UBERMORGEN

<http://ubermorgen.com>

[italiano]

Dietro il nome di Ubermorgen ("dopodomani" o "super domani") si trova una delle identità più imprevedibili dell'attuale tecno-avanguardia europea. Dire avanguardia artistica suonerebbe in effetti inappropriato, visto che le azioni di Ubermorgen puntano a spezzare i confini fisici e concettuali fra mondi apparentemente separati come l'arte, l'economia e la comunicazione. Coinvolti fin dall'inizio nella fondazione della nota corporation etoy - uno dei più importanti esempi di progetto che provocò lo choc del mondo di Internet, dell'arte e degli affari con progetti come "The Digital Hijack" (1996) e "Toywar" (1999) -, i membri Ubermorgen agiscono in modo da riflettere la falsa retorica delle grandi imprese, inserendo le proprie azioni direttamente nel meccanismo della politica e dell'economia contemporanee. Giocano con flussi di informazione strategica, ridirigendoli a seconda delle necessità e spesso alimentando un'irrisolvibile ambiguità. Ubermorgen non reagisce agli eventi, li crea.

"[V]ote-Auction" è uno dei loro progetti più recenti, rischiosi e paradossalmente di maggior successo: «l'unica piattaforma al mondo che dà al consumatore finale un ruolo effettivo nell'industria elettorale americana», afferma Ubermorgen. "[V]ote-Auction", lanciato durante la campagna presidenziale U.S.A. 2000 e riportata sulla stampa internazionale, è un servizio Internet che dà agli individui o a partiti politici la possibilità di mettere all'asta i propri voti e comprare così interi stati. Un vero e proprio sistema di scambio che finalmente «riavvicina capitalismo e democrazia».

[español castellano]

Hans_extrem es solo uno de los seudónimos que identifican a una de las figuras más incapturables e incategorizables del panorama de la vanguardia europea contemporánea. Implicado en el histórico colectivo de net.artistas etoy (dos veces ganadores del prestigioso festival Ars Electronica), Hans_extreme fundó hace unos años una misteriosa empresa llamada "Ubermorgen" que mezcla sorpresivamente e-consulting, marketing, incubación de ideas y media hacking agency, desarrollando intervenciones reales en el mundo del comercio y de la política mundial.

"Vote-Auction" (un proyecto de e-business de subastas de votos en las elecciones presidenciales estadounidenses) y "Nazi-Line" (un portal de ayuda a la comunidad de jóvenes ex-nazi) representan dos de los proyectos mas arriesgados, ambiguos y paradójicamente "exitosos" desarrollados por Ubermorgen.

UBERMORGEN - PRESENTAZIONE A Digital is not analog

UBERMORGEN

<http://ubermorgen.com>

[Italian]

Behind the name of Ubermorgen ("the day after tomorrow" or "super tomorrow") one of the impendibili identities is found of puts into effect them European tecno-vanguard. To say artistic vanguard would play in effects unsuitable, inasmuch as the actions of Ubermorgen head to break the physical borders and conceptual between worlds apparently it separates to you like the art, the economy and the communication. Been involved since the beginning in the foundation of the famous one corporation etoy - one of the more important examples than plan that it provoked the choc of the world of Internet, the art and the transactions with plans like "The Digital Hijack" (1996) and "Toywar" (1999) -, the Ubermorgen members act so as to directly reflect the false rhetorical of the great enterprises, inserting the own actions in the mechanism of contemporary politics and the economy. They play with flows of strategic information, ridirigendoli to second of the necessities and often feeding a irrisolvibile ambiguity. Ubermorgen does not react to the events, creates them.

"[V]ote-Auction" is one of their more recent, rischiosi plans and paradoxicalally of greater happening: "the only platform to the world that gives to the final consumer a effective role in the electoral industry American", asserts Ubermorgen. "[V]ote-Auction", launch during presidential campaign U.S.A. 2000 and brought back on the international press, are a service Internet that it gives to the individuals or to you leave political the possibility to put to the auction the own ballots and to buy therefore entire states. A true one and just arranges of exchange that finally "approaches again Capitalism and democracy".

Dire avanguardia artistica suonerebbe in effetti inappropriato, visto che le azioni di Ubermorgen puntano a spezzare i confini fisici e concettuali fra mondi apparentemente separati come l'arte, l'economia e la comunicazione. Coinvolti fin dall'inizio nella fondazione della nota corporation etoy - uno dei più importanti esempi di progetto che provocò lo choc del mondo di Internet, dell'arte e degli affari con progetti come "The Digital Hijack" (1996) e "Toywar" (1999) -, i membri Ubermorgen agiscono in modo da riflettere la falsa retorica delle grandi imprese, inserendo le proprie azioni direttamente nel meccanismo della politica e dell'economia contemporanee. Giocano con flussi di informazione strategica, ridirigendoli a seconda delle necessità e spesso alimentando un'irrisolvibile ambiguità. Ubermorgen non reagisce agli eventi, li crea.

"[V]ote-Auction" è uno dei loro progetti più recenti, rischiosi e paradossalmente di maggior successo: «l'unica piattaforma al mondo che dà al consumatore finale un ruolo effettivo nell'industria elettorale americana», afferma

[español castellano]

Hans_extrem es solo uno de los seudónimos que identifican a una de las figuras más incapturables e incategorizables del panorama de la vanguardia europea contemporánea. Implicado en el histórico colectivo de net.artistas etoy (dos veces ganadores del prestigioso festival Ars Electronica), Hans_extreme fundó hace unos años una misteriosa empresa llamada "Ubermorgen" que mezcla sorpresivamente e-consulting, marketing, incubación de ideas y media hacking agency, desarrollando intervenciones reales en el mundo del comercio y de la política mundial.

"**Vote-Auction**" (un proyecto de e-business de subastas de votos en las elecciones presidenciales estadounidenses) y "Nazi-Line" (un portal de ayuda a la comunidad de jóvenes ex-nazi) representan dos de los proyectos mas arriesgados, ambiguos y paradójicamente "exitosos" desarrollados por Ubermorgen.

----- d-i-n-a METAGALLERY -----

Übermorgen. "[V]ote-Auction", lanciato durante la campagna presidenziale U.S.A. 2000 e riportata sulla stampa internazionale, è un servizio Internet che dà agli individui o a partiti politici la possibilità di mettere all'asta i propri voti e comprare così interi stati. Un vero e proprio sistema di scambio che finalmente «riavvicina capitalismo e democrazia».

THE ESSENCE OF TODAY'S CONSERVATISM?....Hillary Clinton told a group of her wealthy supporters on Monday that **she supported rolling back some of Bush's tax cuts for the wealthy:**

"Many of you are well enough off that ... the tax cuts may have helped you," Sen. Clinton said. "We're saying that for America to get back on track, we're probably going to cut that short and not give it to you. We're going to take things away from you on behalf of the common good."

Andrew Sullivan **teed off on this yesterday** but then thought better of it. Today he admits that he was a little too snippy, **but excuses it with this:**

Why cannot Hillary end agricultural subsidies, abolish corporate tax shelters, or means-test social security and Medicare? That would be for the common good. But it's easier to raise taxes. *Her invocation of her agenda with the "common good" is also part of what galls me.*

This is actually more revealing than his original comment: he was annoyed because HC invoked the "common good." This is apparently all it takes to drive some conservatives nuts these days.

What a sad commentary. *Of course* the purpose of taxation is to provide for the common good and *of course* Hillary believes her agenda coincides with that common good. What else would she believe?

Apparently, though, a mere acknowledgment that she believes in advocating for the common good is anathema to Sullivan. But if that was really his gut reaction, what does he think we're all here for?

what does he think we're all here for?

He who dies with the most toys wins.

Posted by: [___league](#) on June 30, 2004 at 1:04 PM | [PERMALINK](#)

That's why the Clinton's get all the book money. That's the ticket. Everything we've done to battle the terrorists in the Middle East was done for the common good. Case closed, end of argument. Whew, I'm glad that's over.

Posted by: [RD](#) on June 30, 2004 at 1:08 PM | [PERMALINK](#)

Come on Kevin. Hillary Clinton will get criticized regardless of what she says or her reasoning. Conservatives have had it in for her and her husband since her tenure on the Watergate investigation on the Hill ...

Posted by: [hummm](#) on June 30, 2004 at 1:09 PM | [PERMALINK](#)

Haha, Sully better check with his handlers before criticizing corporate welfare and ag subsidies. That's not considered something that good "conservatives" are allowed to question these days.

Posted by: [melior](#) on June 30, 2004 at 1:12 PM | [PERMALINK](#)

I've gotten into trouble on Kevin's blog before about this - but I have a serious problem about foreigners lecturing Americans about our issues and Sullivan aptly illustrates it here. He's NOT one of us; he wasn't raised in democratic egalitarian tradition in America, but in class-conscious and stratified Britain, and so the idea of a "common good" is anathema and foreign to him.

So what gives him the creds to lecture us?

Posted by: [Andy](#) on June 30, 2004 at 1:12 PM | [PERMALINK](#)

Isn't he a US citizen?

Posted by: [Dutch](#) on June 30, 2004 at 1:14 PM | [PERMALINK](#)

The real conservative definition of the common good:

Me, Myself and I.

Posted by: [GOPNemesis](#) on June 30, 2004 at 1:15 PM | [PERMALINK](#)

I'm actually OK with that quote from Sully about the common good. Of course Sully doesn't think Hillary's agenda promotes the common good, and quite likely Sully doesn't think that she thinks so either. So maybe Sully isn't so much angered by any invocation of the common good, but invocation of the common good in the service of an agenda that he thinks doesn't promote the common good.

Shorter: I could imagine W saying something about how his tax cuts promote the common good. That would make me bite the carpet, using almost exactly Sully's words.

Because of where I was staying this morning I was able to catch only one brief bit of the Sunday shows. And that was the roundtable on Meet the Press.

It was a good panel, including one of my favorite reporters, Mike Allen of the Post. But what caught my eye were two exchanges. One was between Joe Klein and Paul Krugman on the Clinton legacy. Here's the key exchange ...
03/07/05

I guess he hasn't read the preamble to the Constitution:

*We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, **promote the general welfare**, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.*

Posted by: [rachelrachel](#) on June 30, 2004 at 1:17 PM | [PERMALINK](#)

Why does Sullivan consider Hilary's statement particularly galling? Don't all politicians claim their agendas serve the common good?

Posted by: [Bernard Yomtov](#) on June 30, 2004 at 1:18 PM | [PERMALINK](#)

I think the problem here isn't that it is for the common good, but that it is good for the commoners.

Pass the snuffbox.

Posted by: [Louis XIV](#) on June 30, 2004 at 1:19 PM | [PERMALINK](#)

I think it's Hilary using the word "good" without lightening coming down from heaven and striking her dead that pisses him off. Shows that God doesn't hate her as much as he does.

Posted by: [Contrary Mary](#) on June 30, 2004 at 1:19 PM | [PERMALINK](#)

Well, Hilary is the living incarnation of Satan on earth to most right-leaning folk, she's a woman, she's *Bill's* woman, she's educated and "uppity," and she dares to say there is such a thing as "wealthy enough." In addition to the whole common good thing. So Sully is not veering too far off message.

Posted by: [Gaia](#) on June 30, 2004 at 1:20 PM | [PERMALINK](#)

"Her invocation of her agenda with the "common good" **her agenda**

Sullivan was not saying that there is no such animal as the "common good", just that Hilary wasn't appointed by God to name what it is. At least on the second day.

And I am not that sure I like Hilary's formulation. I want to help the poor and lower middle class, and will screw the rich to do it. The idea that "Everyone is helped by program X" is bullshit used by both parties. Remember, Bush said the tax cuts were also for the common good.

Posted by: [bob mcmanus](#) on June 30, 2004 at 1:21 PM | [PERMALINK](#)

Isn't the 'you' that Hilary is talking to the wealthy, ie those that don't need a tax cut to improve their quality of life?

Isn't the supposed 'tax increase' actually merely a revocation of a tax cut, and therefore no increase at all?

Posted by: [GaryLK](#) on June 30, 2004 at 1:23 PM | [PERMALINK](#)

I agree with Mr. Weiner. It isn't that Sullivan is somehow against the common good, it is that he believes Hilary Clinton to be so horribly venal and duplicitous that her invocation of the common good is infuriatingly hypocritical. It is hatred that rages so brightly that it blocks out even the remotest light of reason.

That can be found on both sides of this Blue/Red thing. I think I'm still rational, but Bush pisses me off so much I'm not even sure about myself anymore.

Posted by: [Really, though](#) on June 30, 2004 at 1:24 PM | [PERMALINK](#)

Andy wrote: "he wasn't raised in democratic egalitarian tradition in America, but in class-conscious and stratified Britain, and so the idea of a "common good" is anathema and foreign to him."

Oh, come ON! Britain doesn't have any conception of the common good? This is just stupid.

Posted by: [DNS](#) on June 30, 2004 at 1:24 PM | [PERMALINK](#)

Why cannot Hilary end agricultural subsidies, abolish corporate tax shelters, or means-test social security and Medicare?

Why can't the Republicans? They are, after all, in control of the White House, the Senate, and the House of Representatives. Is Silly Sully actually admitting that only a Democratic regime can work for "the common good"? Fascinating!

Posted by: [dave](#) on June 30, 2004 at 1:27 PM | [PERMALINK](#)

Sullivan was not saying that there is no such animal as the "common good", just that Hilary wasn't appointed by God to name what it is.

Not by God, but by the voters of the State of New York.

Posted by: [rachelrachel](#) on June 30, 2004 at 1:28 PM | [PERMALINK](#)

I think Sullivan, well-known for his fiscal hawkery, is objecting to HRC's presumption that a massive tax increase (as opposed to spending cuts, or at least a mixture of the two) is the only way to reduce federal borrowing. My guess is far more Americans agree with him (at least on principle) than with Hilary.

Now, it could well be that the Senator *would* support some spending cuts (though I wouldn't hold my breath trying to get her on record as to which programs should be trimmed), but one can hardly be blamed for strongly suspecting that, in fact, she does indeed favor tax hikes as the sole means of reducing the deficit.

And, to Sullivan's credit, he *has* been a particularly vociferous critic of Bush's fiscal policies, so, to my mind, at least, he does have some credibility on this issue.

Posted by: [P.B. Almeida](#) on June 30, 2004 at 1:28 PM | [PERMALINK](#)

Ah, how soon Andy forgets his own advocacy of a growth and freedom destroying S1 gas tax.

Posted by: [praktike](#) on June 30, 2004 at 1:29 PM | [PERMALINK](#)

We Britons have so little concept of the common good that we've only elected three socialist governments.

Of course, that's three more than the USA has managed.

I don't think this is a fair criticism. Conservatives believe that government exists for the purpose of defending the borders of the country, and for making high-level policy decisions. They don't believe that government is there to make better the everyday lives of citizens. In fact, they think that government should stay as much out of the way of everyday life as possible. This is not a crackpot loonie fringe wingnut philosophy by the way. This is a standard conservative response to liberalism.

If progressives want to take on the likes of Sullivan, they need to go back to arguing for that outdated and quaint concept of government by for and of the people.

Posted by: [Christopher](#) on June 30, 2004 at 1:31 PM | [PERMALINK](#)

Why hasn't Sullivan asked that of Bush, eh? Bush's Ag bill was the porkiest pork that ever porked. (Well, excluding Boston's little freeway extravaganza...)

Posted by: [Jeffrey Davis](#) on June 30, 2004 at 1:32 PM | [PERMALINK](#)

"he wasn't raised in democratic egalitarian tradition in America, but in class-conscious and stratified Britain, and so the idea of a "common good" is anathema and foreign to him."

Someone obviously doesn't know much about the social and political history of Britain.

And right on cue Drudge is running with an obvious Rove-fed "leak" that Hillary will be the VP choice

...and right on cue the resident winger in the office came running to my desk to direct my attention to the sludge report.

Posted by: [ChrisS](#) on June 30, 2004 at 1:33 PM | [PERMALINK](#)

>>We Britons have so little concept of the common good that we've only elected three socialist governments.

Yeah - like Sully's ever voted for Labour... Right.

Posted by: [Andy](#) on June 30, 2004 at 1:34 PM | [PERMALINK](#)

"There is no such thing as society. There are only individual men and women, and families."

-Margaret Thatcher

Posted by: [craigle](#) on June 30, 2004 at 1:36 PM | [PERMALINK](#)

It's funny how a line like this from Hillary Clinton will set Sullivan off about the Clintons' sense of superiority, and yet he'll write 1,000 words on the phrase "if necessary" to make W. not look like a homophobe. That dude has got issues.

Posted by: [Amitava Mazumdar](#) on June 30, 2004 at 1:37 PM | [PERMALINK](#)

Tax cuts passed by congress were not "across the board." Some taxes had to be raised (particularly on American ex-pat workers). Why? It was for the "common good" so that other tax cuts could be financed.

Sure, Sen. Clinton committed the greatest sin in washington you can ever commit -- which is to say, she told the truth -- but this faux outrage over his statement is pretty pathetic. I mean, the reason we give up our money to taxes *is because we are told it is for the common good*. Is Sullivan unaware that he is paying thousands of dollars in taxes already? Why do you think the government makes him pay those dollars, if not for the supposed "common good"?

Posted by: [Constantine](#) on June 30, 2004 at 1:37 PM | [PERMALINK](#)

The essence of Liberalism:

Society contributing in order to further the common good.

The essence of Conservatism:

"Go fuck yourself"

Posted by: [David Perlman](#) on June 30, 2004 at 1:41 PM | [PERMALINK](#)

I'm at a loss to name a Repub who believes in the common good, general welfare, public interest, etc. Only self interest is real.

Posted by: [David](#) on June 30, 2004 at 1:43 PM | [PERMALINK](#)

Taxes are only so the beautiful people can have their nice wars.

And what D. Perman says.

Posted by: [MattB](#) on June 30, 2004 at 1:43 PM | [PERMALINK](#)

"...they (conservatives) think that government should stay as much out of the way of everyday life as possible."

Unless of course it involves religion or sex.

Posted by: [BCG](#) on June 30, 2004 at 1:44 PM | [PERMALINK](#)

Conservatives believe that government exists for the purpose of defending the borders of the country, and for making high-level policy decisions. They don't believe that government is there to make better the everyday lives of citizens. In fact, they think that government should stay as much out of the way of everyday life as possible.

Well, more importantly the military is to be used to protect life and property from seizure. And that's to be the only role of State, with the exception of preservation of traditional social mores, which runs counter to the idea of staying out of lives altogether. It's a nice concept (I gather most people are for the government staying out of *their* lives but more than happy to use the government to impact other people's lives), but wholly unattainable.

Posted by: [ChrisS](#) on June 30, 2004 at 1:46 PM | [PERMALINK](#)

Apparently, though, a mere acknowledgment that she believes in advocating for the common good is anathema to Sullivan. But if that was really his gut reaction, what does he think we're all here for?

Well, at its best, conservative thought shows when the common good is best served by the aggregation of individual interest (say in the argument that free trade will help the Third World). Unfortunately, this slips easily from analysis of individual cases to ideological blanket. Or does a bait and switch between the two levels.

But what gets me is that his Hillary screed comes just a day after he blasted the entire left for "pathological" Bush hatred, because of the "illogic" of Michael Moore's film. Yet he seems more interested in attributing the most venal psychological motives to Hillary Clinton than he does in debating the pros and cons of tax policy.

Posted by: [Chris in Boston](#) on June 30, 2004 at 1:46 PM | [PERMALINK](#)

P.B. Almeida:

I think Sullivan, well-known for his fiscal hawkery, is objecting to HRC's presumption that a massive tax increase (as opposed to spending cuts, or at least a mixture of the two) is the only way to reduce federal borrowing. My guess is far more Americans agree with him (at least on principle) than with Hillary.

First, if that is what Sullivan meant, that is what Sullivan should have said. It's not what he said. Second, Sullivan himself has advocated tax increases to help reduce the deficit, which pretty much destroys your theory of his intent anyway. And third, there is no indication that Hillary is opposed to all proposed cuts in federal spending: she too favors a mixture of spending cuts and tax increases to reduce the deficit. My guess is that her idea of what that mixture should be is far closer than Sullivan's to what the American people want and would support.

Posted by: [Don P](#) on June 30, 2004 at 1:48 PM | [PERMALINK](#)

It's not the "common good" phrase, it's the fact that this phrase is 1/2 of the description of "redistribution"--that 'we're taking away something from you for the common good--giving it to others.

It's all about redistribution--The biggest difference between conservative and liberals is which way it flows and what the consequence of the flow is.

Posted by: [whoops](#) on June 30, 2004 at 1:48 PM | [PERMALINK](#)

Hey Silly Sully? When do you start advocating a return of all our tax dollars for that excrement-laden war you push from the safety of your keyboard? You know...the war "for the common good" against terrorism.

Idiot hypocrite....

Posted by: [USAPatriot](#) on June 30, 2004 at 1:53 PM | [PERMALINK](#)

It's also worth noting that we could eliminate all agricultural subsidies and all programs that anyone would label corporate welfare and we still wouldn't solve the structural deficit.

As for means-testing social security and medicare, unless we means-tested them to an extreme degree, we still wouldn't solve the structural deficit.

Especially given that we need a larger military and we need to invest, easily, \$100B in improving homeland security (as Hart and Rudman have noted endlessly).

So there's on way around a tax increase if you believe that the federal budget should be balanced through the business cycle.

BTW, PB, restoring the Clinton-era tax rates on incomes above \$200K does not a massive tax increase make....

PS. I do agree, though, that Sully has actually been critical of the bush administration for its fiscal irresponsibility.

Posted by: [howard](#) on June 30, 2004 at 2:02 PM | [PERMALINK](#)

You know, no one is making the "rich" accept Social Security payments. I'd love to see Michael Moore stroll around Washington with his clipboard again and poll all the wealthy members of Congress and think tank gurus over 65 who support means testing/privitization/dog-eat-dog world views. "Sir/Madam, you support privatization/means testing of Social Security payments. Your present income is \$;:million a year. Could you tell us if you accept a social security payment every month?"

Posted by: [Abigail](#) on June 30, 2004 at 2:03 PM | [PERMALINK](#)

Andy:

Yeah - like Sully's ever voted for Labour... Right.

I have no idea what relevance you think this observation has. You claimed that Sullivan's views are a product of being raised in "class-conscious and stratified Britain" rather than "democratic and egalitarian" America. As others have suggested, this idea is nonsense. Britain has a far larger and more extensive welfare state than America, far less economic inequality, and the notion of government as promoter of the common good is far more entrenched in Britain than in the U.S.

Posted by: [Don P](#) on June 30, 2004 at 2:04 PM | [PERMALINK](#)

"There is no such thing as society. There are only individual men and women, and families."

Margaret Thatcher

Maybe so, but doesn't it strike you as odd that so many of them in England speak the exact same language?

Posted by: [Jeffrey Davis](#) on June 30, 2004 at 2:13 PM | [PERMALINK](#)

Hillary is the living incarnation of Satan on earth

Posted by: [Bill](#) on June 30, 2004 at 2:27 PM | [PERMALINK](#)

"End agricultural subsidies."

Well, there goes Andrew's devotion to -- and fandom in -- the red states.

Posted by: [Jim Madison's Dog](#) on June 30, 2004 at 2:28 PM | [PERMALINK](#)

Abigail, a nice idea, but not altogether fair. I mean, I support an increase in the gas tax, but it doesn't mean that in its absence I go write a check to the govt every time I fill up the tank (and I happily accept my tax refund in April, too).

Posted by: [pluto](#) on June 30, 2004 at 2:31 PM | [PERMALINK](#)

[i]test[/i]

Posted by: [weirdo](#) on June 30, 2004 at 2:36 PM | [PERMALINK](#)

You completely ignored Sullivan's main point. He is not upset about tax cuts per se, the issue is that there are much better ways that the budget deficit could be reduced. One of the things that economists do when assessing the value of monetary and fiscal policies is to ask whether, given their cost, they would be better than just dropping money out of a helicopter for people to grab. A tax cut often is no better than dropping money. Other policies can have certain external benefits though. The same goes for revenue increasing policies. If we simply raise taxes that increases revenue and does little else. On the other hand, if we reduce subsidies we end the distortion of our farming market and bring prices to a more rational level. We would also be helping all the third-world farmers who are starving because of our handouts to farmers here.

This argument also applies to corporate tax shelters. They are damaging for more than simply their revenue-reducing effects. What I think Sullivan was upset about with Hillary invoking the common good is that she was using as her lone justification for her policies. His suggestions to increase revenue were superior to hers and he didn't even have to invoke some amorphous liberal concept.

Posted by: [Ian Dew-Becker](#) on June 30, 2004 at 2:38 PM | [PERMALINK](#)

Hillary for VP... it's playing out a little like in "Eagle: The Making of an Asian American President" which is a Manga take on the 2000 pitting VP "Al Noah" against Ken Yamaoka.

Before the convention when it seems dead locked between the VP and Yamaoka, Yamaoka pretends to accept the first lady, "Ellery" as the VP on the ticket almost assuring him the nom. Then at the convention he gambles and gets Noah to be his VP candidate neatly cutting out the First Lady.

It's really a fascinating take on American politics, of course, the Republican candidate is a send off of John Glenn and not W. I suppose not even in fiction could W actually be candidate for president.

Posted by: [Mimiru](#) on June 30, 2004 at 2:42 PM | [PERMALINK](#)

Y'know, the Founders also spoke of the common good -- 'general welfare' in their words. So clearly America was established by people who hated it and were un-American. Remember this as we head into the so-called Fourth of July...

Posted by: [Kurt Weldon](#) on June 30, 2004 at 2:50 PM | [PERMALINK](#)

If Andrew Sullivan didn't actually exist, I suppose that someone would have to manufacture him, just so others would have something to write about. The something would, of course, be totally irrelevant, but it would fill pages somewhere.

Posted by: [raj](#) on June 30, 2004 at 2:53 PM | [PERMALINK](#)

The common good! The common good? Now there's the rub.

Democrats don't know.

There is no such thing as common good. Just common bad.

Selfishness good, collectiveness bad. Got it!

I've got mine, you go get yours.

I do believe Hillary for VP is a dream senario for Rove

Posted by: [boggles](#) on June 30, 2004 at 2:59 PM | [PERMALINK](#)

I find all this wrangling about Sullivan's actual point rather amusing. If one reads Sullivan at all, you quickly come to the conclusion that he can't seem to think, in even a limited way, about the consequences of the ideas he is discussing - he merely parrots back various talking points or his own (often limited) hopes and dreams.

Take the gas tax idea, for example. The consequence he likes and wants - oil independence. Ok, fair enough, laudable goal and all that. But an additional gas tax, while having a nice symbolic value, has, even by conservative argument, horrible consequences. I won't begin to argue about regressive taxes vs. progressive taxes and will stick to a pro-business standard conservative argument. Follow the bouncing ball:

- 1) A \$1 hike in gas taxes would increase operational costs for trucking companies by a significant factor. I would guess on the order of 25-40%.
- 2) Name one sector of that doesn't ship the majority of its goods (within the US) using trucks. All that extra cost gets passed on to someone, probably to these companies.
- 3) The companies have to do something about that extra cost so they either eat it (significantly hurting business) or, pass it on to the consumer.

Bottom line - it will screw people twice (at the pump and at the grocery store, clothing store, etc etc) putting a drag on consumer spending and it will place a significant drag on the business sectors that sell and ship physical products.

How does that fit into Sullivan's world view? I can't see how it does. His knee jerk reaction to Clinton's speech seems more of the same:

- a) I dislike Clinton immensely ergo what she said must be flawed.
- b) Overlay general talking points and type whatever comes to mind.
- c) When called on the silliness of the original statement, write a vague non-apology and fall back on a).

Posted by: [Scott Pauls](#) on June 30, 2004 at 3:00 PM | [PERMALINK](#)

I won't defend Sullivan's vaguely worded statement, but the phrase "common good" is often used by factions which simply wish to grab the property of other factions, for no other reason than they wish to have it. As such, whenever a pol invokes the phrase, one is well served by becoming extremely suspicious, since offers of vote purchasing is usually what follows. Obviously, that wasn't the case in this instance, at least in regards to Sen. Clinton's audience. The vote purchasing offers will come when she addresses other audiences.

Howard, as to what means testing of retirement benefits will achieve, it all depends on what the definition of "extreme" is, doesn't it? From 2001, which I happen to have at my fingertips (don't ask), I see federal outlays were 1.9 trillion, and SS, Medicare, and other retirement comprised 36% of that total, or 684 billion. 18% of outlays was for "social programs", or 342 billion, nearly all of it designed to assist people who are poor.

Now, the demographic group receiving the 36 percent has just about the highest median net worth (the 55 to 64 group may be slightly higher, if I remember correctly), while the group receiving the 18 percent is obviously the poorest among us. This suggests that quite a bit of the 684 billion can be devoted to reducing the roughly 340 billion deficit (2003) before "extremes" are engaged in, presuming that purpose of wealth transfers is to assist those unable to assist themselves.

If the problem of doing so is that retired people have too much illiquid wealth tied up in their homes, how about this proposal? The inheritance tax be reinstated, without an exemption, and be designed to recapture all benefits paid out to the retiree while they were alive, with an inflation adjustment. If the business owner is concerned about having to liquidate a business to pay the tax upon his death, he can simply refuse all retiree benefits, or some amount of retiree benefits, and thereby forgo the tax, or that part of the tax which would cause liquidation.

Posted by: [Willi Allen](#) on June 30, 2004 at 3:00 PM | [PERMALINK](#)

Ian: I have no problem with reducing spending in some areas. Maybe Hillary doesn't either. I don't know.

But Sullivan's argument is simply absurd. Anyone who spends more than a few minutes looking at the federal budget knows perfectly well that there's no feasible way to cut it substantially without making big reductions in defense, Medicare, and/or Social Security. And that won't happen because those are very popular programs.

If he's serious, he'll clam up about ag subsidies and means testing of Social Security (which saves very little) and tell us what kind of swinging cuts he's in favor of. Only then can we argue about whether spending cuts are genuinely a better option than tax increases.

Posted by: [Kevin Drum](#) on June 30, 2004 at 3:02 PM | [PERMALINK](#)

Why does Sullivan consider Hilary's statement particularly galling? Don't all politicians claim their agendas serve the common good?

Because she is Hillary Clinton and must be pilloried at every opportunity by any card carrying conservative. If she said the sun comes up in the east some conservative would have to disagree just because she said it.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 3:03 PM | [PERMALINK](#)

Ian,

Did you not read the "because they are morally better than you" part? Sullivan's main point was not that spending cuts are better than raising taxes (note in his subsequent post he brings up agriculture subsidies and coporate tax shelters, decidedly Republican spending priorities), but that when liberals invoke the common good they are claiming to be morally superior to everyone else, despite the fact that we all know who thinks they are the 'moral' party.

His statement is absurd. 'We' is the Clintons? So Hilary is personally going to take my money and spend it whatever she sees fit? No, 'we' is the federal government, run by both liberals and conservatives, and our elected representatives decide how to spend 'my' money.

He is not having an honest argument about taxes vs. spending cuts, he is venting his irrational Clinton hatred by summing up the role of the federal government as a liberal claim to moral superiority.

It is utter bullshit.

Posted by: [David Perlman](#) on June 30, 2004 at 3:14 PM | [PERMALINK](#)

Conservatives believe that government exists for the purpose of defending the borders of the country, and for making high-level policy decisions.

So why do they support an unnecessary pre-emptive war of choice by this administration?

Posted by: [Inside the Beltway](#) on June 30, 2004 at 3:14 PM | [PERMALINK](#)

If she said the sun comes up in the east some conservative would have to disagree just because she said it.

That by itself is true of any Democrat, not just Hillary. Hillary gets special treatment because she is the Designated Evil One.

I have no idea why they hate her so much. I once asked a conservative friend of mine, but all he could do was sputter in rage. Perhaps one of our esteemed visitors here could describe what it is that makes Hillary the Most Evil Person Who Ever Lived?

It would be especially interesting if the answer contained actual facts, but I won't hold my breath.

Posted by: [craigle](#) on June 30, 2004 at 3:16 PM | [PERMALINK](#)

Will, we'll spare everyone else rehashing the same discussion you and i had the last time this general topic came up, but for the factual record, yes, the 55-64 age group has the highest median net worth.

This, of course, makes sense as soon as you think about it: it's very hard for those above the traditional retirement age to increase their net worth in a substantial way, whereas those in the 55-64 age group (and for everyone else's sake, to be precise, we're talking the "age of the head of household") are, by and large, at the peak of their earnings while some very large costs (like child-rearing) are, by and large, behind them....

Posted by: [howard](#) on June 30, 2004 at 3:17 PM | [PERMALINK](#)

Just to think that only three years ago we were in striking distance of paying off the debt.

A once in a life time opportunity gone just like that!

Think of it - If nasty Republicans could have swallowed hard and excepted the pre 2000 tax code we would be closer still.

You want tax cuts? Imagine how much the budget would shrink if we didn't have to pay off our debt and the interest tied to it.

That would have been a permanent tax cut.

And I don't buy the fiscal stimulous argument, if you have a deflationary recession, supply side fiscal stimulous is counter productive, which is why Bush had no real job growth in 3 years and why the value of the currency shrank as much as 40% against key currencies in international markets.

Posted by: [boggles](#) on June 30, 2004 at 3:24 PM | [PERMALINK](#)

>A \$1 hike in gas taxes would increase operational costs for trucking companies

Who says they would have to pay it? It's possible to have multiple channels of distribution - you may already know diesel fuel and heating oil is interchangeable, the first is taxed and the other isn't. That's why they dye heating oil- woe to you if you're caught with it in your 18-wheeler.

HIRC, we already have a split system- isn't diesel fuel currently taxed a few cents a gallon higher than gasoline? Anybody know offhand?

Posted by: [doesn't matter](#) on June 30, 2004 at 3:24 PM | [PERMALINK](#)

Will Allen:

I won't defend Sullivan's vaguely worded statement, but the phrase "common good" is often used by factions which simply wish to grab the property of other factions, for no other reason than they wish to have it.

Since Hillary Clinton is obviously not proposing to grab other people's property for her personal enrichment, but rather to raise taxes to spend in ways that benefit large numbers of people through programs like Medicare, Social Security and Defense, it's hard to see the relevance of this claim.

Now, the demographic group receiving the 36 percent has just about the highest median net worth (the 55 to 64 group may be slightly higher, if I remember correctly), while the group receiving the 18 percent is obviously the poorest among us. This suggests that quite a bit of the 684 billion can be devoted to reducing the roughly 340 billion deficit (2003) before "extremes" are engaged in, presuming that purpose of wealth transfers is to assist those unable to assist themselves.

But that high median net worth is typically in the form of highly non-liquid assets like one's house. I'd be happy to see greater means testing of social security benefits, and redistribution of some of the proceeds to the poor, but we're not going to demand that elderly people start selling their homes, which they have typically spent their whole working lives paying for, and live off the proceeds as an alternative to Social Security. So your observation about their net worth is basically just irrelevant to the real-world issue of meaningful Social Security reform.

If the problem of doing so is that retired people have too much illiquid wealth tied up in their homes, how about this proposal? The inheritance tax be reinstated, without an exemption, and be designed to recapture all benefits paid out to the retiree while they were alive, with an inflation adjustment.

You mean an estate tax, not an inheritance tax. It's a bad proposal. The prospect of the state taking one's entire assets, or close to it, at death would strongly discourage wealth-creating economic activity and would be an unjust violation of property rights.

Posted by: [Don P](#) on June 30, 2004 at 3:27 PM | [PERMALINK](#)

My larger point, Howard, is that a huge percentage of our government activity is devoted to assisting people who, in comparison with the rest of the population, have great ability to provide for themselves, or to rebate that assistance upon their deaths. The only reason that this is the case is because they are the most reliable voters. Democracy in action, I suppose.

I don't think this is an appropriate use of state power, and it is a particularly poor use of state power when it benefits the oldest, often at the expense of the youngest. As to the politics of it, what are the odds of retirees and their baby-boomer heirs actually pursuing the real common good, and ceasing to behave as if the purpose of the state is to provide comfortable retirements and inheritances, regardless of the ability to provide for oneself, or how much state assistance made the inheritance possible? Ya' mean democracy isn't an unalloyed grand thing? Who'da' think it?

Posted by: [Will Allen](#) on June 30, 2004 at 3:30 PM | [PERMALINK](#)

One of the things that economists do [...]

Lord love a duck.

A whole lot of economists (of whom Sullivan and others would approve) claimed that Clinton's tax bill in 93 would drive us into recession. Whoops. I don't think, after the glories of the Bush II economic performance, that *those* economists have leave to get up out of the thinking chair.

Macro Econ is politics with charts. That's another one of the things economists do.

Posted by: [Jeffrey Davis](#) on June 30, 2004 at 3:32 PM | [PERMALINK](#)

Will, just to note, i appreciate your larger argument, and i'm not up for a point-counterpoint on it today (besides, i agree with some of your larger argument) since i don't have the time.

I did, though, want to be sure that when you recapitulate it again, you get the household median net worth correct....

Posted by: [howard](#) on June 30, 2004 at 3:36 PM | [PERMALINK](#)

You mean an estate tax, not an inheritance tax. It's a bad proposal. The prospect of the state taking one's entire assets, or close to it, at death would strongly discourage wealth-creating economic activity and would be an unjust violation of property rights.

What's this? You mean dead Fundies CAN take it with them?

Posted by: [bo](#) on June 30, 2004 at 3:43 PM | [PERMALINK](#)

Will Allen:

My larger point, Howard, is that a huge percentage of our government activity is devoted to assisting people who, in comparison with the rest of the population, have great ability to provide for themselves, or to rebate that assistance upon their deaths. The only reason that this is the case is because they are the most reliable voters.

Nonsense. While the reliable voting behavior of the elderly is certainly one factor affecting current Social Security and tax policy, the reasons for those policies, and the reasons we have not adopted your proposed policy, also include the fact that your proposals are wildly unpopular. Americans in general simply don't think retirees should be forced to sell their homes and live off the proceeds rather than Social Security, or be forced to repay their Social Security benefits when they die, even if such repayment consumes their entire assets.

As to the politics of it, what are the odds of retirees and their baby-boomer heirs actually pursuing the real common good, and ceasing to behave as if the purpose of the state is to provide comfortable retirements and inheritances, regardless of the ability to provide for oneself, or how much state assistance made the inheritance possible?

They don't behave as if that is "the purpose" of the state. They do behave as if one of the purposes of the state is Social Security. They may or may not favor certain reforms of that program, but they certainly don't favor your radical proposal.

Posted by: [Don P](#) on June 30, 2004 at 3:50 PM | [PERMALINK](#)

I am fascinated that conservatives just go spare when liberals accuse them of being selfish. GWB succeeded in 2000 because he campaigned as a "compassionate conservative." It was a lovely marketing slogan--"all the selfishness, none of the shame."

Conservatives keep trying to find ways to rationalize inequality as the "common good." It just pains them when someone calls their bluff.

Posted by: [Patience1](#) on June 30, 2004 at 3:51 PM | [PERMALINK](#)

Yes, Don, and you quote out of context, and thereby ignore where it is stated that the offers of vote purchasing will come later, with offers of increased benefits or, in the insatce of defense spending, offers to keep open military facilities that are completely irrelevant to national defense. This is what the primary function of a Senator or Congressman is: to buy votes from constituents with tax revenues, without regard to the common good, which is a concept that merely a smokescreen for the vote auction. Thus, magically, every pol who campaigns in Iowa thinks ethanol subsidies are a key element of the common good, despite nearly every economist on earth maintaining that they are damaging, and every pol everywhere "knows" that reducing retiree benefits would destroy the common good.

Next, you raise a point, that of the illiquid nature of many retiree's wealth, and strangely state that it renders my point about retirees being able to assist themselves irrelevant, when I adress this issue, as you acknowledge. Then, somewhat bizarrely, you falsely claim that a tax designed to recapture tax revenues paid out in benefits would "violate property rights" as if the one had the "right" to receive tax revenues without strings attached.

If people didn't wish to have their estates taxed, they would have the right to forgo benefits. As to discouraging wealth creation, giving people money taken from other's paychecks discourages wealth creation more than any other phenomena. People who knew that receiving benefits from the state would reduce what they could pass on to their children might decide to take less in benefits, and generate more wealth for their own use, and to create a larger estate, while they are alive. The only reason it is a bad idea is that it interferes with the vote auction we call elections.

Posted by: [Willi Allen](#) on June 30, 2004 at 3:53 PM | [PERMALINK](#)

*We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, **promote the general welfare**, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.*

Why does the Constitution hate America?

>A \$1 hike in gas taxes would increase operational costs for trucking companies

Who says they would have to pay it? It's possible to have multiple channels of distribution - you may already know diesel fuel and heating oil is interchangeable, the first is taxed and the other isn't. That's why they dye heating oil- woe to you if you're caught with it in your 18-wheeler.

More or less my point. Sullivan doesn't even think through his idea far enough to sense the need for something a tad more complicated...

So, in any case, we can go down a different layer to find yet another drawback that a conservative should find appalling. Gas taxes (even if we tax diesel differently than regular gas) disproportionately hit rural areas (where one must drive around more). Conservatives (Sullivan included) often argue that the tax code should be apply to each person in the same way (see arguments re: flattening the income tax scale) - a gas tax clearly does not meet this test. Moreover, from a purely partisan standpoint (I'll admit, Sullivan isn't a textbook partisan), rural areas tend to be more "red".

I should say, I'm not against a gas tax (although I think it would have to be extremely carefully and, alas, complicatedly implemented), I'm merely arguing that Sullivan often doesn't even adhere to his own stated viewpoints when making any sort of argument.

[Aside- actually I didn't know that diesel and heating oil are the same thing. Good to know if my oil company screws up again this winter and lets my tank run dry...]

Posted by: [Scott Pauls](#) on June 30, 2004 at 3:57 PM | [PERMALINK](#)

Yes, Don, and the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death. The reason why it is structured this way has nothing to do with the common good, unless "common good" is defined as whatever which most guarantees enhancing a politician's career.

Posted by: [Willi Allen](#) on June 30, 2004 at 4:01 PM | [PERMALINK](#)

Conservatives should stop pretending that it is an issue of right versus wrong. For them, it is always "us" versus "them."

Posted by: [Alan](#) on June 30, 2004 at 4:03 PM | [PERMALINK](#)

Social Security is defunct.

Anyone, and I mean anyone right now, under the age of fifty-five, shouldn't even plan on SS being around when they retire. The system was a great idea, but the abuse by both sides in using the SS accounts for their own personal pork projects has left it a zombie.

Personally, we should be honest with ourselves, and each other and put the poor thing out of our misery.

I would say, transfer those who are currently reliant on SS funds over to welfare. Then transfer the SSI tax funds to an account that is controlled by the GAO. Pass laws that prohibit Congress and the President from touching the money, or borrowing against the money for their own personal pork projects.

Then, just then, we may finally have a system that will be healthy and viable for a very long, long time. And who knows, we could possibly build a universal healthcare system into it as well.

Posted by: [sheerahkahn](#) on June 30, 2004 at 4:09 PM | [PERMALINK](#)

the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death.

BULLSHIT!! Excuse the Cheney out of me. My mother lives on her social security and my father's pension. That total \$1200 a month. She has spent all her savings and had to sell her home and her car to make ends meet. Tell me how comfortable her retirement is. Both of my parents worked for over 40 years--often 6 or 7 days a week. Hers is not an atypical scenario. The vast majority of people living on SS do not have a luxurious retirement. Those who were the CEOs of the company they worked for are the ones who have the luxurious retirement.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 4:12 PM | [PERMALINK](#)

Selfish Republicans like to keep their money
and, like Grover, are happy to inspect their
own meat, etc.

For Sully and all Selfish Republicans, irrational Clinton hatred trumps rational aWol hatred every time.

Posted by: [Hedley Lamarr](#) on June 30, 2004 at 4:13 PM | [PERMALINK](#)

First, if that is what Sullivan meant, that is what Sullivan should have said. It's not what he said.

Don P - I believe my interpretation of Sullivan's remarks is spot on. Do you offer a different interpretation, or care to call him to find out?

Second, Sullivan himself has advocated tax increases to help reduce the deficit, which pretty much destroys your theory of his intent anyway.

No, rather, it reinforces my argument regarding Sullivan's meaning. I don't believe he is arguing that spending cuts *alone* are the best means of reducing federal borrowing. I do believe he thinks Hillary Clinton favors tax increases alone as the best means of reducing federal borrowing. I think in his critique he is expressing a view, correct or not, that HRC favors an approach that would solely or overwhelmingly rely on tax increases, as opposed to his preference for a mixture of the two.

And third, there is no indication that Hillary is opposed to all proposed cuts in federal spending: she too favors a mixture of spending cuts and tax increases to reduce the deficit.

Perhaps, but I reckon any spending cuts she favors are paltry, and stand by my view that her approach relies overwhelmingly (if not solely) on increasing taxes, a position I'd suspect is contrary to the wishes of most Americans, who would undoubtedly opt for a mixture of spending cuts and tax increases. If you have evidence of Mrs. Clinton's preference for substantive spending cuts, I'm all ears (or eyes, in this case).

Posted by: [P.B. Almeida](#) on June 30, 2004 at 4:13 PM | [PERMALINK](#)

Why did we invade Iraq if not for the "common good". That seems to be the only acceptable answer left. Or.. as GW says to fight terrorism to make the world a safer place. To make the world a safer placeFOR THE COMMON GOOD!!!

Posted by: [USAF 1965-69](#) on June 30, 2004 at 4:16 PM | [PERMALINK](#)

Sheerakhan, what do you propose be done with the SSI tax revenues that exceed benefits paid, which admittedly, we only have to worry about for another 15 years or so? Should we convert those revenues into silver dollars, and bury them on The Mall? Convert them into bonds? How does that differ from what is currently done? If we are going to continue to have a payroll tax, which, in my opinion, is a bad idea, it should at least be reduced so as to collect no more than benefits paid.

Posted by: [Willi Allen](#) on June 30, 2004 at 4:19 PM | [PERMALINK](#)

common good: To buy all the weapons Kerry voted down, to pay off a 500 billion dollar debt. A 8 trillion dollar debt. We bought it we have to pay for it.

Posted by: [flogger blogger](#) on June 30, 2004 at 4:22 PM | [PERMALINK](#)

Inside, then your mother should not have any reduction to her benefits. However, it is an unavoidable fact that the group receiving retiree benefits has a greater median net worth than most of those who are paying payroll taxes, particularly young people paying payroll taxes. It is a misuse of state power to pay benefits to people who have the means to pay for their own lifestyle, or at least partially so, while obtaining the revenues for those benefits by taxing people who are poorer, also while allowing benefit recipients to pass on inheritances tax-free to heirs. None of this applies to you mother.

Posted by: [Willi Allen](#) on June 30, 2004 at 4:27 PM | [PERMALINK](#)

However, it is an unavoidable fact that the group receiving retiree benefits has a greater median net worth than most of those who are paying payroll taxes.

Cite, please, for this **unavoidable fact**.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 4:30 PM | [PERMALINK](#)

It is ironic, since conservatives are always criticizing liberals for our supposed "moral relativism"...but then when HC acknowledges the "common good", they freak out because suddenly she is imposing her idea of what's good on the rest of us. There's no winning!

Posted by: [gene](#) on June 30, 2004 at 4:31 PM | [PERMALINK](#)

"I would say, transfer those who are currently reliant on SS funds over to welfare."

One of the main aspects of the system when it was set up is that it was not to be considered a welfare type payment, it was an entitlement. You may think that semantic, but it is highly insulting to "transfer" every day Janes and Joes "over to welfare." It is this type of ignorant decision making, without consideration of history and people's perceptions, that made such a mess of the Iraq occupation.

Posted by: [r.t.](#) on June 30, 2004 at 4:33 PM | [PERMALINK](#)

But Sullivan's argument is simply absurd. Anyone who spends more than a few minutes looking at the federal budget knows perfectly well that there's no feasible way to cut it substantially without making big reductions in defense, Medicare, and/or Social Security. And that won't happen because those are very popular programs.

Kevin: I read Sullivan fairly frequently and don't think his prescription for cutting the deficit relies solely, or even mostly, on spending cuts. He advocates an increase in the gas tax, for instance, and I'm certain I've read from him a generally critical attitude of Bush's tax cuts (at least the fact that they've been rolled out in what by rights should constitute a period of sacrifice). It's true that he rails against big government, as well, but your characterization of his arguments as "absurd" is a bit over the top. In fact Sullivan does regularly (like lots of conservatives) call for cuts in entitlements. Eliminating farm subsidies entirely and coupling that with deep cuts in Social Security and Medicare benefits could save \$100 billion a year I calculate. Match that with an \$80 billion tax increase and the deficit is nearly cut in half. Add a few years of economic growth and we should be back in the black before long (and then we could also finally enjoy some Pentagon shrinkage as Iraq winds down). HRC Sullivan also opposes the prescription drug expansion of Medicare.

