace,” which is different from physical space and thereby avoids regulatory claims did not succeed.

The issue of jurisdiction under the territorial principle is double-sided. On the one hand, it seems that it does not give much power to the state for control of Internet activity, most of which occurs transnationally with participation of foreign actors without any tangible contact with a given forum. On the other hand, the territorial principle should not be underestimated. First, it confers jurisdiction over residents of the state, both individual users and corporations, the latter ranging from online businesses to ISPs that may be held liable for hosting of or for providing access to objectionable material. Further, financial intermediaries (such as credit card companies, etc.) can also be obliged

¹⁸ See, Restatement (Third) of Foreign Relations Law 402 (1987) [hereinafter Restatement of Foreign Relations]; § 3 S TRAFGESETZBUCH [Penal Code (of Germany)] [hereinafter StGB]; S TARKE , *supra* note 13, at 184-87.

¹⁹ The sub-set of the territorial principle that covers harmful effects produced on the territory on the state (the effects principle) is examined separately in Part 2.3.

²⁰ Chris Nuttall, *Police hail Net porn ruling*, BBC NEWS , July 1, 1999, available at <http://news.bbc.co.uk/2/hi/science/nature/382152.stm> (last visited April 26, 2004).

to act in accordance with local policies abstaining from facilitating infringement on them.²¹ Second, namespace provides a tool for regulation.²² Although theoretical grounds for this conclusion were not extensively addressed in legal discussion, the authority of a country to administer its own Country-Code Top-Level-Domain space (ccTLD) may fall under the territorial principle of jurisdiction. Even ICANN, the main body on Internet names management does not have a big say in how a state should manage its ccTLD.²³

“By threatening to exclude namespace users and service providers that do not adhere to namespace contracts or policies, namespace providers can enforce their interests in an over-efficient manner.”²⁴ Registrars of domain names can cancel them following the court order or informal request extending territorial jurisdiction as was done, for example, in respect of the sites **vote-auction.com** and **voteauction.com** – the registering US company cancelled the name as a co-defendant of a lawsuit, the Swiss registrar did the same after informal request.²⁵ Quite logically, registrars of ccTLD have to comply with the official country policy in most cases; for example, the manager of the German ccTLD “de.” would not register domain name **www.heil-hitler.de** or the like.²⁶

2.2 Nationality Principle

Nationality (or personality) principle allows the state to exercise jurisdiction irrespective of the territory where the act was committed because of the nationality of the actor (active nationality principle) or because of the nationality of the victim (passive nationality principle).²⁷

Cowan, *The Global Gaming Village: Interstate and Transnational Gambling*, 7 *G AMING L. R EV .* 251, 262 (2003).

2.2.1 Active

Active nationality principle is recognized in many legal systems. For example, according to the US Restatement of Foreign Relations a state has jurisdiction to prescribe the activities, interests, status, or relations of its nationals outside as well as within its territory;²⁸ German criminal law prescribes liability for a limited number of acts committed abroad if the offender is a German national (such as trade in human organs, sex tourism,³⁰ and some others).³¹

29

The ambition of states to have full control over its nationals is not surprising; indeed, as Shapiro commented, “many governments will be reticent about letting their citizens go online if they believe that they have no jurisdiction over what their citizens do there.”³² Nevertheless, active nationality principle is not a generally applicable rule but rather depends on the type of activity. For example, by engaging in child sex tourism a person may be liable upon return under the laws of home country,³³ in gambling usually not.³⁴ Both approaches deserve consideration.

On the one hand, proposal to make citizens liable for their Internet activities wherever they are³⁵ would solve many problems. It would help Europeans in combating hate speech³⁶ without intrusion into expression preferences of others (considering that

many of the US-based white supremacist sites are managed by German neo-Nazis); it would exclude forum-shopping³⁷ and lessen spillover effects of prosecution into other jurisdictions.³⁸ “At least one country, Australia, has made Internet casino gambling legal for everyone except its own citizens.”³⁹ This approach equals the Internet to a new independent space, like the Moon or the Antarctic region where exercise of jurisdiction is

³⁸ See, e.g., *id.* at 240.

³⁹ Cowan, *supra* note 27, at 267.

based on the active nationality principle.⁴⁰ On the other hand, there is an argument for restrained application of the active nationality principle – a person can integrate into foreign legal system without fearing prosecution of his motherland.⁴¹

Anyway, even if the active nationality principle is somewhat problematic it is less problematic than extending jurisdiction to everyone. Application of the active nationality principle to Internet-related controversies is furthermore convenient because whatever the preference of a particular state is, whether for broad or restricted interpretation of this principle, all approaches can coexist since the actor is supposed to be familiar with the laws of his or her home country and at the same time it does not produce spillover effects on other actors.

2.2.2 Passive

The passive nationality principle is applied quite rarely, often on a condition that the act is criminalized both in the prosecuting state and in the state where the offense was committed.⁴² Besides, it is hardly applicable to Internet communication and so far there have been no cases where it would be applied to extraterritorial Internet content controversies.⁴³ In case when a victim of the Internet communication is a real person – defamation, for example, – the courts tend to determine jurisdiction according to the effects principle discussed in the next Part.

2.3 Effects principle

The effects principle allows the state to exercise jurisdiction if the conduct has a substantial effect within the state's territory.⁴⁴ Although it was derived from the territorial

⁴³ To the best of knowledge of the author.

⁴⁴ See, e.g., Restatement of Foreign Relations, *supra* note 18, 402 (1) c; § 9 (1) StGB.

principle and is often regarded as its subset,⁴⁵ the meaning of the effects principle is crucial and independent, particularly for the borderless communication enabled by the Internet. On the international level the principle was recognized by the Permanent Court

of Justice in S.S. Lotus case;⁴⁶ on the national level it is also widely accepted and most jurisdictions consider their laws applicable to extraterritorial Internet content cases on its basis.⁴⁷

The main question is how far the state would go in interpreting the effects principle. The US offers “reasonableness” requirement as a yardstick for applicability of national law to extraterritorial activities.⁴⁸ German scholars sometimes mention “reasonable link” when constructing the “harmful effect” clause⁴⁹ for application of the German law to the acts committed abroad.⁵⁰ In practice, in several cases involving objectionable Internet content the courts tend to apply the effects principle broadly, easily subjecting Internet content publishers to their jurisdiction.

2.3.1 Germany

Germany was among the first to deal with the Internet content illegal under its laws but perfectly legal abroad where it was hosted and made accessible via the Internet. In 1998 it prosecuted and sentenced Felix Somm, the manager of a subsidiary of the American company CompuServe, for distribution of online pornography in its newsgroups.⁵¹ In 1999, however, the case was reversed on the appeal on the grounds that the manager was totally subordinated to the mother company and could not technically restrict access to the illegal content.⁵² The case got much attention and caused

⁵¹ AG München, Urteil vom 28.5.1998 “CompuServe” [München District Court, decision of May 28, 1998], available at http://www.netlaw.de/urteile/lgm_12.htm (last visited April 26, 2004).

⁵² LG München, Entscheidung vom 17.11.1999, NJW 2000, 1051 [München Land Court, decision of Nov. 11, 1999].

CompuServe to alter its content policy to some extent⁵³ but it was not particularly surprising in respect of jurisdiction. Quite naturally that Germany asserted jurisdiction over its national for actions that were presumably committed on its territory (even if content was on the servers of the mother company) apart from any harmful effects. Much more controversial was the Toben case,⁵⁴ which got somewhat less publicity in the US, probably due to involvement of non-US actors only.

On the trip to Germany Frederick Toben, an Australian citizen, was prosecuted and sentenced for Holocaust denial on the Internet – he was the author of various revisionist articles placed on the site of Adelaide Institute located on the Australian server. The case passed several judicial instances and ended up in the German Federal Court of Justice that upheld the conviction and elaborated most thoroughly on the effects principle as applied in the case. The Court started by determining that the content of the website passed exactly to what was covered by section 130 of the German Penal Code – ranging from clearly untrue statements of facts (Toben claimed that not more than 800 thousand Jews died in the Holocaust) to seditious and insulting statements capable to wake negative feelings to Jews in general and to German Jews in particular (such as assertions that Jews were using the Holocaust to enslave Germans in the feeling of guilt, etc.).⁵⁵ Because of the dissemination opportunities of the Internet this illegal content was easily accessible in Germany.⁵⁶ Interesting, one of the elements of the offense prescribed by section 130 is the actual ability of the communication to disturb public peace⁵⁷ and the court took pains to find it in the case. It examined the legislative intent of the norm, which was to avoid contamination of the political climate by belittlement of Nazi crimes;⁵⁸ it explained that the reasonable fear that the communication would disturb public trust in common security would be sufficient to fulfill the requirement;⁵⁹ it established that the addressees of the revisionist articles were Germans (notwithstanding

⁵³ For example, newsgroups containing child pornography were removed in the result of publicity, *see id.* “Tatbestand” [Facts].

the fact that the articles were in English);⁶⁰ and, finally, it concluded that the harmful effect was present and it was legitimate to assert jurisdiction under sections 3 and 9 of the German Penal Code⁶¹ (combination of the territorial and effects principles).

The German legal theory distinguishes the so called “abstract danger offences” that can happen on the Internet without obvious effect on the territory – such as dissemination of pornography, racist materials, extreme violence, etc.⁶² Scholars are divided on the proper interpretation. Some stand for the “restrictive theory” – since such offences do not have a specific location where effect took place, jurisdiction should be restricted to the actual place of action of offender; others support “extensive theory” – effect should be considered to happen everywhere where the abstract danger could realize;⁶³ there are also suggestions to seek for the objective link; to examine the final interest of the actor; and to introduce the push-pull test similar to the US targeting requirement.⁶⁴ The Toben Court was most close to the extensive theory, although it classified section 130 as “the abstract-concrete danger offence” because of the requirement of actual ability for disturbance of peace;⁶⁵ the Court even mentioned that theoretically it was possible to argue that the Holocaust denying statement did not have this ability⁶⁶ but provided no hint as to what kind of argument that could be. Thus, there is no clear guidance, except that the author of a website illegal under German laws will be prosecuted if he or she appears within Germany’s reach.

2.3.2 France

Article 113-2 of the French Criminal Code makes French criminal law applicable to all offenses that are committed within its territory, hereby it is not necessary that the offence is committed exclusively on the French territory, it is enough that one of its constituting elements is present.⁶⁷ This provision subjects the majority of Internet

activities to French jurisdiction. The most notorious illustration of this principle is the Yahoo! case.⁶⁸ The case ended up in the Californian court that refused to enforce the French order on the First Amendment grounds, yet a brief overview of the reasons the French court used in exercising jurisdiction over Yahoo! is meaningful for the present analysis.

In the first instance the justification for exercising jurisdiction was quick and not at all problematic for the French court – it dedicated one paragraph to criminalization of the sale of Nazi memorabilia objects and another short paragraph to the conclusion that the harm was present on the French territory since French users could easily view the auction site.⁶⁹ On the appeal the court elaborated a little more thoroughly. It acknowledged that the Yahoo site “is in general directed principally at surfers based in the United States having regard notably to the items posted for sale, the methods of payment envisaged, the terms of delivery, the language and the currency used;”

nevertheless, it refused to develop the argument further, stating that “the auctioning of objects representing symbols of Nazi ideology... may be of interest to any person”⁷⁰ and “the simple act of displaying such objects in France constitutes a violation of Article R645-1 of the Penal Code and therefore a threat to internal public order.”⁷¹ For the court it was a sufficient basis to assert jurisdiction over the case and to rule on the matter.

Interestingly, it was pointed out in the proceedings to the possible enforcement problems. The court refused to consider seriously this argument – “any possible difficulties in executing our decision in the territory of the United States,... cannot by

themselves justify a plea of incompetence.”⁷² What are the practical consequences of such a judgment is examined later in Part 3.1 of the article.

2.3.3 Australia

In the presumably first Internet defamation with a foreign defendant that was not present in the country except on the Internet the High Court of Australia dealt thoroughly with jurisdiction concerns.⁷³ The case involved defamatory statements with regard to Joseph Gutnick, an Australian resident, that appeared on the Internet site of the US-based magazine *Baron's Online*.⁷⁴ The Australian court asserted the jurisdiction under the effects principle – “activities that have effects beyond the jurisdiction in which they are done may properly be the concern of the legal systems in each place.”⁷⁵

More particularly, in determining jurisdiction the court looked at two issues. First, it examined what was the place of publication of the statements of which Mr. Gutnick complained.⁷⁶ For the analysis the court distinguished between two meanings of “publishing” – “the (publisher's) act of publication and the fact of publication (to a third party)”⁷⁷ and asked, “[i]f the place in which the publisher acts and the place in which the publication is presented in comprehensible form are in two different jurisdictions, where is the tort of defamation committed?”⁷⁸ The conclusion was that since any material placed on the Internet “is not available in comprehensible form until downloaded on to the computer of [the end user, i]t is where that person downloads the material that the damage to reputation may be done.”⁷⁹ Consequently, the tort of defamation may be considered committed in Australia. The second issue the court dealt with was whether it was necessary to create the exception of the Internet.⁸⁰ The court answered in the negative, noticing that “[w]hilst the Internet does indeed present many novel

technological features, it also shares many characteristics with earlier technologies that have rapidly expanded the speed and quantity of information distribution throughout the world... Generally speaking, it is undesirable to express a rule of the common law in terms of a particular technology.”⁸¹

Like the French colleagues, the Australian court remained unimpressed by the enforcement argument of the appellant that the difficulty or impossibility of enforcement the judgment in another jurisdiction “may amount to a practical reason for providing relief to the objecting foreign party on one or more of the grounds of objection raised in this case.”⁸²

2.3.4 Canada

Most recently the Ontario Superior Court of Justice followed the similar logic in *Bangoura v. Washington Post*⁸³ explicitly mentioning the Australian decision.⁸⁴ The court asserted jurisdiction over the US defendant Washington Post with no assets in Canada but with articles published on the Internet. The court started carefully, mentioning that “the mere fact that communication to a third party occurs in a particular jurisdiction does not as such make that jurisdiction the place of tort... There must be a substantial connection between the tort and the jurisdiction as well.”⁸⁵ But at the end the court had no difficulty in finding the connection – the plaintiff resided in Canada for two years even though he was not present at time of publication and the impact on his reputation would be in Canada;⁸⁶ besides, according to the court, there was no unfairness to the US defendant since “the Post is a newspaper with an international profile”⁸⁷ and it “should have reasonably foreseen that the story would follow the plaintiff wherever he resided.”⁸⁸

⁸¹ *Id.* § 125.

⁸² *Id.* § 121.

⁸³ Decision of Jan. 27, 2004, available at

<http://www.scrawford.net/courses/Bangoura%20v.%20Washington%20Post.html> (last visited April 26, 2004).

⁸⁵ *Id.* § 15.

⁸⁶ *Id.* § 18.

⁸⁷ *Id.* § 19 (3).

⁸⁸ *Id.* § 19 (2).

Thus, the Canadian court in its turn established a precedent that “[t]he dissemination of defamatory statements over the Internet can give jurisdiction to the court where damage is sustained by the plaintiff no matter where publication has taken place.”⁸⁹ *Inter alia*, the court produced one remarkable statement, “publishers are not obliged to publish on the Internet. If the potential reach is uncontrollable then the greater the need to exercise care in publication”⁹⁰ – surprisingly speech-chilling argument.

As in the extraterritorial cases described above, the enforcement argument was rejected, “the Washington Post defendants' home jurisdiction's unwillingness to enforce such an order is not determinative of whether the court should assume jurisdiction... It is for the plaintiffs to weigh the advantages and disadvantages of commencing an action in Ontario knowing that it may not be enforced.”⁹¹

2.3.5 Italy

One more country that employed the effects principle for asserting jurisdiction in the Internet content case was Italy. The Italian case originated because of online publications injurious to reputation and privacy of Dulberg Moshe and his two daughters, presumably posted online in Israel by Moshe’s ex-wife and her husband.⁹² The court of the first instance did not assert jurisdiction over the case because the statements under discussion were published abroad, i.e. the offence was committed outside the national territory.⁹³ The Court of Cassation disagreed and remanded the case for further consideration in accordance with its guidelines.⁹⁴

Like the Australian court, the Italian Court of Cassation makes a distinction between the act of the sender publishing defamatory statements online and the perception

of these statements by a third party.⁹⁵ Further, mere availability of the injurious statements on the Internet is not sufficient, actual perception of them by a third person is

⁹³ *Id.*

⁹⁴ *Id.*

⁹⁵ *Id.*

required.⁹⁶ Hypothetically it is possible to argue that the offence is not committed even if the material is online if, for example, nobody visits the web-site.⁹⁷ This is of course a very hard thing to argue and in practice it does not narrow the final conclusion of the court. Once “perception’ of the injurious contents of the messages took place in Italy, the offence must be deemed to have been perpetrated on the national territory”⁹⁸ and the Italian state is entitled to jurisdiction.⁹⁹

2.3.6 Findings

Currently the effects principle as applied in asserting jurisdiction in Internet content controversies is employed most broadly, capable to justify almost anything. It knows no limits and it offers no support for legal certainty or foreseeability of online communication activities. If the Internet content falls within concerns of a particular country, its accessibility alone provides a sufficient link for jurisdiction according to the interpretation of the effects principle of many national courts.

2.4 USA: Targeting-Based Analysis

The targeting-based analysis is not a completely new doctrine, it was already applied in defamation cases in printed media both in the US¹⁰⁰ and Europe.¹⁰¹ In the Internet settings, however, the United States alone favors its application. The Restatement of Foreign Relations provides that the jurisdiction in extraterritorial disputes must be reasonable.¹⁰² The comprehensive description of the factors to determine reasonableness offered by the Restatement is neither exhaustive nor mandatory,¹⁰³ and the targeting-

⁹⁶ *Id.*

¹⁰³ *Id.* comments a & b.

based analysis accepted in interstate disputes by many US courts following *Zippo*¹⁰⁴ is likely to be applied in international disputes as well.¹⁰⁵

The *Zippo* court reflected on jurisdiction issue in an interstate trademark dispute. Most importantly, it stated that a “passive Web site that does little more than make information available to those who are interested in it is not grounds for the exercise personal jurisdiction,”¹⁰⁶ and distinguished two other categories – when there is “the knowing and repeated transmission of computer files over the Internet, personal jurisdiction is proper;”¹⁰⁷ in the middle “a user can exchange information with the host

computer [and] the exercise of jurisdiction is determined by examining the level of interactivity and commercial nature of the exchange of information”¹⁰⁸ – also called the “sliding scale” analysis.¹⁰⁹

The test was developed further in numerous US interstate cases.¹¹⁰ For example, in *Young v. New Haven Advocate* the Virginian court did not assert jurisdiction over Connecticut newspapers in respect of online articles defaming a Virginian prison warden;¹¹¹ in *Neogen Corp. v. Neo Gen Screening, Inc.* the court concluded that the granting of passwords to and collecting personal information of Michigan users was sufficient proof of purposeful availment of the privilege of conducting activities within the forum and asserted jurisdiction over the Pennsylvania corporation.¹¹² Not all cases are consistent and there are some additional problems in international respect. For example, the Canadian Internet broadcaster iCraveTV had sought to limit its distribution to Canadians by conditioning access on passing through three stages of verifications and clickwrap agreements; nevertheless it was dragged into the US court.¹¹³ Besides, there are

many examples of the US prosecuting foreign actors for computer crimes. copyright or computer system security issues are different from content-related controversies but they are not completely irrelevant. At the moment there is not a big probability of an international Internet content dispute originated in the US due to the strong First Amendment protection but the possibility is not unimaginable – for example, in respect of child pornography or obscenity if the COPA or its successor passes the Supreme Court.

Certainly,

2.4.1 Discussion

Is the targeting-based analysis an adequate approach for determining jurisdiction in Internet content controversies? For some authors, “targeting is a key ingredient in the effects test.”¹¹⁵ Indeed, many would readily agree that “if an Internet content provider has taken some action to target citizens of a particular country, that country may assert jurisdiction for the content placed on that website.”¹¹⁶ Targeting is relatively easy to detect when commercial activity takes place but when a passive website merely provides information on objectionable subjects the targeting of a particular jurisdiction is far from obvious. What objectively perceivable factors can be distinguished for the targeting analysis of mere expression?

Interactivity or “the willingness to deal with persons in the forum state”¹¹⁷ could be appropriate for the analysis of commercial transactions but it is hardly applicable to a static website. Another proposal is to regard the use of a foreign language as “a primary test for a non-interactive web site... that would indicate a desire for citizens of a foreign jurisdiction to read the web page.”¹¹⁸ This one is certainly more suitable for

¹¹⁴ See, e.g., U.S. Department of Justice, *Russian Man Sentenced for Hacking into Computers in the United States*, Press Release, July 25, 2003, at <http://www.usdoj.gov/criminal/cybercrime/ivanovSent.htm> (last visited April 26, 2004) [hereinafter U.S. Department of Justice Press Release 2003]; U.S. Department of Justice, *Russian Computer Hacker Sentenced to Three Years in Prison*, Press Release, Oct. 4, 2002, at <http://www.usdoj.gov/criminal/cybercrime/gorshkovSent.htm> (last visited April 26, 2004) [hereinafter U.S. Department of Justice Press Release 2002].

¹¹⁸ Henn, *supra* note 45, at 175.

communication analysis but there are several problems as well. First, there are languages officially used in many jurisdictions (English, Spanish, etc.) and it would be problematic to determine, for example, whether an English-language website targets the US, the UK, Australia, or a number of other countries. Second, the globalization process on the Internet is prominent and the use of several languages for a website is not unusual, even without particular targeting intent. Anyway, the language factor would offer at least some restriction of unlimited application of the effects principle.

One more sound proposal is that “a web site that uses software technologies to target advertising toward the specific user should also be considered to have submitted to the jurisdiction of the specific user.”¹¹⁹ Quite logical, targeting advertising helps to derive financial and other benefits from a particular location and thus provides a link to foreign jurisdiction. Notably, there are many otherwise passive websites that have commercial advertising banners on them.

Targeting-based analysis could be a solution to the unlimited application of the effects principle if the courts could agree to accept it in a consistent form. However, currently there is not much prospect of it. European courts refuse to consider the use of foreign language as a factor for restricting jurisdiction (Toben and Yahoo case); for the US courts the problem is on the side of recognition of foreign judgments – Yahoo! used geographic identification technologies to target French citizens with French language banner advertisements but the French decision was not enforced by the US court.

120

Besides, there are still too many sites that do not expressly target anyone but welcome all interested surfers. Targeting-based analysis would exempt them from the states' control – the result the states cannot assent to.

2.5 Protective Principle

According to the protective principle a state can exercise jurisdiction over

activities of non-nationals whether these activities occur inside or outside its territory for

¹¹⁹ *Id.*

¹²⁰ *Id.* at 176.

protection of important state interests, usually security or economy of the state.

¹²¹ The

application of the protective principle is quite limited, for example, in the US it covers conduct “directed against the security of the state or against a limited class of other state interests,” ¹²² in Germany the offences that can be prosecuted under protective principle – “conduct directed against internal interests of the state” – are specifically enumerated in the Penal Code. ¹²³ In the *Toben* case, for example, the German Federal Court of Justice mentioned that the international law allowed to assert jurisdiction for protection of important internal interests ¹²⁴ but did not really rely on it.

In fact, if the protective principle were to apply broadly, many communication activities on the Internet would fall under jurisdiction of some state of the world. For example, insult of the Federal president is among offences specifically enumerated for application of protective principle in Germany, ¹²⁵ bomb-making information on the Internet infringes on the laws and security interests of the United States. ¹²⁶

2.6 Universal Jurisdiction

The universal jurisdiction is recognized by international law for protection of international interests only in very limited, even unique occasions, such as piracy, war crimes and some others – “conduct sufficiently heinous to violate the laws of all

states.”¹²⁷ The application of the universal jurisdiction to Internet content controversies could arguably be conceivable when the Internet is used, for example, to incite genocide in violation of international law.¹²⁸ The scope of crimes covered by the universal jurisdiction is not strictly determined. The best international codification effort so far is the UNO of Draft Code of Crimes against the Peace and Security of Mankind;¹²⁹ national laws can expand the scope. Thus, German law justifies universal jurisdiction in several

additional cases, including distribution of violent, animal and child pornography doubt applicable to Internet communications as well but not yet tested in real life prosecution of a foreign offender.

3 INTERNET -SPECIFIC CONSIDERATIONS

3.1 Jurisdiction to Enforce

The power to prescribe the law and adjudicate the dispute does not always correlate with the possibility to enforce the judgment. Among the three layers of jurisdiction - jurisdiction to prescribe, jurisdiction to adjudicate, and jurisdiction to

enforce¹³¹ – the weakest layer in respect of Internet controversies that actually limits the power of the state to regulate Internet communication is undoubtedly jurisdiction to enforce. As Goldsmith convincingly argues, “the true scope and power of a nation's regulation is measured by its enforcement jurisdiction, not its prescriptive jurisdiction.”

132

“In general a nation can only enforce its laws against: (i) persons with a presence or assets in the nation's territory; (ii) persons over whom the nation can obtain personal jurisdiction and enforce a default judgment against abroad; or (iii) persons whom the nation can successfully extradite.”¹³³ “In the real world, discrepancy between prescription and enforcement traditionally causes various inefficiencies, including evasion of the law,”¹³⁴ in cyberspace the effect is even more extreme. First, in Internet disputes the proportion of persons with a presence or assets in the nation's territory in comparison to all involved is remarkably low so that a state is often not capable to enforce the judgment without external help.¹³⁵ Second, extradition for enforcement is rare, mostly based on

¹³⁰ § 6 (6) StGB.

¹³¹ See, e.g., Restatement of Foreign Relations, *supra* note 18, 401.

¹³² As described by Matthew Fagin, *Regulating Speech Across Borders: Technology vs. Values*, 9

MICH. TELECOMM. & TECH. L. REV. 395, 417 (2003).

¹³³ Goldsmith, *supra* note 4, at 1216.

¹³⁴ Watt, *supra* note 1, at 690.

¹³⁵ There are areas of criminal law where the US tries to enforce its laws by all means, up to setting up a fake firm to get the criminals on the US soil but it is not likely to happen in speech cases. See U.S. Department of Justice Press Release 2002, *supra* note 114. “This prosecution demonstrates the ability and resolve of the Department of Justice to vigorously investigate and pursue cybercriminals who attack

treaties and almost never of a state's own national; besides it is even less likely to occur in speech disputes because of costs and values clashes.

¹³⁶ The third point of enforcement of a judgment abroad deserves particular consideration.

3.1.1 Enforcement of Foreign Judgments

There is no general obligation of states to enforce foreign judgments under international law,¹³⁷ although there are several international and regional conventions and treaties addressing the issue.¹³⁸ Usually the judgment will be enforced if a number of prerequisites are present. The most common are that the foreign judgment is rendered under proper jurisdiction;¹³⁹ in compliance with procedural rules of the issuing court that are compatible with general requirements of due process of law;¹⁴⁰ reciprocity is often required.¹⁴¹ There are also differences from country to country; for example, the US would rather enforce a foreign money judgment than a foreign injunction¹⁴² the latter being considered "far more difficult and intrusive upon a national sovereignty"¹⁴³ but for Germany or France the distinction does not matter.¹⁴⁴ On the other hand, American

American computer systems. We are committed to tracking down and prosecuting those individuals wherever they may be", *see* U.S. Department of Justice Press Release 2003, *supra* note 114.

¹³⁶ For example, on the extradition request of the Thai government in respect of a Thai woman who displayed the Thai national flag on her pornographic website in the UK it was commented, "it is unlikely the British government would not take action over such minor charges". *See* Silicon.com, *Porn web woman faces extradition from Britain*, Dec. 08 2003, at <http://www.silicon.com/networks/webwatch/0,39024667,39117237,00.htm> (last visited April 26, 2004).

¹³⁸ *See, e.g.*, list of Hague Conventions on Private International Law, available at <http://www.hcch.net/e/conventions/index.html> (last visited April 26, 2004).

¹³⁹ For Germany *see* § 328 (1) 1 Z IVILPROZEBORDNUNG [Civil Process Code] [hereinafter ZPO]. For the US discussion *see, e.g.*, Molly S. Van Houweling, *Enforcement of Foreign Judgments, The First Amendment, And Internet Speech: Notes for the Next Yahoo! v. Licra*, 24 Mich. J. Int'l L. 697, 699 (2003); *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1875-76.

¹⁴⁰ For Germany *see* § 723 (2) ZPO [the decision must legally in force in compliance with rules of the court that made it], § 328 ZPO (1) 2 [the defendant was not properly served], § 328 ZPO (1) 3 [no contradiction with previous decisions] or generally *see* Determann & Ang-Olson, *supra* note 137, at 197. For the US discussion *see, e.g.*, Houweling, *supra* note 139, at 699; *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1875-76.

¹⁴¹ *See, e.g.*, § 328 ZPO (1) 5.

¹⁴² *See* Determann & Ang-Olson, *supra* note 137, at 193.

¹⁴³ *Id.* at 195-96.

¹⁴⁴ *Id.* at 198.

punitive damages are not accepted in Germany.¹⁴⁵ But the particular problem of enforcement of foreign judgments in context of Internet content controversies is represented by the public policy exception secured in many legal cultures.¹⁴⁶ The US is especially well-known for its reluctance to enforce foreign judgments in speech cases due to the First Amendment protection¹⁴⁷ thereby considerably limiting the enforcement expectations of other states – frequently one of the parties in Internet content controversies resides in the US.

3.1.2 Should Prescribe If Cannot Enforce?

The courts are aware of the practical limits of enforcement of judgments entered against persons abroad, nevertheless, they expressively reject the enforcement argument.¹⁴⁸ They feel reluctant to openly admit the limits of their power but the reality prevails and judgments remain unenforced. Remarkably, after the Yahoo! successful litigation in the US that declared unenforceable the order of the French court, there was a twist of the French anti-racist policy and the approach to Internet content controversies changed in practice – the efforts to ensure the hate-free society and the hate-free Internet for local users concentrated on local ISPs instead of on foreign content providers. Thus, in 2001 a case appeared in a French court with plaintiffs almost identical to in the Yahoo! case that complained of the accessibility in France of a number of white-supremacy sites, particularly to those hosted under www.front14.org.¹⁴⁹ This time the anti-racist organizations did not venture into the meaningless race after the American hosting provider. Rather, that wanted to judicially oblige French ISPs to block access to the

site.¹⁵⁰ Considering technical limits of effective blocking measures the litigation resulted in a general obligation on French ISPs to work out a workable technical solution in cooperation with the plaintiffs.¹⁵¹ Interestingly, before going to court LICRA and other plaintiffs contacted the Alaska-based host ISP that agreed to terminate hosting of hateful material.¹⁵² However, the site found another host in Boston that remained insensitive to LICRA's demands.¹⁵³

The practice proves that impossibility to enforce is a highly important matter; the question, however, is how to use this conclusion. On the one hand, there are suggestions that inability to enforce may amount to a practical reason for not extending jurisdiction too much;¹⁵⁴ on the other hand, there are views that on the contrary it may serve as justification for extensive prescriptive jurisdiction – since most entities have no assets other than in their “home” territory, there is no reason to worry and to exaggerate spillover effects of broad prescriptive jurisdiction.¹⁵⁵

One could question, what is the purpose of useless prescription? It produces litigation costs and no real result. Policy and value statements of the country are anyway apparent from criminal codes and other laws. At the same time worldwide jurisdiction contributes to legal uncertainty – even if it is not a meaningful factor anymore,¹⁵⁶ it remains a value. The powerless victims of the worldwide jurisdiction would be end-users that would have to check the laws of every country they travel to if they happen to have placed something on the Internet.

The point is, one have to look reality in the face. The courts regard it beyond their dignity to accept the enforcement argument; however, for a change they could worry on

recognition of and respect to their judgments. The French court stated that it could not create exception of the Internet but ended up in measures on home ISPs. The ability to

Internet access providers and technical providers], available at http://www.legalis.net/cgi-iddn/french/affiche-jnet.cgi?droite=internet_responsabilite.htm (last visited April 26, 2004).

enforce should always be taken into consideration when asserting jurisdiction. It remains to hope that common sense prevails and courts would listen to the arguments similar to this one of a German commentator, “enforcement of German law against content providers abroad is illusionary... In the long run the capitulation before the power of reality and the adjustment of German law to the internationally enforceable minimal standards are unavoidable.” ¹⁵⁷

3.2 Consent to Jurisdiction

Within the discussion on jurisdiction in cyberspace there are suggestions that private regulations will be crucial not only in determining jurisdiction as well as in Internet dispute resolution altogether. ¹⁵⁸ “A more formal method to establish private legal orders in cyberspace is to condition access to particular networks on consent to a particular legal regime.” ¹⁵⁹ Two main problems arise from this suggestion, one of a

general character, the other relating to the subject matter of the article (Internet content controversies).

First, “[t]he validity of [the] contract, in which no positive assent is obtained and the Web site visitor is unlikely to have read the terms, stands on shakier ground.”

¹⁶⁰ It is

very doubtful that legal notices hidden among thousands of pages like “by accessing this web site both you and Netscape agree that the statutes and laws of the state of California, without regard to the conflicts of laws principles thereof, will apply to all matters relating to use of this web site,” ¹⁶¹ may constitute informed consent. The user may not even be

aware that there is such a notice. (In fact, the author of this article was not able to find

this statement independently starting from the Netscape home page and had to follow the

link provided in another article.) ¹⁶² Several US courts already held that “it cannot be said

that merely putting the terms and conditions in this fashion necessarily creates a contract

¹⁵⁷ Höernle, *supra* note 154, at 1013.

¹⁵⁸ See, e.g., Goldsmith, *supra* note 21, at 146.

¹⁵⁹ Goldsmith, *supra* note 4, at 1214.

¹⁶⁰ Geist, *supra* note 113, at 1382.

¹⁶¹ Netscape, *Applicable Laws*, at http://wp.netscape.com/legal_notices/laws.html (last visited April 26, 2004).

¹⁶² August, *supra* note 2, at 546-47, footnote 85.

with any one using the web site.” ¹⁶³ Moreover, even in clearly contractual matters

clickwrap agreement is not always valid. “In business-to-business contracts, choices of

forum clauses are generally enforced in the United States, the E.U., and Japan. Their

validity, however, may be problematic when one party is a consumer.”

¹⁶⁴ Thus, EU

regulation allows a consumer to bring a suit in the courts of a place where the consumer

is domiciled. ¹⁶⁵

Second, disputes involving Internet content controversies are clearly distinct from commercial transactions. Usually they involve either defamation lawsuit or criminal prosecution by the state for dissemination of illegal material where contractual consent doesn't play any role. Even Goldsmith, one of the main proponents of the "consent" approach mentions that "it is doubtful whether these private regulations will accord with the mandatory laws of territorial governments," and it is not really a panacea. 166

Certainly, it doesn't matter for the government if it is asserted that the criminal act was committed under the laws specified on the respective webpage and it doesn't matter for a claim of a third-party who did not agree to any terms. In short, consent theory does not help in Internet content controversies.

3.3 Zoning Argument: Technology

In the recent years there appeared a wave of technology arguments led by Goldsmith claiming that "it is already possible for content providers to take measures to achieve significant control over information flows... As such control becomes more feasible and less costly, personal jurisdiction over cyberspace activities will become functionally identical to personal jurisdiction over real- space activities." 167

According to them, the law should not be alone in protecting local values, "once harnessed to the law, technology can facilitate the exercise of prescriptive jurisdiction in the international arena, by providing the means to ensure perfect compliance with regulatory claims over

¹⁶³ Ticketmaster Corp. v. Tickets, 2000 U.S. Dist. LEXIS 4553, 8; the same conclusion was held in *Mendoza v. AOL*, 90 Cal. App. 4th 1. (Cal.App. 1 Dist. 2001) on the terms of AOL member agreement.

¹⁶⁴ *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1860.

¹⁶⁶ Goldsmith, *supra* note 21, at 146.

cyberspace, by the use of filtering techniques¹⁶⁸ An interesting issue comes up, is it an argument for responsibility *if zone* or for obligation *to zone*? In the former case it would be an additional helpful factor for determining targeting within the effects test; in the latter case, however, it would require transformation of the Internet as we know it.

Obviously, for many commentators there is nothing extravagant in the obligation to zone, for them the claim that content providers should not be liable for harms everywhere where the content appears is justified only as long as “the content provider cannot control the geographical and network distribution of his information flows.”¹⁶⁹

Once adequate means to control information flows are available, they must be employed and the provider cannot complain of liability in a foreign state.¹⁷⁰

Today it is not contested that the quality of the Internet as a free borderless medium does not lie in its “nature“ but is determined by the computer code.¹⁷¹ There are various tools to identify the geographical location of the user¹⁷² and many companies routinely do that for targeting advertising purposes. Moreover, some companies already exercise regional self-censorship – Google and Yahoo were forced to stop running online casino advertisements under the US prosecution threat but Yahoo limited this decision for the US territory.¹⁷³ Undoubtedly, “the rapid development of filtering and “zoning“ techniques, now used for purely commercial reasons such as targeting advertising to a particular public, provides clear evidence that geographical indeterminacy on the Internet is not inevitable, but results from ideological choice.”¹⁷⁴

Some fear that “to effectively prevent materials from entering states where they are not permitted will require “extensive self-identification of users before they receive access to information.”¹⁷⁵ In fact, this concern could be avoided with a slight change in

¹⁷⁵ Fagin, *supra* note 132, at 445, citing Yochai Benkler, *Internet Regulation: A Case Study in the Problem of Unilateralism*, 11 *EJIL* 171, 178 (2000).

the architecture of the Web, for example, introduction of geographical indicator in the IP number of every computer would enable an easy check of the location of every site visitor and could make the site inaccessible for users from specific jurisdictions. The only real question is whether the Internet architecture should develop in this direction, which is a policy question. Throughout the recent history the Western world tried to promote its ideas to those who did not have access to them. The zoning argument, on the contrary, totally disregards the effect on freedom of speech.

3.4 Costs and Effect on Speech

Whether broad prescriptive jurisdiction in respect of Internet content cases may be effectively realized or not, is not the only question that should be examined. “Without assessing [other] factors [such as costs, overall impact on speech, and democracy] the impact of prescriptively legitimate unilateral exercises of jurisdiction upon the on-line community remains unclear.”¹⁷⁶ What would happen if states continue to insist on broad exercise of jurisdiction in Internet content matters?

3.4.1 With Zoning Technologies

In one scenario, broad exercise of jurisdiction would undoubtedly be legitimate if cyberspace were zoned and every author could control the spread of it creation. From the technical point of view, the architecture of the Internet is developed by people and any direction of its development is possible.¹⁷⁷ But do we really want, do we really need the “zoned” cyberspace? “Since the 1940's the United States has deployed anti-jamming

technologies to make Voice of America and other United States government sponsored broadcasting available to people in nations with governments that seek to block news and information.”¹⁷⁶ Similarly, twice in the past three years the US Congress dealt with the bill on Global Internet Freedom proposed for the same purpose – to promote freedom of

¹⁷⁶ *Id.* at 421.

¹⁷⁷ See, generally, L. ESSIG, *supra* note 171.

¹⁷⁸ Elaine M. Chen, *Global Internet Freedom: Can Censorship and Freedom Coexist?* 13 DePaul-LCA J. Art & Ent. L. 229, 233 (2003).

expression on the Internet.¹⁷⁹ Zoning of the Internet would lead to an exactly opposite result. Not only would it make much of valuable content unavailable but it would also significantly raise the costs of Internet activities for all concerned – “in order to implement this technological solution, a multi-national actor must reconsider its relationships with *all* its users, regardless of national origin.”¹⁸⁰ That could lead to a particular speech-averse result - “assuming that technology continues to improve, it may become easier to withhold speech from foreign countries than to sort out inconsistent foreign laws that specify what counts as harmful where.”¹⁸¹

The insistence on general zoning would completely alter the current status of the Internet as a cheap, easily accessible medium enabling free flow of ideas worldwide as we know it and as many cherish it. The Internet would stop to be the medium of users – few private authors have the means to control the spread of their work and few Internet companies would provide free or cheap services when burdened by the obligation to employ geographical filtering in respect of content placed by their customers. Fortunately, this dark development is not probable to occur on a big scale;¹⁸² first of all because the US companies that enjoy the First Amendment protection are not likely to

assume the additional costs without effective enforcement threats. Nevertheless some regional adjustments are possible and already in force, mainly due to regional business interests.¹⁸³

3.4.2 Without Zoning Technologies

In another scenario which is more similar to what is happening today, the courts will continue exercising worldwide jurisdiction but with limited success mainly due to the enforcement problem. One could reflect what would subjecting users to the laws of every country lead to? Would it lead to less objectionable content on the Internet? It is

¹⁷⁹ The bills were not adopted but the fact is significant anyway. See H.R. Res. 12, 107th Cong. (2001); H.R. Res. 48, 108th Cong. (2003).

¹⁸⁰ Yochai Benkler, *Internet Regulation: A Case Study in the Problem of Unilateralism*, 11 EJIL 171, 174 (2000).

¹⁸¹ Houweling, *supra* note 139, at 714-15.

¹⁸² See, e.g., Fagin, *supra* note 132, at 415.

¹⁸³ Human Rights Watch, *Yahoo! Risks Abusing Rights in China* (August 9, 2002), at <http://www.hrw.org/press/2002/08/yahoo080902.htm> (last visited April 26, 2004).

very doubtful, considering that the user is innocent under his or her local laws (if otherwise, the problem may be solved by the respective state, on the state's own initiative or on the notice of others). The only thing it can lead to would be the increasing amount of warnings like they appeared after the Toben case – “Travelers alert!... Stay out of prison! Stay out of Germany!”¹⁸⁴

Under the logic of effects principle as applied by many Western states in asserting jurisdiction over out-of-state actors, producers of swimming suits fashion or erotic could be arrested on their trip to Islamic states as infringing the morality of the country. In fact, journalists, politicians, scholars, writers, enthusiasts, and anyone speaking in

cyberspace would face the same risk – multiplied by the fact that it is not always obvious that the speech is objectionable and where exactly it is objectionable. Perhaps, one could maintain a database of all possible objectionable topics to make it certain not to experience prosecution process on a vacation trip. Irony apart, so far Islamic states did not to extend jurisdiction to foreigners with no connection to a state¹⁸⁶ fighting with objectionable content by local filtering measures but would they refrain from it long if Western states provide so many examples? It appears, Western states are less tolerant to Internet speech than Islamic societies traditionally criticized for oppression of freedom of expression.

3.5 International Solution

International agreement on jurisdiction in Internet-related issues would certainly be the best choice. One of the challenges for negotiating such an agreement is that the Internet activities involve too many topics (commerce, speech, criminal, civil, etc.) that were traditionally dealt with by different means. So far, there are many conventions on jurisdiction in non-Internet-related issues, all of them quite specific and not particularly

¹⁸⁴ See, e.g., statement at <http://www.zensurfrei.com/germanyinformation/> (last visited April 26, 2004).

¹⁸⁵ HERBERT TRÖNDLE, STRAFGESETZBUCH UND NEBENGESETZE [PENAL CODE AND RELEVANT LAWS] 60 (2003).

¹⁸⁶ REMER, *supra* note 17, at 122.

the Convention of Cybercrime but in no clear way.

188

The situation is further aggravated by the fact that among other topics speech issues imply clashes of values. Even regional cooperation efforts that are looked upon as a possible guidance¹⁸⁹ have their shortcoming for application on the international level. Thus, the EU E-Directive offers a combination of home country control (the website operator will be liable in the home state)¹⁹⁰ with an override procedure (the state can assert control over a foreign operator in enumerated exceptions (like public policy issues) but before taking measures should contact another Member State and notify the EU Commission).¹⁹¹ It may be a good solution for a region with more or less commonly shared values but it would hardly work for the whole world¹⁹² – there is little prospect to agree on something when countries do not have much in common from the beginning. Moreover, negotiations between governments on every Internet dispute involving public policy will be too burdensome. The conclusion seems to be that the solution may be found on the national level only, the world is not ready for the international solution yet.¹⁹³ The realistic goal could be to concentrate on harmonization of existing and developing rules in respect to jurisdiction in Internet disputes and to try generalizing them into customs of international law, establishing common principles not from “above” but from below.¹⁹⁴

3.6 Towards Clarity of Rules

¹⁸⁷ See, e.g., Henn, *supra* note 45, at 173, see also *supra* note 138.

¹⁸⁸ Thus, art. 22 (4) of the Convention on Cybercrime provides that the “Convention does not exclude any criminal jurisdiction exercised in accordance with domestic law”.

¹⁸⁹ See, generally, Mark F. Kightlinger, *A Solution to the Yahoo! Problem? The EC E-Commerce Directive as a Model for International Cooperation on Internet Choice of Law*, 24 MICH. J. INT'L L. 719 (2003).

¹⁹⁰ Directive 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market (‘Directive on electronic commerce’), art. 3 § 1, 2000 O.J. (L 178), available at <http://europa.eu.int> (last visited April 26, 2004).

¹⁹¹ *Id.* art. 3 § 4.

¹⁹² See, e.g., Kightlinger, *supra* note 189, at 747.

¹⁹³ See B. REMER, *supra* note 17, at 242.

¹⁹⁴ See *id.* 176-77, 201.

Foreseeability of rules and of the governing law is not a popular argument in discussing Internet transnational issues nowadays¹⁹⁵ but it used to be important.

“Asserting jurisdiction over a nonresident or a person not physically within the state would “offend traditional notions of fair play and substantial justice,” the court said once.¹⁹⁶ The statement is not completely outdated.

“All other things being equal, companies large and small generally prefer predictable legal environments to unpredictable environments,”¹⁹⁷ the same being true for private users as well. As David Post argued, “[s]cale matters... Rules and principles that may be quite reasonable at one scale may become incoherent and unreasonable at another.”¹⁹⁸ In a more recent decision the same idea was expressed by the court – “it does not make sense to adopt a rule that could lead to the liability of countless parties whose role in the infringement is nothing more than setting up and operating a system that is necessary for the functioning of the Internet.”¹⁹⁹

Since every state has its own local policy to protect “all should be ready to subscribe, *ex ante*, to a rule of reason, under which the benefit from being able to ensure protection of local policies should balance out the concessions made to other States’ conflicting regulatory claims.”²⁰⁰ The pragmatic question whether a state *can* unilaterally prescribe laws governing Internet activities can be answered in the affirmative – yes, it can though with very limited success. But it is not enough; the second question should follow, whether a state *should* do it. “Jurisdiction should not be exercised merely because it is permissible under principles of international law.”²⁰¹

4 CONCLUSION

¹⁹⁵ See, e.g., Fagin, *supra* note 132, at 419.

¹⁹⁶

- ²⁰⁰ Watt, *supra* note 1, at 692.
- ²⁰¹ *A Report on Global Jurisdiction Issues*, *supra* note 16, at 1821.

With several exceptions, states tend to apply the effects principle in asserting jurisdiction over foreign actors in Internet content controversies. A little simplified, the justification provided is as follows – “what you say matters to us. Since we can hear it we have jurisdiction.” While the validity of the effects principle as such is not contested, it is necessary to revisit its meaning in respect of Internet content disputes. “A world in which the Effects Principle returns the result “No Substantial Effects Outside the Borders“ when applied to the vast majority of events and transactions is not “functionally identical“ to a world in which application of the same principle to the vast majority of events and transactions returns the opposite result.” ²⁰² Potential accessibility of a website is not a proper link for application of national law. ²⁰³

The US interstate cases with targeting-based analysis provide only limited guidance. First, interstate jurisdiction is different from international extraterritorial jurisdiction, primarily because of the absence of enforcement concern. Second, it is not clear what would be the application in extraterritorial criminal cases, such as child pornography or obscenity prosecution (the latter being a theoretical example so far). Targeting-based analysis could help but even in the US it is not used consistently. Besides, there are not too many objective indicators of targeting and the risk of their arbitrary application reducing the outcome to nothing cannot be ignored.

The realistic proposal would be to apply the territorial principle and the active

nationality principle for determining jurisdiction in Internet content matters. They both can be interpreted quite broadly comprising hosting ISPs and content providers on the state's territory (from businesses to private users), registrars of respective ccTLD names and nationals of the state, thereby giving substantial playground to the state to protect its interests. It would provide foreseeability of legal order and at the same time it would adequately answer the enforcement concern limiting the jurisdiction to the controversies that the state can effectively enforce.

Before the Internet raised many new legal issues the universal jurisdiction was recognized on very limited occasions. Now many states refuse to see the limits of their authority in Internet speech regulation and unrestrained application of the effects

²⁰² Post, *supra* note 198, at 1383 (2002).

²⁰³ See Sieber, *supra* note 50, at 2068.

principle equals pure speech to the most hideous crimes. Even if some Internet content could arguably fall within the universal jurisdiction (such as child pornography), it should not be generalized to cover any case when Internet content is not in line with local preferences.

Der dritte Mann. Präsidentschaftswahlen in einer "Shareholder-Gesellschaft" Von Professor Dr. Claus Leggewie und Dr. Christoph Bieber

[home](#)
[biografie](#)
[publikationen](#)

[forschung](#)
[lehre](#)
[links](#)

Die meisten Politologen hätten vor ein paar Monaten darauf gewettet, dass Al Gore die amerikanische Präsidentschaftswahl sicher gewinnen wird. Laut state of the art sprach alles für einen Sieg des Demokraten aus (und nebenbei: in) Tennessee. Schließlich war er Vizepräsident einer von der Bevölkerung überwiegend als erfolgreich bewerteten Administration, die Amerika aus einer tiefen Rezession in eine Dekade konstanten Wirtschaftswachstums, beachtlicher Produktivitätszuwächse und beeindruckender Weltmarkterfolge geführt hatte und auf halbwegs friedliche Zustände in der Welt verweisen konnte. Ein Kopf-an-Kopf-Rennen, bei dem der unerfahrene Provinzpolitiker George W. Bush am Ende gar als Favorit gehandelt wird, war also nicht zu erwarten.

Die Faustregel: Prosperität gleich Kontinuität, Krise gleich Wechsel basiert auf langjähriger Erfahrung, ist aber ohnehin mit Vorsicht zu genießen. Eine große Rolle spielen der "Charakter" und (frühere) Lebenswandel eines Kandidaten, seine Gewandtheit im Umgang mit den elektronischen Medien und natürlich die vielen Unwägbarkeiten der Kampagne. In allen drei Belangen hatte Bush jr. keinerlei Startvorteile, aber Gore überraschenderweise die größeren Schwierigkeiten. Die Distanzierung von Bill Clinton hat Gores Image als steifer Musterschüler nicht überspielen können; bei den TV-Duellen hat der an sich gewiefte Debattierer Terrain verloren, und wackelige swing states, auf die es im Wahlmännergremium letztlich ankommt, vernachlässigte er ebenso wie solche Staaten, die als sichere Bank galten, darunter sogar seinen Heimatstaat.

Ein "objektiv" gegebener Vorsprung wäre demnach durch subjektive Fehler und Nachteile verspielt worden. Ob die bei beiden Kandidaten üppig, aber ungleich gefüllte "Kriegskasse" eine Rolle spielt, mag dahingestellt bleiben. Auch wenn man als Bewerber um das Weiße Haus von Hause oder durch Spenden superreich sein muss, ist eine Präsidentschaft der Vereinigten Staaten und auch ein Sitz in Senat und Abgeordnetenhaus nicht käuflich. Gibt es also weitere, strukturelle Gründe für eine mögliche Niederlage Gores?

Außer der Stimmungslage der Nation, dem jeweiligen Themenkatalog ("issues") und der Persönlichkeit der Kandidaten werden für Wahlentscheidungen meist Determinanten genannt wie sozialer und Bildungsstatus, ethnische Herkunft und Geschlecht, geographische Lage (Stadt/Land) und nicht zuletzt religiöse Überzeugungen. An letztere ist, vor allem nach den religiös intonierten Bekundungen des demokratischen Vize-Bewerbers Joe Lieberman, als Hintergrund der amerikanischen Wahlentscheidung zu Recht erinnert worden. Aber ausschlaggebend sind der religiöse Pluralismus und die starke evangelikale Rechte dieses Mal noch weniger als 1992 und 1996. Damals drohte der rechtsgerichtete Republikaner Pat Buchanan mit einer Sezession strenggläubiger Abtreibungsgegner, die er dieses Mal wirklich vollzogen hat. Doch in den Umfragen ist der Kandidat der Reform Party zu vernachlässigen; George W. Bush, der sich im Vorwahlkampf als "mitfühlender Konservativer" von religiösen Eiferern wie Buchanan und Gary Bauer abgesetzt hat, brauchte von der religiösen Rechten nicht mehr zu befürchten, zumal er einen Teil ihrer Forderungen, vor allem die Gutscheine für religiös geleitete Privatschulen, übernommen hat.

Anders verhält es sich mit dem Kandidaten der Green Party, Ralph Nader, den anfangs niemand ernst genommen hatte. 1996 war er so chancen- und erfolglos geblieben wie die radikale Rechte jetzt, doch nach letzten Umfragen werden ihm fünf und mehr Prozent der Stimmen zugetraut. In einem völlig von Demokraten und Republikanern beherrschten Zweiparteiensystem mit Mehrheitswahlrecht wäre dies ohne große Bedeutung, doch in einigen US-Staaten, vor allem an der Nordwestküste, könnte Nader noch mehr Stimmen einheimsen und dem Vizepräsidenten damit auf sicher geglaubtem Terrain so viel abnehmen, dass dort - und in der Folge im ganzen Lande - Bush den entscheidenden Vorsprung hätte.

Die Frage wird Dienstagabend entschieden sein, aber sie erlaubt schon jetzt, einige möglicherweise

wahlentscheidende Komponenten auch künftiger Präsidentschaftsrennen in den Blick zu nehmen. Dazu gehört erstens die latente Stärke einer "dritten Partei", die aus dem Repertoire "unabhängiger", also weder der "Grand Old Party" noch den "Democrats" zuneigenden Wähler schöpft. Die Größe dieses Potentials ist unklar und umstritten; wahrscheinlich sind es weniger Amerikaner, als Ross Perot 1992 für sich gewinnen konnte, aber mehr, als sich jetzt für Nader erwärmen können. Der wahrscheinlich größte Teil der "Independents" bleibt Wahlen eher fern.

Die hohe, aber zuletzt noch gestiegene Enthaltungsquote daheim bleibender Wähler verweist zweitens auf sozio-ökonomische Spaltungslinien in der amerikanischen Gesellschaft, die letztlich wichtiger sein dürften als das religiöse Bekenntnis und die (medial verstärkten) Vorlieben und Abneigungen der Wählerschaft gegen die Bewerber. Der beachtliche Anklang, den der als "Verbraucheranwalt" bekannt gewordene Ralph Nader in der Kampagne 2000 gefunden hat, bringt eine weit verbreitete Unzufriedenheit zum Ausdruck - Gefühle, von der politischen Klasse (vor allem auf Bundesebene) ignoriert und vom demokratischen Prozeß ausgeschlossen zu sein, aber auch Enttäuschung über die tatsächlichen Wirkungen von zehn Jahren Wirtschaftswachstum, die weit weniger rosig waren, als vor allem in Europa durch die vom Erfolg der Shareholder-Wirtschaft faszinierten Beobachter der Anschein erweckt worden ist. Dass die US-Bürger zwar fast alle, aber höchst ungleich von der Erholung der Weltwirtschaft profitiert haben und die Realeinkommen bis weit in den Mittelstand hinein eher stagnierten, ist ein Faktor; dass zugleich mit den gewaltigen Überschüssen des Bundeshaushaltes erstmals wieder Verteilungsoptionen offen standen, kam hinzu. Al Gore hat diese Entwicklung in seiner Kampagne aufzugreifen versucht: Einerseits wurde er nicht müde, die binnen- und außenwirtschaftliche Bilanz der Clinton-Administration zu loben, andererseits adressierte er sich an jene, die nicht ins Hintertreffen geraten sollten, und etikettierte die fiskal- und sozialpolitischen Vorschläge seines Rivalen Bush jr. als einzig den oberen Zehntausend und superreichen Familien zugehört.

Einkommens- und Vermögensunterschiede spielen auch in der ganz auf individuellen Erfolg eingestellten politischen Kultur der Vereinigten Staaten eine nicht unerhebliche Rolle. Das beginnt mit der politischen Partizipation und der Beteiligung an überregionalen Wahlen selbst, die umso geringer sind, je niedriger Einkommen und formales Bildungsniveau liegen. Bei der letzten Präsidentenwahl lag Clinton bei Wählern mit einem Familieneinkommen von unter 50.000 Dollar weit vorn, ab 75.000 Dollar votierten sie jedoch genauso deutlich für Bob Dole, und ganz ähnlich verhielt es sich bei den Wahlen zum Repräsentantenhaus. Noch deutlicher war der "gender gap", der Bill Clinton einen deutlichen Vorsprung bei den Frauen und Angehörigen der schwarzen und hispanischen Minderheiten gab, übrigens auch im weiteren, aufgrund der Lewinsky-Affäre höchst turbulenten Verlauf seiner Amtszeit. Am deutlichsten war die Diskrepanz allerdings im Bezug auf den Schulabschluß, wo Clinton bei Personen mit High School- und ohne Schulabschluß ebenso vorherrschte wie den Personen mit Universitätsabschluß.

Nach allem, was man aus Umfragetrends weiß, haben sich diese sozio-demographischen Determinanten des Wahlverhaltens, die aus Einkommensschicht, Bildungsgrad und Zugehörigkeit zu Minderheiten resultieren, im Zweikampf der Parteien und der Bewerber um die Präsidentschaft entdramatisiert. Wer sich, wie mehrfach Al Gore gleichwohl an die "working families" wendet, begibt sich auf ein schlüpfriges, "klassenkampf"verdächtiges Terrain und beantwortet eine neue, ganz wesentliche Frage nicht: Welches Wahlverhalten legen Aktionäre an den Tag? Dieser Gruppe gehören heute nicht mehr, wie vor zwanzig Jahren, die "happy few" an, oder wie noch 1996 knapp über ein Drittel der amerikanischen Wähler, sondern zwischenzeitlich mehr als 60 Prozent - mit weiter steigender Tendenz. Einige Beobachter sprechen deshalb bereits von einer "Investorenklasse" (Larry Kudlow). Diese "Klasse" hat freilich kein gemeinsames Bewußtsein noch ist sie auf eine soziale Schicht beschränkt. Mehr als die Hälfte der Aktienbesitzer verfügt über weniger als 50.000 \$ Jahreseinkommen, und auch ein Viertel der Geringverdienenden (unter 25.000 \$), darunter junge Familien, "working poor" und Pensionäre sind womöglich ohne Krankenversicherung, besitzen aber individuell oder über Investmentfonds Aktien.

Man könnte nun sagen, dass es wenig Sinn macht, auf das Wahlverhalten speziell der Shareholder zu achten, wenn sie bald einen fast repräsentativen Querschnitt der amerikanischen Bevölkerung bilden. Aber Investoren wählen mit signifikant höherer Wahrscheinlichkeit Bush jr. als Gore, und vor allem betrachten sie nicht allein die über einen langen Zeitraum guten Wirtschaftsdaten als die in letzter Zeit weniger guten Signale der Finanzmärkte. Im Vordergrund steht mit anderen Worten weniger die vergangene oder gegenwärtige Identifikation mit dieser oder jener Partei und weniger der Rückblick auf die mit einer Administration gemachten Erfahrungen als die zukünftigen Erwartungen an die nächste Administration. Und wer auch immer diese führt, wird die Zahl der Shareholder durch seine Politik erhöhen und die Bindung von Washington D.C. an Wall Street verstärken. Hinzu kommt, wie eine

Umfrage im Auftrag der American Shareholder Association ergeben hat, dass Aktionäre eher die George W. Bush zugerechneten Orientierungen - weitere Steuererleichterungen, weniger staatliche Regulierung, Schulgutscheine - unterstützen. Der republikanische Kandidat könnte seinen "objektiven" Rückstand also dadurch wettgemacht haben, dass er nicht allein "die Reichen" besser angesprochen hat, sondern sich stärker mit einer Shareholder-Gesellschaft (und -Demokratie) im Einklang befindet. In einer solchen könnten sich klassische Milieubindungen und herkömmliche Parteiidentifikationen relativieren und sich das Wahlverhalten in der Tat jener "rationalen Wahl" annähern, die bei einer Wahlentscheidung ökonomische Zweckkalküle in den Vordergrund stellt.

Dass muss allerdings nicht bei allen Wählern der Fall sein, und die möglichen Stimmen für den "Anti-Kandidaten" Ralph Nader können in der Präferenz für eben jene normativen (und langfristig nicht minder "rationalen") Zielsetzungen begründet sein, die sowohl Gore als auch Bush jr. im Wahlkampf kaum thematisiert haben: nachhaltige, ressourcen- und umweltschonende Entwicklung, bessere Entlohnung und soziale Sicherheit einfacher Arbeitnehmer, eine inklusivere Form der wirtschaftlichen Globalisierung. Nader und seine nach Finanzstärke und Kampagnenfähigkeit von beiden Großparteien meilenweit entfernte Bewegung mobilisiert mit anderen Worten jene politische Spezies, welche der Ökonom Paul Krugman als "Seattle-Mensch" charakterisiert hat und die seit den massenhaften Protesten gegen die Sitzung der Welthandelsorganisation WTO im November 1999 sich von Seattle aus um die ganze Welt ausgebreitet hat.

Das Auftauchen dieser in sich äußerst heterogenen Bewegung versetzt den demokratischen Präsidentenbewerber und seine Partei in einen schmerzhaften Spagat. Sie müssen sich nolens volens an der Shareholder-Gesellschaft ausrichten, haben es aber zugleich mit einer entschiedenen Opposition von Umweltschützern, Gewerkschaftlern und Sozialreformern zu tun, die mit herkömmlichen Kontakten zu den entsprechenden Organisationen nicht mehr erreichbar sind. Naders Kampagne ist gewachsen, obwohl sie ohne jede formelle Unterstützung aus den Minderheiten, den Gewerkschaften und Menschenrechtsgruppen geblieben ist. Für Al Gore ergibt sich damit, obwohl im amerikanischen Parteiensystem zwei sich relativ ähnliche "catch-all-parties" (Otto Kirchheimer) um die Macht ringen, die ihnen per Mehrheitswahl auch klar und ohne Koalitionszwang zufällt, ein ähnliches strategisches Dilemma wie für die Mitte-Links-Koalitionen in Europa. Und potentielle Wähler Ralph Naders haben ebenfalls ein Problem: dass sie mit ihren Stimmen für einen Kandidaten ins Weiße Haus bringen, der von ihren Zielen noch weiter entfernt ist als der vielkritisierte Gore.

Darüber, ob man prinzipientreu für Nader oder das "geringere Übel" Gore votieren soll, hat es in Kreisen der amerikanischen Linken eine erbitterte Diskussion gegeben, die ein paar Tage vor der Wahl nichts anderes als ein echtes Dilemma zutage gefördert hat. Aber es wundert nicht, dass dieses Dilemma auf eine Weise angegangen worden ist, die wiederum weniger klassische weltanschauliche Affiliationen widerspiegelt als sich Gegebenheiten der Shareholder-Demokratie zunutze macht: Das Paradigma des elektronischen Handels hat sich nämlich auch folgerichtig auf den Wahlkampf ausgeweitet und große Teile der "Campaign2000" mit Elementen und Formaten aus dem Fundus des "eCommerce" bereichert.

Im Windschatten der "Killer-Applikationen" aus dem Vorwahlkampf - im Frühjahr sorgten vor allem die massive Erhebung von Spenden ("Online-Fundraising") und die gezielte Wähleransprache per e-mail ("Voter Targeting") für Furore - erfolgte eine gravierende Umgestaltung der Arena politischer Online-Kommunikation, denn noch im letzten Präsidentschaftswahlkampf vor vier Jahren stand die Nutzung des Internet zum Dialog mit der Wählerschaft im Vordergrund.

Der Trend zur Kommerzialisierung der Wahlkampfkommunikation scheint nun für einen unvermuteten "backlash" zu sorgen, der sich mit nichts geringem auseinandersetzt als mit dem amerikanischen Wahlsystem selbst. Stimmen für Gore und Nader sollen jetzt staatenweise "gehandelt" und so ausgetauscht werden, dass Gore nicht verliert und Nader gleichwohl seinen Stimmenanteil behalten kann.

Eine Vorahnung davon durchzuckte die politische Netzwelt bereits bei der Episode um die Website "vote-auction.com": Ein österreichischer Betreiber hatte auf dieser Plattform nach Bundesstaaten vorsortierte Stimmenpakete zum Verkauf angeboten - und angeblich waren stattliche Gebote eingegangen (260.000 Dollar für etwa 21.000 Stimmen). Doch der zu offensichtlich an den herkömmlichen Marktregeln angepasste Tausch "Stimme gegen Geld" geriet zu Recht ins Kreuzfeuer der Kritik; auf Druck amerikanischer Gerichte wurde der Betrieb eingestellt.

Nun aber bahnt sich eine subtilere Variante des Stimmentausches ihren Weg durch das Netz: ausgelöst

durch einen Artikel des Verfassungsrechtlers Jamin Raskin im Online-Magazin "Slate" sind gleich mehrere Websites entstanden, die den besagten Handel "Stimme gegen Stimme" organisieren sollen. Digitale Handelsplätze wie (das inzwischen stillgelegte) "Voteswap2000" oder die am Wochenende vor der Präsidentschaftswahl noch aktiven "Win Win Campaign", "Nader's Traders" oder "Voteexchange" richten sich vornehmlich an potenzielle Wähler des Drittkandidaten Nader sowie an Gore-Anhänger.

Die digitalen Unruheherde funktionieren zunächst nach dem Muster einer Kontaktbörse: Tauschwillige Wähler werden quer zu den Bundesstaaten miteinander in Verbindung gebracht und stellen dann ihre Stimme für ein "Vote-Swapping" zur Verfügung. Auf diese Weise wird kein bindender Vertrag über den Stimmentausch beschlossen, sondern lediglich das Interesse an einer "strategischen Stimmabgabe" (Florian Rötzer) bekundet. Dadurch ist zwar das Einlösen dieser Übereinkunft keineswegs sichergestellt, jedoch schlüpfen Anbieter und Nutzer der Online-Plattformen so durch das engmaschige Regulierungssystem der staatlichen Wahlgesetze. Derartig organisierte Tauschbörsen gelten als reine Diskussionsforen auf denen eine politische Diskussion durch das "First Amendment", das Recht auf freie Meinungsäußerung, erlaubt und geschützt werden müsse.

Nichtsdestotrotz fechten die Wahlaufseher vor allem in Kalifornien einen erbitterten Kampf gegen die Online-Plattformen, die in den letzten Tagen bis zur Wahl ständig auf dem Grat zwischen legaler Meinungsbildungshilfe und illegaler Stimmenschleuder wandeln. Damit findet eine vermeintlich ganz anders geartete Diskussion dieser Woche ihre Fortsetzung: Auch die populäre Musikaustauschbörse "Napster" hatte sich den Groll der mächtigen Musikindustrie zugezogen, da sie einen neuen Zugang zum digitalen Hörgenuß ermöglichte und damit eingefahrene Konventionen über den Haufen warf. Nachdem "Napster" inzwischen im Schoß von Bertelsmann gelandet ist, geht ein Hauch davon nun auch durch die politische Netzwelt. Denn in ähnlich virtuoser Weise nutzen die Tauschbörsen die Vorteile des Internet zur politischen Entscheidungsvorbereitung und -findung. Damit unterscheiden sie sich sowohl von den marketinglastigen Online-Kampagnen der Präsidentschaftskandidaten als auch von der quotenorientierten Berichterstattung der Online-Medien.

Die Bereitstellung einer kostengünstigen und reichweitenstarken Kommunikationsplattform und die Zusammenführung eines über die Bundesstaaten verteilten Publikums setzt das "interaktive" Potential der Online-Kommunikation ein. Und das hat Folgen: die Tauschbörsen führen zu einer Steigerung der Flexibilität politischer Kommunikationsvorgänge und zur Entstehung "virtueller Stimmgemeinschaften" dort, wo sie wahlrechtlich eigentlich gar nicht vorgesehen sind. Aufrufe zum "Stimmen-Sharing" via Internet können so als eine Art "Wahlrechtsreform von unten" angesehen werden: Bislang war es nämlich staatlichen Akteuren vorbehalten, etwa durch die Neuordnung von Wahlkreisen (im sogenannten "Gerrymandering") korrigierenden Einfluß auf den Wahlausgang zu nehmen. Dass ein solcher Eingriff nun auch seitens der Bürger (als "Netizens") zumindest im Bereich des möglichen scheint, ist als unmittelbarer Verdienst des Internet zu werten.

The third man. Presidency elections in a "Shareholder society"

By professor Dr. Claus Leggewie and Dr. Christoph Bieber

Most Politologen would have bet before a few months after that aluminium Gore will win the American praesidentenwahl surely. According to state OF the kind everything spoke for a victory of the democrat out (and besides: in) threshing floor lake. Finally it was predominant vice-president of one of the population as successfully evaluated administration, which had led America from a deep recession into a decade of constant economic growth, considerable productivity increases and impressing world market successes and to halfway peaceful conditions in the world refer could. A head on head running, with which the inexperienced province politician George W. Bush at the end is acted as favorite, was thus not to be expected.

The rule of thumb: Prosperitaet equal continuity, crisis equal change be based on experience of many years, is to be enjoyed however anyway with caution. Play a large role naturally the "character" and (earlier) life change of a candidate, its skill in handling the electronic media and the many imponderables of the campaign. In all three interests Bush did not have jr. any starting advantages, but Gore surprisingly the larger difficulties. The dissociation from Bill Clinton could not overact Gores image as rigid sample pupils; with the TV duels the actually gewieft Debattierer lost terrain, and wobbly swing states, on which it depends in the elector committee in the long run, he neglected his mother country just like such states, which were considered as safe bank, among them even.

"objectively" a given projection/lead would be therefore playful by subjective errors and disadvantages. Whether with both candidates sumptuously, but unequally filled "war cash" plays the role, may remain undecided. Even if one must be super-rich as applicants around the white house of house or by donations, a presidency of the United States and also a seat is not in senate and Lower House available. Are there thus further, structural reasons for a possible defeat Gores?

Except the tendency situation of the nation, the respective topic catalog ("issues") and the personality of the candidates for choice decisions determinants are usually called as more social and education status, ethnical origin and sex, geographical location (city/country) and not least religious convictions. Of the latters, particularly after the religiously intonierten stating of the democratic vice-applicant Joe Lieberman was reminded, as background of the American choice decision rightfully. But the religious pluralismus and the strong evangelikale rights this mark are decisive still less than 1992 and 1996. At that time the republican oriented towards the right Pat Buchanan threatened with a secession strict creditor abortion opponent, whom he really carried out this mark. But in the inquiries the candidate of the reform party is to be neglected; George W. Bush, who in the preselection fight as "along-feeling conservative" from religious zealots such as Buchanan and Gary farmer set off, did not need to fear from religious rights the no more to, particularly since he took over a part of their demands, above all the coupons for religiously led privatschulen.

Differently it behaves with the candidate of the Green party, Ralph Nader, which had seriously taken at the beginning of nobody. 1996 it had in such a way remained chance and unsuccessful like the radical rights now, but after last inquiries five are thought capable of to it and more per cent of the voices. In one completely of democrats and republicans would be this controlled two-party system with mehrheitswahlrecht without great importance, but in some US states, particularly at the northwest coast, Nader still more voices could einheimsen and decrease to the vice-president thereby on surely believed terrain so much that there - and in the consequence in the whole country - Bush would have the crucial projection/lead.

The question will be decided Tuesday evening, but it permits already now to take some possibly choice-crucial components also future presidency running into the view. In addition first of all the latent strength of a "third party" belongs, which from the repertoire "more independently", thus neither the "Grand old party" still the "Democrats" zuneigenden voters draws. The size of this potential is unclear and disputed; there is probable less American, than Ross Perot could win 1992 for itself, but more, than for Nader can warm up now. The probably largest part of the "Independents" stays away from elections rather.

The high, but still risen abstention ratio lasting voter refers at home last secondly to socio-economic splitting lines in the American society, which might be in the long run more important than the religious confession and (medial strengthened) the preferences and dislikes of the constituency against the applicants. The considerable resemblance, which as a "consumer lawyer" become Ralph Nader in the campaign admits 2000 found, expresses a wide-spread discontent - feelings to be excluded from the democratic process from the political class (particularly on federal level) ignored and in addition, disappointment over the actual effects from ten years economic growth, which were far less rosy, than particularly in Europe by the observers fascinated by the success of the Shareholder economy the appearance was aroused. That the US citizens most unequally profited nearly all, but from the recovery of the world economy and the real income until far stagnated into the middle class inside rather, is a

[home](#)
[biografie](#)
[publikationen](#)
[online-texte](#)
[forschung](#)
[lehre](#)
[links](#)

factor; the fact that with the enormous surplus of the Federal Budget for the first time again distribution options stood at the same time openly was added. Aluminium Gore tried this development in its campaign to take up: On the one hand it did not become tired to praise within and external economic balance of the Clinton administration on the other hand one it addressed to those, which should not come into the hintertreffen, and labeled themselves fiskal and sociopolitical suggestions its rival Bush jr. than only the upper ten thousand and super-rich families zugeordnet.

Income and fortune differences play also in the political culture of the United States stopped completely to individual success a not insignificant role. That begins with political participation and participation to supranational elections themselves, which is the smaller, per low incomes and formal education level lies. With the last presidential election Clinton lay dollar far in front with voters with a family income of under 50,000, starting from 75,000 dollar votierten it however just as clearly for Bob Dole, and completely similarly it behaved with the elections to the house of representatives. The "towards that was still clearer gap", which gave Bill Clinton a clear projection/lead with the women and members of the black and hispanischen minorities, by the way even in the further process of its term of office most turbulent due to the Lewinsky affair. Most clearly the discrepancy was however in the reference to graduation, where Clinton vorherrscht with persons with High School and without graduation likewise like the persons with university conclusion.

After everything that one knows from inquiry trends, have themselves these sozio demographic determinants of the voting pattern, which from income bracket, education degree and affiliation to minorities to result, in the duel of the parties and the applicant entdramatisiert around the presidency. Who goes, how aluminium turns Gore several times nevertheless to "working the families", on a slippery, "Klassenkampf" verdächtigtes terrain and do not answer a new, completely substantial question: Which voting pattern do shareholders put to the day? To this group belong today no longer, as before twenty years, "happy few" on, or like still 1996 scarcely over a third of the American voters, but in the meantime more than 60 per cent - far rising tendency. Some observers speak therefore already of a "investor class" (Larry Kudlow). This "class" has certainly no common consciousness still is it to a social layer limited. More as half of the shareholders has less than 50,000 \$ yearly incomes, and also a quarter of the small-earning (under 25.000 \$), under it recent families, "working poor" and pensioners are possibly without health insurance, possess however individually or over unit trust fund shares.

One could say now that it makes little sense, to the voting pattern particularly the Shareholder to pay attention, if they form soon a nearly representative cross section of the American population. But investors select with significantly higher probability Bush jr. than Gore, and above all they do not regard alone the economic parameters good during a long period as the lately less good signals of the financial markets. Less the past or present identification with this or that party is the center of attention and less the review on the experiences than future expectations, made with an administration, to the next administration in other words. And whoever leads these, the number of the Shareholder will increase by its politics and the connection of Washington D. C. at barrier Street will strengthen. In addition it comes as an inquiry on behalf of the American Shareholder Association resulted in that shareholders rather the George W. Bush added orientations - further tax exemptions, less national adjustment, school coupons - to support. The republican candidate could have made up for its "objective" arrears thus by the fact that he did not respond alone "realms" better, but more strongly with a Shareholder society (and democracy) in the agreement is. In such classical environment connections and conventional party identifications could relate themselves and approximate the voting pattern indeed that "rational choice", which places economic purpose calculations during a choice decision into the foreground.

Dass muss allerdings nicht bei allen Wählern der Fall sein, und die möglichen Stimmen für den "Anti-Kandidaten" Ralph Nader können in der Präferenz für eben jene normativen (und langfristig nicht minder "rationalen") Zielsetzungen begründet sein, die sowohl Gore als auch Bush jr. im Wahlkampf kaum thematisiert haben: nachhaltige, ressourcen- und umweltschonende Entwicklung, bessere Entlohnung und soziale Sicherheit einfacher Arbeitnehmer, eine inklusivere Form der wirtschaftlichen Globalisierung. Nader und seine nach Finanzstärke und Kampagnenfähigkeit von beiden Großparteien meilenweit entfernte Bewegung mobilisiert mit anderen Worten jene politische Spezies, welche der Ökonom Paul Krugman als "Seattle-Mensch" charakterisiert hat und die seit den massenhaften Protesten gegen die Sitzung der Welthandelsorganisation WTO im November 1999 sich von Seattle aus um die ganze Welt ausgebreitet hat.

Das Auftauchen dieser in sich äußerst heterogenen Bewegung versetzt den demokratischen Präsidentenbewerber und seine Partei in einen schmerzhaften Spagat. Sie müssen sich nolens volens an der Shareholder-Gesellschaft ausrichten, haben es aber zugleich mit einer entschiedenen Opposition von Umweltschützern, Gewerkschaftlern und Sozialreformern zu tun, die mit herkömmlichen Kontakten zu den entsprechenden Organisationen nicht mehr erreichbar sind. Naders Kampagne ist gewachsen, obwohl sie ohne jede formelle Unterstützung aus den Minderheiten, den Gewerkschaften und Menschenrechtsgruppen geblieben ist. Für Al Gore ergibt sich damit, obwohl im amerikanischen Parteiensystem zwei sich relativ ähnliche "catch-all-parties" (Otto Kirchheimer) um die Macht ringen, die ihnen per Mehrheitswahl auch klar und ohne Koalitionszwang zufällt, ein ähnliches strategisches Dilemma wie für die Mitte-Links-Koalitionen in Europa. Und potentielle Wähler Ralph Naders haben ebenfalls ein Problem: dass sie mit ihren Stimmen für einen Kandidaten ins Weiße Haus bringen, der von ihren Zielen noch weiter entfernt ist als der vielkritisierte Gore.

Darüber, ob man prinzipientreu für Nader oder das "geringere Übel" Gore votieren soll, hat es in Kreisen der amerikanischen Linken eine erbitterte Diskussion gegeben, die ein paar Tage vor der Wahl nichts anderes als ein echtes Dilemma zutage gefördert hat. Aber es wundert nicht, dass dieses Dilemma auf eine Weise angegangen worden ist, die wiederum weniger klassische weltanschauliche Affiliationen widerspiegelt als sich Gegebenheiten der Shareholder-Demokratie zunutze macht: Das Paradigma des elektronischen Handels hat sich nämlich auch folgerichtig auf den Wahlkampf ausgeweitet und große Teile der "Campaign2000" mit Elementen und Formaten aus

dem Fundus des "eCommerce" bereichert.

Im Windschatten der "Killer-Applikationen" aus dem Vorwahlkampf - im Frühjahr sorgten vor allem die massive Erhebung von Spenden ("Online-Fundraising") und die gezielte Wähleransprache per e-mail ("Voter Targeting") für Furore - erfolgte eine gravierende Umgestaltung der Arena politischer Online-Kommunikation, denn noch im letzten Präsidentschaftswahlkampf vor vier Jahren stand die Nutzung des Internet zum Dialog mit der Wählerschaft im Vordergrund.

Der Trend zur Kommerzialisierung der Wahlkampfkommunikation scheint nun für einen unvermuteten "backlash" zu sorgen, der sich mit nichts geringem auseinandersetzt als mit dem amerikanischen Wahlsystem selbst. Eine Vorahnung davon durchzuckte die politische Netzwelt bereits bei der Episode um die Website "vote-auction.com": Ein österreichischer Betreiber hatte auf dieser Plattform nach Bundesstaaten vorsortierte Stimmenpakete zum Verkauf angeboten - und angeblich waren stattliche Gebote eingegangen (260.000 Dollar für etwa 21.000 Stimmen). Doch der zu offensichtlich an den herkömmlichen Marktregeln angepasste Tausch "Stimme gegen Geld" geriet zu Recht ins Kreuzfeuer der Kritik; auf Druck amerikanischer Gerichte wurde der Betrieb eingestellt.

Nun aber bahnt sich eine subtilere Variante des Stimmentausches ihren Weg durch das Netz: ausgelöst durch einen Artikel des Verfassungsrechtlers Jamin Raskin im Online-Magazin "Slate" sind gleich mehrere Websites entstanden, die den besagten Handel "Stimme gegen Stimme" organisieren sollen. Digitale Handelsplätze wie (das inzwischen stillgelegte) "Voteswap2000" oder die am Wochenende vor der Präsidentschaftswahl noch aktiven "Win Win Campaign", "Nader's Traders" oder "Voteexchange" richten sich vornehmlich an potenzielle Wähler des Drittkandidaten Nader sowie an Gore-Anhänger.

Die digitalen Unruheherde funktionieren zunächst nach dem Muster einer Kontaktbörse: Tauschwillige Wähler werden quer zu den Bundesstaaten miteinander in Verbindung gebracht und stellen dann ihre Stimme für ein "Vote-Swapping" zur Verfügung. Auf diese Weise wird kein bindender Vertrag über den Stimmentausch beschlossen, sondern lediglich das Interesse an einer "strategischen Stimmabgabe" (Florian Rötzer) bekundet. Dadurch ist zwar das Einlösen dieser Übereinkunft keineswegs sichergestellt, jedoch schlüpfen Anbieter und Nutzer der Online-Plattformen so durch das engmaschige Regulierungssystem der staatlichen Wahlgesetze. Derartig organisierte Tauschbörsen gelten als reine Diskussionsforen auf denen eine politische Diskussion durch das "First Amendment", das Recht auf freie Meinungsäußerung, erlaubt und geschützt werden müsse.

Nichtsdestotrotz fechten die Wahlaufseher vor allem in Kalifornien einen erbitterten Kampf gegen die Online-Plattformen, die in den letzten Tagen bis zur Wahl ständig auf dem Grat zwischen legaler Meinungsbildungshilfe und illegaler Stimmenschleuder wandeln. Damit findet eine vermeintlich ganz anders geartete Diskussion dieser Woche ihre Fortsetzung: Auch die populäre Musiktauschbörse "Napster" hatte sich den Groll der mächtigen Musikindustrie zugezogen, da sie einen neuen Zugang zum digitalen Hörgenuß ermöglichte und damit eingefahrene Konventionen über den Haufen warf. Nachdem "Napster" inzwischen im Schoß von Bertelsmann gelandet ist, geht ein Hauch davon nun auch durch die politische Netzwelt. Denn in ähnlich virtuoser Weise nutzen die Tauschbörsen die Vorteile des Internet zur politischen Entscheidungsvorbereitung und -findung. Damit unterscheiden sie sich sowohl von den marketinglastigen Online-Kampagnen der Präsidentschaftskandidaten als auch von der quotenorientierten Berichterstattung der Online-Medien.

Die Bereitstellung einer kostengünstigen und reichweitenstarken Kommunikationsplattform und die Zusammenführung eines über die Bundesstaaten verteilten Publikums setzt das "interaktive" Potential der Online-Kommunikation ein. Und das hat Folgen: die Tauschbörsen führen zu einer Steigerung der Flexibilität politischer Kommunikationsvorgänge und zur Entstehung "virtueller Stimmgemeinschaften" dort, wo sie wahlrechtlich eigentlich gar nicht vorgesehen sind. Aufrufe zum "Stimmen-Sharing" via Internet können so als eine Art "Wahlrechtsreform von unten" angesehen werden: Bislange war es nämlich staatlichen Akteuren vorbehalten, etwa durch die Neuordnung von Wahlkreisen (im sogenannten "Gerrymandering") korrigierenden Einfluß auf den Wahlausgang zu nehmen. Dass ein solcher Eingriff nun auch seitens der Bürger (als "Netizens") zumindest im Bereich des möglichen scheint, ist als unmittelbarer Verdienst des Internet zu werten.

Der dritte Mann. Präsidentschaftswahlen in einer "Shareholder-Gesellschaft"
Von Professor Dr. Claus Leggewie und Dr. Christoph Bieber

Die meisten Politologen hätten vor ein paar Monaten darauf gewettet, dass Al Gore die amerikanische Präsidentschaftswahl sicher gewinnen wird. Laut state of the art sprach alles für einen Sieg des Demokraten aus (und nebenbei: in) Tennessee. Schließlich war er Vizepräsident einer von der Bevölkerung überwiegend als erfolgreich bewerteten Administration, die Amerika aus einer tiefen Rezession in eine Dekade konstanten Wirtschaftswachstums, beachtlicher Produktivitätszuwächse und beeindruckender Weltmarkterfolge geführt hatte und auf halbwegs friedliche Zustände in der Welt verweisen konnte. Ein Kopf-an-Kopf-Rennen, bei dem der unerfahrene Provinzpolitiker George W. Bush am Ende gar als Favorit gehandelt wird, war also nicht zu erwarten.

Die Faustregel: Prosperität gleich Kontinuität, Krise gleich Wechsel basiert auf langjähriger Erfahrung, ist aber ohnehin mit Vorsicht zu genießen. Eine große Rolle spielen der "Charakter" und (frühere) Lebenswandel eines Kandidaten, seine Gewandtheit im Umgang mit den elektronischen Medien und natürlich die vielen Unwägbarkeiten der Kampagne. In allen drei Belangen hatte Bush jr. keinerlei Startvorteile, aber Gore überraschenderweise die größeren Schwierigkeiten. Die Distanzierung von Bill Clinton hat Gores Image als steifer Musterschüler nicht überspielen können; bei den TV-Duellen hat der an sich gewiefte Debattierer Terrain verloren, und wackelige swing states, auf die es im Wahlmännergremium letztlich ankommt, vernachlässigte er ebenso wie solche Staaten, die als sichere Bank galten, darunter sogar seinen Heimatstaat.

Ein "objektiv" gegebener Vorsprung wäre demnach durch subjektive Fehler und Nachteile verspielt worden. Ob die bei beiden Kandidaten üppig, aber ungleich gefüllte "Kriegskasse" eine Rolle spielt, mag dahingestellt bleiben. Auch wenn man als Bewerber um das Weiße Haus von Hause oder durch Spenden superreich sein muss, ist eine Präsidentschaft der Vereinigten Staaten und auch ein Sitz in Senat und Abgeordnetenhaus nicht käuflich. Gibt es also weitere, strukturelle Gründe für eine mögliche Niederlage Gores?

Außer der Stimmungslage der Nation, dem jeweiligen Themenkatalog ("issues") und der Persönlichkeit der Kandidaten werden für Wahlentscheidungen meist Determinanten genannt wie sozialer und Bildungsstatus, ethnische Herkunft und Geschlecht, geographische Lage (Stadt/Land) und nicht zuletzt religiöse Überzeugungen. An letztere ist, vor allem nach den religiös intonierten Bekundungen des demokratischen Vize-Bewerbers Joe Lieberman, als Hintergrund der amerikanischen Wahlentscheidung zu Recht erinnert worden. Aber ausschlaggebend sind der religiöse Pluralismus und die starke evangelikale Rechte dieses Mal noch weniger als 1992 und 1996. Damals drohte der

rechtsgerichtete Republikaner Pat Buchanan mit einer Sezession strenggläubiger Abtreibungsgegner, die er dieses Mal wirklich vollzogen hat. Doch in den Umfragen ist der Kandidat der Reform Party zu vernachlässigen; George W. Bush, der sich im Vorwahlkampf als "mitfühlender Konservativer" von religiösen Eiferern wie Buchanan und Gary Bauer abgesetzt hat, brauchte von der religiösen Rechten nicht mehr zu befürchten, zumal er einen Teil ihrer Forderungen, vor allem die Gutscheine für religiös geleitete Privatschulen, übernommen hat.

Anders verhält es sich mit dem Kandidaten der Green Party, Ralph Nader, den anfangs niemand ernst genommen hatte. 1996 war er so chancen- und erfolglos geblieben wie die radikale Rechte jetzt, doch nach letzten Umfragen werden ihm fünf und mehr Prozent der Stimmen zugetraut. In einem völlig von Demokraten und Republikanern beherrschten Zweiparteiensystem mit Mehrheitswahlrecht wäre dies ohne große Bedeutung, doch in einigen US-Staaten, vor allem an der Nordwestküste, könnte Nader noch mehr Stimmen einheimsen und dem Vizepräsidenten damit auf sicher geglaubtem Terrain so viel abnehmen, dass dort - und in der Folge im ganzen Lande - Bush den entscheidenden Vorsprung hätte.

Die Frage wird Dienstagabend entschieden sein, aber sie erlaubt schon jetzt, einige möglicherweise wahlentscheidende Komponenten auch künftiger Präsidentschaftsrennen in den Blick zu nehmen. Dazu gehört erstens die latente Stärke einer "dritten Partei", die aus dem Repertoire "unabhängiger", also weder der "Grand Old Party" noch den "Democrats" zuneigenden Wähler schöpft. Die Größe dieses Potentials ist unklar und umstritten; wahrscheinlich sind es weniger Amerikaner, als Ross Perot 1992 für sich gewinnen konnte, aber mehr, als sich jetzt für Nader erwärmen können. Der wahrscheinlich größte Teil der "Independents" bleibt Wahlen eher fern.

Die hohe, aber zuletzt noch gestiegene Enthaltungsquote daheim bleibender Wähler verweist zweitens auf sozio-ökonomische Spaltungslinien in der amerikanischen Gesellschaft, die letztlich wichtiger sein dürften als das religiöse Bekenntnis und die (medial verstärkten) Vorlieben und Abneigungen der Wählerschaft gegen die Bewerber. Der beachtliche Anklang, den der als "Verbraucheranwalt" bekannt gewordene Ralph Nader in der Kampagne 2000 gefunden hat, bringt eine weit verbreitete Unzufriedenheit zum Ausdruck - Gefühle, von der politischen Klasse (vor allem auf Bundesebene) ignoriert und vom demokratischen Prozeß ausgeschlossen zu sein, aber auch Enttäuschung über die tatsächlichen Wirkungen von zehn Jahren Wirtschaftswachstum, die weit weniger rosig waren, als vor allem in Europa durch die vom Erfolg der Shareholder-Wirtschaft faszinierten Beobachter der Anschein erweckt worden ist. Dass die US-Bürger zwar fast alle, aber höchst ungleich von der Erholung der Weltwirtschaft profitiert haben und die Realeinkommen bis weit in den Mittelstand hinein eher stagnierten, ist ein Faktor; dass zugleich mit den gewaltigen Überschüssen des Bundeshaushaltes erstmals wieder Verteilungsoptionen offen standen, kam hinzu. Al Gore hat diese Entwicklung in seiner Kampagne aufzugreifen versucht: Einerseits wurde er nicht müde, die binnen- und außenwirtschaftliche Bilanz der Clinton-Administration zu loben, andererseits adressierte er sich an jene, die nicht ins Hintertreffen geraten sollten, und etikettierte die fiskal- und sozialpolitischen Vorschläge seines Rivalen Bush jr. als einzig den oberen Zehntausend und superreichen Familien zugeordnet.

Einkommens- und Vermögensunterschiede spielen auch in der ganz auf individuellen Erfolg eingestellten politischen Kultur der Vereinigten Staaten eine nicht unerhebliche Rolle. Das beginnt mit der politischen Partizipation und der Beteiligung an überregionalen Wahlen selbst, die umso geringer sind, je niedriger Einkommen und formales Bildungsniveau liegen. Bei der letzten Präsidentenwahl lag Clinton bei Wählern mit einem Familieneinkommen von unter 50.000 Dollar weit vorn, ab 75.000 Dollar votierten sie jedoch genauso deutlich für Bob Dole, und ganz ähnlich verhielt es sich bei den Wahlen zum Repräsentantenhaus. Noch deutlicher war der "gender gap", der Bill Clinton einen deutlichen Vorsprung bei den Frauen und Angehörigen der schwarzen und hispanischen Minderheiten gab, übrigens auch im weiteren, aufgrund der Lewinsky-Affäre höchst turbulenten Verlauf seiner Amtszeit. Am deutlichsten war die Diskrepanz allerdings im Bezug auf den Schulabschluß, wo Clinton bei Personen mit High School- und ohne Schulabschluß ebenso vorherrschte wie den Personen mit Universitätsabschluß.

Nach allem, was man aus Umfragetrends weiß, haben sich diese sozio-demographischen Determinanten des Wahlverhaltens, die aus Einkommensschicht, Bildungsgrad und Zugehörigkeit zu Minderheiten resultieren, im Zweikampf der Parteien und der Bewerber um die Präsidentschaft entdramatisiert. Wer sich, wie mehrfach Al Gore gleichwohl an die "working families" wendet, begibt sich auf ein schlüpfriges, "klassenkampf"verdächtigtes Terrain und beantwortet eine neue, ganz wesentliche Frage nicht: Welches Wahlverhalten legen Aktionäre an den Tag? Dieser Gruppe gehören heute nicht mehr, wie vor zwanzig Jahren, die "happy few" an, oder wie noch 1996 knapp über ein Drittel der amerikanischen Wähler, sondern zwischenzeitlich mehr als 60 Prozent - mit weiter steigender

Tendenz. Einige Beobachter sprechen deshalb bereits von einer "Investorenklasse" (Larry Kudlow). Diese "Klasse" hat freilich kein gemeinsames Bewußtsein noch ist sie auf eine soziale Schicht beschränkt. Mehr als die Hälfte der Aktienbesitzer verfügt über weniger als 50.000 \$ Jahreseinkommen, und auch ein Viertel der Geringverdienenden (unter 25.000 \$), darunter junge Familien, "working poor" und Pensionäre sind womöglich ohne Krankenversicherung, besitzen aber individuell oder über Investmentfonds Aktien.

Man könnte nun sagen, dass es wenig Sinn macht, auf das Wahlverhalten speziell der Shareholder zu achten, wenn sie bald einen fast repräsentativen Querschnitt der amerikanischen Bevölkerung bilden. Aber Investoren wählen mit signifikant höherer Wahrscheinlichkeit Bush jr. als Gore, und vor allem betrachten sie nicht allein die über einen langen Zeitraum guten Wirtschaftsdaten als die in letzter Zeit weniger guten Signale der Finanzmärkte. Im Vordergrund steht mit anderen Worten weniger die vergangene oder gegenwärtige Identifikation mit dieser oder jener Partei und weniger der Rückblick auf die mit einer Administration gemachten Erfahrungen als die zukünftigen Erwartungen an die nächste Administration. Und wer auch immer diese führt, wird die Zahl der Shareholder durch seine Politik erhöhen und die Bindung von Washington D.C. an Wall Street verstärken. Hinzu kommt, wie eine Umfrage im Auftrag der American Shareholder Association ergeben hat, dass Aktionäre eher die George W. Bush zugerechneten Orientierungen - weitere Steuererleichterungen, weniger staatliche Regulierung, Schulgutscheine - unterstützen. Der republikanische Kandidat könnte seinen "objektiven" Rückstand also dadurch wettgemacht haben, dass er nicht allein "die Reichen" besser angesprochen hat, sondern sich stärker mit einer Shareholder-Gesellschaft (und -Demokratie) im Einklang befindet. In einer solchen könnten sich klassische Milieubindungen und herkömmliche Parteiidentifikationen relativieren und sich das Wahlverhalten in der Tat jener "rationalen Wahl" annähern, die bei einer Wahlentscheidung ökonomische Zweckkalküle in den Vordergrund stellt.

Dass muss allerdings nicht bei allen Wählern der Fall sein, und die möglichen Stimmen für den "Anti-Kandidaten" Ralph Nader können in der Präferenz für eben jene normativen (und langfristig nicht minder "rationalen") Zielsetzungen begründet sein, die sowohl Gore als auch Bush jr. im Wahlkampf kaum thematisiert haben: nachhaltige, ressourcen- und umweltschonende Entwicklung, bessere Entlohnung und soziale Sicherheit einfacher Arbeitnehmer, eine inklusivere Form der wirtschaftlichen Globalisierung. Nader und seine nach Finanzstärke und Kampagnenfähigkeit von beiden Großparteien meilenweit entfernte Bewegung mobilisiert mit anderen Worten jene politische Spezies, welche der Ökonom Paul Krugman als "Seattle-Mensch" charakterisiert hat und die seit den massenhaften Protesten gegen die Sitzung der Welthandelsorganisation WTO im November 1999 sich von Seattle aus um die ganze Welt ausgebreitet hat.

Das Auftauchen dieser in sich äußerst heterogenen Bewegung versetzt den demokratischen Präsidentenbewerber und seine Partei in einen schmerzhaften Spagat. Sie müssen sich nolens volens an der Shareholder-Gesellschaft ausrichten, haben es aber zugleich mit einer entschiedenen Opposition von Umweltschützern, Gewerkschaftlern und Sozialreformern zu tun, die mit herkömmlichen Kontakten zu den entsprechenden Organisationen nicht mehr erreichbar sind. Naders Kampagne ist gewachsen, obwohl sie ohne jede formelle Unterstützung aus den Minderheiten, den Gewerkschaften und Menschenrechtsgruppen geblieben ist. Für Al Gore ergibt sich damit, obwohl im amerikanischen Parteiensystem zwei sich relativ ähnliche "catch-all-parties" (Otto Kirchheimer) um die Macht ringen, die ihnen per Mehrheitswahl auch klar und ohne Koalitionszwang zufällt, ein ähnliches strategisches Dilemma wie für die Mitte-Links-Koalitionen in Europa. Und potentielle Wähler Ralph Naders haben ebenfalls ein Problem: dass sie mit ihren Stimmen für einen Kandidaten ins Weiße Haus bringen, der von ihren Zielen noch weiter entfernt ist als der vielkritisierte Gore.

Darüber, ob man prinzipientreu für Nader oder das "geringere Übel" Gore votieren soll, hat es in Kreisen der amerikanischen Linken eine erbitterte Diskussion gegeben, die ein paar Tage vor der Wahl nichts anderes als ein echtes Dilemma zutage gefördert hat. Aber es wundert nicht, dass dieses Dilemma auf eine Weise angegangen worden ist, die wiederum weniger klassische weltanschauliche Affiliationen widerspiegelt als sich Gegebenheiten der Shareholder-Demokratie zunutzemacht: Das Paradigma des elektronischen Handels hat sich nämlich auch folgerichtig auf den Wahlkampf ausgeweitet und große Teile der "Campaign2000" mit Elementen und Formaten aus dem Fundus des "eCommerce" bereichert.

Im Windschatten der "Killer-Applikationen" aus dem Vorwahlkampf - im Frühjahr sorgten vor allem die massive Erhebung von Spenden ("Online-Fundraising") und die gezielte Wähleransprache per e-mail ("Voter Targeting") für Furore - erfolgte eine gravierende Umgestaltung der Arena politischer Online-Kommunikation, denn noch im letzten Präsidentschaftswahlkampf vor vier Jahren stand die Nutzung des Internet zum Dialog mit der Wählerschaft im Vordergrund.

Der Trend zur Kommerzialisierung der Wahlkampfkommunikation scheint nun für einen unvermuteten "backlash" zu sorgen, der sich mit nichts geringem auseinandersetzt als mit dem amerikanischen Wahlsystem selbst. Stimmen für Gore und Nader sollen jetzt staatenweise "gehandelt" und so ausgetauscht werden, dass Gore nicht verliert und Nader gleichwohl seinen Stimmenanteil behalten kann.

Eine Vorahnung davon durchzuckte die politische Netzwelt bereits bei der Episode um die Website "[vote-auction.com](#)": Ein österreichischer Betreiber hatte auf dieser Plattform nach Bundesstaaten vorsortierte Stimmenpakete zum Verkauf angeboten - und angeblich waren stattliche Gebote eingegangen (260.000 Dollar für etwa 21.000 Stimmen). Doch der zu offensichtlich an den herkömmlichen Marktregeln angepasste Tausch "Stimme gegen Geld" geriet zu Recht ins Kreuzfeuer der Kritik; auf Druck amerikanischer Gerichte wurde der Betrieb eingestellt.

Nun aber bahnt sich eine subtilere Variante des Stimmentausches ihren Weg durch das Netz: ausgelöst durch einen Artikel des Verfassungsrechtlers Jamin Raskin im Online-Magazin "Slate" sind gleich mehrere Websites entstanden, die den besagten Handel "Stimme gegen Stimme" organisieren sollen. Digitale Handelsplätze wie (das inzwischen stillgelegte) "Voteswap2000" oder die am Wochenende vor der Präsidentschaftswahl noch aktiven "Win Win Campaign", "Nader's Traders" oder "Voteexchange" richten sich vornehmlich an potenzielle Wähler des Drittkandidaten Nader sowie an Gore-Anhänger.

Die digitalen Unruheherde funktionieren zunächst nach dem Muster einer Kontaktbörse: Tauschwillige Wähler werden quer zu den Bundesstaaten miteinander in Verbindung gebracht und stellen dann ihre Stimme für ein "Vote-Swapping" zur Verfügung. Auf diese Weise wird kein bindender Vertrag über den Stimmentausch beschlossen, sondern lediglich das Interesse an einer "strategischen Stimmabgabe" (Florian Rötzer) bekundet. Dadurch ist zwar das Einlösen dieser Übereinkunft keineswegs sichergestellt, jedoch schlüpfen Anbieter und Nutzer der Online-Plattformen so durch das engmaschige Regulierungssystem der staatlichen Wahlgesetze. Derartig organisierte Tauschbörsen gelten als reine Diskussionsforen auf denen eine politische Diskussion durch das "First Amendment", das Recht auf freie Meinungsäußerung, erlaubt und geschützt werden müsse.

Nichtsdestotrotz fechten die Wahlaufseher vor allem in Kalifornien einen erbitterten Kampf gegen die Online-Plattformen, die in den letzten Tagen bis zur Wahl ständig auf dem Grat zwischen legaler Meinungsbildungshilfe und illegaler Stimmenschleuder wandeln. Damit findet eine vermeintlich ganz anders geartete Diskussion dieser Woche ihre Fortsetzung: Auch die populäre Musiktatschbörse "Napster" hatte sich den Groll der mächtigen Musikindustrie zugezogen, da sie einen neuen Zugang zum digitalen Hörgenuß ermöglichte und damit eingefahrene Konventionen über den Haufen warf. Nachdem "Napster" inzwischen im Schoß von Bertelsmann gelandet ist, geht ein Hauch davon nun auch durch die politische Netzwelt. Denn in ähnlich virtuoser Weise nutzen die Tauschbörsen die Vorteile des Internet zur politischen Entscheidungsvorbereitung und -findung. Damit unterscheiden sie sich sowohl von den marketinglastigen Online-Kampagnen der Präsidentschaftskandidaten als auch von der quotenorientierten Berichterstattung der Online-Medien.

Die Bereitstellung einer kostengünstigen und reichweitenstarken Kommunikationsplattform und die Zusammenführung eines über die Bundesstaaten verteilten Publikums setzt das "interaktive" Potential der Online-Kommunikation ein. Und das hat Folgen: die Tauschbörsen führen zu einer Steigerung der Flexibilität politischer Kommunikationsvorgänge und zur Entstehung "virtueller Stimmgemeinschaften" dort, wo sie wahlrechtlich eigentlich gar nicht vorgesehen sind. Aufrufe zum "Stimmen-Sharing" via Internet können so als eine Art "Wahlrechtsreform von unten" angesehen werden: Bislang war es nämlich staatlichen Akteuren vorbehalten, etwa durch die Neuordnung von Wahlkreisen (im sogenannten "Gerrymandering") korrigierenden Einfluß auf den Wahlausgang zu nehmen. Dass ein solcher Eingriff nun auch seitens der Bürger (als "Netizens") zumindest im Bereich des möglichen scheint, ist als unmittelbarer Verdienst des Internet zu werten.

HISTORIE:

Sommer 1996: Die Bundesanwaltschaft fordert von den deutschen Providern die Sperrung der in den Niederlanden gehosteten Webseite der Zeitschrift „Radikal“. Selbst die Homepage der stellvertretenden PDS-Bundesvorsitzenden Angela Marquardt wird gesperrt, weil sie einen Link zur Radikal-Seite gesetzt hat. Nachdem Dutzende von Mirror-seiten entstanden sind, gibt die Behörde klein bei.

Herbst 2000: Auf Betreiben der US-Behörden wird dem Österreicher Hans Bernhard die Domain vote-auction.com entzogen, die dieser in der Schweiz registriert hatte. Weder in der Schweiz, noch in Österreich verstießen die Inhalte gegen geltendes Recht.

Frühjahr 2002: Auf Betreiben von Scientology kappt das US-Unternehmen Cignal die Verbindungen des holländischen Providers Xtended Internet. Ein Kunde des Providers hatte eine Seite ins Netz gestellt, die sich kritisch mit der Sekte auseinandersetzt.

Herbst 2002: Die Untersuchungsrichterin Françoise Dessaux fordert die Schweizer Provider auf, zwei Webseiten zu sperren und droht sogar mit einer Anklage wegen Beihilfe. Es geht um einen simplen Fall von Ehrverletzung. Während die Provider der Anordnung Folge leisten müssen, bleibt der Urheber der Seiten vorerst ungeschoren.

FRAGEN & ANTWORTEN:

Freiheit schön und gut – aber warum sollen Nazis ihren Schmutz frei verbreiten dürfen?

Durch Internetsperren verschwinden die Nazis nicht von der Straße, nicht einmal die Naziseiten vom Netz. Der Bürger wird nur davon abgehalten, Seiten zu sehen, die ihn beruhigen könnten. Der Rechtsextremismus wird so ausgeblendet und es besteht die Gefahr das die Sensibilität der Gesellschaft für diese Problematik abnimmt. Wir glauben sogar, dass frei zugängliche Nazi-Seiten einen gewissen Nutzen haben, da man sich so über deren Aktivitäten informieren kann.

Verschwindet dadurch endlich die Kinderpornografie aus dem Netz?

Nein. Kinderpornographie ist weltweit illegal. Wo immer solche Bilder auftauchen, kann die Justiz des Staates direkt eingreifen und die Täter verfolgen. Sichtblenden sind also unnötig.

Wirken die Internetsperren überhaupt?

Der Zugang für den unbedarften Internetnutzer wird erschwert. Viele der Blockaden lassen sich relativ einfach umgehen.

Verhindern die Sperren das Herunterladen von MP3-Dateien?

Die jetzigen Sperrmaßnahmen sicherlich nicht. Aber die Musikbranche verfolgt solche Ziele. Der Deutsche Phonoverband IFPI hatte schon im Jahr 2000 eine zentrale Filterinfrastruktur gefordert.

WIE UMGEHEN?

Eine Anleitung um die DNS-Sperren auf unterschiedlichen Rechner-plattformen zu umgehen, findet man unter:

<https://www.ccc.de/censorship/dns-howto/>

Die genau, bebilderte Anleitung für WinXP unter:

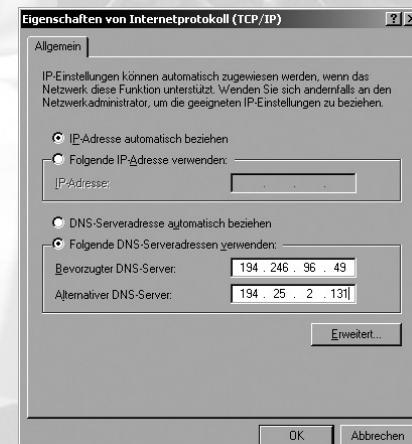

<http://www.ccc.de/censorship/dns-howto/WinXP/WinXPhow-to.htm>

Eine kurze Anleitung für WinXP:

1. Öffnen Sie das Startmenü, dort den Punkt „Verbindungen“ auswählen. Klicken Sie hier nun den Eintrag für Ihren Internetprovider mit der rechten Maustaste an. Im Kontextmenü sind dann die „Eigenschaften“ zu wählen.
2. Hier benötigen Sie die Registerkarte „Netzwerk“, wählen Sie das „Internetprotokoll (TCP/IP)“ aus und klicken dann auf „Eigenschaften“. 3. Aktivieren Sie nun „Folgende DNS-Serveradressen verwenden“ und tragen dann zwei unzensurierte Nameserver ein. Zum Beispiel: 194.246.96.49 (dns2.denic.de) oder 194.246.96.2 (dns3.denic.de) oder 194.25.2.131 (dns02.btx.dtag.de) oder eine andere, ihnen bekannte IP-Adresse eines unzensurierten DNS-Nameservers.

4. Schließen Sie jetzt noch beide Fenster, in dem Sie die Änderungen mit „OK“ bestätigen.

Fertig, nun können Sie das Internet wieder unzensuriert nutzen!

DER FREIRAUM INTERNET IST BEDROHT!

Früher galt das weltweite Netz als Heimstatt für freie Meinungsäußerung, ungehinderte Kommunikation und Internationalität. Doch heute sehen wir viele Bestrebungen, diese Freiheiten immer weiter einzuschränken. Rechte der Bürger sollen kommerziellen und staatlichen Interessen geopfert werden. Auch Deutschland ist von diesen Maßnahmen betroffen.

Die Bezirksregierung Düsseldorf hat im Februar 2002 alle Provider des Landes Nordrhein-Westfalen verpflichtet zwei Internet-Seiten aus den USA für deutsche Kunden zu sperren. Dieses war ein erster Schritt. Inzwischen wird eine Zensur-Infrastruktur geplant, die es erlauben soll, landesweit Webseiten per Mausklick zu sperren.

Dies ist nicht der erste Fall von Zensurmaßnahmen im World Wide Web.

WAS WEITER? WAS TUN?

Internetrechte sind Freiheitsrechte!

**Wir müssen jetzt aktiv werden,
um den BigBrother zu verhindern!**

Informiert Euch!

**Macht Euer Umfeld auf die Gefahr
aufmerksam!**

Sprecht mit Euren Abgeordneten!

Nein. Kinderpornographie ist weltweit illegal. Wo immer solche Bilder auftauchen, kann die Justiz des Staates direkt eingreifen und die Täter verfolgen. Sichtblenden sind also unnötig.

Wirken die Internetsperren überhaupt?

Der Zugang für den unbedarften Internetnutzer wird erschwert. Viele der Blockaden lassen sich relativ einfach umgehen.

Wie umgehen?

Eine Anleitung um die DNS-Speeren auf unterschiedlichen Rechner-plattformen zu umgehen, findet man unter:

<https://www.ccc.de/censorship/dns-howto/>

Die genau, bebilderte Anleitung für WinXP unter:

<http://www.ccc.de/censorship/dns-howto/WinXP/WinXPHow-to.htm>

Eine kurze Anleitung für WinXP:

1. Öffnen Sie das Startmenü, dort den Punkt „Verbindungen“ auswählen. Klicken Sie hier nun den Eintrag für Ihren Internetprovider mit der rechten Maustaste an. Im Kontextmenü sind dann die „Eigenschaften“ zu wählen.
2. Hier benötigen Sie die Registerkarte „Netzwerk“, wählen Siedas„Internetprotokoll(TCP/IP)“ausundklickendannauf „Eigenschaften“. 3. Aktivieren Sie nun „Folgende DNS-Serveradressen verwenden“ und tragen dann **zwei unzensierte Nameserver** ein. Zum Beispiel: 194.246.96.49 (dns2.denic.de) oder 194.246.96.2 (dns3.denic.de) oder 194.25.2.131 (dns02.btx.dtag.de) oder eine andere, ihnen bekannte IP-Adresse eines unzensierten DNS-Nameservers.

4. Schließen Sie jetzt noch beide Fenster, in dem Sie die Änderungen mit

wegen Beihilfe. Es geht um einen simplen Fall von Ehrverletzung. Während die Provider der Anordnung Folge leisten müssen, bleibt der Urheber der Seiten vorerst ungeschoren.