Is any of this politically possible? Probably not much of it in the *near term*, but that doesn't mean one cannot favor such an approach, and argue for it. Victory goes to those who are resolute. I'm sure a lot of liberals would just as soon that talk of means-testing (and other hobby horses of the right) would just go away. But they won't, and with the demographic pressures we're facing, it's unlikely younger voters will put up with the tax increases needed to "fix" our long-term deficits *solely* through raising taxes (though tax increases are likely part of the mix).

Posted by: [P.B. Almeida](#) on June 30, 2004 at 4:35 PM | [PERMALINK](#)

Yes, Don, and the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death.

Bull. As currently structured, SS benefits are so paltry as to not provide comfortable retirements or inheritances to anyone who doesn't nearly have that on their own. For the most part, you either don't have comfortable retirement or inheritance without SS -- and still don't have it adding SS in, or you have a comfortable retirement and generous inheritance to leave without SS and microscopically more so with SS thrown in.

Would it make more sense to means-test SS? Sure, it would. But that argument can be made -- far better, in fact -- without ludicrous hyperbole.

Posted by: [cmdicely](#) on June 30, 2004 at 4:40 PM | [PERMALINK](#)

What I find ironic about SS payroll deductions is the fact that the more you earn, the less of your income that goes into SS deductions. Conversely, the less you earn the more of your income that goes into payroll deductions. Better still, if you make your money through investments, you don't pay any payroll deductions. Just work the minimum number of quarters and you are guaranteed SS. That would seem to mean that those who need SS the most proportional to their income pay the most into it.

SS needs to be modified (fixed), but don't throw the baby out with the bathwater.

Posted by: [Over 50](#) on June 30, 2004 at 4:41 PM | [PERMALINK](#)

In addition, your type of attitude is one that helps propel the US into the Mississippi of the the developed world. We are the most selfish nation in the first world when it comes to providing a net for people. Not to mention, one of the worst countries in the world when it comes to children caring for their aged parents. You are aware that a person's SS payment has a ceiling, are you not? I believe you are taxed, at this point in time, on your first \$86,000 or so. of income.

Posted by: [r.t.](#) on June 30, 2004 at 4:43 PM | [PERMALINK](#)

P.B. Almeida:

Don P - I believe my interpretation of Sullivan's remarks is spot on. Do you offer a different interpretation, or care to call him to find out?

He didn't say what you claim he meant to say.

I do believe he thinks Hillary Clinton favors tax increases alone as the best means of reducing federal borrowing.

But that's not what he said, and he would have no basis for that assumption even if it is what he meant. Sullivan is a skilled writer. I'll take what he writes to express what he means over your guesses that he means something else.

Perhaps, but I reckon any spending cuts she favors are paltry, and stand by my view that her approach relies overwhelmingly (if not solely) on increasing taxes, a position I'd suspect is contrary to the wishes of most Americans, who would undoubtedly opt for a mixture of spending cuts and tax increases.

Well, your suspicions in this case simply are not supported by the evidence, either. There is no evidence that Americans favor anything other than paltry cuts in government spending, if any. The size of the federal government keeps growing in response to democratic pressures. The one serious initiative to make major cuts in federal spending--the Republican Contract with America of the mid '90s--produced one of the biggest political defeats in recent history. Americans often say, in the abstract, that they want smaller government, but when it comes to actual programs and actual votes, they invariably act to make the government bigger. Actions speak louder than words. That has been the reality of at least the last 50 years.

bajesus, so all one has to do is you the term common good, much like "children", and all of a sudden their idea is great!!! Yes Yes, common good, it's for the children, my programs rock!!!!!!!

Posted by: [mama](#) on June 30, 2004 at 4:45 PM | [PERMALINK](#)

Encapsulated Right wing message to the poor:

"Screw the poor. What have you ever done for me. I have a gun, so don't you come near me or my family. Quit looking so sad and weepy. You'll make liberals tax my money to help you.

"I am a religious moralist. Your morals are low class. You have too many babies out of wedlock. You don't speak good English. You eat funny foods. You listen to ugly music. Just because I don't like you doesn't make me a racist. Your religion and culture keep you from getting ahead. Go back where you came from.

"I will not be forced by any government to help you. It's your fault you're poor. You aren't as smart as me or you would be as rich as me.

"I made my money by hard work. I have a nice home and a fancy car. I send my kid to the best private schools. You can't take that away from me or make me fund your public schools.

"You can work for me for less than minimum wage and when I have made my money you can go away. I want to leave all my money to my kids so don't tax me.

"My political and religious leaders tell me that the way I think is right, by God!"

These views are the paradox of the right wing Christian. They stem from the fear of losing to others in a perceived hostile world. Their fears are realized through the response to their actions, when the dispossessed rebel, individually or en mass. Their fears lead to a "mean spirited" cheapening of the worth of others, dividing society and create hostility in turn.

Liberals are charitable, in the true religious sense.

P.B. Almeida:

Kevin: I read Sullivan fairly frequently and don't think his prescription for cutting the deficit relies solely, or even mostly, on spending cuts.

Show me where Sullivan advocates tax increases as the primary, or even as a substantial, means of eliminating the deficit.

Posted by: [Don P](#) on June 30, 2004 at 4:49 PM | [PERMALINK](#)

Will,

Call me crazy, and most of the people here will drop their jaws in reading a conservative, and former Republican write what I'm about to write.

We take the current SSI system and shut it down. Transfer all recipients over to welfare temporarily.

We open a new form of Social Security Insurance. Except that in this new one we incorporate Universal Health Care...oh, what the hell, lets throw in Universal Dental Care as well. The system is set that the tax receipts from the SSI tax still go into this new account, but law is enacted to prevent any form of fund removal from the account. In short, SSI exists outside of the general fund, distinct and untouchable.

No bonds for the extra money that would accumulate in the new SSI account. That's how we got into trouble with the current system. In short, it's okay to have extra money in the account, and the benefit is universal for all Americans.

Damn, I wish I was more versed in economics so I could fathom the details that need to be addressed.

Anyway, Will, the payroll tax is something we all pay into because we all benefit living here in the US. That is unless you want to see all the city, county, regional, state, and federal social, community, and legal infrastructure disappear around you. In which case that would make us a third world country. That certainly would change the face of the US...again.

Posted by: [sheerakhahn](#) on June 30, 2004 at 4:50 PM | [PERMALINK](#)

I don't get it if you have 30 million in the bank and you make 30r 5 million a year why would you even worry about taxes, pay them and shut up because you did not earn that kind of money nobody could work that hard for that kind of money and if you think you are working hard I would say try digging ditches for 12 bucks an hour than come and complain about.

Posted by: [flogger blogger](#) on June 30, 2004 at 4:57 PM | [PERMALINK](#)

Being Rant...

Here is a RADICAL proposal!

Increase the inheritance tax rate to 90% for estates over \$5M. Tell the children of the ultrarich that they had the benefit of their parents' money while they were living--best schools, best food, best cars, best of everything. Now they are adults. If they want to end up as gazillionaires, let them earn it, just like their ancestors did. Take the money from the tax and pour it back into the pot for the "common good" to ensure those who go to public schools today have the same opportunity for a great education as those who went to public schools in the 19th and early 20th centuries.

I bet I'll never get elected to Congress as a Republican OR a Democrat. I may have to become a European and run as a socialist.

Rant completed. I feel lots better for saying that.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:00 PM | [PERMALINK](#)

the payroll tax is something we all pay into because we all benefit living here in the US.

False. Only those who actually work for a living pay payroll taxes. If your income comes from investments, you pay no payroll taxes. That is one reason payroll taxes are regressive. They hit the poor far more heavily than the rich. They are **NOT** income taxes.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:04 PM | [PERMALINK](#)

Will Allen:

Yes, Don, and the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death.

Have you looked at your annual Social Security statement recently? By no reasonable definition of a "comfortable retirement" can SS benefits be considered sufficient to fund one. SS provides, at best, a basic subsistence-level retirement income. And for millions of retirees, a substantial fraction of even that very modest income is consumed by health care expenses not covered by Medicare or other government programs for which they qualify.

Posted by: [Don P](#) on June 30, 2004 at 5:05 PM | [PERMALINK](#)

Have you looked at your annual Social Security statement recently?

Will Allen probably doesn't get an annual Social Security Benefits statement. If he did, he couldn't possibly make the comments he does.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:09 PM | [PERMALINK](#)

Inside the Beltway: "Only those who actually work for a living pay payroll taxes. If your income comes from investments, you pay no payroll taxes. That is one reason payroll taxes are regressive. They hit the poor far more heavily than the rich. They are NOT income taxes."

Well, you got me there. I didn't know that...but wait, isn't there a tax for profits? I'm not a H&R Block guy, but I'm sure that if there are profits involved there is a tax to take a portion away.

Posted by: [sheerahkahn](#) on June 30, 2004 at 5:14 PM | [PERMALINK](#)

Ignoring the trolling about the absence of a 'common good' tradition in Britain (google for 'Attlee' some time), the abiding argument against means-testing of critical benefits such as SS and Medicare is that the administrative regime required for such testing would eat up any savings.

It's usually more efficient to offer universal benefits that generally won't be collected by those wealthy enough to manage without them. I don't imagine that Gwyneth Paltrow will be nipping to the Post Office every week to pick up her £16.50 (c. \$30) for little Apple. But the fact that she could make it easier for those parents for whom that money makes a difference.

Posted by: [nick](#) on June 30, 2004 at 5:19 PM | [PERMALINK](#)

Unavoidable, I'm tired of doing google searches for people who are too lazy to educate themselves before implying that others are not being forthright. Here's one place to look.

<http://www.agingstats.gov/tables%202001/tables-economics.html>

although this table is incomplete, in that it leaves off the below 44 age group, thus not fully showing how extreme our government outlays are skewed to favor older, wealthier, people.

Posted by: [Willi Allen](#) on June 30, 2004 at 5:24 PM | [PERMALINK](#)

There are actually two types of payroll taxes: income taxes and SS/Medicare taxes. Only those who earn a paycheck actually pay the SS/Medicare taxes (current rate is approx. 26%) There are taxes on investment profits when you cash in investments. Those are different. Under the Bush tax cut, those are taxed as regular income. No SS/Medicare taxes are paid on that type of income. A person who works for a living and has investments pays both taxes. A person who only collects income from the capital gains of their investments only pays income taxes and saves ~26% right off the top. It gets very complex very quickly. The bottom line is that the rich pay less taxes per dollar earned than the poor.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:26 PM | [PERMALINK](#)

We're going to take things away from you on behalf of the common good.

Sounds like a fine paraphrase of Karl Marx to me. "From each according to their abilities, to each according to their need".

Posted by: [Ron](#) on June 30, 2004 at 5:42 PM | [PERMALINK](#)

Will Allen wrote:

<http://www.agingstats.gov/tables%202001/tables-economics.html>

Go to the next chart. It says that 38.2 % of the population over 65 is living at low income or below. Low income is between 100 and 199 percent of the poverty threshold (i.e., between \$8,494 and \$16,987 for one person age 65 or over in 2001).

From the same site:

Among older Americans in the lowest fifth of the income distribution, Social Security accounts for 82 percent of income, and public assistance accounts for another 10 percent. For those whose income is in the highest income category, **Social Security** and pensions each **account for about a fifth of income**, and asset income and earnings each account for about 30 percent of total income.

Although dollar expenditures increase with income, the relative burden of health care costs is much higher among lower-income households and households in the middle of the income distribution. In 1998, households in the bottom fifth spent an average of 13 percent of their expenditures on health care. Those in the middle fifth spent an average of 16 percent, and those in the top fifth spent 9 percent.

I'm sorry, but I don't think your argument is as strong as you make it out to be.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:50 PM | [PERMALINK](#)

Actually, I've been self employed for 95% of the time since I turned 14, so I have a much better appreciation of how payroll taxes work than the typical employee. If Social Security benefits are so negligible to the average retiree, then there is all the more reason to reduce them, or even cut them off, to retirees who do have the ability to support themselves, and to also recover benefits with exemption-free estate taxes upon the retirees death.

In any case, this statement...

"the payroll tax is something we all pay into because we all benefit living here in the US. That is unless you want to see all the city, county, regional, state, and federal social, community, and legal infrastructure disappear around you."

is patently false. The payroll tax is something the vast majority of us pay to transfer wealth to a group with a much higher median net worth than those paying. It has nothing to do with "city, county, regional, state, and federal social, community, and legal infrastructure". The reason why an income ceiling as placed on the tax was to place a limit on benefits, since benefits were calculated according to how much taxes were paid. Of course, benefits were originally calculated when the age of expected death was only a few years beyond the retirement age.

Now, the purpose of Social Security is to provide a means for politicians to purchase the votes of people who are in a group with a higher median net worth than those whose wages are being used to make the purchase. In the current, degraded, use of the English language, many people considerate it to be "generous", "compassionate", or "charitable" for politician A to use the wages of citizen B to purchase the vote of citizen C, regardless of the fact of citizen C being much more well off than citizen B.

Posted by: [Willi Allen](#) on June 30, 2004 at 5:51 PM | [PERMALINK](#)

Thanks for the info beltway. Sometimes wonderful ideas fall apart under scrutiny. I shouldn't be surprised my idea for a new Social Security system would be any better.

Ah well, back to my hole on social reform.

Posted by: [sheerahkahn](#) on June 30, 2004 at 5:56 PM | [PERMALINK](#)

Inside, since I have stated all along that benefits should not be reduced to those with low incomes, and that those who cannot support themselves without S.S., but have net worths in illiquid form, should repay their benefits through an estate tax upon their deaths, my argument is not affected at all.

Posted by: [Will Allen](#) on June 30, 2004 at 5:58 PM | [PERMALINK](#)

Ron:

We're going to take things away from you on behalf of the common good.

Sounds like a fine paraphrase of Karl Marx to me, "From each according to their abilities, to each according to their need".

It's not a paraphrase at all. The two statements have completely different meanings.

In any case, **everyone** favors taking things away from you for the common good, even those who think "common good" encompasses only things like national defense, police protection and contract enforcement, so the whole idea that there is something wrong or suspicious about the concept of the "common good" is just stupid.

Posted by: [Don P](#) on June 30, 2004 at 6:02 PM | [PERMALINK](#)

Will: "The reason why an income ceiling as placed on the tax was to place a limit on benefits, since benefits were calculated according to how much taxes were paid. Of course, benefits were originally calculated when the age of expected death was only a few years beyond the retirement age."

Sorry Will, you and Beltway are way out of my league. My expertise is history and science, not economics. I thought I take a swim in the Social reform pool, and well, I just can't swim in it.

My apologies.

Posted by: [sheerahkahn](#) on June 30, 2004 at 6:03 PM | [PERMALINK](#)

Andrew Sullivan is a self-centered, inconsistent whiner who doesn't have a clue about much, especially the idea of the "common good." His screed simply reveals his lack of knowledge of civics, including the U.S. Constitution. Why anyone pays that much attention to him I'll apparently never know. Serious people don't spend time debating such drivel; they spend their time either contributing to the common good, or figuring out how to get more of it for themselves.

Posted by: [a_retrogrouch](#) on June 30, 2004 at 6:15 PM | [PERMALINK](#)

Will Allen:

If Social Security benefits are so negligible to the average retiree, then there is all the more reason to reduce them, or even cut them off, to retirees who do have the ability to support themselves, and to also recover benefits with exemption-free estate taxes upon the retirees death.

But SS benefits are **not** negligible to the average retiree, as your own citation shows, so your premise above is simply false. Just as your previous premise that the "purpose" of SS is to fund a "comfortable retirement" is false. Your claims and proposals are based on a misrepresentation of the current Social Security system, and ignore all sorts of other fundamental issues like asset liquidity and administrative costs. Not to mention the fact that any proposal that would allow the state to grab the entire assets of millions of tens of millions of elderly Americans at death, leaving them with nothing to leave to their spouses or children, is so utterly politically infeasible that it doesn't constitute a serious reform proposal anyway.

Posted by: [Don P](#) on June 30, 2004 at 6:20 PM | [PERMALINK](#)

Sheerahkhan, there is no need to apologize. I appreciate the civility.

Posted by: [Will Allen](#) on June 30, 2004 at 6:23 PM | [PERMALINK](#)

Well, your suspicions in this case simply are not supported by the evidence, either. There is no evidence that Americans favor anything other than paltry cuts in government spending, if any. The size of the federal government keeps growing in response to democratic pressures.

Don P - Not true. Federal spending as a percentage of GDP stopped growing during the Reagan years, and drifted down a couple of points during the Clinton years. This is more or less in keeping with what transpired in other rich countries (especially the English speaking ones) during the same period. The high water mark of the welfare state clearly was the last quarter of the twentieth century. Increasingly, governments have been cutting taxes, selling off state assets, and empowering consumers of government services to utilize market forces. In the United States, the federal government's share of GDP has essentially been in stasis for the last two decades. There may be lots of things we'd all like government to fund, but there's substantial resistance on the part of voters -- and financial markets -- to pay for them.

He didn't say what you claim he meant to say.

I've reread the source (Sullivan's blog) and am convinced my interpretation is correct. In the context of a discussion of fiscal priorities and deficit worries, Sullivan criticizes Hillary Clinton's desire to raise taxes as opposed to the types of entitlement reforms he believes are wiser, and would constitute truer manifestations of policies that genuinely promote the "public good". I'm not sure I understand on which points you're disagreeing with me, and suspect you enjoy the simple pleasure of contradicting P.B. Almeida. Fair enough, but up to this point your criticism is non-substantive.

But that's not what he said, and he would have no basis for that assumption even it is what he meant.

Anyone who reads Sullivan regularly knows he is obsessed with the growing tide of red ink flowing from Washington. Sullivan is indeed critiquing Hillary Rodham's approach to fiscal policy -- namely her strong preference for raising taxes over cutting spending, because doing the latter in a substantive fashion would require entitlement reform. Sullivan, in contrast, has exhibited flexibility in his policy preferences in this area, both by his calls for a significant increase in gasoline taxes, and his critique of Bush's tax cut plans. I'm still waiting, by the way, for you to provide evidence to support your claim that Hillary Clinton supports spending cuts as part of a plan to cut the deficit. Mind you, I'd be pleasantly surprised to find out I'm wrong on this one point, as I like my Democrats hawkish, and Mrs. Clinton is therefore one of my favorite Democrats (I'd frankly much prefer to see her in the White House than John Kerry).

Show me where Sullivan advocates tax increases as the primary, or even as a substantial, means of eliminating the deficit.

In addition to his call for a large gasoline increase (which he specifically cites as a deficit reduction measure) Sullivan also implies strong support for boosting marginal income rates via his critique of the Bush tax cuts, and their contribution to the deficit. Read the paragraph entitled "No War Budget" below.

Well Don, if S.S. benefits are so small, then they are negligible to people who have considerable net worth and/or good private pensions. As to administration costs, such people are already filing tax returns, and getting their social security benefits could be easily incorporated into that system. With modern data processing, it need not be terribly expensive, unless the assumption is made that retirees would engage in widespread fraud to obtain benefits. Funny, though, that administration costs are such a critical calculation when paying benefits, but are nearly ignored when collecting taxes. Gosh, why would that be?

Next, you falsely claim that I have ignored asset liquidity, when that is the entire point of my proposed estate tax, and by the way, your point about spouses is easily dealt with by allowing a spouse to inherit a certain portion of an estate without taxes, or to provide for recovery after the spouse's death. This is done in the Medicaid system currently. Finally, I conceded the political improbability of such a tax well above, which was one of my points; that our current retirement system has as it's core purpose the provision of a means for politicians to purchase the votes of retired, wealthier, people, and their immediate heirs, with the wages of younger, poorer people. Thank you for agreeing.

Posted by: [Will Allen](#) on June 30, 2004 at 6:41 PM | [PERMALINK](#)

Ron:

You're not listening. Confiscating income or wealth and redistributing it on the behalf of the common good is what **everyone** who supports any kind of government is talking about, including the most extreme libertarians who think the only proper purpose of government is to provide minimal functions like a national defense. So stop with your stupid Karl Marx nonsense. Unless you're advocating no government at all, you're advocating redistribution of wealth for the common good, too, you big ol' Commie.

Posted by: [Don P](#) on June 30, 2004 at 6:58 PM | [PERMALINK](#)

What does a self-hating gay man know about the common good? Sully's not even smart enough to vote for people who don't hate him for what he is. Why do we care? He's just a freeper with an above average IQ (for a freeper that is).

Posted by: [d&c](#) on June 30, 2004 at 7:03 PM | [PERMALINK](#)

It is ironic that someone tosses about charges of stupidity while being unable or unwilling to discern the difference between a government outlay for a commonly utilized service, like national defense, or a good or service that anyone can access, like a highway or a court system, and a government outlay for purpose of giving an individual citizen cash, depending on which faction he belongs to, or an individually utilized service that others cannot access, like subsidized hip replacements, depending on which faction he belongs to.

Posted by: [Will Allen](#) on June 30, 2004 at 7:07 PM | [PERMALINK](#)

So 121 comments later, still nobody will tell me why the Right hates Hillary so much.

Huh, I guess there must not be a rational, expressible reason. Who would have guessed?

Posted by: [craigie](#) on June 30, 2004 at 7:24 PM | [PERMALINK](#)

Don P

The most extreme of the libertarians don't believe in any government, not even for national defense. You can check out the idea [here](#).

The question being, are you for increasing socialism, decreasing socialism, or maintaining what we have? I like the decrease, Hillary clearly wants to take us towards more socialism.

Posted by: [Ron](#) on June 30, 2004 at 7:25 PM | [PERMALINK](#)

Will Allen:

Well Don, if S.S. benefits are so small, then they are negligible to people who have considerable net worth and/or good private pensions.

That's not what you said. You said "average retiree," not retirees who "have considerable net worth and/or good private pensions."

But your latest version is still wrong, anyway. As **your own citation** shows, per Inside the Beltway: even for retirees whose income is in the highest income category, Social Security and pensions each account for about a fifth of income. Would you consider a 20% drop in your own income to be "negligible?" I seriously doubt it. And it's obviously even less "negligible" for the much greater number of retirees for whom SS provides much more than 20% of retirement income, including, obviously, those for whom it is the primary source of income.

As to administration costs, such people are already filing tax returns, and getting their social security benefits could be easily incorporated into that system.

I see no basis for believing that means-testing of SS benefits could "easily" be incorporated into the IRS or any other federal agency. And since your proposed test is asset-based rather than income-based, it would be even more difficult to administer and would require a huge new or expanded federal bureaucracy.

Next, you falsely claim that I have ignored asset liquidity, when that is the entire point of my proposed estate tax.

But your estate tax is utterly infeasible for the reasons I stated previously. If you seriously believe that people will vote for a tax that confiscates the **entire assets** of millions of poorer Americans when they die you are living in a fantasy world. People would not support such a proposal because it would strike them, as it strikes me, as profoundly unjust. You claim to be motivated by a desire to reduce government benefits to wealthy retirees who don't really need them, but your actual proposal would burden the poorest retirees and their families the most.

and by the way, your point about spouses is easily dealt with by allowing a spouse to inherit a certain portion of an estate without taxes, or to provide for recovery after the spouse's death.

Then why would any retiree choose your other option of liquidating his assets and living off those instead of claiming SS benefits, if he knows that he will be spared repaying some or all of those benefits from his estate when he dies, and can give them to his spouse (or, presumably, some other beneficiary) instead?

Posted by: [Don P](#) on June 30, 2004 at 7:26 PM | [PERMALINK](#)

"So 121 comments later, still nobody will tell me why the Right hates Hillary so much."

Oh, It's a right wingnut thing. You wouldn't understand, GFY! :^)

Posted by: [bo](#) on June 30, 2004 at 7:27 PM | [PERMALINK](#)

There are actually two types of payroll taxes: income taxes and SS/Medicare taxes.

Well, no.

"Income taxes" are not "payroll taxes", even if they are paid, in part, by payroll deductions. "Payroll taxes" refer to SS/Medicare taxes exclusively.

(OTOH, while "income taxes" are not a kind of payroll taxes, "payroll taxes" are income taxes, inasmuch as they rely Constitutionally on the 16th Amendment empowering Congress to lay a tax on "incomes, from whatever source derived")

Posted by: [cmdicely](#) on June 30, 2004 at 7:28 PM | [PERMALINK](#)

Ron:

*Don P*The most extreme of the libertarians don't believe in any government, not even for national defense.

Those people aren't libertarians. They're anarchists. Are you an anarchist? No? Then you're in bed with Karl Marx on the "common good" thing.

Posted by: [Don P](#) on June 30, 2004 at 7:28 PM | [PERMALINK](#)

I'm sorry if others have pointed this out, since I didn't read all the comments, but means-testing MEDICARE?? Is he nuts? How many seniors have the means to pay for private health insurance?

Posted by: [pierrresc](#) on June 30, 2004 at 7:38 PM | [PERMALINK](#)

Will Allen:

It is ironic that someone tosses about charges of stupidity while being unable or unwilling to discern the difference between a government outlay for a commonly utilized service, like national defense, or a good or service that anyone can access, like a highway or a court system, and a government outlay for purpose of giving an individual citizen cash, depending on which faction he belongs to, or an individually utilized service that others cannot access, like subsidized hip replacements, depending on which faction he belongs to.

I assume the "someone" above is supposed to be me.

There is a difference, albeit a rather ambiguous one, between "universal"-type government services such as national defense, and more more targetted ones such as Social Security.

Yes, there's a difference. And your point is....what? National defense would seem to be an even clearer example of government redistribution of wealth for the "common good" than Social Security. So your point, if you even have one, is a mystery.

Posted by: [Don P](#) on June 30, 2004 at 7:40 PM | [PERMALINK](#)

I'll probably get into trouble for this, but one of the earliest posts begged for an answer: Why shouldn't foreigners lecture the US for your issues, when your president pretty much lectures the rest of the world on a daily basis. If he for instance would lay off having opinions whether or not Turkey is a suitable member of the EU (just to bring up a recent example) we'd might consider shutting up. While I am at it I might as well bring up the constant blabbering about 'the greatest democracy in the world'. Exactly what makes US democracy so much better than the rest?

All meant in the spirit of good natured exchanging of ideas.
/danjo

Posted by: [danjo](#) on June 30, 2004 at 7:44 PM | [PERMALINK](#)

P.B. Almeida:

In addition to his call for a large gasoline increase (which he specifically cites as a deficit reduction measure)

How large? Remember, you're suggesting that Sullivan is proposing tax increases as a major, or perhaps as the **primary**, policy change for eliminating the deficit. Show me where he says this, with regard to the gasoline tax or any other tax.

Sullivan also implies strong support for boosting marginal income rates via his critique of the Bush tax cuts, and their contribution to the deficit. Read the paragraph entitled "No War Budget" below.
http://www.andrewsullivan.com/index.php?dish_inc=archives/2003_02_09_dish_archive.html#90300425

I just did and nowhere do I see him call for a reversal of Bush's tax cuts, let alone for an increase in tax rates beyond that--given that we would still have a large deficit even without Bush's tax cuts. What Sullivan does repeatedly and explicitly call for is a reduction in spending.

So I'm still waiting for this evidence that Sullivan's focus is on raising taxes, rather than cutting spending, to reduce the deficit.

Posted by: [Don P](#) on June 30, 2004 at 7:53 PM | [PERMALINK](#)

Guess what, the system isn't perfect.

Guess what else, the system ain't gonna be perfect anytime in the foreseeable future.

Guess what else, I'm through here.

Aren't you glad?

P.B. Almeida:

Don P - Not true. Federal spending as a percentage of GDP stopped growing during the Reagan years, and drifted down a couple of points during the Clinton years.

There have been short periods of time when federal spending declined slightly, and longer periods of time when it remained essentially flat, but the overall trend of the modern era has been for federal spending to increase. State and local government spending has also been increasing. The long-term trend is inarguably for bigger government, not smaller government. Furthermore, there is rather overwhelming evidence that the government will continue to grow in the future, not least because of the upcoming tidal wave of retiring baby boomers, and the increasing pressure for greater government involvement in the funding and provision of health care. These facts are far more consistent with Hillary Clinton's tax-and-spend politics than with Andrew Sullivan's (and your) fiscal conservative politics.

The high water mark of the welfare state clearly was the last quarter of the twentieth century. Increasingly, governments have been cutting taxes, selling off state assets, and empowering consumers of government services to utilize market forces.

Show me your numbers demonstrating a trend of smaller government in the industrialized democracies (government spending as a percentage of GDP will be fine). Even if the size of government has been declining in isolated examples, that is clearly not the trend in the United States. And the same demographic transition to an older

population that is occurring in the U.S., and that implies a greater demand for government spending and services in the future, is also occurring in all other industrial democracies.

Posted by: [Don P](#) on June 30, 2004 at 8:11 PM | [PERMALINK](#)

conservatives need to realize that it's better being a little less rich in a world where the poor and middle class aren't so desparately behind. i've never been able to figure out why everyone can't see that, you can go to a mall and have a bunch of people shopping with you, or begging you. but, i suppose, locked up tight in your air-conditioned mcmansions with all your guns and bibles, all those other people just don't matter to you anyway--unless of course your feeling bored and righteous and decide to go fuck with someone's sex life or drug habit... that, is the essence of conservatism.

whew! sorry, i expressed myself rather forcefully. i feel better now that I have done it.

Posted by: [travy](#) on June 30, 2004 at 8:11 PM | [PERMALINK](#)

A Republican is one to whom the be-all and end-all of human existence is the highest marginal tax rate. If their financial well-being is ruined by other gimcrack Republican fiscal policies, no matter to them.

Posted by: [Bob H](#) on June 30, 2004 at 8:14 PM | [PERMALINK](#)

After Bill Clinton was first elected in 1992, a Republican operative (don't recall the name) was quoted as saying, "We are going to make Hillary Clinton the most hated woman in America." It has been quite a deliberate campaign by the Republicans and their minions (e.g. Limbaugh) for at least 12 years.

Posted by: [SecularAnimist](#) on June 30, 2004 at 8:30 PM | [PERMALINK](#)

To Don P: Well, a quick google search confirmed that in the U.S., clearly, spending as a percentage of GDP peaked in the Reagan year of 1985. See the Congressional Budget Office report found by Googling "government spending percent gdp"

The same report predicts catastrophe in about 2050, but that assumes no changes in medicare and social security, which must, of course, occur.

The meme that the federal government is some out of control liberal monstrosity is but one of many beliefs which is factually incorrect but forms the basis of many a vote in this country.

Posted by: [hank](#) on June 30, 2004 at 8:30 PM | [PERMALINK](#)

"Exactly what makes US democracy so much better than the rest?"

Well, I think it's a silly phrase, and basically just meant as a nice, warm, rah-rah go-us thing. But there is some justice to it: we're the oldest, we're the biggest, we have the biggest economy, and until the last half-century at most, we could honestly claim to have the most legally-privileged citizens (if you ignored blacks, which we generally did).

We have also served as a world leader from the very outset of our national history: we were and even now still are the inspiration to emerging democratic movements everywhere from France to the former Soviet Union to Africa. Our Constitution is the model for most democracies'. We were the "engine of civilization" and the "breadbasket of liberty" in WWII and the postwar reconstruction. The language of international human rights -- genocide, war crimes, the preeminence of freedom of speech and assembly and the ballot -- these are basically American concepts; the world has adopted our framing of human rights issues. We led the West and NATO--i.e., democracy--against communist totalitarianism. These are not small matters, and we had a right to take pride in them.

I'm not at all sure the phrase is merited since the Cold War, but give us a little while to change our traditional rhetoric, huh?

Posted by: [MannyJ](#) on June 30, 2004 at 9:04 PM | [PERMALINK](#)

Ron wrote on June 30, 2004 at 5:42 PM:

"We're going to take things away from you on behalf of the common good."

Sounds like a fine paraphrase of Karl Marx to me, "From each according to their abilities, to each according to their need".

Sounds like early Christianity.

Acts 2:44-45:

"And all that believed were together, and had all things common; And sold their possessions and goods, and parted them to all men, as every man had need."

Acts 4:34-35:

"Neither was there any among them that lacked: for as many as were possessors of lands or houses sold them, and brought the prices of the things that were sold, and brought the prices of the things that were sold, and laid them down at the apostles' feet: and distribution was made unto every man according as he had need."

"those people aren't libertarians. They're anarchists."

'anarchists are libertarians who rent...'

Posted by: [Heywood](#) on June 30, 2004 at 9:19 PM | [PERMALINK](#)

To Don P: Well, a quick google search confirmed that in the U.S., clearly, spending as a percentage of GDP peaked in the Reagan year of 1985. See the Congressional Budget Office report found by Googling "government spending percent gdp"

Actually, total U.S. government spending (federal, state and local) as a percentage of GDP peaked in 1983 at 33.5. Second highest peak was in 1991, at 33.3. The figure for fiscal 2003 is 30.6, an increase of almost two percentage points over fiscal 2000. Short-term trends aren't very meaningful because of the effects of the economic cycle and random events like wars and natural disasters that may cause temporary spending hikes. But the overall trend of the last century has been a dramatic increase. It's true that spending as a percentage of GDP has remained relatively flat since about the mid-1970s, but since the economy has grown dramatically during that period, government spending in absolute and inflation-adjusted dollars has also grown dramatically.

The same report predicts catastrophe in about 2050, but that assumes no changes in medicare and social security, which must, of course, occur.

Even with major reform of Medicare and Social Security, government spending on those programs, and other health and welfare initiatives, is bound to increase because of the sheer size of the burgeoning elderly population.

Posted by: [Don P](#) on June 30, 2004 at 9:30 PM | [PERMALINK](#)

MannyJ:

Well, I think it's a silly phrase, and basically just meant as a nice, warm, rah-rah go-us thing. The U.S. is neither the largest nor the oldest democracy. It does have the largest economy, but that's because of its large population (other countries rank higher in GDP per capita). I don't think we can ignore America's terrible record on racial justice, its high violent crime rate, its high rates of poverty and economic inequality, its poor public health ranking, or its many other social pathologies when evaluating its merits in comparison to other countries.

And although the U.S. has undeniably contributed greatly to global freedom and justice, you exaggerate that contribution in comparison to other countries. It is certainly not true, for example, that war crimes, or the importance of the ballot, are "basically American concepts." America may have refined and formalized them, but it certainly didn't invent them.

Posted by: [Don P](#) on June 30, 2004 at 9:46 PM | [PERMALINK](#)

If the problem of doing so is that retired people have too much illiquid wealth tied up in their homes, how about this proposal? The inheritance tax be reinstated, without an exemption, and be designed to recapture all benefits paid out to the retiree while they were alive, with an inflation adjustment. If the business owner is concerned about having to liquidate a business to pay the tax upon his death, he can simply refuse all retiree benefits, or some amount of retiree benefits, and thereby forgo the tax, or that part of the tax which would cause liquidation.

Posted by: Will Allen on June 30, 2004 at 3:00 PM

I think that's a VERY good idea!

Posted by: [Dr. Morpheus](#) on June 30, 2004 at 10:16 PM | [PERMALINK](#)

David Perlman gets in the mood:

"The essence of Liberalism:

Society contributing in order to further the common good.

The essence of Conservatism:

"Go fuck yourself!"

Posted by: [David Perlman](#) on June 30, 2004 at 1:41 PM | [PERMALINK](#)

Recently it's been like a raping.

Conservatism = I've got mine. I f'cked you to get it and I'm going to do it again as often and as long as I want.

Liberalism = Please sir, don't hurt me too much.

After 9/11 Liberalism became a little more aggressive: Go f'ck yourself. We're taking our Republic back.

Posted by: [MarkH](#) on June 30, 2004 at 10:18 PM | [PERMALINK](#)

I have no idea why they hate her so much. I once asked a conservative friend of mine, but all he could do was sputter in rage. Perhaps one of our esteemed visitors here could describe what it is that makes Hillary the Most Evil Person Who Ever Lived?

It would be especially interesting if the answer contained actual facts, but I won't hold my breath.

Posted by: [craigie](#) on June 30, 2004 at 3:16 PM

Because she and Bill killed hundreds of people, including Vince Foster!

They're the post power mad people that have ever existed!

And she's a lesbian who's trying to seduce all of American women into lesbianism.

And she's a witch! That's right, an honest to "God" Satan worshiping witch!

This from a hyper-conservative manager I once worked with when I asked the same question.

Posted by: [Dr. Morpheus](#) on June 30, 2004 at 10:19 PM | [PERMALINK](#)

You mean an estate tax, not an inheritance tax. It's a bad proposal. The prospect of the state taking one's entire assets, or close to it, at death would strongly discourage wealth-creating economic activity and would be an unjust violation of property rights.

Posted by: [Don P](#) on June 30, 2004 at 3:27 PM

How Don, merely because you say so?

YOUR DEAD when an inheritance tax kicks in. You can't take your wealth with you when you die.

Geez, I would think that would be obvious.

Oh, and as far as leaving something for your children why the hell can't they make it on their own?

The vast, vast majority of children on this planet inherit little or nothing from their parents. Why should wealthy children get this privilege?

Posted by: [Dr. Morpheus](#) on June 30, 2004 at 10:23 PM | [PERMALINK](#)

The essence of libertarianism:

What's yours is yours; what's mine is mine. We'll voluntarily trade goods and services with one another in mutual cooperation, and both of us will improve our situations for having done so. And no aggressive violence, please.

The essence of Left-liberalism:

What you THINK is "yours" was never really "yours" to begin with, you stinking, selfish, brownshirt pig! Now hand it over so I can call myself "charitable" by spending "your" money.

Posted by: [george gaskell](#) on June 30, 2004 at 10:24 PM | [PERMALINK](#)

Don

Excess cynicism is as unrealistic as jingoism. All countries have horrors to their names, but few have the sheer crazy utopianism of America, let alone put so much of it into practice.

The moment a meme or policy was first thought of is not the most important thing about it, surely? Sure, you can find precursors to most distinctly American customs. Australian ballot, Athenian caste democracy, etc. But we deserve some credit for universalizing them & putting them together in a coherent structure, and for taking seriously things (e.g., war crimes) that were basically academic abstractions.

Now that I think of it, add League of Nations/United Nations to the list.

Which are older? I don't think England really counts, given the power retained by George III. You're right about biggest, I was forgetting India, my bad. We're second biggest.

Posted by: [MannyJ](#) on June 30, 2004 at 10:24 PM | [PERMALINK](#)

MannyJ:

I don't consider "sheer crazy utopianism" to have much merit. The history of attempts to create utopian societies, rather than just better ones, is not encouraging.

As I said, America has contributed greatly to freedom and justice around the world. Some of what you said is true. But other things are simply false, or at least greatly exaggerated. And for all its contributions to the ideas of democracy and freedom and so on that were invented by people in other countries, and first adopted by people in other countries, it is not at all clear that the American versions are superior. America's creaking constitutional system is arguably far worse at representing the wishes of its people, or at producing good government, than alternative systems adopted by other democratic countries.

Which are older? I don't think England really counts, given the power retained by George III.

Then why does America count, given the fact that when George III sat on the British throne, the right to vote in America was reserved for white, propertied men, and denied to everyone else?

Americans are good at finding faults in other countries, but rather bad at seeing the faults in their own.

Posted by: [Don P](#) on June 30, 2004 at 10:43 PM | [PERMALINK](#)

Yeah George that might be true if everyone lived on a self-sufficient island and had nothing to do with each other beyond trade.

But the fact of the matter is that the wealth of a nation is created by millions. And that wealth is then divided so that those who did no work whatsoever, the owners of capital, get the lions share of it. While those who did all the work get to divide what is left amongst themselves.

Or to put it another way, Kevin Drums' [recent post](#) about labor and capital showed a chart where labor received about 63% of the national income generated and capital received about 12%.

Gee, that seems so unfair to capital, since labor got about five times as much of the national income. It seems unfair until you realize that the labor portion of the pie is split amongst 85% of the population while the 12% is split amongst 10% of the population.

Income redistribution is needed to prevent the inevitable disappearance of the middle class under unfettered capitalism. Without income redistribution small businesses would either fail to compete with larger ones or be bought out by them.

Income and wealth would be further and further concentrated thus raising the barriers to any given market for anyone else. The end result of *laissez faire* capitalism is a class structure consisting of two classes, workers and owners of capital; extreme concentration of wealth and an economy which lurches from boom to bust on a ten year average.

The lives of most people are nasty, brutish, and short. And the wealthy live their lives in gated communities with armed guards afraid to venture outside their confines for fear of encountering 'villians' bent on robbing them.

Take a look at just about any Latin American for examples of this and try to tell me that this is preferable to "socialism".

Posted by: [Dr. Morpheus](#) on June 30, 2004 at 11:01 PM | [PERMALINK](#)

Dr Morpheus:

The vast, vast majority of children on this planet inherit little or nothing from their parents. Why should wealthy children get this priviledge?

Because people have a right to give their property to other people, including, and perhaps especially, their children.

What alternative do you propose? Complete control by the government of the transfer of private property?

Posted by: [Don P](#) on June 30, 2004 at 11:05 PM | [PERMALINK](#)

Don, it's obvious that we won't agree, also that we are disagreeing only in degree and/or tone. I basically prefer to see the good in this country first and fix the flaws; you prefer to focus on the flaws and grudgingly acknowledge the good. We're not going to get anywhere arguing such differences in style, and I suspect they make no real difference to our policy choices.

I do think, and you might wish to consider, that the leftist gloom-n-doom we-are-all-sinners approach has a lot to do with the conservative resurgence since Carter. I don't think that emphasizing the good is a moral failing. It need not imply ignoring the bad.

Oh, as to George III, I see a significant difference between a mixed monarchial-democratic form of government and a class-limited franchise: the one is different in kind from a pure democracy, the other only in degree. Besides, Britain also had the veto-empowered non-democratic House of Lords. A democracy just doesn't go with an empowered feudal aristocracy. Although the franchise was limited in America, it was not limited by blood. In theory, any male could become a property owner and vote. At the time of the Constitution, I believe this included blacks, even in the Southern states.

Women were disenfranchised, of course. But that was a reflection of almost worldwide differences in sex roles, and cannot reasonably be said to show that America was not committed to democracy. For most men AND women of the time, the idea of women in politics was bizarre. Once the roles changed (with some lag), the franchise law changed.

Posted by: [MannyJ](#) on June 30, 2004 at 11:39 PM | [PERMALINK](#)

Conservatives believe that money needs to be invested wisely, and are leery about spending money on the common folk.

Liberals are trying to get EVERYONE to see that charity and equity is the best policy.

It's hard to reconcile these two views of the world.

I wish more folks would remember that our revolution was ignited, in part, by "taxation without representation." Specifically, The East India Tea Company wasn't paying their share of taxes on tea, thus it was the cheapest. The Boston Tea Party was a statement about fair taxation, not paying taxes.

Tax-cuts are exactly what the wealthy of the late 1700s were blessed with. Unfortunately many of them were allied with England.

We are on the brink of class warfare. Stay tuned.

Posted by: [Tom Nicholson](#) on June 30, 2004 at 11:50 PM | [PERMALINK](#)

Thank you, Raven.

Posted by: [obscure](#) on June 30, 2004 at 11:50 PM | [PERMALINK](#)

I have a question that has been nagging me a long time. Who the hell is Sullivan? What has he accomplished that warrants paying attention to his views on fiscal policy or any other policy? What's his warrant? I work in this field. I know what I'm talking about and I know the people who know what they are talking about. And I don't know Andrew Sullivan.

Posted by: [Knut Wicksell](#) on July 1, 2004 at 12:05 AM | [PERMALINK](#)

The East India Company was the monopoly supplier, the holder of a unique license to trade in the Far East for tea. It could have made no sense to charge sale taxes to the East India Company; it wasn't buying tea within Britain's jurisdiction. The problem was not that the East India Co's prices were lower than the competition's; as an official monopoly of the Crown, it had no lawful competition.

Our problem was 1) taxes levied on us without representation; 2) a British company got a monopoly and we had no opportunity to compete with it.

Posted by: [MannyJ](#) on July 1, 2004 at 12:21 AM | [PERMALINK](#)

What else would she believe?

That's a toughie. Lets see she's a politician and dosen't want to take real steps to reduce spending for programs like agricultural subsidies, corportate tax shelters, etc... So she says we are going to tax the rich. That always play well and does nothing to help.

I don't know totally confuses me.

Posted by: [Jhinson](#) on July 1, 2004 at 12:33 AM | [PERMALINK](#)

MannyJ:

I don't think that's our difference. I think the difference is that with respect to America you're exaggerating the strengths and ignoring or downplaying the weaknesses, and as a result have an inflated sense of how America ranks in comparison to other nations in terms of democracy and freedom and equality and rights and so on.

I also reject the idea that the left is overly preoccupied or focused on America's flaws. The supposed America-hating left exists largely in the imagination of the America-Uber-Alles right.

Oh, as to George III. I see a significant difference between a mixed monarchical-democratic form of government and a class-limited franchise: the one is different in kind from a pure democracy, the other only in degree.

But America is not and never has been a "pure democracy." The whole point of having a Constitution and an independent judiciary empowered to strike down democratically-enacted laws is to act as an anti-democratic check on the power of legislatures and executives. And your degree/kind distinction is pretty meaningless anyway. Do you really think that a country in which all power rests with a tiny number of voters would be more democratic in any meaningful sense than a country in which most power rests with voters in a universal franchise, but a small amount is reserved for a monarch or other unelected body or individual? The idea seems absurd to me.

Besides, Britain also had the veto-empowered non-democratic House of Lords.

And the U.S. had its own veto-empowered, non-democratic judiciary, consisting ultimately of just nine individuals. Not to mention a franchise that, through limitation to white, property-owning men, operated effectively as class- and inheritance-based method of acquiring power.

A democracy just doesn't go with an empowered feudal aristocracy.

Many European nations have very successfully integrated democracy into what were historically "empowered feudal aristocracies," and have built modern versions of democratic government that arguably operate far more effectively than does America's--which, in George III's day, was itself essentially an empowered feudal aristocracy anyway.

Although the franchise was limited in America, it was not limited by blood. In theory, any male could become a property owner and vote.

The operative words above are "in theory." In practise, it was virtually impossible for black and lower-class white men to become eligible to vote. The system was effectively one of inherited power. And women--half the population--had no democratic powers at all.

But I think your comment above also betrays another stereotypical American blindness--an obsessive focus on the letter or theory or formal structure of the law at the expense of a consideration of how the law actually works in the real world, how power is really distributed and exercised.

Women were disenfranchised, of course. But that was a reflection of almost worldwide differences in sex roles, and cannot reasonably be said to show that America was not committed to democracy.

This is just silly. If reserving some power for a monarch or other non-democratic agent means that a country is not really committed to democracy, as you seem to be suggesting was the case for Britain, then it seems ludicrous to me to argue that a country that excludes half its adult population from voting is really committed to democracy, either. Neither Britain **nor** America in the 18th and 19th centuries constituted what we would recognize today as a proper democracy, a real democracy. They both implicitly and explicitly limited power to a small fraction of the population, and transfers of power in both countries largely followed bloodlines and family relationships. It is at least arguable that British democracy at the time was closer to what we recognize today as proper democracy today than was the American kind.

I have a question that has been nagging me a long time. Who the hell is Sullivan? What has he accomplished that warrants paying attention to his views on fiscal policy or any other policy? What's his warrant? I work in this field. I know what I'm talking about and I know the people who know what they are talking about. And I don't know Andrew Sullivan.

If "this field" is anything to do with politics and public policy, you really ought to know who he is. Andrew Sullivan is a neocon-ish journalist and writer who specializes in political opinion journalism. His blog is one of the most widely-read political blogs. He was, I believe, the youngest editor of The New Republic in the history of that prestigious magazine. He has an enviable academic record at Oxford and Harvard. He's also very publicly gay, and writes about gay issues a lot, especially gay marriage, of which he was an early and enthusiastic proponent. He's also famously Catholic, but has been a very wobbly one of late. He has a regular column in the British Sunday Times, and, I think, in Time magazine. He makes regular television and radio appearances, and his work also appears in many other popular media outlets.

Lest you think I'm a fan of his, I'm not. I agree with most of what he writes about gay stuff, but disagree with most of his other views. I think he's smug and arrogant, often self-contradictory and hypocritical, sometimes infuriating. But he's a very talented writer.

"Easier to raise taxes"?!?!?!?

Posted by: [Nancy Irving](#) on July 1, 2004 at 1:58 AM | [PERMALINK](#)

Don P

Then you're in bed with Karl Marx on the "common good" thing.

The difference being, I'm in favor of reducing Karl's influence, not increasing it. Hillary is in favor of increasing it. Following Marx, as it were.

Raven

Sounds like early Christianity

Not really. You'll notice that the people *sold their possessions*, nobody took them away. One is generosity, the other is robbery. Taxation is forced, you'll notice.

Posted by: [Ron](#) on July 1, 2004 at 8:21 AM | [PERMALINK](#)

Common good is common sense. The libertarian/anarchist model is not only vacuous, it's nonexistent in the real world. There simply is no political context that can imagine purely voluntary cooperation as self-governance. Libertarianism is principle run amok. It fails every reality test.

During the past couple of decades, this noxious nonsense has virtually become the reigning ideology of suburban America. If only we didn't have a government, we wouldn't have to pay taxes to support a library we never use! Or schools that teach things we don't like! We could take a permanent vacation from politics, indeed. Which is precisely what the corporatists would love to see.

Posted by: [Walt](#) on July 1, 2004 at 9:48 AM | [PERMALINK](#)

Morpheus:

Yeah George that might be true if everyone lived on a self-sufficient island and had nothing to do with each other beyond trade.

Actually, you have it exactly backwards. Voluntary trade of goods and services, using a commodity as a medium (like, say, coined metal) reaches its pinnacle of efficiency and prosperity in a complex world-wide economy. Primitive island subsistence economies are more suited to the kind of commune-collectivist approach that you want to impose on the rest of us.

Income redistribution is needed to prevent the inevitable disappearance of the middle class under unfettered capitalism. Without income redistribution small businesses would either fail to compete with larger ones or be bought out by them. Income and wealth would be further and further concentrated thus raising the barriers to any given market for anyone else.

Again, you are exactly wrong. The version of "history" you recite is straight out of Marx, and could not be less accurate.

A free market economy is what creates the middle class. A free market economy is what allows small business to flourish. And the only "barriers to any given market" that have EVER proven to be insurmountable are the ones created and enforced by government.

In fact, most socialist economic policies are, at base, just barrier-to-entry schemes. Medieval guilds were schemes to protect existing tradesmen from new producers entering the market. Unions (backed up by so-called collective bargaining statutes, i.e. compulsory union membership to get a job) are the modern version. Corporations grew out of charters, which were just government-sponsored monopolies. Licensing schemes usually have nothing to do with public-safety (e.g., taxi cabs licenses, or beauticians with educational requirements equivalent to electricians). Trade barriers (which socialists LOVE) only exist to raise prices of goods made by foreign producers (whom domestic government can't control).

And Latin America is a prime example of the brutality of socialism.

In short, free markets are the only means of achieving universal prosperity. Every single infringement of the free market (i.e., the entire socialist platform) serves to destroy wealth and the means for improving quality of life.

Posted by: [george](#) on July 1, 2004 at 10:20 AM | [PERMALINK](#)

I forget the clause in the Constitution that talks about the Common Good. Maybe you can point it out to me.

I see the Right to the Pursuit of Happiness, and even know that it originally said Right to the Pursuit of Property.

Boy probably a good thing they changed that word. Else some of your heads might have exploded.

Posted by: [James stephenson](#) on July 1, 2004 at 11:03 AM | [PERMALINK](#)

Don, it is only a mystery because you make it one. You see, when tax revenues are directed to build an aircraft carrier which keeps the Straights of Mallacca open, thus allowing global trade, the "common good" is being indisputably served. Our society would collapse without global trade. When tax revenues are being directed to Archer Daniels Midland to use corn in an energy-inefficient manner, the "common good" is not being served, and the benefit of the tax revenues is overwhelmingly directed at a small group of people.

Now, there are elements of the Defense Budget which are as obnoxious as ethanol subsidies, but overall, our society cannot exist without defense expenditures. In contrast, the Department of Agriculture could disappear at noon today, and our society wouldn't miss a beat. The only people damaged would be an extremely narrow group. The Department of Agriculture no longer serves the "common good", if it ever did.

Similarly, our retirement system does not serve the "common good", but rather the good of a demographic group with a higher median net worth than the rest of society. Now, I think the common good IS served when those with the inability to provide for themselves receive wealth transfers, but that isn't what our retirement system is about. If wealth transfers were to end tomorrow for people who have the ability to provide for themselves, or if those who received wealth transfers had their estates taxed upon death to recapture those transfers, only a narrow group of people, although not nearly as narrow as ethanol subsidies, would be harmed.

Should the highest marginal income tax be raised from 33% to 39%? I really don't care one way or the other, because it is the wrong question to ask. What needs to be debated is what uses of tax revenues actually serve the common good, and once that is resolved, then a debate can ensue as to what is the least economically damaging way to collect those revenues. If such an approach were taken, our current hodge-podge of income, payroll, and other taxes would look far different. If engaging in trench warfare over the top marginal income tax rate can produce enough political bloodshed (figuratively speaking, of course) to finally force an honest, COMPREHENSIVE, debate on fiscal policy, then I'm all for it. One can dream, I suppose.

<http://www.commondreams.org/views04/0312-08.htm>

[... Begin Excerpt ...]

Here are a couple of headlines for those who haven't had the time to study both economics and history:

1. There is no such thing as a "free market."
2. The "middle class" is the creation of government intervention in the marketplace, and won't exist without it (as millions of Americans and Europeans are discovering).

The conservative belief in "free markets" is a bit like the Catholic Church's insistence that the Earth was at the center of the Solar System in the Twelfth Century. It's widely believed by those in power, those who challenge it are branded heretics and ridiculed, and it is wrong.

In actual fact, there is no such thing as a "free market." Markets are the creation of government.

Governments provide a stable currency to make markets possible. They provide a legal infrastructure and court systems to enforce the contracts that make markets possible. They provide educated workforces through public education, and those workers show up at their places of business after traveling on public roads, rails, or airways provided by government. Businesses that use the "free market" are protected by police and fire departments provided by government, and send their communications - from phone to fax to internet - over lines that follow public rights-of-way maintained and protected by government.

[... End Excerpt ...]

Kevin,

What likely galls conservatives is that this money will be "taken" (I believe this is Hillary's word) and wasted. It would be interesting to hear your thoughts on whether:

- a) there is a cumulative tax rate that is so high it becomes immoral; and,
- b) in general, government redistributions of income work (i.e., do they achieve their stated purpose).

Thanks,
Chris

Posted by: [Chris](#) on July 1, 2004 at 11:56 AM | [PERMALINK](#)

Will Allen:

There is nothing indisputable about a claim that a particular military action serves the common good. There is nothing indisputable about a claim that any government action serves the common good. All these claims are disputable.

So, again, what is your point? If redistributing wealth for the common good is Marxist, as Ron suggested in his post that sparked this exchange, and if Marxism is bad, why aren't you against **every** government act that redistributes wealth for the common good?

Or do you now agree with me that Ron's remark was stupid?

Posted by: [Don P](#) on July 1, 2004 at 12:27 PM | [PERMALINK](#)

Don, it can be empirically proven that our society will collapse without expenditures for national defense. It cannot be empirically proven that our society would collapse if individuals were no longer sent checks from the treasury, simply for being in a faction with sufficient political power. Therefore, to describe both acts as being equally "redistributive" is in error, as one can be empirically shown to be needed for society's survival, thus providing a good or service required by all (there is no "redistribution"; everyone is receiving an essential service) and the other cannot be shown to provide a good or service required by all. Having said that, I think it is in error, and simplistic, to call any check sent to an individual as essentially "Marxist". I try to avoid describing all ideas that I differ with as "stupid".

Posted by: [Will Allen](#) on July 1, 2004 at 12:43 PM | [PERMALINK](#)

Secular Animist (and all other aggressive pro-gov't collectivists):

In actual fact, there is no such thing as a "free market." Markets are the creation of government.

Again, exactly wrong. That sounds like the same inverted logic that produced such phrases as "the gov't GIVES you a tax cut." Orwellian double-speak, in a nutshell.

Governments provide a stable currency to make markets possible.

Like it did when they nationalized (i.e., seized by force) the entire monetary system in 1913, which then caused the false boom of the 1920s and the inevitable depression of the 1930s?

The market selected a stable currency long before the government thugs stepped in, seized it, and forced everyone else to do things their way. The "thaler" was a silver coin, privately minted in Germany, and was known in the market for its purity and consistency. "Thaler" became the "dollar" (long before the U.S. government unconstitutionally declared itself the sole maker of all so-called paper money).

Money exists in any market of sufficient complexity, and it arises naturally out of the desire of the market participants to have a medium that is durable, divisible, and readily verifiable. Societies have used tobacco leaves (which aren't very durable), shells, seeds, even women (which are notoriously hard to divide into parts). The world market (not any government) in the post-mercantilist 16th-19th centuries selected gold and silver as its currency.

And what do you mean by "stable"? Socialists usually mean "fixed prices" (you people hate price fluctuations for some reason). Markets that are free from strong-arm government interference are perfectly stable, even when prices fluctuate. That's what prices do. It's really OK for them to do so. Shortages and waste appear when government steps in to fix prices. In a free market, waste is cleared by dropping prices to market-clearing levels, and shortages disappear when new producers enter the market.

Barrier-to-entry schemes and fixed prices prevent all that from operating as it should.

Posted by: [george](#) on July 1, 2004 at 12:54 PM | [PERMALINK](#)

And, incidentally, "redistribution of wealth" is just a euphemism for "stealing."

The socialist has the same philosophy as the highway robber -- you take from him who's got the money.

Only the highway robber is preferable. At least he ADMITS he is stealing.

And he just robs you and leaves you alone. He doesn't follow you around the rest of your life, tell you what to do all the time, and make you call him your "sovereign," and impune your character for daring to believe your property is yours.

Posted by: [george gaskell](#) on July 1, 2004 at 12:59 PM | [PERMALINK](#)

george gaskell -- do you find it objectionable when the Federal government steals your money to pay for the operations of the military and the Federal courts? Do you find it objectionable when your State and local governments steal your money to pay for the operations of State and local law enforcement?

"Private property" and "markets" are human social adaptations. "Government" is also a human social adaptation. Any or all of these social adaptations (among others) may increase human well-being (which is their only purpose), diminish human well-being (in which case they become, by definition, dysfunctional), or both (i.e. they may increase some aspects of human well-being and diminish others, or increase well-being for some humans while diminishing it for others).

Conscious, creative and attentive application and modification of human social adaptations so as to maximally increase and minimally decrease human well-being constitutes sanity in the conduct of human affairs.

Each of us values what we value, and thus we may have different ideas of what in fact constitutes "human well-being"; additionally each of us has different ideas and experiences that shape our beliefs about what social adaptations do in fact maximize human well-being (as we conceive it).

Through the tests of time, certain human social adaptations (including private property, markets, and government) have established enduring and reliable value in contributing to what many people consider to be human well-being, yet these same adaptations may sometimes fail to do so, become dysfunctional, and indeed may exacerbate human misery.

There is no single, carved-in-stone, collection, configuration or application of human social adaptations that universally produces maximum human well-being in all times, all places, and all circumstances -- even before considering that different cultures and societies have varying concepts of what in fact constitutes human well-being.

Posted by: [SecularAnimist](#) on July 1, 2004 at 1:33 PM | [PERMALINK](#)

Will Allen:

Don, it can be empirically proven that our society will collapse without expenditures for national defense. It cannot be empirically proven that our society would collapse if individuals were no longer sent checks from the treasury, simply for being in a faction with sufficient political power.

Oh really? Produce this "empirical proof" that society will collapse without a national defense, then. Show me how you have determined that it cannot be empirically proven that redistribution of wealth through transfer payments, as in Social Security, is necessary to prevent societal collapse. And so what if a government service is not necessary to prevent societal collapse, anyway?

Of course, even if a national defense is necessary for a nation to survive, that does not mean that any particular military action (such as the one you described above) serves that purpose.

Therefore, to describe both acts as being equally "redistributive" is in error.

I didn't say that they are "equally" redistributive. They are both redistributive. Any time the government confiscates wealth from one group of people and spends that wealth on another group of people, it is redistributing wealth. This is true whether the program is Social Security or the national defense. The pattern of taxation and spending by the United States for the purpose of national defense represents a **huge** redistribution of wealth among the nation's citizens. Some pay only a little (or nothing) for the national defense, others pay a lot. Some receive little benefit from government defense spending, others receive a huge benefit. The scale of redistribution is enormous.

thus providing a good or service required by all (there is no "redistribution"; everyone is receiving an essential service) and the other cannot be shown to provide a good or service required by all.

You haven't shown that either service is or is not required by all. And the issue of whether the service is required by all is independent of whether it redistributes wealth, anyway.

Your position is just totally confusing. What is it that you are **against**, exactly? Government redistribution of wealth? Government services that are required by some but not all? Government services that are not necessary to prevent societal collapse? Or what?

Having said that, I think it is in error, and simplistic, to call any check sent to an individual as essentially "Marxist". I try to avoid describing all ideas that I differ with as "stupid".

So do I. But some claims I disagree with are not just erroneous, but stupid. The claim that Social Security is Marxist is one of them.

Posted by: [Don P](#) on July 1, 2004 at 2:02 PM | [PERMALINK](#)

SecularAnimist:

Ah! So, we have it -- the denial of the existence of private property itself, which lies at the cold, dark heart of all collectivist dogma. Property is theft, so Proudhon began.

As the irrepressible Douglas Adams pointed out in *The Restaurant at the End of the Universe*, this basic premise can be an excellent way to justify stealing: "Property is theft, right? Therefore theft is property, therefore this [insert stolen item here] is mine..."

Private property is really not that hard of a concept. To say, "well, it's a social construct" is to try to dismiss it as though it is an illusion. But then again, dogs understand it. Small children understand it. It begins with the integral, physical human body, and extends to the appropriation of otherwise unclaimed natural resources. I suppose that we can debate the finer points of applied property law, as it relates to the fringes (a very academic exercise, most of the time), but the core principles of property are rather basic and understood by all non-socialists everywhere. I am even sure that you can identify the objects in your life you would consider your property.

Next, I suspect that you are going to suggest that what constitutes the "individual" or a "person" is a "social construct" as well. I'm sure it's lurking there somewhere. Once this bon mot comes out, the descent into postmodernism deconstruction will be complete. What's real isn't real, roles are reversed, conflation of opposites, and all that.

(I'm working on developing a theory that postmodernism, the denial of the existence of objective reality altogether, particularly in its more virulent forms, was developed solely for the purpose of justifying socialism. I'll keep you posted on my progress.)

The great part about private property and free markets is that they really just lets you live your life. You can choose the form of "well-being" that you prefer for yourself. It really has a pleasant "live and let live" element.

Private property and free markets are fundamentally a form of respect for the dignity and integrity of all persons, and an insistence that others afforded you the same respect in return. Why is it that socialism always wants to impose its philosophy on everyone? Why are you not content with forming voluntary communes, where all things are held "in common," all people one, etc.? Why must it always reach OUT to ensnare everyone and everything, even those who don't subscribe to its creed?

And by the way, I do not support a standing military. It is anathema to freedom, is expensive, unnecessary for defense, and invariably follows that dictum in that Costner movie: "If you build it, they will come." Well, if you have a standing military, it will be used.

As for courts, they are probably unnecessary, too, since businesses have, when left alone, tended to form entirely private law systems (the Law Merchant, and the modern arbitration system, to take two examples). But they are not something that bothers me too much because the great thing about courts is that they will usually leave you alone. They are passive, which is a virtue when it comes to the government. And assuming that the law they follow is moral and just, you are generally immune from them if you respect other people's property.

Law enforcement is an entirely different animal from "wealth re-distribution." Law enforcement, like courts, is intended to be defensive, passive, and is (in theory) designed to leave you alone unless and until you infringe on someone else's life, liberty or property. It is a re-active system, designed to allow people to enjoy maximum freedom so long as you respect others and don't injure them.

Socialism is entirely different. It seeks to impose a whole new way of life on everyone, everywhere, simultaneously. It is, by its very nature, aggressive, and is the reason it invariably tends toward totalitarianism.

I happen to believe that there is a profound difference between aggressive force and defensive force. One is just and moral, the other is not. I'll leave you to guess which is which.

[The essence of Liberalism:

Society contributing in order to further the common good.

The essence of Conservatism:

"Go fuck yourself"]

Actually, the Conservative position is, "no need to fuck yourself, we'll do it for you."

I'm still old-fashioned enough to remember when the idea that those that benefited the most from government's actions should pay the most for those benefits.

Of course, if "reversing a tax cut" isn't "raising taxes," a case could be made that anything up to 90% taxation is just reversing historic tax cuts, you know. At one time, the top marginal rate was that high (and I think, in Britain, even higher -- think "one for you, nineteen for me / 'cause I'm the taxman, yeah, I'm the taxman"), so we're just undoing old tax cuts till we reach that level. Not that I'm holding to this, of course.

Ed

Posted by: [Ed Drone](#) on July 1, 2004 at 2:25 PM | [PERMALINK](#)

I'm still old-fashioned enough to remember when the idea that those that benefited the most from government's actions should pay the most for those benefits.

Actually, that tidbit of socialist ideology first made the rounds circa 1912, as part of the propaganda that promoted the seizure of the banking industry via the Federal Reserve Act, and its twin brother the Income Tax (of the same year, not coincidentally).

The propaganda was later re-cycled by FDR (a protege of Wilson, by the way, who inflicted the Federal Reserve and Income Tax on us). FDR used that slogan to justify his violation of the promise that the income tax would only be imposed on the richest of the rich. FDR extended it to wages. Oh, well, you make a deal with the devil, what do you expect?

It apparently still lingers in the minds of our friend SecularAnimist, who pulls quotes to the effect that "Markets are the creation of government." As though we the people did not exist or create anything of value before Big Brother came along and bestowed it on us, thus justifying their taking it back at their pleasure. Sheer garbage.

Posted by: [George Gaskell](#) on July 1, 2004 at 2:43 PM | [PERMALINK](#)

No, Don, it is not true that some citizens benefit more than others from avoiding the collapse of society, with the possible exception of that tiny, tiny, sliver of people who want society to collapse. If everybody wants potable water, nobody benefits more than another when they get it, and if you think it cannot be empirically proven that a society in broad contact with other societies will collapse absent a means of defense, you are simply historically ignorant.

In contrast, there is no similar historical record which lends similar empirical weight to the notion that allowing more powerful political factions to access the property of less powerful factions, for the direct and individual benefit of those in the more powerful faction, is required to prevent the collapse of society. Please, let's avoid the myths about the New Deal either ending the Depression, or the lack of such wealth transfers causing the Depression.

Lastly, I generally oppose using tax revenues for any activity until a good-faith effort has been made to show that failing to engage in that activity might threaten society with a greater incidence of physical coercion, and thus violence, than that represented by taxation. This isn't a bright line test; bright line tests don't exist in the real world of human relations, so there is considerable room for disagreement.

That said, I think it indisputable that some form of national defense is required to prevent violence which would shortly ensue without it, violence which would make the implicit violence represented by taxation plain in comparison. Other are free to argue differently, of course, and then it can be decided by elected representatives, and those who elect them, as to which argument is superior. Of course, there may be areas of agreement that can be reached regarding specific defense-related activities.

In contrast, I don't think the argument is as nearly indisputable as to whether directly transferring wealth to individuals is required to prevent greater violence than that represented by taxation; the historical record simply is not nearly as clear-cut. Thus, I am far more suspicious of such activities, particularly when it involves transfers to people who manifestly have the ability to provide for themselves, or to eventually repay the transfers upon their deaths.

Over 50% of the fiscal activities of our national government is now devoted to directly transferring wealth to individuals, not in return for any service or good they are providing for everyone's benefit, but simply for the individuals' benefit. It simply is not credible that this level of coercion (and the implicit violence such coercion entails) is required to prevent greater levels of violence. This is violence for the pure and simple reason that it can be gotten away with, and benefits those engaging in it. It is merely a might makes right argument writ large.

Posted by: [Will Allen](#) on July 1, 2004 at 3:01 PM | [PERMALINK](#)

Will Allen:

No, Don, it is not true that some citizens benefit more than others from avoiding the collapse of society.

I didn't say that was true. I said that some people benefit more than others from government defense spending. Some people also pay much more than others for the national defense. The redistribution of wealth is enormous. Do you deny this?

and if you think it cannot be empirically proven that a society in broad contact with other societies will collapse absent a means of defense, you are simply historically ignorant.

Then **produce** this alleged empirical proof. You keep claiming it exists. Where is it? And while you're at it, show me your empirical proof that government redistribution of wealth for social welfare purposes (food, clothing, shelter, health care, etc.) is **not** necessary to avoid societal collapse. Show me an example of a successful society in which the government did not perform this function. You can't, of course.

In contrast, there is no similar historical record which lends similar empirical weight to the notion that allowing more powerful political factions to access the property of less powerful factions, for the direct and individual benefit of those in the more powerful faction, is required to prevent the collapse of society.

But **all** government redistribution of wealth is what you call "more powerful political factions access[ing] the property of less powerful factions, for the direct and individual benefit of those in the more powerful faction." That's how democratic politics works. The more powerful faction wins and the less powerful faction loses. What do you think all those defense company lobbyists are doing up on Capitol Hill? They're trying to get money and contracts to enrich themselves, and the people they represent, at the expense of the taxpayers. Taxation and spending for national defense is a **massive** redistribution of wealth, just like Social Security is, just like virtually all government spending is.

Posted by: [Don P](#) on July 1, 2004 at 3:18 PM | [PERMALINK](#)

But all government redistribution of wealth is what you call "more powerful political factions access[ing] the property of less powerful factions, for the direct and individual benefit of those in the more powerful faction." That's how democratic politics works. The more powerful faction wins and the less powerful faction loses.

That's a lovely sentiment -- our hallowed government, so enlightened and progressive, is the moral equivalent of two wolves and a sheep voting on what's for dinner.

What do you think all those defense company lobbyists are doing up on Capitol Hill? They're trying to get money and contracts to enrich themselves, and the people they represent, at the expense of the taxpayers.

Now there's a good argument for repealing the income tax! If Capitol Hill didn't have the POWER to take whatever money it wanted via direct taxes (which it didn't before 1913), then the lobbyists wouldn't swarm about trying to get some of it, would they?

Posted by: [george gaskell](#) on July 1, 2004 at 3:31 PM | [PERMALINK](#)

No, Don, it is not true that some people benefit more than others from having a means of national defense, and thus preventing society's collapse. Now, some people may benefit more by PROVIDING a national defense, but those statements aren't synonymous.

Also, show me a society that existed and prospered for say, 100 years, without a means of defense, while in broad contact with other societies. None exist. By contrast, I can find countless examples of societies which existed and prospered for 100 years or more without the benefit of transferring wealth from some individuals to other individuals, without any service or good provided in return. That is the distinction; building an Osprey aircraft may be a waste, in terms of assuring national defense, but there is a product being provided in return for tax revenues, and some means of national defense is indisputably needed to for society to survive. In contrast, when a 70 year old millionaire receives a Social Security check, he does not provide any service or good in return, and when an Iowa corn producer gets a check from the treasury, it is done without any historical evidence that agriculture subsidies are required to prevent society's collapse, or to assure that society will prosper.

Posted by: [Will Allen](#) on July 1, 2004 at 4:26 PM | [PERMALINK](#)

george, I gotta tell ya' that this dialogue with Don may be a little pointless, given that he once explained to me that it would be perfectly legitimate for a majority to strip an individual of everything they have, and toss him in a well, as long as sufficiently democratic procedures were employed to achieve that end. We are dealing with the unmasked face of unalloyed majoritarianism here, and I actually find it refreshing when it is displayed without any rhetorical disguises. In any case, I gotta' go.

Posted by: [Will Allen](#) on July 1, 2004 at 4:33 PM | [PERMALINK](#)

george gaskell:

Why do Objectivists and Libertarians want to impose their philosophy on everyone, and viciously attack as evil and immoral anyone who questions the smallest detail of their rigid dogma?

It is clear from reading your comments that you did not read or think about what I actually wrote. Instead, you launched into your ongoing inner dialog with the imaginary Evil Collectivist who lives in your head. I realize that this inner dialog is likely an important underpinning of your sense of moral superiority, but it is irrelevant to me or what I wrote.

- > So, we have it -- the denial of the
- > existence of private property itself,
- > which lies at the cold, dark heart of
- > all collectivist dogma.

I did not deny the existence of private property. I wrote that private property is one of many human social adaptations, and specifically said that private property AND markets "have established enduring and reliable value in contributing to what many people consider to be human well-being."

My own belief is that while private property and markets can be and often are clearly beneficial social adaptations, that this is not invariably and universally the case, and that neither one of them is or ought to be the only, central or overriding organizing principle of human society.

- > Private property is really not that
- > hard of a concept. To say, "well, it's
- > a social construct" is to try to dismiss
- > it as though it is an illusion.

You assert that private property is nothing but a "concept." Are you trying to dismiss it as though it is an illusion?

> But then again, dogs understand it.

Humans are animals, specifically social primates. Like all human social adaptations, "private property" is an evolutionary expression of our animal nature, probably arising from the territoriality that many animals exhibit. Just as the human social adaptations of "government" and "rights" arise from the hierarchical relationships of our ancestral social primates.

- > It begins with the integral, physical human
- > body, and extends to the appropriation of
- > otherwise unclaimed natural resources.

You acknowledge that "unclaimed natural resources" are not "private property" until they are "appropriated" by some human. In other words, "private property" is a category of human thought that is applied to entities in the world around us; it is entirely defined by human social conventions; it does not exist as an "objective" reality apart from human social conventions.

- > I suspect that you are going to suggest
- > that what constitutes the "individual"
- > or a "person" is a "social construct"
- > as well.

Every human being is biologically the product of millions of years of evolution of the human genome, so our very genetic makeup and fundamental biological identity is a result of human social behaviour. As to human personality, if you consider the ability to use language to be a basic requisite of human personality, then clearly human personality is a product of human social behaviour. Children who have through some fluke grown up completely isolated from other humans do not acquire language ability and do not develop a fully human personality, and may be unable to do so even when they are brought into human society at an older age.

Humans *are* social animals; that is just a simple fact of nature. Individual humans living and developing human personalities in isolation from other humans are not found in nature.

- > I'm working on developing a theory that
- > postmodernism, the denial of the existence

> of objective reality altogether [...]

The concept of an "objective reality" that exists independent of any observer has been discredited by 20th century physics. It is not a scientific concept. There is only one scientific way to test any concept or model of experience: empirical observation. If the concept or model successfully predicts the results of observation, then it meets the scientific definition of "truth." A claim that something exists independent of observation cannot be tested; it is a religious belief.

> it on us ...

Whom do you imagine created government, George?

Posted by: [SecularAnimist](#) on July 1, 2004 at 6:24 PM | [PERMALINK](#)

Mr. Anonymous Secular Person:

Why do Objectivists and Libertarians want to impose their philosophy on everyone, and viciously attack as evil and immoral anyone who questions the smallest detail of their rigid dogma?

Who's an Objectivist? Are you referring to that weird little cult of Ayn Rand followers? I can't say I've had the pleasure, tho' I suppose I should eventually get around to reading some of it, just to be able to recognize the crackpots when they present themselves. What little I know of them isn't too impressive, as it lacks a certain intellectual rigor.

Besides, I already said that Leftism is an inherently aggressive ideology and its followers want to control everything and everyone. Your "I know you are but what am I" retort is somewhat flaccid.

On the topic of "imposing" -- you seem to be missing a very basic point here: the non-aggression principle behind free market libertarianism. If you don't understand, it is the idea that no one should "impose" on anyone -- I cannot attack you, I cannot steal from you, if I want to improve my situation I must trade with you voluntarily ... forgive me, I'm such the brute!

Consequently, free market libertarianism is, by definition, not an imposition on anyone. It requires only that one recognizes the inherent dignity of every person, and so expects everyone to respect one another's person and property.

Left-liberalism, on the other hand, denies the dignity of the individual, and invariably says, "we [meaning 'the people in charge of the State apparatus'] are going to organize society as we see fit, for your own good." You said as much yourself when you suggested that "neither [markets nor property] is or ought to be the only, central or overriding organizing principle of human society." That sort of comment is, of course, always followed by proposing some socialist strong-arm policy that will "organize" people into your vision of a good "society."

And before you get yourself in a tizzy, markets are not an "organizing principle." Markets are merely the natural, organic and decentralized **result** of people voluntary associating with one another in mutually beneficial trade. Markets are not the heart of libertarianism; respect for individual dignity is. Markets are just the natural by-product of that freedom.

When people like you decide that there ought to be some other "organizing principle," what that invariably means is that you (and your cadre of supporters) are going to decide what's best for everyone else. It is an inherently top-down approach: you look at "society" and then try to invent an "organizing principle" for it. Libertarianism begins at the other end of the scale: the individual, and allows society to develop however its members see fit.

In fact, the term "society" like all other collective nouns, is just a metaphor for the aggregate of every individual's behavior. Collectivists are completely unable to carry on a conversation about politics or economics without resorting to euphemisms like "society," "common," "we," or some other term that glosses over the individual.

So, where do you come down, Mr. Anonymous Secular Person? What is your level of respect for individual dignity?

Whom do you imagine created government, George?

I think the short answer you're looking for is ... people. The intellectual strains you must have endured to squeeze this question from your mind must have been heroic, indeed.

The longer answer would have to be ... government was created by people who didn't like having to respect everyone else's personal dignity by continuing to trade with them on voluntary and peaceful terms. Hence, they resorted to force. Government is merely organized force.

And where does this "living ... in isolation from other humans" thing come from? You and Mrs. Morpheus seem to have been trying to make a point along those lines, but it never really came together.

You did not read or think about what I actually wrote. Instead, you launched into your ongoing inner dialog with the imaginary Evil Collectivist who lives in your head.

If only it were so! There are enough Evil Collectivists on this board alone (to say nothing of the junior Senator from New York and her ilk) to make me fear for the future of my life and property.

Nothing else you said was sufficiently relevant (or made enough sense) to merit a response.

Posted by: [george gaskell](#) on July 1, 2004 at 9:12 PM | [PERMALINK](#)

Will Allen:

No, Don, it is not true that some people benefit more than others from having a means of national defense, and thus preventing society's collapse. Now, some people may benefit more by PROVIDING a national defense, but those statements aren't synonymous.

I didn't say "some people benefit more than others from having a means of national defense." I said that some people benefit more than others from **government defense spending**. The shareholders and employees of defense contractors, for example. The people who live in towns and communities in which defense contractors have manufacturing facilities, for another example. The distribution of benefits from government defense spending is **massively unequal**. In addition, the tax burden is also massively unequal. Some people pay much more for the national defense than others. So government provision of a national defense represents a **massive redistribution of wealth by the government**. It is undeniable.

Also, show me a society that existed and prospered for say, 100 years, without a means of defense, while in broad contact with other societies.

No. **You claimed** to possess **empirical proof** that a national defense is necessary to prevent societal collapse. I am still waiting for that proof. I am also waiting for your proof that the national defense must be provided by the government rather than by some other means in order to prevent societal collapse. You keep making these proof claims. Substantiate them.

By contrast, I can find countless examples of societies which existed and prospered for 100 years or more without the benefit of transferring wealth from some individuals to other individuals, without any service or good provided in return.

What societies? Name some of these "countless examples," then. Every human society involves the transfer of wealth from some individuals to other individuals. Show me an example of a successful society in which the government does **not** redistribute wealth for social welfare functions (food, housing, health, etc.). You can't, can you? You can't produce even one single example, because there has never been such a society. That is why libertarianism is a form of utopianism. It posits a type of human society that has never existed and never could exist.

That is the distinction; building an Osprey aircraft may be a waste, in terms of assuring national defense, but there is a product being provided in return for tax revenues.

So **what** if there's a product? That doesn't alter the fact that the tax-and-spend system that produces that product is an enormous redistribution of wealth by the government between individuals.

Posted by: [Don P](#) on July 1, 2004 at 9:20 PM | [PERMALINK](#)

George gaskell:

That's a lovely sentiment -- our hallowed government, so enlightened and progressive, is the moral equivalent of two wolves and a sheep voting on what's for dinner.

What alternative do you propose, then? Who gets to decide the fate of the sheep? A dictator?

Now there's a good argument for repealing the income tax!

What alternative mechanism of taxation do you propose, then?

Posted by: [Don P](#) on July 1, 2004 at 9:25 PM | [PERMALINK](#)

There are enough Evil Collectivists on this board alone (to say nothing of the junior Senator from New York and her ilk) to make me fear for the future of my life and property.

Nothing else you said was sufficiently relevant (or made enough sense) to merit a response.

George, I admire Secular Animist for valiantly trying to reason with you. But you are here to hurl abuse and spout the repetitious rantings of a fevered mind.

You don't listen or pay attention, you aren't interested in opinions which may challenge you, and you all too obviously can't stand people.

I got ten bucks says your breath stinks.

Posted by: [obscure](#) on July 1, 2004 at 9:29 PM | [PERMALINK](#)

I screwed up the italics above, 2nd line is george's too.

Posted by: [obscure](#) on July 1, 2004 at 9:32 PM | [PERMALINK](#)

Don P:

What alternative do you propose, then? Who gets to decide the fate of the sheep? A dictator?

How about the sheep getting to decide for himself?

What alternative mechanism of taxation do you propose, then?

At this point, I'd even settle for excise taxes (as opposed to direct taxes). Tariffs, etc. Transactional taxes can't be increased by a greedy government beyond a certain level without destroying the market for the thing that is taxed. And then it gets no revenue. The result is that the taxing entity is hemmed in to less noxious levels of intrusion.

Posted by: [george gaskell](#) on July 1, 2004 at 9:42 PM | [PERMALINK](#)

Mr. or Ms. Anonymous Obscure Person:

"You don't listen or pay attention..."

Actually, I just don't bow to dictators, even ones that dress up their oppressive intentions in populist clothes.

I listen all the time. I listen in vain for a well-reasoned opinion about politics or economics that promises to improve the world without stealing from me, but is just so obviously just and true that I am persuaded to voluntarily follow along.

If your "breath" comment is the best you've got, I suspect I won't be hearing such a proposal from you.

Posted by: [george gaskell](#) on July 1, 2004 at 9:49 PM | [PERMALINK](#)

george gaskell:

- > When people like you decide that there
- > ought to be some other "organizing
- > principle," ...

When you address me by railing at "people like you," it indicates that you are addressing a stereotype that exists in your own mind, talking to yourself, and not engaging in a dialog with me at all.

And this from someone who lectures others about respecting the dignity of the individual. Reducing people to preconceived stereotypes is the antithesis of respect for individuals. It is an inherently aggressive behavior that denies the dignity of the individual. Reducing people to stereotypes is in fact a commonly used tool of totalitarian mind control throughout history. Interesting to see you relying on it so heavily.

- > ... what that invariably means
- > is that you (and your cadre of supporters)

- > are going to decide what's best for everyone else.

My cadre of supporters? I think you are hallucinating. Perhaps you imagine that I am actually Lenin.

- > Left-liberalism, on the other hand, denies the dignity of the individual.

For the most part, the leftists and liberals that I have encountered exhibit far more respect for the dignity of individuals than you have shown in your posts here.

- > Left-liberalism ... invariably says, "we [meaning 'the people in charge of the State apparatus'] are going to organize society as we see fit, for your own good."

No, it invariably says that we the people choose to organize ourselves by our own free will as we see fit to establish government that derives its just powers from the consent of the governed, to provide for the common defense and promote the general welfare.

- > ... you suggested that "neither [markets nor property] is or ought to be the only, central or overriding organizing principle of human society."
- > That sort of comment is, of course, always followed by proposing some socialist strong-arm policy that will "organize" people into your vision of a good "society."

That is demonstrably false, since my comment was not followed by any such proposal, nor have I any such proposal to make.

- > Collectivists are completely unable to carry on a conversation about politics or economics without resorting to euphemisms like "society," "common," "we," or some other term that glosses over the individual.

That's because politics and economics deal with the activities of groups of people. There is not much to say about the politics and economics of a single person living on a deserted island who has no interaction with anyone else.

- > government was created by people who didn't like having to respect everyone else's personal dignity by continuing to trade with them on voluntary and peaceful terms. Hence, they resorted to force. Government is merely organized force.

No, government was created by people who did not like being subjected to violence by other people who did not respect their personal dignity. Eventually they agreed to vest the sole power to use force in a government constrained by law to use that force only to prevent the unlawful use of force by individuals against other individuals. Without a government empowered to use force lawfully to prevent the unlawful use of force by individuals against other individuals, your individual liberty and your private property would last only until your ammunition ran out.

Of course, while it is correct to say that specific governments, such as the US, were created, "government" as a social adaptation among humanity in general was not "created," it evolved.

- > Nothing else you said was sufficiently relevant (or made enough sense) to merit a response.

It probably reflects good judgement on your part not to attempt to respond to that which is beyond your comprehension.

- > So, where do you come down, Mr. Anonymous Secular Person? What is your level of respect for individual dignity?

Do as thou wilt shall be the whole of the law.

I think I have shown considerably more respect for your individual dignity than you have shown for mine. You have repeatedly accused me of holding views that I do not in fact hold and have not expressed in my posts here. You have offered nothing but disrespect, contempt, derision, and stereotyping.

I am not sure that you really have an interest in persuading people to a point of view, as opposed to belittling them for your amusement. But if you have an interest in persuasion, I suggest that setting a good example of respect for individuals may be more effective than lecturing people about doing so while you do the opposite.

Posted by: [SecularAnimist](#) on July 1, 2004 at 10:29 PM | [PERMALINK](#)

Well gosh, Don, if there never has been a society that has survived contact with other societies without a means of defense, and you want to maintain that it is possible anyways, feel free. Whatever.

Meanwhile, you stated:

"And while you're at it, show me your empirical proof that government redistribution of wealth for social welfare purposes (food, clothing, shelter, health care, etc.) is not necessary to avoid societal collapse. Show me an example of a successful society in which the government did not perform this function. You can't, of course."

Gee, I dunno, the U.S. existed for about 150 years, and greatly prospered in that time, without such transfers. If you don't want to accept this as proof, or want to engage in myths about the Great Depression, feel free. It seems to make you feel better.

As to why it is important that a product or service be provided in return for tax revenue, well, at least then there is a possibility that the public good will be served, since the good or service may be required to perform a vital function. Now, in practice, many goods and services provided in return for tax revenues are not vital, and they

should be opposed on that basis. When money is simply given to people, however, for no other reason than that they formed the largest or more effective coalition, and they aren't even required to provide a publicly used good or service in return for access to those tax revenues, the chances of the public good actually being served practically fall to zero.

Now, I actually think that a reasonable case can be made for the public good being served for direct transfers, without provision of a publicly used good or service, when it involves people who are shown to be unable to provide for themselves. This comprises a very small and very ineffective portion of the electorate, however, so the chance that such a group will be able to illegitimately coerce others, that is to coerce others for their purely personal benefit, is quite small. If only that was the case with our comfortable seniors, and their baby boomer offspring, who I suspect will turn out to be even more obnoxiously covetous and coercive

I think I'll end this thread now, before you band together with some other like-minded people, and decide to toss me down a well. See ya'.

Posted by: [Will Allen](#) on July 1, 2004 at 10:45 PM | [PERMALINK](#)

Mr. Anonymous Secular Person:

If I refer to you in any way other than by your proper name, it is because you have not deigned to give it.

By "you people" I mean "you the individual pro-government Left-liberals who populate this board, each fully endowed with the full panoply of rights and dignity afforded to all persons, whom I fully respect despite vigorously disagreeing with almost every political opinion you express."

Does that smoothe your ruffled feathers?

I do not know if you are Lenin or not. Again, you have not identified yourself. For all I know, you could be Hillary Herself.

For the most part, the leftists and liberals that I have encountered exhibit far more respect for the dignity of individuals than you have shown in your posts here.

Does your definition of "respect" include making cracks like the one you made referring to "the imaginary Evil Collectivist who lives in [my] head"? The record will reflect that this jibe started off the *ad hominem* portion of today's "dialog." I find your pretense of having your delicate sensibilities offended to be cheap, transparent and cynical.

... nor have I any such proposal to make.

I first encountered you (or some other anonymous person using your handle) quoting at length about how the government creates markets and stable currency. That is a bedrock premise of Left-liberals everywhere. If you disavow that hideous agenda, please forgive my assumption that you would ever have associated yourself with such intellectual sewage.

"Eventually they agreed to vest the sole power to use force in a government ...

Actually, you hit on an interesting topic. Why must the government assert such a monopoly on the use of force? In a related question, how could any government be "authorized" to use aggressive force that no private individual could justly employ? In other words, if we "vest" a government with a portion of the powers that we possess as individuals, how could a government, acting as our agent, justly be empowered to act in ways that we could not? It is a basic principle of agency that I cannot authorize someone to do something that I cannot justly do myself. Which private person ever had the right to stick a gun to my head and demand that I pay him taxes?

Without a government empowered to use force lawfully to prevent the unlawful use of force by individuals against other individuals, your individual liberty and your private property would last only until your ammunition ran out.

Now you're talking sense! Now, where in the Federal Reserve Act and the Income Tax Amendment is the government being empowered to prevent the unlawful use of violence? It seems that these two laws, just as examples, exceed the role of preventing violence. They must be predicated on some other theory of what constitutes good government ... maybe Marx said something about that. Oh, yeah, right there at the top of his list -- "a steeply graduated income tax."

Posted by: [george gaskell](#) on July 1, 2004 at 11:13 PM | [PERMALINK](#)

george gaskel:

How about the sheep getting to decide for himself?

So you think the minority should be able to overrule the majority.

You really think that's a better system of government than majority rule, do you?

Posted by: [Don P](#) on July 1, 2004 at 11:24 PM | [PERMALINK](#)

So you think the minority should be able to overrule the majority. You really think that's a better system of government than majority rule, do you?

Now you're catching on! An invasion of anyone's life, liberty or property is not cleansed of injustice simply because a majority supported it.

Posted by: [george gaskell](#) on July 1, 2004 at 11:28 PM | [PERMALINK](#)

george gaskel:

- > Does your definition of "respect" include
- > making cracks like the one you made
- > referring to "the imaginary Evil Collectivist
- > who lives in [my] head"?

That was by way of pointing out your resort to stereotyping me and accusing me of holding views that I neither hold nor have expressed here. Colorful language, perhaps, but not intended to be disrespectful.

- > I find your pretense of having your delicate
- > sensibilities offended to be cheap, transparent
- > and cynical.

I have said nothing about being offended. Again, you are attributing to me things that I have never said. Again, you appear to be addressing a mental stereotype of who I am and what I believe rather than attending to what I actually have to say.

- > I first encountered you ... quoting at length
- > about how the government creates markets and
- > stable currency. That is a bedrock premise of

> Left-liberals everywhere. If you disavow that
> hideous agenda, please forgive my assumption
> that you would ever have associated yourself
> with such intellectual sewage.

It is not an agenda, it is an analysis. As I wrote when I excerpted and linked to it, it was offered as a view of the origin of the "middle class" to be contrasted with a previous poster's statement that the middle class is created and sustained by "free markets." I would be more interested to read your detailed and specific rebuttal to that analysis, if you are capable of offering one, than to read your rhetoric and name-calling. I provided a link to the full article.

In an earlier post you wrote:

> free market libertarianism is, by definition,
> not an imposition on anyone. It requires only
> that one recognizes the inherent dignity of
> every person, and so expects everyone to respect
> one another's person and property.

I am curious to know whether you refuse to drive an automobile, since every automobile releases into the air an abundance of toxic substances which subject other people to disease and death, against their will. I am also curious to know whether you refuse to use electricity generated by coal-burning power plants, since these also release toxic substances which not only poison human beings but destroy other people's private property as well. Or do your Libertarian principles permit you to subject other people to disease, death and destruction of their property as a consequence of involuntary exposure to your waste products?

I am also curious to know if you carefully investigate the circumstances under which various consumer goods you may purchase, such as clothing, electronics and food, were produced, so you can be certain not to purchase products produced in situations where workers are subjected to coercion and abuse? Or do your Libertarian principles permit you to benefit from coercion and abuse of others if it produces cheap goods and the coercion and abuse occurs out of your sight?

Posted by: [SecularAnimist](#) on July 1, 2004 at 11:56 PM | [PERMALINK](#)

george gaskell:

Now you're catching on! An invasion of anyone's life, liberty or property is not cleansed of injustice simply because a majority supported it.

But you think that the **minority** should be able to decide what constitutes an invasion of life, liberty or property, right? Whatever candidate or position gets the **smaller** number of votes should be the winner, in your proposed form of government, right?

Posted by: [Don P](#) on July 2, 2004 at 12:31 AM | [PERMALINK](#)

Don P -

Mr. Gaskell didn't say any such thing. Are you being intentionally obtuse, or is that really the speed at which your 12-year-old mind works?

Secular Thingy Person --

I don't even know how to respond. Mr. Gaskell has made sound, reasoned arguments, and your response to each one has been to spin off into hysterical hyperbole. What about freedom so offends your sensibilities? Are you really so inept at taking care of yourself and your family that you need the government to step in and do it for you? Or do you think so little of other's abilities that you feel they need taking care of?

This slave-master mentality used to be despised by the left. How odd that they're now trotting it out to justify their socialist agenda.

Posted by: [Scout](#) on July 2, 2004 at 9:09 AM | [PERMALINK](#)

Mr. Anonymous Secular Person:

Colorful language, perhaps, but not intended to be disrespectful.

I am so glad that "colorful language" is permitted! I wasn't aware that you were the hall monitor here, policing the mode of debate for all of us, but I am relieved that being "colorful" will not land me in the principal's office. [In case you haven't caught on, I am implying that you are not a serious person worthy of my respect when you spend your time avoiding the substantive issues and instead spew your hypocritical twaddle focusing exclusively on the WAY we talk. Me: substance. You: form.]

I have said nothing about being offended.

What you said was "I have shown considerably more respect for your individual dignity than you have shown for mine." Most rational people would admit that "I'm offended" and "you're not showing me enough respect" are more or less similar. I am beginning to suspect that you are not using the same standard English dictionary that the rest of us are.

It is an analysis ... it was offered as a view of the origin of the "middle class" to be contrasted with a previous poster's statement that the middle class is created and sustained by "free markets." I would be more interested to read your detailed and specific rebuttal to that analysis.

That previous poster was me. "George" is "george gaskell." Sorry to throw you off track.

This is not the forum for "detailed and specific rebuttals," since doing so would require significantly more space than is appropriate here. But, to sum it up, the economic history reflected in the article you excerpted is flatly wrong. It is not just wrong as a theory, it is wrong as a matter of historical fact.

Markets arise whenever you have a segment of the population that is freed from (a) subsistence food-production and (b) violence. This is why, for example, modern market capitalism arose in central Germany in the late middle ages and early modern periods -- they were free from the kind of strong central governments that you found in France and England. They were the free cities, and were fiercely independent by comparison to most of Europe at the time. Northern Italy, too. Venice was just a swamp, really, and so it was granted a kind of independence from the central government, and then flourished with a merchant middle-class like nowhere else in southern Europe. These people eventually produced the Renaissance.

Of course, this sort of prosperity rarely lasts very long, since governments invariably come along to take what free people have produced.

The term "middle class" is really a loaded term that favors Statists, since the whole body of Marxist literature since the mid-1800s has used it extensively. It has become infused with meaning well beyond its basic significance. I think of it as the class of people who arose from the people in feudal times who (a) were not the slaves and/or serfs, and (b) did not have extensive land holdings acquired and maintained through military force. In the "middle" you have merchants and small-scale farmers who produced articles for trade, or produced more food than the family consumed and sold the rest at market. I call the middle class the literal and figurative descendants of that merchant-group of freemen. They never needed a government to prosper, to "create" their market, and certainly not to "create" their money! They just needed to live free from aggressive violence.

As you said, people sometimes form governments to serve as an organized self-defense force. That's all well and good, but unfortunately, such governments are typically a Leviathan, growing like a cancer beyond its self-defense role, aggregating power to itself until it becomes socialist and then totalitarian.

[Here's a link to my first response on this subject.](#)

I am curious to know whether you refuse to drive an automobile, since every automobile releases into the air an abundance of toxic substances which subject other people to disease and death, against their will.

To the extent that these injuries occur, I strongly support the right of anyone so harmed to be able to prove his injury and collect damages for them. Injury by pollution is no different than injury by crime or negligence. It is wrong and should be stopped. If I am the one causing the injury, then prove it and I will stop and pay the damages.

What I don't understand is why your question is relevant. The existence of pollution-related injuries has nothing to do with a socialist government collecting direct taxes by force.

How, again, does this justify the Federal Reserve Act and the Income Tax amendment? I have asked this question repeatedly, and have not gotten an answer. Perhaps you should spend less time trying to probe for inconsistencies in my argument and more time answering this question.

I'll ask it again. If we "vest" a government with a portion of the powers that we possess as individuals, how could a government, acting as our agent, justly be empowered to act in ways that we could not? It is a basic principle of agency that I cannot authorize someone to do something that I cannot justly do myself. Which private person ever had the right to stick a gun to my head and demand that I pay him taxes? If no private person has the right to do that, how could the government justly have such a power?

And Scout is right on the money -- so much of the socialist agenda has a kind of revolting paternalism lurking behind it.

Posted by: [george gaskell](#) on July 2, 2004 at 10:13 AM | [PERMALINK](#)

But you think that the minority should be able to decide what constitutes an invasion of life, liberty or property, right?