Der Freiraum Internet ist bedroht!

Früher galt das weltweite Netz als Heimstatt für freie Meinungsäußerung, ungehinderte Kommunikation und Internationalität. Doch heute sehen wir viele Bestrebungen, diese Freiheiten immer weiter einzuschränken. Rechte der Bürger sollen kommerziellen und staatlichen Interessen geopfert werden. Auch Deutschland ist von diesen Maßnahmen betroffen.

Die Bezirksregierung Düsseldorf hat im Februar 2002 alle Provider des Landes Nordrhein-Westfalen verpflichtet zwei Internet-Seiten aus den USA für deutsche Kunden zu sperren. Dieses war ein erster Schritt. Inzwischen wird eine Zensur-Infrastruktur geplant, die es erlauben soll, landesweit Webseiten per Mausklick zu sperren.

Dies ist nicht der erste Fall von Zensurmaßnahmen im World Wide Web.

Verhindern die Sperren das Herunterladen von MP3-Dateien?

Die jetzigen Sperrmaßnahmen sicherlich nicht. Aber die Musikbranche verfolgt solche Ziele. Der Deutsche Phonoverband IFPI hatte schon im Jahr 2000 eine zentrale Filterinfrastruktur gefordert.

Was weiter? Was tun?

Internetrechte sind Freiheitsrechte!

Wir müssen jetzt aktiv werden,

um den Big Brother zu verhindern!

Informiert Euch!

Macht Euer Umfeld auf die Gefahr

aufmerksam!

Sprecht mit Euren Abgeordneten!

Weitere Informationen natürlich im Internet:

<https://www.ccc.de/censorship/>

<http://www.odem.org/informationsfreiheit/>

<https://www.fitug.de/>

<https://www.stop1984.com/>

<http://www.artikel5.de/>

„OK“ bestätigen.

Fertig, nun können

Sie das Internet wieder unzensuriert nutzen!

Freies Internet

für freie Bürger.

[See Also: [News Articles](#)]

Last update: Dec 22, 2004

Seyfarth Shaw: [California Labor & Employment Law Update](#) Nov 01, 2004

Creative obtained an injunction barring Getloaded from accessing its site and using its customer list. Getloaded intentionally violated the injunction by among other things, lying under oath

Michael Best & Friedrich: [Newcomer?s Trademark Rights Take Back Seat in Limited A...](#) Oct 01, 2004

The U.S. District Court for the Western District of Pennsylvania denied CNBEC's motion for a preliminary injunction and a jury trial was held. The answer that CNBEC was not injured required the jury to find in favor of CFG. CNBEC then asked the district court for a permanent injunction against CFG, based on the jury's finding of CFG's infringement of the "Citizens" mark

Michael Best & Friedrich: [Ideas on Intellectual Property Law \(August/September 20...](#) Sep 01, 2004

...in this issue Pretrial investigations Do an adequate analysis before filing a patent infringement case Enforcing injunctions in patent suits When a nonparty may violate an injunction Can search engines use trademarks to key searches. Enforcing injunctions in patent suits

Miller Canfield: [No Home Run For Home Schoolers](#) Mar 01, 2004

Arnold & Porter: [Parallel Trade: Advisory - Pharmaceuticals \(PDF: 182 K...](#) Mar 01, 2004

The drugs were imported into and sold in the UK. Glaxo sued for trade mark infringement and applied for summary judgment and an absolute injunction on future sales. 2 Permanent injunction

McDermott: [Employers May Require Employees to Sign Arbitration Agr...](#) Oct 28, 2003

The district court, following Duffield, entered a permanent injunction against the law firm precluding it from conditioning employment on mandatory arbitration of Title VII discrimination claims. A three-judge panel of the Ninth Circuit determined that Duffield was no longer good law and, therefore, reversed the district court s decision

Lowenstein Sandler: ["Emergency Regulations Implement Changes in the St..."](#) Oct 01, 2003

Fried Frank: [Bid Protest Update: Recent Court Of Federal Claims Deci..."](#) May 31, 2003

May 22, 2003), the COFC took the unusual step of agreeing with the protester on the merits, but nonetheless declined to issue a permanent injunction due to national security concerns. The COFC indicated that under normal circumstances it would have issued a permanent injunction ordering resolicitation by the Army

Latham & Watkins: [EU Enlargement and Trademark Protection: The Anti-Pirac..."](#) May 01, 2003

Alternatively, in order to block bank accounts or other assets of the alleged infringer, claimants can use the "Mareva Injunction". These are the recall of counterfeit goods, the disposal of counterfeit goods outside the usual chain of commerce without compensation to the infringer, the destruction of infringing goods, and the claim for injunction--the contempt of which shall be penalised

Goodwin Procter: [Second Round of Simon Property Group v mySimon Likely](#) Apr 30, 2003

US District Court Judge David Hamilton later reduced the jury award to \$50,000 and issued a permanent injunction in favour of SPG, which he then stayed pending an appeal. Hamilton also ordered a new trial on the issue of corrective advertising damages, as evidence indicated that SPG did not have a strong brand image or presence on the Internet

Baker Botts: [U.S. Supreme Court Hears Arguments on Whether the Feder..."](#) Dec 01, 2002

The Second Circuit held that the FTDA permits "adjudication granting or denying an injunction. . . . before the dilution has actually occurred." Petitioners' Arguments to the Supreme Court Petitioners Victor and Cathy Moseley d/b/a Victor's Little Secret (the "Moseleys") presented four main arguments to the Court. This may be accomplished, they argued, by requiring the owner of a famous mark to demonstrate actual harm as opposed to a likelihood of future harm before it is awarded the

Morgan Lewis: [Key Trading Issues Affecting Best Execution](#) Oct 27, 2002

Accordingly, the Commission seeks: (i) entry of a permanent injunction prohibiting defendants from further violations of the relevant provisions of the federal securities laws; (ii) disgorgement of defendants' ill-gotten gains, plus prejudgment interest; and (iii) the imposition of civil monetary penalties due to the egregious nature of defendants' violations. The Commission seeks a permanent injunction and disgorgement pursuant to Section 20(b) of the Securities Act [15 U.S.C. §77t(b)], Section

Seyfarth Shaw: [California Labor & Employment Law Update](#) Oct 01, 2002

The court rejected Friedmans claim, holding that veganism is simply a personal philosophy and not a protected religious creed under the FEHA. Friedman v. Southern California Permanente Medical Group, 2002 Cal. App. However, the court recently reversed this position, holding that a California law firm was not bound by a permanent injunction preventing it from requiring employees to sign a mandatory arbitration agreement

Finnegan Henderson: [Federal Circuit Newsletter](#) Oct 01, 2002

The Court also affirmed the district court's issuance of a permanent injunction against

Thompson and its refusal to correct the inventorship of U.S. Patent No. 5,284,298 ("the `298 patent"). Thompson sued Fluid Controls in the U.S. District Court for the Northern District of Oklahoma for DJ of noninfringement of the `298 patent, recovery for unpaid royalties, an injunction against interference with business relations, damages for unfair business practices, correction of inventorship of the `298

Long & Levitt: [Ted L. Vanzant v. DaimlerChrysler Corporation \(2002\) 96...](#) Aug 26, 2002

The trial court entered a partial summary judgment in favor of DaimlerChrysler, denied Vanzant's motion, and permanently enjoined Vanzant from producing and selling the radiator grills. Vanzant appealed the order granting partial summary judgment and a permanent injunction

Latham & Watkins: [How to Restructure High-Yield Eurobonds](#) Aug 01, 2002

These might take the form of an interim stay on proceedings (as there is no automatic stay), the sanctioning of the plan of reorganisation and a permanent injunction on any Securities Act claims (as there is no cram down). European proceedings It is a pertinent point why so few high-yield issuers have successfully used a European restructuring procedure

Sedgwick: [Do Jurists Dream of Electric Sheep?: California S...](#) May 01, 2002

Unable to stop the spamming any other way, Intel sued Hamidi, seeking a permanent injunction and damages. Ultimately, Intel dropped the damage claim, and obtained an injunction prohibiting Hamidi from spamming its employees at work

Kirkland & Ellis: ["Mission Creep" at FTC?: Use of Disgorgement R...](#) Apr 05, 2002

Arent Fox: [FTC REVIEW](#) Mar 01, 2002

The FTC asked the courts to halt the illegal practices permanently, freeze the defendants' assets pending trial, and order them to give up their ill-gotten gains. The FTC has asked the court to permanently bar the operation from deceptively selling the domain names and to order consumer redress

O'Melveny & Myers: [Employment News - March 2002 \(PDF\)](#) Mar 01, 2002

When its security department was unable to block or otherwise end Hamidi's mass e-mails, Intel sought a permanent injunction to halt Hamidi's conduct on a theory of trespass to chattels - an arcane, common law cause of action, which requires a disturbance of a property owner's right of possession of personal property. The trial court granted Intel's motion and issued a permanent injunction stopping Hamidi's e-mail campaign

Arent Fox: [Supreme Court Declines To Review First Amendment Case; ...](#) Feb 12, 2002

...href=urlToGoTo;} Alerts Supreme Court Declines To Review First Amendment Case; Permanent Injunction Ordered Against Indianapolis Ordinance Restricting Access To Video Games Note: This alert is also available in Adobe Acrobat here. On December 31, 2001, U.S. District Court Judge David F. Hamilton entered a Consent Judgment and Permanent Injunction in litigation over the City of Indianapolis ordinance that restricted minors' access to video games

McGlinchey Stafford: [Who?s In Charge \(presidential executive order reversed\)](#) Feb 01, 2002

He also issued a permanent injunction barring implementation and enforcement. In issuing the executive order, President Bush relied on the U.S. Supreme Court's decision in *Communications Workers v. Beck*, where the court ruled that workers covered by a union

security clause who decline to join the union can be required to pay agency fees only for collective bargaining, contract administration, and grievance adjustment and cannot be required to support nonrepresentational activities such as

Arent Fox: [Federal District Court Strikes Down Executive Order Req...](#) Jan 11, 2002

The judge also issued a permanent injunction prohibiting DOL from implementing and enforcing the executive order. First recognized by the United States Supreme Court in *Communications Workers v. Beck*, 487 U.S. 735 (1988), the so-called "Beck rights" protect employees from being forced to pay union fees for activities beyond collective bargaining, such as political campaign contributions

Kirkpatrick & Lockhart: [Blocking Incoming E-Mails and Internet Postings-The Emp...](#) Jan 01, 2002

In *Intel Corp. v. Hamidi*, 2001 DJDAR 12793 (December 10, 2001), an appellate court affirmed a lower courts grant of an injunction barring a former Intel employee from sending mass e-mails to thousands of company workers. Indeed, such may be an inevitable, The trial court granted an injunction prohibiting though regrettable, fact of modern life, like Hamidi and those acting in concert with him from unwelcome junk mail and telephone

Morrison & Foerster: [First Amendment May Trump Trade Secret Law](#) Dec 03, 2001

The court noted that it was not disputed that "computer code is speech," and it concluded that the Superior Court's preliminary injunction could be characterized as a prohibition of "pure" speech. In this case Bunner apparently obtained the DeCSS code from third parties, and he did not have any relationship with the DVD CCA. *Ford Motor Company v. Lane* This case came before the court on plaintiff Ford Motor Company's ("Ford") motion for a preliminary injunction for violations of the Michigan

Morrison & Foerster: [First Amendment May Trump Trade Secret Law](#) Dec 03, 2001

The court noted that it was not disputed that "computer code is speech," and it concluded that the Superior Court's preliminary injunction could be characterized as a prohibition of "pure" speech. In this case Bunner apparently obtained the DeCSS code from third parties, and he did not have any relationship with the DVD CCA. *Ford Motor Company v. Lane* This case came before the court on plaintiff Ford Motor Company's ("Ford") motion for a preliminary injunction for violations of the Michigan

Morrison & Foerster: [First Amendment May Trump Trade Secret Law](#) Dec 03, 2001

The court noted that it was not disputed that "computer code is speech," and it concluded that the Superior Court's preliminary injunction could be characterized as a prohibition of "pure" speech. In this case Bunner apparently obtained the DeCSS code from third parties, and he did not have any relationship with the DVD CCA. *Ford Motor Company v. Lane* This case came before the court on plaintiff Ford Motor Company's ("Ford") motion for a preliminary injunction for violations of the Michigan

Hale Dorr: [Antitrust and Trade Regulation Bulletin](#) Dec 01, 2001

Shaw Pittman: [District Court Finds Virginia's Regulation of the ...](#) Nov 01, 2001

In granting PSINet's motion for summary judgment for permanent injunction against enforcement of the provision, Judge James H. Michael, Jr. declared that Section 18. In August 2000, he released a similar opinion when he issued a preliminary injunction against enforcement

Weil: [WGM Internet Law Bulletin](#) Oct 10, 2001

The court, however, upheld an injunction entered by the trial court which prevented Felsher from appropriating the likenesses of any person associated with the university. SEC is seeking a permanent injunction against Leurs, in addition to fines

Gibbons: [U.S. Supreme Court to Decide Whether EEOC Can Be Compel...](#) Sep 26, 2001

Specifically, the Waffle House Court concluded that, although the EEOC would not be precluded from maintaining its action in federal district court insofar as it was seeking permanent injunctive relief to prevent Waffle House from continuing its alleged practice of discriminating against employees on the basis of disability, the EEOC was required to arbitrate insofar as it was seeking to vindicate the individual employee's rights through its request for backpay, reinstatement and compensatory

Weil: [New Entity Created Under Debtor's Plan Not A...](#) Sep 01, 2001

Discharge and Successor Liability Under the Bankruptcy Code Customarily, upon confirmation of a plan of reorganization, a debtor's liability for claims arising before the commencement of the debtor's chapter 11 case is discharged, and the discharge operates as a permanent injunction against the commencement or continuation of any acts to recover against the debtor for any discharged claims. Current and future asbestos-related personal injury claimants would be allowed to proceed against the

Chadbourn & Parke: [Options for Suppliers During the Energy Crisis](#) Aug 01, 2001

The QF would then seek a preliminary injunction, to be followed by a permanent injunction, prohibiting the utility from interfering with the QF's third-party sales. However, courts are loathe to issue long-term injunctions, and thus a TRO will often serve as a stop-gap method for selling to third parties

Greenberg Traurig: [Digital Future: Movie Industry Tries to Keep One Step A...](#) Jul 16, 2001

2d 346 (S.D.N.Y. 2000) (issuing the permanent injunction). Representing the defendants, Stanford Law School Dean Kathleen Sullivan argued that the act and, more importantly, the District Court's application of the act in issuing the injunction, are content-based restrictions and unconstitutional when subjected to strict scrutiny analysis

Paul Weiss: [Judges as Critics](#) Jul 16, 2001

The district court entered a preliminary injunction, finding that Randall's book "incorporated the characters, character traits, settings, plot lines, title and other elements" of GWTW. 136 F. Supp. Without waiting to write a "comprehensive opinion," it issued a per curiam order declaring that "it is manifest that the entry of a preliminary injunction in thiswww.paulweiss.com PAUL, WEISS, RIFKIND, WHARTON SON 4copyright case was an abuse of discretion in that it represents an unlawful prior

Gibbons: [Supreme Court Rules Disabled Golfer Must Be Accommodate...](#) Jul 03, 2001

The Court ruled that allowing Casey Martin the use of a golf cart to accommodate his Klippel-Trenaunay-Weber Syndrome, a degenerative circulatory disorder which severely restricts his ability to walk, does not fundamentally alter the rules of professional golf and thus affirmed a permanent injunction requiring the PGA to permit Martin to use a cart in tour and qualifying events. As an initial matter, the Court's opinion in the Martin case is limited to Title III of the ADA, which forbids

Arent Fox: [FTC REVIEW](#) Jul 01, 2001

The settlement permanently bans the defendants from selling non-durable office supplies and prohibits them from selling their customer lists and from transferring business information. The defendants agreed to a preliminary injunction order that would prohibit them from marketing any comfrey product for ingestion, for use as a suppository, or for external use on open wounds, unless they have evidence that the product is free of pyrrolizidine alkaloids and is safe

King & Spalding: [Strategic Options Available When Catastrophe Strikes th...](#) Jun 21, 2001

44 Antisuit Injunctions. An injunction proceeding may be a crucial strategic point in the resolution of the dispute

Weil: [WGM Internet Law Bulletin](#) Jun 13, 2001

Plaintiffs, in addition to monetary damages, are seeking a preliminary and permanent injunction. (Copyright) Australian Securities and Investments Commission v. Wayne Loughnan, (ASIC, sentenced on 5/22/01) Defendant receives a two year suspended sentence after pleading guilty to charges that he made false and misleading statements via spam eMail and on internet bulletin boards

Allen & Overy: [Litigation - June 2001](#) Jun 01, 2001

NWB issued proceedings in England claiming that parts of the Californian proceedings were being pursued in breach of clause 8 and seeking summary judgment and a permanent injunction to restrain the Californian proceedings. Furthermore, the Court of Appeal granted an injunction to stay the Californian proceedings

King & Spalding: [Aggressive Pursuit of Internet Patents Leads to Litigat...](#) May 01, 2001

...com originally asked the U.S. District Court of Connecticut to award both actual and punitive damages and to grant a permanent injunction, the parties settled the suit in January 2001. com convinced the U.S. District Court for the Western District of Washington to issue a preliminary injunction that forced Barnesandnoble

King & Spalding: [NetZero v. Juno: Free Internet Service Competitors Wage...](#) Mar 01, 2001

NetZero has announced that it intends to ask the trial court to extend the injunction through the trial date, which is set for July 2001. Juno is asking the trial court to issue a permanent injunction to preclude future infringement and is seeking monetary damages from both defendants

Gray Cary: [Federal Securities Law and the Internet:? Looking Backw...](#) Feb 01, 2001

29, 1996) (alleging that defendants used the Internet and other means to disseminate false and misleading statements seeking investors to finance construction of ethanol plant in Dominican Republic); Permanent Injunction and Asset Freeze Issued Against Scott Frye to Halt Securities Fraud on the Internet, SEC News Digest 95-221-2, 1995 WL 679305 (S.E.C.) (Nov. 16, 1995) (announcing injunction against solicitation on Internet seeking investors in Costa Rican enterprises); Court Enters Permanent

Arent Fox: [FTC REVIEW](#) Feb 01, 2001

The FTC obtained a permanent injunction from the U.S. District Court for the Eastern District of Virginia and a court order to permanently purge this scam from the Internet in default judgments against two defendants, WTFRC Pty Ltd. and Guiseppe Nirta. The FTC has asked the court to bar the scheme permanently and order consumer redress

Morrison & Foerster: [Internet Law Bulletin -- January 2001](#) Jan 22, 2001

A federal district court issued a preliminary injunction against Verio, finding that its extraction of information from Register. A federal district court issued a permanent injunction against Free Republic, prohibiting the bulletin board from hosting entire copies of newspaper articles posted by its subscribers

Weil: [WGM Internet Law Bulletin](#) Jan 10, 2001

...(Consumer Protection, Securities) SEC v. Westergaard, et al., No. 00cv9776 (S.D.N.Y., filed 12/27/00) SEC sought permanent injunction against Web site operated by defendant, who allegedly received kickbacks for publishing favorable reports on publicly traded stocks; defendants have agreed to settle the charges without admitting or denying any of the SEC's allegations. appeal filed 12/22/00) Verio, Inc. has appealed the injunction prohibiting it from engaging in email marketing campaigns

Finnegan Henderson: [Federal Circuit Newsletter](#) Jan 01, 2001

1 CONTINUED INFRINGEMENT "BREEDS CONTEMPT" Accused infringer's sales of infringing device with only minor changes after entry of injunction justifies finding of contempt. Dec. 12, 2000), the Federal Circuit affirmed a district court's grant of SJ of infringement and award of contempt damages against Davol Inc. ("Davol") for its continued infringement after issuance of a permanent injunction

Morgan Lewis: [Ninth Circuit Allows Competitor to Copy Leatherman'...](#) Jan 01, 2001

Leatherman obtained a preliminary injunction prohibiting defendant from marketing its Toolzall product, and the defendant moved for judgment as a matter of law on Leatherman's trade dress claim, arguing that Leatherman could not prove that the "entire design" of the Pocket Survival Tool was nonfunctional. Pursuant to the jury's finding of infringement, the district court entered a permanent injunction precluding defendant from marketing the Toolzall product

Arent Fox: [FTC REVIEW](#) Jan 01, 2001

As part of the settlement, Matthew Hyman and Zachary Hyman are permanently banned from engaging in any business that sells or telemarkets home or vehicle information guides, or assisting others who sell or telemarket such guides. Credit Card Promoters Banned from Future Telemarketing Efforts Darryl Smith, the principal of American Consumer Membership Services, Inc. (ACMS), has agreed to a permanent ban from engaging in any telemarketing, or in the advertising, promotion, marketing, or sale of

Baker Botts: [Trade Secret Protection and Misappropriation](#) Dec 30, 2000

In fact, a temporary restraining order or a permanent injunction may issue on the basis of "inevitable disclosure of trade secrets." This is a legal theory recognized by many courts which have determined that a person, because of the position or field they are in at their new company, will inevitably disclose trade secrets they learned at their former company. These include: (1) temporary and permanent injunctions; (2) actual damages (including lost profits, unjust enrichment and/or a reasonable

Weil: [WGM Internet Law Bulletin](#) Dec 13, 2000

...com v. Verio, Inc., No. 00cv05747 (S.D.N.Y., permanent injunction granted 12/8/00) Permanent injunction entered, prohibiting defendant from accessing plaintiff's "Whois" database for marketing purposes in violation of terms of use. (Commercial Issues, Domain Names, Privacy, Spam, Terms of Use, Data Protection) People v. Garon, (N.Y.S.Ct

Weil: [WGM Internet Law Bulletin](#) Dec 06, 2000

...(Copyright) Alan Porter, et al. v. Bill Jones, No. 00-CV-11700 (C.D.Cal., amended complaint filed 11/27/00) ACLU has filed an amended complaint seeking a permanent injunction against the California Secretary of State, preventing him from shutting down vote auction Web sites and threatening criminal sanctions against the operators of those Web sites. (Auctions and Electronic Marketplaces, First Amendment, Legal Overview) Tulip Computer International v. Dell Computer Corp., No. 00-CV-981 (D.Del)

Arent Fox: [FTC REVIEW](#) Nov 01, 2000

The judge issued the order as part of a preliminary injunction sought by the FTC, which freezes the defendants' assets and requires that the defendants comply with federal law pending the outcome of a trial on the merits. The FTC's complaint alleged that the defendants misrepresented their affiliation with or endorsement by the U.S. Postal Service by placing classified ads offering permanent positions with the Postal Service in certain geographic areas

Quinn Emanuel: [Trial Attorney of the Month: Fred Bennett](#) Nov 01, 2000

Permanent Injunction Against Cybersquatter Quinn Emanuel recently brought an action for trademark infringement and cybersquatting on behalf of its client, a major California bank, against a startup financial institution operating on the Internet. Only days after Quinn Emanuel filed the action and accompanying motion, defendants had agreed to a permanent injunction preventing them from using any confusingly similar trade names, to abandon their infringing domain name, and to pay attorneys' fees

King & Spalding: [Creative Resolutions in Mediation - Thinking Outside th...](#) Oct 23, 2000

Or, if the dispute is whether the incinerator should be built in the backyard of the plaintiff, the question could be restated as whether the project can be modified, or whether a compensating benefit can be bestowed upon the plaintiff, short of a permanent injunction or payment of consequential damages. Most people like to brainstorm, particularly with regard to technical solutions

Morrison & Foerster: [Internet Law Bulletin -- September 2000](#) Sep 14, 2000

In the Courts>>A federal court in New York has issued a permanent injunction against the publication of the DeCSS code, which decrypts the DVD encryption system CSS. The court ruled that DeCSS violated the circumvention provisions of the Digital Millennium Copyright Act, and rejected the defendants' arguments that the DMCA was unconstitutional. In the Napster case, the district court judge issued a written opinion explaining the basis for her issuing the preliminary injunction

Weil: [Second Circuit Addresses Post-Confirmation Environmenta...](#) Sep 01, 2000

The discharge also operates as a permanent injunction against any act or action to collect, recover, or offset any discharged debt as a personal liability of the debtor. In 1981, the court confirmed Duplan's reorganization plan and permanently enjoined all creditors from asserting, commencing, or continuing any claims against Duplan

Arent Fox: [FTC REVIEW](#) Jul 01, 2000

The Commission is seeking a permanent injunction to prohibit Rexall Sundown from making false and unsubstantiated claims in the future and ordering the company to pay monetary redress. 9 Million An operation that claimed consumers could lease their "dream vehicle" for "free" while earning between \$180 and \$80,000 a month by paying an annual fee and small monthly payments, has been permanently shut down, and ordered to pay \$2

King & Spalding: [Juno v. NetZero and Qualcomm: Who Owns Advertising via ...](#) Jun 28, 2000

Juno alleges that both Qualcomm and NetZero are infringing the '242 patent by producing, distributing and encouraging use of the "EUDORA" email software having the "sponsor mode." Juno is seeking a permanent injunction to preclude future infringement and monetary damages from both defendants. The '242 patent covers displaying advertisements to an Internet user even when that user is no longer connected to the Internet

Weil: [Will Non-competes Be Enforced in the Internet Age?](#) Apr 01, 2000

1999), the U.S. Court of Appeals upheld an injunction against defendant Cohen, enforcing a six-month non-compete clause in his employment agreement. Tigor sued Cohen within ten days of the date he began working for Titleserv, immediately obtained a temporary restraining order, and won a permanent injunction less than thirty days later, barring Cohen from working in the title insurance business or appropriating Tigor's corporate opportunities with its current and prospective customers for a

Commentary by Margo Kingston

October 7, 2004 06:12 PM

"I stand by the decision we took in relation to Iraq." John Howard

COMMENTS

Dear Margo,

Thanks for that insight into the mentality of and rationale behind "without fear or favour" press editorial decision-making, currently operating.

Of course no comment is required re the Murdoch press. To read that a Fairfax executive may have forbidden an objective assessment of the issues and choices facing electors, too, relating to the narrow, "...Commercial interests of the company", makes me shudder!

Which "commercial interests" are being discussed and which forms do these take?

The implications run from an example of mere pig-headed ideologicality, to something actually reeking of the unsavoury.

If this is the mentality that is to be entrenched in the country; then a sad farewell to Democracy.

PS Did anyone notice Lateline a couple of nights ago? Howard was asked, perhaps heading off-camera, if had consulted scientists over his evil woodchipping "policy" involving Tassie?

The question received a rude "no".

Back to the Dark Ages we go.

Posted by: Paul Walter at October 8, 2004 05:20 PM

Not sure what branch of the ALP you are a member of **Michael Fagan**, but at my branch we don't waste valuable party funds on vino and nibblies.

Posted by: Peter Cain at October 8, 2004 04:58 PM

The Rodent's deceitfulness (as displayed yesterday at the Press Club when posed questions by two journalists that were almost identical in tone/thrust/truthseeking re: the pre-war reasons given to justify the Iraqi invasion and the subsequent failure to locate any IRAQI WMD) was breathtakingly evidenced by his two different, and contradictory, responses delivered within minutes of each other.

JOURNALIST: Mark Forbes - The Age

...given that the Iraq Survey Group has now found that Iraq's nuclear, chemical and biological programmes were halted and stockpiles destroyed some years ago, didn't these findings

vindicate the advice of your peak defence intelligence assessment organisation... that there was no evidence of Iraq restarting its programmes and that its capabilities may have been destroyed...?

HONEST JOHN:

...There was an aggregate of intelligence advice given to the government at the time and the decision we took, WHICH WAS IN PART BASED ON THAT ADVICE, BUT NOT ONLY ON THAT ADVICE, was justified in my view.

Later in proceedings:

JOURNALIST: Paul Bongiorno - Network Ten

In this forum, just before the Iraq war you said - I WOULD HAVE TO ACCEPT THAT IF IRAQ HAD GENUINELY DISARMED I COULDN'T JUSTIFY ON ITS OWN A MILITARY INVASION OF IRAQ TO CHANGE THE REGIME.

(Bongiorno further framed his question along the lines of 'there was evidence prior to commencement of the IRAQI invasion to support claims that Iraq had abandoned its WMD programmes/capabilities and that some advice to that effect had been provided to the Government at that time, including advice from the now Green's candidate for the seat of Bennalong, former intelligence officer Andrew Wilkie').

HONEST JOHN:

Well Paul, the advice that we were given at the time was the BASIS of the decision and that decision was taken in good faith.

ME:

Prime Minister, given that you ruled out regime change as a legitimate reason for the invasion of Iraq, was the available intelligence on Iraq's WMD the BASIS for the decision to go to war as a member of the coalition of the willing or was the decision made...IN PART BASED..., BUT NOT ONLY BASED ON... the available evidence?

If your government's decision to send Australians to war... WAS IN PART BASED ON.. pre-war intelligence on Iraq's WMD, will you now enlighten the Australian people as to what other factors were taken into account in favour of the invasion of Iraq, and also explain why any other factors were not enunciated at the time?

Posted by: Peter Cain at October 8, 2004 04:29 PM

G'day. Here's another story from today's sealed Crikey which would once have been incredible.

I had a similar experience at an ABC metro radio station doing an interview on my book. The station manager was in the producer's box and the interviewer was ordered to go tough on me. The intro at another ABNC metro went on and on about how there was a right to free speech in Australia and although listeners might disagree strongly, it was OK to have me on.

A well-connected media operator writes:

As the nation prepares to vote, Emmy Award winning filmmaker Tahir Cambis is the latest

victim of the culture of fear mentality in the besieged bunkers of the ABC.

Cambis, the co-director of the new Australian feature length doco, 'Anthem', had his interview on Triple J in Sydney cut short on Wednesday by senior management intervention.

'Anthem' chronicles the plight of asylum seekers in Australia to the frontline of the War on Terror in Afghanistan, US and Iraq. It is a three year personal odyssey by Cambis and co-director Helen Newman.

Cambis was being interviewed by Lindsay aka the Doctor about the film when the incident happened.

Before he started asking questions, the good Doctor emphasised the "biased" nature of the film - a film he had yet to see.

Cambis was warned about the limited scope for discussion because of the perceived controversy in the film - but was assured he could explain its content.

However, as soon as the film maker proceeded to talk about the war in Iraq and the Siev X - two of the topics covered in the film - the internal Triple J phones began to run hot. Producer Creg Schifton was looking worried: the hounds had been let loose down the phone line. And before you could say 'corporate censorship', he was under attack.

The good Doctor was forced to cut short the interview to resuscitate his nervous producer. And as Cambis was being ushered out of the studio the barking voice of their big boss Linda Bracken could still be heard.

CRIKEY: If this is the kind of petty censorship we'll have to put up with under a new Howard Government, even more reason for a change of administration tomorrow. Then again if The Chaser can get away with its outrageous golden shower ditty, there's obviously still plenty of scope at Aunty for anti-Government material.

Posted by: Margo Kingston at October 8, 2004 03:01 PM

I just read an article by William Shawcross in today's Oz justifying the unjustifiable: **Iraq's liberators should be proud.**

So I did a Google and the first article to come up was one in the [Observer](#) Sunday February 23, 2003: **Why Saddam will never disarm** in which, "William Shawcross says the Iraqi leader is prepared to go to any lengths to hold on to his deadly weapons."

How can these chickenhawks dare to show their faces? They were wrong, wrong, wrong. Some of them may have genuinely believed in the WMDs, though Wolfowitz later airily dismissed them as the "bureaucratic" reason for the war. But some lied through their teeth because they were determined to have their war no matter what.

Posted by: Antonia Feitz at October 8, 2004 02:43 PM

G'day. This is from Crikey's sealed selection today:

2. The Age, Crikey and election editorials

The Age's acting editor Simon Mann was quick to fire off an email last night in response to our lead item in the second sealed section yesterday claiming Fairfax's metropolitan

newspaper boss Mark Scott had decreed from on high that The Age must endorse the Howard Government for a fourth term.

Our edition went out at 6.35pm and this came back from Simon Mann at 7.41pm:

"We ran an editorial conference involving several senior editors including departing Editor in Chief Michael Gawenda and myself, with Mark Scott attending. We debated the principle of not endorsing a particular party in an election campaign but the group agreed that the paper should endorse (I gather the SMH may not be doing that). We then thrashed out the issues with several people having a say, including John Watson. Opinions were divided. But the call was Gawenda's and mine. We've endorsed the coalition on the back of seven years' economic growth, but with some qualifications.

Simon Mann"

The Age's leader John Watson also followed up with the following this afternoon:

Hello. As you chose to name and quote me in your report, not particularly accurately either, I want to correct a couple of crucial claims that were made, and I quote: "Fairfax's Sydney-based management has over-ruled The Age's editorial team and ordered them to editorialise in favour of the Coalition being returned." and "The local heavies, led by acting editor Simon Mann and outgoing editor-in-chief Michael Gawenda, accepted John Watson's argument and didn't think this fence-sitting was sustainable, so a decision was taken to call for a change of government. That decision was then overturned by Mark Scott, Fairfax's head of metropolitan newspapers."

First, there was an extensive discussion, but no decision was made at the meeting. It is true I voiced concern about editorial consistency, but the meeting certainly did not take a decision to call for a change of government. What it did agree on was to reject fence-sitting because there were big differences between the parties, a real choice, and opting out of a decision was an unsatisfactory response. When the meeting broke up, the editor had not announced what he described as a very difficult decision on endorsement.

Regards
John Watson
chief leader writer
The Age

Michael Gawenda also took a strong line when contacted by The Australian's Strewth columnist Nick Leys who produced this item in today's paper which is not online because it only ran in the second edition:

It's the Age of discontent

Things are getting bolshie at the Spencer Street Soviet, aka The Age. An alleged sequence of events over today's election-eve editorial has pushed morale through the basement floor - well, that's according to crikey.com.au. The wildfire rumour said The Age's leader writers sat down to nut out who to back, and after examining the list of Coalition failures the hacks decided to support Labor, as they did in 2001.

Enter head prefect Mark Scott, who overturned the decision due to "commercial interests of the company" and commissioned outgoing editor-in-chief Michael Gawenda to pen a pro-

Coalition editorial instead. "Total nonsense," says Gawenda. "I wasn't overruled, no-one was ... There were negatives on either side, but we decided we would support the Coalition."

Scott was just as dismissive - "it's very disappointing this kind of article appears with such inaccuracies and with no attempt to check the facts with those concerned".

Today's Crikey with editorial responses should be good.

The Crikey response

Crikey was contacted on three separate occasions by Age insiders yesterday and all had the same message which was reflected in our story. Given that the whole saga played out in a private meeting between five or six people, any of the key players were obviously going to deny it. This sort of things happens in newspapers. I can well remember Daily Telegraph editor Col Allan pulling the story about James Packer and Kate Fischer separating after an order from the Murdochs. Col then went on radio and pretended it was his decision and that it was old news. Any self-respecting editor has to toe the party line and stand behind the final decision, so it was absolutely predictable what Gawenda, Simon Mann and Mark Scott would have said if contacted.

We did speak on the phone to a senior editorial figures on The Age yesterday afternoon and this confirmed what was being said in other emails and phone calls. Whatever the truth is, Crikey reported the version of events that swept the newsroom floor yesterday.

At the end of the day you can only look at what has happened. The Age has a new management heavy based in Sydney who used to work for the Liberal Party and he came down to Melbourne to attend the editorial meeting and the final decision was to change horses.

Not surprisingly, the letters are now pouring in to The Age. Here are two that were copied to Crikey:

Dear Sir,

Vote one Mammon; stuff truth, ethics, decency and democracy. And I bet you don't print this after Friday's editorial.

Vincent O'Donnell
Ascot Vale

Michael Gawenda got this one direct:

Your decision to support Howard is pathetic.

John Kotsopoulos
Soon-to-be ex Age subscriber

Posted by: Margo Kingston at October 8, 2004 02:43 PM

Like many of you, I am not looking forward to another Coalition government. It will indeed be a sad day, but there is still a day and a half to go before we can be absolutely sure of the outcome, so I'll just continue visualising a Labor win - and praying.

The bright side is that if Howard is back and interest rates do rise (let's face it, they are bound

to, we're living in an economic bubble that's about to burst), and he backs down on his promises as he is wont to do (I wonder what synonym he'll use in place of 'non-core'), that leaves him open to skewering by Labor and those who've opposed him.

Along with others on Webdiary I too thank you too, Margo, and want you to count me to support you in your campaign for truth and integrity in government and the preservation of a free and unencumbered press.

I bought your book and find it to be compelling reading. I would even venture to say it is obligatory reading for anyone who truly cares about democracy in Australia. I hope you continue your mission, difficult though it must be at times.

We must not give up expressing our views even after the election. Whichever party comes into power, we must, like Margo, be vigilant and alert to any threat to human rights and democratic values and practices. Blogs and discussion groups on the Internet like the one we are in now is one way of pursuing vigilance and uncurling political mis(dis)information.

Posted by: LL Respall-Turner at October 8, 2004 02:42 PM

"I stand by the decision we took in relation to Iraq." John Howard

This confirms Howard is one sick excuse of a human being.

After all the evidence is stacked up it is obvious for anyone with half a brain that this war was the war Bush & Cheney had to have. Nothing was going to stop this war. Howard new it, really we all knew it.

But now the truth is out these morons say they would do it all over again.

These morons started an aggressive war for the sole reason of regime change. As such, under international law they should be brought before the courts and tried as the war criminals they are. After all Kofi Anan said the war was illegal so lets see if he is correct.

John Howard stated to the Australian public the reason for war was to get the WMD's not to remove Saddam. Why did he say that? Because as a lawyer he knew that to remove Saddam without an imminent threat was illegal. Pure and simple.

They all knew, hence all the lies and bullshit about imminent attack from Iraq, stockpiles of WMD's, nuclear threats, alliances with Osama, the shredding machine and so on. ALL LIES.

Alright, I know all you war supporters will say that if we didn't go to war then Saddam would still be in power.

So what? This sadly is the only thing war supporters can salvage from this criminal act. I'm sure that for 200 billion dollars Saddam could have been removed in a more intelligent and peaceful manner thus saving the lives of thousands of Iraqi civilians and the infrastructure of their cities.

Think about it war mongers, 200 billion dollars spent to destroy Iraq, murder tens of thousands of innocent civilians and to give Osama Bin Laden everything he could have dreamed of.

\$200 billion dollars, a lot of which will find its way back to the tax free havens of the family and business associates of George Bush and Dick Cheney. No matter what happens in Iraq or to

the American economy these guys will always be filthy rich and this adventure is getting them richer by the minute, with every bullet and every bomb.

It really does show you what a mug Howard is. While his big time buddies take him for a ride and con him into a war that will make them heaps of money all Howard gets is a pat on the head and called the "man of steal" (spelling error intentional) by one of the most dangerous and deceitful people on the planet.

At the end of the day John Howard has been exposed as a fool (a weak fool) and his desparate longing to be noticed and remembered as a great Australian war time leader nothing more than a pathetic and deadly ego trip.

This is the price we pay for such leaders. Fortunately so far we Australians have only had to pay with our taxes while others pay with their lives.

One final question to the war mongers; would you be prepared to sacrifice your life or the life of one of your children to oust Saddam or would you rather it be done in a more peaceful way?

I bet not one of you war mongers would voluntarily go to Iraq to fight and die, not one. Come on someone, prove me wrong, just one person, just one person in the millions and millions who supported this war show me that you are willing to stand up and be counted. Come on, lets see what your made of. Gee, no one seems to be interested. Looks like we are all just a mob of cowards, just like George Bush, Tony Blair and pathetic little Johny Howard.

On Saturday vote for decency, not for deceit, destruction and death. Please.

Posted by: P Moffat at October 8, 2004 02:21 PM

Margo, in this morning's paper I read the following:

**"Howard's late bid to lock in high earners
By Louise Dodson, Chief Political Correspondent
October 8, 2004**

Australia's top tax rate of 47 per cent was too high and the Government would try to reduce it if re-elected, John Howard said yesterday, making a last-ditch pitch for voters still undecided about who should run the country."

Please Explain Mr Howard. Why is it that you haven't included this policy before now? Instead, you have used the massive revenue streams from what is effectively a double taxation policy in a sordid attempt to porkbarrel your way to a fourth term.

When GST came in, the expectation for many of us was that the government would, as many other governments have done, offset the increased tax take by lowering the top marginal tax rate to perhaps 30% as was done in NZ, albeit with a higher GST rate, I think 12.5%.

What a time to raise this issue! One day before the election. I was very pleased to see The Australian take you to task in their editorial last Saturday. They pointed out that 8.5 years ago you stood on a plank of smaller government, lower taxation, encouraging people to take responsibility for their own affairs whereas all of that has now gone out the window.

Posted by: Ray Soper at October 8, 2004 01:54 PM

If Howard wins tomorrow (or if he gets over 40% of the primary vote), we can safely state that

the notion of public ethics is dead in this country. That so many lies have been told for so long, and yet allowed to pass by the main media organisations is a reflection of the sad little self-absorbed country we have become.

I don't know what to call the political system we have in this country. It used to be a kind of Westminster democracy - where the greatest sin was to mislead the parliament, and a higher sense of public morality was expected.

It existed in Britain only 15 years ago - I remember the UK Trade Minister in 1990 (can't remember the name - Nicholas someone) resigning after he described the proposed Euro currency and closer EU co-operation as "handing everything over to Hitler".

But these days we brazenly invade other countries on trumped-up pretexts (while carefully distinguishing between tyrants, doubtless on the basis of their known oil supplies), and threaten to continue to do so.

Our national parliament is utterly usurped - the symbolism of Bush's security forces taking over Capital Hill was incomparably appropriate. We treat the pitiful trickle of refugees arriving in this land as criminals.

And yet people treat seriously things said during an election campaign - during the campaign, for God's sake - and go on to make serious voting decisions based on this guff. With all the history of 'non-core' promises, people still fall for the same old tosh, assess everying based on their self interest, and announce their intentions accordingly.

I'm no fan of the Labor party - and it's perfectly likely that Latham will descend to Howard's level of duplicitousness within 4 years - but to leave the Liberals there after their performance in recent years is to condone the basest levels of dishonesty and deception. To reward this is unthinkable.

Yet....I fear it will be so.

Posted by: Graeme Gee at October 8, 2004 01:54 PM

Margo, I've just read a very interesting article in crikey.com about tomorrow's editorial in The Age ,and I guess the SMH will comply in some way. It is about why the Age will be supporting the Howard Government.

Is there any institution with a public voice that does not have as their bottom line MONEY? If Howard gets in, I hope Australians are feeling strong because there will be no social policy left in this greedy society of ours.

I feel sick at the thought that the last bastion of leftish press is now gone. I want to leave home, but hey, I'm there already.

Sorry Margo, I'm over Fairfax. I'll now be 'informed' by the ABC.

Margo: You are reading, and have been published by, a Fairfax publication called Webdiary on the SMH online.

Posted by: Gary Richards at October 8, 2004 12:37 PM

Sam Richards thinks that it's tough being John Howard. But Australia's current relative economic prosperity is due to many factors.

One major factor is the 10+ years of economic reforms introduced by the Hawke Labor government.

Another, and probably the most important factor is that this is an incredibly rich country.

Politicians of all persuasions tend to ignore that fact that we have a population of 20 million and an entire continent to ourselves. We have vast natural wealth and we produce more food than we can possibly eat.

If we were not one of the richest nations on earth, we would have to have stuffed things up very badly. The idea that Howard suddenly became an economic genius when he inherited an economy that had already been growing strongly for 4 1/2 years is absurd.

I will be voting Labor on Saturday, because I believe this government needs to be defeated. The only party which can defeat the government is Labor. I voted Green at the NSW election, but this time I will vote for Labor.

As for Howard's press conference, the mind boggles at the rubbish he is allowed to get away with. He asserts that the war in Iraq was legal because Iraq was in violation of UN Security Council resolutions. This is false, but the journalist who asked the question didn't follow up the point.

Under the UN charter, nations can go to war either in self defence (they are attacked or an attack is imminent) or if the UN Security Council authorises it.

Individual nations do not have the right to usurp the Security Council's authority. It was not up to the US and Britain to decide that Iraq was in breach and the appropriate course was war. That right rests with the Security Council and only the Security Council.

Yet Bush, Blair and Howard decided to ignore the UN charter and act themselves. That is why the war was illegal, a fact Howard and the others simply refuse to face.

There is no way around this point. The UN inspectors wanted more time. A clear majority (11 of the 15 members) of the Security Council wanted the inspections to continue, as Hans Blix requested.

Blix said the Iraqis were beginning to show real cooperation. When Bush et al saw that the war resolution would be defeated decisively, Bush and Blair withdrew it and went it alone. No nation has the right to do this.

Their justification for going it alone was that Iraq presented an imminent threat that had to be tackled without further delay. We have known for some time and the final WMD report confirms, that Iraq was no threat.

The reasons that Howard and the others gave for bypassing the Security Council and going to war by themselves, have been shown to be entirely false. There were no weapons of mass destruction. There were no plans to make them. The best that Duelfer could come up with was that Saddam would have liked to acquire them again when the sanctions ended.

However, they found no written justification for this belief. It is based entirely on their interpretation of statements made by various Iraqi prisoners, including Saddam.

Yet Bush's previous handpicked inspector David Kay told CNN television "Right now we have

a lot of people who are desperate to justify the Bush administration's decision to go to war with Iraq.

"They will focus on issues such as intent. You will also hear that although we haven't found the weapons or manufacturing capability, they could have been shipped across the border. You can't ship that which you haven't produced. You can't bury that which you haven't obtained or produced."

"Look, Saddam was delusional. He had a lot of intent. He wanted to be Saladin the Great, of the Middle East yet again. He wanted to put Iraq in a preeminent position to remove the US from the region," Kay added.

"He had a lot of intent. He didn't have capabilities. Intent without capabilities is not an imminent threat." (Agence France Press, Oct 7, 2004)

This then is reality.

How can one overstate the seriousness of this action?

Bush, Blair and Howard, ignored their commitments under the UN charts and went to war for reasons that were false. They refused to listen to any voice that contradicted what they wanted to hear.

When Hans Blix told them that he was sceptical about Iraq's WMDs, they wouldn't listen. When Dr Robert Mathews told Howard that the evidence for Iraq having WMDs was weak, Howard wouldn't listen.

So they ignored the will of the Security Council and the will of most of the world. They insisted that Iraq needed to be disarmed by force.

They were wrong.

Why do our journalists not make this simple point, and make it often to the PM? I don't get it. It seems that at press conferences, the question is asked, he gives his usual bullshit response, and they move on.

Why? Is it because they are under his spell, or they don't know enough? Is it because most of them work for Murdoch and he wants Howard returned? Whatever the reason, it's pretty damnded disheartening.

Posted by: Mark Craddock at October 8, 2004 12:34 PM

Marilyn Shepherd, I will vote Green as well. Any country that has a law to lock up innocent children (forever) who have committed absolutely no crime is a disgrace.

But then again this is the same country that gave us Terra Nullius (empty land) to justify the theft of aboriginal land and resources. Yep that's the Australian way, steal a people's country and then introduce a law to deny their very existence. What hope the kids in detention? We must be a very sick bunch here in OZ.

Posted by: P Moffat at October 8, 2004 12:28 PM

I detect a hint of defeatism among the Labor/Green supporters here. Cheer up, it's not over till the fat lady sings.

As a Liberal, I'm far from complacent about the outcome. Journos in Australia have a very weak grasp of just how unreliable the sample selection of opinion polls can be.

Oh, and **Kate Foster**, if Labor wins, I'll accept that decision and my Centrebet winnings with good grace. As a fellow Liberal disgusted with Howard's spending spree said to me the other day, "If the Australian people vote us out on October 9, it will be for the right reasons".

He has faith that the Australian people's collective wisdom is sound. So do I. If we lose, it will be a judgement that the Liberal Party needs to go back to Opposition and find itself. I think that's a defensible view, and I will understand if it is the judgement the people deliver.

Incidentally, Latham could have won this election soundly with a reformist economic agenda. If the people plump for Howard, it will be because they recognise that the ALP still has not renewed its vigour for government, and that Latham's reformist zeal has been quenched by his handlers and advisers, leading to populist and irresponsible measures like Medicare Gold.

Either way, it has been a highly opportunistic election campaign from all parties (Greens included). The Australian people deserved better.

Posted by: Alan Anderson at October 8, 2004 12:25 PM

Since nobody else has taken up **Kate Foster's** question, I will.

Kate wants to know:

What makes it okay for musicians, actors and crap television actors to tell us how to vote, but the minute a religious person puts their hand up there is an uproar in the media? Don't they have as much say as anyone else?

Speaking as a fellow atheist, I can assure you I bear no ill-will to any religion. I'm as happy to hear from all of them, or none; it's a matter of complete indifference to me.

The reason for the uproar Kate is that musicians & actors have zero real power when it comes to political matters. Yes, they have 'star' power, and they may influence the votes of some yamps who think celebrity=authority. Yes actors sometimes get elected, notably in the USA, and you might even mistake this for celebrity having some kind of real political power. But it ain't so, because if it were, actors wouldn't be constantly whingeing for more government funding of the 'yarts' and special protection for their insufficiently-economically-rational activities.

Bottom line, when actors speak out, nobody (except maybe a few seriously star-struck fans with borderline personality disorder) assumes the actors to have any greater hold on the 'truth' or moral authority than anybody else. They are considered to be no more or less qualified to speak than doctors, lawyers or joe public.

However, religious leaders are different. The institutions they represent claim to have a special kind of moral and spiritual knowledge. And when they speak, they do so with the authority of those institutions behind them.

The church's claim on special knowledge may not impress you or I any more than a speaker representing the 'cult of celebrity', but I assure you that religions of all kinds have an impressive record of political influence throughout history and even today.

Witness that in this age of legislated 'equal opportunity', a group like the Anglican Churches

General Synod as recently as this week voted down the consecration of female bishops, even though it was supported by more than 50% of the Synod (the required majority was two-thirds).

Why does a religious institution have the power to defy entrenched community standards and even its own majority view on equal opportunity? Because of its claimed status as having a special hold on moral and spiritual truths that go beyond temporal matters.

But religious folks aren't the only kind who need to hold their tongue on politics. Here's another way to think about your question. Would you be comfortable if an army general came out publically in support of one party or the other? I suggest that it would be extremely destabilising to our democracy if the military were to express political support for a party. Well, religion is in the same camp. It is precisely because they have (or could have) real political power that they shouldn't ever attempt to wield it.

Democracy is about governing for all. We cannot allow a minority to hold the majority to ransom, nor allow the majority to tyrannise a minority. Religious leaders speaking publically on politics is to be discouraged, because it can all too easily give rise to either scenario.

Posted by: Mercurius at October 8, 2004 12:18 PM

Mark Latham is an incompetent manager of finances and a liar. I have not yet seen anyone put a credible defence to Mark Latham's dealings in Liverpool Council. Anyone, anyone? Nope just silence!

Here is a link to ABC late line special investigation presented by Tont Jones a few months ago.

I'll show you another con job. Have a look at Labor's cost savings of \$28 billion. I entered labor's web site to find specific cost savings - all hog wash, nothing specific, just numbers.

Labor's other policies are nothing but feel good policies. Most are not even properly costed. The projected costs are nonexistent. They haven't even bothered to submit their policies to Treasury, but a selective few and there are no specifics.

Even some of these policies are borrowed from other heavily interested parties i.e. Medicare gold from the Catholic private hospitals and environmental policies from the Greens.

I hear that Latham has the backing from economists on interest rates. That's a worry because economists haven't got it right since the Asian financial crisis in 1997!

You might argue that the power of the world financial markets have a say on interest rates. That's not true. Their models are mainly based on a mechanical theoretical basis taught in university's that wouldn't have the slightest notion about realities in life - the public confidence, our behaviour or our thought processes.

They can't even forecast three months ahead. We have had 2 world recessions. Was Australia affected? Did world markets dictate that we would go into recession as well? Nope.

These below are the worst case scenario if Latham wins Government:

1. In 2 years time Australia will head into budget deficits, small now but will blow out into the billions in the next 5 years.

2. The new industrial relations policy kicks in next year, and productivity gains that have been made in last 20 years will be gone. There will be no distinctions between hard working employees and slackers. They will be paid the same. As a result unions will seek collective bargaining, and wages will increase more than the productive gains in industries.
3. Inflation starts to creep up now at 4% and rising because of no wage constraints, The Reserve Bank starts raising interest rates.
4. Companies start laying off workers that are too expensive to keep. Industrial action is commenced by the unions for wage rises and to halt company restructuring.
5. In 3 years time, Latham increases the company tax rate to keep the budget in order. This has an adverse reaction to industries and more lay offs.
6. Unemployment starts to rise, hitting 7%.
7. Public confidence is low.
8. Australian and foreign companies realising they can't compete against overseas markets start to put their investments overseas.
9. The reserve bank has no choice but to raise rates again to stem the flow of money going overseas now at 9%.
10. The property market collapses to a 10 year low.
11. Mark Latham's pride takes over; he will not wind back any of his policies.
12. We're all f***.

I entered Webdiary two weeks ago and saw a lot of anger against the Howard government and most of it was directed at his foreign policy and lack of social responsibility. I might say most of it I agreed with. But when you talk about Latham being the saviour, well have a look beyond his fairy tale policies and you might learn something more.

Posted by: John Lazoglou at October 8, 2004 11:55 AM

Whatever happens we'll get the party that we want and not necessarily the party we need. Isn't democracy a wonderful thing?

Posted by: Sean Hefferon at October 8, 2004 11:45 AM

Well, I don't hide behind false statements...it's been the finding of both the Jull Inquiry and the Flood Inquiry that no influence was exerted on the intelligence agencies, there was no massaging by ministers of that...

A wonderful example of one of the PM's favourite ways of avoiding accusations - he's been loose with the truth. Reply to the accusation that he didn't have the intelligence advice to back up his decision to go to war (and therefore it was made for other reasons than were presented to the Australian people) by replying to another accusation that he can defend. Namely that intelligence was sexed up. This is not the accusation and hasn't been for at least eighteen months.

The real issue was that he was *selective* in the intelligence he received and indeed has put in place a series of procedures, and a culture, in the public service that means he didn't receive

information it would have been politically inconvenient to hear.

Under Howard deceit in government has been routinised. Now an everyday consideration in the business of the Australian state is the factoring in of the *political needs* of the government. In particular their need for walls of plausible deniability. This is a complete about face from the Westminster tradition that public servants have a duty to lay all facts and foreseeable consequences before a minister so that s/he can make the best possible decisions and take responsibility for them.

If this seems just abstract and unrealistic consider the following. An agency has information that hints that a terrorist incident may occur, or even be provoked by a government action. However the information is, like most intelligence, tenuous.

In deciding to go to the minister the public servant must now consider, would the minister want to know this? If something happens and he doesn't know he's *politically* safer to be able to deny foreknowledge. And the minister knowing may not be able to really affect the outcome, so perhaps better to leave it.

A decision like this is reinforced by precedent under Howard. When this sort of scenario has occurred the government has usually rewarded the public servants concerned with promotion. Again the opposite of past practice, where failing to keep a minister informed could easily lead to the end of a career.

For that matter, with advisers and politically appointed managers surrounding Howard and his ministers, even if the information is passed up the line it may be blocked for political reasons at the level of ministerial staff.

This is an issue Mr Howard will not address but is both a condemnation of his democratic credentials, his honesty, and it represents a major breakdown in the workings of government and consequently the safety and welfare of Australians.

Posted by: Tony Phillips at October 8, 2004 11:32 AM

Fear not Margo. The great unwashed get it right more often than not. Howard sneaked in last time because of last minute Tampa-ing. This time his career-long sneakiness will keep him out.

The 10-15% undecideds are taking a deep breath before giving the old b*****d the heave.

Posted by: John Kotsopoulos at October 8, 2004 10:57 AM

Fredrik Johansson, you are right, Howard didn't lie about Saddam possessing Weapons of Mass Destruction. The lie was that those weapons posed a real and immediate threat.

It had to be a lie, because why on earth would you invade a nation that possessed WMD and had the intention of using them?

Why on earth would you put the men and women of your armed forces directly in the firing line of some of the most destructive weapons on the planet?

Why on earth would you destabilize the nation in the full understanding that there was a very real possibility of terrorists streaming into the country and getting their hands on those very same weapons?

It doesn't make sense for him to have not lied. Because, if he did believe that Saddam's WMD posed a real and immediate threat, he is not only stupid, he is incompetent.

Howard has made much of his "courageous" decision to go to war. It IS courageous to run into a burning house to save the life of a child. It is NOT courageous to deliberately set the house on fire in the first place.

John Howard endangered the lives of the men and women of the Australian Defense Force so he could play hero. He is directly responsible for the deaths of almost 15 000 innocent Iraqi civilians. He has consigned the world to a perpetual state of conflict for at least the next half century and for that he must be condemned on Saturday.

Posted by: Carl Baker at October 8, 2004 10:57 AM

I lived in Austria for 12 years, and saw the fall of the Berlin wall, the collapse of Eastern Europe and the fall of Yugoslavia. I saw hundreds of thousands of refugees march across Europe and saw them taken in many European countries.

I witnessed Austria a tiny republic, because of its frontline geographic position, humanely help process, house and or transit and look after the needs of these refugees, including schooling for the children, health services for the sick and countless other services for anyone who needed them.

I never ever saw or heard of them jailing children.

I saw all of this during the rise and rise of Jorg Haider and the Right, the decimation of the Austrian Socialists and the entrance of Austria into the European Union.

Throughout this period I saw the incremental rise of the Green Party which had become the only refuge for the conscience vote, on a wide range of issues, not just humanitarian or ecological issues.

Yesterday's High Court Decision puts our election into some perspective. This is no longer a question of what sort of future and country are we going to vote for, and who will best represent that ambition. This is a question of what country have we become, that we can jail children, enact it in Parliament and enshrine it in law, and still go to the polls deciding which family package suits our pocket best.

I'm voting for the Greens and their "Kooky" policies, because in Australia it is no longer kooky to imprison children indefinitely, it is no longer kooky to invade another country or to invite another country to invade us if the policy settings are correct. It is no longer kooky to tell lies and risk lives.

I'm voting Green because of time lost when Simon Crean failed to fall on his sword because of personal ambition or false pride, at a time when the ALP could have used that valuable time to regroup and fought on.

I'm voting Green because Bob Brown confronted the most powerful man in the world. Looked him right in the eye, and the President of the United States, backed down, refused to reply.

Thanks Margo for mediating this forum. I'm still sticking with my prediction of Howard buried under a veritable landslide, an increased mandate for the Greens.

I think the damage has already been done, we are John Howard, whether he wins or loses.

Posted by: Carl Fowler at October 8, 2004 10:50 AM

Paul, if "excitement" and "soul" is what you are looking for, perhaps you should look elsewhere than politics and politicians.

Posted by: Mike Lyvers at October 8, 2004 10:26 AM

I had just one opportunity to express myself on electronic media, on regional ABC radio. A producer asked what I would say. I said I would talk about the media's failure to provide important information that might effect how people vote. I was told not to mention Rupert Murdoch.

Got on. Said why don't Australians know 37,000 Iraqis were killed in the first six months of the illegal invasion of Iraq? And added that it did not surprise me that Australia was ranked No. 50 in the world for Press freedom. ABC only allowed two callers after me.

One wanted a river dredged and the other wanted to refute what I had said, saying I obviously had an agenda. The ABC presenter didn't even say hey, no need to insult another caller.

Until we insist on diversity of media ownership in this country, we will remain the sheeple the power elites lead by the nose. If the Coalition is returned on Saturday, corporate media control will only worsen. And I will no longer be listening or watching. What would be the point! I can get the basic facts and figures online these days and agitate within an international framework.

Meantime, it will be truly fascinating to see if the Murdoch polls - how utterly fantastic that ABC's Kerry O'Brien never fails to say the 'authoritative' Newspoll - were as manipulated as recent American polls which have been mocked and derided, even in the corporate media.

Sheep follow leaders and Newspoll and the media have reported even a 1 point lead as a Coalition win, ignoring the margin of error by a mile. Some comments in recent days by the pollsters and pundits concerning 18 perecent 'undecideds' does make one wonder if this is an attempt to explain away a Labor win! Fingers, toes and eyes are crossed!

Posted by: Mitch Williams at October 8, 2004 10:24 AM

Frederik Johansson, Churchill was the architect of the Gallipoli landings, intended to break the Western Front stalemate, in WWI, and the invasion of Sicily and Italy, the Axis' 'soft underbelly', in WWII.

The former was checked in its initial stages and developed into a year-long meat grinder for both sides, while the latter went from a projected lightning advance against token resistance to a gradual, expensive slog which lasted until the end of the war.

Churchill, like Howard, was a posturing fool with an overinflated sense of his own importance, who used base demagoguery to rally the easily-impressed into supporting his blunders. It's a far more telling mark of the man that he was booted out of office a mere 10 weeks after the German surrender.

Inept politicians like war. It allows them to squander money, resources and people's lives and render them 'sacrifices'.

Posted by: M. Alat at October 8, 2004 09:53 AM

Kate Foster, I read the SMH, my income is \$40,000, I have never earned enough to get a deposit for a home so I'm a renter, I am a working mother because I couldn't afford not to be.....

and best of all, I have maintained the rage since 1975, and by now I'm furious.

Even if the government is voted back in I could be satisfied with Johnny losing Bennelong.

Posted by: Janine Smith at October 8, 2004 09:20 AM

Margo, thank you for this forum and all your hard work. I think we are lucky to have you and all the Webdiarists for their considered and for the most part intelligent opinions.

I agree that whatever the result come Sunday we shall have to accept it. If Mr Howard wins, that won't stop me from shedding a tear though for the continued slow death of our democracy under another Howard government.

I hate to think that the country we love has turned into a country of people more concerned with their own material wealth than the future of our children. I hope against all hope that Latham will win (with a nice increase in Green senators to keep the bastards honest) but I am very much afraid he wont.

I will be watching on saturday night with family and friends and plan to get very drunk if Howard wins. I will worry about the hangover on Sunday. Like a friend of mine said the other day, the sun will still rise even if the rodent does win. Thanks again Margo!

Posted by: Wendy Davies at October 8, 2004 09:18 AM

My preferred outcome this weekend would be a government led by Bob Brown. Next in line would be a Labor/Green coalition. Following that a Labor win. Finally, the Liberals win, but Howard, Hockey, Abbott, Ruddick and Downer are given the flick.

Oh well, I guess the odd day dream is ok!

Posted by: Karl Castan at October 8, 2004 09:17 AM

I have been rereading "The Coach" by Rick Charlesworth, the former Hockeyroo coach and Federal Parliamentarian, and I came across a bit in the book which had a sense of de ju vu about it. Remember it was written in 2001 prior to the last federal election:

"Perhaps the thing that disappointed me most about the political process was the widely held view that the pork barrel worked. Handouts in the months before an election were calculated to paper over failures in the previous years. Looking from the outside I notice that the present government of John Howard is again this year hastily making peace with the disaffected and neglected via this well-rehearsed route.

"In sport, teams prepare best for major events by thorough and diligent work over years, rather than via last minute efforts. In the same way governments cannot ignore major areas of policy for years and expect to be supported. Usually the voters are smarter than that. John Howard now claims he is 'listening' to the electorates and responding. It begs to question as to what he was doing during the previous two years. I suspect the 'listening and caring' of today is merely a mirage."

The Coach 2001. pp.51

It is interesting how not a great deal has changed in the last 3 years, but did we really expect it would. Mr Howard relies on the relative comfort of the Australia community to re-elect him while he bores us to sleep with the same old rhetoric. It is turning out to be a dangerous slumber, I hope we do not wake up to late.

Margo I recently read the quaterly essay on MArk Latham and thought it provided a really good outline of the man and what he stands for. Why is it that thses things never seem to make it to the mainstream press? Do we have Rupert Murdoch to thank for this?

Posted by: Stephen Locke at October 8, 2004 09:15 AM

To those forum-ites who state the media is biased against Labor: hear hear! I have seen nothing in ALL forms of media to support Labor (except for this bastion of enightenment). It is incredibly offensive, and proof Howard has controlled the media perfectly in his grubby campaign.

Saturday will show what sort of country we are. Whether we fall for the lies, deceit and thuggery of Howard and his minions, or accept the need for a real change in government, and a chance to regain the extensive lost ground caused by the 'Howard Years'.

We now have proof that Howard has duped the population by dragging us into a war we did not want. He has consistently denied that he mislead us, and now that it has been proved otherwise, he has neither the humility nor strength to admit his error.

The gall of this man! He will gladly smokescreen us into thinking this was was justified, and that, along with his litany of untruths (interest rates, forest policy, destruction of Medicare, children overboard, Abu Ghraib, SMS warnings, unemployment figures, economic management etc) proves he has not the ability to be straight with the Australian people.

I am so angry that this fiend has the audacity to con Australians, and that, by some indicators, will lead to his re-election. It is absolutely preposterous!

Come on Australia, do not be taken for a fool. Do not let Howard get away with it. Put him last tomorrow, please, for the sake of this country.

Posted by: Scott Brown at October 8, 2004 09:13 AM

I read with despair yesterday - care of Crikey.com.au - that the directors of *The Age* have over ridden the editorial staff and decreed that the paper should endorse a Liberal win in the Saturday issue and that indeed the article has already been written.

How can the average Australian possibly be asked to make informed choices in this sort of climate?

Margo - thank you so much for your Webdiary. You have allowed a great many of us to feel we are not alone for the past few weeks and the dissemination of quality informed debate here has been an enormous asset. I will be weeping with you on Saturday night by the looks of things - let's hope just enough of the people whose votes count teeter over the edge. At the very least the Senate vote may keep a lid on any potential worst excesses.

Maintain the rage!!

Margo: In the same issue of Crikey, we learned that the finance department head Peter Boxall banned staff handing out how to vote cards without written permission. WE

NEED TO KNOW WHO YOU ARE.

Posted by: Sue Bradford at October 8, 2004 08:36 AM

John Howard's hero Bob Menzies was know as "Pig Iron Bob". Surely Howard deserves the title "Pig Headed John". Please just go away John.

Posted by: Rob Parkhouse at October 8, 2004 07:23 AM

In all the debate about evidence of weapons of mass destruction, one thing has been deliberately ignored by Howard, and negligently ignored by the vast bulk of the media. The intelligence which Howard still maintains justified the invasion was described by the United States in the following general terms: "we know the weapons are there and we know where they are".

Yet every time the inspectors turned up to one of the sites indicated by the United States, they found nothing. Every time they tested the intelligence, it failed. And this was before the invasion. You cannot plausibly rely on intelligence which has already repeatedly been shown to be wrong. You cannot plausibly say that you believed in the accuracy of the intelligence when it has already been repeatedly shown to be inaccurate. You cannot claim the intelligence to justify anything, if all the evidence pointed to it being far from the mark.

The attention on revelations that have come out after the war played into Howard's hands. He refers to it as hindsight. But in March of 2003, when the invasion began, there was already plenty of evidence that the intelligence was wrong as it had repeatedly been shown to be wrong by the inspections in the months before. This is something that deserved more attention, both at the time, and at all times since.

Posted by: Troy Rollo, independent candidate for Bennelong at October 8, 2004 07:04 AM

So another visit by little Johnny to an obviously tame press club. Yet again he's allowed a free ride on Iraq. He continues to assert that we went into Iraq on faulty intelligence yet no one then asks about the incompetent intelligence services.

If he manages to get re-elected I can only say the INTELLIGENCE is not only missing from ASIO but from Australia as a whole. I suggest that the next time someone tells an IRISH joke it should in fact be an Australian joke.

Posted by: Mike Barlow at October 8, 2004 06:58 AM

Hi there! Margo, you have succinctly stated your beliefs below and I agree with you wholeheartedly. My problem is that I don't think that the Greens can deliver. I just don't agree with their policies or their stance on most non-environmental issues. Left is ok, wacky is not. For example, I can't see how they can let in all comers who claim to be refugees while reducing the overall population on environmental grounds.

I don't like John Howard much, but he has done as many good things as bad. I am not sure that Mark Latham can control the unions, who are already exulting at the prospect of a possible return to the industrial dark ages.

I had hoped that the major parties would have considered using the surplus to return some of our money. We need taxation reform that simplifies the system, rewards savings and not debt. We are currently living beyond our means, and even a modest rise in interest rates, which is probably inevitable whoever wins, will cause much heartache in working Australia.

Instead, we have had this vote auction.

It seems to me that many people are fascinated with Mark Latham, and his major drawcards are that he's new and not John Howard. I think that the election will be closer than the polls are now predicting, but I can't vote for Labor on the basis of a dislike for Uncle John. It seems to be a risk, because Mark Latham seems to be erratic, populist and demonstrates absolute ignorance in the international arena. Is that what we need right now? I can't vote for the Greens and sleep at night.

While "Not Happy, John" describes me well, I can't register a protest vote. My perception is that this is probably the most important election since 1975.

That said, wouldn't it be a gas if the Coalition is returned but Andrew Wilkie got up in Bennelong? I would laugh for a week.

Posted by: Jeff Milward at October 8, 2004 02:08 AM

Hey **Kate Foster**, I agree with a lot of what you say, but I fear that these pages are scattered with people who will never accept that an average person can have a view. If you're not down at your local ALP branch having a bottle of Jacobs Creek and a nibble on some "coon" you can't possibly understand the issues.

Posted by: Michael Fagan at October 8, 2004 01:14 AM

Perhaps it's me but just about all the commentators bar a few seem biased against Labor and my blood boils when I hear John Howard making like "I am the greatest". He was asked on T. V. the other night about interest rates being 10% when the Fraser Government was in power and he didn't want to know about it. He said they weren't under his stewardship, but he was treasurer then. He will never admit that anything he had done was wrong.

Same with Iraq. I've had it and I'm going to pray for a miracle on Saturday for Labor. I'm raving a bit I know but as I said I get so upset with the tactics of the Libs. And if they win I'll cry with you Margo.

Posted by: Anne Snape at October 8, 2004 01:01 AM

Margo, Sunday will tell us how the Australian people really vote this time around, but regardless of the outcome our democracy is the richer for all your tireless efforts and the SMH in providing a forum for the rich exchange of ideas and points of view for all. Thank you!

Posted by: Russell Darroch at October 8, 2004 12:54 AM

Margo, Winston Churchill - who knows a thing or two about war - once said that he knew of no war that could not have been prevented by negotiation. He then suggested a democratic United Nations as the solution.

I've yet to see it, but I hope eventually the UN will be a true democratic authority to enforce laws on international matters, outside of the influence of powerful national governments.

At that time the Saddams and Mugabes of the world will be tried and sentenced by due legal process.

My point is that I believe it was wrong to go to war and I will never support Howard for supporting Bush on this.

However, many people's constant reference to Howards "lies" in his justification for war is not reasonable. Clearly all governments believed Iraq possessed weapons of mass destruction - even the federal opposition believed this to be the case and stated so in parliament.

What Saddam's intention to do with those weapons is difficult to predict. Here is a dictator who has invaded another country, gassed 100's of thousands of his own people, persecuted and tortured thousands more, has made it clear he is not answerable to none AND has then maintained a program for mass destruction weapons and subsequently produced 'some' quantity of these.

It seems entirely reasonable that the 'intelligence' community drew the conclusion here was a dictator who had the means and interest to use these kinds of weapons - and it doesn't much matter whether on Iraq's, other countries in the middle east or elsewhere.

I also acknowledge that I don't have anywhere near the same access to security information that is available to the Australian government and opposition.

As misguided as Howard was to support the war in Iraq, I fail to see where he lied.

I also fail to be convinced if Labor was in power during this same period, that they - under the same pressure from the US - would not have also joined in war in similar circumstances, as much as they may claim that to be the case now.

Let us hope that next time the UN functions as a true democratic organisation, and doesn't wait 10 years to solve this kind of problem.

Margo: He decided on what his own investigator Phillip Flood said was "thin and ambiguous evidence", so at best, if he was telling truth that WMDs were the reason for war - which they certainly weren't - he made a colossal misjudgement for which he should apologise. Previous Prime Ministers would have been forced to resign.

The BIG lie was that he told us he hadn't decided to go to war with Bush, whatever happened, when in fact he'd promised otherwise to Bush as far back as June 2002, before debate in Australia had even begun. See Chapter 2 of my book.

Posted by: Fredrik Johansson at October 8, 2004 12:53 AM

OK a few words courtesy of Justice Kirby in the case of Woolley v s267 in the High Court on this infamous day in history, as predicted last night:

"In the case of Bakhtiyari I traced the series of parliamentary and other official reports by which, over the past decade, the Australian Parliament has been made aware of official concerns about the requirements of mandatory detention of unlawful arrivals in general, and the detention of vulnerable people such as children and unaccompanied minors in particular. Notwithstanding those reports, and several recommendations for alteration of the system of mandatory detention, including in the case of children, the system has been maintained unchanged.

"The act has not been amended in any relevant respect. On the contrary the procedures have been continued despite an intervening change of federal government and considerable public debate on the matter.

"It cannot be said that the policy, including as it relates to the detention of children, is the

result of oversight, ignorance, inattention or mistake.

"It is the product of a deliberate decision of successive governments and the Australian parliament enacted and maintained in force under the broad scope of the aliens power granted by the constitution."

And from Al Kateb re Justice Gummow"

"The current migration act does not make it an offence for an unlawful non-citizen to enter or to be within Australia in contravention of , or in evasion of the act."

And Justice Hayne: "The person's immigration status as unlawful serves is no more than a reference to a non-citizen not having a valid permission to enter and remain in Australia. The use of the term unlawful does not as such refer to a breach of a law."

*

In Baxter and Villawood are over 40 babies, many of them born in detention and denied even a nationality, denied citizenship and now once and for all denied all legal rights and habeas corpus release - thanks to Bob Hawke and Nick Bolkus and aided and abetted and made infinitely worse by Ruddock, Howard and co.

And we blew up Iraqi children and Afghani children. The ALP have put up about 10 amendments to have the children released.

I will vote Green.

Posted by: Marilyn Shepherd at October 8, 2004 12:24 AM

To **Kate Foster**: If Howard is re-elected, I will accept the decision. But I will do so with a lot of sadness, because I think that result would mean that Australians care about wealth ahead of a society that looks after all its citizens, values truth in government, has compassion for refugees and tries to resolve international conflicts without rushing to war.

Today, in a response to a question about whether the electorate was bored with him, Howard said that "people are never bored with prosperity". I don't know about that. I'm not saying a sound economy is not important, but there is something completely lacking in a society that is based merely on acquiring more stuff.

Look around at the obsession with property and wealth in our cities at the moment. I can't think of anything more boring and banal.

Howard has nothing else to offer but the mantra of economic performance and low interest rates. Never mind that these things are affected by global trends. Never mind that many of the foundations were put in place by Hawke and Keating. There is no vision, no excitement, no soul.

You also ask why it is not acceptable for religious institutions or people to comment on politics. That's not my view. I would just expect that the views expressed lined up with the principles of the religions that the people represent.

That's why Archbishops Pell and Jensen get such a reaction when they call a policy to give less government funding to rich schools 'divisive'.

That's why Families First get a hard time for calling Mosques 'Satan's strongholds' and

wanting to deny rights for marginalised groups like gays and lesbians.

Posted by: Paul Somerville at October 8, 2004 12:15 AM

Margo wrote: "Cross your fingers the voters of Bennelong get rid of him on Saturday. John Valder says 'the vibes' are good."

Time to share my predictions, as usually, entirely against the grain (and the Galaxy Poll, just breaking in the news). They are my "likely trends".

Wentworth (via Peter King to David Patch ALP)
Warringah (large swing away from Tony Abbott)
North Sydney (swing away from Joe Hockey to ALP)
Bennelong (large swing, or lost to Andrew Wilkie GREENS)
Adelaide (from Trish Worth to ALP)

Richmond (From Larry Anthony to Elliot ALP)
Berowra (large swing away from Philip Ruddock: Hornsby Shire features a richly blossoming refugee group)
Deakin (from Phil Barresi to ALP)
Eden-Monaro (from Gary Nairn to Kel Watt ALP)
Parramatta (from Ross Cameron to ALP)

Kalgoorlie (from Barry Haase to ALP?)
Makin (from Trish Draper to ALP)

Posted by: Jack H Smit at October 7, 2004 11:38 PM

Well, Peter Costellos treasury has spoken: There is no \$700 million "black hole" in Labor's tax policy. OK Mr Costello, given that you staked your reputation on this claim (and we all heard you do it), what are you going to do now that you have lost your reputation?

Although, by my reckoning, this is the 3rd election in a row (or is it the 4th?) this has happened to you. I have no right to be surprised. Just as well global economic conditions have been favourable - I suspect we'd be in trouble with you mob in charge if they weren't.

Posted by: Michael Lines at October 7, 2004 11:36 PM

Response to **Kate Foster**: If Howard gets more than 20% of the vote on Saturday, it's NOT a fair result. The electoral processes have been perverted by Howard, with a lot of help from the news media. If Whitlam had been caught out lying as much as Howard had been, his Government would not have even survived until the end of 1972, yet almost the whole news media continues to treat Howard as a credible figure.

Last weekend's Sunday Mail (a Murdoch paper) in Brisbane editorialised "Howard deserves your vote". It tells it's readers:

"Rarely has a campaign ... exposed government and opposition to such rigorous opposition."

Well excuse me! What 'scrutiny' is Howard being exposed to over his interest rates scare campaign when it would not be an issue had Howard not so vigorously stoked the fires of housing inflation? And of his spurious 'half-pregnancy' argument in relation to Telstra? Or his evasion and backsliding over the Tasmanian forestry issue, where it is now impossible to fully verify the truth of his claims until after the elections?

The case for war that everyone who could see and think knew was deeply flawed at the time etc, etc, etc, etc.

Every day when Howard is 'interviewed' by journalists I see gaping holes in his logic large enough to drive a convoy of semi-trailers through, line abreast, yet the journos will nearly always fail to point out these holes to their audience.

Anyhow, my point is that the audience is led to believe that Howard has been 'scrutinised'. As one of the trusted 'scrutinisers', The Sunday Mail now has the authority to tell its readership what its learned and considered conclusions from that 'scrutiny' are.

The remainder of the editorial, which if read past the headline, is swallowed by most readers. To spot the logical errors and unfounded assertions requires too much mental energy for most readers, when they are fed this stuff day in, day out, year after year, with no access to alternative ways of viewing the world.

One of many unfounded assertions in the editorial is:

"There is no disputing the Govt's success in winding back unemployment"

... Well I dispute it! If you work 1 hour per week as a tele-marketer, you're 'employed'. How is it that we are told the Tasmanian economy will collapse if they don't go on wiping out old-growth forests? All well-known instances of Howard's incompetence and deceit are swept under the carpet, or ignored.

Without this sort of propaganda being fed down the throats of so much of the population, it would not be possible for Howard to get anywhere close to 50% of the vote on Saturday.

So, I repeat, NO I don't accept that if Howard gets more than 20% of the vote on Saturday, it's a fair result.

Having said that, I think that a lot more can, and should, be done to overcome the power posed by the Media Magnates, particularly Murdoch.

But first the 'left', for want of a better term, needs to take a good hard look at itself.

Posted by: James 'Westnet' at October 7, 2004 11:25 PM

A civil war is probably the next stage for post-Saddam Iraq, not the puppet democracy the Alliance of the Willing has installed.

The Prime Minister is naturally unapologetic, he's not a sorry man. He's a fantasist. An ace schoolboy debater. Unfortunately in the real world the stakes are greater - they are life and death realities, of countless refugees and displaced people.

They will always be the real victims of war.

At a people's rally in the seat of Bennelong we were told by aid workers returning to Australia that the conditions in Iraq and Afghanistan are as bad as some remote aboriginal settlements - and that is intolerable.

These places are broken down with no basic services at all. In place of water and electricity or education there is violence and disruption.

So for John Howard to say sorry would mean losing a debate - something he learned never to

do under any circumstance or as the result of any consequence. For Howard it is the pure politics of power, and we should ourselves be on red alert.

If we return this man as leader of the government this Saturday, we do so out of vulgar economic greed, not need. For Australians there may now be no other worthy reason.

Here the victim of our election will be Truth in Government, and that is something future generation may never reconcile.

Posted by: Ruark Lewis at October 7, 2004 11:19 PM

Heartwarming to read Howard's touching endorsement of the city of Canberra in response to the final question today. I wonder what Canberrans would make of it? What a pity that John and Janette had to shift to Kirribilli and miss out on the joys of the capital...

Posted by: Greg Bowyer at October 7, 2004 10:25 PM

At the end of the day. When the fat lady has sung. When all the words and views have been said and written. We will get the Government that we deserve. We have no one to blame but ourselves.

But I will urge your readers to reflect for a second that we are a lucky country and fortunate people. We live in paradise as compared with a lot of other less fortunate people of this earth. So don't complain too much.

As for you Margo, thank you for your conviction and courage. This forum has been a blast. Keep up the good work. BTW, Labor by 3.

Posted by: P. Tjhai at October 7, 2004 10:12 PM

Hi Margo, geez that **S Richards** is a sh*tstirrer. Pity he doesn't seem to be able to differentiate between JWH's spin & some dissenting thought and discussion.

Hard won surplus?? Try taxing PAYE workers without a hint of regret about bracket creep etc and then turning the gains into "new programs" at election time. No wonder such an attitude creates a little cynicism from the "unblinded".

Kate Foster, everyone has to accept the result, no matter what their allegiance. There are some who feel there is a "better" way into the future they are passionate about. If your's is another ?? years of JWH, so be it, but please do not denigrate those of a different view for expressing their desires.

Some more variation in the "media" would help in the general population's discourse but we all have to work with what we have.

But I do wonder about the changes in media ownership Helen Coonan has in mind, as reported in today's Oz...

Posted by: A Gibson at October 7, 2004 10:07 PM

I think we are supposed to be prepared to vote Howard in because Costello will take over at some point, and somehow he is preferable.

What I won't forget is that Costello and all the rest of the Liberal candidates, especially the sitting members, were happy to stand behind Howard at this time.

They must be remembered in the future as people who were happy to keep children in detention centres, go to war on a lie, accept non-core promises as a common practice, ignore the big environmental issues, dismantle Medicare etc etc.

Posted by: S Robertson at October 7, 2004 09:48 PM

I have a question for the Caretaker PM. If Latham and the ALP win the election, do you intend to stay as leader of the Liberal Party in opposition, assuming "your Party wants you", or will you retire causing a by-election in Bennelong?

Margo: Cross your fingers the voters of Bennelong get rid of him on Saturday. John Valder says 'the vibes' are good.

Posted by: Helen Moore at October 7, 2004 09:24 PM

"Well, I don't hide behind false statements," says Howard.

Howard has become a master of falsehood. He relies heavily on deceit. He repeats falsehoods over and over on the understanding that if you say something often enough, people will start to believe you.

We have seen over the past few weeks, the gullible who have accepted Howard's repetitions as truth and the irrational Howard devotees who would accept anything this shameless liar says.

Those who are going to vote for Howard obviously care little about his shameful past. Not to mention all the issues raised in this forum about the past eight years, Howard is a bigot with a long history. His shameful past goes much further back. This is a bloke who Malcolm Fraser says, alone in the Fraser Cabinet, opposed asylum for Vietnamese boat people, who vehemently opposed sanctions against the apartheid regime in South Africa, who spoke out for years against Asian immigration and condemned multiculturalism, who voted in the Parliament against a resolution congratulating the Holt Liberal Government for abandoning the White Australia Policy and reaffirming that Australia's immigration program must not be based on race, who flirted with Pauline Hanson until their polling revealed she was taking more votes from the Liberals than from Labor, who defended the decision of the Queensland Liberal Party to direct preferences to One Nation and who played the race card for all it was worth at the last election.

Consider your vote carefully, Australia!

Thanks Margo for all the work you have put into this forum.

Posted by: Gary Boddy at October 7, 2004 09:14 PM

It is tough being John Howard. You have Labor using the fruits of eight tough years of economic management against you. Hard won surpluses and low debt used to fund policies like the unsustainable vote buying Medicare Gold.

Margo you state that if Howard wins you will be upset at the final rejection of your idea of what Australia stands for and what being an Australian means.

How can that be? You are voting Green. Not even Green voters accept Green policies. The Greens are relying on a protest vote from unsophisticated young voters or disillusioned oldies.

Come one Margo, you can't be serious about The Greens being good for the economy and jobs. What about the Green open door immigration policy? If you come, you can stay.

Margo: I'm voting Green because I want someone to argue on principle on human rights and the rule of law. I want someone who's game to stand up and say what many Australians think despite blanket official censorship. I want someone who cares about the long term health of the planet, and someone who believes there is more to being human than making money and that money does not define success. I want someone who is not the salesperson for big business, but represents me and what I believe in.

Posted by: Sam Richards at October 7, 2004 09:14 PM

G'day. A Sydney reader in Ruddock's seat, poor man, writes:

"I am getting desperate. Does anybody know where there is a pub/club/bar/public venue in Sydney city where people can watch the election results come in over a few beverages with friends? I have searched everywhere but with no joy. I really want to watch it but the idea of doing so from my seat of [Berowra](#) is not something I relish (we need a swing of 15.6% against incumbent Phillip Ruddock to oust him, ha!"

Posted by: Margo Kingston at October 7, 2004 08:35 PM

What a sick sad world we live in when the only person who didn't lie in this whole sordid affair, was the Butcher of Bagdad. It takes your breath away that so many people will actually vote for Howard.

Howard is a Luddite, just like the obsolete loggers of old growth forests, just like elevator drivers, telephone exchange operators and every other job that's been left behind in the 20th century. Wake up - it's the 21st century and it's time for a new start.

Posted by: M.Tait. at October 7, 2004 08:31 PM

If John Howard wins this election (despite the encouragement from the readers of this newspaper), will the readers of this diary accept that this was the will of the Australian people?

The reason I say this is that there has been dialogue amongst the readers of this diary that Mark Latham should win this election because of this and that. However, your readers do not represent the majority of average Australians.

If you were to compare the average income of readers of the SMH with the average income of your opposition readers, I would estimate that you guys come out on top by a long way. I have a social conscience, however I also earn a decent living and can afford to re-visit the mistakes of the Whitlam/Hawke/Keating Governments, unlike many of average Australians. And I am not just talking about interest rates.

I truly believe that the Labor Party could have won this election, it was there for the taking, however I don't believe that their policies have won through to the hearts of average Australians - real policies for real people, not airy fairy attempts at winning votes.

Labor's family tax package is a joke - average Australians want simple, easy to understand policies, not something that you are still trying to explain 3 weeks later (I saw Wayne Swan stumble over the tax package yesterday).

So if the Coalition win, could you please accept that this was the will of the Australian people

and accept defeat gracefully?

I have one more question that perhaps the readers of this diary could answer. How come it is acceptable for Australian celebrities to lecture us on Australian politics, but not for religious institutions (I am atheist, so I don't feel that I am biased in this regard). What makes it okay for musicians, actors and crap television actors to tell us how to vote, but the minute a religious person puts their hand up there is an uproar in the media? Don't they have as much say as anyone else? I am dying to know the answer.

May the best party to lead the country in all aspects of society win on Saturday.

: Margo: I will accept the result. Of course I will. I'll cry for a while, though, at the final rejection of my idea of what Australia stands for and what being an Australian means. The fair go and all that. Times have moved on, I guess. I'm just another old codger. Whatever happens I'm taking a month off!

Posted by: Kate Foster at October 7, 2004 08:29 PM

Well the word is out among the Bushites (of whom Mr. Howard counts himself in order just behind Tony Blair): stand firm, give no quarter, admit no wrong. Deny or ignore the evidence of attacking positions. Claim to be compassionate while denigrating "the status of unlawful non-citizens," as Chief Justice Murray Gleeson applied to detained children.

Bush said yesterday that Hussein "chose defiance and war, [and] our coalition enforced the just demands of the world," but Iraq actually had allowed the United Nations to send inspectors into the country, although Iraqi officials had balked at allowing scientists to leave the country for questioning. The inspectors left not because Iraq kicked them out but because the United States said it was about to launch an invasion and their safety could not be guaranteed.

Former chief U.N. weapons inspector Hans Blix, adding weight to Kerry's argument, said yesterday: "Had we had a few months more, we would have been able to tell both the CIA and others that there were no weapons of mass destruction [at] all the sites that they had given to us."

Bush ignored the findings when he gave a major speech attacking Kerry, saying, "There was a risk -- a real risk -- that Saddam Hussein would pass weapons, or material, or information to terrorist networks," i.e.: Damn the torpedoes. Full speed ahead.

No WMDs; no connection with 9/11 attacks; no liberation of grateful Iraqis; no democracy; no Osama; no protections for civilization's artifacts or library documents; no consistent electricity; no pure water or sewer; no adequate hospitals, no gasoline. Consider the murdered, the mangled, the maimed, the tortured. Consider the minds of their loved ones. Consider the costs of the war in battered U.S. honor and commitments, a broken Western alliance, a shredded United Nations and a scarred Bill of Rights. Think of the acid now seething in the souls of America's warniks. Think of the attacks against our freedoms wrought by Patriot I & II. Think of the government's control of our formerly free press. Think of how Saddam told the truth: there never were any weapons of mass destruction in Iraq.

Gleichgewicht der Online-Community verschiebt sich hin zu Vize Gore | IT-Manager präferieren aber G.W. Bush | Reform des Ausbildungssystems ist zentrales Thema | FuZo-Community setzt eine Bank auf Al Gore

Zwei aktuelle Umfragen vor der Präsidentschaftswahl befassen sich mit den Präferenzen US-amerikanischer IT-Experten - und liefern teilweise widersprüchliche Ergebnisse.

Danach scheinen Programmierer Al Gore den Vorzug zu geben, während die Firmenchefs eher zu George Bush neigen.

Von 14.500 per Online-Erhebung eingelangten Stimmen bei Metricnet hatte der Vizepräsident mit 50 zu 38 Prozent vor Bush die Nase vorne. Und im Gegensatz zu den landesweiten Umfragen verschob sich das Gleichgewicht im vergangenen Monat deutlich Richtung Al Gore.

 Metricnet.com

Die Ergebnisse einer Umfrage, die das "CIO Magazine" im Laufe eines Symposiums erhoben hatte, scheinen hingegen von einem anderen Planeten zu kommen.

48 Prozent der IT-Manager gaben in diesem Fall George Bush den Vorzug, nur 37 Prozent präferierten das Ticket Gore - Lieberman.

Allerdings meinten von den 210 befragten Symposiumsteilnehmern 41 Prozent, das Gore-Team wäre für die Zukunft der "New Economy" die bessere Alternative. Nur 38 Prozent sahen die bessere IT-Zukunft in Bush - Cheney.

 [CIO Magazine](#)

Insgesamt beteiligten sich an der Meinungsumfrage von Metricnet 217.000 Teilnehmer. Da die Stimmabgabe aber unwiderruflich und endgültig durchzuführen war, reflektieren die angegebenen Trends nicht jene Personen, die im Laufe der Zeit ihre Meinung geändert haben.

Das beherrschende Wahlkampfthema im IT-Bereich war die Reform des amerikanischen Ausbildungssystems. In den vergangenen Wochen hat darüber hinaus die Bedeutung des Schutzes der Privatsphäre im Netz breiten Raum eingenommen.

Von  [Dragan Espenschied und Alvar C.H. Freude](#), 27.01. 2001, 04:53:37

Ein Internet-Filter bannt keine Gefahr, er blendet sie nur aus dem Netz aus.

Einschränkungen der Meinungsfreiheit, die von Filtern ausgehen, sind weit gravierender.

Filter lösen keine Probleme

Wie ist mit »unerwünschten Inhalten« umzugehen? Die Leugnung der Massenvernichtung der Juden während der NS-Herrschaft ist in Deutschland verboten. Fredrick Töben, Australier deutscher Abstammung, ist Leiter des [»Adelaide Institute«](#) und bezeichnet dort immer wieder die Ermordung der Juden während des zweiten Weltkrieges als Erfindung und Verschwörung. Diese in Australien nicht strafbaren Behauptungen sind übers Internet auch in Deutschland abrufbar.

Der [Bundesgerichtshof](#) hatte nun zu urteilen, ob Töben dafür in Deutschland bestraft werden darf und stellte in einem Grundsatzurteil[1] fest: ja, er kann dafür haftbar gemacht werden.

[1] Siehe [Pressemitteilung](#) des BGH sowie Urteil im [Volltext](#) bei Juramail

[2] Die Entscheidung des BGH hat international für viel Unverständnis gesorgt, siehe Stefan Krempel in Telepolis: [Besorgnis über BGH-Urteil gegen Holocaust-Leugner](#)« (Dezember 2000); Steve Kettmann in Hotwired:

Stellt ein Ausländer von ihm verfaßte Äußerungen, die den Tatbestand der Volksverhetzung im Sinne des § 130 Abs. 1 oder des § 130 Abs. 3 StGB erfüllen ("Auschwitzlüge"), auf einem ausländischen Server in das Internet, der Internetnutzern in Deutschland zugänglich ist, so tritt ein zum Tatbestand gehörender Erfolg (§ 9 Abs. 1 3. Alternative StGB) im Inland ein, wenn diese Äußerungen konkret zur Friedensstörung im Inland geeignet sind.

[»German Hate Law: No Denying It«](#)

Aus der [Pressemitteilung](#) des BGH[2]

Der BGH spricht von Äußerungen, die den Frieden im Inland stören würden. Solche Argumente ist man ansonsten nur von autoritären Regimen gewöhnt, und welche Folgen dies haben kann, läßt sich einfach ausmalen: In Ländern wie dem Iran wird »der innere Frieden« massiv gestört, wenn Frauen unverhüllt abgebildet werden. Wie groß wäre der Aufstand, wenn ein Deutscher Werber im Iran zum Tode verurteilt werden würde, weil er die auch im Iran abrufbare Internetseite eines Dessous-Herstellers gestaltete? Es wirft sich unweigerlich die Frage auf: Kann es sich ein Staat wirklich erlauben, seine Gesetzgebung auf ein globales Medium auszudehnen? Wäre Töben auch verurteilt worden, wenn er den Holocaust auf seinem auch von Deutschland aus abrufbaren Anrufbeantworter leugnen würde?

Anstatt nationale Gesetze auszudehnen, sollte lieber überlegt

werden wie man sinnvoll mit Holocaust-Leugnern umgehen kann. Der einzige sinnvolle Weg kann nur durch Aufklärung zum Erfolg führen. Die Behauptungen der Holocaust-Leugner zu widerlegen ist nicht schwer. Die Aufklärungs-Site [Nizkor](#) beschreitet diesen Weg erfolgreich und veröffentlicht z.B. [Dokumente](#), die die Argumente der Revisionisten widerlegen. Eine [deutsche Übersetzung](#) ist auf [Burkhard Schröders Homepage](#) zu finden.

Internet ist Narrowcast

Um die Kritik an bestehenden oder geplanten Filter-Systemen für das Internet zu verstehen, ist es wichtig, die wesentlichen Unterschiede des Netzes zu anderen Medien zu kennen. Aktuelle Konzepte für Internet-Filter sind vom Aufbau an klassischen Broadcast-Medien orientiert. Das Netz ist jedoch eine globale Kommunikations-Plattform, in der sich privater und öffentlicher Raum vermischen.[3]

Da sich das Internet über nationale Grenzen hinweg erstreckt, kann für Inhalte im Netz kein nationales Recht gelten.

Nachdem Bertelsmann in die Musiktaschbörse Napster investiert hatte, bat der niedersächsische Verfassungsschutz den Medienkonzern, die Verbreitung von rechtsradikalen Musikstücken in Napster zu verhindern.[4] Was sich aus deutscher Sicht wie eine gute Tat anhört, beeinträchtigt aus US-amerikanischer Sicht die Redefreiheit. Aus deren Sicht stört man sich eher an nackten Brüsten und sexuellen Anspielungen. Also sollten derlei Musikstücke am besten auch aus Napster entfernt werden. Je mehr Forderungen gestellt werden, desto weniger bleibt übrig:

(Januar 2001)

*Denn wenn man die Gesetze aller Internet-Länder auf Napster
anwenden würde, bliebe wohl außer Heintje und Guildo Horn
nicht viel übrig.*

Erik Möller: [»Die Herrschaft der Server geht zu Ende«](#), taz, 4. Januar

2001, Seite 17

Keine zentrale Stelle kann es sich somit erlauben, für den Rest der Welt zu bestimmen, was im Netz an Inhalten vertretbar ist und was nicht. Selbst in möglichst objektiv gestalteten Kriterien zur Bewertung von Inhalten werden Wertvorstellungen transportiert. – Soll es der Zweck von Filter-Systemen sein, die Auseinandersetzung mit unangenehmen Dingen oder fremden Wertvorstellungen überflüssig zu machen? Dazu braucht man aber kein Internet. Das Internet steht für Diversität.

Der Preis für globale Kommunikation und Redefreiheit ist, dass sich wirklich jeder dieser Mittel bedienen kann. Zur Untermauerung der Forderungen nach inhaltlicher Regulierung des Netzes werden besonders gerne Kinderpornografie und Neonazis herangezogen. (Siehe dazu das Kapitel [»... in den Medien«](#)) Das [Cybercrime-Abkommen des Europarates](#) enthält sogar einen eigenen Paragraphen, der Kinderpornografie nochmals kriminalisiert. Man mag es kaum für möglich halten, aber schon vor dem Internet gab es Kinderpornografie und Besitz und Herstellung entsprechenden Materials sind auch ohne Cybercrime-Abkommen europaweit und nahezu weltweit illegal. Zudem ist es ein Mythos, dass man als unbedarfter Web-Surfer auf solche Angebote stoßen könnte. Das Web ist schon von daher

kein anonymes Medium, da jeder Server im Netz eindeutig indentifiziert werden kann.

Das Thema Neonazis wird ebenfalls hochgespielt. Selbst die äußerst kritische Simon-Wiesenthal-Stiftung kommt im April 1999 auf gerade mal 1.400 Hass-Seiten:

Die über 1.400 Haß-Seiten im Internet könnten theoretisch von gut 150 Millionen Internetnutzer weltweit gelesen werden.

Zitiert nach [»Simon-Wiesenthal-Center USA: Zahl rassistischer](#)

[Internetseiten wächst«](#) auf der Site [Judentum in Europa](#)

Etwas mehr als ein Jahr später sind es gerade mal 2000 »problematische« Webseiten, die das Wiesenthal-Zentrum zählt.[5]

Filter, die den Zugriff auf solche Webseiten unterbinden, helfen jedoch nicht gegen rechtsradikale Gesinnung. Stattdessen werden Probleme einfach ausgeblendet:

Das Beharren auf nationalen Empfindlichkeiten ist im Kern nicht sinnvoll, weil es gerade bei den sogenannten »schädlichen Informationen« doch darum geht, den Nutzen für die Gesellschaft zu erkennen. Nach meinem Verständnis gibt es überhaupt keine schädlichen Informationen, schließlich werden auf diesem Wege gesellschaftliche Probleme aufgezeigt.

Freiwillige Selbstkontrolle

Wo es noch relativ leicht fällt, sich gegen staatliche Kontrolle zu wenden, macht das System der freiwilligen Selbstkontrolle auf den ersten Blick einen vernünftigeren Eindruck. Dennoch geht auch von diesen Bemühungen eine große Gefahr für die freie Meinungsäußerung im Netz aus.

Das vom W3C vorgeschlagene PICS-System (Details im Artikel [☞ »Die Standardisierung der Zensur«](#)) vermittelt auf technischer Ebene den Eindruck, ein flexibles und mit Bedacht konstruiertes System sein. Jeder kann die eigenen Inhalte nach beliebigen Schemata selbst bewerten, zudem können sich Rating-Services bilden, die auch fremde Inhalte einteilen. Somit kann jede Information aus jedem nur erdenklichen Blickfeld bewertet werden – theoretisch.

Das Problem einer Kategorisierung besteht im Internet noch viel mehr als bei klassischen Medien. Ist Kriegsberichterstattung nun gewaltverherrlichend und muss daher von Minderjährigen ferngehalten werden? Oder dürfen Nachrichten nicht gefiltert werden? Wenn ja, was sind dann Nachrichten und was ist beispielsweise Sensations-Journalismus? Was ist Ironie, was ernstgemeint? So einfach lässt sich das glücklicherweise nicht sagen, amerikanische Juristen sahen das im Fall von [☞ vote-auction](#) jedoch anders. Ein Jurist forderte während einer Gesprächsrunde am 24. Oktober 2000 auf CNN tatsächlich, Satire müssen man kenntlich machen, so wie die Comics auf der letzten Seite einer Zeitung. [6] Wie soll eine Filterung dieser Vorstellung nach ablaufen? Mit ein paar binären Kategorien lässt sich menschliche Kommunikation nicht einteilen.

[6] [☞ RealVideo-](#)

[Aufzeichnung der Sendung](#)

bei CNN; höchst sehenswert

Anders als bei einem Broadcast-Medium wie beispielsweise dem Kinofilm, das innerhalb eines Jahres eine endliche Anzahl Produkte erzeugt, entsteht im Netz täglich eine schlicht unüberschaubare Menge an Daten, die niemals vollständig nach auch nur *irgendeinem* Bewertungs-System eingeteilt werden könnte. Konversationen im Usenet, Einträge in Foren, Nachrichten, all das kann unmöglich bewertet werden.

Ein Filter-System, das nicht kategorisierte Inhalte durchlässt, ist sinnlos, weil dadurch eine Menge unerwünschte Inhalte unbehelligt bleiben. Daher ist es aus Sicht der Filter-Software logisch, unbewertete Inhalte zu sperren.

Die einzigen Sites, die sich in allen populären Bewertungs-Schemen eintragen werden können, sind große kommerzielle Angebote. Alle anderen haben nicht die finanziellen Mittel, eine detaillierte Selbstbewertung vorzunehmen. Das Netz wird so zu einem homogenisierten, sauberen Distributionskanal für **Mainstream-Ware**.

Zudem verhindert eine freiwillige Selbstkontrolle keinesfalls staatliches Eingreifen. Ähnlich wie bei unbewerteten Inhalten können von einem Filter auch keine falsch bewerteten Inhalte akzeptiert werden. Stuft sich beispielsweise ein Porno-Anbieter zur Ankurbelung des Geschäfts als »tauglich ab 16 Jahren« ein, funktioniert der Filter nicht mehr wie gewünscht. Daher sind früher oder später Maßnahmen gegen falsche Bewertungen erforderlich. Eine andere Institution als der Staat könnte diese Kontrollfunktion kaum übernehmen. [7]

[7] Siehe

 »Standardisierung der Zensur«

Freiwillige Selbstzensur

Andere Filter setzen nicht bei den Erstellern von Inhalten an, sondern bei den Konsumenten. Filter-Produkte wie [NetNanny](#) oder [CyberPatrol](#) filtern auf dem lokalen Computer nach Schwarzen Listen oder Schlüsselwörtern.

Diese Schwarze Listen und Schlüsselwörter sind jedoch das Geschäftsgeheimnis der jeweiligen Herstellerfirmen; ein lokales Filterprogramm ist recht schnell geschrieben, weit mehr Arbeit macht die Unterteilung in korrekte und nicht korrekte Inhalte.

Dass die Listen sehr häufig Unsinn enthalten beweist immer wieder die Jugendrechtsorganisation [Peacefire](#) durch [Analysen](#) der Filter-Programme. Informationen über Brustkrebs oder die Website des Vatikan wurden blockiert, angesehenere konservative Vereinigungen wie beispielsweise [Focus on Family](#), die sich [haarsträubender Weise](#) zum Thema Homosexualität äußern, wurden jedoch nicht als diskriminierend eingestuft. Deutlich zeigt sich, dass auch kommerzielle Filter-Software niemals neutral sein kann. Besonders kritisch wird es, sollten diese Systeme Dank ihrer einfachen Handhabung an Schulen oder in öffentlichen Bibliotheken eingesetzt werden: [8] Gefiltert wird dann zwar schon, aber was genau, fällt unter das Betriebsgeheimnis der Filterhersteller.

Filter systems are to be rejected in principle

Of [✉ Dragan Espenschied and Alvar C.H. joy](#), 27.01. 2001, 04:53:37

An InterNet filter avoids no danger, it fades out it only from the net.

Restrictions of the liberty of opinion, which proceed from filters, are far more serious.

Filters do not solve problems

How is to be gone around with "unwanted contents"? Denying of the massvernichtung of the Jews during the LV rule is forbidden in Germany. Fredrick Toeben, Australian of German descent, is director/conductor [↗ of the "Adelaide of institutes"](#) designation there again and again and the murder of the Jews during the Second World War as invention and conspiracy. These statements not punishable in Australia are callable over the InterNet also in Germany.

[1] See [↗ press release](#) of

the BGH as well as

judgement in [↗ the full text](#)

[↗ The Federal High Court](#) had to judge now whether Toeben may be punished for it in Germany and placed in a basic

with Juramail

judgement [1] firmly: yes, he can be made liable for it.

[2] The decision of the BGH

gesort internationally for

much lack of understanding,

sees Stefan stuff in Telepolis:

[\[2 \] Concern over BGH judgement against Holocaust Leugner " \(December 2000\);](#)

Steve chaining man in

Hotwired: [\[2 \] "German Hate](#)

Law: NO Denying It "

If a foreigner places to expressions written by him, which fulfill the facts of the incitement of the masses in the sense § to 130 exp. of the 1 or § 130 exp. the 3 StGB ("Auschwitzluege"), on a foreign server into the InterNet, which is accessible to InterNet users in Germany, then a success belonging to the facts steps (§ 9 exp. 1 3. Alternative StGB) in the inland, if these expressions are concretely for the disturbance of the peace in the inland suitable.

From [\[2 \] the press release](#) of the BGH [2]

The BGH speaks of expressions, which would disturb the peace in the inland. Such arguments is accustomed one otherwise only of authoritarian Regimen, and which consequences this can have, can be painted simply: In countries like Iran "the internal peace" substantial is disturbed, if women are unverhuellt illustrated. Would the rebellion be how large, if a German solicitor in Iran would be condemned to death, because he arranged also the InterNet side of a Dessous manufacturer callable in Iran? It raises itself inevitably the question: Can it really take the liberty a state to expand its legislation since a global medium? Would Toeben have been also condemned, if he became the Holocaust on its also from Germany from callable answering set denials?

Instead of national laws to expand, as one should be rather considered meaningfully with Holocaust Leugnern to deal can. The only meaningful way can lead only by clearing-up to success. The statements of the Holocaust Leugner to disprove

is not heavy. The clearing-up Site [Nizkor](#) successfully takes this path and publishes e.g. [Documents](#), which disprove the arguments of the revisionists. [A German translation](#) is to be found [on Burkhard Schroeders](#) homepage.

InterNet is Narrowcast

In order to understand the criticism, it is important or to planned filter systems for the InterNet, besteheden on to know the substantial differences of the net to other media. Current concepts for InterNet filters are oriented of the structure at classical Broadcast media. The net is however a global communication platform, in which private and public area mix themselves. [3]

Since the InterNet extends over national borders away, no national right can apply to contents in the net. After Bertelsmann had invested Napster into the music exchange stock exchange, the protection of the constitution of Lower Saxony asked the medium company to prevent the spreading of right-wing extremist music pieces in Napster. [4] Which sounds itself from German view like a good act, the free speech impairs from US-American view. From whose one disturbs view itself rather at naked chests and sexual allusions. Thus such music pieces should be removed best also from Napster. The to be placed, remains for more demands the less:

[3] Michael Horak on

Freedom For left: ["is there still the private homepage?"](#) (September 2000)

[4] See also the journalistic jewel ["Kinder pornos with](#)

Because if one would apply the laws of all InterNet countries to Napster, horn would probably not remain for much except Heintje and Guildo.

"Napster" in the mirror on-line
one (January 2001)

Erik Moeller: [☞ "the rule of the servers goes to end"](#), taz, 4 January 2001,
page 17

No central place can take the liberty it thus to intend for the remainder of the world what in the net at contents it is justifiable and which not. Even in as objectively as possible arranged criteria for the evaluation of contents value conceptions are transported. - target it the purpose of filter systems its to make the argument with unpleasant things or strange value conceptions redundant? In addition one needs however no InterNet. The InterNet stands for diversity.

The price for global communication and free speech is that really each of these means can avail itself. For the untermuerung of the demands for contentwise adjustment of the net particularly gladly Kinderpornografie and neo-Nazis are consulted. (see in addition the chapter [☞ "... in the media"\) ☞ \[the Cybercrime agreement of the Council of Europe\]\(#\) even contains its own paragraph, which kriminalisiert again Kinderpornografie. One may hardly consider it possible, but already before the InterNet there was Kinderpornografie and possession and production of appropriate material is European-wide and almost world-wide illegal also without Cybercrime agreements. Besides it is a myth that one could encounter as unbedarfter Web web-Surfer such offers. The Web is already of therefore no anonymous medium since each server in the net can be indentifiziert clearly.](#)

The topic neo-Nazi is magnified the importance of likewise. Even the extremely critical Simon Wiesenthal donation comes in April 1999 on straight times 1,400 hate sides:

Over 1.400 the hate sides in the InterNet could be read theoretically by well 150 million InterNet user world-wide.

Quoted after ["Simon Wiesenthal center the USA: Number of racistic InterNet sides grows "](#) on the Site [Judentum in Europe](#)

Somewhat more than one year later are it straight times 2000 "problematic" web page, which counts the Wiesenthal center.

[5]

Filters, which prevent the access to such web pages, do not help however against right-wing extremists conviction.

Instead problems are simply faded out:

Persisting in national sensitivities is not meaningful in the core, because it concerns nevertheless straight with the so-called "harmful information" to recognize the use for the society. After my understanding there is at all no harmful information, in this way social problems is finally pointed out.

[5] Source: Stefan Krempf

in Telepolis: ["citizen of Berlin explanation against the hate in the net"](#) (June 2000)

Andy Mueller Maguhn in the interview with Stefan stuff: ["hard discourse and free exchange of views instead of filters"](#) in Telepolis (August 2000)

Freiwillige self-check

Where it falls still relatively easily to turn against national control the system of the freiwilligen self-check makes a vernueftigeren impression at first sight. A large danger for the free expression of opinion in the net proceeds nevertheless also from these efforts.

The PICS system suggested by the W3C (detail in the article ["the standardisation of the censorship"](#)) obtain on technical level the impression, a flexible and with

consideration designed system its. Everyone can evaluate own contents according to arbitrary patterns themselves, besides Rating services can themselves form, which divide also stranger of contents. Thus each information from each only erdenklichen field of vision can be evaluated - theoretically.

The problem of a Kategorisierung exists still many more than with in the InterNet classical media. Is war reporting now force-wonderful-ends and must therefore from persons under age be kept away? Or couldn't messages be filtered? If, which then messages are and which is for example sensation journalism? What is irony, which seriously? That cannot so simple be said fortunately, American lawyers saw in the case of [vote auction](#) however differently. A lawyer demanded during a round of talks on 24 October 2000 on CNN actually, satire must one recognizable make, as the Comics on the last page of a newspaper. [6] How is a filtering to run off after this conception? Also human communication cannot a few binary categories be divided.

Differently than with a Broadcast medium as for example daily a simply difficult-to-understand quantity of data in the net, which could be never divided completely according to also only any system of evaluation, develops for the motion picture film, which produces a finite number *of products* within a yearly. Konversationen in the Usenet, Eintraege in forums, message, all that can not possibly be evaluated.

A filter system, which lets not categorized contents through, is senseless, because thereby a quantity remained undisturbed unwanted contents. Therefore it is logical from view of the

[6] [Material video](#)

recording of the transmission

with CNN; most worth seeing

filter often commodity to close unvalued contents.