I think that what constitutes an invasion of life, liberty and property is so basic that my dog could understand it. Let's take them one by one.

"Life" -- invaded when someone is killed or physically injured.

"Liberty" -- invaded when someone is restrained by aggressive force or the threat of aggressive force from doing or not doing something.

It gets a little complicated here, so try to keep up.

"Property" -- can you point out the objects in your life that are your property? A dwelling, perhaps? Your furniture? The food you eat, which is the property of the grocery store until you trade money for it? The funds in your wallet and even the intangible credit in your bank account? Are any of these things starting to sound familiar?

Whatever candidate or position gets the smaller number of votes should be the winner, in your proposed form of government, right?

I suppose this is an attempt at argument via *reductio ad absurdum*. I'll make this really simple for you. Consider, as an example, a law that says that Protestant churches are illegal. A majority of voters has duly passed this law. Is it moral or just? No. Even though a majority supported it, the rights of the minority (or even a lone individual) would be infringed by its enforcement.

Now, stay with me here -- what if we respected the right to keep one's property? I can't reach into your wallet and take what I find there. I can't call your employer and tell him, "give me 35% off the top of whatever you were going to pay Don."

But you think it is just and moral for the government to do the same thing because a majority says so? Explain that to me, please.

And don't bother to go into the whole "charity" thing. How I choose to give to charity is my business. That's why they call it "giving." What the government does is "taking." Taxes are taken by force, and it is not charity.

Posted by: [george gaskell](#) on July 2, 2004 at 10:44 AM | [PERMALINK](#)

Secular-esque:

I am curious to know whether you refuse to drive an automobile ...

Only under protest. I only drive a car because I am forced to. The federal government has been systematically destroying pedestrian-accessible cities with the interstate highway system for 60 years.

It would never have been able to do that if it didn't have the funds to do so via the Income Tax. Eisenhower admired the Autobahn. Hitler's Autobahn.

The free market didn't create car-dependent cities. Our federal government did, inspired by collectivist Europe.

Posted by: [george gaskell](#) on July 2, 2004 at 11:29 AM | [PERMALINK](#)

scout:

> I don't even know how
> to respond.

No one asked you to respond, and no one compels you to respond. If you don't know how to respond, you are free not to.

> Mr. Gaskell has made sound, reasoned arguments,
> and your response to each one has been to spin
> off into hysterical hyperbole.

I disagree with your characterization of Mr. Gaskell's writings and my own.

> What about freedom so offends your
> sensibilities? Are you really so inept
> at taking care of yourself and your
> family that you need the government
> to step in and do it for you? Or do
> you think so little of other's

> taking care of?

I see that you figured out a way to respond; with stereotyping and insults. So you did know how to respond after all.

Posted by: [SecularAnimist](#) on July 2, 2004 at 12:17 PM | [PERMALINK](#)

Scout:

Mr. Gaskell didn't say any such thing.

Yes he did. He said that the sheep should get to decide whether it is eaten, not the wolves. The sheep is the minority. The wolves are the majority.

Are you being intentionally obtuse, or is that really the speed at which your 12-year-old mind works?

No, I'm not being intentionally obtuse. Are you unable to read, or are you just a total moron?

Posted by: [Don P](#) on July 2, 2004 at 1:02 PM | [PERMALINK](#)

george gaskell:

> I am so glad that "colorful language" is
> permitted! I wasn't aware that you were
> the hall monitor here, policing the mode
> of debate for all of us, but I am relieved
> that being "colorful" will not land me in
> the principal's office.

Once again you resort to stereotyping me as engaging in authoritarian behavior (acting as if I were "the hall monitor here, policing the mode of debate") when I have done nothing of the kind. I have merely expressed opinions.

> I am implying that you are not a
> serious person worthy of my respect ...

Based on your writings here, you seem to be a person whose psychological well-being requires a feeling of superiority to others, which you satisfy through stereotyping and vacuous insults. You have not given me any reason to value your opinion of me, or to care whether you respect me or not, so your implication is of no interest to me, really.

> ... when you spend your time avoiding the
> substantive issues ...

Thank you, but I will decide for myself what "issues" I consider "substantive" and what questions interest me, and I will write about those matters that interest me.

I note that yesterday you denounced in strong terms the idea that "the 'individual' or a 'person' is a 'social construct'" as well as what you characterized as "postmodernism, the denial of the existence of objective reality altogether". I responded directly to these fundamental statements -- by fundamental, I mean that your concepts of the "individual", the "person" and "objective reality" seem to be foundational elements of your political philosophy. Without explanation or discussion, you dismissed as irrelevant my direct challenges to what I understood to be your views on the social nature and origin of human personality, and the question of whether there is an "objective reality" independent of observation. In other words, you raised these issues and then declined to follow them up.

I am not complaining; you are free to write what you wish and are under no obligation to discuss or respond to anything I write. But I would point out that you are doing exactly the same thing that I am: discussing matters that interest you and not discussing those that don't.

> ... and instead spew your hypocritical
> twaddle focusing exclusively on the WAY
> we talk. Me: substance. You: form.]
>
> ... I am beginning to suspect that
> you are not using the same standard
> English dictionary that the rest of

george gaskell:

I think that what constitutes an invasion of life, liberty and property is so basic that my dog could understand it. Let's take them one by one.

That's nice, but the issue isn't what you personally think the answer to that question is, the issue is, under your proposed system of government, **who gets to decide?** Who gets to decide whether sheep have a right not to be eaten by wolves? Why should the vote of the sheep on that issue, or on any other issue, count for more than the votes of the two wolves?

Posted by: [Don P](#) on July 2, 2004 at 1:59 PM | [PERMALINK](#)

This is all interesting discussion but I just don't see this country going back to Herbert Hoover-style government.

BTW if you've worked your way up from poverty or near-poverty into a position of having enough wealth so that things like the government spending the relatively small percentage of your tax dollar that it does on things like programs for the underprivileged as opposed to things like defense (never forget Ike's warning about the military/industrial complex), Social Security and interest on the federal debt really upset you then good for you.

Many work hard but have not moved up. Many also have much wealth that they have either stolen, cheated someone else out of or inherited and thus have not worked to earn. If the response from the right wing to that is "well, that's just too bad, that's just how it is..." then my response to them is that the New Deal, Great Society, Big Government, etc. are just how things are and they might as well stop their whining and get used to it.

Democracy IS all about everyone having a real chance to move up. When the middle class is thriving our country is thriving. All that GOP style trickle-down economics does is put the squeeze on the middle class while further enriching those who already have their wealth and in the meantime weakening Democracy by setting up a government by those are wealthy and powerful for those who are wealthy and powerful.

george gaskell:

I wrote: "I am curious to know whether you refuse to drive an automobile, since every automobile releases into the air an abundance of toxic substances which subject other people to disease and death, against their will."

> To the extent that these injuries occur,

That they do in fact occur is empirically verifiable. Information on the well established health effects of automobile-produced air pollution is publicly available.

- > .. I strongly support the right of anyone
- > so harmed to be able to prove his injury and
- > collect damages for them. Injury by pollution
- > is no different than injury by crime or
- > negligence. It is wrong and should be stopped.
- > If I am the one causing the injury, then prove
- > it and I will stop and pay the damages.

You and millions of other automobile drivers, including myself, are COLLECTIVELY causing injury to large numbers of people who suffer pollution-induced illness and death. No individual injury can be directly attributed on a strict causal basis to the air pollution emitted by one particular automobile. So the offer made in your last sentence is empty.

If one man -- perhaps a terrorist -- dumped a vial of deadly poison into a city's water supply, and that vial of poison were sufficiently virulent to kill thousands of people, he would be considered a mass murderer, and if caught and convicted, would be subjected to appropriate penalties.

But suppose instead, that a thousand terrorists each dump a vial of poison into the water supply. In this case, the amount of poison in a single vial, diluted by the large amount of water, is not enough to harm anyone who drinks the water, but the aggregate amount of poison from the thousand vials is lethal. Moreover, the effects of the poison are unpredictable and random depending on various factors, so while some individuals who drink the water will become ill or die, others will be unaffected.

When one of these vial-dumpers is caught, he says: "The vial that I poured into the water supply could not harm anyone. You cannot hold me accountable unless you can prove that my individual action directly caused a specific injury to a specific individual."

How does that differ from your position on the illness and death to which your automobile use contributes?

- > What I don't understand is why your
- > question is relevant.

My question was intended to evoke discussion of issues of equity, benefit and harm that arise in human society which cannot be adequately addressed solely within the framework of individual responsibility for individual actions. Your individual drive to work or to the store does not in and of itself directly cause the illness or death by poisoning of any specific individual. But the aggregate effect of the choices and behaviours of millions of automobile drivers does demonstrably cause illness and death to large numbers of people.

Some might suggest addressing this harm done to millions by requiring automobile and/or fuel manufacturers to adopt technology that would eliminate or at least dramatically reduce the damaging emissions from automobiles (as was done, of course, when leaded gasoline was banned). That would be a government-imposed solution, backed up by force.

Others might suggest addressing this harm by imposing a tax on automobiles and/or fuel, the proceeds from which would compensate those suffering from illness or death known to be caused by automobile air pollution. Again, this would be a government-imposed solution, backed up by force.

I suspect that either of those proposals would be objectionable to you.

What remedy would you propose for a collective harm caused by collective actions?

Posted by: [SecularAnimist](#) on July 2, 2004 at 2:13 PM | [PERMALINK](#)

george gaskell:

- > I only drive a car because
- > I am forced to.

No one puts a gun to your head and forces you to drive a car. You drive a car for your own convenience.

- > The federal government has been
- > systematically destroying pedestrian
- > -accessible cities with the interstate
- > highway system for 60 years.

Very little of the Interstate Highway System is in cities and it has little relevance to urban transportation issues.

It certainly is relevant to the decline of inter-city passenger railroads, and it is certainly true that massive government subsidies for automobile infrastructure (as well as for commercial air transport) have disadvantaged rail transport in general. Subsidized highway construction has also made truck transport inexpensive, thus encouraging the transport of food and manufactured goods over long distances, which has detrimental effects.

I am not a fan of Federal subsidies for road building, but that is different from being opposed to taxation or government spending in principle.

- > Eisenhower admired the Autobahn.

> Hitler's Autobahn.

If I recall correctly, the US Interstate Highway System was at least in part advocated on the basis of its importance for military defense.

> The free market didn't create car-dependent
> cities. Our federal government did [...]

I suggest you research the role of automobile companies buying up municipal trolley systems and deliberately destroying them so as to remove competition for their products.

I respectfully suggest that not all that is evil in the world is a result of government actions. The free, independent, rational, self-interested choices of large numbers of individuals can, in the aggregate, produce evil results. Americans love cars, and have freely chosen to purchase and drive them in large numbers, with profoundly harmful consequences.

I understand that it is axiomatic in Libertarian philosophy that government action is evil and invariably produces evil results, and that rational, nonviolent, free, self-interested action is good and invariably produces good results. But it is simply not true.

Posted by: [SecularAnimist](#) on July 2, 2004 at 2:43 PM | [PERMALINK](#)

Secular-o-rama:

What remedy would you propose for a collective harm caused by collective actions?

Short answer: Class action lawsuits (with an open/indefinite class of polluting defendants, and specially named co-defendants, like automotive manufacturers, etc). They did it with asbestos and others. A court can tailor a remedy based on proven facts. By contrast, regulation by executive decree is a ham-fisted approach, and usually politically corrupt.

But none of this is on point at all. This thread is about the wisdom and propriety of direct taxes and so-called "wealth redistribution" schemes. Remember Hillary's line? *"We're going to take things away from you for the common good."*

The Federal Reserve Act and the Income Tax Amendment (just to take two examples of massive wealth re-distribution measures) had nothing to do with health issues. Your pollution example may have some secondary wealth-transfer side-effects (e.g., away from manufacturers), but that is not its primary purpose or justification. Its stated purpose is health and safety.

In contrast, the Federal Reserve and income tax were promoted as though they were good **economic** policy, just like every other price-fixing, licensing and trade barrier that started to creep into our government during the ironically termed "progressive" era. This avalanche of legislation was all explicitly about "improving" the economy, and we are still doing it today.

So, please, for the third time, answer my question: If we "vest" a government with a portion of the powers that we possess as individuals, how could a government, acting as our agent, justly be empowered to act in ways that we could not? It is a basic principle of agency that I cannot authorize someone to do something that I cannot justly do myself. Which private person ever had the right to stick a gun to my head and demand that I pay him taxes? If no private person has the right to do that, how could the government justly have such a power?

It just sickens me that people who pretend that they have enough self-respect to condemn theft have absolutely no qualms about engaging a government to do their stealing for them.

Posted by: [george gaskell](#) on July 2, 2004 at 2:59 PM | [PERMALINK](#)

george gaskell:

You posted this question twice; belatedly I offer my thoughts.

> If we "vest" a government with a portion
> of the powers that we possess as individuals,
> how could a government, acting as our agent,
> justly be empowered to act in ways that we
> could not? It is a basic principle of agency
> that I cannot authorize someone to do something
> that I cannot justly do myself.

I would argue that you cannot, in fact, justly use force against others based solely on your individual perception that they have harmed you and that force is the only way to address or rectify that harm. However, government may justly use force on your behalf in that way, provided you have substantiated and proved that harm was done to you, in accordance with lawful procedures for proving such harm, and provided that government's use of force is also in accordance with law.

And referring back to my earlier post about automobiles and collective harms, yes, I believe that the government may justly use force to address harms done to a "class" of people by another "class" of people.

> Which private person ever had the right
> to stick a gun to my head and demand that
> I pay him taxes? If no private person has
> the right to do that, how could the
> government justly have such a power?

No individual private person has the right to demand that you pay taxes to him. However, this is not the same question as whether the society or community of people in which you live has the right to demand payment of taxes, as your portion of the cost of sustaining the society or community from whose existence you benefit prodigiously and ubiquitously. The government derives its just power to levy taxes from the consent of the community which establishes and ordains the government as its agent.

Do you feel that you derive no benefit from living in a society or community of fellow human beings and thus owe your fellow humans nothing towards sustaining that community?

Posted by: [SecularAnimist](#) on July 2, 2004 at 3:00 PM | [PERMALINK](#)

Secular Thing Idiot --

What is your obsession with being stereotyped? It's cracking me up . . . you're so afraid to address the issues (probably because I was correct, you are terrified at the thought of a world where adults are expected to actually stand on their own two feet, rather than suck off the tit of the bloated federal government) that you keep shrieking about stereotypes. Interesting argument. Whenever you're cornered, insist that you're the victim. Oh, wait, that's right, you're a Democrat. I suppose the victim mentality comes to you naturally.

Donny-boy -- I weep for the future.

Posted by: [Scout](#) on July 2, 2004 at 3:07 PM | [PERMALINK](#)

I respectfully suggest that not all that is evil in the world is a result of government actions.

Government has an uncanny ability to produce the exact opposite result of its stated objectives. For example, fixing prices doesn't make goods cheaper; it produces shortages. It is an axiom of economics that you can't change just one thing. Whenever a brute-force rule like a price-fix is implemented, the system reacts, and you get changes that ripple throughout the system. This is like a law of nature, but government has yet to acknowledge it. Instead, a government will typically implement another measure to deal with the harmful consequences of the first, and then another, and then another. That is why such governments tend to grow in power.

All that is evil in this world falls into three basic categories:

(1) criminals, i.e., evil individuals acting more or less alone. In the grand scheme of things, this is pretty small-scale, person-on-person kind of harm, the kind that most of us experience very rarely over our entire lifetimes, and against which basic security and self-defense measures can protect, or at least minimize. At least most people acknowledge that crime is wrong, so it presents no real intellectual or philosophical difficulty.

(2) totalitarian governments, controlling everyone and everything in its path. This is crime multiplied several million times over.

(3) An unholy **alliance between government and private business. Leftists sometimes rail against the inherent harm that flows from such an alliance, such as your example of automobile makers using city governments to rip up urban rail systems, or the mind-bogglingly huge corruption of the railroad industry, the famed military-industrial complex, etc. But why is it that Left-liberals never realize that the morally objectionable part of the Unholy Alliance is on the side of government, not business? The Unholy Alliance is a marriage of money and force. Business supplies the money, and government supplies the force. The morally objectionable part is the force! Government IS force, and when used aggressively, it is wrong, whether employed by the highway robber or by the socialist.**

Posted by: [george gaskell](#) on July 2, 2004 at 3:22 PM | [PERMALINK](#)

george gaskell:

I agree that I have digressed into subjects not related to direct taxation. On the other hand, the subject heading of this thread is "The Essence of Today's Conservatism" and your posts yesterday at least in part spoke to what I would call the "essence" of Libertarian philosophy, which intrigues me. So, off I went.

May I ask a question of you, by way of a hypothetical scenario:

In a surprising outcome of the upcoming election, the Libertarian Party's candidate is elected President, and Libertarian candidates as well win approximately one-third of the seats in each house of Congress. The Democratic and Republican parties also hold approximately one third of the Congress each.

Having read and been impressed by your writings in this forum, the Libertarian President-elect asks you to meet with him to give your advice on his agenda for his first term.

"George," he says, "here's my situation. You know what the Libertarian platform is. I've only got one third of the Congress, the Libertarians, that I can count on to support it. If I'm going to make the changes that you and I know should be made, I'll need the votes of some Republicans and some Democrats.

"A lot of the Republicans, and Democrats alike, are corrupt corporate statists who are simply glutting themselves and their financial backers on the taxpayers' money. The Democrats are clamoring to raise taxes now, and lately the Republicans are raising taxes on future generations by running the government into massive debt. I don't expect any support from them.

"But on the Democratic side, oddly enough, I think I can get support for part of our platform from so-called progressives, in that they tend towards Libertarian views on social issues, issues of personal behavior. Plus they tend to frown on maintaining a huge, costly standing military and getting into foreign wars when there is no clear threat to the country. On the other hand, they are raving socialists when it comes to progressive income taxation and redistribution of wealth, single-payer health care, and all of that. And they are opposed to the right of individuals to own guns.

"On the Republican side, there are some folks who will support us on limiting government regulation of private commercial activity, and reducing taxes while at the same time reducing spending to eliminate the deficit. But at the same time, they tend to support a large, expensive, standing military; and they want to control everyone's personal, private behaviour, especially regarding sex, according to their religious beliefs.

"I want to accomplish at least one or two, but realistically no more than three or four, major fundamental changes in my first term. And maybe some smaller, incremental changes.

"So, George, what's your advice? What are the most important changes I should go for? And politically, how do I appeal to each of these groups to get them to support those changes?"

scout --

I have exchanged posts with george gaskell, and you are no george gaskell.

Posted by: [SecularAnimist](#) on July 2, 2004 at 3:32 PM | [PERMALINK](#)

(sorry about the out-of-control bold type there)

Do you feel that you derive no benefit from living in a society or community of fellow human beings and thus owe your fellow humans nothing towards sustaining that community?

This is more *reductio ad absurdum* argument. And it is also more of the "person isolated on an island" theme, for which I have yet to discern the relevance.

No, I do not believe that. Society is great. I just want it to stop stealing from me.

I believe that the "society" you speak of is only moral and just if its relationships are based on **cooperation**, as you find in **voluntary trade** and every other voluntary social group. In contrast, transactions that are not voluntary and cooperative are what most people call "violent crime." No one seems to have a problem understanding this when it occurs on a personal scale.

But for some reason, Leftists seem to think that the aggressive use of force is perfectly justified so long as government does it.

Posted by: [george gaskell](#) on July 2, 2004 at 3:36 PM | [PERMALINK](#)

I have exchanged posts with george gaskell, and you are no george gaskell.

You can say that again.

Despite repeated opportunities, you have not yet answered the essence of my argument. I can only assume that you are laying down your sword in defeat in the face of superior logic.

Posted by: [Scout](#) on July 2, 2004 at 3:51 PM | [PERMALINK](#)

So, George, what's your advice? What are the most important changes I should go for? And politically, how do I appeal to each of these groups to get them to support those changes?

Before we go very far down this road, I have to say that I know next to nothing of the Libertarian Party's actual platform. The LP's clout in the libertarian intellectual community is virtually nil. It either needs new leadership, or a new name, or something resembling a colonic cleansing.

But to answer your question, I think my earlier posts suggest that the Federal Reserve and the Income Tax (which go hand-in-hand) must be eliminated. If we eliminate them, we go back to a form of money that the market selects, the federal government must then survive on transactional taxes and loses its ability to choose the "right" people (in Al Gore's choice phrase) that are going to pay. The income tax is what enables huge deficits, since the federal government must issue bonds to cover these deficits, and its ability to re-pay these bonds is only based on its virtually unlimited ability to forcibly take whatever it wants from the people. Thus, the income tax and the Fed are the root of all evil, as far as the federal government goes.

Do that, and 90% of the other problems go away.

In political terms, I do not know because I am not a politician. You could convince the more libertarian Republicans that they have completely lost the game on the ever-expanding government, and business will prosper when freed from the death-grip of government. Then appeal to the freedom-loving Democrats out there (although none come to mind ...), and promise them universal gay marriage and explicit federal court jurisdiction over the class-action pollution lawsuits I described above.

As a second wave of earth-shattering accomplishments, I propose we restore the states' rights to peaceful secession. Lincoln abolished that right (no one before him even doubted that it existed, most states expressly reserving that right when they ratified the Constitution, as if they even had to), but he "discovered" the federal government's power to invade other states... who knew? I'm not promoting secession per se, but it would keep the federal government in line. The mere threat of secession is like a political nuclear solution -- if the union gets to be too oppressive on balance, we'll take our marbles and leave.

Sure, scout. Whatever you say.

Posted by: [SecularAnimist](#) on July 2, 2004 at 4:38 PM | [PERMALINK](#)

george gaskell:

Thanks for your advice to my imaginary Libertarian president-elect. Very interesting, particularly the proposal for nonviolent secession rights for the states.

- > the federal government must then survive on
- > transactional taxes and loses its ability to
- > choose the "right" people (in Al Gore's choice
- > phrase) that are going to pay.

By choosing which transactions to tax, how much to tax them, and how to spend the revenues, isn't the government still choosing who will pay and who will benefit? Aren't the taxes still taken coercively -- particularly if the transactions the government chooses to tax are such that people cannot easily forgo them? Seems a difference of degree rather than of principle. Although, as Al Gore said regarding torture in Iraq, differences of degree are important.

- > transactions that are not voluntary and
- > cooperative are what most people call
- > "violent crime." No one seems to have
- > a problem understanding this when it
- > occurs on a personal scale.
- > But for some reason, Leftists seem to
- > think that the aggressive use of force is
- > perfectly justified so long as government
- > does it.

I get into your car beside you, point a gun at your head, and order you to drive where I tell you to drive.

A policeman finds you driving down the left side of the road, pulls you over, and orders you to drive on the right side of the road as the government dictates. Implicitly, if not literally, he is pointing his gun at your head and telling you to drive where he tells you to drive, just as I did.

What's the difference?

- > Society is great. I just want
- > it to stop stealing from me.

I don't view it as stealing from me. I view it as requiring me to pay my share of the cost of maintaining an orderly, nonviolent society which establishes the prerequisites for individuals to thrive and live, for the most part, as they see fit.

In a social system in which government is constituted as a representative democracy which derives its authority from the consent of the governed, and is accountable and answerable to the people, I get to have my say like every other citizen as to what gets taxed, how much, and how that money is spent.

Personally, I don't have the same fundamental problem with that as you seem to have. In particular, I don't mind paying taxes, including Federal and state income tax.

I do mind when the government wastes the money or uses it improperly (in my judgement) or the process becomes corrupted and no longer functions as the representative democracy it is supposed to be.

Posted by: [SecularAnimist](#) on July 2, 2004 at 5:09 PM | [PERMALINK](#)

Conservative bastards don't believe there is such a thing as the common good.

That is why good political and moral hygiene dictates that the immoral, lying sack of shit conservative fucks be excised from the body politic like the metastasizing cancer they have become.

Libertarianism is philosophy for kindergarteners and people looking for an effective cover story for upper-class thieves and the boot-licking toadies who serve them.

Posted by: [The Wild-Eyed Fool](#) on July 2, 2004 at 5:58 PM | [PERMALINK](#)

Secular:

By choosing which transactions to tax, how much to tax them, and how to spend the revenues, isn't the government still choosing who will pay and who will benefit?

To a certain extent, yes, unfortunately, all taxes are by their nature coercive, and so inherently anti-liberty. Such is life. But direct taxes (like the income tax) are fundamentally different from transactional taxes. The difference has to do with one's view of the proper role of government and the rule of law.

The income tax is essentially a form of slavery. To be a slave is to be denied the right to keep the fruit of your labors. A slave is only allowed to keep what his master lets him have. Did you know that not all American slaves were forced to work in the fields? Many of them were sent out into the work-force, to work for wages, **but his master took a percentage of whatever he earned**. That is precisely the same way the federal government treats OUR incomes -- as though it is their money first, and we get to keep what they suffer us to retain.

Also, a transactional tax is not directed at individuals, but rather at behavior, specifically **public** commercial behavior. By only taxing the transaction, individuals are afforded a zone of privacy in their financial lives. The behavior is taxed, not the person. The difference is crucial. By contrast, the income tax requires a full accounting of our financial lives to the government every single year. Transactional taxes are collected anonymously, and direct taxes are collected by name. This gives the government a huge weapon against its political enemies -- the threat of the audit.

Also, look at what is a "taxable event" in a transactional tax system as opposed to direct taxes. Each individual can choose how to spend his money, and thus how to pay the tax. I do not choose to earn an income. I do so because I must contribute to society, and I must provide for my family. I can, however, choose how my money is spent, and thus how taxes are paid. More control for the people, less for the government.

Blackstone said that, "A power over a man's resources is a power over his will." Through special rules (such as via the 501(c)(3) non-profit status granted to churches), the government is able to directly manipulate the resources of organizations in order to gain control over them. Often, these are not commercial institutions, but rather are groups devoted to matters of conscience and morality. With the power to levy an income tax (or even the threat of it) on **unpopular** or politically inconvenient organizations, the entire range of conscience-based associations is subjected to the control and manipulation of the government. This is not a theoretical threat. It is very real, as calls to withdraw the 501(c)(3) status of one's opponents happen all the time.

In contrast, a transactional tax does not require us to surrender our dignity, our privacy, our control, nor requires us to confess our entire economic life to the government.

A policeman finds you driving down the left side of the road, pulls you over, and orders you to drive on the right side of the road as the government dictates. Implicitly, if not literally, he is pointing his gun at your head and telling you to drive where he tells you to drive, just as [the carjacker] did. What's the difference?

The traffic analogy is something that every libertarian is asked to respond to about 8 or 9 times a year.

The short answer is that there is no moral difference between driving on the left side of the road as opposed to the right. But there is a huge moral difference between being left alone and being deprived of the use of my car under threat of imminent death.

Posted by: [george gaskell](#) on July 2, 2004 at 5:59 PM | [PERMALINK](#)

george gaskell:

Backtracking to your comments re: how to remedy a collective harm caused by collective actions (responding to my automobile exhaust example), you suggested:

- > Class action lawsuits (with an open/indefinite
- > class of polluting defendants, and specially
- > named co-defendants, like automotive
- > manufacturers, etc). They did it with asbestos
- > and others. A court can tailor a remedy based
- > on proven facts. By contrast, regulation by
- > executive decree is a ham-fisted approach, and
- > usually politically corrupt.

Just a couple of comments. If a court can tailor a remedy based on proven facts, I see no reason why an executive agency's (e.g. the EPA) regulatory remedy would not also be required to be based on proven facts, and indeed legal action has been taken against regulatory agencies based on the complaint that their regulations were insufficiently fact-based (recently, specifically regarding particulate air pollution from diesel engines, pretty much the topic of my example). The court thus acts as a check on corrupt executive regulation.

Also, I suggest that it would be interesting to compare and contrast the approach taken to asbestos and the approach taken to lead in gasoline. There are of course real physical differences between the two substances, how they are dispersed in the environment, whom is exposed, and so on, so they are not directly comparable. Yet some insight might still be obtained from comparing the remedies applied and the result. I am not aware that the banning of leaded gasoline was ham-fisted or corrupt; it seems to have been an effective solution, and the costs were absorbed by those who benefit from the use of gasoline.

Posted by: [SecularAnimist](#) on July 2, 2004 at 6:20 PM | [PERMALINK](#)

george gaskell:

- > The short answer is that there is no moral
- > difference between driving on the left side
- > of the road as opposed to the right. But
- > there is a huge moral difference between being
- > left alone and being deprived of the use of
- > my car under threat of imminent death.

So is there after all a difference between an individual putting a gun to your head and stealing your money (carjacking) and the government requiring you to pay taxes (the armed policeman compelling you with implicit threat of force to drive lawfully on the right side of the road, thereby depriving you of the ability to use your car as you see fit)?

Not to be a wise guy, but it sounds like you are saying that in this case "the aggressive use of force is perfectly justified so long as government does it," a view you attributed to Leftists.

Perhaps there is a long answer?

Posted by: [SecularAnimist](#) on July 2, 2004 at 6:40 PM | [PERMALINK](#)

More afterthoughts.

- > ... appeal to the freedom-loving Democrats
- > out there ... promise them universal gay
- > marriage and explicit federal court jurisdiction
- > over the class-action pollution lawsuits I

> descibed above.

Don't forget legalizing recreational drugs. That will appeal to a lot of Leftists.

- > I propose we restore the states' rights to
- > peaceful secession ... I'm not promoting
- > secession per se, but it would keep the federal
- > government in line. The mere threat of secession
- > is like a political nuclear solution -- if the
- > union gets to be too oppressive on balance,
- > we'll take our marbles and leave.

What if a state governor, with the support of a majority of the citizens of his state, and the acquiescence of a docile or intimidated minority, decides to invoke the right to peaceful secession in order to establish a fundamentalist totalitarian theocracy, or a hereditary monarchy, within his state? As long as he did not engage in any acts of violence or aggression towards other states? How would that be handled?

Would not the prospect of losing the protection of a "common defense" (i.e. the Federal armed forces) against foreign enemies be a strong disincentive to secession, sufficient to vitiate its credibility as to "keeping the federal government in line"?

I am not expert on Canadian politics, but it is my understanding that under Canada's federal system, the provincial governments have considerably more autonomy and power vis a vis the Federal government than is the case in the US, yet Canada embraces Federal government programs that I suspect you would consider socialist, e.g. their single-payer health care system. So I am not sure that enhancing states' rights will get you where you want to go.

Posted by: [SecularAnimist](#) on July 2, 2004 at 7:08 PM | [PERMALINK](#)

That is why good political and moral hygiene dictates that the immoral,lying sack of shit conservative fucks be excised from the body politic like the metastasizing cancer they have become.

And the liberals borrow yet another highlight from the Communist/Nazi playbook: advocate killing your enemies under the guise of improving society.

Al Gore took the first step down this path just the other day, by labeling those who exercise their free speech to criticize the Democratic party in the blogosphere as "Digital Brown Shirts." Very Hitler-esque. First you dehumanize your enemies. Then you strip them of their rights. And then it's just a very short trip to the death camps or ovens or the other areas where Collectivists like to send their foes.

Posted by: [Scout](#) on July 2, 2004 at 7:14 PM | [PERMALINK](#)

The Wild Eyed Fool wrote: "Libertarianism is philosophy for kindergarteners and people looking for an effective cover story for upper-class thieves and the boot-licking toadies who serve them."

I have encountered people who, in my opinion, cynically spouted Libertarian rhetoric while actually pursuing an agenda of using the power of government to transfer wealth and power to those who are already wealthy and powerful.

I do not perceive george gaskell to be one of those people. I don't share his values and beliefs, but I believe that he sincerely holds them and no doubt strives to act according to them to the best of his ability.

Posted by: [SecularAnimist](#) on July 2, 2004 at 7:28 PM | [PERMALINK](#)

You are a liar. That is not what Al Gore said.

Until now the entire content of your posts to this board has been name-calling and puerile insults. Now you have apparently decided to diversify, by adding lies.

It is not an improvement.

Posted by: [SecularAnimist](#) on July 2, 2004 at 7:32 PM | [PERMALINK](#)

From Al Gore's speech to the American Constitution Society at Georgetown University Law Center, June 24, 2004:

[... Begin Excerpt ...]

Dan Rather says that post-9/11 patriotism has stifled journalists from asking government officials "the toughest of the tough questions." Rather went so far as to compare Administration efforts to intimidate the press to "necklacing" in apartheid South Africa, while acknowledging it as "an obscene comparison."

"The fear is that you will be necklaced here (in the U.S.), you will have a flaming tire of lack of patriotism put around your neck," Rather explained. It was CBS, remember, that withheld the Abu Ghraib photographs from the American people for two weeks at the request of the Bush Administration.

Donald Rumsfeld has said that criticism of the Administration's policy "makes it complicated and more difficult" to fight the war. CNN's Christiane Amanpour said on CNBC last September, "I think the press was muzzled and I think the press self-muzzled. I'm sorry to say but certainly television, and perhaps to a certain extent my station, was intimidated by the Administration."

The Administration works closely with a network of "rapid response" digital Brown Shirts who work to pressure reporters and their editors for "undermining support for our troops." Paul Krugman, the New York Times columnist, was one of the first journalists to regularly expose the President's consistent distortions of the facts. Krugman writes, "Let's not overlook the role of intimidation. After 9/11, if you were thinking of saying anything negative of the President...you had to expect right-wing pundits and publications to do all they could to ruin your reputation."

Bush and Cheney are spreading purposeful confusion while punishing reporters who stand in the way. It is understandably difficult for reporters and journalistic institutions to resist this pressure, which, in the case of individual journalists, threatens their livelihoods, and in the case of the broadcasters can lead to other forms of economic retribution. But resist they must, because without a press able to report "without fear or favor" our democracy will disappear.

[... End Excerpt ...]

Is the Bush administration "spreading purposeful confusion while punishing reporters who stand in the way"?

Has the Bush administration discouraged journalists from asking, in Dan Rather's words, "the toughest of the tough questions" by threatening to hang a metaphorical "flaming tire of lack of patriotism" around the necks of those who criticize Bush administration policy?

Was the press, in the words of CNN's Christiane Amanpour "muzzled" and "intimidated by the Administration"?

Is it fair to characterize as "digital Brown Shirts" those who work on behalf of the administration to threaten and intimidate critics into silence -- in the words of NY Times columnist Paul Krugman, "right-wing pundits and publications" that "do all they could to ruin your reputation"?

Do the Bush administration and its allies "threaten their livelihoods" of individual journalists, and threaten broadcasters with "other forms of economic retribution"?

Is our democracy in danger if "a press able to report without fear or favor" is endangered by threats and intimidation?

It is one thing to offer an honest rebuttal to Gore's accusations. Perhaps he is entirely wrong.

However, it is dishonest and cowardly to lie about what he said.

Posted by: [SecularAnimist](#) on July 2, 2004 at 7:53 PM | [PERMALINK](#)

Look SecularAsswipe, I'm so glad that you and George have become newest, bestest friends, but that's really neither here nor there to me.

It's laughable for you to call me a liar, and then accuse me of name calling. You do know that "liar, liar, pants on fire," is in fact name calling, albeit usually favored by little snot-nosed kids? In fact, I think I have a pretty good idea of who you are: you are a goatee wearing, bike riding, girly man, Gen Y loser (or a baby boomer . . . the two generations have merged into one indistinguishable ball of liberal putrescence) who thinks that this sensitive male routine is the only path to getting laid. It might work while you're in college, or with the Austin/SanFran/Seattle vegan hippie chicks who refuse to shave their amrpts, but once you get to a certain age, for that you'll really need to get a car.

Thank you for quoting Al Gore's speech, it saved me the trouble of having to find it. He did use the term "digital brownshirt," and he meant it in as ugly a way as I indicated (hence, I am not a liar, dick wad, you are).

The very idea that that hyperbolic, bloviating, class warrior sack of shit was your party's presidential candidate is telling. But then so is your sycophantic, tongue lolling idoltry of the Michael "I'm a fat shit, and I hate America" Moore brigade.

Go toke your weed, don the Birkies, and pedal your ass over to the co-op so that you can paint the posters for you're upcoming EarthFirst! rally, where you can gather with your anti-American posse and gnash your teeth over how Bushitler kills kittens and puppies and those poor innocent terrorist/freedom fighters. Strum your acoustic guitars and sing a few rounds of Kumbaya, and beaman all of the ways that the oil greedy U.S. is the cause of all of the hate and violence and poverty and earthquakes and smog and road rage in the world.

Posted by: [Scout](#) on July 2, 2004 at 10:39 PM | [PERMALINK](#)

I do not perceive george gaskell to be one of those people. I don't share his values and beliefs, but I believe that he sincerely holds them and no doubt strives to act according to them to the best of his ability.

Well now, isn't that just the sweetest thing?

I'll tell you this: I believe in George Gaskell.

No matter how much smoke you blow up his ass, no way George is going to go down to the co-op with you to join in your Godless protests.

The George in my mind has a gun strapped to his hip and a steely gaze in his eye. He may not initiate any aggressive violence, but when you and your WTO protest buddies decide to start breaking the store front windows at the Gap, and threaten the supply of surprisingly affordable khakis, George will kick your tree hugging asses all the back to Berkley.

As I caressed the **natural breast enlargement** curve of her back with one hand, the other was on my heavily lubricated penis, guiding it to her asshole. I rubbed my growing cock thru my pants as I thought about the fact that she was standing there all prim and proper with a load of my cum in her underwear, squishing **boob cruise** around her cunt lips and clit. I had ass-fingered three girls before her and two had liked it (or at least put up with it). If you can't stop him just let him stick it in your nice clean ass. I rise to stand behind you **celebrity tits** and force my cock smoothly into your cunt. She and Amy could not believe he was really licking up his own cum. Oh, fuck yeah, baby. She pushed her finger into his anus, finding his prostate again.

We were eighteen then, she said **world sex amateurs** wistfully. She began to get very excited and her kisses became even more passionate and urgent. The look of **amateur thumbnails** sheer lust on his face reassured her and realisation dawned that at 40 tonight was the night that she would finally become a woman. Her pussy was hot **naked amateur** and alive, not just allowing my cock inside, no, it was welcoming it and helping to bring it in. Logan **amateur girls** moaned, pushing his cock forward with his hips as I bent close to him, and I shivered **amateur adult video** again in anticipation. His cock was so much bigger than their fingers, yet felt natural in there whereas their fingers had felt alien. But finally she sat down on her **nude amateur** knees and he came up to her, his cock hovering just millimeters away from her face. She took up the plate and gently but promptly began to spoon-feed the sweaty, naked and exhausted girl, as if she was an infant. Now I could approach and talk to girls who would have blown me off previously.

I moved my lips down her **hardcore teen pics** legs and gently ran my tongue down her foot.

Even though my cock was fit to burst I was **black teen girls** having too much fun taking Alice into unknown sexual territory. (if they ever develop a university course on **nude young teen girls** fucking maybe Ill apply for professorship) She nodded and raised her lower body slightly. In my experience many women **lolita virgin** find contact of their clit too much early on in sex and prefer pressure on the area just above it. After a while I took her erect clit, which was surprisingly big, and sucked **teen girls pictures** into my mouth rather like a woman sucking a cock. You know there are some words like fuck and asshole which just sound crude when spoken by a woman. Up to now I couldnt **teen porn free** give a toss about a birds feelings, only whether she enjoyed a good fuck. Alice, forgive my curiosity, but I cant believe the way you orgasmed as I rimmed your rear She blushed a little and **tiffany teen** said explained how her anus had always been her most sensitive area and how while all her friends at school masturbated by rubbing their clits or pushed a vibrator into their **little teen virgins** cunts, all she needed was to push a finger or other suitable object into her ass. His lips marked another trail from her **teen porn photos** neck to her heavy breasts, circling them twice each, then closing in slightly on her rose-stained **teen hot girls** nipples, circling again. Over and over he did this until she felt his breath on her nipples, but never moved closer.

Posted by: [Nude teen girls](#) on November 27, 2004 at 6:07 AM | [PERMALINK](#)

I used the ratty **free teen movies** arm of the cum stained couch as a lever to start up a steady, slower rhythm. He loosened **webcam teens** his fingers in my hair and tenderly stroked my scalp as I drew the last of his offering from his cock. Oui, mais... My command **teens nude** of French was not enough to explain that although Jewish by birth, I had not been circumcised, **teen thumbs** the discovery of which seemed to be the cause of her sudden change. A fourth quality, which **teen nudity** was certainly no liability, was an unshakable confidence that he would succeed in everything he attempted, **teen sexuality** and that it was inevitable that everyone he attempted to charm and seduce would, eventually, succumb. I quickly ran my tongue down her crack until it slid into her **teen magazines** waiting pussy. After I had my lover worked up into a decent state of arousal, I slid lower, eventually scrunching myself up between her legs as she spread them wide **young virgins** for me.

Alcohol can [mart cialis](#) sabotage a normal and [cialis pill](#) protective process [cialis online](#) in the body, where the [cialis pills](#) liver is no longer [use cialis](#) able to release sugar [cialis cheapest](#) when blood levels dip too low. As a [cialis free](#) result, a person with diabetes [cialis 5 mg](#) who drinks too much [medication cialis](#) can find himself slipping [5 mg cialis](#) into a hypoglycemic (low blood sugar) episode, [cialis fedex](#) characterized by symptoms [generic cialis](#) such as sweating, dizziness, and a rapid heartbeat, and [mexican cialis](#) sometimes progressing to slurred [buy cialis](#) speech, confusion, and (in [abuse cialis](#) the worst cases) even convulsions and unconsciousness. Students with [cialis abuse](#) diabetes also need to be aware [generic cialis](#) that the use of alcohol or [cialis use](#) recreational drugs can distort their ability [sale cialis](#) to sense when their blood [cialis and pregnancy](#) sugar levels are too high or [alprazolam cialis](#) too low. For example, they may be less aware of symptoms [cialis line](#) like lightheadedness, [shakiness, blurred and pregnancy cialis](#) vision, and lack of coordination [cialis dosages](#) that can be signs of low blood sugar -- or [overnight cialis](#) of intoxication.

Just to be flippant for a moment:

Anyone else notice the similarities between the Bush administration and the Borg?

"Resistance is futile! You will be assimilated into the New World Corporate Order!"

On a serious ending note, the Bush administration has just declared war on everyone else in space. I'm beginning to wonder if these clowns aren't rogue Scientists who took L. Ron Hubbard's disgusting science-fiction vision of A future and are trying to make it THE future.

The Case for the Draft

America can remain the world's superpower. Or it can maintain its current all-volunteer military. It can't do both.

By Phil Carter and Paul Glastris

THE ESSENCE OF TODAY'S CONSERVATISM?....Hillary Clinton told a group of her wealthy supporters on Monday that **she supported rolling back some of Bush's tax cuts for the wealthy:**

"Many of you are well enough off that ... the tax cuts may have helped you," Sen. Clinton said.

"We're saying that for America to get back on track, we're probably going to cut that short and not give it to you. We're going to take things away from you on behalf of the common good."

Andrew Sullivan **teed off on this yesterday** but then thought better of it. Today he admits that he was a little too snippy, **but excuses it with this:**

Off Track

America's economy is losing its competitive edge and Washington hasn't noticed.

By Benjamin Wallace-Wells

7 Mistakes Superheroines Make

Why the latest action-babe flicks flopped.

By Christina Larson

Why cannot Hillary end agricultural subsidies, abolish corporate tax shelters, or means-test social security and Medicare? That would be for the common good. But it's easier to raise taxes. *Her invocation of her agenda with the "common good" is also part of what galls me.*

This is actually more revealing than his original comment: he was annoyed because HC invoked the "common good." This is apparently all it takes to drive some conservatives nuts these days.

What a sad commentary. *Of course* the purpose of taxation is to provide for the common good and *of course* Hillary believes her agenda coincides with that common good. What else would she believe?

Apparently, though, a mere acknowledgment that she believes in advocating for the common good is anathema to Sullivan. But if that was really his gut reaction, what does he think we're all here for?

Come on Kevin, Hillary Clinton will get criticized regardless of what she says or her reasoning. Conservatives have had it in for her and her husband since her tenure on the Watergate investigation on the Hill ...

Posted by: [hummm](#) on June 30, 2004 at 1:09 PM | [PERMALINK](#)

Haha, Sully better check with his handlers before criticizing corporate welfare and ag subsidies. That's not considered something that good "conservatives" are allowed to question these days.

Posted by: [melior](#) on June 30, 2004 at 1:12 PM | [PERMALINK](#)

I've gotten into trouble on Kevin's blog before about this - but I have a serious problem about foreigners lecturing Americans about our issues and Sullivan aptly illustrates it here. He's NOT one of us; he wasn't raised in democratic egalitarian tradition in America, but in class-conscious and stratified Britain, and so the idea of a "common good" is anathema and foreign to him.

So what gives him the creds to lecture us?

The real conservative definition of the common good:

Me, Myself and I.

Posted by: [GOPNemesis](#) on June 30, 2004 at 1:15 PM | [PERMALINK](#)

I'm actually OK with that quote from Sully about the common good. Of course Sully doesn't think Hillary's agenda promotes the common good, and quite likely Sully doesn't think that she thinks so either. So maybe Sully isn't so much angered by any invocation of the common good, but invocation of the common good in the service of an agenda that he thinks doesn't promote the common good.

Shorter: I could imagine W saying something about how his tax cuts promote the common good. That would make me bite the carpet, using almost exactly Sully's words.

Posted by: [Matt Weiner](#) on June 30, 2004 at 1:15 PM | [PERMALINK](#)

I guess he hasn't read the preamble to the Constitution:

*We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, **promote the general welfare**, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.*

Posted by: [rachelrachel](#) on June 30, 2004 at 1:17 PM | [PERMALINK](#)

Why does Sullivan consider Hilary's statement particularly galling? Don't all politicians claim their agendas serve the common good?

Posted by: [Bernard Yomtov](#) on June 30, 2004 at 1:18 PM | [PERMALINK](#)

I think the problem here isn't that it is for the common good, but that it is good for the commoners.

Pass the snuffbox.

Posted by: [Louis XIV](#) on June 30, 2004 at 1:19 PM | [PERMALINK](#)

I think it's Hillary using the word "good" without lightening coming down from heaven and striking her dead that pisses him off. Shows that God doesn't hate her as much as he does.

Posted by: [Contrary Mary](#) on June 30, 2004 at 1:19 PM | [PERMALINK](#)

Well, Hillary *is* the living incarnation of Satan on earth to most right-leaning folk, she's a woman, she's *Bill's* woman, she's educated and "uppity," and she dares to say there is such a thing as "wealthy enough." In addition to the whole common good thing. So Sully is not veering too far off message.

Posted by: [Gaia](#) on June 30, 2004 at 1:20 PM | [PERMALINK](#)

"Her invocation of her agenda with the "common good" **her agenda**

Sullivan was not saying that there is no such animal as the "common good", just that Hilary wasn't appointed by God to name what it is. At least on the second day.

And I am not that sure I like Hilary's formulation. I want to help the poor and lower middle class, and will screw the rich to do it. The idea that "Everyone is helped by program X" is bullshit used by both parties. Remember, Bush said the tax cuts were also for the common good.

Posted by: [bob mcmanus](#) on June 30, 2004 at 1:21 PM | [PERMALINK](#)

Isn't the 'you' that Hillary is talking to the wealthy, ie those that don't need a tax cut to improve their quality of life?

Isn't the supposed 'tax increase' actually merely a revocation of a tax cut, and therefore no increase at all?

Posted by: [GaryLK](#) on June 30, 2004 at 1:23 PM | [PERMALINK](#)

I agree with Mr. Weiner. It isn't that Sullivan is somehow against the common good, it is that he believes Hillary Clinton to be so horribly venal and duplicitous that her invocation of the common good is infuriatingly hypocritical. It is hatred that rages so brightly that it blocks out even the remotest light of reason.

That can be found on both sides of this Blue/Red thing. I think I'm still rational, but Bush pisses me off so much I'm not even sure about myself anymore.

Posted by: [Really, though](#) on June 30, 2004 at 1:24 PM | [PERMALINK](#)

Why cannot Hillary end agricultural subsidies, abolish corporate tax shelters, or means-test social security and Medicare?

Why can't the Republicans? They are, after all, in control of the White House, the Senate, and the House of Representatives. Is Silly Sully actually admitting that only a Democratic regime can work for "the common good"? Fascinating!

Posted by: [dave](#) on June 30, 2004 at 1:27 PM | [PERMALINK](#)

Sullivan was not saying that there is no such animal as the "common good", just that Hilary wasn't appointed by God to name what it is.

Not by God, but by the voters of the State of New York.

Posted by: [rachelrachel](#) on June 30, 2004 at 1:28 PM | [PERMALINK](#)

I think Sullivan, well-known for his fiscal hawkery, is objecting to HRC's presumption that a massive tax increase (as opposed to spending cuts, or at least a mixture of the two) is the only way to reduce federal borrowing. My guess is far more Americans agree with him (at least on principle) than with Hillary.