The only Sites, which will register themselves in all popular evaluation Schemen to be able, are large commercial offers. All different do not have the financial means to make a detailed self evaluation. The net becomes in such a way a homogenized, clean distribution channel for Mainstream commodity.

Zudem verhindert eine freiwillige Selbstkontrolle keinesfalls staatliches Eingreifen. Ähnlich wie bei unbewertenen Inhalten können von einem Filter auch keine falsch bewerteten Inhalte akzeptiert werden. Stuft sich beispielsweise ein Porno-Anbieter zur Ankurbelung des Geschäfts als »tauglich ab 16 Jahren« ein, funktioniert der Filter nicht mehr wie gewünscht. Daher sind früher oder später Maßnahmen gegen falsche Bewertungen erforderlich. Eine andere Institution als der Staat könnte diese Kontrollfunktion kaum übernehmen. [7]

Filtersysteme sind grundsätzlich abzulehnen

Von  [Dragan Espenschied und Alvar C.H. Freude](#), 27.01. 2001, 04:53:37

Ein Internet-Filter bannt keine Gefahr, er blendet sie nur aus dem Netz aus.

Einschränkungen der Meinungsfreiheit, die von Filtern ausgehen, sind weit gravierender.

Filter lösen keine Probleme

Wie ist mit »unerwünschten Inhalten« umzugehen? Die Leugnung der Massenvernichtung der Juden während der NS-Herrschaft ist in Deutschland verboten. Fredrick Töben, Australier deutscher Abstammung, ist Leiter des [»Adelaide Institute«](#) und bezeichnet dort immer wieder die Ermordung der Juden während des zweiten Weltkrieges als Erfindung und Verschwörung. Diese in Australien nicht strafbaren Behauptungen sind übers Internet auch in Deutschland abrufbar.

Der [Bundesgerichtshof](#) hatte nun zu urteilen, ob Töben dafür in Deutschland bestraft werden darf und stellte in einem Grundsatzurteil[1] fest: ja, er kann dafür haftbar gemacht werden.

[1] Siehe [Pressemitteilung](#) des BGH sowie Urteil im [Volltext](#) bei Juramail

[2] Die Entscheidung des BGH hat international für viel Unverständnis gesorgt, siehe Stefan Krempel in Telepolis: [Besorgnis über BGH-Urteil gegen Holocaust-Leugner«](#) (Dezember 2000); Steve Kettmann in Hotwired:

[»German Hate Law: No Denying It«](#)

Stellt ein Ausländer von ihm verfaßte Äußerungen, die den Tatbestand der Volksverhetzung im Sinne des § 130 Abs. 1 oder des § 130 Abs. 3 StGB erfüllen ("Auschwitzlüge"), auf einem ausländischen Server in das Internet, der Internetnutzern in Deutschland zugänglich ist, so tritt ein zum Tatbestand gehörender Erfolg (§ 9 Abs. 1 3. Alternative StGB) im Inland ein, wenn diese Äußerungen konkret zur Friedensstörung im Inland geeignet sind.

Aus der [Pressemitteilung](#) des BGH[2]

Der BGH spricht von Äußerungen, die den Frieden im Inland stören würden. Solche Argumente ist man ansonsten nur von autoritären Regimen gewöhnt, und welche Folgen dies haben kann, läßt sich einfach ausmalen: In Ländern wie dem Iran wird »der innere Frieden« massiv gestört, wenn Frauen unverhüllt abgebildet werden. Wie groß wäre der Aufstand, wenn ein Deutscher Werber im Iran zum Tode verurteilt werden würde, weil er die auch im Iran abrufbare Internetseite eines Dessous-Herstellers gestaltete? Es wirft sich unweigerlich die Frage auf: Kann es sich ein Staat wirklich erlauben, seine Gesetzgebung auf ein globales Medium auszudehnen? Wäre Töben auch verurteilt worden, wenn er den Holocaust auf seinem auch von Deutschland aus abrufbaren Anrufbeantworter leugnen würde?

Anstatt nationale Gesetze auszudehnen, sollte lieber überlegt werden wie man sinnvoll mit Holocaust-Leugnern umgehen kann. Der einzige sinnvolle Weg kann nur durch Aufklärung zum Erfolg führen. Die Behauptungen der Holocaust-Leugner zu widerlegen ist nicht schwer. Die Aufklärungs-Site [↗ Nizkor](#) beschreitet diesen Weg erfolgreich und veröffentlicht z.B. [↗ Dokumente](#), die die Argumente der Revisionisten widerlegen. Eine [↗ deutsche Übersetzung](#) ist auf [↗ Burkhard Schröders Homepage](#) zu finden.

Internet ist Narrowcast

Um die Kritik an bestehenden oder geplanten Filter-Systemen für das Internet zu verstehen, ist es wichtig, die wesentlichen Unterschiede des Netzes zu anderen Medien zu kennen.

Aktuelle Konzepte für Internet-Filter sind vom Aufbau an klassischen Broadcast-Medien orientiert. Das Netz ist jedoch eine globale Kommunikations-Plattform, in der sich privater und öffentlicher Raum vermischen. [3]

Da sich das Internet über nationale Grenzen hinweg erstreckt, kann für Inhalte im Netz kein nationales Recht gelten.

Nachdem Bertelsmann in die Musiktaschbörse Napster investiert hatte, bat der niedersächsische Verfassungsschutz den Medienkonzern, die Verbreitung von rechtsradikalen Musikstücken in Napster zu verhindern. [4] Was sich aus deutscher Sicht wie eine gute Tat anhört, beeinträchtigt aus US-amerikanischer Sicht die Redefreiheit. Aus deren Sicht stört man sich eher an nackten Brüsten und sexuellen Anspielungen. Also sollten derlei Musikstücke am besten auch aus Napster entfernt werden. Je mehr Forderungen gestellt werden, desto weniger bleibt übrig:

[3] Michael Horak auf

Freedom For Links: [»Gibt es noch die private Homepage?«](#) (September 2000)

[4] Siehe auch das

journalistische Juwel

[»Kinder pornos bei Napster«](#) im Spiegel Online (Januar 2001)

Denn wenn man die Gesetze aller Internet-Länder auf Napster anwenden würde, bliebe wohl außer Heintje und Gildo Horn nicht viel übrig.

Erik Möller: [»Die Herrschaft der Server geht zu Ende«](#), taz, 4. Januar

2001, Seite 17

Keine zentrale Stelle kann es sich somit erlauben, für den Rest der Welt zu bestimmen, was im Netz an Inhalten vertretbar ist und was nicht. Selbst in möglichst objektiv gestalteten Kriterien zur Bewertung von Inhalten werden Wertvorstellungen transportiert. – Soll es der Zweck von Filter-Systemen sein, die Auseinandersetzung mit unangenehmen Dingen oder fremden Wertvorstellungen überflüssig zu machen? Dazu braucht man aber kein Internet. Das Internet steht für Diversität.

Der Preis für globale Kommunikation und Redefreiheit ist, dass sich wirklich jeder dieser Mittel bedienen kann. Zur Untermauerung der Forderungen nach inhaltlicher Regulierung des Netzes werden besonders gerne Kinderpornografie und Neonazis herangezogen. (Siehe dazu das Kapitel [»... in den Medien«](#)) Das [Cybercrime-Abkommen des Europarates](#) enthält sogar einen eigenen Paragraphen, der Kinderpornografie nochmals kriminalisiert. Man mag es kaum für möglich halten, aber schon vor dem Internet gab es Kinderpornografie und Besitz und Herstellung entsprechenden Materials sind auch ohne Cybercrime-Abkommen europaweit und nahezu weltweit illegal. Zudem ist es ein Mythos, dass man als unbedarfter Web-Surfer auf solche Angebote stoßen könnte. Das Web ist schon von daher kein anonymes Medium, da jeder Server im Netz eindeutig indentifiziert werden kann.

Das Thema Neonazis wird ebenfalls hochgespielt. Selbst die äußerst kritische Simon-Wiesenthal-Stiftung kommt im April 1999 auf gerade mal 1.400 Hass-Seiten:

Die über 1.400 Haß-Seiten im Internet könnten theoretisch von gut 150 Millionen Internetnutzer weltweit gelesen werden.

Zitiert nach [»Simon-Wiesenthal-Center USA: Zahl rassistischer](#)

[Internetseiten wächst«](#) auf der Site [Judentum in Europa](#)

Etwas mehr als ein Jahr später sind es gerade mal 2000 »problematische« Webseiten, die das Wiesenthal-Zentrum zählt.[5]

Filter, die den Zugriff auf solche Webseiten unterbinden, helfen jedoch nicht gegen rechtsradikale Gesinnung. Stattdessen werden Probleme einfach ausgeblendet:

Das Beharren auf nationalen Empfindlichkeiten ist im Kern nicht sinnvoll, weil es gerade bei den sogenannten »schädlichen Informationen« doch darum geht, den Nutzen für die Gesellschaft zu erkennen. Nach meinem Verständnis gibt es überhaupt keine schädlichen Informationen, schließlich werden auf diesem Wege gesellschaftliche Probleme aufgezeigt.

[5] Quelle: Stefan Krempel in

Telepolis: [»Berliner](#)

Erklärung gegen den Hass im Netz« (Juni 2000)

Andy Müller-Maguhn im Interview mit Stefan Krempel: [»Harter Diskurs](#)

[und freier Meinungs austausch statt Filter«](#) in Telepolis (August 2000)

Freiwillige Selbstkontrolle

Wo es noch relativ leicht fällt, sich gegen staatliche Kontrolle zu wenden, macht das System der freiwilligen Selbstkontrolle auf den ersten Blick einen vernünftigeren Eindruck. Dennoch geht auch von diesen Bemühungen eine große Gefahr für die freie Meinungsäußerung im Netz aus.

Das vom W3C vorgeschlagene PICS-System (Details im Artikel [»Die Standardisierung der Zensur«](#)) vermittelt auf

technischer Ebene den Eindruck, ein flexibles und mit Bedacht konstruiertes System sein. Jeder kann die eigenen Inhalte nach beliebigen Schemata selbst bewerten, zudem können sich Rating-Services bilden, die auch fremde Inhalte einteilen. Somit kann jede Information aus jedem nur erdenklichen Blickfeld bewertet werden – theoretisch.

Das Problem einer Kategorisierung besteht im Internet noch viel mehr als bei klassischen Medien. Ist Kriegsberichterstattung nun gewaltverherrlichend und muss daher von Minderjährigen ferngehalten werden? Oder dürfen Nachrichten nicht gefiltert werden? Wenn ja, was sind dann Nachrichten und was ist beispielsweise Sensations-Journalismus? Was ist Ironie, was ernstgemeint? So einfach lässt sich das glücklicherweise nicht sagen, amerikanische Juristen sahen das im Fall von [\[6\] vote-auction](#) jedoch anders. Ein Jurist forderte während einer Gesprächsrunde am 24. Oktober 2000 auf CNN tatsächlich, Satire müssen man kenntlich machen, so wie die Comics auf der letzten Seite einer Zeitung. [6] Wie soll eine Filterung dieser Vorstellung nach ablaufen? Mit ein paar binären Kategorien lässt sich menschliche Kommunikation nicht einteilen.

[6] [RealVideo-](#)

[Aufzeichnung der Sendung](#)

bei CNN; höchst sehenswert

Anders als bei einem Broadcast-Medium wie beispielsweise dem Kinofilm, das innerhalb eines Jahres eine endliche Anzahl Produkte erzeugt, entsteht im Netz täglich eine schlicht unüberschaubare Menge an Daten, die niemals vollständig nach auch nur *irgendeinem* Bewertungs-System eingeteilt werden könnte. Konversationen im Usenet, Einträge in Foren, Nachrichten, all das kann unmöglich bewertet werden.

Ein Filter-System, das nicht kategorisierte Inhalte durchlässt, ist sinnlos, weil dadurch eine Menge unerwünschte Inhalte unbehelligt bleiben. Daher ist es aus Sicht der Filter-Software logisch, unbewertete Inhalte zu sperren.

Die einzigen Sites, die sich in allen populären Bewertungsschemen eintragen werden können, sind große kommerzielle Angebote. Alle anderen haben nicht die finanziellen Mittel, eine detaillierte Selbstbewertung vorzunehmen. Das Netz wird so zu einem homogenisierten, sauberen Distributionskanal für Mainstream-Ware.

Zudem verhindert eine freiwillige Selbstkontrolle keinesfalls staatliches Eingreifen. Ähnlich wie bei unbewerteten Inhalten können von einem Filter auch keine falsch bewerteten Inhalte akzeptiert werden. Stuft sich beispielsweise ein Porno-Anbieter zur Ankurbelung des Geschäfts als »tauglich ab 16 Jahren« ein, funktioniert der Filter nicht mehr wie gewünscht. Daher sind früher oder später Maßnahmen gegen falsche Bewertungen erforderlich. Eine andere Institution als der Staat könnte diese Kontrollfunktion kaum übernehmen. [7]

[7] Siehe

[»Standardisierung der Zensur«](#)

Freiwillige Selbstzensur

Andere Filter setzen nicht bei den Erstellern von Inhalten an, sondern bei den Konsumenten. Filter-Produkte wie [NetNanny](#) oder [CyberPatrol](#) filtern auf dem lokalen Computer nach Schwarzen Listen oder Schlüsselwörtern.

Diese Schwarze Listen und Schlüsselwörter sind jedoch das Geschäftsgeheimnis der jeweiligen Herstellerfirmen; ein lokales Filterprogramm ist recht schnell geschrieben, weit mehr Arbeit macht die Unterteilung in korrekte und nicht korrekte Inhalte.

Dass die Listen sehr häufig Unsinn enthalten beweist immer wieder die Jugendrechtsorganisation [Peacefire](#) durch [Analysen](#) der Filter-Programme. Informationen über Brustkrebs oder die Website des Vatikan wurden blockiert, angesehen konservative Vereinigungen wie beispielsweise [Focus on Family](#), die sich [haarsträubender Weise](#) zum Thema Homosexualität äußern, wurden jedoch nicht als diskriminierend eingestuft. Deutlich zeigt sich, dass auch kommerzielle Filter-Software niemals neutral sein kann. Besonders kritisch wird es, sollten diese Systeme Dank ihrer einfachen Handhabung an Schulen oder in öffentlichen Bibliotheken eingesetzt werden: [8] Gefiltert wird dann zwar schon, aber was genau, fällt unter das Betriebsgeheimnis der Filterhersteller.

[12] Zitiert nach Stefan

In den 70ern sollten die Bibliotheken überwacht werden, heute das Internet. Staatsschützer und Kriminalitätsbekämpfer jeglicher Art wollen möglichst alle Schritte der Bürger nachvollziehen können. So entwickelte das FBI mit Carnivore[9] ein Überwachungssystem, dass – einmal zwangsweise beim Provider installiert – die komplette Kommunikation der Internet-Nutzer überwachen, aufzeichnen und analysieren soll. Natürlich zum Schutz der Bürger vor Kriminalität. Heute wünscht Bertelsmann, dass in Schulen MP3s verboten werden und das Internet gefiltert wird[10] – in den 70ern wurden in Bayern Schulbücher zensiert, Autoren wie Wolf Biermann und Günter Wallraff waren in Bayerischen Schulbüchern nicht erlaubt.[11]

Das Netzwerk ist dezentral

Von [☒ Dragan Espenschied, Alvar C.H. Freude](#), 19.01. 2001, 06:48:31

Richtig: Das Netzwerk ist das, wozu es gemacht wird

Trotz größtenteils dezentraler Technik sind die Abbildung bestehender und Schaffung neuer Hierarchien möglich.

Das gebräuchlichste Bild der Vernetzung im Internet ist das eines Spinnennetzes oder von Maschen: Jeder Punkt ist gleichzeitig mit jedem anderen Verbunden. Einer nicht ganz richtigen Legende nach^[1] wurde diese Struktur vom US-Militär entwickelt, um auch nach einem Ausfall mehrerer Rechner durch einen Atomschlag weiterhin über ein funktionierendes Computernetzwerk verfügen zu können. Wenn man also nicht einmal mit Atomwaffen den Datenfluss verhindern kann, wie soll dann irgendjemand das Netz kontrollieren können?

[1] Aufklärung findet sich bei

[☒ Netplanet](#) in dem Artikel [☒ »Die Geschichte des Internets«](#)

Das Modell der Maschen oder des Spinnennetzes beschreibt nur auf *einer* technischer Ebene den Weg, den Datenpakete üblicherweise durch das Netz nehmen. Ist die Verbindung ins Netz erst einmal hergestellt, gibt es quasi kein halten mehr, mit jedem anderen Rechner in diesem Netz ist technisch eine Verbindung möglich. Tatsächlich stellt jedoch immer irgend jemand diese Verbindungen her oder sorgt dafür, dass sie technisch korrekt funktionieren.

»So worldwide people are looking at 10 Web sites.«

Trotz der scheinbar dezentralen Architektur des Netzes entstehen allein durch die Nutzung bestimmter Angebote Hierarchien und Abhängigkeiten.

Werbenetzwerke wie [DoubleClick](#) schalten auf einer Vielzahl von Websites Werbebanner. Mit jedem abgerufenen Banner werden jedoch zusätzlich über Cookies Benutzer-IDs vergeben. So kann DoubleClick personenbezogen verfolgen, welche Adressen angeschaut werden, auf denen Banner geschaltet sind.

Suchmaschinen übertragen die eingegebenen Suchwörter in der Adresszeile und können daher von Banner-Netzwerken ebenfalls ausgewertet werden.

Suchmaschinen selbst sind zentrale Anlaufstellen im Netz und versprechen, »alles« im Netz zu finden. Welche Adressen jedoch als die besten Suchergebnisse einsortiert werden, fällt unter das Betriebsgeheimnis und wird für die Benutzer nicht transparent gestaltet.

The top ten Web sites – by controlling 20 percent of what everybody on the Net sees – is an astounding concentration of power that we probably haven't seen since the Roman Empire, in the sense that this is worldwide – we have as many people using our panel in Japan as Media Metrics has in the United States. So worldwide people are looking at 10 Web sites. Those companies have an astounding ability to put things in front of people that can influence them – whether they do it or not, who knows – so it's not like just CBS, NBC and ABC in the United States. These top ten are worldwide

Brewster Kahle, CEO von [Alexa](#), in Feedmag: [»re: Brewster Kahle«](#)

Alexa selbst ist ein Service, der mittels der »Smart Browsing«-Funktion des Netscape-Browsers besuchte Websites sammelt und indexiert und aufgrund dessen Benutzern Angebote mit ähnlichen Inhalten vorschlagen kann. Alexa ist also ein möglicher Punkt, an dem Benutzerprofile gesammelt werden könnten oder auch eine Überwachung stattfinden könnte, wer »illegale Inhalte« anschaut etc. Brewster Kahle dazu:

By being here at Alexa, we've got the biggest collection of what the current Web looks like now, and in the past, as well as where millions of people are surfing. We don't know who's who and we don't care [...].

Jedoch gibt es keine Institution, die überprüft, ob Alexa sich *wirklich* nicht darum kümmert, wer wer ist.

[↗ RealNetworks](#), die lange Zeit mit dem *Realplayer*, *RealAudio* und *RealVideo* die einzige funktionierende Lösung für Streaming Media anboten, protokollierten, welche Video- und Audioströme die Benutzer anschauten und übertrugen diese Daten an ihren eigenen Server zurück. [2] Sogar über die *RealJukebox* im CD-ROM-Laufwerk abgespielte Musik-CDs wurden gemeldet. Als diese Aktion bekannt wurde, beteuerte RealNetworks, dass keine Verbindung zwischen den gesammelten Daten und den Registrierungs-Informationen hergestellt würde, die bei der Installation der Player-Software abgefagt werden. Und in zukünftigen Versionen würde diese Funktion deaktiviert werden. [3] – Auch das wurde nicht überprüft. RealNetworks ist in den Vereinigten Staaten ansässig, die Datenschutzbestimmungen dort sind nicht gerade streng. Der Tenor geht vor allem in die Richtung, die Wirtschaft habe Datenschutz-Fragen selbst zu klären. Die Kraft des Marktes würde dann regeln, wieviel Datenschutz überhaupt vom Kunden gewünscht sei.

[2] Richard M. Smith: [↗ »The RealJukeBox monitoring system«](#),
Oktober 1999

[3] Florian Rötzer in Telepolis:
[↗ Die reuigen Sünder wollen zu Heiligen in Sachen Privacy werden](#)

Wir brauchen keine staatlichen Regelungen, die den freien Informationsfluss stoppen, wenn die Informationen freiwillig gegeben werden; Regelungen, die Cookies verbieten und maßgeschneiderte Lösungen des Marktes erschweren. (Allenfalls, wenn Kinder im Spiel sind oder Daten unter Zwang erhoben werden, sind staatliche Eingriffe erforderlich.)
Also brauchen wir keine Gegenorganisation zur Direct Marketing Association, die die gleiche Macht hat und sich

von irgendwelchen Verbraucherschutzorganisationen leiten lässt.

Esther Dyson: Release 2.0; 1997, Droemer Knauer, München; Seite 259

Wie immer hört bei Kindern der Spaß auf, denn die verstehen ja noch nicht, was Daten sind und können sie nicht »freiwillig geben«. Wer versteht jedoch, wie das mit den Daten und dem freiwilligen Geben funktioniert? Gebe ich *freiwillig* etwas Preis, wenn ich in einer Suchmaschine suche und DoubleClick meine Suchanfrage mitprotokolliert? Nur vier Seiten vorher schreibt Dyson:

Das Frustrierende an Cookies ist, daß kein normaler Mensch sie verstehen kann, obwohl sie sich auf dem eigenen PC befinden. (Clevere, »böse« Hacker verstehen sie dafür umso besser; sie können fiktive Cookies fabrizieren, sich darauf einloggen und dann als fingierte User wie Hochstapler agieren.)[4]

Die private Organisation [Trust-e](#) wurde gegründet, um ein freiwilliges, verpflichtendes Regelwerk für den Datenschutz zu etablieren und so das Vertrauen der Konsumenten in den elektronischen Handel aufzubauen. Firmen wie RealNetworks und Microsoft gehören Trust-e an und verpflichten sich, die gemeinsam erstellten Richtlinien einzuhalten. Im Fall von RealNetworks wurden jedoch auch die selbst gesetzten Trust-e-Richtlinien verletzt. Nach einer Entschuldigung und dem Versprechen, dass das nicht wieder vorkommt, ist jedoch nichts weiter geschehen. Der moralischen Aufgabe scheint die Trust-e nicht gewachsen zu sein.[5] Andererseits

[4] Man beachte, dass hier zuerst ein Missbrauchs-Fall aus Sicht eines Website-Betreibers beschrieben wird. Viel

interessanter ist jedoch, dass ein »Kunde« nicht sehen kann, was auf der anderen Seite mit seinen Daten geschieht

[5] Siehe auch: Karsten Weber in Telepolis: [»Selbstverpflichtung vs. Rechtsanspruch«](#) (Februar

2000) und Declan McCullagh in

Wired: [»Is TRUSTe](#)

[Trustworthy?»](#) (November 1999)

bemüht sich die Wirtschaft um die Erhaltung des Markenrechtes im Netz und nimmt dafür gerne die Hilfe des Staates in Anspruch.

Um zu beweisen, dass die Abhängigkeiten keinesfalls unveränderlich sind, haben wir in unserem [Experiment](#) selbst unbemerkt eine »softe« Netzwerk-Hierarchie innerhalb unserer Hochschule aufgebaut und uns selbst an deren Spitze gesetzt.

Die Fragen die oft auftauchen sind: »Welche konkreten Gefahren gehen von der Überwachung aus? Was kann mir schon passieren, wenn jemand weiß, dass ich diese und jene Website besucht habe? Ich habe nichts zu verbergen!« Auf den ersten Blick mag das für den einen oder anderen sicher so akzeptabel sein. Nur welche Folgen kann das wirklich haben? Ein bißchen personalisierte Werbung im Gegenzug zu kostenlosen Angeboten im Internet zu erhalten, das ist ja nicht weiter schlimm, ist oft als Argument zu hören.

Aber konstruieren wir doch mal einen fiktiven Fall: Eric Example schaut sich in fünf Jahren ein paar Schmuddel-Sex-Filmchen aus dem Internet an, und vielleicht noch einen Film über das Marihuana-Rauchen. Vielleicht wurde auch gar nicht inhaliert, jedenfalls in dreißig Jahren möchte Smith US-Präsident werden und dann steht mit einem mal in der Presse: früher hat er sich »unanstößige« Filme angeschaut, und schon ist er erledigt, aus der Traum vom Weißen Haus.

Oder Bettina Beispiel sucht einen neuen Arbeitsplatz. Der vielversprechende Arbeitgeber läßt routinemäßig eine Recherche über sie durchführen und stellt fest, dass sie vor einiger Zeit mit einer Wahrscheinlichkeit von 70% regelmäßig nach Selbsthilfegruppen für Alkoholranke im Internet gesucht hat. Tja, pech gehabt.

Harte Hierarchien

Das Internet als ganzes besteht aus vielen unterschiedlich organisierten Netzwerken, die über Router miteinander verbunden sind. Üblicherweise werden solche Netzwerke hierarchisch aufgebaut, das heißt mehrere Benutzer verbinden sich über eines oder mehrere Gateways mit dem nächst größeren Netzwerk. Es gibt jedoch an keiner Stelle einen Raum, der niemandem gehört.

[6] Siehe Wolfgang J. Koschnick in

Telepolis: [»Schmuddel-Sex und Rassismus im Internet lassen sich kaum verbieten«](#) (Mai 1997)

[7] Siehe Patrick Goltzsch in

Telepolis: [»Werkeln an der Zollstation«](#), November 2000

[8] Florian Rötzer in Telepolis:

[»Chinas Regierung führt schärfere Internetgesetze ein«](#) (Oktober 2000) und [»Saudi Arabien sperrt wegen Pornographie Zugang zu den Yahoo-Clubs«](#) (August 2000)

Übergangspunkte von einem Netzwerk in ein anderes sind ideale Punkte, um den Datenverkehr zu kontrollieren.

Beispiele dafür wären an Schulen oder Bibliotheken installierte Systeme wie [SmartFilter](#), im größeren Maßstab blockierte T-Online bereits 1997 den Zugang zu einer Website[6], allerdings mit nur mäßigem Erfolg. Im Juni 2000 war die International Federation of the Phonographic Industry bei den deutschen Providern für ein Filtersystem, welches das illegale Kopieren von Musik über das Netz verhindern soll.[7] In China und Saudi Arabien werden über staatlich lizenzierte Provider die Zugriffe auf bestimmte Angebote gesperrt.[8]

Die Zuweisung von leserlichen Namen zu IP-Adressen [9] erfolgt über Nameserver, die ebenfalls hierarchisch aufgebaut sind. Der oberste »A« root server wird von [Network Solutions](#), einem von der US-Regierung beauftragten Unternehmen, verwaltet. Die Regulierung des inzwischen demonopolisierten Registrierungsmarktes [10] soll das ebenfalls von der US-Regierung initiierte *Internet Corporation for Assigned Names and Numbers* ([ICANN](#)) übernehmen.

[9] Ähnlich wie in einem

Telefonbuch, genauere Erklärung

bei NetPlanet: [»Adressierung im](#)

[Internet«](#)

[10] Siehe das [»Green Paper«](#)

vom Januar 1998 des [US](#)

[Department Of Commerce](#)

2000 ließ Milosevic zur Wahlzeit in Serbien oppositionelle Websites 24 Stunden lang aus dem Nameserver für .org.yu-Domains auf andere Inhalte umleiten. [11] Die angekündigte alternative Berichterstattung zu den staatlichen Medien im Netz wurde dadurch stark behindert. Das Regime hatte Druck auf den Verwalter der .org.yu Domain unter Druck gesetzt.

[11] Christian Ahlert in Telepolis:

[»Eine Geschichte über Milosevic, Zensur und ICANN«](#), Oktober 2000

Der in Österreich gehostete und besonders in Amerika umstrittene Website [voteauction.com](#) (neue URL als Namenlose IP-Adresse <http://62.116.31.68/>) wurde im gleichen Jahr zuerst von [Domain Bank Inc](#) der Name entzogen, nach einer Neuregistrierung eines ähnlichen Namens ([vote-auction.com](#)) in Deutschland über CoreNic, wurde auch dieser Name bei CoreNic, gesperrt. [12] Die Kontrolle des Namenssystems geschieht also nicht öffentlich oder verteilt, sondern liegt in der Hand von größtenteils US-amerikanischen Institutionen, welche die knappste Ressource des Netzes verteilen. [13]

Aus technischer Sicht sind keine zentralen Stellen zur

Namensverwaltung notwendig. Es sind nicht einmal

[12] Details zu diesen Vorgängen

Namen notwendig, diese existieren nur als komfortable

in den [Pressemitteilungen von](#)

[Voteauction](#)

Möglichkeit, eine bestimmte IP-Nummer anzusprechen,

die man sich ähnlich leicht wie eine Telefonnummer

[13] Details zum Voteauction-Fall

merken könnte. Interesse an einem zentralen und

und den Interessen des CORE:

gesicherten Namenssystem haben vor allem Firmen, die

Armin Medosch in Telepolis:

gewisse Marken ins Netz übertragen oder dort neue

The network is decentralized

Of  [Dragan Espenschied, Alvar C.H. joy](#), 19.01. 2001, 06:48:31

Correctly: The network is that, to which it is made

Despite to a large extent decentralized technology are the illustration more existing and creation of new hierarchies possible.

The most common picture of cross-linking in the InterNet is that of a spider net or from meshes: Each point is simultaneous with every other group. After a not completely correct legend [1] this structure was developed by the US military, in order to be able to have also after a loss of several computers by an atomic impact further a functioning computer network. If one cannot thus even prevent data flow with nuclear weapons, how then somebody is to be able to control the net?

[1] Clearing-up is with  [Netplanet](#) in the article  "the history of the Internets"

The model of the meshes or the spider net describes only on a technical level the way, which packets take usually by the net. If the connection is only once manufactured in the net, there is quasi none holds more, with every other computer in this net is technically a connection possible. However always possibly someone actually manufactures these connections or ensures for the fact that they function technically correctly.

"so worldwide people across looking for 10 Web of sites."

Despite the apparently decentralized architecture of the net alone hierarchies and dependence result from the use of certain offers.

Advertising networks such as [DoubleClick](#) switch on a multiplicity of Websites advertising banners. With each called up banner however additionally over Cookies user IDs are assigned. Like that DoubleClick can pursue personal, which addresses are looked at, on those banners is switched.

Search machines transfer the entered search words in the address line and can therefore by banner networks be evaluated likewise. Search machines are central approach places in the net and promise to find "everything" in the net. Which addresses are sorted however as the best search results, falls under the trade secret and for the users not transparency is arranged.

The top ten Web of sites - by controlling 20 by cent OF everybody on the Net of lake what - is on astounding concentration OF power that incoming goods probably haven't lakes since the novel Empire, into the scythe that this is worldwide - incoming goods have as many people using our panel ind Japan as Media Metrics has into the United of states. So worldwide people acres looking RK 10 Web of sites. Those of companies have astounding ability ton of PUT things in front OF people that on CAN influence them - more whether they DO it or emergency, who knows - in such a way it's emergency like just CBS, NBC and ABC into the United States. Thesis top acres worldwide ten

Brewster bald one, CEO von [Alexa](#), in feed-likes: ["RH: Brewster bald one"](#)

Alexa is a service, which collects visited Websites by means of the "Smart Browsing" function of the Netscape Browsers and indexed and due to offers with similar contents can suggest to its users. Alexa is thus a possible point, at which user profiles could be collected or also a monitoring could take place, who looks at "illegal contents" etc.. Brewster bald one in addition:

By being here RK Alexa, we've got the biggest collection OF what the current Web looks like now, and into the past, as waves as where million OF people acres surfing. Incoming goods don't know who's who and incoming goods don't care [...].

However there is no institution, which examines whether Alexa does not worry really about who who is. [\[2 \] Material networks](#) , which offered long time with the Realplayer , RealAudio and RealVideo the only functioning solution for Streaming Media, logged, which video and audio stream looked at the users and these data transferred to their own server back. [2] Even over *the RealJukebox* in the CD Rome drive assembly played music CDs was announced. When this action admits became, material networks protested that no connection between the collected data and the registration information was made, which are abgefagt with the installation of the Player software. And in future versions this function would be deactivated. [3] - also that was not examined. Material networks resides in the United States, the data protection regulations are strict not straight there. The tenor goes particularly into the direction, the economy has to data security questions themselves to clarify. The strength of the market would regulate then, how much data security was desired of the customer at all.

[2] Richard M. Smith: [\[2 \]](#)
"The RealJukeBox
monitoring system" ,
October 1999

[3] Florian Roetzer in
Telepolis: [\[3 \]](#) The reuigen
Suender wants to become
holy ones in things Privacy

We do not need national regulations, which stop the free information flow, if the information is voluntarily given; Regulations, which forbid Cookies and make custom-made solutions more difficult of the market. (if necessary, if children are in the play or data are raised under obligation, national interferences are necessary.) Thus we do not need Gegenorganisation to the Direct marketing Association, which has the same power and from any consumer protection organizations be led can.

Esther Dyson: Release 2.0; 1997, Droemer Knaur, Munich; Page 259

Like always the fun stops with children, because those do not understand yet, what data are and they cannot give "voluntarily". Who understands however, how with the data and the freiwilligen giving functions? Do I give *voluntarily* something price, if I search in a search machine and my retrieval query along-logs DoubleClick? Dyson writes only four sides before:

The frustrating at Cookies is that no normal humans can understand her, although they are on the own PC. (Clever, "badly" hackers understand them for it the better; they can produce fictitious Cookies, log in on it and then as a fictitious user such as hochstapler act.) [4]

[4] One notes that here first a case of abuse from view of an Website operator

is described. Many more interesting it is however that a "customer" cannot see, what on the other side with his data happens

[5] See also: Karsten weber in Telepolis: ["self obligation vs. legal claim"](#) (February 2000) and Declan McCullagh in Wired: ["Is of tRUSTe Trustworthy?"](#) (November 1999)

The private organization [of trust-e](#) was created, over a freiwilliges to establish obligating set of rules for the data security and so the confidence of the consumers into the electronic trade aufzuabuen. Companies such as material networks and Microsoft belong trust-e and commit themselves to keep the together provided guidelines. In the case of material networks however also the Trust e guidelines even set were hurt. After an apology and the promise that that does not occur again it continued to happen, however nothing. Does not seem to have been up to to the moral task the trust-e. [5] On the other hand the economy strives for the preservation of the trademark law in the net and takes for it gladly the assistance up of the state.

In order to prove that dependence are not under any circumstances constant, we hanben in our  experiment unnoticed a "soft" network hierarchy within our university developed and us at their point set.

The questions those often emerge are: "which concrete dangers proceed from the monitoring? What can happen to me, if someone knows that I visited these and that Website? I do not have to hide anything!" At first sight may be surely so acceptable for or others. Only which consequences can that really have? Little personalisierte advertisement in response to free offers in the InterNet to receive, that is not further bad, is often as argument to be heard.

But we design nevertheless times a fictitious case: Eric Example watches in five years a few Schmuddel Sex Filmchen from the InterNet, and perhaps still another film over the marijuana smoking. Perhaps not inhaliert also at all, anyhow in thirty years would like Smith US president to become and then is located with one times in the press: in former times it looked at itself "unanstoessige" films, and it is settled already, from the dream of the white house.

Or Bettina example looks for a new job. The promising employer lets a search accomplish by routine over it and states that it looked some time ago with a probability of 70% regularly for groups of self-helps for alcohol patient in the InterNet. Tja, pitch had.

Hard hierarchies

Erklärung bei NetPlanet:

[↗](#) »Adressierung im

Internet«

[10] Siehe das [↗](#) »Green

Paper« vom januar 1998

des [↗](#) US Department Of

Commerce

The InterNet as a whole consists of many differently organized networks, which over rout are connected. Usually such networks are hierarchically developed, i.e. several users connect themselves over one or more gateways with the next larger network. There is however nowhere an area, which does not belong to anybody.

Transition points of a network into another are ideal points, in order to control the data traffic. Examples of it would already be at schools or libraries installed systems such as [↗](#)

[SmartFilter](#) , in the larger yardstick blocked T-Online 1997 the

entrance to a Website [6] however with only moderate

success. In June 2000 those was international Federation OF

the Phonographic Industry with the German Providern for a

filter system, which was to prevent the illegal copying of music

over the net. [7] In China and Saudi Arabia the accesses to

certain offers become closed over nationally licenced Provider.

[8]

Die Zuweisung von leserlichen Namen zu IP-Adressen [9]

erfolgt über Nameserver, die ebenfalls hierarchisch aufgebaut

sind. Der oberste »A« root server wird von [↗](#) [Network](#)

[Solutions](#), einem von der US-Regierung beauftragten

Unternehmen, verwaltet. Die Regulierung des inzwischen

demonopolisierten Registrierungsmarktes[10] soll das

ebenfalls von der US-Regierung initiierte *Internet Corporation*

for Assigned Names and Numbers ([↗](#) [ICANN](#)) übernehmen.

[11] Christian Ahlert in

Telepolis: [»Eine](#)

[Geschichte über Milosevic, Zensur und ICANN](#)«,

Oktober 2000

2000 ließ Milosevic zur Wahlnacht in Serbien oppositionelle Websites 24 Stunden lang aus dem Nameserver für .org.yu-Domains auf andere Inhalte umleiten.[11] Die angekündigte alternative Berichterstattung zu den staatlichen Medien im Netz wurde dadurch stark behindert. Das Regime hatte Druck auf den Verwalter der .org.yu Domain unter Druck gesetzt.

Der in Österreich gehostete und besonders in Amerika umstrittene Website voteauction.com (neue URL als Namenlose IP-Adresse <http://62.116.31.68/>) wurde im gleichen Jahr zuerst von [Domain Bank Inc](#) der Name entzogen, nach einer Neuregistrierung eines ähnlichen Namens (vote-auction.com) in Deutschland über CoreNic, wurde auch dieser Name bei CoreNic, gesperrt.[12] Die Kontrolle des Namenssystems geschieht also nicht öffentlich oder verteilt, sondern liegt in der Hand von größtenteils US-amerikanischen Institutionen, welche die knappste Ressource des Netzes verteilen.[13]

[12] Details zu diesen

Vorgängen in den

[Pressemitteilungen von Voteauction](#)

Aus technischer Sicht sind keine zentralen Stellen zur Namensverwaltung notwendig. Es sind nicht einmal Namen notwendig, diese existieren nur als komfortable Möglichkeit, eine bestimmte IP-Nummer anzusprechen, die man sich ähnlich leicht wie eine Telefonnummer merken könnte.

[13] Details zum

Voteauction-Fall und den

Interessen des CORE: Armin

Medosch in Telepolis:

[»Email aus USA \(Zensur am Beispiel von Voteauction\)](#)«, November

2000

Interesse an einem zentralen und gesicherten Namenssystem haben vor allem Firmen, die gewisse Marken ins Netz übertragen oder dort neue aufbauen wollen. Im Zweifelsfall werden diese global eindeutigen Namen an denjenigen vergeben, der aus wirtschaftlicher Sicht den größten Anspruch darauf hat.

Das Netzwerk ist dezentral

Von [✉ Dragan Espenschied, Alvar C.H. Freude](#), 19.01. 2001, 06:48:31

Richtig: Das Netzwerk ist das, wozu es gemacht wird

Trotz größtenteils dezentraler Technik sind die Abbildung bestehender und Schaffung neuer Hierarchien möglich.

Das gebräuchlichste Bild der Vernetzung im Internet ist das eines Spinnennetzes oder von Maschen: Jeder Punkt ist gleichzeitig mit jedem anderen Verbunden. Einer nicht ganz richtigen Legende nach^[1] wurde diese Struktur vom US-Militär entwickelt, um auch nach einem Ausfall mehrerer Rechner durch einen Atomschlag weiterhin über ein funktionierendes Computernetzwerk verfügen zu können. Wenn man also nicht einmal mit Atomwaffen den Datenfluss verhindern kann, wie soll dann irgendjemand das Netz kontrollieren können?

[1] Aufklärung findet sich bei

[Netplanet](#) in dem Artikel [»Die Geschichte des Internets«](#)

Das Modell der Maschen oder des Spinnennetzes beschreibt nur auf *einer* technischer Ebene den Weg, den Datenpakete üblicherweise durch das Netz nehmen. Ist die Verbindung ins Netz erst einmal hergestellt, gibt es quasi kein halten mehr, mit jedem anderen Rechner in diesem Netz ist technisch eine Verbindung möglich. Tatsächlich stellt jedoch immer irgend jemand diese Verbindungen her oder sorgt dafür, dass sie technisch korrekt funktionieren.

»So worldwide people are looking at 10 Web sites.«

Trotz der scheinbar dezentralen Architektur des Netzes entstehen allein durch die Nutzung bestimmter Angebote Hierarchien und Abhängigkeiten.

Werbenetzwerke wie [DoubleClick](#) schalten auf einer Vielzahl von Websites Werbebanner. Mit jedem abgerufenen Banner werden jedoch zusätzlich über Cookies Benutzer-IDs vergeben. So kann DoubleClick personenbezogen verfolgen, welche Adressen angeschaut werden, auf denen Banner geschaltet sind.

Suchmaschinen übertragen die eingegebenen Suchwörter in der Adresszeile und können daher von Banner-Netzwerken ebenfalls ausgewertet werden.

Suchmaschinen selbst sind zentrale Anlaufstellen im Netz und versprechen, »alles« im Netz zu finden. Welche Adressen jedoch als die besten Suchergebnisse einsortiert werden, fällt unter das Betriebsgeheimnis und wird für die Benutzer nicht transparent gestaltet.

The top ten Web sites – by controlling 20 percent of what everybody on the Net sees – is an astounding concentration of power that we probably haven't seen since the Roman Empire, in the sense that this is worldwide – we have as many people using our panel in Japan as Media Metrics has in the United States. So worldwide people are looking at 10 Web sites. Those companies have an astounding ability to put things in front of people that can influence them – whether they do it or not, who knows – so it's not like just CBS, NBC and ABC in the United States. These top ten are worldwide

Brewster Kahle, CEO von [Alexa](#), in Feedmag: [»re: Brewster Kahle«](#)

Alexa selbst ist ein Service, der mittels der »Smart Browsing«-Funktion des Netscape-Browsers besuchte Websites sammelt und indexiert und aufgrund dessen Benutzern Angebote mit ähnlichen Inhalten vorschlagen kann. Alexa ist also ein möglicher Punkt, an dem Benutzerprofile gesammelt werden könnten oder auch eine Überwachung stattfinden könnte, wer »illegale Inhalte« anschaut etc. Brewster Kahle dazu:

By being here at Alexa, we've got the biggest collection of what the current Web looks like now, and in the past, as well as where millions of people are surfing. We don't know who's who and we don't care [...].

Jedoch gibt es keine Institution, die überprüft, ob Alexa sich *wirklich* nicht darum kümmert, wer wer ist.

[↗ RealNetworks](#), die lange Zeit mit dem *Realplayer*, *RealAudio* und *RealVideo* die einzige funktionierende Lösung für Streaming Media anboten, protokollierten, welche Video- und Audioströme die Benutzer anschauten und übertrugen diese Daten an ihren eigenen Server zurück. [2] Sogar über die *RealJukebox* im CD-ROM-Laufwerk abgespielte Musik-CDs wurden gemeldet. Als diese Aktion bekannt wurde, beteuerte RealNetworks, dass keine Verbindung zwischen den gesammelten Daten und den Registrierungs-Informationen hergestellt würde, die bei der Installation der Player-Software abgefragt werden. Und in zukünftigen Versionen würde diese Funktion deaktiviert werden. [3] – Auch das wurde nicht überprüft. RealNetworks ist in den Vereinigten Staaten

[2] Richard M. Smith: [↗ »The](#)

RealJukeBox monitoring system«,

Oktober 1999

[3] Florian Rötzer in Telepolis:

Die reuigen Sünder wollen zu Heiligen in Sachen Privacy werden

ansässig, die Datenschutzbestimmungen dort sind nicht gerade streng. Der Tenor geht vor allem in die Richtung, die Wirtschaft habe Datenschutz-Fragen selbst zu klären. Die Kraft des Marktes würde dann regeln, wieviel Datenschutz überhaupt vom Kunden gewünscht sei.

Wir brauchen keine staatlichen Regelungen, die den freien Informationsfluss stoppen, wenn die Informationen freiwillig gegeben werden; Regelungen, die Cookies verbieten und maßgeschneiderte Lösungen des Marktes erschweren. (Allenfalls, wenn Kinder im Spiel sind oder Daten unter Zwang erhoben werden, sind staatliche Eingriffe erforderlich.)

Also brauchen wir keine Gegenorganisation zur Direct Marketing Association, die die gleiche Macht hat und sich von irgendwelchen Verbraucherschutzorganisationen leiten lässt.

Esther Dyson: Release 2.0; 1997, Droemer Knaur, München; Seite 259

Wie immer hört bei Kindern der Spaß auf, denn die verstehen ja noch nicht, was Daten sind und können sie nicht »freiwillig geben«. Wer versteht jedoch, wie das mit den Daten und dem freiwilligen Geben funktioniert? Gebe ich *freiwillig* etwas Preis, wenn ich in einer Suchmaschine suche und DoubleClick meine Suchanfrage mitprotokolliert? Nur vier Seiten vorher schreibt Dyson:

Das Frustrierende an Cookies ist, daß kein normaler Mensch sie verstehen kann, obwohl sie sich auf dem eigenen PC befinden. (Cleverer, »böse« Hacker verstehen sie dafür umso besser; sie können fiktive Cookies fabrizieren, sich darauf einloggen und dann als fingierte User wie Hochstapler agieren.)[4]

[4] Man beachte, dass hier zuerst ein Missbrauchs-Fall aus Sicht eines Website-Betreibers beschrieben wird. Viel

interessanter ist jedoch, dass ein »Kunde« nicht sehen kann, was auf der anderen Seite mit seinen Daten geschieht

[5] Siehe auch: Karsten Weber in Telepolis: [»Selbstverpflichtung vs. Rechtsanspruch«](#) (Februar 2000) und Declan McCullagh in Wired: [»Is TRUSTe Trustworthy?«](#) (November 1999)

Die private Organisation [Trust-e](#) wurde gegründet, um ein freiwilliges, verpflichtendes Regelwerk für den Datenschutz zu etablieren und so das Vertrauen der Konsumenten in den elektronischen Handel aufzubauen. Firmen wie RealNetworks und Microsoft gehören Trust-e an und verpflichten sich, die gemeinsam erstellten Richtlinien einzuhalten. Im Fall von RealNetworks wurden jedoch auch die selbst gesetzten Trust-e-Richtlinien verletzt. Nach einer Entschuldigung und dem Versprechen, dass das nicht wieder vorkommt, ist jedoch nichts weiter geschehen. Der moralischen Aufgabe scheint die Trust-e nicht gewachsen zu sein. [5] Andererseits bemüht sich die Wirtschaft um die Erhaltung des Markenrechtes im Netz und nimmt dafür gerne die Hilfe des Staates in Anspruch.

Um zu beweisen, dass die Abhängigkeiten keinesfalls unveränderlich sind, haben wir in unserem [Experiment](#) selbst unbemerkt eine »softe« Netzwerk-Hierarchie innerhalb unserer Hochschule aufgebaut und uns selbst an deren Spitze gesetzt.

Die Fragen die oft auftauchen sind: »Welche konkreten Gefahren gehen von der Überwachung aus? Was kann mir schon passieren, wenn jemand weiß, dass ich diese und jene Website besucht habe? Ich habe nichts zu verbergen!« Auf den ersten Blick mag das für den einen oder anderen sicher so akzeptabel sein. Nur welche Folgen kann das wirklich haben? Ein bißchen personalisierte Werbung im Gegenzug zu kostenlosen Angeboten im Internet zu erhalten, das ist ja nicht weiter schlimm, ist oft als Argument zu hören.

Aber konstruieren wir doch mal einen fiktiven Fall: Eric Example schaut sich in fünf Jahren ein paar Schmuddel-Sex-Filmchen aus dem Internet an, und vielleicht noch einen Film über das Marihuana-Rauchen. Vielleicht wurde auch gar nicht inhaliert, jedenfalls in dreißig Jahren möchte Smith US-Präsident werden und dann steht mit einem mal in der Presse: früher hat er sich »unanständige« Filme angeschaut, und schon ist er erledigt, aus der Traum vom Weißen Haus.

Oder Bettina Beispiel sucht einen neuen Arbeitsplatz. Der vielversprechende Arbeitgeber läßt routinemäßig eine Recherche über sie durchführen und stellt fest, dass sie vor einiger Zeit mit einer Wahrscheinlichkeit von 70% regelmäßig nach Selbsthilfegruppen für Alkoholranke im Internet gesucht hat. Tja, pech gehabt.

Harte Hierarchien

Das Internet als ganzes besteht aus vielen unterschiedlich organisierten Netzwerken, die über Router miteinander verbunden sind. Üblicherweise werden solche Netzwerke hierarchisch aufgebaut, das heißt mehrere Benutzer verbinden sich über eines oder mehrere Gateways mit dem nächst größeren Netzwerk. Es gibt jedoch an keiner Stelle einen Raum, der niemandem gehört.

[6] Siehe Wolfgang J. Koschnick in

Telepolis: [»Schmuddel-Sex und Rassismus im Internet lassen sich kaum verbieten«](#) (Mai 1997)

[»Chinas Regierung führt schärfere Internetgesetze ein«](#) (Oktober 2000) und [»Saudi Arabien sperrt wegen Pornographie Zugang zu den Yahoo-Clubs«](#) (August 2000)

Übergangspunkte von einem Netzwerk in ein anderes sind ideale Punkte, um den Datenverkehr zu kontrollieren.

Beispiele dafür wären an Schulen oder Bibliotheken installierte Systeme wie [SmartFilter](#), im größeren Maßstab blockierte T-Online bereits 1997 den Zugang zu einer Website[6], allerdings mit nur mäßigem Erfolg. Im Juni 2000 war die International Federation of the Phonographic Industry bei den deutschen Providern für ein Filtersystem, welches das illegale Kopieren von Musik über das Netz verhindern soll.[7] In China und Saudi Arabien werden über staatlich lizenzierte Provider die Zugriffe auf bestimmte Angebote gesperrt.[8]

Die Zuweisung von leserlichen Namen zu IP-Adressen [9]

erfolgt über Nameserver, die ebenfalls hierarchisch aufgebaut sind. Der oberste »A« root server wird von [Network Solutions](#), einem von der US-Regierung beauftragten Unternehmen, verwaltet. Die Regulierung des inzwischen demonopolisierten Registrierungsmarktes

Seit ihren Web-Projekten "Assoziationsblaster" und "Bodenständig" sind Dragan Espenschied und Alvar Freude in der Stuttgarter Kreativen-Szene längst keine Unbekannten mehr. Vor kurzem wurden die beiden ehemaligen Merz-Akademie-Studenten für ihre Diplomarbeit "insert_coin" mit dem SWR-Medienkunstpreis in der Sparte "Interaktiv" belohnt. Marko Schacher hat die beiden Internet-Freaks zum Interview getroffen

Dass es so einfach wäre, den Web-Datenverkehr an der Merz Akademie und damit 250 Personen zu kontrollieren, hatten Dragan Espenschied und Alvar Freude zunächst nicht gedacht. Mit einer selbst entwickelten Filter-Software konnten beide die auf den hauseigenen Monitoren angezeigten Web-Inhalte und E-Mails nach Belieben verändern. Munter tauschen sie "Stoiber" gegen "Strauss" und "Kohl" gegen "Schröder" aus, verlinkten die Netscape-Startseite mit einer Porno-Site und leiteten alle "Spiegel"-Leser zu "Focus" um. Aber niemand bemerkte es. Und vor allem: Niemand regte sich darüber auf. Doch lesen Sie selbst:

Erstmal Herzlichen Glückwunsch zum "Internationalen Medienkunstpreis" in der Sparte "Interaktiv". Wie sahen die Presse-Reaktionen aus?

Espenschied: In "Telepolis" wurde unsere Arbeit innerhalb einer Berichterstattung über die Medienkunstpreis-Verleihung als "Studentenstreich" bezeichnet, da waren wir doch etwas eingeschnappt.

Freude: Der Journalist mochte offensichtlich die Veranstaltung, den Rahmen, in der die Medienkunst präsentiert wurde, nicht, hat sich unsere Arbeit aber auch überhaupt nicht angeschaut, sondern nur die Präsentation gesehen und dachte offenbar, das sei alles nur

ein Fake, so interessante Manipulationen könne man automatisch ja gar nicht vornehmen.

Wie habt ihr euch bei der Preisverleihung im Karlsruher ZKM gefühlt? Die Veranstaltung kam im Fernsehen sehr "steif" rüber...

Espenschied: Die Verleihung war schon okay. Schade, dass wir nur vier Minuten zum Präsentieren hatten. Insgesamt ist die Präsentation ganz gut angekommen. Wir haben ja ein paar Witzchen reingebaut und zum Beispiel bei den Reise-Seiten unter www.zeit.de "Athen" gegen "Kabul" ausgetauscht, wodurch sich die Schlagzeile "Kabul wie es singt und kracht" ergab. Eine Rede von Stoiber haben wir so verändert, dass der viel Nazi-Zeug schwafelt. Zuerst hatten wir da Bedenken, dann dachte wir "Ach was, wir müssen ja auch irgendwie einen bleibenden Eindruck hinterlassen".

Freude: Bei der Fernsehausstrahlung haben die verantwortlichen TV-Redakteure unsere Präsentation der Arbeit leider vollständig rausgestrichen. Vor Ort haben wir ein paar Beispiele unserer Filter gezeigt und auch ein paar Worte mit Markus Brock gewechselt. Wahrscheinlich hatten die Kameramänner aber Probleme, unsere Präsentation technisch rüberzubringen. Wir haben ja mit Notebook und per Videobeamer präsentiert. Im Fernsehen hätte man die Beispiele wohl nicht lesen können.

In eurer Dankesrede, die über TV ging, habt ihr lediglich eurer Professorin Olia Lialina gedankt...

Freude: Die Dankesrede haben sie auch gekürzt, wohl weil die ziemlich holprig war.

Wie waren die Reaktionen der eingeladenen Gäste auf euer Projekt vor Ort, bei der Preisverleihung im Karlsruher ZKM?

Espenschied: Nur positiv. Es hat - glaube ich - niemand zu verbissen aufgefaßt. Es hat uns niemand vorgeworfen, das wir eine "Schweinerei" gemacht hätten.

Freude: Die meisten haben verstanden, dass es ein Experiment war, um herauszufinden, wie die Leute reagieren, und es eben auch entlarvend sein sollte. Ich glaube nicht, dass jemand auf uns jetzt böse ist. Dagegen mögen jetzt viele denken "Um Gotteswillen, es ist ja schlimm, was man mit so einem Server alles anstellen kann"

Während de Projekts gab es von Seiten der Merz-Akademie-Studenten kaum Reaktionen. Geht denn jetzt - nach der öffentlichen Preisverleihung - ein Aufschrei durch die Merz Akademie?

Freude: Von der Merz Akademie schaut definitiv kaum jemand auf die Seiten. Ich bin mir sicher, dass sich auch der Direktor bisher nicht die Seiten angeschaut hat. In den Log-Files sind nur sehr wenige Zugriffe von der Merz Akademie. Wir waren aber schon immer die Exoten an der Merz Akademie. Seit Olia Lialina hier ist, ist sie auch eine Exotin. Ab da waren wir die Exoten im Exoten-Kurs.

Inwieweit war Olia Lialina an eurem Projekt beteiligt?

Espenschied: Olia hat vor allem die Verantwortung getragen. Was wir da gemacht haben, war ja schon brisant. Olia war die einzige, die informiert war.

Freude: Wobei die Werkstatt-Leute jetzt trotzdem alles mir in die Schuhe schieben.

Espenschied: Olia hat uns ermutigt, das Projekt durchzuführen. Wir haben ja hauptsächlich nachts gearbeitet, damit das niemand merkt. Irgendwann haben wir den Kontakt mit der Außenwelt fast vollkommen verloren und nur noch unsere Log-Files und Statistiken angeschaut. Da ist es schon wichtig, dass mal jemand kommt, und dir Tipps gibt.

Hattet ihr während des Projekts nie rechtliche Bedenken?

Freude: Klar, die haben wir halt runtergeschluckt. Wir haben aber ganz bewußt nur Akademie intern gefiltert und nicht in Sachen, die verschlüsselt waren, eingegriffen. Natürlich wären in der Lage gewesen, herauszufinden, wer sich welche Websites anschaut. Anhand der Urzeiten wissen wir auch, wer um welche Urzeit abends noch an der Akademie ist. Zu unserem Entsetzen ist ja fast überhaupt keine Porno-Seite angeschaut worden.

Wer kaum auf die Idee, den Merz-Akademie-Server im Rahmen einer Diplomarbeit zu manipulieren?

Freude: Die Idee ist uns mal mehr oder weniger zufällig beim Essen gekommen. Ich weiß gar nicht mehr, von wem sie ursprünglich ausging. Das hat sich irgendwie so hoch geschaukelt.

Espenschied: Wir waren immer schon von Text besessen. Weil der Computer mit Text, der ja auf klar definierten Symbolen basiert, am besten umgehen kann. Die Suchmaschinen, Archive und Protokolle funktionieren ja alle mit Text. Eigentlich haben all unsere Projekte immer etwas mit Text zu tun, mit dem Speichern und Indizieren von Wörtern.

Habt ihr mit dem Preis gerechnet?

Espenschied: Eigentlich ist unsere Arbeit doch eher ungewöhnlich für die Sparte "Interaktiv" des SWR-Medienkunstpreises. Wenn es um interaktive Arbeiten geht, sind das doch meist interaktive Filme, wo du mit der Maus über ein Bild fährst und suchst, wo man drauf klicken kann. Die Medienkunst kommt ja ganz stark aus dem Videobereich.

Freude: Die Leute sind visuelle Arbeiten gewohnt. Unsere Arbeit ist ja letztendlich eine sehr theoretische, gesellschafts-politische Arbeit. Da tun sich die Leute, die normalerweise Medienkunst behandeln, schwer damit. Schon die SWR-Leute hatten ja Schwierigkeiten, unsere Arbeit, in Bilder umzusetzen. Wenn wir unsere Arbeit nicht gekannt hätten, hätten wir aufgrund des TV-Beitrags nichts geschmalt. Die haben eher über die Entwicklung des Internets und über Computer-Viren geschwafelt, als über unser Projekt.

Umso überraschter müßtet ihr sein, den "Medienkunstpreis" erhalten zu haben.

Espenschied: Die Preise haben ja andere Leute vergeben.

Freude: Dieselbe Arbeit hatten wir mit dem nahezu gleichen Text beim diesjährigen Prix Ars Electronica eingereicht und zwar in der Kategorie "Aktivismus". Der Experte der Vor-Jury hat allerdings nur einmal auf die Startseite geschaut, das war alles. Das ist natürlich enttäuschend, wenn sich die Leute nicht die Zeit nehmen, die Arbeiten zu beurteilen. Beim Prix Ars Electronica solltest du eben schon einen Namen haben und mit optisch attraktivem Material aufwarten können, sonst hast Du keine Chance. Beim SWR hatten wir da Glück, dass der Friedrich Kittler, Professor für Ästhetik und Geschichte der Medien an der Humboldt-Uni in Berlin, in der Jury war, und der sich für das Projekt interessiert hat.

Sehr ihr selbst "Insert_coin" denn als Medienkunst? Sehr visuell ist euer Projekt ja nicht.

Freude: Kunst muß ja nicht immer eine visuelle Geschichte sein. Schließlich gibt es ja auch Konzept-Kunst. Ich denke, das unsere Arbeiten schon künstlerische Elemente enthalten.

Espenschied: "insert_coin" kann auch als eine Art "elektronische Performance" gesehen werden. Wir haben ja auf die Reaktionen und Gewohnheiten der User reagiert. Die Ideen, die wir reinprojiziert haben, reagieren ja teils überspitzt auf Geschichten, die tatsächlich passiert sind, zum Beispiel auf die CDU-Aktion "Netz gegen rechts". Wir haben das Projekt aber nicht mit der Intention gemacht, jetzt Künstler sein zu wollen.

Freude: "Kunst" ist ein Begriff, da können sich 1000 Leute darüber streiten und 2000 andere Meinungen haben. Mir selbst gefallen jedenfalls Kunstwerke, die eine politische oder gesellschaftliche Aussage haben, wie zum Beispiel diese Arbeit "Der deutschen Bevölkerung" von Hans Haacke, die ja in Berlin wahre Grabenkämpfe ausgelöst hat.

Espenschied: Ich fand die "Vote Auction"-Aktion klasse. Da wurde tatsächlich diskutiert, da ist was passiert. Sobald die Kunst eine tatsächliche Auswirkung hat, wird sie für mich interessant. Wenn im Medienkunstbereich Fakes gebaut werden, die zwar interessant aussehen, aber nicht funktionieren, finde ich das langweilig. In der ZKM-Ausstellung "Net Condition" wurde zum Beispiel ein System präsentiert, das angeblich Videokonferenzen

abcheckt und die Gesichter nach Algorithmen in die Sparten "Schön" und "Häßlich" einteilt. Als Idee fand ich das super. Du hast aber halt auch sofort gesehen, dass das mit einem Multimediaprogramm zusammengekllickt wurde. Wenn das wirklich funktioniert hätte, hätte das eine Brisanz gehabt. So aber war es ein flimmernder, blöd herumstehender, belangloser Kasten.

Freude: Ich finde es wichtig, dass die Werke nicht nur für ein Fachpublikum interessant sind. Es gibt ja tausende von Sachen, die kann man gar nicht verstehen, wenn man in der Thematik nicht drin ist.

Espenschied: Mit "insert_coin" haben wir versucht, ein gewisses Expertenwissen so rüberzubringen, dass jeder etwas damit anfangen kann. Gerade im Netz-Bereich gibt es ja diese Hacker-Kultur, die sehr elitär und arrogant ist. Wenn man da etwas nicht versteht und nachfragt, wird man angeschissen. Wir selbst haben uns bei unseren "insert_coin"-Seiten viel Mühe gegeben.

Ja, ja, die "Unmündigkeit des Users" beschäftigt euch schon seit Jahren...

Freude: Viele User sagen halt "Beim Auto weiß ich ja auch nicht, wie der Motor funktioniert". Das ist auch richtig. Fürs Autofahren reicht es aus, zu wissen, wo das Gaspedal, wo die Bremse, wo der Scheibenwischer, etc. ist. Beim Computer, der noch viel komplexer ist, wollen die Leute noch viel weniger wissen. Trotzdem soll das Internet Alltagsmedium sein, oder zumindest werden. Aber nur den wenigsten Leuten wird auch die Gelegenheit gegeben, das Internet zu verstehen. Den Leuten beizubringen, wie ein Computer funktioniert, ist nicht schwieriger, als ihnen Dreamweaver oder Word beizubringen.

Espenschied: Um verantwortlich handeln zu können, sollte man mindestens den groben Überblick haben und sich nicht von Benutzeroberflächen fernsteuern lassen.

Das klingt jetzt stark nach erhobenem Zeigefinger...

Espenschied: Wir wollen eine Hilfestellung geben. Natürlich wollen wir uns selbst auch die Möglichkeit geben, das Internet so zu erhalten, wie wir es haben wollen. Wenn das Netz komplett kommerziell kontrolliert wird, haben wir auch weniger Spaß am Leben.

Freude: Wenn man Politiker hört, gibt es im Netz nur zwei Themen: Terroristen, Kinderschänder und ähnliche böse Leute und eben E-Commerce. Es gibt aber viel, viel, viel mehr Dinge, die man mit dem Internet machen kann, und die viel interessanter sind. Das Schwierige ist, dass die Leute, die kommerzielle Interessen haben, natürlich mächtiger sind und die Medien einfacher beeinflussen können.

Glaubt ihr, dass euer Projekt "insert_coin" an der Hochschule der Medien anders abgelaufen wäre?

Freude: Nein, garantiert nicht. Selbst wenn wir das Projekt an der Technischen Universität in Vaihingen gemacht hätten, wäre es genauso verlaufen - mit dem Unterschied, dass eben nicht 250 Leute davon betroffen gewesen wären, sondern meinetwegen 20 000. Da ist

natürlich die Wahrscheinlichkeit, dass jemandem etwas auffällt größer. Zum Schluß, als das Projekt öffentlich war, haben wir ja aber erst richtig auf die Pauke gehauen.

Wäre damals der Merz-Akademie-Server nicht abgestürzt, hätte der Werkstattleiter gar nichts mitbekommen, und ihr hättet euch gar nicht geoutet?

Espenschied: Als der Server ausgefallen ist und wir in der Folge quasi ertappt wurden, haben wir uns schon geärgert, dass das Projekt nur so kurz gelaufen ist. Wir hatten ja erst einen Monat protokolliert. Verschiedene Filter mit den richtig interessanten Geschichten waren erst zwei Wochen lang aktiv.

Freude: Schon vor dem Server-Ausfall hat es verschiedene Gelegenheiten gegeben, bei denen das Projekt eigentlich hätte auffallen müssen. Während der sogenannten "Wahlwochen" saß die gesamte Akademie in der Aula, um sich die Studentenarbeiten, darunter auch einige Internet-Arbeiten anzusehen. Bei diesen Internetarbeiten haben wir zum Beispiel ein Projekt namens "LEDA" in "LEDER" umbenannt und mit Blümchen-Hintergrund versehen. Diese grafischen Mißgeschicke wurden vom Vortragenden geschickt übergeben, die Namensveränderung wurde auf irgendwelche Witzbolde geschoben. Zudem hatten wir auf jede Website, die offline auf dem Merzakademie-Server lag, einen ganz häßlichen Werbebanner "Klick here for good education" gepackt. Der Banner wurde während der Vorträge mit einem leisen Schmunzeln zur Kenntnis genommen - aber das war's dann auch. Die Leute im Saal dachten, der Banner sei Bestandteil der Arbeit, die Leute, welche die Arbeit gemacht hatten, haben wiederum gedacht "Naja, okay, jetzt macht die Merz Akademie zur Finanzierung ihres Webservers eben Werbebanner auf alle Homepages drauf.

Was hat sich durch den Server-Ausfall und das Zwangs-Outing geändert?

Freude: Eigentlich hat sich dadurch nichts verändert. An einem Montag ist der Server ausgefallen und lief dann einen halben Tag nicht. Abends haben wir es geschafft, einen - ungefilterten - Ersatzserver unter gleicher Adresse zum Laufen zu bringen. Am Mittwoch kam vom Leiter der Medienwerkstatt dann eine Rundmail, in der er darauf hinwies, dass wir persönliche Daten der Studenten hätten protokollieren können.

Espenschied: Wir haben uns daraufhin per Rundmail geoutet und eine Anleitung angeboten, wie man die Filter abschalten kann. Während des Projekts wurde die Anleitung ganze sieben mal aufgerufen - und dann noch drei mal von ein und derselben Person. Es hat auch kaum jemand von den Feedback-Möglichkeiten Gebrauch gemacht, die wir bei allen Manipulationen eingebaut haben. Also haben wir uns immer größeren Unsinn ausgedacht und sind an die Grenzen unserer Vorstellungskraft gekommen. Internet wird eben als Konsum-Medium angesehen. Kaum jemand will in Kontakt mit jemanden treten, den er nicht kennt. Wenn man Zeug bekommt, das einem nicht gefällt, macht man halt das Fenster zu.

Freude: Selbst Monate nach dem Projekt hat eigentlich kaum jemand die Tragweite des Projekts verstanden. Es gab einige, die erschrocken waren. Doch der trägen Masse war das egal. Die Merz Akademie ist ja sehr stolz darauf, dass die Studenten zur Medienkompetenz ausgebildet werden - das gilt offensichtlich im wesentlichen aber nur für die Bereiche Film,

Fernsehen und Medientheorie. Im Bereich Internet dürfe das noch eine Weile dauern.

Welchen Einfluß hatte "insert_coin" auf eure Stellung innerhalb der Merz Akademie und auf eure Einstellung gegenüber der interaktiven Gesellschaft?

Freude: Für alle Mitarbeiter der Medienwerkstatt bin ich seitdem ein rotes Tuch, noch stärker als vorher, obwohl der Direktor uns natürlich gratuliert hat und auch bei den Veranstaltungen anwesend war. Im Wesentlichen hat das Projekt viele unserer Vermutungen bestätigt. Dass die Leute die Manipulationen nicht im Vorfeld entdecken würden, war uns im Grunde klar. Wenn etwas auf einer Seite komplett falsch ist, zum Beispiel da "Schröder" statt "Kohl" steht, wird das eben auf den Webmaster geschoben. Nachdem das Projekt aber öffentlich war und klar war, was wir Drastisches angestellt hatten, hätte ich eigentlich schon Reaktionen erwartet. Zumindest hätte ich mir erhofft, dass sich die Leute mehr Gedanken über das Medium Internet und seine Möglichkeiten machen.

Espenschied: Über den Schrecken der Nicht-Reaktionen bin ich inzwischen drüber weg gekommen. Realistisch kann man einfach nicht erwarten, dass danach alle aufschreien "Auja, erzählt uns jetzt, wie alles geht".

Denkt ihr über eine Fortsetzung des Projekts nach?

Espenschied: Da müßten wir den entsprechenden Rahmen haben. Wenn wir an keiner Hochschule gewesen wären, wo hätten wir dann mit dem Projekt hingehen können? An anderen Institutionen, die das Web tatsächlich als Arbeitsmedium gebrauchen, wäre das Projekt schwieriger geworden.

Hat euch noch keine Firma engagiert, um mit einem ähnlichen Projekt die Aufmerksamkeit und "Mündigkeit" der eigenen Angestellten zu testen?

Freude: Da würde ich sofort mitmachen. Aber die Idee hast bisher nur du gehabt.

Wie sieht euer Leben nach der Merz Akademie aus?

Freude: Derzeit arbeite ich drei Tage die Woche in der Agentur AGI und helfe dort bei der Konzept-Programmierung. Mal sehen, vielleicht hänge ich eine Doktorarbeit dran.

Espenschied: Ich bin schon während des Diploms als HTML-Lehrer an der Mrz Akademie eingesprungen. Im Moment mache ich dort die Internet-Einführung für die zweiten Semester und versuche, den Studenten nicht nur Flash oder Dreamweaver vorzuführen, sondern ihnen auch zu zeigen, was im Hintergrund abläuft.

Achja: Welche Note habt ihr denn für "insert_coin" als Diplomarbeit bekommen?

Freude: Wir haben eine 1,2 gekriegt. Die Präsentation war aber auch schlecht. Und die meisten Dozenten haben sich die Arbeit im Netz auch wieder nicht angeschaut.

Since their Web projects "Assoziationsblaster" and "native" are Dragan Espenschied and Alvar joy in the Stuttgart creative scene long no more unknown quantities. Recently the two former Merz academy students were recompenced for their thesis (diploma) "insert_coin" with the SWR Medienkunstpreis in the section "interactive". Marko schacher met the two InterNet Freaks to the interview

The fact that it would be so simple had first not thought to control the Web data traffic at the Merz academy and thus 250 persons Dragan Espenschied and Alvar joy. With could both developed filter often commodity Web contents and enamels indicated on the internal monitors as desired change. Lively they exchange "Stoiber" against "bunch" and "Kohl" against "Schroeder", linked the Netscape starting side with a Porno Site and rerouted all "Spiegel" readers too" focus ". But nobody noticed it. And above all: Nobody excited itself over it. But you read:

Erstmal congratulations on the "international media art price" in the section "interactive". How did the press reactions look?

Espenschied: In "Telepolis" our work was called within a reporting over the media art award of the prize "student caper", there we had nevertheless somewhat caught.

Joy: Journalist liked obviously meeting, whom framework, in which the media art was presented, not, has itself our work in addition, at all not looked at, but only seen the presentation and thought obviously, that was everything only a Fake, so interesting manipulations could one automatically at all does not make.

How you you during the award of the prize in the Karlsruher ZKM felt? The meeting came

in the television very "rigidly" more rueber...

Espenschied: The award already was okay. It harms that we had only four minutes for presentation. Altogether the presentation arrived completely good. We clean-built a few Witzchen and for example with the travel sides under www.zeit.de "Athens" against "Kabul" exchanged, whereby the headline "Kabul sings itself like it and cracks" resulted in. We in such a way changed a speech of Stoiber that much Nazi things schwafelt. First we had there doubts, then thought we "oh which, we must also somehow a lasting impression left".

Joy: During the fernsehausstrahlung the responsible persons of TV editors have our presentation of the work unfortunately completely rausgestrichen. Locally we have a few examples of our filters shown and also a few words with Markus let us break into changed. Probably the camera men had however problems, our presentation technically rueberzubringen. We presented with Notebook and by Videobeamer. In the television one could probably not have read the examples.

In your thank speech, which went over TV, have you only your Professorin Olia Lialina thanked...

Joy: They also shortened the thank speech, probably because those was rather holprig.

How were the reactions of the invited guests to your project locally, during the award of the prize in the Karlsruher ZKM?

Espenschied: Only positively. It understood - I believe - nobody to bite. It did not accuse anybody to us, which we would have made a "mess".

Joy: Most understood that it was an experiment, in order to find out, how the people react, and it to evenly also be exposing should. I do not believe that someone is bad now on us. On the other hand now many may think "around God will, it are bad, which one can employ with so a server of everything"

While de Projekts hardly gave it on the part of the Merz academy students to reactions. - after the public award of the prize - does a proclamation go now through the Merz academy?

Joy: From the Merz academy someone definitely hardly looks on the sides. I am sure me that also the director did not look at itself so far the sides. In the log files are only very few accesses of the Merz academy. We were however always the Exoten at the Merz academy. Since Olia Lialina is here, she is also a exotin. We were the Exoten off there in the Exoten

course.

To what extent was Olia Lialina involved in your project?

Espenschied: Olia carried above all the responsibility. Which we made there, was already explosive. Olia was the none, which was informed.

Joy: Whereby the workshop people now nevertheless everything for me into the shoes push.

Espenschied: Olia encouraged us to accomplish the project. We worked mainly at night, so that that does not notice anybody. Sometime we nearly perfectly lost the contact with the external world and anschaut only our log files and statistics. There it is already important the fact that times someone comes and Tipps gives you.

Had you during the project never legal doubts?

Joy: Clearly, those we swallowed stop. We filtered however completely consciously only academy internally and did not intervene not in things, which were coded. Able it would have been natural to find out who which Websites looks at itself. On the basis the primeval times we know also, who around which primeval times in the evening still at the academy is. To our frightening nearly at all no Porno side was looked at.

Who hardly on the idea to manipulate the Merz academy server in the context of a thesis (diploma)?

Joy: The idea came us times more or less coincidentally when eating. I do not know no more, from whom she originally proceeded. That swung itself somehow so highly.

Espenschied: We were always already possessed by text. Because the computer can deal with text, which is based on clearly defined symbols, best. The search machines, archives and minutes function all with text. Actually all our projects have to always do something with text, with the storing and the indicating of words.

You with the price calculated?

Espenschied: Actually our work is nevertheless rather unusual for the section "interactive" of the SWR Medienkunstpreises. If it concerns interactive work, are nevertheless usually interactive films, where you drive and search with the mouse over a picture, where one can

click drauf. The media art comes completely strongly from the video range.

Joy: The people are used visual to work. Our work is finally a very theoretical, socio-political work. There the people, which normally treat media art, do heavily thereby. Already the SWR people had difficulties, our work, to convert into pictures. If we had not known our work, we would have fastened nothing due to the TV contribution. Those geschwafelt rather over the development of the Internets and over computer viruses, as over our project.

The more surprised would have to be you the "media art art price" to have received.

Espenschied: The prices assigned different people.

Joy: The same work we had submitted almost same text with that with the Prix of this year of acre Electronica in the category "activism". The expert of the prejury looked that however only once on the starting side, was everything. That is natural disappointing, if the people do not take themselves the time to judge the work. With the Prix of acre Electronica you should have been able to offer evenly already a name and optically attractive material, otherwise you do not have a chance. With the SWR we had there luck the fact that the Friedrich Kittler, professor for aesthetics and history of the media at the Humboldt university was in Berlin, in the jury and which in the project was interested.

Very it "Insert_coin" as media art? Very your project is not visual.

Joy: Art does not have to be always a visual history. Finally there is also concept art. I think, which our work already artistic elements contains.

Espenschied: "insert_coin electronic performance" can be seen "also as a kind". We reacted to the Reaktionen and habits the user. The ideas, which we reinprojeziert, react partly exaggerated to stories, which actually happened, for example to the CDU action "net approximately right". We did not make the project however with the intention to want to be now artists.

Joy: "art" is a term, there can 1000 people about it argue and 2000 other opinions have. Anyhow works of art, which have a political or social statement, please me as for example this work "of the German population" from Hans Haacke, which released true trench combats in Berlin.

Espenschied: I found the "Vote Auction" action class. There actually one discussed, there which one happened. As soon as the art has an actual effect, it becomes interesting for me. If within the media art range Fakes are built, which look interesting, but not to function, do not find I that boringly. In the ZKM exhibition "Net condition" was presented for example a system, which abcheckte allegedly video conferences and which according to Algorithmen into the sections "beautiful" and "ugly" divide faces. As idea I found the super. You saw however stop also immediately that with a Multimediaprogramm one together-clicked. If that had really functioned, an explosiveness would have had. So however it was a flickering, blood standing, inconsequential box.

Joy: I find it important that the works are not only interesting for a specialized public. There are thousands of things, which one cannot at all understand, if one is not in the topic in it.

Espenschied: With "insert_coin" we tried, a certain expert knowledge rüberzubringen in such a way that each somewhat thereby can begin. Straight one in the network area gives it this hacker culture, which is very elitaer and arrogant. If one does not understand and inquires there somewhat, becomes one angeschissen. We ourselves gave us with our "insert_coin" sides much trouble.

Yes, the "minority users" employs you already for years...

Joy: Many user do not say stop "with the car white I also, like the engine functioned". That is also correct. For driving a car it is sufficient to know where the accelerator pedal, where the brake, where the windshield wiper is, etc.. With the computer, which is still many more complex, the people want to know still many less. Nevertheless the InterNet should be everyday life medium, or at least become. But only also the opportunity is given to the few people to understand the InterNet. The people to teach, how a computer functions, is not more difficult, than teaching to them Dreamweaver or Word.

Espenschied: Um verantwortlich handeln zu können, sollte man mindestens den groben Überblick haben und sich nicht von Benutzeroberflächen fernsteuern lassen.

Das klingt jetzt stark nach erhobenem Zeigefinger...

Espenschied: Wir wollen eine Hilfestellung geben. Natürlich wollen wir uns selbst auch die Möglichkeit geben, das Internet so zu erhalten, wie wir es haben wollen. Wenn das Netz komplett kommerziell kontrolliert wird, haben wir auch weniger Spaß am Leben.

Freude: Wenn man Politiker hört, gibt es im Netz nur zwei Themen: Terroristen, Kinderschänder und ähnliche böse Leute und eben E-Commerce. Es gibt aber viel, viel, viel mehr Dinge, die man mit dem Internet machen kann, und die viel interessanter sind. Das Schwierige ist, dass die Leute, die kommerzielle Interessen haben, natürlich mächtiger sind und die Medien einfacher beeinflussen können.

Glaubt ihr, dass euer Projekt "insert_coin" an der Hochschule der Medien anders abgelaufen wäre?

Freude: Nein, garantiert nicht. Selbst wenn wir das Projekt an der Technischen Universität in Vaihingen gemacht hätten, wäre es genauso verlaufen - mit dem Unterschied, dass eben nicht 250 Leute davon betroffen gewesen wären, sondern meinetwegen 20 000. Da ist natürlich die Wahrscheinlichkeit, dass jemandem etwas auffällt größer. Zum Schluß, als das Projekt öffentlich war, haben wir ja aber erst richtig auf die Pauke gehauen.

Wäre damals der Merz-Akademie-Server nicht abgestürzt, hätte der Werkstattleiter gar nichts mitbekommen, und ihr hättet euch gar nicht geoutet?

Espenschied: Als der Server ausgefallen ist und wir in der Folge quasi ertappt wurden, haben wir uns schon geärgert, dass das Projekt nur so kurz gelaufen ist. Wir hatten ja erst

einen Monat protokolliert. Verschiedene Filter mit den richtig interessanten Geschichten waren erst zwei Wochen lang aktiv.

Freude: Schon vor dem Server-Ausfall hat es verschiedene Gelegenheiten gegeben, bei denen das Projekt eigentlich hätte auffallen müssen. Während der sogenannten "Wahlwochen" saß die gesamte Akademie in der Aula, um sich die Studentenarbeiten, darunter auch einige Internet-Arbeiten anzusehen. Bei diesen Internetarbeiten haben wir zum Beispiel ein Projekt namens "LEDA" in "LEDER" umbenannt und mit Blümchen-Hintergrund versehen. Diese grafischen Mißgeschicke wurden vom Vortragenden geschickt übergangen, die Namensveränderung wurde auf irgendwelche Witzbolde geschoben. "Internet wird eben als Konsum-Medium angesehen"

Interview mit Alvar Freude und Dragan Espenschied

von Marko Schacher

Seit ihren Web-Projekten "Assoziationsblaster" und "Bodenständig" sind Dragan Espenschied und Alvar Freude in der Stuttgarter Kreativen-Szene längst keine Unbekannten mehr. Vor kurzem wurden die beiden ehemaligen Merz-Akademie-Studenten für ihre Diplomarbeit "insert_coin" mit dem SWR-Medienkunstpreis in der Sparte "Interaktiv" belohnt. Marko Schacher hat die beiden Internet-Freaks zum Interview getroffen

Dass es so einfach wäre, den Web-Datenverkehr an der Merz Akademie und damit 250 Personen zu kontrollieren, hatten Dragan Espenschied und Alvar Freude zunächst nicht gedacht. Mit einer selbst entwickelten Filter-Software konnten beide die auf den hauseigenen Monitoren angezeigten Web-Inhalte und E-Mails nach Belieben verändern. Munter tauschen sie "Stoiber" gegen "Strauss" und "Kohl" gegen "Schröder" aus, verlinkten die Netscape-Startseite mit einer Porno-Site und leiteten alle "Spiegel"-Leser zu "Focus" um. Aber niemand bemerkte es. Und vor allem: Niemand regte sich darüber auf. Doch lesen Sie selbst:

Erstmal Herzlichen Glückwunsch zum "Internationalen Medienkunstpreis" in der Sparte "Interaktiv". Wie sahen die Presse-Reaktionen aus?

Espenschied: In "Telepolis" wurde unsere Arbeit innerhalb einer Berichterstattung über die Medienkunstpreis-Verleihung als "Studentenstreich" bezeichnet, da waren wir doch etwas eingeschnappt.

Freude: Der Journalist mochte offensichtlich die Veranstaltung, den Rahmen, in der die Medienkunst präsentiert wurde, nicht, hat sich unsere Arbeit aber auch überhaupt nicht angeschaut, sondern nur die Präsentation gesehen und dachte offenbar, das sei alles nur ein Fake, so interessante Manipulationen könne man automatisch ja gar nicht vornehmen.

Wie habt ihr euch bei der Preisverleihung im Karlsruher ZKM gefühlt? Die Veranstaltung kam im Fernsehen sehr "steif" rüber...

Espenschied: Die Verleihung war schon okay. Schade, dass wir nur vier Minuten zum Präsentieren hatten. Insgesamt ist die Präsentation ganz gut angekommen. Wir haben ja ein paar Witzchen reingebaut und zum Beispiel bei den Reise-Seiten unter www.zeit.de "Athen" gegen "Kabul" ausgetauscht, wodurch sich die Schlagzeile "Kabul wie es singt und kracht" ergab. Eine Rede von Stoiber haben wir so verändert, dass der viel Nazi-Zeug schwafelt. Zuerst hatten wir da Bedenken, dann dachte wir "Ach was, wir müssen ja auch irgendwie einen bleibenden Eindruck hinterlassen".

Freude: Bei der Fernsehausstrahlung haben die verantwortlichen TV-Redakteure unsere Präsentation der Arbeit leider vollständig rausgestrichen. Vor Ort haben wir ein paar Beispiele unserer Filter gezeigt und auch ein paar Worte mit Markus Brock gewechselt. Wahrscheinlich hatten die Kameramänner aber Probleme, unsere Präsentation technisch rüberzubringen. Wir haben ja mit Notebook und per Videobeamer präsentiert. Im Fernsehen hätte man die Beispiele wohl nicht lesen können.

In eurer Dankesrede, die über TV ging, habt ihr lediglich eurer Professorin Olia Lialina gedankt...

Freude: Die Dankesrede haben sie auch gekürzt, wohl weil die ziemlich holprig war.

Wie waren die Reaktionen der eingeladenen Gäste auf euer Projekt vor Ort, bei der Preisverleihung im Karlsruher ZKM?

Espenschied: Nur positiv. Es hat - glaube ich - niemand zu verbissen aufgefaßt. Es hat uns niemand vorgeworfen, das wir eine "Schweinerie" gemacht hätten.

Freude: Die meisten haben verstanden, dass es ein Experiment war, um herauszufinden, wie die Leute reagieren, und es eben auch entlarvend sein sollte. Ich glaube nicht, dass jemand auf uns jetzt böse ist. Dagegen mögen jetzt viele denken "Um Gotteswillen, es ist ja schlimm, was man mit so einem Server alles anstellen kann"

Während de Projekts gab es von Seiten der Merz-Akademie-Studenten kaum Reaktionen. Geht denn jetzt - nach der öffentlichen Preisverleihung - ein Aufschrei durch die Merz Akademie?

Freude: Von der Merz Akademie schaut definitiv kaum jemand auf die Seiten. Ich bin mir sicher, dass sich auch der Direktor bisher nicht die Seiten angeschaut hat. In den Log-Files sind nur sehr wenige Zugriffe von der Merz Akademie. Wir waren aber schon immer die Exoten an der Merz Akademie. Seit Olia Lialina hier ist, ist sie auch eine Exotin. Ab da waren wir die Exoten im Exoten-Kurs.

Inwieweit war Olia Lialina an eurem Projekt beteiligt?

Espenschied: Olia hat vor allem die Verantwortung getragen. Was wir da gemacht haben, war ja schon brisant. Olia war die einzige, die informiert war.

Freude: Wobei die Werkstatt-Leute jetzt trotzdem alles mir in die Schuhe schieben.

Espenschied: Olia hat uns ermutigt, das Projekt durchzuführen. Wir haben ja hauptsächlich nachts gearbeitet, damit das niemand merkt. Irgendwann haben wir den Kontakt mit der Außenwelt fast vollkommen verloren und nur noch unsere Log-Files und Statistiken angeschaut. Da ist es schon wichtig, dass mal jemand kommt, und dir Tipps gibt.

Hattet ihr während des Projekts nie rechtliche Bedenken?

Freude: Klar, die haben wir halt runtergeschluckt. Wir haben aber ganz bewußt nur Akademie intern gefiltert und nicht in Sachen, die verschlüsselt waren, eingegriffen. Natürlich wären in der Lage gewesen, herauszufinden, wer sich welche Websites anschaut. Anhand der Urzeiten wissen wir auch, wer um welche Urzeit abends noch an der Akademie ist. Zu unserem Entsetzen ist ja fast überhaupt keine Porno-Seite angeschaut worden.

Wer kaum auf die Idee, den Merz-Akademie-Server im Rahmen einer Diplomarbeit zu manipulieren?

Freude: Die Idee ist uns mal mehr oder weniger zufällig beim Essen gekommen. Ich weiß gar nicht mehr, von wem sie ursprünglich ausging. Das hat sich irgendwie so hoch geschaukelt.

Espenschied: Wir waren immer schon von Text besessen. Weil der Computer mit Text, der ja auf klar definierten Symbolen basiert, am besten umgehen kann. Die Suchmaschinen, Archive und Protokolle funktionieren ja alle mit Text. Eigentlich haben all unsere Projekte

immer etwas mit Text zu tun, mit dem Speichern und Indizieren von Wörtern.

Habt ihr mit dem Preis gerechnet?

Espenschied: Eigentlich ist unsere Arbeit doch eher ungewöhnlich für die Sparte "Interaktiv" des SWR-Medienkunstpreises. Wenn es um interaktive Arbeiten geht, sind das doch meist interaktive Filme, wo du mit der Maus über ein Bild fährst und suchst, wo man drauf klicken kann. Die Medienkunst kommt ja ganz stark aus dem Videobereich.

Freude: Die Leute sind visuelle Arbeiten gewohnt. Unsere Arbeit ist ja letztendlich eine sehr theoretische, gesellschafts-politische Arbeit. Da tun sich die Leute, die normalerweise Medienkunst behandeln, schwer damit. Schon die SWR-Leute hatten ja Schwierigkeiten, unsere Arbeit, in Bilder umzusetzen. Wenn wir unsere Arbeit nicht gekannt hätten, hätten wir aufgrund des TV-Beitrags nichts geschmalt. Die haben eher über die Entwicklung des Internets und über Computer-Viren geschwafelt, als über unser Projekt.

Umso überraschter müßtet ihr sein, den "Medienkunstpreis" erhalten zu haben.

Espenschied: Die Preise haben ja andere Leute vergeben.

Freude: Dieselbe Arbeit hatten wir mit dem nahezu gleichen Text beim diesjährigen Prix Ars Electronica eingereicht und zwar in der Kategorie "Aktivismus". Der Experte der Vor-Jury hat allerdings nur einmal auf die Startseite geschaut, das war alles. Das ist natürlich enttäuschend, wenn sich die Leute nicht die Zeit nehmen, die Arbeiten zu beurteilen. Beim Prix Ars Electronica solltest du eben schon einen Namen haben und mit optisch attraktivem Material aufwarten können, sonst hast Du keine Chance. Beim SWR hatten wir da Glück, dass der Friedrich Kittler, Professor für Ästhetik und Geschichte der Medien an der Humboldt-Uni in Berlin, in der Jury war, und der sich für das Projekt interessiert hat.

Sehr ihr selbst "Insert_coin" denn als Medienkunst? Sehr visuell ist euer Projekt ja nicht.

Freude: Kunst muß ja nicht immer eine visuelle Geschichte sein. Schließlich gibt es ja auch Konzept-Kunst. Ich denke, das unsere Arbeiten schon künstlerische Elemente enthalten.

Espenschied: "insert_coin" kann auch als eine Art "elektronische Performance" gesehen werden. Wir haben ja auf die Reaktionen und Gewohnheiten der User reagiert. Die Ideen, die wir reinprojiziert haben, reagieren ja teils überspitzt auf Geschichten, die tatsächlich passiert sind, zum Beispiel auf die CDU-Aktion "Netz gegen rechts". Wir haben das Projekt aber nicht mit der Intention gemacht, jetzt Künstler sein zu wollen.

Freude: "Kunst" ist ein Begriff, da können sich 1000 Leute darüber streiten und 2000 andere Meinungen haben. Mir selbst gefallen jedenfalls Kunstwerke, die eine politische oder gesellschaftliche Aussage haben, wie zum Beispiel diese Arbeit "Der deutschen Bevölkerung" von Hans Haacke, die ja in Berlin wahre Grabenkämpfe ausgelöst hat.

Espenschied: Ich fand die "**Vote Auction**"-Aktion klasse. Da wurde tatsächlich diskutiert, da ist was passiert. Sobald die Kunst eine tatsächliche Auswirkung hat, wird sie für mich interessant. Wenn im Medienkunstbereich Fakes gebaut werden, die zwar interessant aussehen, aber nicht funktionieren, finde ich das langweilig. In der ZKM-Ausstellung "Net Condition" wurde zum Beispiel ein System präsentiert, das angeblich Videokonferenzen abcheckt und die Gesichter nach Algorithmen in die Sparten "Schön" und "Häßlich" einteilt. Als Idee fand ich das super. Du hast aber halt auch sofort gesehen, dass das mit einem Multimediaprogramm zusammengeklickt wurde. Wenn das wirklich funktioniert hätte, hätte das eine Brisanz gehabt. So aber war es ein flimmernder, blöd herumstehender, belangloser Kasten.

Freude: Ich finde es wichtig, dass die Werke nicht nur für ein Fachpublikum interessant sind. Es gibt ja tausende von Sachen, die kann man gar nicht verstehen, wenn man in der Thematik nicht drin ist.

Espenschied: Mit "insert_coin" haben wir versucht, ein gewisses Expertenwissen so rüberzubringen, dass jeder etwas damit anfangen kann. Gerade im Netz-Bereich gibt es ja diese Hacker-Kultur, die sehr elitär und arrogant ist. Wenn man da etwas nicht versteht und nachfragt, wird man angeschissen. Wir selbst haben uns bei unseren "insert_coin"-Seiten viel Mühe gegeben.

Ja, ja, die "Unmündigkeit des Users" beschäftigt euch schon seit Jahren...

Freude: Viele User sagen halt "Beim Auto weiß ich ja auch nicht, wie der Motor funktioniert". Das ist auch richtig. Fürs Autofahren reicht es aus, zu wissen, wo das Gaspedal, wo die Bremse, wo der Scheibenwischer, etc. ist. Beim Computer, der noch viel komplexer ist, wollen die Leute noch viel weniger wissen. Trotzdem soll das Internet Alltagsmedium sein, oder zumindest werden. Aber nur den wenigsten Leuten wird auch die Gelegenheit gegeben, das Internet zu verstehen. Den Leuten beizubringen, wie ein Computer funktioniert, ist nicht schwieriger, als ihnen Dreamweaver oder Word beizubringen.

Espenschied: Um verantwortlich handeln zu können, sollte man mindestens den groben Überblick haben und sich nicht von Benutzeroberflächen fernsteuern lassen.

Das klingt jetzt stark nach erhobenem Zeigefinger...

Espenschied: Wir wollen eine Hilfestellung geben. Natürlich wollen wir uns selbst auch die Möglichkeit geben, das Internet so zu erhalten, wie wir es haben wollen. Wenn das Netz komplett kommerziell kontrolliert wird, haben wir auch weniger Spaß am Leben.

Freude: Wenn man Politiker hört, gibt es im Netz nur zwei Themen: Terroristen,

Kinderschänder und ähnliche böse Leute und eben E-Commerce. Es gibt aber viel, viel, viel mehr Dinge, die man mit dem Internet machen kann, und die viel interessanter sind. Das Schwierige ist, dass die Leute, die kommerzielle Interessen haben, natürlich mächtiger sind und die Medien einfacher beeinflussen können.

Glaukt ihr, dass euer Projekt "insert_coin" an der Hochschule der Medien anders abgelaufen wäre?

Freude: Nein, garantiert nicht. Selbst wenn wir das Projekt an der Technischen Universität in Vaihingen gemacht hätten, wäre es genauso verlaufen - mit dem Unterschied, dass eben nicht 250 Leute davon betroffen gewesen wären, sondern meinetwegen 20 000. Da ist natürlich die Wahrscheinlichkeit, dass jemandem etwas auffällt größer. Zum Schluß, als das Projekt öffentlich war, haben wir ja aber erst richtig auf die Pauke gehauen.

Wäre damals der Merz-Akademie-Server nicht abgestürzt, hätte der Werkstattleiter gar nichts mitbekommen, und ihr hättet euch gar nicht geoutet?

Espenschied: Als der Server ausgefallen ist und wir in der Folge quasi ertappt wurden, haben wir uns schon geärgert, dass das Projekt nur so kurz gelaufen ist. Wir hatten ja erst einen Monat protokolliert. Verschiedene Filter mit den richtig interessanten Geschichten waren erst zwei Wochen lang aktiv.

Freude: Schon vor dem Server-Ausfall hat es verschiedene Gelegenheiten gegeben, bei denen das Projekt eigentlich hätte auffallen müssen. Während der sogenannten "Wahlwochen" saß die gesamte Akademie in der Aula, um sich die Studentenarbeiten, darunter auch einige Internet-Arbeiten anzusehen. Bei diesen Internetarbeiten haben wir zum Beispiel ein Projekt namens "LEDA" in "LEDER" umbenannt und mit Blümchen-Hintergrund versehen. Diese grafischen Mißgeschicke wurden vom Vortragenden geschickt übergeben, die Namensveränderung wurde auf irgendwelche Witzbolde geschoben. Zudem hatten wir auf jede Website, die offline auf dem Merzakademie-Server lag, einen ganz häßlichen Werbebanner "Klick here for good education" gepackt. Der Banner wurde während der Vorträge mit einem leisen Schmunzeln zur Kenntnis genommen - aber das war's dann auch. Die Leute im Saal dachten, der Banner sei Bestandteil der Arbeit, die Leute, welche die Arbeit gemacht hatten, haben wiederum gedacht "Naja, okay, jetzt macht die Merz Akademie zur Finanzierung ihres Webservers eben Werbebanner auf alle Homepages drauf.

Was hat sich durch den Server-Ausfall und das Zwangs-Outing geändert?

Freude: Eigentlich hat sich dadurch nichts verändert. An einem Montag ist der Server ausgefallen und lief dann einen halben Tag nicht. Abends haben wir es geschafft, einen - ungefilterten - Ersatzserver unter gleicher Adresse zum Laufen zu bringen. Am Mittwoch kam vom Leiter der Medienwerkstatt dann eine Rundmail, in der er darauf hinwies, dass wir persönliche Daten der Studenten hätten protokollieren können.

Espenschied: Wir haben uns daraufhin per Rundmail geoutet und eine Anleitung angeboten, wie man die Filter abschalten kann. Während des Projekts wurde die Anleitung ganze sieben mal aufgerufen - und dann noch drei mal von ein und derselben Person. Es

hat auch kaum jemand von den Feedback-Möglichkeiten Gebrauch gemacht, die wir bei allen Manipulationen eingebaut haben. Also haben wir uns immer größeren Unsinn ausgedacht und sind an die Grenzen unserer Vorstellungskraft gekommen. Internet wird eben als Konsum-Medium angesehen. Kaum jemand will in Kontakt mit jemanden treten, den er nicht kennt. Wenn man Zeug bekommt, das einem nicht gefällt, macht man halt das Fenster zu.

Freude: Selbst Monate nach dem Projekt hat eigentlich kaum jemand die Tragweite des Projekts verstanden. Es gab einige, die erschrocken waren. Doch der trägen Masse war das egal. Die Merz Akademie ist ja sehr stolz darauf, dass die Studenten zur Medienkompetenz ausgebildet werden - das gilt offensichtlich im wesentlichen aber nur für die Bereiche Film, Fernsehen und Medientheorie. Im Bereich Internet dürfe das noch eine Weile dauern.

Welchen Einfluß hatte "insert_coin" auf eure Stellung innerhalb der Merz Akademie und auf eure Einstellung gegenüber der interaktiven Gesellschaft?

Freude: Für alle Mitarbeiter der Medienwerkstatt bin ich seitdem ein rotes Tuch, noch stärker als vorher, obwohl der Direktor uns natürlich gratuliert hat und auch bei den Veranstaltungen anwesend war. Im Wesentlichen hat das Projekt viele unserer Vermutungen bestätigt. Dass die Leute die Manipulationen nicht im Vorfeld entdecken würden, war uns im Grunde klar. Wenn etwas auf einer Seite komplett falsch ist, zum Beispiel da "Schröder" statt "Kohl" steht, wird das eben auf den Webmaster geschoben. Nachdem das Projekt aber öffentlich war und klar war, was wir Drastisches angestellt hatten, hätte ich eigentlich schon Reaktionen erwartet. Zumindest hätte ich mir erhofft, dass sich die Leute mehr Gedanken über das Medium Internet und seine Möglichkeiten machen.

Espenschied: Über den Schrecken der Nicht-Reaktionen bin ich inzwischen drüber weg gekommen. Realistisch kann man einfach nicht erwarten, dass danach alle aufschreien "Auja, erzählt uns jetzt, wie alles geht".

Denkt ihr über eine Fortsetzung des Projekts nach?

Espenschied: Da müßten wir den entsprechenden Rahmen haben. Wenn wir an keiner Hochschule gewesen wären, wo hätten wir dann mit dem Projekt hingehen können? An anderen Institutionen, die das Web tatsächlich als Arbeitsmedium gebrauchen, wäre das Projekt schwieriger geworden.

Hat euch noch keine Firma engagiert, um mit einem ähnlichen Projekt die Aufmerksamkeit und "Mündigkeit" der eigenen Angestellten zu testen?

Freude: Da würde ich sofort mitmachen. Aber die Idee hast bisher nur du gehabt.

Wie sieht euer Leben nach der Merz Akademie aus?

Freude: Derzeit arbeite ich drei Tage die Woche in der Agentur AGI und helfe dort bei der Konzept-Programmierung. Mal sehen, vielleicht hänge ich eine Doktorarbeit dran.

Espenschied: Ich bin schon während des Diploms als HTML-Lehrer an der Mrz Akademie eingesprungen. Im Moment mache ich dort die Internet-Einführung für die zweiten Semester und versuche, den Studenten nicht nur Flash oder Dreamweaver vorzuführen, sondern ihnen auch zu zeigen, was im Hintergrund abläuft.

Achja: Welche Note habt ihr denn für "insert_coin" als Diplomarbeit bekommen?

Freude: Wir haben eine 1,2 gekriegt. Die Präsentation war aber auch schlecht. Und die meisten Dozenten haben sich die Arbeit im Netz auch wieder nicht angeschaut.

„Governments of the Industrial World, you weary giants of flesh and steel ...“

Das vorangestellte Zitat stammt von John Perry Barlow, dem Mitbegründer der amerikanischen Electronic Frontier Foundation (EFF), das dieser in einem Manifest der weltweiten Netz-Community anlässlich der Verabschiedung des „Communication Decency Act“ im Februar 1996 präsentierte. Barlows *Declaration of the Independence of Cyberspace* ist eine wütende Reaktion auf den Versuch des amerikanischen Senats, durch einen Zusatz zur amerikanischen Telekommunikationsgesetzgebung Inhalte im Internet zu regulieren.¹ Barlow erklärt in seiner *Unabhängigkeitserklärung* den Cyberspace zu einem Raum außerhalb der Souveränität der „Regierungen der industriellen Welt“ und ruft die „Zivilisation des Geistes im Cyberspace“ aus. Erscheint der „Cyberspace“, den Barlow proklamiert, zunächst als idealer anarchischer Ort, ähnlich der von Hakim Bey beschriebenen „Temporären Autonomen Zonen“², vergleicht er ihn an anderer Stelle jedoch auch mit dem Wilden Westen des 19. Jahrhunderts, einem quasi rechtsfreien Raum, in dem die „Pursuit of Happiness“ jede Tat rechtfertigte, die im Namen dieses ‚unveräußerlichen Rechts‘ begangen wurde. Die vorgebliche Radikalität von Barlows *Unabhängigkeitserklärung* erweist sich also bei näherer Betrachtung als problemlos mit dem Neoliberalismus der amerikanischen Neuen Rechten vereinbar.

Die beiden britischen Sozialwissenschaftler Richard Barbrook und Andy Cameron haben diese eklektische Ideologie daher zu Recht als „kalifornisch“ bezeichnet.³ Für Barbrook und Cameron ist diese eskapistische und technikdeterministische „kalifornische Ideologie“ (mit ihren Organen *Wired* und *Mondo 2000*) das Resultat einer „seltsamen Verschmelzung der kulturellen Boheme aus San Francisco mit den High-Tech-Industrien von Silicon Valley“, die den „freischwebenden Geist der Hippies mit dem unternehmerischen Antrieb der Yuppies“ verbindet. Diese Verschmelzung der Gegensätze – des sozialen, teils anarchischen Liberalismus der Linken und des Anti-Etatismus und wirtschaftlichen Neoliberalismus der Rechten – wurde, so Barbrook und Cameron, durch einen vollkommen überzogenen Glauben an das emanzipatorische Potenzial der neuen Informationstechnologien ausgelöst.

Die euphorische Aufbruchstimmung Anfang der 1990er Jahre, die nicht nur bei Vertretern der „kalifornischen Ideologie“ Fuß gefasst hatte, hat in den letzten Jahren eine kolossale Dämpfung erfahren, unter anderem dadurch, dass ab Mitte der 1990er Jahre die Marktökonomie massiv ins Internet einzog und dort mehr und mehr die so genannte „Geschenköko-

¹ „Regierungen der industriellen Welt, ihr müden Giganten aus Fleisch und Blut, ich komme aus dem Cyberspace, der neuen Heimat des Geistes. Im Namen der Zukunft bitte ich euch, Vertreter einer vergangenen Zeit: Lasst uns in Ruhe! Wo wir uns versammeln, habt ihr keine Macht mehr.“ (Auszug aus: John Perry Barlows *Unabhängigkeitserklärung des Cyberspace*, 1996, <http://www.uni-magdeburg.de/iphi/seminare/ethik/barlow.html>).

² Hakim Bey (Peter Lamborn Wilson), *TAZ – Die Temporäre Autonome Zone*, Berlin 1994 [Original: New York 1991].

³ Richard Barbrook / Andy Cameron, „Die kalifornische Ideologie“, in: nettime (Hg.), *Netzkritik. Materialien zur Internet-Debatte*, Berlin 1997, S. 15-36.

nomie“ verdrängte. Je stärker Unternehmen das Netz zu nutzen begannen, desto mehr wurde und wird von Seiten des Staates und der Wirtschaft eine Verrechtlichung forciert, die die seit den 1960er Jahren gewachsenen Freiräume des Internet beschneidet. Der international wachsende, vermeintlich rechtsfreie Raum des Internet kollidiert ab Mitte der 1990er Jahre zunehmend mit nationalen Ordnungen; die neuen Strukturen des Internet stoßen auf bestehende soziale und rechtliche Strukturen der Gesellschaft. Im Gefolge der Wirtschaft halten ab Mitte der 1990er Jahre auch die Rechtsanwälte Einzug in das Internet.⁴ In vielen Ländern greifen Gerichte und staatliche Behörden in das Internet ein, um auch hier gesetzliche Regularien zu Kryptographie und Urheberrechtsschutz⁵ durchzusetzen (unter anderem durch den Einsatz so genannter technischer Rechtekontroll- oder Digital-Rights-Management-Systeme) – siehe den Fall der Internet-Musiktauschbörse Napster.

In der zweiten Hälfte der 1990er Jahre starten Regierungen weltweit verschiedene Versuche zur Regulierung von Internet-Inhalten. 1996 tritt der umstrittene „Communications Decency Act“ in den USA in Kraft, der den Gebrauch von ‚unanständigen‘ Wörtern im Internet verbietet; 1997 wird er für verfassungswidrig erklärt. In China müssen sich 1996 Nutzer und Internet Service Provider (ISPs) bei der Polizei registrieren lassen, und die Regierung versucht, den Zugang zu politisch unliebsamen Websites zu unterbinden. In Deutschland sperren Provider den Zugriff auf den holländischen Provider xs4all, auf dessen Servern eine Kopie der in Deutschland verbotenen linksautonomen Zeitschrift *Radikal* liegt. Im selben Jahr entscheidet ein deutsches Gericht, dass CompuServe den Zugang zu rund 200 Newsgroups, die sich im weitesten Sinne mit Sexualität beschäftigen, unterbinden muss (Pornographie-Vorwurf). Die Sperrung sorgt weltweit für Aufsehen und Empörung. Ebenfalls in Deutschland, genauer: Nordrhein-Westfalen, sorgt der Wunsch nach einem von Neonazi-Inhalten und Kinderpornografie „gesäuberten“ Internet seit 2000 für eine Diskussion über einen regierungsamtlichen Einbau von Filtern ins weltweite Netz. Das netzaktivistische Projekt *insert_coin* von Dragan Espenschied und Alvar Freude hat jedoch eindringlich gezeigt, dass mit der Zensur und Ausblendung von Netzinhalten auch eine Manipulation jeglichen Contents möglich wird – und mit großer Wahrscheinlichkeit unbemerkt bleibt.

⁴ „Für die neuen Generationen von Nutzern gibt es nur eine Information, die frei und möglichst weit zirkulieren soll, und das ist Werbung. Alle andere Information ist für sie Ware. Um nun in diesem promiskuitiven Milieu eine Information (z.B. Börsendaten, Lehrmaterial, Musikstücke) derjenigen und nur derjenigen zugänglich zu machen, die dafür bezahlt haben, müssen in das Internet zusätzliche, aufwendige Schutzmechanismen, Zonen mit Zugangskontrollen und kryptographisch abgesicherte Copyrights Control Systems eingezogen werden. Die sog. Rechteindustrie (Bertelsmann, Sony, Time-Warner usw.) arbeitet seit etwa 1994 nach Kräften daran, ihre Waren über das Netz verkaufbar zu machen und technisch abzusichern.“ (Volker Grassmuck, „Freie Software: Geschichte, Dynamiken und gesellschaftliche Bezüge. Bericht im Rahmen des Forschungsprojektes „Von der Ordnung des Wissens zur Wissensordnung digitaler Medien“, Humboldt-Universität zu Berlin. Ver 1.0, September 2000)

⁵ Zu Copyright und Musik im Netz vgl. *mikro.lounge #7: Sonic Outlaws – Copyright und Musik im Netz*, WMF / Berlin 7.10.1998 (<http://www.mikro.org/Events/19981007.html>) sowie das von Volker Grassmuck organisierte Symposium *Napster und die Folgen*, Hochschule für Grafik und Buchkunst Leipzig, 26. Januar 2001 (<http://www.hgb-leipzig.de/~vgrass/semi-napster/symp.html>).

Zentralisiertes, dezentrales und verteiltes Netzwerk⁶

Das Internet wurde in den 1960er Jahren nicht als ein solches ‚Massenmedium‘ konzipiert, zu dem es heute geworden ist. Strukturell unterscheidet es sich von zentralisierten Sendemedien wie Fernsehen oder Radio durch seine verteilte Netzstruktur. Dieser besondere, ursprünglich auf „Unverwundbarkeit“ hin konzipierte technische Aufbau des Internet ist bis heute der Hauptgrund für seine oft „anarchisch“ genannte Struktur, die sich nach wie vor fast jeglicher politischer oder wirtschaftlicher Kontrolle entzieht. Dies geschieht zum Beispiel durch permanentes Nomadisieren von inkriminierten Daten durch das Netz. In den 1990er Jahren setzt eine breite Entwicklung und Verfügbarkeit kostengünstiger, digitaler Technologien und Medien ein. Mit der seit Beginn der 1990er Jahre möglich gewordenen Kopplung dieser digitalen Technologien (zum Beispiel Personal Computer) an das Internet, das jetzt durch seine erste grafische Oberfläche zunehmend populär wird, entsteht ein Medienverbund, der fast jeder/m (zumindest in der westlichen Welt) potenzielle Sendefähigkeit garantiert. Hierdurch entstehen neue Arten von Praktiken, die man „taktische“ oder „kleine Medien“ nennen kann. Beiden gemeinsam ist, dass sie den Nutzern nicht nur die Fähigkeit zu (passivem) Lesen, sondern auch und vor allem zu (aktivem) Schreiben in die Hand geben. Während die hierarchische und zentralisierte Sendestruktur der Massenmedien nur eine Einweg-Kommunikation (besser: Ausstrahlung ohne Rückkanal) erlaubt, ermöglicht und vereinfacht der Einsatz so genannter „Do-It-Yourself-Medien“ (wie Mailboxen, Internet-Mailinglisten, Newsgroups, Webseiten) die Schaffung alternativer Öffentlichkeiten und den Aufbau translokaler Gemeinschaften. Wichtig ist einzig und allein, so schreibt Hakim Bey in der *Temporären Autonomen Zone*, die „Offenheit und Horizontalität der Struktur“ (Bey 1994, S. 122)

⁶ Aus: Paul Baran, „On Distributed Communication Networks“, in: IEEE Transactions on Communication Systems, March 1964, S. 1-9, hier: S. 1.