Now, it could well be that the Senator *would* support some spending cuts (though I wouldn't hold my breath trying to get her on record as to which programs should be trimmed), but one can hardly be blamed for strongly suspecting that, in fact, she does indeed favor tax hikes as the sole means of reducing the deficit.

And, to Sullivan's credit, he *has* been a particularly vociferous critic of Bush's fiscal policies, so, to my mind, at least, he does have some credibililty on this issue.

Posted by: [P.B. Almeida](#) on June 30, 2004 at 1:28 PM | [PERMALINK](#)

Ah, how soon Andy forgets his own advocacy of a growth and freedom destroying \$1 gas tax.

Posted by: [praktike](#) on June 30, 2004 at 1:29 PM | [PERMALINK](#)

We Britons have so little concept of the common good that we've only elected three socialist governments.

Of course, that's three more than the USA has managed.

Posted by: [Keith](#) on June 30, 2004 at 1:29 PM | [PERMALINK](#)

I don't think this is a fair criticism. Conservatives believe that government exists for the purpose of defending the borders of the country, and for making high-level policy decisions. They don't believe that government is there to make better the everyday lives of citizens. In fact, they think that government should stay as much out of the way of everyday life as possible. This is not a crackpot loonie fringe wingnut philosophy by the way. This is a standard conservative response to liberalism.

If progressives want to take on the likes of Sullivan, they need to go back to arguing for that outdated and quaint concept of government by for and of the people.

Posted by: [Christopher](#) on June 30, 2004 at 1:31 PM | [PERMALINK](#)

Why hasn't Sullivan asked that of Bush, eh? Bush's Ag bill was the porkiest pork that ever porked. (Well, excluding Boston's little freeway extravaganza...)

"There is no such thing as society. There are only individual men and women, and families."

-Margaret Thatcher

Posted by: [craigie](#) on June 30, 2004 at 1:36 PM | [PERMALINK](#)

It's funny how a line like this from Hillary Clinton will set Sullivan off about the Clintons' sense of superiority, and yet he'll write 1,000 words on the phrase "if necessary" to make W. not look like a homophobe. That dude has got issues.

Posted by: [Amitava Mazumdar](#) on June 30, 2004 at 1:37 PM | [PERMALINK](#)

Tax cuts passed by congress were not "across the board." Some taxes had to be raised (particularly on American ex-pat workers). Why? It was for the "common good" so that other tax cuts could be financed.

Sure, Sen. Clinton committed the greatest sin in washington you can ever commit -- which is to say, she told the truth -- but this faux outrage over his statement is pretty pathetic. I mean, the reason we give up our money to taxes *is because we are told it is for the common good*. Is Sullivan unaware that he is paying thousands of dollars in taxes already? Why do you think the government makes him pay those dollars, if not for the supposed "common good"?

Posted by: [Constantine](#) on June 30, 2004 at 1:37 PM | [PERMALINK](#)

The essence of Liberalism:

Society contributing in order to further the common good.

The essence of Conservatism:

"Go fuck yourself"

I'm at a loss to name a Repub who believes in the common good, general welfare, public interest, etc. Only self interest is real.

Posted by: [David](#) on June 30, 2004 at 1:43 PM | [PERMALINK](#)

Taxes are only so the beautiful people can have their nice wars.

And what D. Perman says.

Posted by: [MattB](#) on June 30, 2004 at 1:43 PM | [PERMALINK](#)

"...they (conservatives) think that government should stay as much out of the way of everyday life as possible."

Unless of course it involves religion or sex.

Posted by: [BCG](#) on June 30, 2004 at 1:44 PM | [PERMALINK](#)

Conservatives believe that government exists for the purpose of defending the borders of the country, and for making high-level policy decisions. They don't believe that government is there to make better the everyday lives of citizens. In fact, they think that government should stay as much out of the way of everyday life as possible.

Well, more importantly the military is to be used to protect life and property from seizure. And that's to be the only role of State, with the exception of preservation of traditional social mores, which runs counter to the idea of staying out of lives altogether. It's a nice concept (I gather most people are for the government staying out of *their* lives but more than happy to use the government to impact other people's lives), but wholly unattainable.

Posted by: [ChrisS](#) on June 30, 2004 at 1:46 PM | [PERMALINK](#)

Apparently, though, a mere acknowledgment that she believes in advocating for the common good is anathema to Sullivan. But if that was really his gut reaction, what does he think we're all here for?

Well, at its best, conservative thought shows when the common good is best served by the aggregation of individual interest (say in the argument that free trade will help the Third World). Unfortunately, this slips easily from analysis of individual cases to ideological blanket. Or does a bait and switch between the two levels.

But what gets me is that his Hillary screed comes just a day after he blasted the entire left for "pathological" Bush hatred, because of the "illogic" of Michael Moore's film. Yet he seems more interested in attributing the most venal psychological motives to Hillary Clinton than he does in debating the pros and cons of tax policy.

Posted by: [Chris in Boston](#) on June 30, 2004 at 1:46 PM | [PERMALINK](#)

P.B. Almeida:

I think Sullivan, well-known for his fiscal hawkery, is objecting to HRC's presumption that a massive tax increase (as opposed to spending cuts, or at least a mixture of the two) is the only way to reduce federal borrowing. My guess is far more Americans agree with him (at least on principle) than with Hillary.

First, if that is what Sullivan meant, that is what Sullivan should have said. It's not what he said. Second, Sullivan himself has advocated tax increases to help reduce the deficit, which pretty much destroys your theory of his intent anyway. And third, there is no indication that Hillary is opposed to all proposed cuts in federal spending; she too favors a mixture of spending cuts and tax increases to reduce the deficit. My guess is that her idea of what that mixture should be is far closer than Sullivan's to what the American people want and would support.

Posted by: [Don P](#) on June 30, 2004 at 1:48 PM | [PERMALINK](#)

It's not the "common good" phrase, it's the fact that this phrase is 1/2 of the description of "redistribution"--that 'we're taking away something from you for the common good--giving it to others.

It's all about redistribution--The biggest difference between conservative and liberals is which way it flows and what the consequence of the flow is.

Posted by: [whoops](#) on June 30, 2004 at 1:48 PM | [PERMALINK](#)

Hey Silly Sully? When do you start advocating a return of all our tax dollars for that excrement-laden war you push from the safety of your keyboard? You know....the war "for the common good" against terrorism.

Idiot hypocrite....

Posted by: [USAPatriot](#) on June 30, 2004 at 1:53 PM | [PERMALINK](#)

It's also worth noting that we could eliminate all agricultural subsidies and all programs that anyone would label corporate welfare and we still wouldn't solve the structural deficit.

As for means-testing social security and medicare, unless we means-tested them to an extreme degree, we still wouldn't solve the structural deficit.

Especially given that we need a larger military and we need to invest, easily, \$100B in improving homeland security (as Hart and Rudman have noted endlessly).

So there's on way around a tax increase if you believe that the federal budget should be balanced through the business cycle.

BTW, PB, restoring the Clinton-era tax rates on incomes above \$200K does not a massive tax increase make....

PS. I do agree, though, that Sully has actually been critical of the bush administration for its fiscal irresponsibility.

Posted by: [howard](#) on June 30, 2004 at 2:02 PM | [PERMALINK](#)

You know, no one is making the "rich" accept Social Security payments. I'd love to see Michael Moore stroll around Washington with his clipboard again and poll all the wealthy members of Congress and think tank gurus over 65 who support means testing/privitization/dog-eat-dog world views. "Sir/Madam, you support privitization/means testing of Social Security payments. Your present income is \$;;million a year. Could you tell us if you accept a social security payment every month?"

Posted by: [Abigail](#) on June 30, 2004 at 2:03 PM | [PERMALINK](#)

Andy:

Yeah - like Sully's ever voted for Labour... Right.

I have no idea what relevance you think this observation has. You claimed that Sullivan's views are a product of being raised in "class-conscious and stratified Britain" rather than "democratic and egalitarian" America. As others have suggested, this idea is nonsense. Britain has a far larger and more extensive welfare state than America, far less economic inequality, and the notion of government as promoter of the common good is far more entrenched in Britain than in the U.S.

Posted by: [Don P](#) on June 30, 2004 at 2:04 PM | [PERMALINK](#)

"There is no such thing as society. There are only individual men and women, and families."

Margaret Thatcher

Maybe so, but doesn't it strike you as odd that so many of them in England speak the exact same language?

Posted by: [Jeffrey Davis](#) on June 30, 2004 at 2:13 PM | [PERMALINK](#)

Hillary is the living incarnation of Satan on earth

Posted by: [Bill](#) on June 30, 2004 at 2:27 PM | [PERMALINK](#)

"End agricultural subsidies."

Well, there goes Andrew's devotion to -- and fandom in -- the red states.

Posted by: [Jim Madison's Dog](#) on June 30, 2004 at 2:28 PM | [PERMALINK](#)

Abigail, a nice idea, but not altogether fair. I mean, I support an increase in the gas tax, but it doesn't mean that in its absence I go write a check to the govt every time I fill up the tank (and I happily accept my tax refund in April, too).

Posted by: [pluto](#) on June 30, 2004 at 2:31 PM | [PERMALINK](#)

[i]test[/i]

Posted by: [weirdo](#) on June 30, 2004 at 2:36 PM | [PERMALINK](#)

You completely ignored Sullivan's main point. He is not upset about tax cuts per se, the issue is that there are much better ways that the budget deficit could be reduced. One of the things that economists do when assessing the value of monetary and fiscal policies is to ask whether, given their cost, they would be better than just dropping money out of a helicopter for people to grab. A tax cut often is no better than dropping money. Other policies can have certain external benefits though. The same goes for revenue increasing policies. If we simply raise taxes that increases revenue and does little else. On the other hand, if we reduce subsidies we end the distortion of our farming market and bring prices to a more raional level. We would also be helping all the third-world farmers who are starving because of our handouts to farmers here.

This argument also applies to corporate tax shelters. They are damaging for more than simply their revenue-reducing effects. What I think Sullivan was upset about with Hillary invoking the common good is that she was using as her lone justification for her policies. His suggestions to increase revenue were superior to hers and he didn't even have to invoke some amorphous liberal concept.

Posted by: [Ian Dew-Becker](#) on June 30, 2004 at 2:38 PM | [PERMALINK](#)

Hillary for VP... it's playing out a little like in "Eagle: The Making of an Asian American President" which is a Manga take on the 2000 pitting VP "Al Noah" against Ken Yamaoka.

Before the convention when it seems dead locked between the VP and Yamaoka, Yamaoka pretends to accept the first lady, "Ellery" as the VP on the ticket almost asuring him the nom. Then at the convention he gambles and gets Noah to be his VP candidate neatly cutting out the First Lady.

It's really a fascinating take on American politics, of course, the Republican candidate is a send off of John Glenn and not W. I suppose not even in fiction could W actually be candidate for president.

Posted by: [Mimiru](#) on June 30, 2004 at 2:42 PM | [PERMALINK](#)

Y'know, the Founders also spoke of the common good -- 'general welfare' in their words. So clearly America was established by people who hated it and were un-American. Remember this as we head into the so-called Fourth of July...

Posted by: [Kurt Weldon](#) on June 30, 2004 at 2:50 PM | [PERMALINK](#)

If Andrew Sullivan didn't actually exist, I suppose that someone would have to manufacture him, just so others would have something to write about. The something would, of course, be totally irrelevant, but it would fill pages somewhere.

Posted by: [raj](#) on June 30, 2004 at 2:53 PM | [PERMALINK](#)

The common good! The common good? Now there's the rub.

Democrats don't know.

There is no such thing as common good. Just common bad.

Selfishness good, collectiveness bad. Got it!

I've got mine, you go get yours.

I do believe Hillary for VP is a dream senario for Rove

Posted by: [boggles](#) on June 30, 2004 at 2:59 PM | [PERMALINK](#)

I find all this wrangling about Sullivan's actual point rather amusing. If one reads Sullivan at all, you quickly come to the conclusion that he can't seem to think, in even a limited way, about the consequences of the ideas he is discussing - he merely parrots back various talking points or his own (often limited) hopes and dreams.

Take the gas tax idea, for example. The consequence he likes and wants - oil independence. Ok, fair enough, laudable goal and all that. But an additional gas tax, while having a nice symbolic value, has, even by conservative argument, horrible consequences. I won't begin to argue about regressive taxes vs. progressive taxes and will stick to a pro-business standard conservative argument. Follow the bouncing ball:

1) A \$1 hike in gas taxes would increase operational costs for trucking companies by a significant factor. I would guess on the order of 25-40%.

2) Name one sector of that doesn't ship the majority of its goods (within the US) using trucks. All that extra cost gets passed on to someone, probably to these companies.

3) The companies have to do something about that extra cost so they either eat it (significantly hurting business) or, pass it on to the consumer.

Bottom line - it will screw people twice (at the pump and at the grocery store, clothing store, etc etc) putting a drag on consumer spending and it will place a significant drag on the business sectors that sell and ship physical products.

How does that fit into Sullivan's world view? I can't see how it does. His knee jerk reaction to Clinton's speech seems more of the same:

- a) I dislike Clinton immensely ergo what she said must be flawed.
- b) Overlay general talking points and type whatever comes to mind.
- c) When called on the silliness of the original statement, write a vague non-apology and fall back on a).

Posted by: [Scott Pauls](#) on June 30, 2004 at 3:00 PM | [PERMALINK](#)

I won't defend Sullivan's vaguely worded statement, but the phrase "common good" is often used by factions which simply wish to grab the property of other factions, for no other reason than they wish to have it. As such, whenever a pol invokes the phrase, one is well served by becoming extremely suspicious, since offers of vote purchasing is usually what follows. Obviously, that wasn't the case in this instance, at least in regards to Sen. Clinton's audience. The vote purchasing offers will come when she addresses other audiences.

Howard, as to what means testing of retirement benefits will achieve, it all depends on what the definition of "extreme" is, doesn't it? From 2001, which I happen to have at my fingertips (don't ask), I see federal outlays were 1.9 trillion, and SS, Medicare, and other retirement comprised 36% of that total, or 684 billion. 18% of outlays was for "social programs", or 342 billion, nearly all of it designed to assist people who are poor.

Now, the demographic group receiving the 36 percent has just about the highest median net worth (the 55 to 64 group may be slightly higher, if I remember correctly), while the group receiving the 18 percent is obviously the poorest among us. This suggests that quite a bit of the 684 billion can be devoted to reducing the roughly 340 billion deficit (2003) before "extremes" are engaged in, presuming that purpose of wealth transfers is to assist those unable to assist themselves.

If the problem of doing so is that retired people have too much illiquid wealth tied up in their homes, how about this proposal? The inheritance tax be reinstated, without an exemption, and be designed to recapture all benefits paid out to the retiree while they were alive, with an inflation adjustment. If the business owner is concerned about having to liquidate a business to pay the tax upon his death, he can simply refuse all retiree benefits, or some amount of retiree benefits, and thereby forgo the tax, or that part of the tax which would cause liquidation.

Posted by: [Will Allen](#) on June 30, 2004 at 3:00 PM | [PERMALINK](#)

Ian: I have no problem with reducing spending in some areas. Maybe Hillary doesn't either. I don't know.

But Sullivan's argument is simply absurd. Anyone who spends more than a few minutes looking at the federal budget knows perfectly well that there's no feasible way to cut it substantially without making big reductions in defense, Medicare, and/or Social Security. And that won't happen because those are very popular programs.

If he's serious, he'll clam up about ag subsidies and means testing of Social Security (which saves very little) and tell us what kind of swinging cuts he's in favor of. Only then can we argue about whether spending cuts are genuinely a better option than tax increases.

Posted by: [Kevin Drum](#) on June 30, 2004 at 3:02 PM | [PERMALINK](#)

Why does Sullivan consider Hilary's statement particularly galling? Don't all politicians claim their agendas serve the common good?

Because she is Hillary Clinton and must be pilloried at every opportunity by any card carrying conservative. If she said the sun comes up in the east some conservative would have to disagree just because she said it.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 3:03 PM | [PERMALINK](#)

Ian,

Did you not read the "because they are morally better than you" part? Sullivan's main point was not that spending cuts are better than raising taxes (note in his subsequent post he brings up agriculture subsidies and corporate tax shelters, decidedly Republican spending priorities), but that when liberals invoke the common good they are claiming to be morally superior to everyone else, despite the fact that we all know who thinks they are the 'moral' party.

His statement is absurd. 'We' is the Clintons? So Hilary is personally going to take my money and spend it whatever she sees fit? No, 'we' is the federal government, run by both liberals and conservatives, and our elected representatives decide how to spend 'my' money.

He is not having an honest argument about taxes vs. spending cuts, he is venting his irrational Clinton hatred by summing up the role of the federal government as a liberal claim to moral superiority.

It is utter bullshit.

Posted by: [David Perlman](#) on June 30, 2004 at 3:14 PM | [PERMALINK](#)

Conservatives believe that government exists for the purpose of defending the borders of the country, and for making high-level policy decisions.

So why do they support an unnecessary pre-emptive war of choice by this administration?

Posted by: [Inside the Beltway](#) on June 30, 2004 at 3:14 PM | [PERMALINK](#)

If she said the sun comes up in the east some conservative would have to disagree just because she said it.

That by itself is true of any Democrat, not just Hillary. Hillary gets special treatment because she is the Designated Evil One.

I have no idea why they hate her so much. I once asked a conservative friend of mine, but all he could do was

THE WASHINGTON MONTHLY

sputter in rage. Perhaps one of our esteemed visitors here could describe what it is that makes Hillary the Most Evil Person Who Ever Lived?

It would be especially interesting if the answer contained actual facts, but I won't hold my breath.

Posted by: [craigie](#) on June 30, 2004 at 3:16 PM | [PERMALINK](#)

Will, we'll spare everyone else rehashing the same discussion you and i had the last time this general topic came up, but for the factual record, yes, the 55-64 age group has the highest median net worth.

This, of course, makes sense as soon as you think about it: it's very hard for those above the traditional retirement age to increase their net worth in a substantial way, whereas those in the 55-64 age group (and for everyone else's sake, to be precise, we're talking the "age of the head of household") are, by and large, at the peak of their earnings while some very large costs (like child-rearing) are, by and large, behind them....

Posted by: [howard](#) on June 30, 2004 at 3:17 PM | [PERMALINK](#)

Just to think that only three years ago we were in striking distance of paying off the debt.

A once in a life time opportunity gone just like that!

Think of it - If nasty Republicans could have swallowed hard and excepted the pre 2000 tax code we would be closer still.

You want tax cuts? Imagine how much the budget would shrink if we didn't have to pay off our debt and the interest tied to it.

That would have been a permanent tax cut.

And I don't buy the fiscal stimulous argument, if you have a deflationary recession, supply side fiscal stimulous is counter productive, which is why Bush had no real job growth in 3 years and why the value of the currency shrank as much as 40% against key currencies in international markets.

Posted by: [boggles](#) on June 30, 2004 at 3:24 PM | [PERMALINK](#)

>A \$1 hike in gas taxes would increase operational costs for trucking companies

Who says they would have to pay it? It's possible to have multiple channels of distribution - you may already know diesel fuel and heating oil is interchangeable, the first is taxed and the other isn't. That's why they dye heating oil- woe to you if you're caught with it in your 18-wheeler.

IIRC, we already have a split system- isn't diesel fuel currently taxed a few cents a gallon higher than gasoline? Anybody know offhand?

Posted by: [doesn't matter](#) on June 30, 2004 at 3:24 PM | [PERMALINK](#)

Will Allen:

I won't defend Sullivan's vaguely worded statement, but the phrase "common good" is often used by factions which simply wish to grab the property of other factions, for no other reason than they wish to have it.

Since Hillary Clinton is obviously not proposing to grab other people's property for her personal enrichment, but rather to raise taxes to spend in ways that benefit large numbers of people through programs like Medicare, Social Security and Defense, it's hard to see the relevance of this claim.

Now, the demographic group receiving the 36 percent has just about the highest median net worth (the 55 to 64 group may be slightly higher, if I remember correctly), while the group receiving the 18 percent is obviously the poorest among us. This suggests that quite a bit of the 684 billion can be devoted to reducing the roughly 340 billion deficit (2003) before "extremes" are engaged in, presuming that purpose of wealth transfers is to assist those unable to assist themselves.

But that high median net worth is typically in the form of highly non-liquid assets like one's house. I'd be happy to see greater means testing of social security benefits, and redistribution of some of the proceeds to the poor, but we're not going to demand that elderly people start selling their homes, which they have typically spent their whole working lives paying for, and live off the proceeds as an alternative to Social Security. So your observation about their net worth is basically just irrelevant to the real-world issue of meaningful Social Security reform.

If the problem of doing so is that retired people have too much illiquid wealth tied up in their homes, how about this proposal? The inheritance tax be reinstated, without an exemption, and be designed to recapture all benefits paid out to the retiree while they were alive, with an inflation adjustment.

You mean an estate tax, not an inheritance tax. It's a bad proposal. The prospect of the state taking one's entire assets, or close to it, at death would strongly discourage wealth-creating economic activity and would be an unjust violation of property rights.

Posted by: [Don P](#) on June 30, 2004 at 3:27 PM | [PERMALINK](#)

My larger point, Howard, is that a huge percentage of our government activity is devoted to assisting people who, in comparison with the rest of the population, have great ability to provide for themselves, or to rebate that assistance upon their deaths. The only reason that this is the case is because they are the most reliable voters. Democracy in action, I suppose.

I don't think this is an appropriate use of state power, and it is a particularly poor use of state power when it benefits the oldest, often at the expense of the youngest. As to the politics of it, what are the odds of retirees and their baby-boomer heirs actually pursuing the real common good, and ceasing to behave as if the purpose of the state is to provide comfortable retirements and inheritances, regardless of the ability to provide for oneself, or how much state assistance made the inheritance possible? Ya'mean democracy isn't an unalloyed grand thing? Who'da' thunk it!?

Posted by: [Will Allen](#) on June 30, 2004 at 3:30 PM | [PERMALINK](#)

One of the things that economists do [...]

Lord love a duck.

A whole lot of economists (of whom Sullivan and others would approve) claimed that Clinton's tax bill in 93 would drive us into recession. Whoops. I don't think, after the glories of the Bush II economic performance, that *those* economists have leave to get up out of the thinking chair.

Macro Econ is politics with charts. That's another one of the things economists do.

Posted by: [Jeffrey Davis](#) on June 30, 2004 at 3:32 PM | [PERMALINK](#)

Will, just to note, i appreciate your larger argument, and i'm not up for a point-counterpoint on it today (besides, i agree with some of your larger argument) since i don't have the time.

I did, though, want to be sure that when you recapitulate it again, you get the household median net worth correct....

Posted by: [howard](#) on June 30, 2004 at 3:36 PM | [PERMALINK](#)

You mean an estate tax, not an inheritance tax. It's a bad proposal. The prospect of the state taking one's entire assets, or close to it, at death would strongly discourage wealth-creating economic activity and would be an unjust violation of property rights.

What's this? You mean dead Fundies CAN take it with them?

Posted by: [bo](#) on June 30, 2004 at 3:43 PM | [PERMALINK](#)

Will Allen:

My larger point, Howard, is that a huge percentage of our government activity is devoted to assisting people who, in comparison with the rest of the population, have great ability to provide for themselves, or to rebate that assistance upon their deaths. The only reason that this is the case is because they are the most reliable voters.

Nonsense. While the reliable voting behavior of the elderly is certainly one factor affecting current Social Security and tax policy, the reasons for those policies, and the reasons we have not adopted your proposed policy, also include the fact that your proposals are wildly unpopular. Americans in general simply don't think retirees should be forced to sell their homes and live off the proceeds rather than Social Security, or be forced to repay their Social Security benefits when they die, even if such repayment consumes their entire assets.

As to the politics of it, what are the odds of retirees and their baby-boomer heirs actually pursuing the real

common good, and ceasing to behave as if the purpose of the state is to provide comfortable retirements and inheritances, regardless of the ability to provide for oneself, or how much state assistance made the inheritance possible?

They don't behave as if that is "the purpose" of the state. They do behave as if one of the purposes of the state is Social Security. They may or may not favor certain reforms of that program, but they certainly don't favor your radical proposal.

Posted by: [Don P](#) on June 30, 2004 at 3:50 PM | [PERMALINK](#)

I am fascinated that conservatives just go spare when liberals accuse them of being selfish. GWB succeeded in 2000 because he campaigned as a "compassionate conservative." It was a lovely marketing slogan--"all the selfishness, none of the shame."

Conservatives keep trying to find ways to rationalize inequality as the "common good." It just pains them when someone calls their bluff.

Posted by: [Patience1](#) on June 30, 2004 at 3:51 PM | [PERMALINK](#)

Yes, Don, and you quote out of context, and thereby ignore where it is stated that the offers of vote purchasing will come later, with offers of increased benefits or, in the instance of defense spending, offers to keep open military facilities that are completely irrelevant to national defense. This is what the primary function of a Senator or Congressman is; to buy votes from constituents with tax revenues, without regard to the common good, which is a concept that merely a smokescreen for the **vote auction**. Thus, magically, every pol who campaigns in Iowa thinks ethanol subsidies are a key element of the common good, despite nearly every economist on earth maintaining that they are damaging, and every pol everywhere "knows" that reducing retiree benefits would destroy the common good.

Next, you raise a point, that of the illiquid nature of many retiree's wealth, and strangely state that it renders my point about retirees being able to assist themselves irrelevant, when I address this issue, as you acknowledge. Then, somewhat bizarrely, you falsely claim that a tax designed to recapture tax revenues paid out in benefits would "violate property rights" as if the one had the "right" to receive tax revenues without strings attached.

If people didn't wish to have their estates taxed, they would have the right to forgo benefits. As to discouraging wealth creation, giving people money taken from other's paychecks discourages wealth creation more than any other phenomena. People who knew that receiving benefits from the state would reduce what they could pass on to their children might decide to take less in benefits, and generate more wealth for their own use, and to create a larger estate, while they are alive. The only reason it is a bad idea is that it interferes with the **vote auction** we call elections.

Posted by: [Will Allen](#) on June 30, 2004 at 3:53 PM | [PERMALINK](#)

*We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, **promote the general welfare**, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.*

Why does the Constitution hate America?

>A \$1 hike in gas taxes would increase operational costs for trucking companies

Who says they would have to pay it? It's possible to have multiple channels of distribution - you may already know diesel fuel and heating oil is interchangeable, the first is taxed and the other isn't. That's why they dye heating oil- woe to you if you're caught with it in your 18-wheeler.

More or less my point. Sullivan doesn't even think through his idea far enough to sense the need for something a tad more complicated...

So, in any case, we can go down a different layer to find yet another drawback that a conservative should find appalling. Gas taxes (even if we tax diesel differently than regular gas) disproportionately hit rural areas (where one must drive around more). Conservatives (Sullivan included) often argue that the tax code should be apply to each person in the same way (see arguments re: flattening the income tax scale) - a gas tax clearly does not meet this test. Moreover, from a purely partisan standpoint (I'll admit, Sullivan isn't a textbook partisan), rural areas tend to be more "red".

I should say, I'm not against a gas tax (although I think it would have to be extremely carefully and, alas, complicatedly implemented), I'm merely arguing that Sullivan often doesn't even adhere to his own stated viewpoints when making any sort of argument.

[Aside- actually I didn't know that diesel and heating oil are the same thing. Good to know if my oil company screws up again this winter and lets my tank run dry...]

Posted by: [Scott Pauls](#) on June 30, 2004 at 3:57 PM | [PERMALINK](#)

Yes, Don, and the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death. The reason why it is structured this way has nothing to do with the common good, unless "common good" is defined as whatever which most guarantees enhancing a politician's career.

Posted by: [Will Allen](#) on June 30, 2004 at 4:01 PM | [PERMALINK](#)

Conservatives should stop pretending that it is an issue of right versus wrong. For them, it is always "us" versus "them."

Posted by: [Alan](#) on June 30, 2004 at 4:03 PM | [PERMALINK](#)

Social Security is defunct.

Anyone, and I mean anyone right now, under the age of fifty-five, shouldn't even plan on SS being around when they retire. The system was a great idea, but the abuse by both sides in using the SS accounts for their own personal pork projects has left it a zombie.

Personally, we should be honest with ourselves, and each other and put the poor thing out of our misery.

I would say, transfer those who are currently reliant on SS funds over to welfare. Then transfer the SSI tax funds to an account that is controlled by the GAO. Pass laws that prohibit Congress and the President from touching the money, or borrowing against the money for their own personal pork projects.

Then, just then, we may finally have a system that will be healthy and viable for a very long, long time. And who knows, we could possibly build a universal healthcare system into it as well.

Posted by: [sheerahkahn](#) on June 30, 2004 at 4:09 PM | [PERMALINK](#)

the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death.

BULLSHIT!! Excuse the Cheney out of me. My mother lives on her social security and my father's pension. That total \$1200 a month. She has spent all her savings and had to sell her home and her car to make ends meet. Tell me how comfortable her retirement is. Both of my parents worked for over 40 years--often 6 or 7 days a week. Hers is not an atypical scenario. The vast majority of people living on SS do not have a luxurious retirement. Those who were the CEOs of the company they worked for are the ones who have the luxurious retirement.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 4:12 PM | [PERMALINK](#)

Selfish Republicans like to keep their money and, like Grover, are happy to inspect their own meat, etc.

For Sully and all Selfish Republicans, irrational Clinton hatred trumps rational aWol hatred every time.

Posted by: [Hedley Lamarr](#) on June 30, 2004 at 4:13 PM | [PERMALINK](#)

First, if that is what Sullivan meant, that is what Sullivan should have said. It's not what he said.

Don P - I believe my interpretation of Sullivan's remarks is spot on. Do you offer a different interpretation, or care to call him to find out?

Second, Sullivan himself has advocated tax increases to help reduce the deficit, which pretty much destroys your theory of his intent anyway.

No, rather, it reinforces my argument regarding Sullivan's meaning. I don't believe he is arguing that spending cuts *alone* are the best means of reducing federal borrowing. I do believe he thinks Hillary Clinton favors tax increases alone as the best means of reducing federal borrowing. I think in his critique he is expressing a view, correct or not, that HRC favors an approach that would solely or overwhelmingly rely on tax increases, as opposed to his preference for a mixture of the two.

And third, there is no indication that Hillary is opposed to all proposed cuts in federal spending; she too favors a mixture of spending cuts and tax increases to reduce the deficit.

Perhaps, but I reckon any spending cuts she favors are paltry, and stand by my view that her approach relies overwhelmingly (if not solely) on increasing taxes, a position I'd suspect is contrary to the wishes of most Americans, who would undoubtedly opt for a mixture of spending cuts and tax increases. If you have evidence of Mrs. Clinton's preference for substantive spending cuts, I'm all ears (or eyes, in this case).

Posted by: [P.B. Almeida](#) on June 30, 2004 at 4:13 PM | [PERMALINK](#)

Why did we invade Iraq if not for the "common good". That seems to be the only acceptable answer left. Or.. as GW says to fight terrorism to make the world a safer place. To make the world a safer placeFOR THE COMMON GOOD!!!

Posted by: [USAF 1965-69](#) on June 30, 2004 at 4:16 PM | [PERMALINK](#)

Sheerakhan, what do you propose be done with the SSI tax revenues that exceed benefits paid, which admittedly, we only have to worry about for another 15 years or so? Should we convert those revenues into silver dollars, and bury them on The Mall? Convert them into bonds? How does that differ from what is currently done? If we are going to continue to have a payroll tax, which, in my opinion, is a bad idea, it should at least be reduced so as to collect no more than benefits paid.

Posted by: [Will Allen](#) on June 30, 2004 at 4:19 PM | [PERMALINK](#)

common good: To buy all the weapons kerry voted down, to pay off a 500 billion dollar debt.A 8 trillion dollar debt,We bought it we have to pay for it.

Posted by: [flogger blogger](#) on June 30, 2004 at 4:22 PM | [PERMALINK](#)

Inside, then your mother should not have any reduction to her benefits. However, it is an unavoidable fact that the group receiving retiree benefits has a greater median net worth than most of those who are paying payroll taxes, particularly young people paying payroll taxes. It is a misuse of state power to pay benefits to people who have the means to pay for their own lifestyle, or at least partially so, while obtaining the revenues for those benefits by taxing people who are poorer, also while allowing benefit recipients to pass on inheritances tax-

free to heirs. None of this applies to you mother.

Posted by: [Will Allen](#) on June 30, 2004 at 4:27 PM | [PERMALINK](#)

However, it is an unavoidable fact that the group receiving retiree benefits has a greater median net worth than most of those who are paying payroll taxes,

Cite, please, for this **unavoidable fact**.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 4:30 PM | [PERMALINK](#)

It is ironic, since conservatives are always criticizing liberals for our supposed "moral relativism"...but then when HC acknowledges the "common good", they freak out because suddenly she is imposing her idea of what's good on the rest of us. There's no winning!

Posted by: [gene](#) on June 30, 2004 at 4:31 PM | [PERMALINK](#)

"I would say, transfer those who are currently reliant on SS funds over to welfare."

One of the main aspects of the system when it was set up is that it was not to be considered a welfare type payment, it was an entitlement. You may think that semantic, but it is highly insulting to "transfer" every day Janes and Joes "over to welfare." It is this type of ignorant decision making, without consideration of history and people's perceptions, that made such a mess of the Iraq occupation.

Posted by: [r.t.](#) on June 30, 2004 at 4:33 PM | [PERMALINK](#)

But Sullivan's argument is simply absurd. Anyone who spends more than a few minutes looking at the federal budget knows perfectly well that there's no feasible way to cut it substantially without making big reductions in defense, Medicare, and/or Social Security. And that won't happen because those are very popular programs.

Kevin: I read Sullivan fairly frequently and don't think his prescription for cutting the deficit relies solely, or even mostly, on spending cuts. He advocates an increase in the gas tax, for instance, and I'm certain I've read from him a generally critical attitude of Bush's tax cuts (at least the fact that they've been rolled out in what by

rights should constitute a period of sacrifice). It's true that he rails against big government, as well, but your characterization of his arguments as "absurd" is a bit over the top. In fact Sullivan does regularly (like lots of conservatives) call for cuts in entitlements. Eliminating farm subsidies entirely and coupling that with deep cuts in Social Security and Medicare benefits could save \$100 billion a year I calculate. Match that with an \$80 billion tax increase and the deficit is nearly cut in half. Add a few years of economic growth and we should be back in the black before long (and then we could also finally enjoy some Pentagon shrinkage as Iraq winds down). IIRC Sullivan also opposes the prescription drug expansion of Medicare.

Is any of this politically possible? Probably not much of it in the *near term*; but that doesn't mean one cannot favor such an approach, and argue for it. Victory goes to those who are resolute. I'm sure a lot of liberals would just as soon that talk of means-testing (and other hobby horses of the right) would just go away. But they won't, and with the demographic pressures we're facing, it's unlikely younger voters will put up with the tax increases needed to "fix" our long-term deficits *solely* through raising taxes (though tax increases are likely part of the mix).

Posted by: [P.B. Almeida](#) on June 30, 2004 at 4:35 PM | [PERMALINK](#)

Yes, Don, and the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death.

Bull. As currently structured, SS benefits are so paltry as to not provide comfortable retirements or inheritances to anyone who doesn't nearly have that on their own. For the most part, you either don't have comfortable retirement or inheritance without SS -- and still don't have it adding SS in, or you have a comfortable retirement and generous inheritance to leave without SS and microscopically more so with SS thrown in.

Would it make more sense to means-test SS? Sure, it would. But that argument can be made -- far better, in fact -- without ludicrous hyperbole.

Posted by: [cmdicely](#) on June 30, 2004 at 4:40 PM | [PERMALINK](#)

What I find ironic about SS payroll deductions is the fact that the more you earn, the less of your income that goes into SS deductions. Conversely, the less you earn the more of your income that goes into payroll deductions. Better still, if you make your money through investments, you don't pay any payroll deductions.

Just work the minimum number of quarters and you are guaranteed SS. That would seem to mean that those who need SS the most proportional to their income pay the most into it.

SS needs to be modified (fixed), but don't throw the baby out with the bathwater.

Posted by: [Over 50](#) on June 30, 2004 at 4:41 PM | [PERMALINK](#)

In addition, your type of attitude is one that helps propel the US into the Mississippi of the the developed world. We are the most selfish nation in the first world when it comes to providing a net for people. Not to mention, one of the worst countries in the world when it comes to children caring for their aged parents. You are aware that a person's SS payment has a ceiling, are you not? I believe you are taxed, at this point in time, on your first \$86,000 or so. of income.

Posted by: [r.t.](#) on June 30, 2004 at 4:43 PM | [PERMALINK](#)

P.B. Almeida:

Don P - I believe my interpretation of Sullivan's remarks is spot on. Do you offer a different interpretation, or care to call him to find out?

He didn't say what you claim he meant to say.

I do believe he thinks Hillary Clinton favors tax increases alone as the best means of reducing federal borrowing.

But that's not what he said, and he would have no basis for that assumption even it is what he meant. Sullivan is a skilled writer. I'll take what he writes to express what he means over your guesses that he means something else.

Perhaps, but I reckon any spending cuts she favors are paltry, and stand by my view that her approach relies overwhelmingly (if not solely) on increasing taxes, a position I'd suspect is contrary to the wishes of most Americans, who would undoubtedly opt for a mixture of spending cuts and tax increases.

Well, your suspicions in this case simply are not supported by the evidence, either. There is no evidence that

Americans favor anything other than paltry cuts in government spending, if any. The size of the federal government keeps growing in response to democratic pressures. The one serious initiative to make major cuts in federal spending--the Republican Contract with America of the mid '90s--produced one of the biggest political defeats in recent history. Americans often say, in the abstract, that they want smaller government, but when it comes to actual programs and actual votes, they invariably act to make the government bigger. Actions speak louder than words. That has been the reality of at least the last 50 years.

Posted by: [Don P](#) on June 30, 2004 at 4:43 PM | [PERMALINK](#)

bajesus, so all one has to do is you the term common good, much like "children", and all of a sudden their idea is great!!! Yes Yes, common good, it's for the children, my programs rock!!!!!!!!!!

Posted by: [mama](#) on June 30, 2004 at 4:45 PM | [PERMALINK](#)

Encapsulated Right wing message to the poor:

"Screw the poor. What have you ever done for me. I have a gun, so don't you come near me or my family. Quit looking so sad and weepy. You'll make liberals tax my money to help you.

"I am a religious moralist. Your morals are low class. You have too many babies out of wedlock. You don't speak good English. You eat funny foods. You listen to ugly music. Just because I don't like you doesn't make me a racist. Your religion and culture keep you from getting ahead. Go back where you came from.

"I will not be forced by any government to help you. It's your fault you're poor. You aren't as smart as me or you would be as rich as me.

"I made my money by hard work. I have a nice home and a fancy car. I send my kid to the best private schools. You can't take that away from me or make me fund your public schools.

"You can work for me for less than minimum wage and when I have made my money you can go away. I want to leave all my money to my kids so don't tax me.

"My political and religious leaders tell me that the way I think is right, by God!"

These views are the paradox of the right wing Christian. They stem from the fear of loosing to others in a perceived hostile world. Their fears are realized through the response to their actions, when the dispossessed rebel, individually or en mass. Their fears lead to a "mean spirited" cheapening of the worth of others, dividing society and create hostility in turn.

Liberals are charitable, in the true religious sense.

P.B. Almeida:

Kevin: I read Sullivan fairly frequently and don't think his prescription for cutting the deficit relies solely, or even mostly, on spending cuts.

Show me where Sullivan advocates tax increases as the primary, or even as a substantial, means of eliminating the deficit.

Posted by: [Don P](#) on June 30, 2004 at 4:49 PM | [PERMALINK](#)

Will,

Call me crazy, and most of the people here will drop their jaws in reading a conservative, and former Republican write what I'm about to write.

We take the current SSI system and shut it down. Transfer all recipients over to welfare temporarily. We open a new form of Social Security Insurance. Except that in this new one we incorporate Universal Health Care...oh, what the hell, lets throw in Universal Dental Care as well. The system is set that the tax receipts from the SSI tax still go into this new account, but law is enacted to prevent any form of fund removal from the account. In short, SSI exists outside of the general fund, distinct and untouchable.

No bonds for the extra money that would accumulalte in the new SSI account. Thats how we got into trouble with the current system. In short, it's okay to have extra money in the account, and the benefit is universal for all Americans.

Damn, I wish I was more versed in economics so I could fathom the details that need to be addressed.

Anyway, Will, the payroll tax is something we all pay into because we all benefit living here in the US. That is unless you want to see all the city, county, regional, state, and federal social, community, and legal infrastructure disappear around you. In which case that would make us a third world country. That certainly would change the face of the US...again.

Posted by: [sheerahkahn](#) on June 30, 2004 at 4:50 PM | [PERMALINK](#)

I don't get it if you have 30 million in the bank and you make 3 or 5 million a year why would you even worry about taxes, pay them and shut up because you did not earn that kind of money nobody could work that hard for that kind of money and if you think you are working hard I would say try digging ditches for 12 bucks an hour than come and complain about.

Posted by: [flogger blogger](#) on June 30, 2004 at 4:57 PM | [PERMALINK](#)

Being Rant...

Here is a RADICAL proposal!

Increase the inheritance tax rate to 90% for estates over \$5M. Tell the children of the ultrarich that they had the benefit of their parents' money while they were living--best schools, best food, best cars, best of everything. Now they are adults. If they want to end up as gazillionaires, let them earn it, just like their ancestors did. Take the money from the tax and pour it back into the pot for the "common good" to ensure those who go to public schools today have the same opportunity for a great education as those who went to public schools in the 19th and early 20th centuries.

I bet I'll never get elected to Congress as a Republican OR a Democrat. I may have to become a European and run as a socialist.

Rant completed. I feel lots better for saying that.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:00 PM | [PERMALINK](#)

the payroll tax is something we all pay into because we all benefit living here in the US.

False. Only those who actually work for a living pay payroll taxes. If your income comes from investments, you pay no payroll taxes. That is one reason payroll taxes are regressive. They hit the poor far more heavily than the rich. They are **NOT** income taxes.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:04 PM | [PERMALINK](#)

Will Allen:

Yes, Don, and the purpose of Social Security, as currently structured, is to provide comfortable retirements and inheritances, regardless of the ability to pay for one's own lifestyle while living, or upon one's death.

Have you looked at your annual Social Security statement recently? By no reasonable definition of a "comfortable retirement" can SS benefits be considered sufficient to fund one. SS provides, at best, a basic subsistence-level retirement income. And for millions of retirees, a substantial fraction of even that very modest income is consumed by health care expenses not covered by Medicare or other government programs for which they qualify.

Posted by: [Don P](#) on June 30, 2004 at 5:05 PM | [PERMALINK](#)

Have you looked at your annual Social Security statement recently?

Will Allen probably doesn't get an annual Social Security Benefits statement. If he did, he couldn't possibly make the comments he does.

Posted by: [Inside the Beltway](#) on June 30, 2004 at 5:09 PM | [PERMALINK](#)

Inside the Beltway: "Only those who actually work for a living pay payroll taxes. If your income comes from investments, you pay no payroll taxes. That is one reason payroll taxes are regressive. They hit the poor far more heavily than the rich. They are NOT income taxes."

Well, you got me there. I didn't know that...but wait, isn't there a tax for profits? I'm not a H&R Block guy, but I' sure that if there are profits involved there is a tax to take a portion away.

ドイツに移った「票のオークション」サイト

AP通信社

i-mode Mail to a Friend Print

カリフォルニア州サクラメント発——2万1000票にのぼる米大統領選の票を最高額の入札者に売却すると豪語していたウェブサイトが、ドメイン名を変え、登記もドイツの会社に移した。票を売るとは米国では連邦法でも州法でも禁止されているが、ハイフン付きの新サイト名を冠した『ポート・オークション・コム』(vote-auction.com)のオーストリア人所有者ハンス・ベルンハルト氏は、ドイツに拠点を移したのは法的追求を避けるためではないと主張する。

ベルンハルト氏がAP通信社に宛てた電子メールによると、ハイフン付きの名前に変えたのは、タイプをするときにvoteとauctionの間にハイフンを入れて打つ人が多いということが調査の結果わかったのだ、その現状に合わせたにすぎないということだ。

同サイトでは、投票者に個人データを記入してもらい、その票を州で分けたブロックごとに最高額の入札者に売る旨を提示する。こうすることによって、「選挙運動に費やされる巨額の資金が直接一般の投票者のもとに入る」となることになると同サイトは言う。

同サイトは、票の購入者はどのような団体であれ個人であれ選ばないとしている。しかし、票を売ろうとしている売業者や入札者の身元は明かしていないし、売買をいつまで続けるかについても明らかにしていない。

ベルンハルト氏によると、米国での票のオークションは、これが事業として成立するかどうかを見極めるためのテストだという。投票者への支払い方法や、正当な有権者であることを確認する方法などは、まだ研究の余地があるということらしい。

この仕組みは、ミシガン州とニューヨーク州の選挙管理当局からは批判されているし、旧サイトはイリノイ州の裁判所命令によって閉鎖させられた。カリフォルニア州の州務長官ビル・ジョーンズ氏は、票の売却は重罪で、3年以上の拘禁刑が言い渡される可能性がある」と警告した。

同サイトは今週、ドイツのCSLコンピューター・サービス社のサポートを受け再開された。26日(米国時間)までに2500名以上のカリフォルニア州の有権者が票を売る申し出をしており、現時点で

が、物体に向けて中性子を発射し、発生したガンマ線を分析することで、荷物の中にある物体の正確な化学式を割り出し、荷物の中身の3次元画像を作成する新技術などが期待されている。

 [NASA版『ディープ・インパクト』打ち上げ成功](#)

 [恐竜を食べていた哺乳類の化石発見](#)

最高の入札値は4万8000ドル、すなわち1票当たり19.61ドルだ。

「正直言って、こういったサービス——サービスという言葉が使えるかどうかは別だが——は、その気がある人に情報が伝わるかぎり、おそらく永遠に続くだろう」とインターネットを研究している、イリノイ大学シカゴ校のスティーブ・ジョーンズ教授は言った。

カリフォルニア州の州務長官の広報担当者によると、ドメイン名を変えたからといって、同サイトとその運営者に対する州の調査にはなんら影響しないという。

広報担当者は、捜査によってユーザーの身元を突きとめる方法は見いだしているのだが、詳細については発表できないという。ベルンハルト氏は、ユーザーが捜査を受けることを防ぐため、同サイトのメッセージボードは停止したと語った。

現在の技術では、売票者を特定することは技術的にまず不可能だろうというのが業界の専門家の見方だ。

ウェブ・フィルタリングに関連する製品を作っている米インターネット・プロダクツ社(本社サンディエゴ)のスチュワート・ファーリー氏は、「特別な令状でもない限り、サイトを使った人をチェックする法的手段はない。しかも、国をまたがって行なわれる活動に、令状が出されるのはきわめて異例だ」と語った。

このウェブサイトはもともと、ニューヨーク在住の大学院生が立ち上げたのだが、ニューヨーク州当局から裁判に訴えたと迫られ、8月に現所有者に売却したものだ。

インターネット・オークション・サイトを運営する米イーベイ社も、票売りの可能性について議論する必要が出てきたという。8月に6人が大統領選の票を売ると申し出て、オークション管理者が気づいて締め出した時点ですでに、入札最高額が1万100ドルにも達していたのだ。

It moved to Germany, " auction " sight

AP news agency

- i-mode
- Mail to a Friend
- Print

The web sight which you have boasted the California state Sacramento departure - - vote of the American Presidential election which is climbed in 2 ten thousand 1000 votes is sold in the bidder of the highest amount, changed domain name, moved also registration to the German company. Selling vote in the United States with Federal law and is prohibited with state law, but new sight name of the hyphen being attached was entitled, ' the boat - the auction * COM ' (vote-auction.com) as for the Austrian human owner ハンス * Bern hull To, as for moving base to Germany you insist is not, in order to avoid legal pursuit.

According to the email which the Bern hull To addresses to the AP news agency, because the result of investigation it was found, that as for changing into the name of the hyphen being attached, when typing, inserting the hyphen between the vote and the auction, the person whom it strikes it is many it means it only adjusted to the present condition.

With the same sight, it has entering the private data in the poll person, the effect which in every block which divided the vote in the state sells in the bidder of the highest amount it presents. Like this when it means that " the enormous fund which is spent to election campaign directly enters into the origin of the general poll person, " by doing, you call the same sight.

As for the same sight, as for the buyer of vote we have assumed in some kind of group with that individual that it does not choose. But, you do not reveal the identity of the sale vote person and the bidder whom it has been about probably to sell vote it has not made clear concerning and, it continues buying and selling how long.

According to the Bern hull To, as for auction of the vote in the United States, you say it is the test in order to ascertain whether or not this it is formed as a business. Method of paying to the poll person and the method et cetera of verifying that it is the legitimate voter seem, the notion that where still it is the margin of research.

[of the next generation propulsion](#)

American transport preservation bureau started the development promotion program of the bomb detector of the next generation. With the current technology which uses CT scan, erroneous operation occurs in approximately 10% ratio, but the neutron is discharged destined for the object, by the fact that the gamma-ray which occurs is analyzed, accurate chemical formula of the object which is in the baggage is calculated, the new technology and the like which draws up 3 dimensional picture of content of the baggage is expected.

[The popular ' iPod shuffle ', appraisal it divides, ' Mac mini '](#)

[NASA edition ' deep * impact ' it launches, success](#)

[Ate the dinosaur the mammalian fossil discovery](#)

This mechanism is criticized from the election management authorities of Michigan state and New York and, the old sight was made to close by the courthouse order of Illinois state. As for state duty director building * Jones of California state, as for sale of vote when with felony, there is a possibility detention punishment of 3 years or more being sentenced, it warned.

The same sight this week received the support of the CSL computer * service corporation of Germany and was reopened. 26 days (the American time) to we do the request where the voter of California state 2500 or more sells vote, the highest bid value per 4 ten thousand 8000 dollars, namely 1 vote is 19.61 dollars at present time.

" Honesty saying, whether or not such service - - you can use the word, service, it is another, but if - -, information is transmitted to the person who is that air, perhaps it probably will continue eternally ", Internet is researched, Professor Steve * Jones of the Illinois university Chicago school said.

According to the public information person in charge of state duty director of California state, because domain name was changed, saying, you say what it does not have an influence on the same sight and the investigation of the state for that operator.

The public information person in charge pierces the identity of the user with investigation and the method of stopping is discoverable, but concerning details cannot announce, you say. The Bern hull To, in order to prevent the fact that the user receives investigation, said the message board of the same sight that it stopped.

With present technology, the sale vote person as for specifying technically first it probably is impossible, is the viewpoint of the specialist of industry.

If スチュワート * fur Lee of the American Internet * products corporation (head office San Diego) which makes the product which it is related to web * filtering " is not the special warrant, there is no legal expedient which checks the person who used the sight. Furthermore, the country extending over, the fact that the warrant is put out to the activity which is done, is quite exceptional case ", that.

This web sight started originally the graduate student of the New York residence, but when from the New York authorities it appeals to judgment, those which are approached, in August sell in the present owner.

The United States I which manages Internet * auction * sight - also the bay corporation, says the necessity to argue concerning the possibility of vote buying and selling arose. Requesting 6 people sell the vote of Presidential election in August, the auction manager becoming aware, already, bid highest amount had reached to even 1 ten thousand 100 dollars at the point in time when it excludes.

Moved to the Ä P ² Ä µ ° , ¼ ® Ý £ » ² Ä of the ç
vote which AP news agency

The ³ª Ì P » ² Ä which you have boasted October 26th of 2000 2:00am PDT ¶ Ø Ì « Ù Æ ± state » , ×
Ò Ý Ä departure - - vote of the American Presidential election which is climbed in 2 ten thousand
1000 votes is sold in the bidder of the highest amount, changes ð Ä P Ò ² Ý name and selling the ;
vote where also ð registration moved to the company of the Ä P ² Ä in the United States with Federal
law and is prohibited with state law, but new » ² Ä name of the ð Ê ² Ì Ý being attached was entitled,
' the Î P ° Ä - the µ ° , The ¼ ® Ý ¥ ° Ñ ' (vote-auction.com) as for the µ ° ½ Ä Ø ± human owner Ê Ý
½ ¥ Í P Ù Ý Ê Ù Ä person as for moving base to the ð Ä P ² Ä you insist is not, in order to avoid
legal pursuit, the ;

According to the electronic Ò ° Ù which the Í P Ù Ý Ê Ù Ä person addressses to the AP news agency
as for changing into the name of the ð Ê ² Ì Ý being attached when doing the ð Ä ² Ì ß, inserting the Ê
² Ì Ý between the vote and the auction, the notion that where the person whom it strikes it is many the
result of investigation being to be understood, means it only adjusted to the present condition of the ð,
the ;

When with the same » ² Ä it has entering the private Ä P ° Ä in the ð poll person, that the enormous
fund which is spent to ð ç election campaign the ; which presents the effect which in every Ì P Ù - ,
which divided the vote of the ð in the state sells in the bidder of the highest amount like this by doing
the £ enters directly in the origin of the general poll person it means, as for the same » ² Ä is said the ;

But as for the same » ² Ä as for the buyer of ð vote the ; which we have assumed in some kind of
group with that individual that it does not choose, you do not reveal the identity of the sale vote
person and the bidder whom it has been about probably to sell ð vote has not been made clear
concerning and it continues ð buying and selling how long, the ;

According to the Í P Ù Ý Ê Ù Ä person as for the µ ° , ¼ ® Ý of the vote in the ð United States, the
notion that where method of paying to the ; poll person that it is the Ä ½ Ä in order to ascertain
whether or not ð this it is formed as a business and the method et cetera of verifying that it is the ð
legitimate voter the ð still a margin of research is, seems the ;

This mechanism is criticized from the election management authorities of ð Ð ¼ ¶ P Ý state and Æ - °
Ö ° , state and as for the ð old » ² Ä as for the state duty director Ë P Ù ¥ ¼ P ® ° Ý ½ P person of ; ¶
Ø Ì « Ù Æ ± state which can be made to close by the courthouse order of ² Ø É ² state as for sale of ð
vote when there is a possibility detention punishment above ð 3 year being sentenced with felony was
warned the ;

The same » ² Ä this week receives the » Î ß ° Ä of the CSL ° Ý Ê ß - ° Ä ° ¥ » ° Ë P ½ corporation of
the ð Ä P ² Ä and the ; 26 day which is reopened (the American time) to we do the request where the
voter of ¶ Ø Ì « Ù Æ ± state 2500 or more sells vote and at ð present time as for the highest bid value
per 4 ten thousand 8000 Ä P Ù ð namely 1 vote is 19.61 Ä P Ù the ;

ç honesty saying, whether or not such » ° Ë P ½ of the ð - - you can use the word, » ° Ë P ½, it is
another, but if - - information is transmitted to the person who is that air of the ð, as for ½ Ä ° Ì P ¥
¼ P ® ° Ý ½ P professor of the ð ² Ø É ² university ¼ ¶ ° P school which the ð continues perhaps and

eternally researches the £ and the ² Ý À ° È - Ä was said the ;

According to the public information person in charge of state duty director of ¶ Ø Ì « Û Æ ± state because ² Ä Ð Ò ² Ý name was changed, saying, what it does not have an influence on the ² same » ² Ä and the investigation of the state for that operator, the ;

As for the ; Í Ð Û Ý Ê Û Ä person that the public information person in charge pierced the method of stopping is discoverable, but concerning the ² details it cannot announce in order to prevent the fact that the ² Õ ° » Ð ° receives investigation the identity of the Õ ° » Ð ° with ² investigation and and as for the Ò - ¾ ° ¼ Ð Î Ð ° Ä Ð of the ² same » ² Ä you said that stopped, the ;

With present technology the ² sale vote person as for specifying technically first it probably is impossible, is the viewpoint of the specialist of industry the ;

If the American ² Ý À ° È - Ä ¶ Ì ß Û Ä Ð , Ä corporation which makes the product which it is related to the ³ª Ì Ð ¶ Ì ° Û Ä Ø Ý , Ð (the head office » Ý Ä Ð ° ° Ð) the ½ Á - Û ° Ä ¶ Ì § ° Ø ° person is not the ² ç special warrant the person who used the ² » ² Ä the Áª , as for the legal expedient which is done the ; which is not furthermore as for the ² warrant being put out to the activity which ² country extending over is done you talked with the £ which is quite exceptional case the ;

This ³ª Ì Ð » ² Ä started the graduate student of ² Æ - ° Õ ° , residence originally, but when from the ² Æ - ° Õ ° , state authorities it appeals to judgment, is approached and in ² August sells in the present owner the thing ;

Requesting, 6 people sell the vote of Presidential election in ; August that the necessity to argue the American ² ° Í Ð ² corporation which manages the ² Ý À ° È - Ä ¶ µ ° , ¼ ® Ý ¶ » ² Ä concerning the possibility of ² vote buying and selling arose, the ² µ ° , ¼ ® Ý manager becoming aware, already ² bid highest amount had reached to even 1 ten thousand 100 Ä Ð Û at the point in time when it excludes the ;

ドットに移った「票のオークション」サイト AP通信社

2000年10月26日 2:00am PDT カリフォルニア州サクラメント発——2万1000票にのぼる米大統領選の票を最高額の入札者に売却すると豪語していたウェブ 사이트가、ドメイン名を変え、登記もドットの会社に移した。票を売るとは米国では連邦法でも州法でも禁止されているが、ハイフン付きの新サイト名を冠した『ボート・オークション・コム』(vote-auction.com)のオーストリア人所有者ハンス・ベルハルト氏は、ドットに移したのには法的追求を避けるためではないと主張する。

ベルハルト氏がAP通信社に宛てた電子メールによると、ハイフン付きの名前に変えたのは、タイプをするときにvoteとauctionの間にハイフンを入れて打つ人が多いということが調査の結果わかったので、その現状に合わせたにすぎないということだ。

同サイトでは、投票者に個人データを記入してもらい、その票を州で分けたブロックごとに最高額の入札者に売る旨を提示する。こうすることによって、「選挙運動に費やされる巨額の資金が直接一般の投票者のもとに入ることになる」と同サイトは言う。

同サイトは、票の購入者はどのような団体であれ個人であれ選ばないとしている。しかし、票を売ろうとしている売票者や入札者の身元は明かしていないし、売買をいつまで続けるかについても明らかにしていない。

ベルハルト氏によると、米国での票のオークションは、これが事業として成立するかどうかを見極めるためのテストだという。投票者への支払い方法や、正当な有権者であることを確認する方法などは、まだ研究の余地があるということらしい。

この仕組みは、ミシガン州とニューヨーク州の選挙管理当局からは批判されているし、旧サイトはアリゾナ州の裁判所命令によって閉鎖させられた。カリフォルニア州の州務長官ビル・ジョーンズ氏は、票の売却は重罪で、3年以上の拘禁刑が言い渡される可能性があるかと警告した。

同サイトは今週、ドットのCSLコンピュータ・サービス社のホストを受け再開された。26日(米国時間)までに2500名以上のカリフォルニア州の有権者が票を売る申し出をしており、現時点で最高の入札値は4

万8000ドル、すなわち1票あたり19.61ドルだ。

「正直言って、こういったサービス——サービスという言葉が使えるかどうかは別だが——は、その気がある人に情報が伝わるかぎり、おそらく永遠に続くだろう」とインターネットを研究している、イリノイ大学シカゴ校のスティブ・ジョーンズ教授は言った。

カリフォルニア州の州務長官の広報担当者によると、ドメイン名を変えたからといって、同サイトとその運営者に対する州の調査にはなんら影響しないという。

広報担当者は、捜査によってユーザの身元を突きとめる方法は見いだしているのだが、詳細については発表できないという。ベルナルト氏は、ユーザが捜査を受けることを防ぐため、同サイトのメッセージボードは停止したと語った。

現在の技術では、売票者を特定することは技術的にまず不可能だろうというのが業界の専門家の見方だ。

ウェブ・フィルタリングに関連する製品を作っている米インターネット・プロダクツ社(本社サンディエゴ)のシュワート・ファーリー氏は、「特別な令状でもない限り、サイトを使った人をチェックする法的手段はない。しかも、国をまたがって行なわれる活動に、令状が出されるのはきわめて異例だ」と語った。

このウェブサイトはもともと、ニューヨーク在住の大学院生が立ち上げたのだが、ニューヨーク州当局から裁判に訴えられ、8月に現所有者に売却したもの。

インターネット・オークション・サイトを運営する米イーベイ社も、票売買の可能性について議論する必要が出てきたという。8月に6人が大統領選の票を売ると申し出て、オークション管理者が気づいて締め出した時点ですでに、入札最高額が1万100ドルにも達していたのだ。

Faire de l'argent avec les élections

Il y a vraiment des petits malins qui, faisant fi de la tendance anti-cybersquattage, persistent à vouloir vendre à prix lourd des noms de domaine évidents. Dernier en date, [Election2000.com](#), qui a été mis en vente sur [eBay](#).

Wayne W. Kiedaisch, qui s'est autoproclamé guru des noms de domaine, est chargé de la promotion de la vente: «Nous (le vendeur et moi) comprenons que la fenêtre d'affaires pour vendre des noms de domaine est étroite. Cependant, nous comprenons également que ce nom de domaine en particulier possède un potentiel incroyable et une valeur qui ira en grandissant jusqu'à la journée des élections (ndlr: américaines bien sûr, quoique l'enchère pourrait également intéresser les Canadiens par les temps qui courent)».

Le site a reçu plusieurs milliers de visites sans aucune promotion et le nombre de visiteurs ne cesse d'augmenter rapidement chaque jour. Le nom sera à sa valeur maximum le jour de l'élection quand le site pourra être utilisé pour fournir des résultats en temps réel pour la couverture de l'élection et des résultats du scrutin en ligne.» Il n'empêche qu'au moment d'écrire ces lignes, pas une seule enchère n'avait été enregistrée.

Ce coup de promotion n'est pas sans rappeler la mise aux enchères de voix de particuliers sur le même eBay au mois d'août dernier (voir notre [nouvelle](#)). Les élections américaines sont une histoire de gros sous, on le savait déjà.

Un autre cas est actuellement dans la mire des médias, celui de [Vote-Auction.com](#), qui avait perdu – et qui vient de retrouver – son accès au Web par le biais de son nom de domaine. Une cour de l'Illinois avait ordonné la fermeture du site la semaine même et les responsables ont tout simplement ajouté un trait d'union entre les deux mots pour refaire surface. Comme l'explique notre confrère [Multimédium](#), le site propose de mettre sa voix électorale aux enchères non pas contre des espèces sonnantes et trébuchantes, mais contre des dons à des associations

caritatives. [Tout le contraire](#) de ce site qui incite chaque bon citoyen à emmener un ami voter.

[FAQ](#)

Il y a vraiment des petits malins qui, faisant fi de la tendance anti-cybersquattage, persistent à vouloir vendre à prix lourd des noms de domaine évidents. Dernier en date, [Election2000.com](#), qui a été mis en vente sur [eBay](#).

Wayne W. Kiedaisch, qui s'est autoproclamé guru des noms de domaine, est chargé de la promotion de la vente: «Nous (le vendeur et moi) comprenons que la fenêtre d'affaires pour vendre des noms de domaine est étroite. Cependant, nous comprenons également que ce nom de domaine en particulier possède un potentiel incroyable et une valeur qui ira en grandissant jusqu'à la journée des élections (ndlr: américaines bien sûr, quoique l'enchère pourrait également intéresser les Canadiens par les temps qui courent)».

Le site a reçu plusieurs milliers de visites sans aucune promotion et le nombre de visiteurs ne cesse d'augmenter rapidement chaque jour. Le nom sera à sa valeur maximum le jour de l'élection quand le site pourra être utilisé pour fournir des résultats en temps réel pour la couverture de l'élection et des résultats du scrutin en ligne.» Il n'empêche qu'au moment d'écrire ces lignes, pas une seule enchère n'avait été

enregistrée.

Ce coup de promotion n'est pas sans rappeler la mise aux enchères de voix de particuliers sur le même eBay au mois d'août dernier (voir notre [nouvelle](#)). Les élections américaines sont une histoire de gros sous, on le savait déjà.

Un autre cas est actuellement dans la mire des médias, celui de [Vote-Auction.com](#), qui avait perdu – et qui vient de retrouver – son accès au Web par le biais de son nom de domaine. Une cour de l'Illinois avait ordonné la fermeture du site la semaine même et les responsables ont tout simplement ajouté un trait d'union entre les deux mots pour refaire surface. Comme l'explique notre confrère [Multimédium](#), le site propose de mettre sa voix électorale aux enchères non pas contre des espèces sonnantes et trébuchantes, mais contre des dons à des associations caritatives. [Tout le contraire](#) de ce site qui incite chaque bon citoyen à emmener un ami voter.

Hans Bernhard

He's a plastic man, he's a plastic man!

Gehört „plasticman – rolemodel“ eher in die Kategorie Barbie Liberation Organization, shock marketing oder unerfüllte sexuelle Phantasien?

das "plasticman - rolemodel" foto-editorial ist eine rein aesthetisches und formales produkt. die bilder sind wie ein temesta-aquarium - sie helfen mir zu entspannen. diese plasticman-bilder erfüllen keine provokative oder schockierende funktion, da gibt es bereits in der werbung [reklame] und pornoszene dutzende varianten davon. unerfuellte phantasien werden auch nicht abgedeckt, meine phantasie ist streng pragmatisch. bzgl. der barbie liberation front [blo] gibt es deckungsgleichheiten. so seh ich das. das shock marketing der ubermorgen group hat sich transformiert. chic marketing. ein zeitverzoeagertes style implantat, ein selbstmordattentat a la documenta 2007. dies ist eine prophezeihung. ich habe selbstredend keine ahnung unter welcher kategorie so etwas abgelegt werden kann. hans bernhard operiert seit jahren in einem kommunikations-zeitraum. in einem sehr schnellen massenmedialen rueckkoppelungsnetzwerk. real-time living im gegensatz zur amerikanischen fast food trash kultur, die aus re-runs der 50-90er jahre besteht, im kulinarischen, im entertainment, im biologischen [bakteriellen] und im infrastrukturellen bereich.

Und? Wie war die Arbeit mit Petter Hegre? Gab ´s als Lohn ein Jahresabo?

petter ist hinter seiner kamera ein sehr verschlossener mensch. ich arbeite nur via web mit ihm. ich denke ueber erotische und plastische konzepte nach und er stellt sie 1:1 her. nicht immer so wie ich sie mir ertraeume aber doch sehr nahe an der realitaet meiner fiktion. in manischen arbeitsphasen ist es eine unnachvollziehbare, ungeschriebene perfekte kommunikation. die produkte sind zumeist sehr rein, sehr sauber. petters profitdenken motiviert mich. "mein modell ... ist für mich wilder engel und barbie-puppe zugleich", erklärt petter hegre, "sie ist blond mit großen bruesten, zarter haut und rasierter scham."

Wo ist das Plastikmännchen jetzt?

es wurde nach dem foto shooting verbrannt.

petter: is it legitimate to be an artist?

INTERVIEWER

Alain Bieber

hans: no!
p: why not?
h: because you do not create enough turnover or profit for society.
p: is it legitimate to be a plasticman?
h: yes!
p: why?
h: because you create economical value and recreational moments for your audience.
p: so that is why you need to be a plasticman?
h:

a plastic man will last forever
with a plastic mac
in the clement weather
of an indoor shopping superstore,
no he never steps outside the door.
he's a lazy, hazy, instant gravy
polymer daisy - plastic man
he's a plastic man

plastic man loves to spend
on plastic goods that never end.
he's got a plastic car, a plastic life
a plastic lover and a plastic wife
he's a plastic man
he's a plastic man

intercourse and super bowl
does them both by remote control.
loves to watch and eat the telly
loves to watch and eat the telly
believe me when you see his belly:
he's a rubbery, blubbery, not very cuddly
plastic man
he's a plastic man

wrapped in rubber he loves to dance.
sweats inside his plastic pants.
whips it up into a trance
of narcissism's withering glance
in the mirror on the wall
the mirror there sees it all
a polymer dream that's so inflated,
his love was squashed
and laminated
he's a plastic man
he's a plastic man
: : mark gwynne jones, 1997 – 2001.

Ok - Themenwechsel: Wie groß schätzt Du die Möglichkeiten politischer Veränderung durch Kunst, Hacking und Hoaxing eigentlich wirklich ein?

in china dauert es normalerweise keine drei tage nach einer veroeffentlichung / publikation, bis die ersten illegalen kopien einer aktion auftauchen. anstatt auf die ersten "offiziellen" DVDs zu warten, die auf dem schwarzmarkt für weniger als einen euro zu haben sind, sollten die fans die CNN footage "[\[V\]ote-auction](#): burden of proof" [CNN, 2000] sehen.

"there are not many artists who can present live action and the documentation, in one piece, of an artwork in the form of videotape containing a 27 minute broadcast from CNN". flashart magazine

als teil eines pulsierenden technologischen und medialen netzwerkes sind meine aktionen [digitaler aktionismus, legal art, [f]originals, digitale kunst, net.art] vegetativer art. der schmerz, die neugierde, die geschwindigkeit erzeugen rauschzustände, welche wiederum zu instinktiven reaktionen fuehren. frueheres training mit lsd, xtc, etoy, ubermorgen, meskalin und anderen drogen und sekten helfen dabei, nicht in permanente psychosen zu verfallen, sondern mit erfahrung, gefuehl und uebersicht ein 500 km/h corporate-geschoss durch den 3d-rush-hour stadtverker ohne schwerkraft zu fuehren [retroyou r/c]. schoen gesagt, nicht?

Mit welcher der folgenden Figuren kannst du Dich am ehesten identifizieren und warum? Jesus von Nazareth, Ernesto Ché Guevara, Osama Bin Laden oder Joseph Beuys?

"his style can be described as a mix between andy kaufman and jeff koons, his actions can be seen as underground matthew barneys and the early john lydon [johnny rotten], his gesamtwerk has been described as duchampian and beuysche and his everyday philosophy is best described in the ubermorgen slogan: <it's different because it is fundamentally different!>" bart kessner

"time seems to be all that stands between these two individuals, however, what has happened and changed in the world during that time seems to make the short distance between them seem a little further than it really is. beuys came across to the world with greater ease and less tension, never <attacking> anyone and therefore was always seen as a fairly passive artist with potentially revolutionary beliefs - but never as a serious threat to any governments or institutions. where presently, bernhard is seen entirely as a threat as he lashes out and attacks those government institutions with his potentially revolutionary actions. beuys and bernhard have very similar long-term goals and motivations but their places in time / history don't allow for that likeness to be seen easily." nicolas primich

Was ist die Quelle Deiner Inspiration?

meine interne total fragmentierte und extrem chaotische hddisk, darauf sitzt ein verchromtes ventil und wiederum darueber der arbeitsspeicher. impulse, stimulus, erwirken eine "response", ein zugriff auf andere stimuli oder eben auf die festplatte. das ventil reguliert den output normalerweise, in krisensituationen kann es aber zu ueberdruck fuehren und dann fliesst der strom ungebremst in den langsam aber sicher uebevollen arbeitsspeicher. die konsequenz daraus, der arbeitsspeicher muss seinen inhalt nach aussen transportieren und dann selektiv loeschen, keine einfache aufgabe. in der ultimativen krisen kann dies zum zusammenbruch des systems fuehren [psychose] und / oder einem extremen output-schub, der fuer menschen nicht mehr verarbeitbar ist. "hans, l'inspiration c'est toi! quand meme!" jean-luc goddard

Kurz und knapp: Lieblingsbuch, Lieblingsfilm, Lieblingsessen, Lieblingskünstler?

die rote zora, der pate, hummer mit geschmolzener butter, thomas bernhard.

Und was haben eigentlich Hans Bernhard und Helmut Lang gemeinsam?

SNM/DLA: Namenregister 'L' Nachlaßverzeichnis... Lang, Isaac siehe: Goll, Yvan Lang, Josef Bernhard H-67 ... 22 Lang, Peter (Verlag) K-89 Lang, Siegfried B ... Langbein, August Friedrich Ernst C-23 Lange, Carl Albert M. ... photography HELMUT LANG HANS BERNHARD fashion coverage, closed series, nikon coolpix 950 asis, 2002. ... maxi. fashion by HANS BERNHARD foriginal. AKH HELMUT LANG. ... 1. Steeldartclub Kangaroots 1995 Neumarkt eV - 1995/96... Hans Lang, 0-2. Bernhard Fink, 1-2. Karsten Dittrich, 2-0. Gerd Ziegler, 0-2. Hans Ott, 0-2. Helmut Ascher, 1-2. Rainer Zimmermann, 2-1. Günter Schumpa, 1-2. Lang/Schumpa, 0-2.

Letzte Frage: Nach etoy, the digital hijack, ubermorgen, [V]ote-auction, injunction generator etc. - Was für ein Projekt würdest Du gerne noch machen? Und mit welchen Künstlern würdest Du gerne zusammen arbeiten? Ich nehme an Helmut Lang?

nope, helmut ist doch ein alter sack, oder? weiss nicht. ich wuensche mir eine gute zusammenarbeit mit mir selbst. nach jahren der kollektiven arbeit sehne ich mich nach autoritaeren strukturen. mein assistent andreas birachabel ist meine einzige verbindung nach aussen und zu meinen mitarbeitern. eine kuenstlerin mit der ich weiterhin gerne eng zusammenarbeiten wuerde ist livlx von ubermorgen. ein mensch mit dem ich vielleicht mal zusammenarbeiten kann ist billie bernhard, mit carl von micromusic.net verbindet mich die musik, mit aaron von lo-res.org der code und die mathematik, mit mark, carl und dave die etoy. HOLDING, mit lex-o die esof ltd in sofia, bulgarien, mit den schudas eine persoenliche ebene, mit alexei shulgin und den runme.org ppl, mit meinem psychiater und meiner therapeutin, mit meinen sued-afrikanischen freunden damian, francois, slycer und spo0ky und natuerlich den assoziations-blaster maniacs drx und alvar el al. leider kann ich nicht ueber geplante projekte sprechen.

Tausend Dank für das Interview und die Unterstützung, rebel:art wünscht alles, alles Gute für weitere Projekte.

Ich danke dir fuer die fragen und wuensche den leserinnen weiterhin eine gute und informative zeit mit dem neuen print magazin rebel:art.

Hans's Bernhard

He's A plastic one, he's A plastic one!

plasticman rolemodel rather into the category does Barbie liberation Organization belong, shock to marketing or unfulfilled sexual fantasies?

"plasticman - rolemodel" photo editorial purely aesthetic and formal product is the pictures is like an temesta aquarium - they do not help to ease me these plastic one pictures to fulfill a provocative or shocking function, there give it already in the advertisement [advertisement] and pornoszene dozens of variants of it unfulfilled fantasies are not also covered, my fantasy are strictly pragmatically concerning the barbie liberation front [blo] give it to congruences. thus seh I that shock the marketing of the ubermorgen group transformed. chic marketing a time-delayed style implant, a suicide assassination attempt A la documenta 2007. this is one prophezeihung. I has naturally no notion under which category such a thing to be put down can Hans' Bernhard operated for years in one communication period. in a very fast massenmedialen feedback network. real-time living in contrast to the American nearly food trash culture, which exists out RH run of the 50-90er years, in the culinary, in entertainment, in the biological [bacterial] and within the infrastructural range.

And? How was the work with Petter Hegre? Gab's as wages a Jahresabo?

a very locked human being I is more petter works only via Web with it I thinks about erotische and plastic concepts and he places her 1:1 not always as I her to me ago dreams of however nevertheless very close at the reality of my fiction behind his camera. in manischen operating phases it is unnachvollziehbare, unwritten perfect communication the products is mostly very purely, very cleanly petters profit-thinks motivates me. "my model... is for me savage angel and barbie pupates at the same time", explains [more petter hegre](#), "it is blond with large chests, more tenderly strikes and shaved shame."

Where is the plastic male now?

Ok - topic change: How largely actually really estimate does you the possibilities of political change by art, Hacking and Hoaxing?

in China it lasts no three normally meets after a publication/a publication, until the first illegal copies of an action emerge instead of on the first "official" DVDs to wait, which are to be had on the black market for less than a euro, should the fans the CNN footage " [\[V\]ote auction](#) : burden OF proof "see [CNN, 2000].

"there acres emergency many artists who CAN present live action and the documentation, into one piece, OF on artwork into the form OF videotape containing A 27 minute broadcast from CNN ". flashart magazines

as part a pulsating technological and medalen network are my actions [digitally aktionismus, legally kind, [f]originals, digital art, net.art] vegetative art. the pain, which curiosity, produce the speed to intoxication-be entitled, which again to instinktiven reactions lead earlier training with LSD, ubermorgen xtc, etoy, meskalin and other drugs and sparkling wines help thereby, not into permanent psychosen too purged, but with experience to lead feeling and overview 500 km/h a corpus width unit projectile by the 3d-rush-hour more stadterker without the force of gravity [retroyou r/c]. beautifully said, not?

With which of the following figures can you identify yourself earliest and

why? Jesus of Nazareth, Ernesto Ché Guevara, Osama is shop or Joseph Beuys?

"his style CAN described as A mix between andy kaufman and jeff koons, his act ion CAN lakes as underground matthew barneys and the early John lydon [johnny rot], his synthesis of the arts has been described as duchampian and beuysche and his everyday philosophy is best described into the ubermorgen slogan: < it's because different it is fundamentally different! > " beard more kessner

"time seems tons all that conditions between thesis two individuals, more however, what has happened and changed into the world during that time seems tons make the short distance between them seem A little than it really is. beuys came across ton the world with more greater ease and less tension, more never < attacking > anyone and therefore which always lakes as A fairly passive artist with potentially revolutionary beliefs - more never as A but serious threat tons any governments or institution where presently, Bernhard is lakes entirely as A threat as he lashes out and attacks those government institution with his potentially revolutionary act ion. beuys and Bernhard have very similar long term goals and motivation but their places in time/history don't allow for that likeness tons lakes easily." nicolas primich

What is the source of your inspiration?

my internal totally fragmented and extremely chaotic hard disk, whereupon a chromed valve and again over it the main memory of impulses, sit stimulus, obtain a "response", accessed other current stimuli or evenly the non removable disk. the valve normally adjusts the output, in crisis situations can it however to positive pressure lead and then flows the river into slowly however without brakes the surely overful main memory. the consequence from it, the main memory must transport and then selectively delete its contents outward, no simple task. in the ultimative crisis this can lead to the collapse of the system [psychose] and/or an extreme output thrust, which is no longer processable for humans. "Hans, l'inspiration c'est toi! quand meme!" Jean luc goddard

Briefly and scarcely: Favourite book, favourite film, favourite meal, favourite artist?

the red zora, the godfather, lobster with melted butter, Thomas' Bernhard.

And which actually Hans's Bernhard and Helmut Lang have together?

SNM/DLA: Name register ' L ' deduction listing... Long, Isaac see: Goll, Yvan long, Josef Bernhard H-67... 22 long, Peter (publishing house) K-89 long, Siegfried B... Long leg, August Friedrich Ernst C-23 is enough, for Carl Albert M... photography HELMUT LONG HANS'S BERNHARD fashion coverage, closed series, nikon coolpix 950 asis, 2002nd... maxi. fashion by HANS'S BERNHARD foriginal. AKH HELMUT LONG & 1. Steeldartclub Kangaroots 1995 new market eV - 1995/96... Hans's long, 0-2. Bernhard Fink, 1-2. Karsten Dittrich, 2-0. Gerd Ziegler, 0-2. Hans Ott, 0-2. Helmut Ascher, 1-2. Rainer Carpenter, 2-1. Guenter Schumpa, 1-2. Lang/Schumpa, 0-2.

Last question: After etoy, the digitally hijack, ubermorgen, [V]ote auction, injunction generator etc.. - which for a project you would gladly still make? And with which artists you would work gladly together? I take at Helmut Lang?

nope, Helmut is nevertheless an old bag, or? white I do not wish myself a good co-operation with me after years of the collective work long myself I for authoritarian structures. my assistant Andreas birachaubel is my only connection outward and to my coworkers an artist with whom I further gladly closely would co-operate is lizvix of ubermorgen. humans with whom I perhaps times co-operate can is billie Bernhard, with Carl of micromusic.net connects me the music, with aaron of lo-res.org the code and mathematics, with Marks, Carl and Dave etoy.HOLDING, with lex o esof the Ltd. in sofia, Bulgaria, with schudas the personal even, with alexei shulgin and runme.org ppl, with my psychiatrist and mine therapeutin, with my South African befriend damian, francois, more slycer and spoOky and naturally association more blaster maniacs drx and alvar el unfortunately I cannot speak aluminium about planned projects.

Thousand thanks for the interview and the support, rebel:art wishes all, all to property for further projects.

in china dauert es normalerweise keine drei tage nach einer veroeffentlichung / publikation, bis die ersten illegalen kopien einer aktion auftauchen. anstatt auf die ersten "offiziellen" DVDs zu warten, die auf dem schwarzmarkt für weniger als einen euro zu haben sind, sollten die fans die CNN footage "[V]ote-auction: burden of proof" [CNN, 2000] sehen.

"there are not many artists who can present live action and the documentation, in one piece, of an artwork in the form of videotape containing a 27 minute broadcast from CNN". flashart magazine

als teil eines pulsierenden technologischen und medialen netzwerkes sind meine aktionen [digitaler aktionismus, legal art, [f]originals, digitale kunst, net.art] vegetativer art. der schmerz, die neugierde, die geschwindigkeit erzeugen rauschzustände, welche wiederum zu instinktiven reaktionen fuhren. frueheres training mit lsd, xtc, etoy, ubermorgen, meskalin und anderen drogen und sekten helfen dabei, nicht in permanente psychosen zu verfallen, sondern mit erfahrung, gefuehl und uebersicht ein 500 km/h corporate-geschoss durch den 3d-rush-hour stadtverker ohne schwerkraft zu fuehren [retroyou r/c]. schoen gesagt, nicht?

Mit welcher der folgenden Figuren kannst du Dich am ehesten identifizieren und warum? Jesus von Nazareth, Ernesto Ché Guevara, Osama Bin Laden oder Joseph Beuys?

"his style can be described as a mix between andy kaufman and jeff koons, his actions can be seen as underground matthew barneys and the early john lydon [johnny rotten], his gesamtkunstwerk has been described as duchampian and beuysche and his everyday philosophy is best described in the ubermorgen slogan: <it's different because it is fundamentally different!>" bart kessner

"time seems to be all that stands between these two individuals, however, what has happened and changed in the world during that time seems to make the short distance between them seem a little further than it really is. beuys came across to the world with greater ease and less tension, never <attacking> anyone and therefore was always seen as a fairly passive artist with potentially revolutionary beliefs - but never as a serious threat to any governments or institutions. where presently, bernhard is seen entirely as a threat as he lashes out and attacks those government institutions with his potentially revolutionary actions. beuys and bernhard have very similar long-term goals and motivations but their places in time / history don't allow for that likeness to be seen easily." nicolas primich

Was ist die Quelle Deiner Inspiration?

meine interne total fragmentierte und extrem chaotische hddisk, darauf sitzt ein verchromtes ventil und wiederum darueber der arbeitsspeicher. impulse, stimulus, erwirken eine "response", ein zugriff auf andere aktuelle stimuli oder eben auf die festplatte. das ventil reguliert den output normalerweise, in krisensituationen kann es aber zu ueberdruck fuehren und dann fliesst der strom ungebremst in den langsam aber sicher uebevollen arbeitsspeicher. die konsequenz daraus, der arbeitsspeicher muss seinen inhalt nach aussen transportieren und dann selektiv loeschen, keine einfache aufgabe. in der ultimativen krise kann dies zum zusammenbruch des systems fuehren [psychose] und / oder einem extremen output-schub, der fuer menschen nicht mehr verarbeitbar ist. "hans, l'inspiration c'est toi! quand meme!" jean-luc goddard

Kurz und knapp: Lieblingsbuch, Lieblingsfilm, Lieblingsessen, Lieblingskünstler?

die rote zora, der pate, hummer mit geschmolzener butter, thomas bernhard.

Und was haben eigentlich Hans Bernhard und Helmut Lang gemeinsam?

SNM/DLA: Namenregister 'L' Nachlaßverzeichnis... Lang, Isaac siehe: Goll, Yvan Lang, Josef Bernhard H-67 ... 22 Lang, Peter (Verlag) K-89 Lang, Siegfried B ... Langbein, August Friedrich Ernst C-23 Lange, Carl Albert M. ... photography HELMUT LANG HANS BERNHARD fashion coverage, closed series, nikon coolpix 950 asis, 2002. ... maxi. fashion by HANS BERNHARD foriginal. AKH HELMUT LANG. ... 1. Steeldartclub Kangaroots 1995 Neumarkt eV - 1995/96... Hans Lang, 0-2. Bernhard Fink, 1-2. Karsten Dittrich, 2-0. Gerd Ziegler, 0-2. Hans Ott, 0-2. Helmut Ascher, 1-2. Rainer Zimmermann, 2-1. Günter Schumpa, 1-2. Lang/Schumpa, 0-2.

Letzte Frage: Nach etoy, the digital hijack, ubermorgen, [V]ote-auction, injunction generator etc. - Was für ein Projekt würdest Du gerne noch machen? Und mit welchen Künstlern würdest Du gerne zusammen arbeiten? Ich nehme an Helmut Lang?

nope, helmut ist doch ein alter sack, oder? weiss nicht. ich wuensche mir eine gute zusammenarbeit mit mir selbst. nach jahren der kollektiven arbeit sehne ich mich nach autoritaeren strukturen. mein assistent andreas birachaubel ist meine einzige verbindung nach aussen und zu meinen mitarbeitern. eine kuenstlerin mit der ich weiterhin gerne eng zusammenarbeiten wuerde ist lizvix von

übermorgen. ein mensch mit dem ich vielleicht mal zusammenarbeiten kann ist billie bernhard, mit carl von micromusic.net verbindet mich die musik, mit aaron von lo-res.org der code und die mathematik, mit mark, carl und dave die etoy. HOLDING, mit lex-o die esof ltd in sofia, bulgarien, mit den schudas eine persoenliche ebene, mit alexei shulgin und den runme.org ppl, mit meinem psychiater und meiner therapeutin, mit meinen sued-afrikanischen freunden damian, francois, slycer und spo0ky und natuerlich den assoziations-blaster maniacs drx und alvar el al. leider kann ich nicht ueber geplante projekte sprechen.

Tausend Dank für das Interview und die Unterstützung, rebel:art wünscht alles, alles Gute für weitere Projekte.

Ich danke dir fuer die fragen und wuensche den leserinnen weiterhin eine gute und informative zeit mit dem neuen print magazin rebel:art.

DESIGN THE REVOLUTION OR JUST REVOLUTIONARY DESIGN?

OpenSpace über Design, Ästhetik und Aktivismus mit:

Tom Büschemann (PLATOON cultural development, Berlin), alle gesellschaftlichen prozesse sind von wirtschaftlichen interessen bestimmt. attraktivität und konsumierbarkeit werden erwartet und angeboten. alles ist angenehm, unterhaltend, verständlich, kalkulierbar und in letzter konsequenz positiv. alles ist 'attraktiv'. diese dienstleistungs-philosophie wird in sämtlichen bereichen des lebens vertreten. der mit ihr verbundene konsum bestimmt unser denken, fühlen und handeln: unsere kultur. eine verschiebung der wahrnehmung ist eingetreten: die illusion wird immer schöner und die realität hässlicher. wirklichkeit wird abgelehnt und ignoriert, die illusion zur weltanschauung. die 'hyperrealität' entsteht. in dieser ist das Leben als solches angenehm, verständlich, unterhaltend und die risiken kalkulierbar. das leben ist konsumierbar. und langweilig. immer mehr menschen können und wollen sich dieser illusion nicht hingeben. das leben ist nicht konsumierbar. die wirklichkeit ist in vielen bereichen das genaue gegenteil: unangenehm, anstrengend, agressiv, unkalkulierbar, unverständlich. und interessant. diese bestandteile des lebens werden von PLATOON nicht ausgelassen, sondern in den vordergrund gestellt. die hyperrealität wird kontrastiert. PLATOON stellt fragen, irritiert, regt zum denken an und vermittelt wirklichkeit. PLATOON unterhält nicht - PLATOON kommuniziert.

Mike Riemel (MIKEA 5+ agentur für kultur und medien, Berlin) Gründer u.a. von Foto-Shop-Berlin Galerie, Flyer Soziotope) - MIKEA (Medien, Innovation, Kultur, Ereignisse, Agentur) seit 95 Ich-Agentur und dabei wenn es um Projekte rund um die Kombination aus Film, Musik, Kunst, Mode, Netz, Medien und Veranstaltungen geht. MIKEA lanciert, kommuniziert und kooperiert. ACUD, Haus des Lehrers, Bootlab, Haus des Reisens waren Stationen auf dem langen Weg durch Mitte. Festivals, Ausstellungen, Moderation, Radio und Video sind die Baustellen aus denen Filme, Sendungen, Bücher, Fotos, Websites und Erinnerungen destilliert werden. Import/Export. Konsum verbindet ! Kultur muss man MACHEN: CONTENT RAVING

Ioannis Karanasios (art director rebel:art mag, Stuttgart),

Andreas Magino, Tobias Waszkiewicz (++BATTERIE - Ein digitales Magazin, Düsseldorf / Wuppertal)

BATTERIE ist ein Forum für visuell interessierte Menschen. Ein Medium in dem sich frei von der alltäglichen Arbeitssituation, allgemeinen Trends oder dem Druck von Auftraggebern kreativ mit einem gegebenen Thema beschäftigt werden kann. Jede Ausgabe stellt ein neues Thema, mit dem sich die eingeladenen Teilnehmer auseinandersetzen können, wobei alle Beiträge ohne Einschränkung veröffentlicht werden. Die Bandbreite der Ergebnisse sowie der individuelle Stil jedes Einzelnen sollen hier gezeigt

werden. Die Umsetzung kann typografisch, illustrativ, fotografisch oder mit allen anderen denkbaren gestalterischen Techniken erfolgen. Einzige Einschränkung ist das mit jeder Ausgabe variierende Format und die Begrenzung auf eine vorgegebene Anzahl an Seiten. Das Magazin erscheint alle drei Monate und steht im pdf-Format unter www.ladestation.net zum download bereit.

CLUB DER POLNISCHEN VERSAGER 14 - 16 Uhr > fforming visual resistance

● URBAN ACTIONS 2004

rethinking space - nikeground von 0100101110101101.ORG und [Public Netbase](http://PublicNetbase)

... und es hat "Swoosh" gemacht! „You want to wear it, why shouldn't cities wear it too?“ fragte im Oktober 2003 Nike. Nikeground, das neue Projekt des Sportartikelherstellers möchte eine neue, revolutionäre Vision vermitteln: rethinking space! In den nächsten Tagen wird die Nike Infobox um die Welt ziehen, um zu verkünden, dass ausgewählte Plätze, Parks und Strassen dazu auserkoren wurden in Nikeplatz, Nikesquare und Nikestrasse umbenannt zu werden. Kleine Dokumentation der „hyperrealistischen Theaterinszenierung“. 6 min - 2004

CNN Burden of Proof: [V]oteAuction von [Hans Bernhard](http://HansBernhard) / ubermorgen

Im Sommer 2000 uebernahm die Netzkunstfirma ubermorgen ein Projekt, das im Rahmen der Diplomarbeit eines New Yorker Studenten entstanden war. "[V]ote-Auction" wurde von ubermorgen internationalisiert, ausgebaut und mit einem auf die Zielgruppe zugeschnittenen Web-Design ausgestattet. Es handelt sich um ein Forum, das Demokratie und Kapitalismus einander naeher bringen will. Im Vorfeld der US-amerikanischen Praesidentschaftswahl 2000 wurden Waehler eingeladen, ihre Stimme zur Versteigerung freizugeben. Eines der beruehmtesten "weltweiten" Medien, der Fernsehsender CNN, berichtete siebenmal ueber "vote-auction" und widmete dem Thema am 24. Oktober 2000 eine halbstuendige Folge der Justiz-Sendung "Burden of Proof" unter dem Titel "Bidding for Ballots: Democracy on the Block". [Mehr Infos...](#) 30 min (CNN Sondersendung) - 2000

The Horribly Stupid Stunt (Which has Resulted in His Untimely Death) von the yes men

Check out this notorious real-life political prank foisted upon the WTO by a mysterious group of anonymous hoaxsters known as The Yes Men, who used the fake GATT.org cite to pose as WTO representatives and actually spoke at an international trade conference, with hilarious results. "Come join The Yes Men as they deliver a deathly horrible lecture to a group of high-powered lawyers, who think they are listening to the World Trade Organization. The lawyers' shocking response drives The Yes Men to the depths of depravity, with stupid results." The Yes Men serve us well as a group of imposters who will "use any means necessary to agree their way into the fortified compounds of commerce, ask questions, and then smuggle our the stories of their undercover escapades to provide a public glimpse at the behind-the-scenes world of business." 45 min - 2001

BLACKBOX 16 - 18 Uhr >>> ffighting for freedom

mit T_Bazz (AHA, Rom)

bitte [anmelden](#) (nur ca. 20 Teilnehmer)

CLUB DER POLNISCHEN VERSAGER 18 - 20 Uhr >>> fffighting with words

● **ACADEMY 23: THE CUT UP SESSION**

Cut-Ups, Poems und Performance mit **Daniel Kulla** (Systemausfall, Berlin) und **271** (Berlin).

Cut Up, die über 50 Jahre alte Methode Machtstrukturen in der Sprache zu entlarven und zu brechen ist einfacher und aktueller denn je im Zeitalter von Copy And Paste. Es geht aber nicht nur elektronisch, live wird es zur kollektiven Performance die Grenzen zwischen Publikum und "Literaten" auflöst und tief verborgene Wahrheiten zu Tage bringt zum Beispiel wenn Marx mit CDU-Parteiprogrammen, Donald Duck, Pornos und Public Enemy-Texten vermischt wird.

CLUB DER POLNISCHEN VERSAGER 20.15 - 22 Uhr >>> fffighting with words

● **Extremboutique Nagy / die guten Atmosphären**

Mit **monochrom** (Wien)

// Erstens (Überbau): In den letzten Jahren entwickelte sich in vielen geisteswissenschaftlichen Disziplinen die Erforschung und Diskussion von „Atmosphären“, verstanden als die emotionale Wahrnehmung sinnlicher Ereignisse und Ereignisräume. PhilosophInnen, KulturtheoretikerInnen, KommunikationswissenschaftlerInnen, ArchitektInnen, Stadt- und RaumplanerInnen, KünstlerInnen, AusstellungsmacherInnen und viele mehr haben wichtige Beiträge zu diesem Diskurs geliefert. monochrom hat diese Stimmen gesammelt, gesichtet, ausgewertet, durcheinandergewürfelt und die Ernte zu einer abendfüllenden Powerpointoperette fusioniert, die zwingend um 20:15 zu beginnen hat: Das Ergebnis ist ein 90-minütiges Restessen aus Powerpointeinspielungen, Livemusik (und wir meinen: Livemusik!), Installation, Klangwolke, Medienkritik (incl. Kritik-der-Medienkritik und deren Kritik), Bildungsroman, Gala, Archäologie, Diskurskritik (incl. Kritik-der-Diskurskritik und deren Kritik) und ordentlich Schmerz bzw. Schmelz. Simultan-Phänomenologie, Geschwür und ein Ballett der Ränder. Die geradbrechte Geballtheit ist indes nur ein stummer Schrei nach Liebe zum Detail.

// Zweitens (Handlung): Der outgeplachte Textilbranchler Boom Springfield, gestresst von Alltag, Wohnsituation und Captain Abramowitsch erfährt durch seinen Freund Josh D. Stangassinger aus der IT-Branche von der Extremboutique Nagy, wo es eine hervorragende Atmosphäre geben soll. Die Suche nach besagtem Etablissement gestaltet sich jedoch schwierig. Die „Wächterinnen der guten Atmosphäre“ tauchen beharrlich auf und geben ihm in verklausalierten Coachings zu Denken. Immer ist Boom innerlich für den Eintritt in die Boutique noch nicht bereit. Er muss noch lernen, reflektieren, spüren, optimieren, Allianzen knüpfen, verschlanken, downloaden, selbsterfahren und den interpersonellen Relaunch wagen, was auch bedeutet, das er seinem Umfeld (eigentlich nur Josh D. Stangassinger aus der IT-Branche) auf der Tasche liegt. Über die Jahre versucht er seine Softskills in den Bereichen Kommunikation, Mystik, Philosophie, Psychologie, feministische Literaturwissenschaft und Kulturkritik etc. zu entwickeln, so zu stählen. Kurz seinen Atmo-Bachelor zu machen. Die „Gralssuche“ nach der guten Atmosphäre gerät zum schleppenden Irrlauf durch die verschlungenen Plateaus von Wissenschaft, Medialität und Alltag. Was die Boutique genau ist, ob der Protagonist schließlich erfolgreich ist, ob das Projekt scheitert... - wird man/frau ja sehen. Denn das letzte der acht Kapitel spielt jeweils im „Hier und Jetzt“ der aktuellen Situation bzw. „Aura“ (Walter Benjamin), kurz: in der konkreten Aufführungsatmosphäre. Lassen Sie sich entzaubern von Methode mit Wahnsinn und Posthumanität mit menschlichem Antlitz. Eine Riester-Rente des normalen Geschmacks von monochrom - seit 15 Jahren kreativ, seit 7 sogar mit „c“. Erscheinen Sie bitte zahlreich, wenn möglich manisch

monochrom

GALERIE ZURMOEBELFABRIK ab 21 Uhr >>> **electronic resistance II**

● **ELECTRO RIOT LOUNGE**

(((controller-band. : (((controller-beat. (Berlin)

(((controller-beat. ist das jüngste einer Reihe von Projekten: Joysticks und andere Computerspielcontroller werden als Steuergeräte zur Bedienung von Musiksoftware benutzt. Die Verwendung dieser Geräte in Verbindung mit einem dafür entwickelten Softwareinterface ermöglicht es live zu improvisieren, ohne zu Hilfenahme von Bildschirm, Maus und Tastatur. Es ist also möglich die Musik intuitiv und als Gesamtheit zu steuern. **(((controller-beat.** ist nun die Erweiterung dieser Controller-Idee auf den tanzbaren Bereich, wobei **(((controller-beat.** nicht als Band mit festen Spielern zu verstehen ist, sondern eher als Vorrichtung, an welcher unterschiedliche Spieler improvisieren können. **(((controller-band.** sind michael wilhelmi und thomas kusitzky aus Berlin: [Info](#)

Fortransit - Fortran 1.0 (Zürich)

Fortransit is an automatic coding system for the IBM 650 data processing system by superimposing a translator on the compiler developed at the Carnegie Institute of Technology. Fortransit makes available to 650 users the language of Fortran. Fortran, a language developed for the IBM 704, closely resembles the language of mathematics; it was designed primarily for scientific and engineering computation.