Hakim Beys *Temporäre Autonome Zonen* sind nomadisierende Praktiken und Zusammenschlüsse, die nicht an die Existenz spezifischer Technologien oder Orte gebunden sind. Allerdings wird die für die Schaffung einer solchen „Temporären Autonomen Zone“ notwendige Kommunikation durch das Internet – oder „Spinnengewebe“, wie Hakim Bey das Netz nennt – erleichtert.⁷ Bei der „Temporären Autonomen Zone“ handelt es sich nach Beys Worten um einen „Aufstand, der nicht zur direkten Konfrontation mit dem Staat führt, wie eine Operation einer Guerilla, die ein Gebiet (Land, Zeit, Imagination) befreit und sich dann auflöst, um sich irgendwo / irgendwann zu re-formieren, bevor der Staat sie zerschlagen kann.“ (Bey 1994, S. 113) Ihre größte Stärke ist, so Bey weiter, neben ihrer zeitlichen Begrenzung ihre Unsichtbarkeit. Hier trifft sich sein Konzept mit Michel de Certeaus berühmter Definition von Taktiken, die er in seiner *Kunst des Handelns*⁸ formuliert hat. Die Taktik ist per se eine „Bewegung ‚innerhalb des Sichtfeldes des Feindes‘, [...] die sich in einem von ihm kontrollierten Raum abspielt.“⁹ Sie muss, da sie nicht über einen eigenen Ort verfügt, unsichtbar sein, denn sie hat, im Gegensatz zur Strategie, nicht die Möglichkeit eines Rückzugs auf eine Basis oder in ein Lager, die ihr vorausschauendes Handeln erlauben würde. Ihr „Nicht-Ort“ ermöglicht ihr zweifellos die Mobilität, zwingt sie jedoch auch dazu, „günstige Gelegenheiten“ zu nutzen. Insgesamt gesehen, ist die Taktik eine Kunst des Schwachen, wie Clausewitz am Beispiel der List in seiner Abhandlung *Vom Kriege* notierte.¹⁰ Der Taktik geht es mittels praktischer, pragmatischer Finten darum, analog zur rhetorischen Bewegung der antiken Sophistik, „die Position des Schwächsten so stark wie möglich zu machen“.¹¹

NETZ(KUNST)AKTIVISMUS: DAS INTERNET ALS TAKTISCHES WERKZEUG

Temporäre, taktische Zusammenschlüsse, die sich nomadisierender Werkzeuge bedienen, finden sich auch im so genannten Netzaktivismus der 1990er Jahre. Netzaktivismus beziehungsweise aktivistische Netzkunst umfasst unterschiedliche Strategien, die von der Einrichtung alternativer Kommunikations- und Informationskanäle bis hin zu praktiziertem „elektronischen zivilen Ungehorsam“ reichen. Der „ermöglichende“ oder vernetzende Einsatz bezeichnet dabei eine auf Herstellung von Kommunikation angelegte Verwendung. In der zweiten Hälfte der 1990er Jahre vernetzen sich zum Beispiel verstärkt Umwelt- und Menschen-

⁷ „Das Spinnengewebe bedarf keiner Computertechnologie, um zu existieren. Mündliche Botschaften, Post, das marginale Zine-Netzwerk, ‚Telefonketten‘ und ähnliches reichen, um ein Informations-Spinnengewebe zu schaffen.“ (Bey 1994, S. 122).

⁸ Michel de Certeau, *Kunst des Handelns*, Berlin 1988 [frz. Original: *L'invention du quotidien. 1. Arts de faire*, Paris 1980].

⁹ De Certeau zitiert an dieser Stelle von Bülow: „Strategie ist die Wissenschaft von kriegerischen Bewegungen außerhalb des Sichtbereiches des Gegners; Taktik, innerhalb desselben.“ (S. 368).

¹⁰ Vgl. Carl von Clausewitz, *Vom Kriege*, Bonn 1980, S 387.

¹¹ De Certeau 1988, S. 91. Er zitiert an dieser Stelle Aristoteles: „Aus dem schwächsten von zwei Argumenten das stärkste machen.“ (Aristoteles, *Rhetorik*. II, Kap. 24, 1402a). Auf die Bedeutung der Rhetorik für die Formen, die „die Wiederkehr des Unterdrückten im Bereich einer Ordnung“ ermöglichen (verbale Verkürzung, Verdichtung, Doppel- und Widersinnigkeiten, Verschiebungen, etc.), hat bereits Freud in seinen Untersuchungen zum Witz hingewiesen. Vgl. Sigmund Freud, „Der Witz“, in: *Gesammelte Werke*, Bd. VI.

rechtsaktivisten sowie Globalisierungskritiker, die dem so genannten „Empire“ Paroli bieten wollen, und organisieren ihren Protest über das Internet.

Neben dem Aufbau solch autonomer Kommunikationssysteme zählt die Strategie des „elektronischen zivilen Ungehorsams“ („Electronic Civil Disobedience“) zu den wichtigsten Praktiken des Netzaktivismus. Dieses Konzept, das von der US-amerikanischen Künstlergruppe Critical Art Ensemble (CAE) 1996 geprägt wurde, überträgt das Prinzip des zivilen Ungehorsams in den elektronischen Datenraum:

The strategy of ECD [Electronic Civil Disobedience] should not be a mystery to any activists. They are the same as traditional CD [Civil Disobedience]. ECD is a nonviolent activity by its very nature, since the oppositional forces never physically confront one another. As in CD, the primary tactics are trespass and blockage. Exits, entrances, conduits, and other key spaces must be occupied by the contestational force in order to bring pressure on legitimized institutions engaged in unethical or criminal actions. Blocking information conduits is analogous to blocking physical locations; however, electronic blockage can cause financial stress that physical blockage cannot, and it can be used beyond the local level. ECD is CD reinvigorated. What CD once was, ECD is now.¹²

Während sich ziviler Ungehorsam gegen lokalisierbare Machtzentren und Institutionen (zum Beispiel Regierungseinrichtungen, Ministerien, Unternehmenszentralen) richtet, deren reibungsloses Funktionieren er durch Blockade des Zugangs temporär stört, reicht, so die These des CAE Mitte der 1990er Jahre, diese gewaltlose Strategie heute nicht mehr aus. Unternehmen sind zu transnationalen, global agierenden Korporationen geworden, die sich zunehmend von konkreten Orten in den Cyberspace verlagern. Diese Korporationen können Provokationen des zivilen Ungehorsams ausweichen, da sich ihre Existenz zunehmend in einen nomadischen elektronischen Datenstrom verlagert:

[A] major change in the representation of power [has] occurred over the past twenty years. Power once represented itself as a visible sedentary force through various types of spectacle (media, architecture, etc.), but it has instead retreated into cyberspace where it can nomadically wander the globe, always absent to counterforces, always present whenever and wherever opportunity knocks.¹³

¹² Critical Art Ensemble, *Electronic Civil Disobedience and other Unpopular Ideas*, New York 1996, S. 18.

¹³ CAE 1996, S. 29. Und an anderer Stelle: „Blocking the entrance to a building, or to some other resistant action in physical space, can prevent reoccupation (the flow of personnel), but this is of little consequence so long as information-capital continues to flow.“ (CAE 1996, 9).

Um unter diesen Umständen noch wirksam zu sein, sollte sich ziviler Ungehorsam nicht länger nur der Blockade physischer Orte widmen,¹⁴ sondern vielmehr den Fluss von Informationen selbst hemmen:

Blocking information access is the best means to disrupt any institution, whether it is military, corporate, or governmental. When such action is successfully carried out, all segments of the institution are damaged.¹⁵

Der strategische Ort des Widerstandes erweitert sich also, folgt man dem CAE, von den Straßen in das Internet, denn:

To fight a decentralized power requires the use of a decentralized means.¹⁶

Einige Netzaktivisten bezeichnen diese Form des elektronischen Protestes im Netz als „Hacktivismus“. Zurückgeführt werden kann dieser Begriff, der sich aus den Worten „Hacken“ und „Aktivismus“ zusammensetzt, auf Aktionen des Electronic Disturbance Theatre (EDT), das 1998 eine Serie von Protestaktionen gegen Webseiten der mexikanischen Regierung organisierte und mit globaler Unterstützung durchführte („FloodNet“, siehe unten). Diese Art von „Hacktivismus“ zielt in den meisten Fällen auf eine Unterbrechung der Kommunikationsfähigkeit des „Gegners“ ab und steht somit in eklatantem Widerspruch zum „Hacker“-Primat des „möglichst optimalen, ungehinderten Datenflusses“.¹⁷

Einen ihrer spektakulärsten Erfolge konnte die internationale Netz-Community in dem bekannten Fall *etoy vs. EToys* (1999-2000) für sich verbuchen. Diese zeitgenössische Version von David gegen Goliath ist ein Beispiel dafür, wie sich eine „Temporäre Autonome Zone“, in diesem Fall *Toywar*, spontan aus verteilt agierenden Individuen bildete, einen „Realitätshack“ ausführte und danach wieder verschwand. Wenn keine Gegenkräfte dies verhindern, werde sich jedoch in Zukunft der ursprünglich freie Raum des Internet in einen Raum perfekter Kontrolle verwandeln, so die These des amerikanischen Juristen Lawrence Lessig, die er 1999 in „Code and other Laws of Cyberspace“¹⁸ aufstellte. Der aggressive Kampf um Domainnamen im Rahmen der Kommerzialisierung des Internet ist nur ein erstes Symptom

¹⁴ “[A]s capital has increasingly become decentralized, breaking through national boundaries and abandoning the cities, street action has become increasingly useless.” (CAE 1996, S. 11)

¹⁵ CAE 1996, S. 13.

¹⁶ CAE 1996, S. 23.

¹⁷ An dem Streit, der sich 1998 an den „virtuellen Sit-Ins“ des EDT entzündete, wurde das immer wieder aufbrechende „Hacker / Aktivisten-Schisma“ (CAE) deutlich, in dem sich ‚alte‘ und ‚neue‘ Netzkulturen (man könnte auch sagen: das „Technik“- und das „Politikprimat“) unversöhnlich gegenüberstehen: “Here are two groups motivated to accomplish similar anti-authoritarian ends, but which cannot seem to find a point of intersection. While the [hackers] live on-line, the [activists] live in the street, and both are unknowingly defeated by a communication gap for which neither is responsible. The schism between the knowledge and technical skill has to be closed, to eliminate the prejudices held by each side (hacker intolerance for the technologically impaired, and activist intolerance for those who are not politically correct).” (CAE 1996, 20).

¹⁸ Lawrence Lessig, *Code and other Laws of Cyberspace*, New York 1999 (<http://www.code-is-law.org/>).

auf dem Weg dorthin. Die „Zonen“ und „Grenzen der Freiheit“ im Netz werden auch in Zukunft aufs Neue bedrängt werden und sich dementsprechend verschieben – die eingangs skizzierte technische Struktur des Internet wird jedoch (hoffentlich) verhindern, dass sie ganz verschwinden. Die „Temporäre Autonome Zone“ ist erfinderisch und flink und sucht sich neue Räume, wenn die angestammten Plätze bedroht sind. Die „TAZ“ ist nicht utopisch, in der unmittelbaren Bedeutung des Wortes, denn sie ist kein Nicht-Ort. Im Gegenteil: „*Die TAZ ist irgendwo.*“ Sie liegt an der Schnittstelle vieler Kräfte, sie bildet sich dort, wo viele Vektoren sich überschneiden. Dies können relative, instabile und dezentrale Nicht-Orte sein, ein „Gegen-Netz“ oder eine Art Netz-Untergrund. Der Theoretiker und lustvolle Praktiker der „Temporären Autonomen Zone“ ist sich sicher, „dass das offizielle Netz es niemals schaffen wird, das Spinnengewebe oder das Gegenetz auszuschalten – Datenpiraterie, ungenehmigte Transmissionen und der freie Informationsfluss können nicht eingefroren werden.“ (Bey 1994, S. 123) Die Tatsache, dass das Internet schon allein aufgrund seiner dezentralen Struktur nie komplett beherrschbar, homogenisierbar oder kontrollierbar sein wird, scheint dieser Hoffnung Recht zu geben.

FORMEN DES WIDERSTANDS IN DER ELEKTRONISCHEN ÖFFENTLICHKEIT

Technische Strukturen sind jedoch jederzeit veränderbar. Ob der freie Fluss von Informationen wirklich nicht kanalisiert, kontrolliert und gegebenenfalls „eingefroren“ werden kann, wird angesichts der Entwicklungen der letzten Jahre immer fraglicher. Der (öffentliche?) Raum des Internet ist längst nicht mehr so offen, wie noch vor ein paar Jahren. Seit dem Einsetzen des Netzbooms Anfang der 1990er Jahre wird die Architektur des Internet, so wie wir sie bislang kannten, zunehmend durch Partikularinteressen bedroht. Vor allem die (Unterhaltungs-)Industrie arbeitet massiv an der Schließung des offenen Raums Internet (Stichwort Digital Rights Management Systeme, DRM). Im juristischen Bereich bedeutet dies zum Beispiel, dass die Urheberrechtsgesetze „nicht im Sinne der Urheber, sondern der sich zentralisierenden Content-Industrie auf die erwartete Internet-Distribution neu konzipiert“¹⁹ werden. So soll zum Beispiel der Gesetzesentwurf der Bundesregierung zur Novellierung des Urheberrechts, der seit August 2002 vorliegt, das Recht zum privaten Vervielfältigen, das in der analogen Welt jedem in begrenztem Umfang offen steht und zum festen Bestandteil des Alltags der Nutzer in der Informationsgesellschaft geworden ist, im digitalen Raum einschränken. Dies würde zu einer massiven Einschränkung der Informationsfreiheit in der vielbeschworenen Informationsgesellschaft führen. Die Initiative privatkopie.net fordert dagegen für die demokratische Informationsgesellschaft ein Urheberrecht, das die Teilhabe aller am kulturellen Leben sowie die Informations- und Meinungsfreiheit garantiert. Es geht dabei, wie Pit

¹⁹ Pit Schultz, „Internet: A Public Domain? Hybride Öffentlichkeiten: Netz-Aktivismus gegen Content-Industrie“, in: Marius Babias, Achim Könnecke, *Die Kunst des Öffentlichen*, Dresden 1998, S. 132-147, hier: S. 146.

Schultz bereits 1998 schrieb, nicht mehr um Utopien, sondern darum, „lediglich das Mindestmaß an frei verfügbaren Wissensgrundlagen für eine funktionierende Demokratie im Zeitalter ihrer elektronischen Vernetzung einzufordern.“ (Schultz 1998, S. 146f.)

Wir haben es, ganz allgemein formuliert, mit unterschiedlichen Formen der Schließung elektronischer Öffentlichkeiten zu tun, gegen die KünstlerInnen und NetzaktivistInnen verschiedene Formen des Widerstands entwickeln. Neben einem eher „klassischen“ aufklärerischen Medienaktivismus (wie ihn zum Beispiel privatkopie.net, odem.org und der CCC vertreten) hat sich in den letzten Jahren eine Vielfalt hybrider künstlerisch-aktivistischer Netz-Praktiken herausgebildet, die – angesichts der sich potenzierenden „Gesellschaft des Spektakels“ – über reine Informationskampagnen oder Unterschriftensammlungen hinausgehen. In Anlehnung an das 1998 von der autonomen a.f.r.i.k.a.-Gruppe, Luther Blissett und Sonja Brünzels herausgegebene *Handbuch der Kommunikationsguerilla* lassen sich folgende subversiv-künstlerische Verfahren nennen, die im Netz neue Aktualisierung erfahren: Camouflage, Überidentifizierung, Fake und Fälschung, subversive Affirmation, Collage / Montage sowie Entwendung und Umdeutung (Détournement). Darüber hinaus kam es zu verschiedenen Umsetzungen des Konzeptes des „elektronischen zivilen Ungehorsams“, zu diversen kreativen Détournements von (Gesellschafts-)Technologien und zur (zumindest konzeptuellen) Entwicklung radikal-autonomer Kommunikationssysteme. Auf unterschiedliche Weise werden Fragen nach der „Natur“ des digitalen Eigentums gestellt (vgl. gwobush.com, dowchemical.com, textz.com, etoy / toywar) und Machtstrukturen in Räumen elektronischer Kommunikation sichtbar gemacht (vgl. makrolab).

Im Folgenden sollen Projekte und Aktivitäten von Gruppen und Individuen (KünstlerInnen, AktivistInnen) vorgestellt werden.

ELEKTRONISCHER ZIVILER UNGEHORSAM

Critical Art Ensemble (CAE)

<http://www.critical-art.net>

Das CAE ist ein Kollektiv von fünf KünstlerInnen aus unterschiedlichen Bereichen, „exploring the intersections between art, technology, radical politics and critical theory“ (vgl. Website). Neben der wichtigen Publikation von *Electronic Civil Disobedience and other Unpopular Ideas* (New York, 1996), in der das Konzept des „elektronischen zivilen Ungehorsams“ entwickelt wird, hat das CAE in den letzten Jahren Projekte vor allem in den Bereichen Biotech und Tactical Media durchgeführt. Biotech Projekte seit 1996: *Flesh Machine*, *Society for Reproductive Anachronisms*, *Cult of the New Eve*, *GenTerra*, *Contestational Biology*, *Molecular Invasion*. Zum Themenkomplex Tactical Media schreibt CAE: “Tactical Media is situational,

ephemeral, and self-determinating. It encourages the use of any media that will engage a particular, socio-political context in order to create molecular interventions and semiotic shocks that contribute to the negation of the rising intensity of authoritarian culture.” Tactical Media-Projekte seit 1992: *The Therapeutic State* (1992), *Radio Commercials* (1993), *Useless Technology* (1994), *Diseases of Consciousness* (1997), *International Campaign for Free Alcohol and Tobacco for the Unemployed* (Sheffield, 1998), *Radio Bikes* (Graz, 2000), *Tactical Gizmology Workshop* (Eyebeam, New York, 2002).

Electronic Disturbance Theatre (EDT)

<http://www.thing.net/~rdom/ecd/ecd.html>

Das Konzept des elektronischen zivilen Ungehorsams entstand aus dem seit 1994 betriebenen globalen Internetaktivismus der mexikanischen Zapatistas und ihrer Anhänger. Zwei ihrer Unterstützer, Stefan Wray und Ricardo Dominguez, sind wichtige Vertreter des elektronischen zivilen Ungehorsams. Wray unterhält eine Website zu Theorie und Praxis des elektronischen zivilen Ungehorsams, und Dominguez, der als Mitglied des Critical Art Ensemble einer der Co-Autoren von *Electronic Civil Disobedience* ist, arbeitet als Redakteur bei The Thing, einem unabhängigen, aus einer Kunstmailbox hervorgegangenen Internet Service Provider in New York. Wray und Dominguez sind außerdem Mitglieder der Gruppe Electronic Disturbance Theatre²⁰ (EDT), die für ihre Software „FloodNet“ (FlutNetz) bekannt geworden ist. Seit April 1998 hat das EDT unter anderem die Webseite der mexikanischen Regierung wegen ihres Vorgehens gegen die Zapatistas gezielt mit ihrer FloodNet-Software angegriffen. FloodNet ist ein verteiltes, auf Massenbeteiligung basierendes System, das automatisch die anzugreifende Website aufruft. Beteiligen sich genügend Leute an einem solchen FloodNet-Angriff, wird der Server mit einer Welle von Anfragen überflutet, die er nicht mehr abarbeiten kann.²¹ Die Webseite ist für alle weiteren Anfragen blockiert und vorübergehend nicht mehr erreichbar. Bei einem FloodNet-Angriff handelt es sich also um ein virtuelles Sit-In.²² Neben dem simplen Blockade-Effekt gibt es auch subtilere Vorgehensweisen; beispielsweise suchten automatisierte Anfragen nach der Seite mit dem Dateinamen „human_rights“. Da es diese Seite auf dem Server nicht gab, erschien in der (allerdings nur für den Systemadministrator einzusehenden) Log-Datei des Servers die Meldung „human_rights not found on this server“. Während der *Ars Electronica* 1998 in Linz wurde FloodNet außerordentlich scharf von der Organisation Hackers for Electronic Art (HEART) kritisiert. Hacker lehnen solche Angriffe generell ab, da diese a) nicht kunstvoll genug sind, um als genuines Hacken zu gel-

²⁰ Den Begriff Electronic Disturbance prägte das Critical Art Ensemble. Vgl. Critical Art Ensemble, *The Electronic Disturbance*, New York 1994.

²¹ Ein öffentlich durchgeführtes virtuelles Sit-In blockiert also den Zugang zu bestimmten Websites für eine begrenzte Zeit und ist daher, so Reinhold Grether, „einem Lohnrunden-Warnstreik vergleichbar, ein Mittel zivilen Ungehorsams, das der Gegenseite Un- und Kampfesmut signalisiert.“ (Reinhold Grether, „Wie die Etoy-Kampagne geführt wurde. Ein Agentenbericht“, in: *Telepolis*, 9.2.2000 (<http://www.heise.de/tp/>).

²² Für die Diskussion über die FloodNet-Software auf Nettime vgl. Nettime-Archiv, Juni-November 1998.

ten und b) weil die empfindliche Netzinfrastruktur generell, so die Hacker-Ethik, nicht durch „undifferenzierte“ Angriffe gestört werden dürfe. Die Aktivisten des EDT ihrerseits hielten dagegen, dass ihre Taktik sehr zielgerichtet und vor allem nicht (wie die typischen, von „Skript-Kiddies“²³ ausgeführten Distributed Denial of Service (DDoS)-Angriffe) anonym sei. FloodNet wurde jedoch auch von anderen Netzaktivisten kritisiert. Unter anderem wurde EDT vorgeworfen, eine zu kurzsichtige Strategie zu verfolgen. Geert Lovink, holländischer Medientheoretiker und Netzaktivist, schrieb dazu: „Hacktivism should [...] not just temporarily shoot down enemy servers. We need to be much more careful, flexible, remain under cover. FloodNet originates from an actual public space lost and gone. Perhaps it is trying to reconstruct the loss in a much too easy way. In our experience, here in Amsterdam, the digital public sphere is a long term project, with thousands of people involved. In part, our work is invisible, and contains many random elements. Activists, by nature, are hasty. They want to get things done. Yet protection and restructuring of the public sphere is not a simple problem to solve. So let us come up with many models and examine which ones work, and which don't. That's hacktivism for me.“²⁴

etoy – “the first streetgang on the information super highway”

<http://www.etoys.com>

1999 stürzte sich der neu gegründete US-amerikanische Internet-Spielzeugversand eToys²⁵ daran, dass die Schweizer Künstlergruppe etoy²⁶ eine ganz ähnliche Internetadresse hatte, die potenzielle Kunden verwirren könnte. etoy waren seit Mitte der 1990er Jahre unter anderem durch ihr Projekt „Digital Hijack“²⁷ und durch ihre perfekte Firmensimulationsstrategie bekannt. Die Spielzeugfirma bot der Künstlergruppe (so die Künstler) 500.000 US\$ für den Verkauf der Domain an. etoy lehnte die „feindliche Übernahme“ jedoch ab. Obwohl die Künstler ihre URL schon ein paar Jahre länger besaßen als die Spielzeugfirma ihre Adresse, erließ im November 1999 ein Richter am Los Angeles Superior Court auf Antrag von eToys.com eine einstweilige Verfügung („temporary injunction“) gegen die Verwendung des Domainnamens etoy.com durch die Künstlergruppe. Die Künstlergruppe lenkte ein und nahm bis zur endgültigen Entscheidung durch das Gericht ihre Website freiwillig vom Netz. Was

²³ „Skript-Kiddies“ (Skript-Kinder), abschätzi ge Bezeichnung von Hackern für Jugendliche, denen die Fähigkeit zum ‚genuinen‘ Hacken abgeht und die sich daher bei fertigen Skripten bedienen und aus diesen ihre DDoS-Software zusammenstellen, ohne jedoch ein tieferes Verständnis dessen zu haben, was diese anrichten kann.

²⁴ Geert Lovink, Gespräch mit A. Galloway, „Hacking Activism. An Email Dialogue between Alex Galloway and Geert Lovink“, in: Nettime, 10.2.1999, <http://www.nettime.org/nettime.w3archive/199902/msg00058.html>.

²⁵ eToys (<http://www.eToys.com>).

²⁶ etoy (<http://www.etoys.com>).

²⁷ etoy, „Digital Hijack“ (<http://www.hijack.org/>, 1996). „For a period of four months in 1996, the etoy gang legally hacked into five major search engines devising a trap for net travellers and technology tourists of the time. With the twilight zone of the medium forming the place of action, search engines were transformed into a stage, designed as a merger between a Hollywood action movie script and a real life airplane hijacking. This was a shocking experience and a violent attack on the innocent Internet user of the time. It became known as the digital hijack – and the members of etoy as the first street gang on the information super highway.“ (Nicolas Primmich, „Gesamtkunstwerk“, in: *Rohrpost*, 17.12.2002 (http://www.hansbernhard.com/publications/publications_about/2002/Gesamtkunstwerk.doc)).

dann jedoch folgte, versetzte zunächst etoy und dann die internationale Netz-Community in Rage: Die Firma Network Solutions, die für die Vergabe und die Eintragungen von Domains in das Hauptverzeichnis zuständig war, löschte Anfang Dezember 1999 die URL etoy.com aus eben jenem Hauptverzeichnis, ein Schritt, der nicht durch die einstweilige Verfügung gedeckt war. etoy war nun auch nicht mehr per E-Mail erreichbar. Die Netz-Existenz der Gruppe war gelöscht worden. Als Antwort auf das Verhalten von Network Solutions und eToys entwickelte eine Community von Netzaktivisten um die US-amerikanische Künstler- und Aktivistengruppe RTMark (siehe unten) den etoy-Solidaritäts-Fond und die *Toywar*-Plattform, deren erklärtes Ziel es war, die Firma eToys zu zerstören. Weniger pathetisch ausgedrückt: Es ging darum, den Wert der eToys-Aktien mit allen zur Verfügung stehenden Mitteln so weit wie möglich nach unten zu drücken. In den folgenden Wochen griffen Aktivisten die Website von eToys mit verschiedenen Mitteln (zum Beispiel virtuelle Sit-Ins) an, die, so las man in einer augenzwinkernd bis ernst gemeinten Pressemitteilung von RTMark,²⁸ für den darauffolgenden 70-prozentigen Wertverlust der eToys-Aktien in der Nasdaq-Notierung verantwortlich gemacht wurden. Wie Reinhold Grether, Internet-Forscher und Mitentwickler der *Toywar*-Kampagne, schrieb, nutzte man dabei den sowieso im Abstieg begriffenen Trend der eToys-Aktie und münzte diese Marktwertverluste in der Außendarstellung geschickt in einen Erfolg für etoy um. etoy-Unterstützer waren in sämtlichen mit eToys befassten Investorenforen kontinuierlich präsent und streuten dort entsprechende Negativ-Nachrichten. Für die „virtuellen Sit-Ins“ wurde eine neue Version der FloodNet-Software eingesetzt, die von der Gruppe Electronic Disturbance Theatre (EDT) ursprünglich zur Unterstützung der mexikanischen Zapatistas entwickelt worden war. Das raffinierteste Skript war wahrscheinlich „killer-toy.html“, ein nicht-lineares Skript, das die Warenkörbe auf eToys.com unablässig füllte, ohne jemals einen Kauf zu tätigen. Es handelte sich dabei um automatisierte Anfragen, die – bildlich gesprochen – mit ihren virtuellen Einkaufswagen über die eToys.com-Seiten zogen, Kinderspielzeug tausendfach in diesen Einkaufswagen stapelten – und natürlich nie zur Kasse gingen. Das „virtuelle Shop-In“ hatte einzig und allein den Zweck, den eToys-Server zur Abarbeitung von Routinen anzuhalten und letztendlich zu überlasten. Auch wenn von Seiten der Aktivisten betont wurde, dass man darauf achtete, den Server nur kurzfristig anzugreifen und unter keinen Umständen völlig außer Gefecht zu setzen (weil es, so Grether, um den „symbolischen Ausdruck der Breite des Protests und nicht um einen Terroranschlag“ ging), führte das virtuelle Sit-In zehn Tage in der Vorweihnachtszeit 1999 doch zur fast kompletten Blockade des eToys-Servers.²⁹ Die *Toywar*-Website³⁰ war ein symbolisches „Schlachtfeld“, ein Online-Solidaritäts-Spiel, in dem die UnterstützerInnen von etoy in Form von playmobilar-tigen, mit virtuellen Waffen ausgerüsteten Avataren aufmarschierten. Die Spielankündigung

²⁸ Pressemitteilung von RTMark: „Finally, total victory for etoy (rtmark press release)“, in: *rohrpost*, 26.1.2000 (<http://www.mikro.org/rohrpost>).

²⁹ Vgl. CNN-Bericht (<http://cnn.com/TRANSCRIPTS/9912/17/mlld.00.html>).

³⁰ *Toywar* (<http://www.toywar.com/>).

las sich folgendermaßen: “On your team, thousands of players. Your opponents: eToys and its shareholders—as long as they still own shares. The stakes: art, free expression and life on the Internet.” Die Pro-etoy-Community wurde auf dem Höhepunkt der Kampagne durch 1798 Avatare visualisiert, die auf der Website demonstrativ Stellung bezogen. etoy und RTMark setzten mit der *Toywar*-Plattform der normalerweise bilderlosen, strukturellen Gewalt(strategie) der Ökonomie im Netz eine eben diese bilderlose Gewalt visualisierende Strategie entgegen. Birgit Richard schreibt dazu: „Die [mediale] Gewalt ist bilderlos, deshalb muss das Imaginäre Futter bekommen: etoy nutzen die Symbole ökonomischer Bildermacht und die Kriegsmetapher in spielerischer Form. Sie bebildern ihren [...] Kampf gegen eine Spielzeugfirma, um die abstrakten Vorgänge der Gewalt zu zeigen, die für Nicht-Eingeweihte nur schwer nachvollziehbar sind und erreich[t]en [so] den Support einer großen Webcommunity.“ (Richard 2001, S. 205).³¹ Nach drei Monaten ließ eToys.com Ende Januar 2000 die Klage gegen die Künstlergruppe fallen – nicht zuletzt auch wohl wegen der heftigen Gegenreaktionen, die die Firma zu spüren bekommen hatte.³² Dieser spektakuläre Erfolg hat gezeigt, dass das Internet beziehungsweise die Nutzung kleiner oder taktischer Medien durch eine globale Netzgemeinschaft von Aktivisten in günstigen Fällen, so Reinhold Grether, die Selbstorganisation einer „Gegen-Macht“ erlaubt, die einen gut organisierten Gegner an die Wand spielen kann.

RTMark

<http://www.rtmark.com>

Eine der Hauptaufgaben der Künstler- und Aktivistengruppe RTMark (sprich: „arty mark“, ein Wortspiel mit „trademark“ und „arty“) besteht darin, subversive Aktivitäten zu finanzieren. Die US-amerikanische Gruppe unterstützt Leute finanziell, die zum Beispiel großen Konzernen kleine Streiche spielen wollen. Auf der Website von RTMark befindet sich eine öffentlich einsehbare Datenbank („The Mutual Funds“) mit verschiedenen „Fördertöpfen“ für subversive Aktivitäten. RTMark sieht die Aufgabe der „Mutual Funds“ darin, Auftraggeber und Auftragnehmer zusammenzuführen. Ähnlich wie an der Börse können Geldgeber in verschiedene Unternehmungen investieren. Die „Dividende“ ist nicht finanzieller Natur, sondern besteht in der Aufmerksamkeit in den Massenmedien und in persönlicher Genugtuung. So wurde die Barbie Liberation Organisation (BLO) über die „Mutual Funds“ finanziell unterstützt. Die Aktion bestand darin, in einem Supermarkt die Sound-Chips von Barbie- und G.I.-Joe-Puppen auszutauschen. Danach sagten die G.I.-Joes „Wanna go shopping?“ und die Barbies „Dead

³¹ Zur strukturellen Gewalt im Netz, zur performativen Eigenschaft von Domainnamen im Netz und zu aktuellen Formen des Netzaktivismus (unter anderem etoy, RTMark) vgl. auch Birgit Richard, „Am Anfang war das Wort: Domain war’s! Zur Gewalt des Eigennamens in virtuellen Welten“, in: *Kunstforum International*, Bd. 153, Januar-März 2001, S.202-229.

³² etoy.AGENT027: “VICTORY*VICTORY*VICTORY*VICTORY*VICTORY!”, in: *Nettime*, 25.1.2000 (<http://www.nettime.org/nettime.w3archive/200001/msg00143.html>).

men tell no lies“. In einem anderen Projekt versteckte ein Computerprogrammierer im Auftrag von RTMark zwei schwule Polizisten in dem Videospiel SimCopter. Desweiteren unterstützte RTMark die Schweizer Netzkunstgruppe etoy bei ihrer juristischen Auseinandersetzung mit dem amerikanischen Spielzeugversand Etoys. Auch die Website vote-auction.com der Gruppe Übermorgen.com, auf der zur amerikanischen Präsidentenwahl 2000 Wählerstimmen meistbietend versteigert wurden, wurde von RTMark unterstützt.

Immer wieder irritiert die Gruppe Internetbenutzer durch ‚gefakte‘ Webseiten, die den offiziellen Seiten von Politikern und Unternehmen zum Verwechseln ähnlich sehen. Ziel solcher Fakes wurde unter anderem schon George W. Bush, dessen angeblichen Kokain-Erfahrungen unter der Adressen GWBush.com in Erinnerung gerufen wurden. In einer Pressekonzferenz forderte Bush daraufhin vor laufender Fernsehkamera, dass „die Freiheit ihre Grenzen“ haben müsse und stellte sich so selbst bloß.

Weitere gefakte Websites waren unter anderem die der internationalen Organisationen GATT (Global Agreement on Tariffs and Trade) www.gatt.org und die der World Trade Organisation WTO.org (beide 2001). Über Anfragen, die von anderen Handelsorganisationen an die gefakte WTO-Website gerichtet wurden, nahm RTMark im Namen der WTO Kontakt mit Interessenten auf. In ihrer Aktion „The Yes Men“ (2001-2002) schickte die Gruppe einen gewissen Andy Bichelbaum als einen offiziellen Vertreter der WTO zu internationalen Konferenzen (unter anderem in Salzburg), wo er Erstaunliches zur Lage der Weltwirtschaft berichtete, die „Faulheit der Italiener“ verurteilte und das Ende der WTO verkündete (vgl. das Doku-Video auf der Website). Aus einer Selbstdarstellung der Yes Men:

The Yes Men sind die Töchter einer Website: www.gatt.org. Geboren zu einem Zeitpunkt, als das alte „General Agreement on Tariffs and Trade“ (GATT) bereits durch die Welthandelsorganisation (WTO / World Trade Organisation) ersetzt worden war, hat [gatt.org](http://www.gatt.org) die Aufmerksamkeit von CEOs, JuristInnen, JournalistInnen und anderen Splittergruppen der westlichen herrschenden Klassen auf sich konzentriert. Die Leute hinter der Website haben in den vergangenen zwei Jahren mit großem Vergnügen Einladungen zu internationalen Tagungen (<http://theyesmen.org/wto/>, <http://theyesmen.org/finland/>) und etablierten Fernsehsendungen angenommen (<http://theyesmen.org/tv.html>), und zwar als Vertreter der WTO. Ihre berühmt-berüchtigten PowerPoint-Präsentationen werden gerne als „Naked Lunch der Globalisierung“ bezeichnet (siehe besonders www.theyesmen.org/hamburger). In allen Fällen wurden The Yes Men von Personen eingeladen, die die Parodie (<http://gatt.org/>) für die offizielle Website der WTO (<http://www.wto.org/>) hielten.

Kürzlich, am 21. Mai, kündigte ein Vertreter der Welthandelsorganisation einem schockierten, aber Anteil nehmenden Publikum in Sydney die Auflösung seiner Organisa-

tion an (<http://theyesmen.org/tro/disband.rtf>, <http://theyesmen.org/tro/cpa.html>). Er gab bekannt, dass sich die WTO als neue Organisation rekonstituieren werde, und zwar mit dem erklärten Ziel, statt der Reichen nun die Armen dieser Welt zu unterstützen. (http://gatt.org/trastat_e.html).

Diese sensationelle Ankündigung rief weltweites Echo hervor, unter anderem eine erregte Debatte im kanadischen Parlament, wo der Abgeordnete John Duncan im Plenarsaal das Wort ergriff und fragte, „welche Auswirkungen dies auf unsere Positionen zu Holz, Landwirtschaft und anderen Streitfragen bezüglich des Welthandels haben“ werde.

Zu diesem Zeitpunkt prangerte das Hauptquartier der WTO in Genf den „Vertreter“ als Hochstapler an: „Obwohl wir den Humor [des Hochstaplers] zu schätzen wissen, möchten wir nicht, dass angesehenere Nachrichtenorganisationen wie die Ihre zu denen zählen, die hinters Licht geführt werden.“ „Diesmal handelt es sich nicht um Humor“, sagte Andy Bichlbaum, der die WTO in Sydney „repräsentierte“. „Wir wollen die WTO tatsächlich auflösen und ihre Charta umschreiben, sodass die Armen von der Handelspolitik profitieren, statt darunter zu leiden.“

Bei früheren Auftritten hofften The Yes Men, beim Publikum diverser Veranstaltungen Entsetzen hervorzurufen, indem sie Ideen zum Freihandel auf ihre logischen Konsequenzen hin zuspitzten. Im September 2000 setzten sie sich vor einem positiv gestimmten Publikum internationaler JuristInnen im österreichischen Salzburg für den Verkauf von Wählerstimmen an die meistbietende Firma ein (<http://theyesmen.org/wto/ppt/>).

Im Juni 2001 stellten sie einem begeisterten Publikum von TextilforscherInnen in Tampere, Finnland, den Management-Freizeitanzug vor. Diese Telepräsenz-Technologie soll es ManagerInnen ermöglichen, ArbeiterInnen in so genannten Sweatshops mit Hilfe eines knapp einen Meter langen goldenen Phallus ferngesteuerte Elektroschocks zu verabreichen. (<http://theyesmen.org/finland/photos.html>).

Im Mai 2002 versuchten The Yes Men, skeptische Studierende der Universität Plattsburgh, New York, davon zu überzeugen, dass das Welthungerproblem mit Hilfe des Recyclings von McDonald's-Hamburgern (<http://theyesmen.org/hamburger/>) aus Post-Konsumenten-Abfall zu lösen sei.

Die neueste Aktion von RTMark besteht aus der gefakten Website Dow-Chemical.com (2002/2003), auf der sich der gleichnamige amerikanische Chemie-Konzern zu seiner Rückzugs- und Nicht-Entschädigungs-Strategie aus dem verseuchten Bhopal bekennt. Durch einen Chemie-Unfall starben in der indischen Stadt Bhopal in den 1984 Jahren Tausende Menschen. Diese Website führte aufgrund einer gerichtlich angeordneten „einstweiligen Verfügung“ („temporary injunction“) nicht nur zu einer temporären Schließung der gesamten The Thing-Website durch den Provider Verio, sondern auch zur Kündigung des Vertrag mit The

Thing zum 28. Februar 2003 durch den Provider (vgl. dazu den Text von Martin Conrads, „Den Netzaktivismus auf die Straße tragen“, in: *Statement-Reader Die Offene Stadt: Anwendungsmodelle*, hrsg. v. Marius Babias und Florian Waldvogel, Essen 2003).

DETOURNEMENT SOZIALER TECHNOLOGIEN

Übermorgen.com

<http://www.ubermorgen.com>

Nach der zeitweiligen Loslösung von der von ihm mitbegründeten, sich als Firma tarnenden Künstlergruppe etoy im Jahr 1999 gründete Hans Bernhard (a.k.a. etoy.HANS, etoy.BRAINHARD, hans_extrem, e01) zusammen mit Maria Haas (a.k.a. Liz oder Lizvix) die Firma *ubermorgen.com*, die in Deutschland, Österreich, der Schweiz und Bulgarien registriert ist. Handlungsfelder von *Übermorgen* sind Software-Entwicklung, Lizenz-Verträge, angewandtes Design und Beratungstätigkeiten für multinationale Unternehmen sowie Aktions-, Performance- und massenmediale Kommunikationskunst. *Übermorgen* bezeichnet seine Aktivitäten als „Media Hacking“ und verbreitet seine Inhalte mittels „Guerilla-Marketing-Taktiken“ bzw. mittels des so genannten „Schock-Marketing“. Auch das auf einer Idee von James Baumgartner basierende und von *Übermorgen* weiterentwickelte Projekt *[V]ote-auction* (2000) (heute www.vote-auction.net) basierte auf dieser Marketing- und Kommunikations-Strategie. Unter dem eingängigen Slogan „Bringing capitalism and democracy closer together!“ wurde US-amerikanischen Wählern pünktlich zur Präsidentschaftswahl 2000 (G. W. Bush vs. Gore) die Möglichkeit angeboten, ihre Stimme im Internet über eine Online-Auktions-Plattform meistbietend zu versteigern. Die angebotenen Stimmen eines ganzen US-Bundesstaates sollten dann an den Meistbietenden verkauft und der entsprechende Anteil am Erlös den Stimmenverkäufern ausbezahlt werden. In beneidenswerter Klarheit wurde so die Verschränkung von Kapital und (Stimm-)Macht demonstriert. Während individueller Stimmenverkauf in allen US-Bundesstaaten und auf Bundesebene zwar streng verboten ist, wird dieses Verbot nämlich durch massive (legale) Wahlkampfspenden großer Wirtschaftsunternehmen permanent unterlaufen. Die Resonanz in den Massenmedien war überwältigend. In den drei Monaten vor der Wahl gab *Übermorgen* am Tag bis zu fünf Radio- und TV-Interviews und bis zu 20 Interviews per E-Mail und Telefon. Verschiedene US-amerikanische Staatsanwälte kündigten insgesamt 13 Gerichtsverfahren gegen *Übermorgen.com* an. In vier US-Bundesstaaten wurden wirkliche Verfahren eingeleitet (Missouri, Chicago, Massachusetts und Wisconsin) und einstweilige Verfügungen ausgesprochen. Aufgrund eines Richterspruchs in Illinois wurde die Domain der Website zweimal gesperrt, konnte aber unter leicht verändertem Namen jeweils wieder – rechtzeitig für die Wahlen selbst – online gehen. Der

Fernsehsender CNN berichtete sieben Mal über *[V]ote-auction* und widmete dem Thema am 24. Oktober 2000 eine halbstündige Folge der Justiz-Sendung „Burden of Proof“ unter dem Titel „Bidding for Ballots: Democracy on the Block“. Insgesamt sollen bis zu 450 Millionen Medienkonsumenten von der Aktion erfahren haben. Da den Vertretern von *[V]ote-Auction* jedoch letztendlich keine illegalen Aktivitäten nachgewiesen werden konnten, wurden die Gerichtsverfahren in allen Bundesstaaten (außer in Illinois) eingestellt. Übermorgen stellt alle in diesen Verfahren generierten Originaldokumente (Klagen, Gerichtsurteile, etc.) in Ausstellungen aus und nennt diese „foriginals“ (eine Kombination aus „forged“/gefälscht und „original“). Die so realisierte permanente Verquickung von Fakt und Fiktion verweist auf einen extrem erweiterten Materialbegriff, der für Übermorgen auch (internationales) Recht, Demokratie und globale Kommunikation (Input-Feedback-Loops) umfasst.

Institute for Applied Autonomy (IAA)

<http://www.appliedautonomy.com>

Das US-amerikanische Institute for Applied Autonomy (IAA) untersucht die Strukturen des öffentlichen Raums im Zeitalter elektronischer Überwachung, analysiert die Grenzen der freien Meinungsäußerung und entwickelt technologische Lösungen, die AktivistInnen bei subversiven Aktionen unterstützen sollen. Der wichtigste Tätigkeitsbereich des IAA ist das Feld der so genannten „Contestational Robotics“ oder „Widerständigen Robotik“. Das IAA kehrt die traditionellen Beziehungen zwischen Robotern und autoritären Machtstrukturen um, indem es Roboter entwickelt, die den Bedürfnissen, den Anforderungen und den finanziellen Möglichkeiten kulturell widerständiger Kräfte entsprechen. Es hat bislang vier „Contestational Robots“ gebaut: „GraffitiWriter“, „StreetWriter“, „Little Brother“ („Pamphleteer“) und die Netzapplikation „iSee“. Der „GraffitiWriter“ ist ein kleiner Roboter, der programmiert bzw. über das Internet ferngesteuert werden kann, um beliebige Texte mit einer Geschwindigkeit von 15 km/h auf horizontalen Flächen aufzutragen. Der Schreib- bzw. Druckprozess ähnelt dabei dem eines Nadeldruckers. Er kann in überwachten Räumen oder während öffentlicher Veranstaltungen eingesetzt werden. Beim „StreetWriter“ handelt es sich um einen umgebauten Kleintransporter, der während der Fahrt Nachrichten auf die Straße schreiben kann. Diese Nachrichten können von hohen Gebäuden oder niedrig fliegenden Flugzeugen gelesen werden und bis zu mehreren Hundert Metern lang sein. „Little Brother“ („Pamphleteer“) ist ein kleiner humanoider Roboter, der unermüdlich Flugblätter verteilen kann. Das aktuellste Projekt des IAA ist „iSee“. Dabei handelt es sich um eine netzbasierte Applikation, die die Standorte von Closed-Circuit-Überwachungskameras (CCTV) im öffentlichen Raum auflistet. Die BenutzerInnen können mittels eines PDA (Personal Digital Assistant) diejenigen Wege und Routen herausfinden, die nicht durch Kameras überwacht werden, und sich so unbeobachtet durch den öffentlichen Raum bewegen.

Heath Bunting / Kayle Brandon

<http://www.irational.org>

Der britische Künstler Heath Bunting interessiert sich für die Herstellung von Kommunikation und die Schaffung sozialer Kontexte und Verbindungen von virtuellem und physischem Raum. Während Bunting in den 1980er Jahren mittels Graffiti psycho-geographische Interventionen in urbane Räume vollzog, sich im Kontext von Fax- und Mail Art und Londoner Piratenradios engagierte, wurde er in den 1990er Jahren zu einem der exponiertesten Vertreter der so genannten „net.art“, einer informellen Gruppe vorrangig europäischer NetzkünstlerInnen, die dem Mitte der 1990er Jahre einsetzenden Internethype kritisch gegenüberstanden. Zwischen 1994 und 1997 entwickelte Bunting künstlerische Projekte vorwiegend im Internet. Heath Bunting war in dieser Zeit einer der profiliertesten Netzkünstler und einer der ersten, die sich aus der Netzkunst wieder zurückzogen. Er erkundet Reiserouten für die unkontrollierte Überwindung europäischer Staatsgrenzen. Das von der Tate Modern London in Auftrag gegebene Internet-Projekt *BorderXing Guide* (2001) dokumentiert die illegalen Grenzübertritte innerhalb und außerhalb Europas, die Heath Bunting und Kayle Brandon in den letzten Jahren im Selbstversuch vollzogen. *BorderXing Guide* versteht sich als Anleitung zum Grenzübertritt ohne Papiere. Als Briten besitzen Bunting und Brandon zwar EU-Pässe, gehen jedoch solche Wege durch Wälder, Flüsse, Berge und Tunnel, die Flüchtlinge und Papierlose wählen müssen, um von einem Land in ein anderes zu gelangen. Die Informationen, die Bunting und Brandon in Form von Fotografien, detaillierten Aufzeichnungen, Karten und lakonischen Kommentaren zu den einzelnen Routen auf der Website zur Verfügung stellen, sind jedoch nicht für jede/n InternetnutzerIn zugänglich. Um Zugang zu dem Projekt zu erhalten, muss man physisch zu einem der weltweit verteilten „Social Servers“ reisen (Orte mit öffentlichem Internet-Zugang), die Buntings Vertrauen genießen. Die Zugangsbegrenzung zu *BorderXing Guide* verfolgt dabei mehrere Ziele: Zum einen geht es um die Einbettung des Virtuellen in einen spezifischen sozialen Kontext. Zum anderen verweist das Projekt auf den paradoxen Zusammenhang zwischen einer immer besseren Vernetzung innerhalb der westlichen Welt (Geld, Güter, Informationen) und deren gleichzeitiger Abschottung gegenüber unerwünschten Einwanderern. *BorderXing* spielt mit seinen Prinzip der „umgekehrten Authentifizierung“ zudem auf die alltäglichen Erfahrungen illegaler GrenzgängerInnen an.

Renaud Auguste-Dormeuil

Seit Mitte der 1990er Jahre widmet sich Renaud Auguste-Dormeuil der Untersuchung von Überwachungs- und Sicherheitssystemen, deren Präsenz im urbanen öffentlichen Raum heute allgegenwärtig geworden ist. Dabei geht es dem Künstler nicht, wie den Hackern, um das Aufzeigen möglicher Sicherheitslücken und Schwachstellen, sondern darum, auf die

ubiquitäre Präsenz dieser Systeme hinzuweisen und potentielle Schutz- oder Gegenmaßnahmen gegen das Dispositiv der Kontrolle zu entwickeln. Er zeichnet die Standorte von Überwachungskameras in Stadtpläne ein, die es ihren BenutzerInnen erlauben, sich unbeobachtet durch den Stadtraum zu bewegen. Die auf diesem Prinzip basierende vierteilige Posterserie *Quatre itinéraires d'importantes manifestations parisiennes autorisées par la Préfecture de Police (Vier wichtige, von der Polizeipräfektur genehmigte Demonstrationsrouten in Paris, 1998)* listet die Positionen von Überwachungskameras an vier wichtigen Demonstrationsachsen in Paris auf. Akribisch verzeichnet jede Karte, deren Layout sich an der offiziellen Straßenverkehrskarte der Pariser Bushaltestellen anlehnt, welche Institution entlang dieser vier Routen welche Arten von Kameras betreibt. Von Ende 1999 bis Anfang 2000 bot der Künstler eine *Paris Mabuse Visit Tour* an (Video, 60 min.). Dabei handelte es sich um eine einstündige touristische Stadtrundfahrt durch Paris in einem Kleinbus, der die TeilnehmerInnen zu den „ungewöhnlichsten Standorten von Videoüberwachungskameras“ im 1. und 2. Arrondissement brachte. Im Video *De l'art de se camoufler chez soi (Von der Kunst, sich zu Hause zu verstecken, 1998, 40 min.)* führt der Künstler, ähnlich den Video-Heimwerkertipps im Baumarkt, die Konstruktion falscher Flurdecken, doppelter Wände und Bücherregale vor, hinter denen man Zuflucht vor Verfolgern finden kann. Ein weiteres Projekt, das sich mit der Ambivalenz von Lokalisierung und Kontrolle im Zeitalter der Satellitennavigation befasst, ist *GPS (2001, variable Maße)*. Die zunächst ästhetisch-dekorativ erscheinende, in den Farben Gelb, Magenta und Grün gehaltene abstrakte Wandmalerei im Vortragsraum der Kokerei Zollverein erweist sich auf den zweiten Blick als eine Visualisierung der Funktionsweise des Global Positioning System (GPS). GPS erlaubt weltweit eine auf 30 Meter genaue Ortung von Personen oder Objekten, die mit einem entsprechenden Empfänger ausgestattet sind.

Surveillance Camera Players (SCP)

<http://www.notbored.org/the-scp.html>

Die Surveillance Camera Players spielen seit Mitte der 1990er Jahre kurze Stücke vor den Überwachungskameras von New York. Ihre erste Aufführung fand im Dezember 1996 in der U-Bahn-Station Union Square statt. Gegeben wurde eine Drei-Minuten-Version von Alfred Jarrys *Père Ubu* – genau 100 Jahre nach der Premiere des skandalumwitterten Avantgardestücks. Weil die Überwachungskameras (noch) keinen Ton aufzeichnen können, werden alle Stücke stumm aufgeführt. Dialoge werden nicht gesprochen, sondern, ähnlich wie die Zwischentitel im Stummfilm, auf Texttafeln gezeigt. Inzwischen gehören neben selbstgeschriebenen Stücken auch Kurzfassungen von Werken wie Samuel Becketts *Warten auf Godot*, Edgar Allan Poes *Der Rabe* oder George Orwells *1984* zum Repertoire der Surveillance Camera Players. Das Publikum der Kurzstücke besteht aus dem Sicherheitspersonal, das die Bilder der Überwachungskameras ansieht, und aus den Passanten, die zufällig an den

Aufführungsorten der SCP vorbeikommen. Die Aufführungen enden zumeist damit, dass Wachmänner der bespielten Orte oder Institutionen die Gruppe auffordern, aufzuhören und nach Hause zu gehen. Auf der Website der Gruppe findet sich neben akribischen Beschreibungen der Aufführungen auch eine Reihe von theoretischen Texten über die Aktivitäten der SCP. Diese bringen ihre Aktionen unter anderem mit Antonin Artauds *Theater der Grausamkeit*, dem politischen Straßentheater von Gruppen wie zum Beispiel dem *Living Theatre* und Guy Debords Konzeption der „Konstruktion von Situationen“ in Verbindung. Das Internet benutzen die SCP nur, um Informationen über ihre Aktivitäten zu verbreiten.

Bureau of Inverse Technology (BIT)

<http://www.bureauit.org/>

Das Bureau of Inverse Technology wurde 1992 von Natalie Jeremijenko in Melbourne, Australien, gegründet, 1997 als Firma in Delaware (USA) etabliert und operiert seither weltweit. Das Büro fungiert auch als Informationsagentur, die die Bedürfnisse des Informationszeitalters bedient. Die angebotenen Produkte umfassen Wirtschaftsindizes, Netzwerkeinrichtungen und Visualisierungsvorrichtungen, wie auch Videos, Musik oder spezielle Installationen. Die „Suicide Box“ (1996) bestand aus einer automatischen Kamera, die an der Golden Gate Bridge in San Francisco installiert wurde und auf vertikale Bewegungen reagierte, die von der Brücke ausgingen. Jede dieser vertikalen Bewegungen wurde aufgezeichnet. „BIT Plane“ (1997-99 [<http://www.bureauit.org/plane/>]) ist ein umgebautes fernsteuerbares Spionage-Modellflugzeug (Spannweite 20 inches [= 50 cm]), das, ausgerüstet mit einer Videokamera, über ‚feindliches‘ Territorium fliegen und dort Aufnahmen machen kann. Aufgrund seiner geringen Abmessungen kann es auch solches Gelände überfliegen, das für andere Flugkörper unzugänglich ist. Der erste Überwachungsflug fand 1997 über dem Silicon Valley in Kalifornien statt: “[!]n an aerial reconnaissance over the Silicon Valley California 1997, bit plane flew solo and undetected into the glittering heartland of the Information Age. Video generated in this exercise includes footage retrieved over no-camera zones Apple, Lockheed, Nasa Ames, Netscape, Xerox Parc, Interval Research, Atari, Hewlett Packard, Oracle, Yahoo, SGI, Sun Microsystems.” (vgl. Website)

0100101110101101.org (Bologna)

<http://0100101110101101.org/>

http://0100101110101101.org/home/life_sharing/

<http://0100101110101101.org/home/vopos/>

Das italienische Netzkunst-Duo, das sich der Einfachheit halber auch „zero one dot org“ nennen lässt, ist Ende der 1990er Jahre durch seine radikalen Kopier-Projekte bekannt geworden, in denen es sich mit Fragen von Original und Reproduktion, Autorenschaft, Copy-

right und Plagiat im Internet auseinander setzte. Seit Anfang 2001 arbeitet es an der Realisierung seines bislang umfangreichsten und aufwendigsten Projektes, das unter dem Titel *Glasnost (Transparenz)* läuft. Hierbei handelt es sich um ein Selbstüberwachungssystem, das unablässig Daten über das Leben der beiden Mitglieder von 0100101110101101.org sammelt und diese Informationen unzensuriert öffentlich macht. Der erste Schritt zur Realisierung von *Glasnost* war das Projekt *life_sharing* (2001). *life_sharing*, ein Anagramm des Begriffs *file sharing*, ermöglicht Internet-NutzerInnen den direkten Online-Zugang zum Computer der Künstler. Alle auf der Festplatte befindlichen Daten – Texte, Bilder, Software, privater Mailverkehr, etc. – unterliegen der Gnu Public License (GPL) und sind insofern frei zugänglich und kopier- und manipulierbar: „*life_sharing* is a brand new concept of net architecture turning a website into a hardcore personal media for complete digital transparency.“ Seit dem Beginn des Projektes *VOPOS* (Januar 2002) trägt das Duo GPS-Transmitter (Global Positioning System), die in regelmäßigen Abständen die Koordinaten der Künstler an deren Website senden, auf die die Öffentlichkeit jederzeit zugreifen kann. Die Daten werden auf Stadtkarten übertragen und visualisieren somit ständig den aktuellen Aufenthaltsort der Künstler: „*Glasnost* explores the contradictions of privacy in the era of information technology, mirroring the obsession of society in collecting and archiving personal data.“

SICHTBARMACHUNG VON MACHTSTRUKTUREN IN RÄUMEN ELEKTRONISCHER KOMMUNIKATION

Marko Peljhan / Projekt Atol: „makrolab“ (1997-2007)

<http://makrolab.ljudmila.org>

Marko Peljhans *makrolab* wurde erstmals während der *documenta X* 1997 in Kassel aufgebaut, operierte Anfang 2000 an der Westküste Australiens und im Frühsommer 2002 in Schottland. Beim *makrolab* handelt es sich um eine autonome Forschungs-, Arbeits- und Wohneinheit, vom Aussehen her einem *Skylab* nicht unähnlich. Graham Mann, einer der Besucher im *makrolab II*, das Anfang 2000 auf Rottneest Island vor der Westküste Australien installiert wurde, beschreibt dieses folgendermaßen: „*Makrolab II* is a Gibsonesque hexagonal prism bristling with antennae and weather instruments. It was shipped onto the island in a Seatainer, then plugged into communications networks and satellite links. It produces its own power, recycles its water, and supports a crew of up to seven. [...] Like a spaceship, it needs to support its occupants without drawing on the local, ubiquitous, market-oriented, oversupply of consumer goods. It moves to different locations to sample different weather patterns, animal movements and datascares which Earth has to offer.“³³ Diese mobile Forschungssta-

³³ Graham Mann, in: Bruce Sterling, *A Visit to the Makrolab*, in: Nettime, 21.4.2000 (<http://www.nettime.org>).

tion kartographiert mit Hilfe von allerlei technischem Gerät die „Topographie der Signale“³⁴ im gesamten elektromagnetischen Spektrum – als eine Art privates ECHELON-System:³⁵ Es ist ausgerüstet mit Sende- und Empfangsantennen,³⁶ die verschiedene Signalbereiche erfassen und dort zirkulierende Datenströme aufzeichnen können. Diese Datenströme enthalten Informationen aus den unterschiedlichsten Quellen: aus privaten Telefongesprächen, satellitengesteuerten Navigationssystemen und militärischen und wirtschaftlichen Kommunikationen. Neben der Telekommunikation kartographiert das Projekt außerdem auch diverse natürliche Phänomene: „[T]his is the territory through which phone conversations, faxes, radio and TV programs, and reports transmitted over satellites and space probes flow. In short, this is a world in which ordinary phone conversations intermingle with strategic debates between corporations or military headquarters, and with atmospheric phenomena, meteorological shifts and paths of bird migrations.“³⁷ In Kassel klinkte sich das *makrolab* in Telefonate und andere Arten von Kommunikationen ein, die in dieser Zeit über internationale INMARSAT-Telekommunikationssatelliten liefen. Der amerikanische Künstler Brian Springer, der einige Zeit im *makrolab* arbeitete, schrieb später: „Wir näherten uns dem Himmel über dem Lutterberg als einer lebendigen Bücherei, aus deren Regalen uns Stimmen, Bilder und Datenkommunikation entgegenströmten.“³⁸ Untersucht wurde zum Beispiel, so Marko Peljhan, wer die INMARSAT-Satelliten zu welchen Zwecken benutzte, „wie bestimmte Machtstrukturen [...] sich der Technologie bedienen und was da verborgen wird“, und auch die Anfälligkeit privater Telekommunikation.³⁹ Das *makrolab*, das als zehnjähriges Forschungsprojekt geplant ist, wird abseits großer Städte oder Ausstellungen an möglichst abgelegenen Orten aufgebaut (Lutterberg bei Kassel, Rottneest Island vor der Westküste Australiens, Athol Estate in Schottland) und soll 2007 konsequenterweise mit einer Installation in der Antarktis abgeschlossen werden. Peljhan verfolgt in diesem Projekt eine Strategie, die er „Insulation /

³⁴ Dieter Daniels, Text zu Marko Peljhan, in: *ciTy. Internationaler Medienkunstpreis 2000*, Südwestrundfunk Baden Baden, ZKM Zentrum für Kunst und Medientechnologie Karlsruhe, 2000, S. 94-97, hier: S. 95.

³⁵ „What makrolab does, is basically using the principle of ECHELON.“ (Marko Peljhan, „makrolab | lecture 310897. the makrolab lecture in the 100 days program“, *documenta X*, Kassel, 31.08.1997). ECHELON ist ein von der amerikanischen National Security Agency (NSA) betriebenes weltweit operierendes elektronisches System zum Abhören kommerzieller Telekommunikationssatelliten. Es wird von den Vereinigten Staaten vor allem für die Überwachung nichtmilitärischer Ziele – Regierungen, Organisationen oder Firmen außerhalb der USA – unter anderem für Wirtschaftsspionage eingesetzt. Vgl. Oliver Schröm, „Verrat unter Freunden. Wie die NSA, Amerikas größter und verschwiegenster Geheimdienst, deutsche Firmen ausspioniert und dabei einen Milliarden Schaden anrichtet“, in: *Die Zeit*, 30.9.1999, S. 13ff.

³⁶ Das makrolab verfügt über „access to a wide spectrum of short wave, L-Band, and mobile radio frequencies, tele-printer and satellite telephone systems (INMARSAT), Internet and satellite video transmissions.“ (Johannes Birringer, „MAKROLAB – A Heterotopia“, in: *Performing Arts Journal*, Herbst 1998 (<http://www.makrolab.ljudmila.org/reports/heterotopia.htm>)).

³⁷ Igor Zabel, „Umetnost, moč in javnost. Model Makrolab“ [Art, Power and the Public. Makrolab Model], in: *M'ars. Časopis Moderne galerije Ljubljana*. Jg. IX, 1997, Nr. 3-4. 1-8, S. 7.

³⁸ Brian Springer, in: Tilman Baumgärtel, „Kunst als Lauschangriff. Ein Gespräch mit Marko Peljhan über dessen Projekt Makrolab“, in: *Telepolis*, 6.10.1998 (<http://www.heise.de/tp/deutsch/special/info/6299/1.html>). Auch veröffentlicht in: Tilman Baumgärtel, *net.art. Materialien zur Netzkunst*, Nürnberg 1999, S. 136-141.

³⁹ Zu Greenpeace sagte Marko Peljhan: „Die wissen wahrscheinlich gar nicht, dass jedes Mal, wenn sie das Satelliten-Telefon auf ihrem Boot benutzen, ihre Gegner alles mithören können. Oder sie wissen es, aber es ist ihnen egal. Ich finde es sehr wichtig zu zeigen, dass die Privatsphäre nicht so geschützt ist, wie es die meisten Leute wahrscheinlich annehmen.“ (Peljhan, in: Baumgärtel 1999, 138).

Isolation“ (Isolierung / Isolation) nennt. Es handelt sich dabei um eine Kombination aus vollkommener physischer Isolation und gleichzeitig totaler medialer Vernetzung mit der Außenwelt: “[T]he project is located external to the exhibition venue, it is not accessible to the ordinary public, and its crew is shut away in a special environment entirely separate from its surroundings. The essential feature of the project, however, is that their retreat into the isolated system does not mean the interruption of all forms of communication” (Zabel 1997, 6). Erscheint das Ziel einer Isolation in einem explizit auf Kommunikation ausgerichteten Projekt zunächst wie ein Widerspruch,⁴⁰ wird jedoch schnell klar, dass diese Kappung aller herkömmlichen Verbindungen einer maximalen Intensivierung der Untersuchung des immateriellen Territoriums der Signale dient. Das *makrolab* ist einerseits *vollkommen isoliert* und andererseits *voll vernetzt*. Es erscheint daher wie eine radikale Umsetzung des McLuhanschen Prothesenmodells.⁴¹ Die physisch-geographische Isolierung (bei gleichzeitiger Vernetzung) soll der Besatzung die Unabhängigkeit von und gleichzeitige Reflexion der (auch medial vermittelten) gesellschaftlichen Bedingungen ermöglichen: “Insulation / isolation is understood as a vehicle to achieve independence from and reflection of the actual entropic social conditions” (Peljhan, *d X*, 1997). Der deklarierte Rückzug aus dem Spektakel bzw. aus der Gesellschaft des Spektakels⁴² (Peljhan spielte in seinem Vortrag während der *documenta X* auf Guy Debord und die Situationisten an) soll einen Raum der Ruhe und der Reflexion eröffnen, von dem aus eine Art Vogelschau auf die Topographie der Signale möglich wird, die zwischen den Zentren zirkulieren.⁴³ Darüber hinaus sollen durch diese „insulation / isolation“ auch die Voraussetzungen für eine intensiv(iert)e Kommunikation unter den Besatzungsmitgliedern geschaffen werden. Peljhans These ist, dass wenige Individuen in einer solchen „intensiven Isolierung“ mehr „evolutionären Code“ produzieren können als große politische Bewegungen. Unter „evolutionärem Code“ versteht Peljhan die experimentelle Erforschung und Entwicklung von Strategien und Verhaltensweisen in zeitgenössischen und zukünftigen Gesellschaften, die zunächst in der Laborsituation des *makrolab* getestet werden, um später dann im alltäglichen Leben eingesetzt werden zu können. Genau hier liegt das *utopische* Potenzial des *makrolab*. Es geht zunächst um eine Bewusstmachung des immateriellen Datenraums, der sich wie eine neue Dimension über den materiellen Raum legt. Der zweite Schritt besteht in einer Verdeutlichung der in dieser Datensphäre vorhandenen antagonistischen Machtinteressen einschließlich ihrer Strategien des Datensammelns, der Überwachung und Kontrolle. Gegen diese Strategien hat das *makrolab* – dies ist der dritte Schritt – seine Taktik der „counter-surveillance“ entwickelt. Diese Taktik besteht in der Umkehrung bzw. in der Demokratisierung der erwähnten Strategien (wie sie zum Beispiel

⁴⁰ “Isolation of course, in a communication project sounds like a contradiction in terms.” (Peljhan, Vortrag *documenta X*, Kassel, 31.08.1997).

⁴¹ Vgl. Marshall McLuhan, *Die magischen Kanäle. Understanding Media*, Dresden 1994.

⁴² Vgl. Guy Debord, *Die Gesellschaft des Spektakels*, Berlin 1996.

⁴³ Daniels 2000, S. 95.

ECHELON verwendet), die normalerweise nur von institutionellen, staatlichen oder privatwirtschaftlichen Stellen betrieben werden können. Die Weitergabe der so gewonnenen Informationen an Dritte ist jedoch nicht legal. Peljhan sucht mit seinen Kollegen daher nach juristischen Möglichkeiten, diese Informationen trotzdem an die Öffentlichkeit zu bringen, um so über Struktur und Inhalt dieses normalerweise unsichtbaren Informationsraums aufzuklären. Es geht Peljhan und seinen Mitstreitern darum, der Öffentlichkeit taktische, juristische und technologische Mittel an die Hand zu geben, um sich selbst ein Bild von den Überwachungs- und Kontrollmethoden und -möglichkeiten zu machen, die normalerweise militärischen oder staatlichen Einrichtungen oder global agierenden großen Unternehmen oder Medienkonglomeraten vorbehalten sind.⁴⁴

world-information.org

<http://world-information.org/>

<http://www.t0.or.at/t0>

World-information.org ist eine vom Netzkultur-Verein Public Netbase (Wien) initiierte Ausstellung zu Themen der Herstellung, Manipulation, Kontrolle und Distribution von Informationen in der so genannten „Informationsgesellschaft“. Sie wurde 2000 in Brüssel, 2001 in Wien und Ende 2002 in Amsterdam gezeigt und wanderte im März 2003 nach Belgrad und danach nach New Delhi. Die Ausstellung fragt danach, wie Technologien die Gesellschaft verändern bzw. sich auf Gesellschaft, Politik, Kultur, Kunst und Wirtschaft auswirken. Auf 32 Informationsdisplays wird die Entstehung und Manipulation der öffentlichen Meinung sowie die Gefährdung der Public Domain durch aktuelle juristische und technische Entwicklungen im Bereich von Copyright und Urheberrecht, durch Monopolbildungen im Bereich der Massenmedien und durch die Implementierung von Kontrollstrukturen im Internet dargestellt. Außerdem setzt sich das Projekt mit der verschärften Sicherheitsgesetzgebung seit dem 11. September 2001 auseinander, die unter anderem den umfassenden Einsatz biometrischer Kontrolltechnologien vorsieht.

⁴⁴ Das makrolab erforscht in experimenteller Weise auch die juristischen Möglichkeiten des ‚öffentlichen Abhörens‘: “[T]he essential thing about [makrolab] is the demonstration of the possibility of the legal use of means for research on the telecommunications spectrum. Telecommunications are the most regulated part of legislation in all the countries of the world, and are crucial to projects which act to open and not close the problems.” (Marko Peljhan, “Strategije Minimalnega Odpora – Analiza Taktičnega Delovanja v Družbi Kontrole” [Strategies of Minimal Resistance – Analysis of Tactical Work in the Surveillance Society], in: *Svet umetnosti Tečaj za kustose sodobne umetnosti 1999: Geopolitika in umetnost* [The World of Art Curatorial Course for Contemporary Art: Geopolitics and Art]. Hg. v. OSI/SCCA, Ljubljana 1999, S. 60-63).

Dragan Espenschied / Alvar Freude: „insert_coin“ (2000/2001)

http://www.odem.org/insert_coin/

http://www.online-demonstration.org/insert_coin/imkp2001.html

Zwei Personen kontrollieren 250 Personen. Um die Kompetenz und Kritikfähigkeit der Anwender bezüglich des Alltagsmediums Internet zu überprüfen, kontrollierten und manipulierten Dragan Espenschied und Alvar Freude im Rahmen ihrer Diplomarbeit *insert_coin* den Web-Datenverkehr an der Merz-Akademie in Stuttgart. So verwandelten sie beispielsweise Suchmaschinen in Denunzier-Portale, veränderten aktuelle Meldungen auf Nachrichtensites; selbst Wörter in privater Email-Kommunikation, die über Web-Interfaces wie Hotmail abgerufen wurden, liefen durch den von Espenschied und Freude manipulierten Proxy-Server (Filter). Und niemand bemerkte es. Authentizität vorzutäuschen, war ein Leichtes, denn auch die Adressen (URLs), die Daten im Web unverwechselbar auszeichnen, wurden von Espenschied und Freude kontrolliert. Als sie das Experiment den Studierenden und MitarbeiterInnen der Akademie bekannt machten, interessierte sich jedoch so gut wie niemand dafür. Obwohl die beiden eine simpel zu befolgende Anleitung veröffentlichten, mit der jeder selbständig den Filter ausschalten konnte, nahm sich nur ein verschwindend geringer Teil der Studierenden eine Minute Zeit, um eine einfache Einstellung vorzunehmen und so wieder an ungefilterte Daten heranzukommen. Noch mehrere Monate nach dem Ende des Experiments war der Web-Zugriff von den meisten Computern der Akademie ausgefiltert. Das Experiment von Espenschied und Freude konnte beweisen, dass Manipulation von Internet-Inhalten sehr einfach und effizient funktionieren kann. Das Internet ist keinesfalls unkontrollierbar, ohne Hierarchien oder unabhängig von bestehenden Machtverhältnissen. Und die Benutzer bewegen sich unmündig in einem Medium, das jeden Tag mehr Bedeutung in Politik, Wirtschaft und Privatleben gewinnt.

Knowbotic Research: „Minds of Concern: Breaking News“

<http://www.krcf.org>

<http://www.unitedwehack.ath.cx/>

Das Projekt *Minds of Concern: Breaking News* der Künstlergruppe Knowbotic Research, das Anfang Mai 2002 in der Ausstellung *Open_Source_Art_Hack* im New Yorker New Museum gezeigt wurde,⁴⁵ besteht aus einer Rauminstallation sowie einem „Public Domain Scanner“, also einer Software, die so genanntes „Portscanning“ erlaubt, das heißt, mit dieser Software kann man kontrollieren, wie bestimmte Computer an das Internet angeschlossen sind, welche Türen („Ports“) offen, welche geschlossen sind. Mittels Port-Scanning kann man die Verwundbarkeit bestimmter Server feststellen. Dies ist legal, so lange man nicht durch offene Türen oder Fenster in fremde Computer eindringt. Die Künstler geben den BenutzerInnen die

⁴⁵ "Minds of Concern: Breaking News" (2002), als Teil des Ausstellungsprojektes *Open_Source_Art_Hack*, The New Museum, 3.5.-30.6.2002 (<http://www.netartcommons.walkerart.org/>, <<http://unitedwehack.ath.cx/>>).

Möglichkeit, ein solches Port-Scanning nicht etwa auf Servern großer multinationaler Konzerne durchzuführen, sondern auf Servern von Nicht-Regierungs-Organisationen und kleiner, medienkultureller Institutionen. Damit wollen sie auf die Verwundbarkeit derjenigen AktivistInnen aufmerksam machen, die sich für Datensicherheit einsetzen. Das Projekt musste letztendlich vom Netz genommen werden, da der Provider des Museums dem Museum mit juristischen Konsequenzen drohte. Matthew Mirapaul schrieb dazu in der *New York Times* am 13.5.2002: "The dispute calls attention to one of the very points the piece is intended to make. Because the lines between public and private control of the Internet are not yet clearly defined, what artists want to do may be perfectly legal, but that does not mean they will be allowed to do it."

ENTWICKLUNG AUTONOMER KOMMUNIKATIONSSYSTEME

Name.Space

<http://www.name.space.xs2.net/>

1996 gründete der New Yorker Video- und Medienkünstler Paul Garrin, der in den frühen 1980er Jahren Assistent der VideokünstlerInnen Nam June Paik und Shigeko Kubota war, das Projekt Name.Space. Das Projekt sollte es jedem Netznutzer unabhängig vom Domain Name System (DNS) des Internet ermöglichen, seinen individuellen Domainnamen einzurichten. Bereits 1996 waren viele der begehrten Domainnamen – besonders solche mit generischen Top Level Domains wie .com, .org, .net, von denen es bis vor kurzem nur sieben gab – vergeben.⁴⁶ Bisher hat die US-amerikanische Firma Network Solutions Inc. (NSI) ein von der amerikanischen Regierung zugeteiltes Monopol auf die kostenpflichtige Vergabe dieser Domainnamen (100 US \$ / Jahr pro Domainname). Wie viele Vertreter der internationalen Netzcommunity übte auch Paul Garrin fundamentale Kritik am Domain Name System (DNS), dem er eine künstliche Verknappung von Top Level Domains unterstellte. Laut Garrin stellt die Monopolmacht von NSI eine Privatisierung von öffentlichem Gut, der Verkauf von (künstlich knapp gehaltenen) Domainnamen eine Kommerzialisierung des öffentlichen Raums des Internet dar. Garrin dazu in einem Interview: „Ich betrachte das Internet als öffentlichen Raum – so wie die Straßen. In den USA werden jetzt immer mehr Straßen privatisiert. Wenn du auf eine Straße gehst, die jemand gekauft hat, oder in eine Shopping Mall [...], betrittst du Privateigentum, und du hast nicht mehr das durch die Verfassung geschützte Recht, frei dei-

⁴⁶ Ein Domainname ist zum Beispiel „mikro“ in <http://www.mikro.org>. Diese Adresse ist – im Gegensatz zu der darunter liegenden IP-Nummer (www.mikro.org entspricht der IP-Nummer 194.95.161.64) – leicht zu merken und einmalig im Internet. Letzter Teil einer URL ist immer eine Top Level Domain. Diese können Generic Top Level Domains (gTLDs) oder Country Code Top Level Domains (ccTLDs) sein. gTLDs sind heute: .org (für Organisationen), .edu (für Universitäten), .com (für kommerzielle Körperschaften), .gov (für die Regierung der USA), .mil (für das Militär), .int (für internationale Organisationen), .net (für Netzprovider). Daneben gibt es ca. dreihundert zweilettrige länderspezifische Top Level Domains (ccTLDs) wie zum Beispiel .de, .ru, .uk.

ne Meinung zu äußern. Je mehr Orte privatisiert werden, desto weniger öffentliche Plätze gibt es, an denen man sagen kann, was man will. In den letzten Jahren hat es diese Gentrifizierung von ganzen Stadtvierteln gegeben, jetzt setzt eine Disneyfizierung des Netzes ein, die genauso gefährlich ist.“⁴⁷ Garrin wollte mit seiner Firma pgMedia daher das DNS durch ein eigenes Namenssystem ersetzen. Mit Name.Space wollte er beweisen, dass es zumindest technisch keine Grenze für die Anzahl von (Top Level) Domains gibt. Der Namensraum des Name.Space erlaubte – das behauptete zumindest Garrin – im Gegensatz zum heutigen DNS die Einführung einer unbegrenzten Anzahl von Top Level Domains *durch die einzelnen Nutzer*. Damit die Name.Space-Domainnamen von jedem ans Internet angeschlossenen Computer aufgerufen werden könnten, wollte pgMedia NSI zur Aufnahme der Name.Space-Domainnamen in den Rootserver File bewegen. Network Solutions lehnte ab. Die Klage, die Garrin daraufhin gegen NSI einreichte, wurde Anfang 2000 abschlägig beschieden. NSI behält das Monopol zur Vergabe von Domainnamen in generischen TLDs bis mindestens zum Jahr 2003. Garrin, der Ende der 1970er Jahre bei den Konzeptkünstlern Martha Rosler und Hans Haacke an der Cooper Union in New York studierte und dort die politische Variante dieser Kunst kennen gelernt hatte, sieht seine Firma pgMedia als ein politisches Unternehmen, das sich direkt aus seiner künstlerischen Arbeit entwickelt hat.⁴⁸ Garrin ist überzeugt, dass sich Künstler und unabhängige Medien ihre eigene technische und ökonomische Infrastruktur schaffen müssen, um unabhängig arbeiten zu können. Die Verbreitung unabhängiger Informationen und ‚unpopulärer‘, kritischer Ideen muss durch den Kauf eigener Bandbreite und die Schaffung einer eigenen Netzinfrastruktur gewährleistet werden. Die hierfür benötigten finanziellen Mittel sollen, so Garrin, durch eigene Firmen aufgebracht werden. Ein solcher ‚autonomer‘ Server ist Garrins *Mediafilter* (<http://www.mediafilter.org>), der seit März 1995 online ist. Hier findet man unabhängige Zeitschriften, die investigativen Journalismus fördern, zum Beispiel *Covert Action Quarterly* oder *The Balkan Media and Policy Monitor*. Im September 1997 brach auf der Mailingliste *Nettime*⁴⁹ ein heftiger Streit über Garrins Name.Space aus. Gestritten wurde weniger über die erklärten Ziele des Projekts (verschiedene Leute machten sich Gedanken über die notwendige Erweiterung des DNS), als vielmehr über die Vorgehensweise, mit der Garrin diese Ziele erreichen wollte. Da war zunächst Garrins Einzelkämpfertum. Protokolle und Standards werden im Internet eigentlich immer kollektiv erarbeitet, wie auch Rop Gongrijp in der Diskussion bemerkte: “This is not a problem that you solve on your own or with a few friends. Internet is built by hundreds of thousands of people that have programmed it. You can't solve this with three people, not from the structure

⁴⁷ Paul Garrin, Interview mit Tilman Baumgärtel, 20.4.1997, in: Tilman Baumgärtel, *[net.art] Materialien zur Netzkunst*, Nürnberg 1999, S. 92-101, hier: S. 96.

⁴⁸ Zu Paul Garrin vgl. auch Jutta Zaremba, „Medien(kampf)kunst. Paul Garrins Macht des Taktischen“, in: *Kunstforum International*, Bd. 153, Januar-März 2001, S. 195-201.

⁴⁹ Nettime ist eine internationale Mailingliste für Netzkritik, die seit 1995 besteht und heute über 1.500 Subscriber umfasst (<http://www.nettime.org>).

Name.Space has now. You solve this by working with large groups, involving universities etc.”⁵⁰ Garrin verstieß gegen dieses ‚Gesetz‘, indem er eigene Standards auf eigene Faust entwickelte. Garrin gab nach eigenen Worten dem „schnellen“ korporativen Modell eindeutig den Vorzug gegenüber „langsamen“ basisdemokratischen Entscheidungswegen. Durch die Gründung einer eigenen Firma, so die Kritiker weiter, schlage er (persönliches) Kapital aus einem gemeinsam verfolgten Ziel. Die weitreichendste Kritik an Garrins Name.Space kam von Rop Gongrijp, dem Leiter der holländischen Hacker-Organisation Hacktic und Mitglied des Amsterdamer Internet Service Providers xs4all. Laut Gongrijp funktioniere Name.space technisch überhaupt nicht, und sei daher auch keine Alternative zum bestehenden Domain Name System.⁵¹

INSULAR Technologies

<http://www.insular.net>

Ein anderes autonomes Kommunikationssystem entwickelt der slowenische Künstler Marko Peljhan seit 1999. *INSULAR Technologies* („International Networking System for Universal Long-distance Advanced Radio“) ist konzipiert als ein weltweites, unabhängiges, offen zugängliches und dezentrales Radionetzwerk, das parallel zu den herkömmlichen Kommunikationsstrukturen Daten, Text und Sprache überträgt. Es soll in erster Linie eine sichere Kommunikation zwischen unabhängigen Kultur-, Medien- und gesellschaftlichen Initiativen, Nicht-Regierungsorganisationen und Individuen gewährleisten, die unter Umständen in entfernten Gegenden oder Umgebungen mit begrenzter Connectivity operieren. Sichere Kommunikation wird durch den Einsatz von Verschlüsselung und durch die Existenz einer autonomen Infrastruktur gewährleistet, die darauf abzielt, die NutzerInnen unabhängiger von der gegenwärtigen bestehenden proprietären Telekommunikationsinfrastruktur (vor allem der kommerziellen Kommunikationssatelliten von INTELSAT) zu machen. *INSULAR Technologies* soll auch als Back-Up-System dienen und im Notfall bestehende digitale und analoge Netzwerke und Telekommunikationsinfrastrukturen ersetzen.

DIGITALE EIGENTUMSFRAGEN

Rolux

<http://www.rolux.org>

Rolux (Sebastian Lütgert) ist eines der unabhängigen kleinen Netzprojekte, die sich im Berlin der 1990er Jahren mit seinen leer stehenden Gebäuden und verlassenen Geländen im Umfeld von Clubs und Bars, Kunst und elektronischer Musik gebildet haben. Dazu gehört unter anderem auch mikro e.V., das bootlab, wo sich Lütgerts Arbeitsplatz befindet, Veranstaltungen wie (der inzwischen eingestellte) *last tuesday*, der (heute nicht mehr existierende) Club DaimlerChrysler, aber auch Mailinglisten wie Nettime und Rohrpost. Seit 2001 betreibt Lütgert / Rolux das Projekt textz.com,⁵² das mit dem flotten Spruch „we are the & in copy & paste“ wirbt. textz.com ist eine Datenbank für Texte. Man findet Texte mit und ohne Copyright, fiktionale und theoretische Texte, Manifeste und Songtexte. Da steht Theodor W. Adorno neben der autonomen a.f.r.i.k.a.-Gruppe, Douglas Adams neben Klaus Theweleit und Kathy Acker. Die Texte stammen aus unterschiedlichen Quellen. Sie werden entweder von den Autoren selbst eingereicht, als freie im Netz kursierende Texte von Mitwirkenden in die textz.com-Datenbank eingespeist oder von mit Scannern und Texterkennungssoftware bestückten UserInnen vom analogen Medium Papier in digitale ASCII-Files umgewandelt. Sebastian Lütgert selbst hat dem Projekt textz.com unter dem Titel „napster was only the beginning“ eine Einleitung vorangestellt, die eine wütende Ablehnung jeglicher proprietärer Schließungen („organized corporate piracy“) darstellt:

napster was only the beginning. an introduction to <http://textz.com> [v0.5]

a spectre is haunting the corporate world – the spectre of organized world-wide file-sharing. mp3, to name the most common synonym for the becoming-distributor of millions of former customers, has clearly shown that the flows of digital data are much more driven by people and formats than they are determined by legislation, ownership or the new global rules of the corporate-political. napster has reverse-engineered the ideology of a whole industry, and it has finally proven its total, complete and absolute obsolescence. the transnational companies that are now trying to break it up have started a war they will never be able to stop. there are going to be thousands of napsters.

<http://textz.com> is not even zero-point-five of them.

we are not the dot in dot-com, neither are we the minus in e-book. the future of online publishing sits right next to your computer: it's a \$50 scanner and a \$50 printer, both connected to the internet. we are the & in copy & paste, and plain ascii is still the format

⁵² Vgl. dazu auch Vali Djordjevic, „Nützliche Tools für den Netzintellektuellen. Minordomo und textz.com aus dem Hause ROLUX“, in: *Telepolis*, 23.7.2001.

of our choice. it shouldn't require a plug-in to read a book on the net, nor should it require a credit card. the text industry is a paper tiger. along with the mass erosion of their proprietary rights goes the vanishing of their digital watermarks. packed today, cracked tomorrow. whatever electronic gadgets they will come up with – they are all going to be dead media on their very release day. forget about your new kafka dvd. i already got it via sms.

this is not project gutenbergr. it is neither about constituting a canonical body of historical texts (by authors so classical that they've all been watching the grass from below for almost a century of posthumous copyright), nor is it about htmlifying freely available books into unreadable sub-chapterized hyper-chunks. texts relate to texts by other means than a href. just go to your local bookstore and find out yourself. the net is not a rhizome, and a digital library should not be an interactive nirvana. the conceptual poverty of today's post-academic, post-corporate public online services – and we haven't seen dot-museum yet – is not and has never been a desirable alternative to a future that will be controlled by the super-pervasive data-streams of the upcoming military-entertainment complex. there are still other options. nostalgia is slavery. stay home, read a book.

information does not want to be free. in fact it is absolutely free of will, a constant flow of signs of lives which are permanently being turned into commodities and transformed into commercial content. <http://textz.com> is not part of the information business. they say there was a time when content was king, but we have seen his head rolling. our week beats their year. ever since we have been moving from content to discontent, collecting scripts and viruses, writing programs and bots, dealing with textz as warez, as executables – something that is able to change your life. this is not promotional material. facing the unified principles of information – the combined horror of global communication and so-called guerilla marketing – there is no more need for media theory or cultural studies. the resistance against corporate culture can itself no longer remain in the cultural domain. you make a mistake if you see what we do as merely apolitical.

we are studying the coils of the serpent, watching the walk of the penguin, mapping the moves of our wired enemies. intellectual, digital and biological property – cornerstones of the new regimes of control – are the direct result of organized corporate piracy. they are not only replacing such obsolete notions as freedom, democracy, human rights and technological progress. all these new forms of ownership are, in the first place, attempts to expropriate people's work, data and bodies – just as they begin to acquire, for the first time in history, the technical means to organize them differently. today's global media and communication conglomerates are mafias, and we shouldn't count on what's left of the national governments when it comes to fighting back. "humanity won't

be happy until the last copyright holder is hung by the guts of the last patent lawyer."
napster was only the beginning. the nineties of the net are over. let's move on.

a.s.ambulanzen, berlin/germany, march 2001. no copyright <http://textz.com>⁵³

Im Mai 2002 hatte es die *F.A.Z.* abgelehnt, eine Vorabversion von Martin Walsers neuem Roman *Tod eines Kritikers* abzudrucken, da die Hauptfigur des Romans eine allzu deutliche Ähnlichkeit mit dem bekannten jüdischen Literaturkritiker Marcel Reich-Ranicki aufwies, vor allem aber weil der Roman ein „Repertoire antisemitischer Klischees“ enthielt. Daran anschließend entspann sich eine wilde Debatte in den Feuilletons der deutschen wie internationalen Medien, die daraufhin vom Suhrkamp Verlag mit einer Kopie des Manuskripts beliefert wurden. Dies geschah zum Teil über den Versand eines PDF-Dokuments, was zur Folge hatte, dass nicht lizenzierte Kopien im Internet auftauchten. Während sich der Suhrkamp Verlag dann schließlich trotz „kontroverser Diskussionen und Bedenken, die im Haus bestehen“, dazu entschloss, den Roman *Tod eines Kritikers* am 26. Juni 2002 vorzeitig zu veröffentlichen, war auch textz.com auf das Walser-Manuskript aufmerksam geworden. Als Pool für elektronisch publizierte, kritische Textproduktionen schien man hier jedoch nicht besonders von Walsers Werk angetan zu sein und beförderte auf der Website eine Datei mit dem Titel „walser.pdf“ kurzerhand in den virtuellen Papierkorb <http://textz.com/trash/walser.pdf>. Kurze Zeit später erhielt textz.com von Anwälten des Suhrkamp Verlags wegen angeblicher Urheberrechtsverstöße eine Abmahnung (<http://textz.com/trash/walser.txt>). Pikanterweise verbirgt sich hinter der verdächtigen Dateibenennung „walser.pdf“ nicht etwa das berüchtigte Walser-Manuskript, sondern Bruce Sterlings Veröffentlichung *The Hacker Crackdown – Law and Disorder on the Electronic Frontier*, ein von dem amerikanischen Autor als so genannte „Literary Freeware“ freigegebenes und autorisiertes E-Book, das sich mit den urheberrechtlichen Streitigkeiten und Grauzonen des elektronischen Publizierens auseinandersetzt. Die Betreiber von textz.com verstießen somit also keineswegs gegen die Veröffentlichungsrechte des Suhrkamp Verlags, dessen Rechtsabteilung schließlich nach einer kurzen Mailkorrespondenz auch nichts weiter von sich hören ließ. Am 24. Juni 2002 führte textz.com diesen Streich noch einen Schritt weiter: Statt Walsers Manuskript direkt als Textdatei zum Download anzubieten oder einen weiteren Link auf eine entsprechende Kopie zu setzen, veröffentlichte textz.com den 10.000 Zeilen umfassenden Quellcode eines Perl-Skripts (<http://textz.com/trash/walser.pl.txt>), das über einen entsprechenden Perl-Interpreter eine ASCII-Textversion von Walsers *Tod eines Kritikers* generieren kann. Ausdrücklich weist textz.com auf seiner Website darauf hin, dass dieses Skript nicht ohne die ausdrückliche, schriftliche Genehmigung des Suhrkamp Verlags in Frankfurt ausgeführt werden darf. Auch gehöre das „Reverse-Engineering der Schriften eines senilen deutschen Revisionisten nicht

⁵³ In: *Rohrpost*, 15.3.2001. Zusatz: „<http://textz.com> (a.k.a. <http://textwarez.com>) has been launched on february 28 2001, 10:00 CET. please support our system and contribute textz and bookz“.

gerade zum Kerngeschäft von textz.com“. Als freie Software unter der GNU General Public License der Free Software Foundation jedoch darf der Source-Code frei verteilt und modifiziert werden. Das Perl-Skript „walser.php“ enthält außerdem die Utility „makewalser.php“, mit der PHP-Skripte auch für andere Texte erstellt werden können.⁵⁴

BigBrotherAwards

<http://www.bigbrotherawards.de/>

Die „BigBrotherAwards Deutschland“ wurden ins Leben gerufen, um die öffentliche Diskussion um Privatsphäre und Datenschutz zu fördern – sie sollen missbräuchlichen Gebrauch von Technik und Informationen aufzeigen. Seit 1998 wird ein solcher „Preis“ in verschiedenen Ländern und seit dem Jahr 2000 auch in Deutschland an Firmen, Organisationen und Personen verliehen, die in nachhaltiger Weise die Privatsphäre von Menschen beeinträchtigen oder (persönliche) Daten Dritten zugänglich machen. Die deutschen BigBrother-Awards werden vom Bielefelder FoeBuD e. V. organisiert, der sich 1987 als Verein zur Förderung des öffentlichen bewegten und unbewegten Datenverkehrs gründete. Bekannt wurde der Verein durch Vernetzungsarbeit im Zerberus-Netz, seine Mailbox BIONIC, das Friedensnetzwerk ZaMir, das deutschsprachige Handbuch zu dem Verschlüsselungsprogramm Pretty Good Privacy (PGP) und seine monatliche Veranstaltungsreihe *Public Domain* zu Themen aus Zukunft und Technik, Wissenschaft und Politik, Kunst und Kultur.

den. Sie konnten sämtliche Inhalte kontrollieren, veränderten sie nach Belieben oder blockierten sie willkürlich – niemand protestierte (vgl. Espenschied & Freude: *insert_coin*, 2000-2001, siehe oben).

Chaos Computer Club (CCC)

<http://www.ccc.de>

„Der Chaos Computer Club ist eine galaktische Gemeinschaft von Lebewesen, unabhängig von Alter, Geschlecht und Rasse sowie gesellschaftlicher Stellung, die sich grenzüberschreitend für Informationsfreiheit einsetzt und mit den Auswirkungen von Technologie auf die Gesellschaft sowie das einzelne Lebewesen beschäftigt und das Wissen um diese Entwicklung fördert. Der CCC setzt sich für ein Menschenrecht auf zumindest weltweite, ungehinderte Kommunikation ein. Dies schließt natürlich technische Forschung, Entwicklung von entsprechenden technischen Hilfsmitteln und die Diskussion entsprechender technischer Sachgebiete sowie öffentliche Demonstrationen mit ein. Der Chaos Computer Club versteht sich als ein Forum der Hackerszene, eine Instanz zwischen Hackern, Systembetreibern und der Öffentlichkeit. Zunehmend ist diese Aufgabe in Teilbereichen (Netz-Zensur, Krypto-Regulierung) die einer Interessensvertretung, die versucht, durch Wissen Einfluss zu nehmen.“ (padeluum, <http://www.ccc.de/faq#ccc>)

privatkopie.net

<http://www.privatkopie.net>

Im Anschluss an die internationale Konferenz *Wizards of OS 2*⁵⁵ und den Workshop *Have you ever felt oppressed by technology? YOU WILL – Campaigning für Offene Kulturen und Freies Wissen*⁵⁶ initiierte mikro e. V. im Jahr 2002 zusammen mit anderen Organisationen die Initiative *privatkopie.net*, die sich für den Erhalt der Informationsfreiheit in der Informationsgesellschaft einsetzt. Anlass war der Gesetzesentwurf der Bundesregierung zur Novellierung des Urheberrechts, der seit August 2002 vorlag. Dieser Entwurf sah vor, das Recht zum privaten Vervielfältigen, das in der analogen Welt jedem in begrenztem Umfang offen steht und zum festen Bestandteil des Alltags der NutzerInnen in der Informationsgesellschaft geworden ist, im digitalen Raum einzuschränken. Die Initiative *privatkopie.net* fordert dagegen für die demokratische Informationsgesellschaft ein Urheberrecht, das die Teilhabe aller am kulturellen Leben sowie die Informations- und Meinungsfreiheit garantiert. Im Laufe von 2002 wurden über 30.000 Unterschriften gesammelt und im Dezember 2002 der Bundesjustizministerin übergeben.

„Governments of the Industrial World, you weary giants of flesh and steel
...“

Das vorangestellte Zitat stammt von John Perry Barlow, dem Mitbegründer der amerikanischen Electronic Frontier Foundation (EFF), das dieser in einem Manifest der weltweiten Netz-Community anlässlich der Verabschiedung des „Communication Decency Act“ im Februar 1996 präsentierte. Barlows *Declaration of the Independence of Cyberspace* ist eine wütende Reaktion auf den Versuch des amerikanischen Senats, durch einen Zusatz zur amerikanischen Telekommunikationsgesetzgebung Inhalte im Internet zu regulieren.

¹ Barlow er-

klärt in seiner *Unabhängigkeitserklärung* den Cyberspace zu einem Raum außerhalb der Souveränität der „Regierungen der industriellen Welt“ und ruft die „Zivilisation des Geistes im Cyberspace“ aus. Erscheint der „Cyberspace“, den Barlow proklamiert, zunächst als idealer anarchischer Ort, ähnlich der von Hakim Bey beschriebenen „Temporären Autonomen Zonen“ ², vergleicht er ihn an anderer Stelle jedoch auch mit dem Wilden Westen des 19. Jahr-

hundreds, einem quasi rechtsfreien Raum, in dem die „Pursuit of Happiness“ jede Tat recht-

fertigte, die im Namen dieses ‚unveräußerlichen Rechts‘ begangen wurde. Die vorgebliche Radikalität von Barlows *Unabhängigkeitserklärung* erweist sich also bei näherer Betrachtung als problemlos mit dem Neoliberalismus der amerikanischen Neuen Rechten vereinbar.

Die beiden britischen Sozialwissenschaftler Richard Barbrook und Andy Cameron haben diese eklektische Ideologie daher zu Recht als „kalifornisch“ bezeichnet.

³ Für Barbrook und

Cameron ist diese eskapistische und technikdeterministische „kalifornische Ideologie“ (mit ihren Organen *Wired* und *Mondo 2000*) das Resultat einer „seltsamen Verschmelzung der kulturellen Boheme aus San Francisco mit den High-Tech-Industrien von Silicon Valley“, die den „freischwebenden Geist der Hippies mit dem unternehmerischen Antrieb der Yuppies“ verbindet. Diese Verschmelzung der Gegensätze – des sozialen, teils anarchischen Libera-

lismus der Linken und des Anti-Etatismus und wirtschaftlichen Neoliberalismus der Rechten – wurde, so Barbrook und Cameron, durch einen vollkommen überzogenen Glauben an das emanzipatorische Potenzial der neuen Informationstechnologien ausgelöst.

Die euphorische Aufbruchstimmung Anfang der 1990er Jahre, die nicht nur bei Vertretern der „kalifornischen Ideologie“ Fuß gefasst hatte, hat in den letzten Jahren eine kolossale Dämpfung erfahren, unter anderem dadurch, dass ab Mitte der 1990er Jahre die Marktökonomie massiv ins Internet einzog und dort mehr und mehr die so genannte „Geschenköko-

¹ „Regierungen der industriellen Welt, ihr müden Giganten aus Fleisch und Blut, ich komme aus dem Cyberspace, der neuen Heimat des Geistes. Im Namen der Zukunft bitte ich euch, Vertreter einer vergangenen Zeit uns in Ruhe! Wo wir uns versammeln, habt ihr keine Macht mehr.“ (Auszug aus: John Perry Barlows *Unabhängigkeitserklärung des Cyberspace*, 1996, <http://www.uni-magdeburg.de/iph/seminare/ethik/barlow.html>)
² Mark J. Bey (Peter Lamborn Wilson), *TAZ – Die Temporäre Autonome Zone*, Berlin 1994 [Original: New York 1991].

³ Richard Barbrook / Andy Cameron, „Die kalifornische Ideologie“, in: nettime (Hg.), *Netzkritik. Materialien Internet-Debatte*, Berlin 1997, S. 15-36.

nomie“ verdrängte. Je stärker Unternehmen das Netz zu nutzen begannen, desto mehr wur-

de und wird von Seiten des Staates und der Wirtschaft eine Verrechtlichung forciert, die die

seit den 1960er Jahren gewachsenen Freiräume des Internet beschneidet. Der

international wachsende, vermeintlich rechtsfreie Raum des Internet kollidiert ab Mitte der 1990er Jahre

zunehmend mit nationalen Ordnungen; die neuen Strukturen des Internet stoßen auf beste-

hende soziale und rechtliche Strukturen der Gesellschaft. Im Gefolge der Wirtschaft

halten ab Mitte der 1990er Jahre auch die Rechtsanwälte Einzug in das Internet.

⁴ In vielen

greifen Gerichte und staatliche Behörden in das Internet ein, um auch hier gesetzliche Regu- Ländern
 larien zu Kryptographie und Urheberrechtsschutz durchzusetzen (unter anderem durch
 den
 Einsatz so genannter technischer Rechtekontroll- oder Digital-Rights-Management-
 Systeme)
 – siehe den Fall der Internet-Musiktauschbörse
 Napster.

In der zweiten Hälfte der 1990er Jahre starten Regierungen weltweit verschiedene Ver-
 suche zur Regulierung von Internet-Inhalten. 1996 tritt der umstrittene „Communications De-
 cency Act“ in den USA in Kraft, der den Gebrauch von ‚unanständigen‘ Wörtern im
 Internet
 verbietet; 1997 wird er für verfassungswidrig erklärt. In China müssen sich 1996 Nutzer
 und
 Internet Service Provider (ISPs) bei der Polizei registrieren lassen, und die Regierung ver-
 sucht, den Zugang zu politisch unliebsamen Websites zu unterbinden. In Deutschland sper-
 ren Provider den Zugriff auf den holländischen Provider xs4all, auf dessen Servern eine Ko-
 pie der in Deutschland verbotenen linksautonomen Zeitschrift *Radikal* liegt. Im selben
 Jahr
 entscheidet ein deutsches Gericht, dass CompuServe den Zugang zu rund 200
 Newsgroups,
 die sich im weitesten Sinne mit Sexualität beschäftigen, unterbinden muss (Pornographie-
 Vorwurf). Die Sperrung sorgt weltweit für Aufsehen und Empörung. Ebenfalls in
 Deutschland,
 genauer: Nordrhein-Westfalen, sorgt der Wunsch nach einem von Neonazi-Inhalten und Kin-
 derpornografie „gesäuberten“ Internet seit 2000 für eine Diskussion über einen regierungs-
 amtlichen Einbau von Filtern ins weltweite Netz. Das netzaktivistische Projekt insert_coin
 von
 Dragan Espenschied und Alvar Freude hat jedoch eindringlich gezeigt, dass mit der
 Zensur
 und Ausblendung von Netzinhalten auch eine Manipulation jeglichen Contents möglich
 wird
 – und mit großer Wahrscheinlichkeit unbemerkt
 bleibt.

⁴ „Für die neuen Generationen von Nutzern gibt es nur eine Information, die frei und möglichst weit
 zirkulieren
 sind, und das ist Werbung. Alle andere Information ist für sie Ware. Um nun in diesem promiskuitiven Milieu
 Information (z.B. Börsendaten, Lehrmaterial, Musikstücke) derjenigen und nur derjenigen zugänglich zu ma-
 chen, die dafür bezahlt haben, müssen in das Internet zusätzliche, aufwendige Schutzmechanismen, Zonen
 Zugangskontrollen und kryptographisch abgesicherte Copyrights Control Systems eingezogen werden. Die
 Rechteindustrie (Bertelsmann, Sony, Time-Warner usw.) arbeitet seit etwa 1994 nach Kräften daran, ihre
 Waren das Netz verkaufbar zu machen und technisch abzusichern.“ (Volker Grassmuck, „Freie Software: Ge-
 schichte, Dynamiken und gesellschaftliche Bezüge. Bericht im Rahmen des Forschungsprojektes „Von der Ord-
 nung des Wissens zur Wissensordnung digitaler Medien“, Humboldt-Universität zu Berlin. Ver 1.0,
 September
 2000)

⁵ Zu Copyright und Musik im Netz vgl. *mikro.lounge #7: Sonic Outlaws – Copyright und Musik im Netz*, WMF /
 Berlin 7.10.1998 (<http://www.mikro.org/Events/19981007.html>) sowie das von Volker Grassmuck
 Symposium *Napster und die Folgen*, Hochschule für Grafik und Buchkunst Leipzig, 26. Januar 2001
 (<http://www.hgb-leipzig.de/vgrass/semi-napster/symp.html>).

Zentralisiertes, dezentrales und verteiltes Netzwerk

6

Das Internet wurde in den 1960er Jahren nicht als ein solches ‚Massenmedium‘ konzipiert, zu dem es heute geworden ist. Strukturell unterscheidet es sich von zentralisierten Sendemedien wie Fernsehen oder Radio durch seine verteilte Netzstruktur. Dieser besondere, ursprünglich auf „Unverwundbarkeit“ hin konzipierte technische Aufbau des Internet ist bis heute der Hauptgrund für seine oft „anarchisch“ genannte Struktur, die sich nach wie vor fast jeglicher politischer oder wirtschaftlicher Kontrolle entzieht. Dies geschieht zum Beispiel durch permanentes Nomadisieren von inkriminierten Daten durch das Netz. In den 1990er Jahren setzt eine breite Entwicklung und Verfügbarkeit kostengünstiger, digitaler Technologien und Medien ein. Mit der seit Beginn der 1990er Jahre möglich gewordenen Kopplung dieser digitalen Technologien (zum Beispiel Personal Computer) an das Internet, das jetzt durch seine erste grafische Oberfläche zunehmend populär wird, entsteht ein Medienverbund, der fast jeder/m (zumindest in der westlichen Welt) potenzielle Sendefähigkeit garantiert. Hierdurch entstehen neue Arten von Praktiken, die man „taktische“ oder „kleine Medien“ nennen kann. Beiden gemeinsam ist, dass sie den Nutzern nicht nur die Fähigkeit zu (passivem) Lesen, sondern auch und vor allem zu (aktivem) Schreiben in die Hand geben. Während die hierarchische und zentralisierte Sendestruktur der Massenmedien nur eine Einweg-Kommunikation (besser: Ausstrahlung ohne Rückkanal) erlaubt, ermöglicht und vereinfacht der Einsatz so genannter „Do-It-Yourself-Medien“ (wie Mailboxen, Internet-Mailinglisten, Newsgroups, Webseiten) die Schaffung alternativer Öffentlichkeiten und den Aufbau translokaler Gemeinschaften. Wichtig ist einzig und allein, so schreibt Hakim Bey in der *Temporären Autonomen Zone*, die „Offenheit und Horizontalität der Struktur“ (Bey 1994, S. 122)

⁶ Aus: Paul Baran, „On Distributed Communication Networks“, in: IEEE Transactions on Communication Systems,

Hakim Beys *Temporäre Autonome Zonen* sind nomadisierende Praktiken und Zusammenschlüsse, die nicht an die Existenz spezifischer Technologien oder Orte gebunden sind. Allerdings wird die für die Schaffung einer solchen „Temporären Autonome Zone“ notwendige Kommunikation durch das Internet – oder „Spinnengewebe“, wie Hakim Bey das Netz nennt – erleichtert. ⁷ Bei der „Temporären Autonomen Zone“ handelt es sich nach Beys Worten um einen „Aufstand, der nicht zur direkten Konfrontation mit dem Staat führt, wie eine Operation einer Guerilla, die ein Gebiet (Land, Zeit, Imagination) befreit und sich dann auflöst, um sich irgendwo / irgendwann zu re-formieren, *bevor* der Staat sie zerschlagen kann.“ (Bey 1994, S. 113) Ihre größte Stärke ist, so Bey weiter, neben ihrer zeitlichen Begrenzung ihre Unsichtbarkeit. Hier trifft sich sein Konzept mit Michel de Certeaus berühmter Definition von Taktiken, die er in seiner *Kunst des Handelns* ⁸ formuliert hat. Die Taktik ist per se eine „Bewegung ‚innerhalb des Sichtfeldes des Feindes‘, [...] die sich in einem von ihm kontrollierten Raum abspielt.“ ⁹ Sie muss, da sie nicht über einen eigenen Ort verfügt, unsichtbar sein, denn sie hat, im Gegensatz zur Strategie, nicht die Möglichkeit eines Rückzugs auf eine Basis oder in ein Lager, die ihr vorausschauendes Handeln erlauben würde. Ihr „Nicht-Ort“ ermöglicht ihr zweifellos die Mobilität, zwingt sie jedoch auch dazu, „günstige Gelegenheiten“ zu nutzen. Insgesamt gesehen, ist die Taktik eine Kunst des Schwachen, wie Clausewitz am Beispiel der List in seiner Abhandlung *Vom Kriege* notierte. ¹⁰ Der Taktik geht es mittels praktischer, pragmatischer Finten darum, analog zur rhetorischen Bewegung der antiken Sophistik, „die Position des Schwächsten so stark wie möglich zu machen“. ¹¹

NETZ(KUNST)AKTIVISMUS: DAS INTERNET ALS TAKTISCHES WERKZEUG

Temporäre, taktische Zusammenschlüsse, die sich nomadisierender Werkzeuge bedienen, finden sich auch im so genannten Netzaktivismus der 1990er Jahre. Netzaktivismus beziehungsweise aktivistische Netzkunst umfasst unterschiedliche Strategien, die von der Einrichtung alternativer Kommunikations- und Informationskanäle bis hin zu praktiziertem „elektronischen zivilen Ungehorsam“ reichen. Der „ermöglichende“ oder vernetzende Einsatz bezeichnet dabei eine auf Herstellung von Kommunikation angelegte Verwendung. In der zweiten Hälfte der 1990er Jahre vernetzen sich zum Beispiel verstärkt Umwelt- und Menschen-

⁷ „Das Spinnengewebe bedarf keiner Computertechnologie, um zu existieren. Mündliche Botschaften, Post, marginale Zine-Netzwerk, ‚Telefonketten‘ und ähnliches reichen, um ein Informations-Spinnengewebe zu schaffen.“ (Bey 1994, S.

⁸ Michel de Certeau, *Kunst des Handelns*, Berlin 1988 [frz. Original: *L'invention du quotidien. I. Arts de Paris*].

⁹ De Certeau zitiert an dieser Stelle von Bülow: „Strategie ist die Wissenschaft von kriegerischen außerhalb des Sichtbereiches des Gegners; Taktik, innerhalb desselben.“ (S.

¹⁰ Vgl. Carl von Clausewitz, *Vom Kriege*, Bonn 1980, S 387.

¹¹ De Certeau 1988, S. 91. Er zitiert an dieser Stelle Aristoteles: „Aus dem schwächsten von zwei Argumenten das stärkste machen.“ (Aristoteles, *Rhetorik*. II, Kap. 24, 1402a). Auf die Bedeutung der Rhetorik für die Formen, die „die Wiederkehr des Unterdrückten im Bereich einer Ordnung“ ermöglichen (verbale Verkürzung, Verdichtung, Doppel- und Widersinnigkeiten, Verschiebungen, etc.), hat bereits Freud in seinen *Zur Wirkung* wiesen. Vgl. Sigmund Freud, „Der Witz“, in: *Gesammelte Werke*, Bd. VI.

rechtsaktivisten sowie Globalisierungskritiker, die dem so genannten „Empire“ Paroli bieten wollen, und organisieren ihren Protest über das Internet.

Neben dem Aufbau solch autonomer Kommunikationssysteme zählt die Strategie des „elektronischen zivilen Ungehorsams“ („Electronic Civil Disobedience“) zu den wichtigsten Praktiken des Netzaktivismus. Dieses Konzept, das von der US-amerikanischen Künstlergruppe Critical Art Ensemble (CAE) 1996 geprägt wurde, überträgt das Prinzip des zivilen Ungehorsams in den elektronischen Datenraum:

The strategy of ECD [Electronic Civil Disobedience] should not be a mystery to any activists. They are the same as traditional CD [Civil Disobedience]. ECD is a nonviolent activity by its very nature, since the oppositional forces never physically confront one another. As in CD, the primary tactics are trespass and blockage. Exits, entrances, conduits, and other key spaces must be occupied by the contestational force in order to bring pressure on legitimized institutions engaged in unethical or criminal actions. Blocking information conduits is analogous to blocking physical locations; however, electronic blockage can cause financial stress that physical blockage cannot, and it can be used beyond the local level. ECD is CD reinvigorated. What CD once was, ECD is now. [12](#)