Christian Keinstar - Laptop live (Köln)

Christian Keinstar macht schon seit Jahren Laptop Art & Audio. Seine live-Shows sind ein experimenteller Augen- und Ohrenschaus.

Federico Bucalossi - Nothuman (Florenz)

Bucalossi präsentiert sein neues Projekt Nothuman - Net.Art und Media Art Installationen

flyer soziotope - rebelflyers united (Berlin)

Das Flyer Soziotope präsentiert eine kleine Auswahl internationaler rebel: flyer

nicolas-bourbaki VJ Crew (Berlin/FFM)

Die nicolas-bourbaki VJ Crew aus Berlin und Frankfurt wird auch dieses Mal wieder eine VJ-Show der Extraklasse präsentieren.

Moritz Frei (Berlin)

Moritz Frei stellt Arbeiten aus seiner neuen Fotoserie "image" vor.

Monafloe (Bukarest)

Florin Tudor und Mona Vatamanu repräsentieren die junge Media Art Generation in Bukarest - rebel:art präsentiert einige Ihrer neuen Filme.

Robert Praxmarer - t(error) (Linz)

Robert Praxmarer, Mitglied des ars electronica futurelab, präsentiert seine interaktive Videoinstallation 't(error).

Oliver Schneider - CasualHero (Berlin)

Oliver Schneider stellt Arbeiten aus seiner neuen Fotoserie "CasualHero" aus.

The CMYK - Manifest - alle Farben, alle Nuancen, alle Möglichkeiten!

Cyan - Farbe für das Sinnbild „Future“

steht für Visionen, Utopie, für die Affirmation, denn eine andere Welt ist möglich!

Magenta - Farbe für das Sinnbild „Female“

steht für alles positive was mit der konventionellen Weiblichkeit verbunden wird, Ästhetik, Emotionen, visuelle Reize. (Dieses Sinnbild will natürlich nicht eine Weiblichkeit formulieren, sondern die bekannten Assoziationen produktiv einsetzen.)

Yellow – Farbe für das Sinnbild „Freedom“

steht für Experimente, Provokation, freie Entfaltung, all das wozu Freiheit erst nötig ist oder wodurch sie erst entsteht.

Black – Farbe für das Sinnbild „Fighting“

steht für direkten Widerstand, Militanz und Dekonstruktion, wenn Werke direkt in ihrer Aussage wirken, wenn Probleme nicht nur thematisiert werden, sondern an Brennpunkten symbolisch angegangen werden, wenn Machtstrukturen durch kulturelle Praxen auseinandergenommen werden.

Wo ist Berlin, wo ist die Torstrasse? Einen Stadtplan mit den Locations...

CNN Burden OF Proof: [V] oteAuction of Hans's Bernhard / ubermorgen

In the summer 2000 transferred the net art company ubermorgen a project, which in the context of the thesis (diploma) New Yorker student had developed. "[V]ote Auction" was internationalized, developed by Ubermorgen and equipped with a Web Design cut to the target group. It concerns a forum, which wants to bring democracy and capitalism each other more near. In the apron of the US-American presidency election 2000 voters were invited to release their voice to the auction. One of the most famous "world-wide" media, the television station CNN, reported seven times over "vote auction" and dedicated on 24 October 2000 an halfhour consequence of the law transmission "Burden OF Proof" to the topic under the title "Bidding for to Ballots: Democracy on the block ". [More information...](#) 30 min (CNN special transmission) - 2000

CUT Ups, Poems and performance with **Daniel Kulla** (system crash, Berlin) and **271** (Berlin).

CUT UP to expose and break over 50 years the old method power structures in the language is simple and more up-to-date ever in the age of CoPy and paste. Electronically, live will it to the collective performance the borders do not however only go to Pornos and Public Enemy texts between public and "Literaten" dissolve and deeply hidden truths to day bring to the Beipiel if Marx with CDU party programs, Donald duck, are mixed.

CLUB of the POLISH FAILURES 20,15 - 22 o'clock >>> fffighting with words

● Extreme fashion shop Nagy/the good atmospheres

With **mono chrome** (Vienna)

// first of all (cover): In the last years the research and discussion developed of Atmosphaeren , understood as the emotional perception of sinnlicher events and event areas in many spirit-scientific disciplines. Philosopher inside, culture theoretician inside, communication scientist inside, architect inside, city and physical planner gutters, artists, exhibition-make-run and many more have important contributions to this discourse supplied mono chrome these voices collected, sighted, evaluated, durcheinandergewuerfelt and the harvest to a evening-filling Powerpointoperette fused, which has to begin compellingly around 20:15: The result is a 90-minuetiges remainder meal from power POINT bringing, Livemusik (and we mean: Livemusik!), Installation, sound cloud, medium criticism (inclusive criticism the medium criticism and their criticism), education novel, Gala, Archaeologie, discourse criticism (inclusive criticism the discourse criticism and their criticism) and properly pain and/or bloom. Simultaneous Phaenomenologie, ulcer and a ballet of the edges. The geradbrechte clenchingness is meanwhile only mute cries after love for the detail.

// secondly (action): The outgeplacte Textilbranchler boom Springfield, gestresst of everyday life, living situation and Captain Abramowitsch experiences by its friend Josh D Stangassinger from the IT industry of the extreme fashion shop Nagy, where there is to be a outstanding atmosphere. The search for mentioned Etablissement becomes however difficult. The Waechterinnen the good Atmosphaere emerges persistently and gives it in verklausalierten Coachings to thinking. Always boom is not yet ready internally for the entrance into the fashion shop. He must still learn, reflects, feels, optimizes, alliances to attach, slim, downloaden, experienced and the inter+personnel Relaunch dare, which also means, which it its surrounding field (actually only Josh D. Stangassinger from the IT industry) on the bag lies. Over the years it tries its Softskills within the ranges communication, Mystik, philosophy, psychology, to develop toolistic literature science and culture criticism etc. so to steel. To make briefly its Atmo Bachelor. Gralssuche after the good atmosphere turns out to the sluggish erring run by the devoured plateaus of science, Medialitaet and everyday life. Which the fashion shop is exact whether the Protagonist is successful finally, whether the project fails... - one/woman will see. Because the last one of the eight chapters plays in each case in more Hier and Jetzt of the current situation and/or Aura (walter Benjamin), briefly: in the concrete performance atmosphere. Leave yourselves entzaubern from method with insanity and post office humanity with human face. A Riester pension of the normal taste of mono chrome - for 15 years creatively, since 7 even with c . Appear please numerously, as manisch as possible

DESIGN THE REVOLUTION OR JUST REVOLUTIONARY DESIGN?

OpenSpace über Design, Ästhetik und Aktivismus mit:

Tom Büschemann (PLATOON cultural development, Berlin), alle gesellschaftlichen prozesse sind von wirtschaftlichen interessen bestimmt. attraktivität und konsumierbarkeit werden erwartet und angeboten. alles ist angenehm, unterhaltend, verständlich, kalkulierbar und in letzter konsequenz positiv. alles ist 'attraktiv'. diese dienstleistungs-philosophie wird in sämtlichen bereichen des lebens vertreten. der mit ihr verbundene konsum bestimmt unser denken, fühlen und handeln: unsere kultur. eine verschiebung der wahrnehmung ist eingetreten: die illusion wird immer schöner und die realität hässlicher.wirklichkeit wird abgelehnt und ignoriert, die illusion zur weltanschauung. die 'hyperrealität' entsteht. in dieser ist das Leben als solches angenehm, verständlich, unterhaltend und die risiken kalkulierbar. das leben ist konsumierbar. und langweilig. immer mehr menschen können und wollen sich dieser illusion nicht hingeben. das leben ist nicht konsumierbar. die wirklichkeit ist in vielen bereichen das genaue gegenteil: unangenehm, anstrengend, agressiv, unkalkulierbar, unverständlich. und interessant. diese bestandteile des lebens werden von PLATOON nicht ausgelassen, sondern in den vordergrund gestellt. die hyperrealität wird kontrastiert. PLATOON stellt fragen, irritiert, regt zum denken an und vermittelt wirklichkeit. PLATOON unterhält nicht - PLATOON kommuniziert.

Mike Riemel (MIKEA 5+ agentur für kultur und medien, Berlin) Gründer u.a. von Foto-Shop-Berlin Galerie, Flyer Soziotope) - MIKEA (Medien, Innovation, Kultur, Ereignisse, Agentur) seit 95 Ich-Agentur und dabei wenn es um Projekte rund um die Kombination aus Film, Musik, Kunst, Mode, Netz, Medien und Veranstaltungen geht. MIKEA lanciert, kommuniziert und kooperiert. ACUD, Haus des Lehrers, Bootlab, Haus des Reisens waren Stationen auf dem langen Weg durch Mitte. Festivals, Ausstellungen, Moderation, Radio und Video sind die Baustellen aus denen Filme, Sendungen, Bücher, Fotos, Websites und Erinnerungen destilliert

werden. Import/Export. Konsum verbindet ! Kultur muss man MACHEN:

Cut-Ups, Poems und Performance mit **Daniel Kulla** (Systemausfall, Berlin) und **271** (Berlin).

Cut Up, die über 50 Jahre alte Methode Machtstrukturen in der Sprache zu entlarven und zu brechen ist einfacher und aktueller denn je im Zeitalter von Copy And Paste. Es geht aber nicht nur elektronisch, live wird es zur kollektiven Performance die Grenzen zwischen Publikum und "Literaten" auflöst und tief verborgene Wahrheiten zu Tage bringt zum Beispiel wenn Marx mit CDU-Parteiprogrammen, Donald Duck, Pornos und Public Enemy-Texten vermischt wird.

CLUB DER POLNISCHEN VERSAGER 20.15 - 22 Uhr >>> fffighting with words

● Extremboutique Nagy / die guten Atmosphären

Mit **monochrom** (Wien)

// Erstens (Überbau): In den letzten Jahren entwickelte sich in vielen geisteswissenschaftlichen Disziplinen die Erforschung und Diskussion von „Atmosphären“, verstanden als die emotionale Wahrnehmung sinnlicher Ereignisse und Ereignisräume. PhilosophInnen, KulturtheoretikerInnen, KommunikationswissenschaftlerInnen, ArchitektInnen, Stadt- und RaumplanerInnen, KünstlerInnen, AusstellungsmacherInnen und viele mehr haben wichtige Beiträge zu diesem Diskurs geliefert. monochrom hat diese Stimmen gesammelt, gesichtet, ausgewertet, durcheinandergewürfelt und die Ernte zu einer abendfüllenden Powerpointoperette fusioniert, die zwingend um 20:15 zu beginnen hat: Das Ergebnis ist ein 90-minütiges Restessen aus Powerpointeinspielungen, Livemusik (und wir meinen: Livemusik!), Installation, Klangwolke, Medienkritik (incl. Kritik-der-Medienkritik und deren Kritik), Bildungsroman, Gala, Archäologie, Diskurskritik (incl. Kritik-der-Diskurskritik und deren Kritik) und ordentlich Schmerz bzw. Schmelz. Simultan-Phänomenologie, Geschwür und ein Ballett der Ränder. Die geradbrechte Geballtheit ist indes nur ein stummer Schrei nach Liebe zum Detail.

// Zweitens (Handlung): Der outgeplachte Textilbranchler Boom Springfield, gestresst von Alltag, Wohnsituation und Captain Abramowitsch erfährt durch seinen Freund Josh D. Stangassinger aus der IT-Branche von der Extremboutique Nagy, wo es eine hervorragende Atmosphäre geben soll. Die Suche nach besagtem Etablissement gestaltet sich jedoch schwierig. Die „Wächterinnen der guten Atmosphäre“ tauchen beharrlich auf und geben ihm in verklausalierten Coachings zu Denken. Immer ist Boom innerlich für den Eintritt in die Boutique noch nicht bereit. Er muss noch lernen, reflektieren, spüren, optimieren, Allianzen knüpfen, verschlanken, downloaden, selbsterfahren und den interpersonellen Relaunch wagen, was auch bedeutet, das er seinem Umfeld (eigentlich nur Josh D. Stangassinger aus der IT-Branche) auf der Tasche liegt. Über die Jahre versucht er seine Softskills in den Bereichen Kommunikation, Mystik, Philosophie, Psychologie, feministische Literaturwissenschaft und Kulturkritik etc. zu entwickeln, so zu stählen. Kurz seinen Atmo-Bachelor zu machen. Die „Gralssuche“ nach der guten Atmosphäre gerät zum schleppenden Irrlauf durch die verschlungenen Plateaus von Wissenschaft, Medialität und Alltag. Was die Boutique genau ist, ob der Protagonist schließlich erfolgreich ist, ob das Projekt scheitert... - wird man/frau ja sehen. Denn das letzte der acht Kapitel spielt jeweils im „Hier und Jetzt“ der aktuellen Situation bzw. „Aura“ (Walter Benjamin), kurz: in der konkreten Aufführungsatmosphäre. Lassen Sie sich entzaubern von Methode mit Wahnsinn und Posthumanität mit menschlichem Antlitz. Eine Riester-Rente des normalen Geschmacks von monochrom - seit 15 Jahren kreativ, seit 7 sogar mit „c“. Erscheinen Sie bitte zahlreich, wenn möglich manisch

monochrom

Kommunikationsprojekt im öffentlichen Raum

ubermorgen.com

»[V]ote-auction«

Das auf einer Idee von James Baumgartner basierende und von ubermorgen weiterentwickelte Projekt »[V]ote-auction« (2000) basierte auf dieser Marketing- und Kommunikations-Strategie. Unter dem eingängigen Slogan »Bringing capitalism and democracy closer together!« wurde US-amerikanischen Wählern pünktlich zur Präsidentschaftswahl 2000 (G.W. Bush vs. Gore) die Möglichkeit angeboten, ihre Stimme im Internet über eine online-Auktions-Plattform meistbietend zu versteigern. Die angebotenen Stimmen eines ganzen US-Bundesstaates sollten dann an den Meistbietenden verkauft und der entsprechende Anteil am Erlös den Stimmenverkäufern ausbezahlt werden. In beneidenswerter Klarheit wurde so die Verschränkung von Kapital und (Stimm-)Macht demonstriert. Während individueller Stimmenverkauf in allen US-Bundesstaaten und auf Bundesebene zwar streng verboten ist, wird dieses Verbot nämlich durch massive (legale) Wahlkampfspenden großer Wirtschaftsunternehmen permanent unterlaufen.

Die Resonanz in den Massenmedien war überwältigend. In den drei Monaten vor der Wahl gab ubermorgen am Tag bis zu fünf Radio- und TV-Interviews und bis zu 20 Interviews per e-mail und Telefon. Verschiedene US-amerikanische Staatsanwälte kündigten insgesamt 13 Gerichtsverfahren gegen Ubermorgen.com an. In vier US-Bundesstaaten wurden wirkliche Verfahren eingeleitet (Missouri, Chicago, Massachusetts und Wisconsin) und einstweilige Verfügungen ausgesprochen.

Aufgrund eines Richterspruchs in Illinois wurde die Domain der Website zweimal gesperrt, konnte aber unter leicht verändertem Namen jeweils wieder rechtzeitig für die Wahlen selbst - online gehen. [...]

Insgesamt sollen bis zu 450 Millionen Medienkonsumenten von der Aktion erfahren haben. Da den Vertretern von »[V]ote-Auction« jedoch letztendlich keine illegalen Aktivitäten nachgewiesen werden konnten, wurden die Gerichtsverfahren in allen Bundesstaaten (außer in Illinois) eingestellt.

Ubermorgen stellt alle in diesen Verfahren generierten Originaldokumente (Klagen, Gerichtsurteile, etc.) in Ausstellungen aus und nennt diese »originals« (eine Kombination aus »forged«/gefälscht und »original«). Die so realisierte permanente Verquickung von Fakt und Fiktion verweist auf einen extrem erweiterten Materialbegriff, der für ubermorgen auch (internationales) Recht, Demokratie und globale Kommunikation (Input-Feedback-Loops) umfasst.

(Quelle: Inke Arns, »Soziale Technologien«, in: Die offene Stadt - Anwendungsmodelle. Jahresprogramm der Kokerei Zollverein, Essen 2003.)

Communication project in the public area

ubermorgen.com

"[V]ote auction"

On an idea of James the Baumgartner based and of ubermorgen further developed project "[V]ote auction" (2000) was based on this marketing and communication strategy. Under the in-usual slogan "Bringing capitalism and democracy more closer more together!" punctually for the presidency election 2000 (G.W.Bush vs. Gore) the possibility, their voice in the InterNet over an on-line auction platform by auction for auctions was offered to US-American voters. The offered voices of a whole US Federal State should then to the highest bidder be sold and the appropriate portion of proceeds the voice salesmen be paid off. In envy-worth clarity so the cross-setting of capital became and (be correct)Macht demonstrated. While individual voice sales is strictly forbidden in all US Federal States and on federal level, this prohibition will permanently occur by substantial (legal) election campaign donations of large business enterprises.

The resonance in the mass media was overwhelming. In the three months before the choice gave ubermorgen on the day up to five radio and TV interviews and up to 20 interviews by email and telephone. Different US-American state lawyers announced altogether 13 legal proceedings against Ubermorgen.com. In four US Federal States real procedures were expressed introduced (Missouri, Chicago, Massachusetts and Wisconsin) and provisional orders. Due to a court decision in Illinois the Domain of the Website became twice closed, could however under easily changed name again in each case - in time for the elections themselves - to on-line goes [...]

Altogether are up to 450 million medium consumer of the action to have experienced. There the representatives of "[V]ote Auction" no illegal activities to be however finally proven knew, the legal proceedings in all Federal States (except in Illinois) were adjusted.

Ubermorgen places all in these procedures generated original documents (complaints, court decisions, etc..) in exhibitions out and this calls >foriginals< (a combination out >forged</gefaelscht and >original<). The in such a way realized permanent Verquickung of fact and fiction refers to an extremely extended material term, which also covers for ubermorgen (international) right, democracy and global communication (input feedback loop).

(source: Inke Arns, "social technologies", in: The open city - application models. Yearly program of the coking plant customs union, meal 2003.)

»[V]ote-auction«

Das auf einer Idee von James Baumgartner basierende und von ubermorgen weiterentwickelte Projekt »[V]ote-auction« (2000) basierte auf dieser Marketing- und Kommunikations-Strategie. Unter dem eingängigen Slogan »Bringing capitalism and democracy closer together!« wurde US-amerikanischen Wählern pünktlich zur Präsidentschaftswahl 2000 (G.W. Bush vs. Gore) die Möglichkeit angeboten, ihre Stimme im Internet über eine online-Auktions-Plattform meistbietend zu versteigern. Die angebotenen Stimmen eines ganzen US-Bundesstaates sollten dann an den Meistbietenden verkauft und der entsprechende Anteil am Erlös den Stimmenverkäufern ausbezahlt werden. In beneidenswerter Klarheit wurde so die Verschränkung von Kapital und (Stimm-)Macht demonstriert. Während individueller Stimmenverkauf in allen US-Bundesstaaten und auf Bundesebene zwar streng verboten ist, wird dieses Verbot nämlich durch massive (legale) Wahlkampfspenden großer Wirtschaftsunternehmen permanent unterlaufen.

Die Resonanz in den Massenmedien war überwältigend. In den drei Monaten vor der Wahl gab ubermorgen am Tag bis zu fünf Radio- und TV-Interviews und bis zu 20 Interviews per e-mail und Telefon. Verschiedene US-

amerikanische Staatsanwälte kündigten insgesamt 13 Gerichtsverfahren gegen Übermorgen.com an. In vier US-Bundesstaaten wurden wirkliche Verfahren eingeleitet (Missouri, Chicago, Massachusetts und Wisconsin) und einstweilige Verfügungen ausgesprochen.

Aufgrund eines Richterspruchs in Illinois wurde die Domain der Website zweimal gesperrt, konnte aber unter leicht verändertem Namen jeweils wieder rechtzeitig für die Wahlen selbst online gehen. [...]

Insgesamt sollen bis zu 450 Millionen Medienkonsumenten von der Aktion erfahren haben. Da den Vertretern von »[V]ote-Auction« jedoch letztendlich keine illegalen Aktivitäten nachgewiesen werden konnten, wurden die Gerichtsverfahren in allen Bundesstaaten (außer in Illinois) eingestellt.

Übermorgen stellt alle in diesen Verfahren generierten Originaldokumente (Klagen, Gerichtsurteile, etc.) in Ausstellungen aus und nennt diese »originals« (eine Kombination aus »forged«/gefälscht und »original«). Die so realisierte permanente Verquickung von Fakt und Fiktion verweist auf einen extrem erweiterten Materialbegriff, der für übermorgen auch (internationales) Recht, Demokratie und globale Kommunikation (Input-Feedback-Loops) umfasst.

VI. CONCLUSION 92

i. Introduction.1

The Internet has heightened interest in private international law and in alternative dispute resolution. The Internet's low economic barriers to entry invite participation in commerce and politics by small entities and individuals who cannot afford direct participation in many traditional markets and political arenas. These low barriers to entry, and greater participation by individuals and small entities, also encourage a greater incidence of small transactions. When dispute resolution costs are high, as they are for traditional administrative and judicial procedures, the transaction costs of dispute resolution threaten to swamp the value of the underlying transaction,² meaning on the one hand that victims are less likely to seek vindication of their rights and, on the other hand, that actors and alleged wrongdoers may face litigation costs that outweigh the advantages of their offering goods and services in the new electronic markets. To realize the potential of participation by small entities and individuals and of small transactions, it is necessary to reduce the costs of dispute resolution.

Second, the geographic openness of electronic commerce makes more likely stranger-to-stranger transactions. The absence of informal means of developing trust, as when one shops regularly at the local bookstore, means that both merchants and consumers will be inhibited in engaging in commerce unless they have some recourse if the deal goes sour. Some accepted form of dispute resolution must be available to establish the requisite confidence for commerce to occur at all.

Third, the Internet is inherently global. Goods offered for sale on a Web page published on a server physically located in Kansas are as visible to consumers in Kosovo as in Kansas. In other words, it is difficult to localize injury-producing conduct or the injury itself in Internet-based markets or political arenas. Traditional dispute resolution machinery and private international law rules depend upon localization to determine jurisdiction.³ Impediments to localization create uncertainty and controversy over assertions of jurisdiction. That uncertainty has two results. It may frustrate communities who resent being unable to reach through their legal machinery conduct

occurring in a far off country. It also subjects anyone participating in the Internet to jurisdiction by any one of nearly 200 countries in the world, and in many cases, to their subordinate political units.

Even if negotiations succeed over an international treaty on civil judgment enforcement,⁴ that is not enough. A treaty will help reduce uncertainty. But a treaty will not solve the problem of a furniture manufacturer in Thomasville, North Carolina, who sells furniture through the Internet. The treaty may say that the furniture manufacturer must litigate in, let's say, Tirana, Albania where one of his customers is. That is not a very attractive proposition if the manufacturer sold \$1,000 worth of furniture, because it will cost it more to litigate there than the transaction was worth. And if the treaty says that the furniture manufacturer gets to litigate at home, in North Carolina, that won't be a very attractive proposition for the purchaser of the furniture in Tirana, Albania. New forms of dispute resolution can cross boundaries easily and reduce uncertainty with respect to applicable law and enforceability.

For electronic commerce and political discourse to flourish in the Internet, new forms of alternative dispute resolution must be designed and deployed. While much of the responsibility for creative design and practicable deployment depends on private initiative rather than governmental mandates, attention also must be paid to the position of private regulation in an overarching legal framework.

The Internet needs not only alternative dispute resolution in the adjudicatory sense—as in arbitration and mediation. It also needs rules made by private entities which get applied in alternative dispute resolution forums. Private rulemaking is much more common than many people assume. America Online and Microsoft Network make rules for subscribers; “Internet Corporation for Assigned Names and Numbers” (“ICANN”) makes rules for application in domain name disputes; seal organizations such as Truste make rules for those who wish to use the seal or maintain their membership in a private ordering regime; increasingly, filters and blacklists are being developed that embody rules for conduct in computer code. For these private rulemaking activities, even more than for private adjudicatory activities, public institutions must determine what is permissible and what is not; what will subject the rule maker to liability and what should be privileged.

Dispute resolvers outside the context of pure mediation where only party-identified interests count, must be able to make enforceable decisions. Once the dispute resolver has made a decision, that decision must be enforced against the losing party. Absent any possibility for coercive enforcement, the losing party has little incentive to comply voluntarily.⁵

Many arbitration systems allow the parties, the arbitrators, and analysts of the process to take the rules and the enforcement for granted. The arbitrator looks to a contract or ordinary law as the source of rules to be applied. The New York Convention and/or national arbitration statutes provide for judicial enforcement for any arbitration award.

But alternative dispute resolution systems for the Internet offer new sources of rules and of enforcement, making it desirable to think more deeply about rulemaking and enforcement as part of the overall matrix of alternative dispute resolution for the Internet.

Within the analytical framework of private international law, one needs to think about choice of law⁶ and enforcement⁷ as well as forum selection.⁸

II Recent developments in private international law

A. Localization

All modern legal systems are pragmatic, in the sense that they limit formal prerogatives according to the practicability of exercising power which is subject to physical limits of space.⁹ In public and private international law, this translates into the concept of sovereignty. A state's power within its own boundaries is plenary,¹⁰ only recently limited by universal conceptions of human rights.¹¹ Outside its boundaries, exercise of coercive power is aggression¹² because it necessarily intrudes upon the sovereign prerogatives of other states. Legislatures and other rule makers may not extend their law to persons lacking relevant connections to the (geographically defined) state of the rule maker.¹³ Courts and other dispute resolution bodies may not make decisions or apply rules to persons lacking connections with their "geographically defined" venues.¹⁴

Concepts of prescriptive and adjudicative jurisdiction have evolved to accommodate commerce extending beyond the boundaries of a particular sovereign, but the jurisdictional concepts still depend upon localizing conduct. Tort law rules depend on where injuries occur;¹⁵ contract law rules depend on where contracts are made or performed.¹⁶ Property law rules depend on where the property is located.¹⁷

The Internet makes it more difficult to localize legally relevant conduct than preceding technologies of commerce. Where is a contract made when it is executed by the invisible interaction of server and client software on computers located in two different countries, neither of which may be the habitual residence of the buyer or seller?¹⁸ Where does tortious injury occur when a wrongdoer located halfway around the world pirates intellectual property?¹⁹ Where does tortious injury occur when a hacker launches a denial of service attack that clogs up the routers representing the only gateway to an e-commerce vendor but located in another place arbitrarily determined by network engineers? Do the courts of Virginia have in rem jurisdiction over everyone doing business on the Internet through a dot-com domain name merely because the domain names are "located" on a root domain server in Virginia?²⁰

Because of difficulties in localizing conduct in Internet markets, allocating jurisdiction to a formal public institution is uncertain, even as a theoretical matter.²¹ The law is adaptive and creative, however, and making good progress in working out theoretical solutions to problems arising from new technologies. It is not intellectually difficult, when working from established principles of localizing trans-border activities, to formulate rules that localize Internet conduct.²²

The concept of targeting is one such solution to the difficulties in localizing conduct in Internet markets.²³ Targeting entails a market participant directing its sales or purchasing activity to a particular jurisdiction.²⁴ An Internet merchant wishing to reduce the uncertainty associated with potential regulation by nearly 200 national sovereigns and thousands of subordinate governmental entities can target only one or a few jurisdictions whose legal regime it understands and accepts. Alternately, if such a participant wishes to avoid the requirements or enforcement mechanisms of a particular sovereign, it can exclude or "de-target" that jurisdiction. A growing number of judicial decisions in the United States²⁵ and guidance issued by administrative agencies such as the Securities and Exchange Commission²⁶ are refining formulas for targeting and de-targeting.

The targeting concept avoids the uncertainty associated with subjecting an Internet merchant to the jurisdiction of any place where its Web site is visible,²⁷ which is usually everywhere in the world. On the other hand, extensive de-targeting has the effect of excluding consumers in de-targeted states from the benefits of global e-commerce.

B. Enforcement against Intermediaries

Concluding that the rules emanating from a particular legislature govern a transaction in a formal sense, or that a court or administrative tribunal has personal jurisdiction over a foreign e-commerce vendor, is not the end of the matter. The rules still must be enforced and the adjudicative decisions turned into monetary relief or practical

cessation of illegal conduct.²⁸ Meaningful enforcement and application depends upon the practicality of asserting coercive control over property or persons located within the boundaries of the rule issuing or adjudicating sovereign²⁹ or the willingness of other sovereigns to recognize and enforce foreign rules and decisions.³⁰ Whether such persons or property can be located, and whether transnational recognition and enforcement will occur, are additional, and potentially large, sources of uncertainty, in comparison to the uncertainty regarding theories of jurisdiction.

Although the Internet's virtual marketplace is indifferent to national borders and therefore sovereignty, it does depend upon physical devices, such as modems, telephone switching equipment, routers, radio transmitters, receivers, antennas and computers that function as servers and clients. While participants in small states conceivably can use the public switched telephone system to connect to Internet service providers located entirely outside their states,³¹ the typical merchant or consumer uses a local Internet service provider, who has leased lines, routers, and servers, and may have radio transmitting and receiving apparatus, in the same jurisdiction where the merchant or consumer is located. The legal system focuses on locally present property as a justification for jurisdiction and, more importantly, as the means for enforcing rules and decisions. This encourages legal institutions to impose liability on intermediaries as a way of reducing uncertainty with respect to jurisdiction and enforcement power over more remote actors who may bear more direct responsibility for disputed conduct.³²

While intermediary liability represents a potential solution to the legal uncertainty, it is also a source of additional transaction costs.³³ When intermediaries face liability for conduct engaged in by their customers, they have an incentive to exclude customers who may increase their risk. Risk averseness by intermediaries can undermine the Internet's potential as much as risk averseness by end users.

C. Hague Negotiation

Both localization and enforcement are under active discussion in the Hague Conference on Private International Law,³⁴ which has 100 years of experience in facilitating multilateral agreement among states on public law frameworks for private law.³⁵ Now, the Conference is considering a comprehensive treaty for judicial jurisdiction and enforcement of foreign civil judgments.³⁶ An October draft convention on international civil judgments is modelled closely on the European Brussels and Lugano Conventions. The Conference has an opportunity to work out basic ground rules for localizing conduct in Internet markets, through targeting and otherwise.³⁷ It also has an opportunity to define the relationship between private regulation and public enforcement.³⁸

As of this writing, the main controversies preventing agreement on the draft convention involve U.S. objections to limitations on general doing business jurisdiction, U.S. objections to extension of tort jurisdiction to the place of injury without regard to the purposefulness test of World Wide Volkswagen,³⁹ and the exclusion of consumer and employment contracts from choice of forum clauses. The last issue is of particular importance to the evolution of Internet-related ADR. Usually, the legal position of arbitration is determined with reference to forum selection clauses in contract. Disabling consumers from being able to agree on forum selection would be a setback for consumer ADR on the Internet.

D. The Role of Privately Made Law

Private international law long has held a place for private regulation through its acceptance of forum selection and choice of law clauses. A forum selection clause in the contract permits the contracting parties to waive their right to present a dispute to a public court and instead to present it to another tribunal—sometimes a court in another

country; sometimes arbitration. A choice of law clause permits parties to a contract to legislate, in the sense that they select a sovereign whose law should be applied to their dispute other than the sovereign whose laws otherwise would be applied.

Long standing controversies exist over the kinds of forums that qualify for deference in forum selection clauses. Uncertainty over whether private arbitration qualifies for forum selection was the stimulus for enactment of the Federal Arbitration Act in the United States and a negotiation of the New York Convention. The Internet renews the debate and increases uncertainty because of the proliferation of new kinds of dispute resolution mechanisms that do not qualify under traditional criteria for arbitration.

Party autonomy expressed through choice of law clauses traditionally has been even more limited. Some legal systems and commentators do not permit the parties to select as a source of law anything other than a state bearing some relationship to the transaction. Others would allow designation of any state, but disallow designation of private sources of law. On the other hand, as a matter of contract law, it is difficult to understand why the parties would lack legal competence to incorporate by reference the rules of a private standard setting body. If they can do that, logically they must be able to incorporate by reference the rules of any private body unless the content of a particular rule offends public policy. In a sense, defining the position of new dispute resolution systems—what one might call private regulatory systems—within traditional legal frameworks is a matter of elaborating private international law's forum selection and choice of law concepts. But even when this is done, that will not be enough; private regulation of the Internet is not limited to situations in which contractual relations exist.

III Categories of private regulation

As the introduction explained, private dispute resolution systems are but a subset of private regulation, which also includes rulemaking and enforcement. Developing the most appropriate legal framework for private dispute resolution requires understanding the available legal frameworks for private regulation in general.

Private regulation occurs in four basic situations: when public institutions delegate rulemaking and adjudication authority to private institutions or defer after the fact to private decisions, when those subject to private regulation consent in advance to the private regulatory regime, when private decisions are sufficiently acceptable to those affected by them that they acquiesce after the fact rather than presenting their disputes to public institutions, and when persons or entities in control of valuable resources issue rules and enforce them by threatening denial of access to the valuable right. The fourth situation presents greater challenges for structuring hybrid regulation because it lacks the enforcement and judicial-review connections inherent in the first two situations.

Few legal systems rely entirely on private regulation to protect consumers and small businesses. The traditional difficulty with private regulation is that it may not express the political consensus of democratic societies with respect to values to be enforced⁴⁰ or the balance of power to be struck between stronger and weaker market participants.⁴¹

Combining the jurisdictional strengths of private regulation, and the greater political legitimacy of public regulation requires development of new hybrid frameworks. Public law⁴² can set minimum, and relatively general, standards of conduct and provide backup enforcement, representing the boundaries of a space within which a multiplicity of private regulatory regimes can work out detailed rules and first-level dispute resolution and rule enforcement machinery.⁴³

The relatively general character of the public law rules makes it easier to achieve consensus among multiple sovereigns with different legal traditions and varying political alignments, while also excluding private regulatory regimes that might be insufficiently protective of weaker parties or too restrictive of competition and innovation in the absence of the public law framework.

A. Public law delegation and deferral

The first category of private regulation begins with public power to make and apply law, which is transferred to private entities.

Notwithstanding the “non delegation doctrine” which questions the loss of accountability resulting when public institutions performing legislative functions delegate their authority to private decision makers,⁴⁴ delegation of rulemaking power is commonplace in the modern regulatory state, including federal delegation to states,⁴⁵ delegation of authority to set standards for health care to the Joint Commission on Accreditation of Healthcare Organizations (“JCAHO”),⁴⁶ delegation of authority to approve minimum price orders to agricultural cooperatives,⁴⁷ delegation of rules and enforcement of airport security arrangements under the Federal Aviation Act, and delegation of authority over railroad trucking rates to Rate Bureaus. Newer examples include the COPPA Safe Harbor Statutory Provisions, and the US/EU Privacy Safe Harbor Agreement.

Deferral to private decisions is a slightly different concept. Public adjudicatory institutions have the power to decide disputes, but they abstain from deciding them in favor of private decisions when certain criteria are met. “National Labor Relations Board” (“NRLB”) deferral to collectively bargaining arbitration, suspension of judicial litigation in favor of private arbitration, and eventual enforcement of private arbitration awards under the Federal Arbitration Act and the New York Convention, and abstention by court in cases involving private association decisions all are examples.

In this context for private regulation, the inherent power of the public rulemaking and adjudicatory institutions represent the public law framework, while the exercise of delegated power and the making of decisions to which public institutions will defer, represent the private activity within the framework.

This context provides a robust source of criteria for making private decisionmaking accountable. The Delegation Doctrine in Administrative Law ensures accountability by requiring “channeling” of private decisionmaking through limits on the scope of the subject matter of the private actors, by enforcing procedural regularity, and by assuring judicial review of decisions.⁴⁸

B. Consent/waiver

Most private regulation occurs within a contractual framework, in which those bound by private regulatory decisions agree in advance to be bound. Private associations such as the Boy Scouts,⁴⁹ churches, condominium associations, AOL and Microsoft network all are examples. In this form of private regulation, contract identifies the legislators, judges, and sheriffs, and also defines subject matter, the processes for making, applying, and enforcing rules. The parties bound by private regulatory decisions are congruent with the parties to the contract.

Many private privacy regulatory regimes depend upon intermediaries to revoke membership or seals that immunize members or holders from direct action by public authorities.⁵⁰ In these circumstances, also, the legal framework is contractual.

While consent-based private regulatory regimes may appear purely private, they are not. Contract law developed and applied by public institutions provide a public law framework within which the private regimes operate. While usually denominated “private law” rather than “public law,” the frameworks nevertheless represent judgments by public institutions as to the permissible scope of private regulation.

Controversies over this kind of private regulation for the Internet center on the meaning of “consent.” Often, the terms of the contractual framework are determined not through negotiation among all affected parties, but by unilateral decision of one party. The law must specify what kind of conduct by the other party(ies) represents assent to the unilaterally developed terms. Whether subjecting oneself to the private regime represents legally effective consent turns on adequate notice of the terms, and on the availability of alternatives to a particular regime. This, in turn, invites evaluation of the “switching costs” for leaving one regime in favor of another.⁵¹

C. Acquiescence

Regardless of the construction of public law frameworks some private regulation will occur, in circumstances where participants voluntarily accept it, after the fact.

In many cases the effect of private decisionmaking depends, not on explicit delegation by public institutions, and not on before-the-fact consent to the private regulatory regime, but on the practical acceptability of the private decisions. Employees denied promotions or dismissed often accept the employer decisions—supervisory or appellate—rather than suing in court or filing charges with the NLRB or the Equal Opportunity Commission. Private litigants often accept the result of advisory arbitration or other dispute resolution mechanisms rather than pressing for a decision by a jury or judge. Most parties to credit card disputes apparently accept the result of the chargeback process rather than suing in court.

This category of private regulation definitionally assures accountability, because those adversely effected by private decisions can take their dispute to another level, eventually ending up before a public institution. Their power to acquiesce or to withhold acquiescence assures accountability to them.

D. Self-enforcing; direct deprivation of valuable right

The fourth category of private regulation presents the greatest accountability challenges. In this context, the power of private decision makers stems not from explicit or easily implied consent by those subject to the private governance, nor from explicit delegation of legal authority possessed by public institutions, but from de facto control over a valuable resource by private persons or entities. Self-help repossession of tangible chattels and private control of range land⁵² are pre-Internet examples.

Domain name regulation, regulation by private Internet and service content providers, and “Mail Abuse Prevention System” (“MAPS”) are examples in the Internet context.⁵³ The authority of ICANN and of domain name registrars derives not so much from the Department of Commerce/ICANN Memorandum of Agreement, as from the de facto control over the databases that translate domain names into IP addresses. By refusing to list a domain name in authoritative domain name servers, ICANN and domain name registrars can deprive one of access to the Internet. AOL and Microsoft Network can exclude subscribers from access to other subscribers under rules developed privately by the service providers.

MAPS represents an extension of this category of private regulation. The RBL is machinery for blocking access to the Internet. It was created by private unilateral

action. It is a valuable resource in the negative sense that one can use the Internet only by not being listed in the RBL.

This category of private regulation overlaps the first two categories to some extent. One can argue that electing to use a private resource represents legal consent to the private regulatory regime associated with the private resource. But this is an attenuated form of consent. Because the resource is valuable, switching costs may be so high as to be infinite. The consent question resolves into a switching cost question, which, in turn, resolves into questions whether the resource to which access potentially is denied can easily be duplicated by others.⁵⁴

How the law should provide a framework for this form of private regulation is problematic. U.S. law long has drawn a sharp distinction between public and private actors.

In *Flagg Brothers v. Brooks*,⁵⁵ the Supreme Court rejected the idea that self-help repossession represented state action, entitling the adversely affected party to the protections of the due process clause of the Fourteenth Amendment.⁵⁶ It referred to the “essential dichotomy between public and private acts.”⁵⁷ “While as a factual matter any person with sufficient physical power may deprive a person of his property, only a State or a private person whose action may be fairly treated as that of the State itself, may deprive him of an interest encompassed within the Fourteenth Amendment’s protection.”⁵⁸

The central question with respect to this category of private regulation is what form the public law framework should take. That depends, in turn, on the existence of a private right of action to challenge decisions by this category of private regulator, and on the criteria that would entitle the private regulator to a privilege or immunity. These questions cannot be resolved without also considering the appropriate prerogatives of those who control private property.

Buried beneath these questions of how past causes of action and models for controversies can be mapped to the Internet is the question whether access to the Internet represents a new kind of interest that should be entitled to legal protection; in other words, should access to the Internet be a right? Even if such a right should be recognized by legal systems, much heavy intellectual lifting remains to define the boundaries of that right.

E. Defensive private regulation

Private regulation often occurs as a defensive measure by intermediaries potentially subject to liability for information they handle. Usually these intermediaries find themselves in the fourth situation -- in control of valuable resources.

Internet service providers or telecommunications entities may be drawn into a regulatory role by the threat of liability imposed on them for the conduct of users of their services. To reduce the risk of liability, intermediaries who are subject to liability for harm caused by content originators have a strong incentive to exclude any content or commerce that poses a risk.⁵⁹ Defensive private regulation involves great risk of private censorship and exclusion of risky content and commerce.

IV. Legal Anchors for Alternative Dispute Resolution

Appropriately designed dispute resolution mechanisms offer lower costs, reassure participants, and solve jurisdictional problem because use of them manifests consent.

The experience of WIPO in adjudicating nearly a thousand domain name disputes shows the willingness of Internet users to submit their disputes to private dispute resolution institutions applying rules developed by private bodies.⁶⁰

A. The New Enforcement

Larry Lessig has helped us understand that Internet regulation can be profoundly different because enforcement of rules occurs through code rather than by the human intervention of judges and sheriffs.⁶¹

This means the elimination of the usual opportunity for public legal institutions to assure accountability of private rulemaking, adjudication, and enforcement at the point when an ADR decision is enforced in a regular court.

When code-based enforcement is involved, as often is the case in Internet disputes, new mechanisms, and some new criteria, must be used to assure accountability of private regulatory decisionmakers.

The need for new thinking and new doctrine is most obvious with respect to the development of causes of action to permit review of MAPS rules and rule application, but some commentators believe the same is necessary to reform ICANN rulemaking and adjudication as well.

V. Three new cases

Three cases involving Internet disputes make more concrete some of the open issues relating to choice of law and enforcement. All three of them involve enforcement or the possibility of enforcement through technical means, not requiring coercion by public authorities. Two of them involve revocation of domain names by domain registrars; the other involves enforcement by blocking IP addresses of rule violators.

The three cases differ in the source of rules applied. The first involved application of a rule developed and promulgated by ICANN, and adjudication by the WIPO domain name dispute resolution process—one of the most successful alternative dispute resolution systems for the Internet.

The second involved application of a criminal statute of the State of Illinois to a Web server based in Austria. The adjudicator in this case was a regular Illinois court of general jurisdiction.

The third case is the most interesting because it raises the most novel issues and presents the greatest challenges for designing hybrid regulatory systems for the Internet. In it, the rule maker was a private individual, with no contractual relationship with those to whom the rule is applied, and there was no independent adjudicator.

A. Walmartcanadasucks

Wal-Mart Stores, Inc v. walmartcanadasucks.com, Case No. D2000-1104, was the third case involving disputes between the respondent and Wal-Mart. The two earlier cases, involving domain names confusingly similar to the Wal-Mart trademark, were resolved in Wal-Mart's favor. The third case involved a much narrower question: whether a domain name including the suffix "sucks" can be confusingly similar to the text string to which "sucks" is appended. The sole panelist, the author of this paper, concluded that a domain name including the word "sucks" cannot be confusingly similar, and that a privilege for criticism and parody reinforces that conclusion.

The respondent hardly had clean hands. He had been found in the past to be a cybersquatter with respect to this complainant.

But, the panel concluded, distasteful conduct should not stampede UDRP decision makers into an unwarranted expansion of the domain name dispute process. The UDRP has a narrow scope. It is meant to protect against trademark infringement, not to provide a general remedy for all misconduct involving domain names. Posting defamatory material on a Web site would not justify revocation of a domain name under the UDRP. Posting child pornography on a Web site would not justify domain name revocation. While a domain name registrar may be privileged to revoke a domain name for "illegal use" under § 2 of the Uniform Registration Agreement, whether a use is illegal in general is beyond the subject matter jurisdiction of an administrative panel under the UDRP.

Transfer or revocation of a domain name as a remedy in a dispute panel proceeding is authorized only when the panel finds (1) that the domain name is identical to or confusingly similar to a trademark and (2) when there is bad faith.

Bad faith, no matter how egregious, cannot supply a likelihood of confusion where it does not otherwise exist. Suppose the owner of the trademark Acmebytes registers and uses the domain name Acmebytes.com. Suppose further that the proprietor is named Agnes. If someone registers the domain name "agnesisawitch.com" and offers to surrender it in exchange for the payment of money, the bad faith elements of the ICANN policy no doubt would be satisfied. But Agnesisawitch.com is not confusingly similar to Acmebytes.com and the presence of bad faith cannot make it so.

I do not see how a domain name including "sucks" ever can be confusingly similar to a trademark to which "sucks" is appended. But whether or not a per se privilege for use of "sucks" is appropriate, the record in this case did not support a finding that the ICANN policy was violated.

Thus whether walmartcanadasucks is effective criticism of Wal-Mart, whether it is in good taste, whether it focuses on the right issues, all are immaterial; the only question is whether it is criticism or parody rather than free-riding on another's trade mark.

Because the accused domain name was not identical or confusingly similar to a trademark or service mark in which the complainant has rights, I concluded that the complainant did not establish the elements of a violation of the ICANN Policy.

B. Voteauction.com

In October, 2000, the Chicago Board of Election Commissioners became concerned that a Web site located in Austria, voteauction.com, had the potential to corrupt or, at least, to undermine confidence in the general election subsequently held on 7 November 2000 in Chicago and elsewhere in the United States. voteauction.com solicited voters in the then forthcoming election to offer to sell their votes, and also solicited persons interested in buying those votes. The Web site was constructed so that offers to sell and offers to buy were made by filling out a form that included the address, with a pull down list including Illinois as an option. Moreover, the Web site also included a summary of outstanding offers with Illinois as a specific listing. There was, thus, little difficulty in concluding that Illinois courts could exercise jurisdiction over the Web

site under the Zippo Continuum⁶² and the targeting concept of Millennium Enterprises.⁶³

Accordingly, the Board of Election Commissioners filed a civil lawsuit in the Circuit Court of Cook County against voteauction.com and its individual organizers and managers.

But the existence of theoretical jurisdiction was not enough; any judgment also must be enforced, and the procedures for transnational enforcement of judgments not only are uncertain, they would take months. The election was scheduled in weeks.

So, the Election Commissioners thought about practicable enforcement measures that might be taken against property located in the jurisdiction, or at least in the United States. One possibility was to target the domain name, “voteauction.com.” Such an approach had been suggested by the author of this article in “Will the Judgment Proof Own Cyberspace.”⁶⁴ The offending domain name was present in Illinois—and hundreds or thousands of domain name servers supporting hundreds or thousands of Internet service providers in the vicinity of Chicago. But litigating against all those ISPs quickly was ruled out. Instead, voteauction.com’s domain name registrar, Domain Bank, was named as a defendant in the lawsuit, and the draft injunction attached to the complaint included a paragraph ordering that the domain name be withdrawn or cancelled. In October 2000, Judge Murphy of the Circuit Court of Cook County Illinois signed the injunction after a hearing.

Domain Bank had been notified of the lawsuit, and had engaged in extensive telephonic discussions with counsel for the Election Commissioners. Domain Bank had, in its standard domain name registration agreement, a provision prohibiting the use of domain names for “illegal purposes.” After the injunction was issued, signifying a judicial determination that the domain name was being used illegally, Domain Bank cancelled the voteauction.com domain name, shutting down voteauction.com all over the world.

But celebrations of victory in Chicago were tentative, and sure enough, about a week later voteauction.com opened up under a new domain name, “**vote-auction.com**,” and this domain name was registered in Switzerland with CORE. But CORE had a similar prohibition against illegal use in its standard domain name registration agreement. After extensive telephonic and email discussions between counsel for the Election Commissioners and counsel for CORE, CORE also cancelled the **vote-auction.com** domain name, once again shutting the site down. Subsequently, voteauction.com sought to publicize its IP address, the use of which would avoid the domain name system all together, but by then, the election had been held.

The voteauction.com litigation illustrates an interplay between public and private regulation different from walmart. The lawsuit and the injunction obviously were traditional adjudicatory processes by a court—a paradigmatic public institution. But an important part of the overall result turned on the private rule, promulgated by a private institution—the domain name registrars—that prohibited illegal use of the domain name. Based on the determination of illegality by the public institution, the private institution used its power over an asset—the domain name—to achieve the result desired by the complainant. Voteauction.com can be understood to be an interesting case about judicial jurisdiction, but it also is about enforcement of a very broad rule by a private intermediary.

Voteauction.com involved the inverse of the usual relationship between public and private institutions. In voteauction.com, the public courts in Illinois performed the adjudicatory function, and the private domain name registrars decided whether to enforce the judicial decision. Because no injunction clearly supported by personal jurisdiction bound either of the domain name registrars, their actions in revoking voteauction’s domain name privileges is best understood as purely private action, informed by the public determination by the Circuit Court of Cook County.

Voteauction.com also showed the importance and practicability in working out the boundary between public and private regulation. In some theoretical sense, it would have been better to have enforced the injunction against domain name translation in or near Chicago. That would have kept the enforcement action within the sovereign whose laws were being enforced. It also would have comported more comfortably with geographic limits on the jurisdiction of the court issuing the injunction. But doing

that was impracticable, given the large number of ISPs and uncertain patterns of use. It was much easier under tight time deadlines imposed by the proximity of the election, to focus enforcement efforts on a single intermediary, the first located in another state but within the United States, and the second located in a foreign country. The theoretical jurisdictional grounds were shakier, but enforcement at this level was practicable.

C. The MAPS Controversy

The MAPS⁶⁵ is a form of private regulation that operates completely outside a public law framework. MAPS is a nonprofit California corporation that allows ISPs and email service providers to exclude spam⁶⁶ from their systems. MAPS maintains a list of IP addresses, known as the “Realtime Blackhole List” (“RBL”),⁶⁷ and permits MAPS subscribers automatically to exclude from their systems any email message originating from one of the listed IP addresses. Some 20,000 ISPs, corporations, government agencies and individuals, comprising some 40% of the Internet, subscribe to MAPS.⁶⁷

MAPS has published rules, known as “Basic Mailing List Management Principles for Preventing Abuse” (BMLMPPA),⁶⁸ which purport to state Internet standards and best current practices for proper mailing list management. Among other things the rules require use of a “double opt-in procedure”⁶⁹ before mail can be sent to a particular addressee. Complaints about mailers not complying with the rules result in the mailer being put on the RBL,⁷⁰ and owners of IP addresses on the RBL can be removed only by satisfying MAPS they will comply in the future.⁷¹

MAPS illustrates the fourth type of private-regulation identified in § III -- regulation enabled by control of a valuable private resource. And MAPS starts, not with ownership of the valuable private resources; the resources are owned by thousands of private internet service providers. MAPS uses technology, “code” in Professor Lessig’s parlance, to extend its private decisions into control of resources owned by others.

In August 2000, Harris Interactive, Inc., a public opinion survey organization used MAPS and a number of its subscribers in the United States District Court for the Western District of New York.⁷² The complaint alleges tortious interference with business and contractual relations,⁷³ commercial disparagement,⁷⁴ negligent breach of a duty to administer the RBL in a fair and evenhanded manner,⁷⁵ violation of New York general business law prohibiting deceptive and confusing consumer communications,⁷⁶ defamation per se,⁷⁷ conspiracy to interfere tortiously with plaintiff’s business,⁷⁸ federal antitrust violations for concerted refusal to deal,⁷⁹ attempted monopolization,⁸⁰ monopolization,⁸¹ conspiracy to monopolize by refusal to deal,⁸² forming and operating a trade association that unreasonably restricts competition,⁸³ and violation of the New York “Donnelly Act.”⁸⁴ The suit requests compensatory damages in excess of \$50 million and punitive damages.

The Harris lawsuit reveals the dilemmas faced by a self-regulatory intermediary. The lawsuit alleges that MAPS placed Harris on the RBL without good cause,⁸⁵ and without reasonably investigating facts or giving Harris an opportunity to be heard,⁸⁶ that it promulgated standards that interfered with legitimate communications,⁸⁷ and that it imposed conditions for removal from the RBL that were arbitrary and unreasonable.⁸⁸ The suit thus challenges the content of the private rules, claims absence of due process in applying them, and illegality in the sanctions imposed for violating the rules.

On November 15, 2000, Exactis.com, Inc. sued MAPS in the United States District Court for the District of Colorado,⁸⁹ alleging claims under the Colorado Wiretapping Act, blocking communications in violation of state law,⁹⁰ the Colorado Organized Crime Control Act,⁹¹ the Sherman Act,⁹² the Colorado Unfair Trade Practices Act,⁹³ intentional interference with contractual relations,⁹⁴ intentional and negligent misrepresentation and extortion,⁹⁵ trade disparagement, and unfair competition. Exactis alleged that among the services blocked by MAPS was requested confirmations of brokerage transactions by Charles Schwab.⁹⁶ The complaint alleges a disagreement over the specific procedures to be used to ensure that a recipient wishes to receive email transmitted through Exactis’s service, MAPS insisting on double opt in, Exactis utilizing measures “different from, but not less effective than” double opt in.⁹⁷

One can only speculate as to possible outcomes of the litigation. One obvious possibility is that the MAPS self-regulatory regime be allowed to continue according to the desires of its owners and subscribers. Another possibility is that the regime will be shut down under an injunction or because of the magnitude of damages imposed or sought. Or, the court might impose conditions on continued operation of the regulatory regime, analogous to those imposed in the past on private standard-setting organizations,⁹⁸ requiring substantive support for the content of rules and due process in their application and enforcement. Finally, the controversy, and others like it may stimulate legislative action to channel such private self-regulatory activities.

The MAPS form of private regulation easily could be extended to other areas. The Christian Right could organize a blacklist for ISPs that handle material that undermines family values. The intellectual property community could organize a blacklist for ISPs that do not have sufficiently stringent policies to discourage infringement. Consumers groups could organize blacklists for ISPs that allow online merchants to operate without appropriate return and refund policies.

In all of these cases, ISPs could be coerced into “subscribing” to the blacklist by threats that any non-subscribing ISP will be treated like an ISP that handles offending material. Confronted with the threat of being blacklisted, most ISPs would prefer to subscribe and thus become a part of an ever-expanding governance regime, adopting the rules unilaterally determined by the organizer of the blacklist.

Now David Post thinks all of this is just fine: “The MAPS ‘vigilantes’ (bad) can just as easily be characterized as ‘activists’ (good), and the kind of ‘bottom-up,’ uncoordinated, decentralized process of which the RBL is a part strikes me as a perfectly reasonable way to make ‘network policy’ and to ‘answer fundamental policy questions about how the Net will work.’”⁹⁹

For Post, it is sufficient that the government does not administer the RBL; a private entity does.

Post’s preference for private ordering over what he calls “collective” regulation apparently is premised on the possibility of Internet participants freely choosing which regulatory regime they prefer. It is not clear how this process of choice is supposed to work with MAPS. Presumably, Post would say that ISPs are free to subscribe to MAPS or not. That freedom may be illusory if MAPS itself or a future elaboration of MAPS were to blacklist any ISP who does not subscribe.

Moreover, an interest conflict exists between subscribing ISPs and ISPs handling “Unsolicited Commercial E-mail” (“UCE”). The former want to eliminate the costs of handling certain types of inbound email; the latter want to use the Internet as a unified whole, any part of which is reachable from any other part. Why should one side of the value argument get to make the decision, because it is in a position to use code to enforce its decision? If the UCE handlers develop code that will circumvent the RBL, should that reverse the value decision? That apparently is the world that Post would prefer.

D. Mechanisms of Accountability

Internet-related private regulation and alternative dispute resolution is a reality. As these new legal regimes make rules and apply and enforce them, some affected parties will be disappointed. Every dispute resolution panel proceeding produces a loser. Blacklists implemented through code adversely affect those on the blacklist. Lawsuits in the regular courts provide new data for advocates of different approaches to transnational jurisdiction and judgment execution. Consider the three cases reviewed. Wal-Mart is free to file a trademark infringement action in court and seek a result different from that in Case Number 2000-1104. The case against voteauction.com is still pending in the Circuit Court of Cook County. Further proceedings may complicate the initial outcomes. In any event, as the case becomes better known, domain

names registrars may be pressured to change their responses to judicial findings like that in the [voteauction.com](#) case.

MAPS provides the most fertile ground for development of hybrid regulatory concepts further. Because the MAPS blacklist is self enforcing, it is not obvious how courts or other public institutions can assure accountability by MAPS. The pending litigation, however, and other possible reactions to MAPS should illuminate causes of action and standards of review that can enable judicial scrutiny of the objective rationality and procedural transparency of private regulatory regimes. As these legal doctrines evolve, it also may be appropriate to develop a better understanding of the interests of Internet participants in having access to the Internet as a whole and how those interests might be legally protected without turning Internet service providers—including those who want access—into common carriers.

VI. Conclusion

Greater use of alternative dispute resolution is necessary to allow the Internet to fulfill its potential. Hybrid legal frameworks always have been necessary to make alternative dispute resolution effective, and the same is true for Internet-oriented ADR. In designing these hybrid frameworks for the Internet, however, greater attention must be paid to the source of rules and to enforcement because new rulemaking institutions have arisen, and code permits enforcement without the involvement of publicly accountable sheriffs and judges. MAPS provides especially fertile ground for exploring and eventually adopting some new techniques for assuring accountability of private regulators.

VI. CONCLUSION	92

I. INTRODUCTION.¹

1. The Internet has heightened interest in private international law and in alternative dispute resolution. The Internet's low economic barriers to entry invite participation in commerce and politics by small entities and individuals who cannot afford direct participation in many traditional markets and political arenas. These low barriers to entry, and greater participation by individuals and small entities, also encourage a greater incidence of small transactions. When dispute resolution costs are high, as they are for traditional administrative and judicial procedures, the transaction costs of dispute resolution threaten to swamp the value of the underlying transaction,² meaning on the one hand that victims are less likely to seek vindication of their rights and, on the other hand, that actors and alleged wrongdoers may face litigation costs that outweigh the advantages of their offering goods and services in the new electronic markets. To realize the potential of participation by small entities and individuals and of small transactions, it is necessary to reduce the costs of dispute resolution.

2. Second, the geographic openness of electronic commerce makes more likely stranger-to-stranger transactions. The absence of informal means of developing trust, as when one shops regularly at the local bookstore, means that both merchants and consumers will be inhibited in engaging in commerce unless they have some recourse if the deal goes sour. Some accepted form of dispute resolution must be available to establish the requisite confidence for commerce to occur at all.

3. Third, the Internet is inherently global. Goods offered for sale on a Web page published on a server physically located in Kansas are as visible to consumers in Kosovo as in Kansas. In other words, it is difficult to localize injury-producing conduct or the injury itself in Internet-based markets or political arenas. Traditional dispute resolution machinery and private international law rules depend upon localization to determine jurisdiction.³ Impediments to localization create uncertainty and controversy over assertions of jurisdiction. That uncertainty has two results. It may frustrate communities who resent being unable to reach through their legal machinery conduct occurring in a far off country. It also subjects anyone participating in the Internet to jurisdiction by any one of nearly 200 countries in the world, and in many cases, to their subordinate political units.

4. Even if negotiations succeed over an international treaty on civil judgment enforcement,⁴ that is not enough. A treaty will help reduce uncertainty. But a treaty will not solve the problem of a furniture manufacturer in Thomasville, North Carolina, who sells furniture through the Internet. The treaty may say that the furniture manufacturer must litigate

¹ The author is the Dean and Professor of Law, Chicago-Kent College of Law, Illinois Institute of Technology; member National Research Council Computer Science and Telecommunications Board; author, *Law and the Information Superhighway* (2d ed. Aspen Law & Business 2000); member of the bar: Virginia, Pennsylvania, District of Columbia, Maryland, Illinois, United States Supreme Court. This article summarizes analysis and conclusions developed more fully in Henry H. Perritt, Jr., *Economic and Other Barriers to Electronic Commerce*, 21 U.P.A.J.INT'L ECON.L. 563 (2000); Henry H. Perritt, Jr., *Dispute Resolution in Cyberspace: Demand for New Forms of ADR*, 15 OH. ST. J. DIS. RES. 675 (2000). The accountability mechanisms ideas will be explored further in a forthcoming article in the University of Chicago Legal Forum.

² It is irrational to spend \$5,000 or \$10,000 for a lawsuit over a \$300 transaction.

³ See Restatement (Third) of the Law of Foreign Relations of the United States § 401 (1987) (describing bases for jurisdiction).

⁴ See § II(C).

in, let's say, Tirana, Albania where one of his customers is. That is not a very attractive proposition if the manufacturer sold \$1,000 worth of furniture, because it will cost it more to litigate there than the transaction was worth. And if the treaty says that the furniture manufacturer gets to litigate at home, in North Carolina, that won't be a very attractive proposition for the purchaser of the furniture in Tirana, Albania. New forms of dispute resolution can cross boundaries easily and reduce uncertainty with respect to applicable law and enforceability.

5. For electronic commerce and political discourse to flourish in the Internet, new forms of alternative dispute resolution must be designed and deployed. While much of the responsibility for creative design and practicable deployment depends on private initiative rather than governmental mandates, attention also must be paid to the position of private regulation in an overarching legal framework.

6. The Internet needs not only alternative dispute resolution in the adjudicatory sense—as in arbitration and mediation. It also needs rules made by private entities which get applied in alternative dispute resolution forums. Private rulemaking is much more common than many people assume. America Online and Microsoft Network make rules for subscribers; “Internet Corporation for Assigned Names and Numbers” (“ICANN”) makes rules for application in domain name disputes; seal organizations such as Truste make rules for those who wish to use the seal or maintain their membership in a private ordering regime; increasingly, filters and blacklists are being developed that embody rules for conduct in computer code. For these private rulemaking activities, even more than for private adjudicatory activities, public institutions must determine what is permissible and what is not; what will subject the rule maker to liability and what should be privileged.

7. Dispute resolvers outside the context of pure mediation where only party-identified interests count, must be able to make enforceable decisions. Once the dispute resolver has made a decision, that decision must be enforced against the losing party. Absent any possibility for coercive enforcement, the losing party has little incentive to comply voluntarily.⁵

8. Many arbitration systems allow the parties, the arbitrators, and analysts of the process to take the rules and the enforcement for granted. The arbitrator looks to a contract or ordinary law as the source of rules to be applied. The New York Convention and/or national arbitration statutes provide for judicial enforcement for any arbitration award.

9. But alternative dispute resolution systems for the Internet offer new sources of rules and of enforcement, making it desirable to think more deeply about rulemaking and enforcement as part of the overall matrix of alternative dispute resolution for the Internet. Within the analytical framework of private international law, one needs to think about choice of law⁶ and enforcement⁷ as well as forum selection.⁸

⁵ Exceptions may exist when the dispute arises and is resolved in the context of an ongoing relationship. Then, the losing party may comply in order to avoid damage to the relationship.

⁶ What systems of substantive law may be reference points for deciding cases: systems originating with private entities as well as with states? If so, what qualifies as a legitimate private source of law?

⁷ What kinds of private decisions are eligible for enforcement by public officers backed up by coercion? When enforcement takes place privately, what kinds of private enforcement actions give rise to civil or criminal liability?

II RECENT DEVELOPMENTS IN PRIVATE INTERNATIONAL LAW

A. Localization

10. All modern legal systems are pragmatic, in the sense that they limit formal prerogatives according to the practicability of exercising power which is subject to physical limits of space.⁹ In public and private international law, this translates into the concept of sovereignty. A state's power within its own boundaries is plenary,¹⁰ only recently limited by universal conceptions of human rights.¹¹ Outside its boundaries, exercise of coercive power is aggression¹² because it necessarily intrudes upon the sovereign prerogatives of other states. Legislatures and other rule makers may not extend their law to persons lacking relevant connections to the (geographically defined) state of the rule maker.¹³ Courts and other dispute resolution bodies may not make decisions or apply rules to persons lacking connections with their "geographically defined" venues.¹⁴

11. Concepts of prescriptive and adjudicative jurisdiction have evolved to accommodate commerce extending beyond the boundaries of a particular sovereign, but the jurisdictional concepts still depend upon localizing conduct. Tort law rules depend on where injuries

[Footnote continued from previous page]

⁸ What is the class of permissible forums the parties can select and have their selection respected by the regular courts?

⁹ See *Pennoyer v. Neff*, 95 U.S. 714, 722 (1877) (discussing how, in the United States, each state enjoys sovereignty over persons within its territory, except as limited by the Constitution).

¹⁰ See U.N. CHARTER art. 2, paras. 4, 7 (stating that the United Nations does not have the authority to interfere with a state's domestic sovereignty).

¹¹ See *Regina v. Bartle*, (H.L. Mar. 24 1999), available at <http://www.parliament.the-stationery-office.co.uk/pa/ld199899/ldjudgmt/jd990324/pino1.htm> (allowing extradition of former head of state for violation of torture convention); Julie Mertus, *Reconsidering the Legality of Humanitarian Intervention: Lessons from Kosovo*, 41 WM. & MARY L. REV. 1743, 1752-53 (2000) (offering interpretation of U.N. Charter that reconciles conflict between sovereignty and human rights law); Elizabeth E. Ruddick, *The Continuing Constraint of Sovereignty: International Law, International Protection, and the Internally Displaced*, 77 B.U. L. REV. 429, 449 (1997) (discussing conflict between human rights law and sovereignty).

¹² See John Linarelli, *An Examination of the Proposed Crime of Intervention in the Draft Code of Crimes against the Peace and Security of Mankind*, 18 SUFFOLK TRANSNAT'L L. REV. 1 (1995) (explaining difficulty in defining aggression in international law); Leila Nadya Sadat & S. Richard Carden, *The New International Criminal Court: An Uneasy Revolution*, 88 GEO. L.J. 381, 440 (2000) (explaining concept of aggression in evolution of humanitarian law); Walter Gary Sharp, Sr., *International Obligations to Search for and Arrest War Criminals: Government Failure in the Former Yugoslavia?* 7 DUKE J. COMP. & INT'L L. 411, 426 (1997) (explaining difficulty in justifying enforcement of prohibition against war crimes in territory of another state).

¹³ See *Phillips Petroleum*, 472 U.S. at 804 (requiring connection between controversy and state whose law is to be applied).

¹⁴ See *Asahi*, 480 U.S. at 102 (requiring purposeful availment of the benefits of the sovereign asserting jurisdiction); *World-Wide Volkswagen Corp. v. Woodson*, 444 U.S. 286 (1980) (refining the "minimum contacts" standard set forth in *International Shoe Co. v. Washington*); *Zippo Mfg. V. Zippo Dot Com*, 952 F. Supp. 1119 (W.D.Pa. 1997) (holding that the defendant purposefully availed itself of doing business in the forum state).

occur;¹⁵ contract law rules depend on where contracts are made or performed.¹⁶ Property law rules depend on where the property is located.¹⁷

12. The Internet makes it more difficult to localize legally relevant conduct than preceding technologies of commerce. Where is a contract made when it is executed by the invisible interaction of server and client software on computers located in two different countries, neither of which may be the habitual residence of the buyer or seller?¹⁸ Where does tortious injury occur when a wrongdoer located halfway around the world pirates intellectual property?¹⁹ Where does tortious injury occur when a hacker launches a denial of service attack that clogs up the routers representing the only gateway to an e-commerce vendor but located in another place arbitrarily determined by network engineers? Do the courts of Virginia have in rem jurisdiction over everyone doing business on the Internet through a dot-com domain name merely because the domain names are “located” on a root domain server in Virginia?²⁰

13. Because of difficulties in localizing conduct in Internet markets, allocating jurisdiction to a formal public institution is uncertain, even as a theoretical matter.²¹ The law is adaptive and creative, however, and making good progress in working out theoretical solutions to problems arising from new technologies. It is not intellectually difficult, when working from established principles of localizing trans-border activities, to formulate rules that localize Internet conduct.²²

14. The concept of targeting is one such solution to the difficulties in localizing conduct in Internet markets.²³ Targeting entails a market participant directing its sales or purchasing

Or. 1999) (explaining *Zippo* continuum as a “sliding scale” under which the “likelihood that personal jurisdiction can be constitutionally exercised is directly proportionate to the nature and quality of commercial activity that an entity conducts over the Internet” and suggesting that jurisdiction exists over Web sites only when the forum

activity to a particular jurisdiction.²⁴ An Internet merchant wishing to reduce the uncertainty associated with potential regulation by nearly 200 national sovereigns and thousands of subordinate governmental entities can target only one or a few jurisdictions whose legal regime it understands and accepts. Alternately, if such a participant wishes to avoid the requirements or enforcement mechanisms of a particular sovereign, it can exclude or “de-target” that jurisdiction. A growing number of judicial decisions in the United States²⁵ and guidance issued by administrative agencies such as the Securities and Exchange Commission²⁶ are refining formulas for targeting and de-targeting.

15. The targeting concept avoids the uncertainty associated with subjecting an Internet merchant to the jurisdiction of any place where its Web site is visible,²⁷ which is usually everywhere in the world. On the other hand, extensive de-targeting has the effect of excluding consumers in de-targeted states from the benefits of global e-commerce.

B. Enforcement against Intermediaries

16. Concluding that the rules emanating from a particular legislature govern a transaction in a formal sense, or that a court or administrative tribunal has personal jurisdiction over a foreign e-commerce vendor, is not the end of the matter. The rules still must be enforced and the adjudicative decisions turned into monetary relief or practical cessation of illegal conduct.²⁸ Meaningful enforcement and application depends upon the practicality of asserting coercive control over property or persons located within the boundaries of the rule issuing or adjudicating sovereign²⁹ or the willingness of other sovereigns to recognize and enforce

[Footnote continued on next page]

foreign rules and decisions.³⁰ Whether such persons or property can be located, and whether transnational recognition and enforcement will occur, are additional, and potentially large, sources of uncertainty, in comparison to the uncertainty regarding theories of jurisdiction.

17. Although the Internet's virtual marketplace is indifferent to national borders and therefore sovereignty, it does depend upon physical devices, such as modems, telephone switching equipment, routers, radio transmitters, receivers, antennas and computers that function as servers and clients. While participants in small states conceivably can use the public switched telephone system to connect to Internet service providers located entirely outside their states,³¹ the typical merchant or consumer uses a local Internet service provider, who has leased lines, routers, and servers, and may have radio transmitting and receiving apparatus, in the same jurisdiction where the merchant or consumer is located. The legal system focuses on locally present property as a justification for jurisdiction and, more importantly, as the means for enforcing rules and decisions. This encourages legal institutions to impose liability on intermediaries as a way of reducing uncertainty with respect to jurisdiction and enforcement power over more remote actors who may bear more direct responsibility for disputed conduct.³²

[Footnote continued from previous page]

2000) (discussing the practical application of the Brussels Convention to enforce foreign judgments).

³⁰ *Compare* de la Mata v. Am. Life Ins. Co., 771 F. Supp. 1375, 1383 (D. Del. 1991) (holding that reciprocity is not a prerequisite to recognition of a judgement) *with* Hilton v. Guyot, 159 U.S. 113, 228 (1895) (holding that comity requires reciprocity).

³¹ An example would be a consumer located in Skopje, Macedonia, who places a long distance telephone call to a Microsoft Network point of presence in Frankfurt, Germany.

³² See Kim L. Rappaport, *In the Wake of Reno v. ACLU: The Continued Struggle in Western Constitutional Democracies with Internet Censorship and Freedom of Speech Online*, 13 AM. U. INT'L. REV. 765, 790-91 (1998) (describing prosecution of CompuServe executive for material on Internet site that violated German Information and Communications Services Act). In mid-2000 an anti-Nazi group in France sued Yahoo! for making available material through an American Internet site that contravened French law. See Steve Bold, *Yahoo! In Online Auction Legal Spat with French Authorities*, NEWSBYTES NEWS NETWORK, May 16, 2000, available at 2000 WL 21177244. On November 20, 2000, in LICRA and French Union of Jewish Students v. Yahoo! Inc., the Country Court of Paris ordered Yahoo! Inc. to comply with a May 22 order within 3 months from notification, subject to a penalty of 100,000 Francs per day of delay effective from the first day following the expiration of the 3 months period. The May 22, order stated that Yahoo! Inc. must 1) take all necessary measures to make impossible access to Nazi merchandise or any other site or service that may be construed "as an apology for Nazism or contesting the reality of Nazi crimes;" 2) to warn all Internet surfers before proceeding with searches on yahoo.com of the risks involved in continuing to view such sites; and 3) continued the proceeding to allow Yahoo to submit for deliberation by all the interested parties the measures it proposes to take to "put an end to the trouble and damage suffered and to prevent any further trouble." To do so, Yahoo must not allow surfers of French nationality or calling from French territory to access Nazi merchandise or any other site or service that may be construed "as an apology for Nazism or contesting the reality of Nazi crimes." Yahoo is also required to warn all Internet surfers before proceeding with searches on yahoo.com of the risks involved in continuing to view such sites. Furthermore, the Court ordered a three month continuance of the proceeding to allow Yahoo to submit for deliberation by all the interested parties the measures it proposes to take to "put an end to the trouble and damage suffered and to prevent any further trouble." Furthermore, Yahoo is ordered to make payment of 10,000 Francs to each of the plaintiffs. The Court reasoned that even though the "Yahoo Auctions" site does generally target surfers based in the United States, auctions involving symbols of Nazi

[Footnote continued on next page]

18. While intermediary liability represents a potential solution to the legal uncertainty, it is also a source of additional transaction costs.³³ When intermediaries face liability for conduct engaged in by their customers, they have an incentive to exclude customers who may increase their risk. Risk averseness by intermediaries can undermine the Internet's potential as much as risk averseness by end users.

C. Hague Negotiation

19. Both localization and enforcement are under active discussion in the Hague Conference on Private International Law,³⁴ which has 100 years of experience in facilitating multilateral agreement among states on public law frameworks for private law.³⁵ Now, the Conference is considering a comprehensive treaty for judicial jurisdiction and enforcement of foreign civil judgments.³⁶ An October draft convention on international civil judgments is modelled closely on the European Brussels and Lugano Conventions. The Conference has an opportunity to work out basic ground rules for localizing conduct in Internet markets, through targeting and otherwise.³⁷ It also has an opportunity to define the relationship between private regulation and public enforcement.³⁸

20. As of this writing, the main controversies preventing agreement on the draft convention involve U.S. objections to limitations on general doing business jurisdiction, U.S. objections to extension of tort jurisdiction to the place of injury without regard to the purposefulness test

[Footnote continued from previous page]

ideology "may be of interest to any person." Furthermore, Yahoo is aware of addressing French viewers because French parties making connections to Yahoo auction site from a terminal located in France receive Yahoo advertising banners written in the French language. The Court stated that the act of displaying objects of Nazi ideology in France is a violation of Article R645-1 of the Penal Code and thus is a "threat to internal public order." The Court also stated that the technical measures and the initiatives at its disposal "in the name of the simple public morality" give Yahoo an opportunity to satisfy the injunctions of the May 22, order. The two technical procedures identified by the Court, geographical identification and user declaration of nationality, would allow Yahoo! Inc. to filter out French IP addressed at a success rate of 90 %.

³³ When intermediaries are concerned about potential liability, they include the expected value of liability into their costs of doing business.

³⁴ <http://www.hcch.net/e/workprog/jdgm.html>.

³⁶ <http://www.hcch.net/e/workprog/jdgm.html> (draft convention and associated analyses).

³⁷ http://www.ali.org/ali/Intl_Juris_Proj.htm (analyses of Hague Conference efforts by ALI)

³⁸ In an experts conference convened by the Hague Conference in Ottawa in 2000, the author suggested that the draft convention exception for choice of forum clauses enforceability for consumer contracts could be conditioned on the consumers not having available to them an acceptable private dispute resolution alternative .

of World Wide Volkswagen,³⁹ and the exclusion of consumer and employment contracts from choice of forum clauses. The last issue is of particular importance to the evolution of Internet-related ADR. Usually, the legal position of arbitration is determined with reference to forum selection clauses in contract. Disabling consumers from being able to agree on forum selection would be a setback for consumer ADR on the Internet.

D. The Role of Privately Made Law

21. Private international law long has held a place for private regulation through its acceptance of forum selection and choice of law clauses. A forum selection clause in the contract permits the contracting parties to waive their right to present a dispute to a public court and instead to present it to another tribunal—sometimes a court in another country; sometimes arbitration. A choice of law clause permits parties to a contract to legislate, in the sense that they select a sovereign whose law should be applied to their dispute other than the sovereign whose laws otherwise would be applied.

22. Long standing controversies exist over the kinds of forums that qualify for deference in forum selection clauses. Uncertainty over whether private arbitration qualifies for forum selection was the stimulus for enactment of the Federal Arbitration Act in the United States and a negotiation of the New York Convention. The Internet renews the debate and increases uncertainty because of the proliferation of new kinds of dispute resolution mechanisms that do not qualify under traditional criteria for arbitration.

23. Party autonomy expressed through choice of law clauses traditionally has been even more limited. Some legal systems and commentators do not permit the parties to select as a source of law anything other than a state bearing some relationship to the transaction. Others would allow designation of any state, but disallow designation of private sources of law. On the other hand, as a matter of contract law, it is difficult to understand why the parties would lack legal competence to incorporate by reference the rules of a private standard setting body. If they can do that, logically they must be able to incorporate by reference the rules of any private body unless the content of a particular rule offends public policy. In a sense, defining the position of new dispute resolution systems—what one might call private regulatory systems—within traditional legal frameworks is a matter of elaborating private international law's forum selection and choice of law concepts. But even when this is done, that will not be enough; private regulation of the Internet is not limited to situations in which contractual relations exist.

III CATEGORIES OF PRIVATE REGULATION

24. As the introduction explained, private dispute resolution systems are but a subset of private regulation, which also includes rulemaking and enforcement. Developing the most appropriate legal framework for private dispute resolution requires understanding the available legal frameworks for private regulation in general.

³⁹ World Wide Volkswagen v. Woodson, 444 U.S. 286, 295 (1980) (foreseeability of contacts with forum state insufficient to support personal jurisdiction; contacts must be purposeful).

25. Private regulation occurs in four basic situations: when public institutions delegate rulemaking and adjudication authority to private institutions or defer after the fact to private decisions, when those subject to private regulation consent in advance to the private regulatory regime, when private decisions are sufficiently acceptable to those affected by them that they acquiesce after the fact rather than presenting their disputes to public institutions, and when persons or entities in control of valuable resources issue rules and enforce them by threatening denial of access to the valuable right. The fourth situation presents greater challenges for structuring hybrid regulation because it lacks the enforcement and judicial-review connections inherent in the first two situations.

26. Few legal systems rely entirely on private regulation to protect consumers and small businesses. The traditional difficulty with private regulation is that it may not express the political consensus of democratic societies with respect to values to be enforced⁴⁰ or the balance of power to be struck between stronger and weaker market participants.⁴¹

27. Combining the jurisdictional strengths of private regulation, and the greater political legitimacy of public regulation requires development of new hybrid frameworks. Public law⁴² can set minimum, and relatively general, standards of conduct and provide backup enforcement, representing the boundaries of a space within which a multiplicity of private regulatory regimes can work out detailed rules and first-level dispute resolution and rule enforcement machinery.⁴³

28. The relatively general character of the public law rules makes it easier to achieve consensus among multiple sovereigns with different legal traditions and varying political alignments, while also excluding private regulatory regimes that might be insufficiently protective of weaker parties or too restrictive of competition and innovation in the absence of the public law framework.

A. Public law delegation and deferral

29. The first category of private regulation begins with public power to make and apply law, which is transferred to private entities.

30. Notwithstanding the “non delegation doctrine” which questions the loss of accountability resulting when public institutions performing legislative functions delegate

⁴⁰ See Neil Weinstock Netanel, *Cyberspace Self-Governance: A Skeptical View From Liberal Democratic Theory*, 88 Calif. L. Rev. 395 (2000).

⁴¹ European Commission, Data Protection Working Party, Working Document: Judging industry self-regulation: when does it make a meaningful contribution to the level of data protection in a third country? (14 Jan. 1998), http://europa.eu.int/comm/internal_market/en/media/dataprot/wpdocs/wp7en.htm.

⁴² Terminology is a problem in talking and writing about these issues. "Public law" as the phrase is used to describe hybrid regulation, signifies law emanating from legislatures and courts. "Private law" in contrast signifies law emanating from private rule makers and adjudicators. Both of these categories arguably belong to the superset of private international law. Public international law involves relations between sovereigns, and that is not the subject of this paper at all.

⁴³ See Henry H. Perritt, Jr., *The Internet is Changing the Public International Legal System*, 88 Ky. L. Rev. 885, 931 (2000).

their authority to private decision makers,⁴⁴ delegation of rulemaking power is commonplace in the modern regulatory state, including federal delegation to states,⁴⁵ delegation of authority to set standards for health care to the Joint Commission on Accreditation of Healthcare Organizations (“JCAHO”),⁴⁶ delegation of authority to approve minimum price orders to agricultural cooperatives,⁴⁷ delegation of rules and enforcement of airport security arrangements under the Federal Aviation Act, and delegation of authority over railroad trucking rates to Rate Bureaus. Newer examples include the COPPA Safe Harbor Statutory Provisions, and the US/EU Privacy Safe Harbor Agreement.

31. Deferral to private decisions is a slightly different concept. Public adjudicatory institutions have the power to decide disputes, but they abstain from deciding them in favor of private decisions when certain criteria are met. “National Labor Relations Board” (“NRLB”) deferral to collectively bargaining arbitration, suspension of judicial litigation in favor of private arbitration, and eventual enforcement of private arbitration awards under the Federal Arbitration Act and the New York Convention, and abstention by court in cases involving private association decisions all are examples.

32. In this context for private regulation, the inherent power of the public rulemaking and adjudicatory institutions represent the public law framework, while the exercise of delegated power and the making of decisions to which public institutions will defer, represent the private activity within the framework.

33. This context provides a robust source of criteria for making private decisionmaking accountable. The Delegation Doctrine in Administrative Law ensures accountability by requiring “channeling” of private decisionmaking through limits on the scope of the subject matter of the private actors, by enforcing procedural regularity, and by assuring judicial review of decisions.⁴⁸

⁴⁴ Schechter Poultry Corp. v. U.S. 295 495 (1935); Panama Refining Co. v. Ryan 293 U.S. 388 (1935), Henry H. Perritt, Jr., *International administrative law for the Internet: mechanisms of accountability* 51 Admin.L.Rev. 871 (1999) (all discussing delegation doctrine). Dean Krent offers a working definition of delegation: “any congressional act which empowers those outside Congress to enforce or implement a legislative objective and backs those efforts with the coercive force of the federal government.” Harold J. Krent, *Fragmenting The Unitary Executive: Congressional Delegations Of Administrative Authority Outside The Federal Government*, 85 Nw. U. L. Rev. 62, 67 (1990). [hereinafter “Krent on Delegation”].

Michael Froomkin, *Wrong Turn In Cyberspace: Using ICANN To Route Around the APA and the E Constitution*, 50 Duke L.J. 17 (2000).

B. Consent/waiver

34. Most private regulation occurs within a contractual framework, in which those bound by private regulatory decisions agree in advance to be bound. Private associations such as the Boy Scouts,⁴⁹ churches, condominium associations, AOL and Microsoft network all are examples. In this form of private regulation, contract identifies the legislators, judges, and sheriffs, and also defines subject matter, the processes for making, applying, and enforcing rules. The parties bound by private regulatory decisions are congruent with the parties to the contract.

35. Many private privacy regulatory regimes depend upon intermediaries to revoke membership or seals that immunize members or holders from direct action by public authorities.⁵⁰ In these circumstances, also, the legal framework is contractual.

36. While consent-based private regulatory regimes may appear purely private, they are not. Contract law developed and applied by public institutions provide a public law framework within which the private regimes operate. While usually denominated “private law” rather than “public law,” the frameworks nevertheless represent judgments by public institutions as to the permissible scope of private regulation.

37. Controversies over this kind of private regulation for the Internet center on the meaning of “consent.” Often, the terms of the contractual framework are determined not through negotiation among all affected parties, but by unilateral decision of one party. The law must specify what kind of conduct by the other party(ies) represents assent to the unilaterally developed terms. Whether subjecting oneself to the private regime represents legally effective consent turns on adequate notice of the terms, and on the availability of alternatives to a particular regime. This, in turn, invites evaluation of the “switching costs” for leaving one regime in favor of another.⁵¹

C. Acquiescence

38. Regardless of the construction of public law frameworks some private regulation will occur, in circumstances where participants voluntarily accept it, after the fact.

39. In many cases the effect of private decisionmaking depends, not on explicit delegation by public institutions, and not on before-the-fact consent to the private regulatory regime, but on the practical acceptability of the private decisions. Employees denied promotions or dismissed often accept the employer decisions—supervisory or appellate—rather than suing in court or filing charges with the NLRB or the Equal Opportunity Commission. Private litigants often accept the result of advisory arbitration or other dispute resolution mechanisms rather than pressing for a decision by a jury or judge. Most parties to credit card disputes apparently accept the result of the chargeback process rather than suing in court.

⁴⁹ See *Boy Scouts v. Dale*, 530 U.S. 640 (2000).

⁵⁰ <http://www.truste.org/>; <http://www.bbbonline.org/>

⁵¹ See Neil Weinstock Netanel, *Cyberspace Self Governance: A Skeptical View from Liberal Democratic Theory*, 88 *Calif. L. Rev.* 395, 451 (2000).

40. This category of private regulation definitionally assures accountability, because those adversely effected by private decisions can take their dispute to another level, eventually ending up before a public institution. Their power to acquiesce or to withhold acquiescence assures accountability to them.

D. Self-enforcing; direct deprivation of valuable right

41. The fourth category of private regulation presents the greatest accountability challenges. In this context, the power of private decision makers stems not from explicit or easily implied consent by those subject to the private governance, nor from explicit delegation of legal authority possessed by public institutions, but from de facto control over a valuable resource by private persons or entities. Self-help repossession of tangible chattels and private control of range land⁵² are pre-Internet examples.

42. Domain name regulation, regulation by private Internet and service content providers, and “Mail Abuse Prevention System” (“MAPS”) are examples in the Internet context.⁵³ The authority of ICANN and of domain name registrars derives not so much from the Department of Commerce/ICANN Memorandum of Agreement, as from the de facto control over the databases that translate domain names into IP addresses. By refusing to list a domain name in authoritative domain name servers, ICANN and domain name registrars can deprive one of access to the Internet. AOL and Microsoft Network can exclude subscribers from access to other subscribers under rules developed privately by the service providers.

43. MAPS represents an extension of this category of private regulation. The RBL is machinery for blocking access to the Internet. It was created by private unilateral action. It is a valuable resource in the negative sense that one can use the Internet only by not being listed in the RBL.

44. This category of private regulation overlaps the first two categories to some extent. One can argue that electing to use a private resource represents legal consent to the private regulatory regime associated with the private resource. But this is an attenuated form of consent. Because the resource is valuable, switching costs may be so high as to be infinite. The consent question resolves into a switching cost question, which, in turn, resolves into questions whether the resource to which access potentially is denied can easily be duplicated by others.⁵⁴

45. How the law should provide a framework for this form of private regulation is problematic. U.S. law long has drawn a sharp distinction between public and private actors.

46. In *Flagg Brothers v. Brooks*,⁵⁵ the Supreme Court rejected the idea that self-help repossession represented state action, entitling the adversely affected party to the protections

⁵² See Terry L. Anderson & J. Bishop Grewell, Property Rights Solutions For The Global Commons: Bottom-Up Or Top-Down? 10 Duke Envtl. L. & Pol'y F. 73 (1999) (describing private regulation of cattle ranges).

⁵³ See § V of this paper for concrete description.

⁵⁴ See Henry H. Perritt, Jr., Law and the Information Superhighway § 2.10[F] (2d ed. 2000) (describing essential facilities doctrine and citing cases).

⁵⁵ 436 U.S. 149 (1978).

of the due process clause of the Fourteenth Amendment.⁵⁶ It referred to the “essential dichotomy between public and private acts.”⁵⁷ “While as a factual matter any person with sufficient physical power may deprive a person of his property, only a State or a private person whose action may be fairly treated as that of the State itself, may deprive him of an interest encompassed within the Fourteenth Amendment’s protection.”⁵⁸

47. The central question with respect to this category of private regulation is what form the public law framework should take. That depends, in turn, on the existence of a private right of action to challenge decisions by this category of private regulator, and on the criteria that would entitle the private regulator to a privilege or immunity. These questions cannot be resolved without also considering the appropriate prerogatives of those who control private property.

48. Buried beneath these questions of how past causes of action and models for controversies can be mapped to the Internet is the question whether access to the Internet represents a new kind of interest that should be entitled to legal protection; in other words, should access to the Internet be a right? Even if such a right should be recognized by legal systems, much heavy intellectual lifting remains to define the boundaries of that right.

E. Defensive private regulation

49. Private regulation often occurs as a defensive measure by intermediaries potentially subject to liability for information they handle. Usually these intermediaries find themselves in the fourth situation -- in control of valuable resources.

50. Internet service providers or telecommunications entities may be drawn into a regulatory role by the threat of liability imposed on them for the conduct of users of their services. To reduce the risk of liability, intermediaries who are subject to liability for harm caused by content originators have a strong incentive to exclude any content or commerce that poses a risk.⁵⁹ Defensive private regulation involves great risk of private censorship and exclusion of risky content and commerce.

IV. LEGAL ANCHORS FOR ALTERNATIVE DISPUTE RESOLUTION

51. Appropriately designed dispute resolution mechanisms offer lower costs, reassure participants, and solve jurisdictional problem because use of them manifests consent.

52. The experience of WIPO in adjudicating nearly a thousand domain name disputes shows the willingness of Internet users to submit their disputes to private dispute resolution institutions applying rules developed by private bodies.⁶⁰

⁵⁶ 436 U.S. at 153.

⁵⁷ 436 U.S. at 165 (internal citations and quotations omitted).

⁵⁸ 436 U.S. at 157 (internal quotations and citations omitted).

⁵⁹ The incentive is reduced by 47 U.S.C. § 233, immunizing certain intermediaries from liability as “publishers.”

⁶⁰ See Henry H. Perritt, Jr., *Dispute Resolution in Cyberspace: Demand for New Forms of ADR*, 15 OH. ST. J. DIS. RES. 675 (2000).

A. The New Enforcement

53. Larry Lessig has helped us understand that Internet regulation can be profoundly different because enforcement of rules occurs through code rather than by the human intervention of judges and sheriffs.⁶¹

54. This means the elimination of the usual opportunity for public legal institutions to assure accountability of private rulemaking, adjudication, and enforcement at the point when an ADR decision is enforced in a regular court.

55. When code-based enforcement is involved, as often is the case in Internet disputes, new mechanisms, and some new criteria, must be used to assure accountability of private regulatory decisionmakers.

56. The need for new thinking and new doctrine is most obvious with respect to the development of causes of action to permit review of MAPS rules and rule application, but some commentators believe the same is necessary to reform ICANN rulemaking and adjudication as well.

V. THREE NEW CASES

57. Three cases involving Internet disputes make more concrete some of the open issues relating to choice of law and enforcement. All three of them involve enforcement or the possibility of enforcement through technical means, not requiring coercion by public authorities. Two of them involve revocation of domain names by domain registrars; the other involves enforcement by blocking IP addresses of rule violators.

58. The three cases differ in the source of rules applied. The first involved application of a rule developed and promulgated by ICANN, and adjudication by the WIPO domain name dispute resolution process—one of the most successful alternative dispute resolution systems for the Internet.

59. The second involved application of a criminal statute of the State of Illinois to a Web server based in Austria. The adjudicator in this case was a regular Illinois court of general jurisdiction.

60. The third case is the most interesting because it raises the most novel issues and presents the greatest challenges for designing hybrid regulatory systems for the Internet. In it, the rule maker was a private individual, with no contractual relationship with those to whom the rule is applied, and there was no independent adjudicator.

A. Walmartcanadasucks

61. Wal-Mart Stores, Inc v. walmartcanadasucks.com, Case No. D2000-1104, was the third case involving disputes between the respondent and Wal-Mart. The two earlier cases, involving domain names confusingly similar to the Wal-Mart trademark, were resolved in Wal-Mart's favor. The third case involved a much narrower question: whether a domain

⁶¹ Lawrence Lessig, *Code and Other Laws of Cyberspace*, 218-219 (2000).

name including the suffix “sucks” can be confusingly similar to the text string to which “sucks” is appended. The sole panelist, the author of this paper, concluded that a domain name including the word “sucks” cannot be confusingly similar, and that a privilege for criticism and parody reinforces that conclusion.

62. The respondent hardly had clean hands. He had been found in the past to be a cybersquatter with respect to this complainant.

63. But, the panel concluded, distasteful conduct should not stampede UDRP decision makers into an unwarranted expansion of the domain name dispute process. The UDRP has a narrow scope. It is meant to protect against trademark infringement, not to provide a general remedy for all misconduct involving domain names. Posting defamatory material on a Web site would not justify revocation of a domain name under the UDRP. Posting child pornography on a Web site would not justify domain name revocation. While a domain name registrar may be privileged to revoke a domain name for “illegal use” under § 2 of the Uniform Registration Agreement, whether a use is illegal in general is beyond the subject matter jurisdiction of an administrative panel under the UDRP.

64. Transfer or revocation of a domain name as a remedy in a dispute panel proceeding is authorized only when the panel finds (1) that the domain name is identical to or confusingly similar to a trademark and (2) when there is bad faith.

65. Bad faith, no matter how egregious, cannot supply a likelihood of confusion where it does not otherwise exist. Suppose the owner of the trademark Acmebytes registers and uses the domain name Acmebytes.com. Suppose further that the proprietor is named Agnes. If someone registers the domain name “agnesisawitch.com” and offers to surrender it in exchange for the payment of money, the bad faith elements of the ICANN policy no doubt would be satisfied. But Agnesisawitch.com is not confusingly similar to Acmebytes.com and the presence of bad faith cannot make it so.

66. I do not see how a domain name including “sucks” ever can be confusingly similar to a trademark to which “sucks” is appended. But whether or not a per se privilege for use of “sucks” is appropriate, the record in this case did not support a finding that the ICANN policy was violated.

67. Thus whether walmartcanadasucks is effective criticism of Wal-Mart, whether it is in good taste, whether it focuses on the right issues, all are immaterial; the only question is whether it is criticism or parody rather than free-riding on another’s trade mark.

68. Because the accused domain name was not identical or confusingly similar to a trademark or service mark in which the complainant has rights, I concluded that the complainant did not establish the elements of a violation of the ICANN Policy.

B. Voteauction.com

69. In October, 2000, the Chicago Board of Election Commissioners became concerned that a Web site located in Austria, voteauction.com, had the potential to corrupt or, at least, to undermine confidence in the general election subsequently held on 7 November 2000 in Chicago and elsewhere in the United States. voteauction.com solicited voters in the then forthcoming election to offer to sell their votes, and also solicited persons interested in buying those votes. The Web site was constructed so that offers to sell and offers to buy were made

by filling out a form that included the address, with a pull down list including Illinois as an option. Moreover, the Web site also included a summary of outstanding offers with Illinois as a specific listing. There was, thus, little difficulty in concluding that Illinois courts could exercise jurisdiction over the Web site under the Zippo Continuum⁶² and the targeting concept of Millennium Enterprises.⁶³

70. Accordingly, the Board of Election Commissioners filed a civil lawsuit in the Circuit Court of Cook County against voteauction.com and its individual organizers and managers.

71. But the existence of theoretical jurisdiction was not enough; any judgment also must be enforced, and the procedures for transnational enforcement of judgments not only are uncertain, they would take months. The election was scheduled in weeks.

72. So, the Election Commissioners thought about practicable enforcement measures that might be taken against property located in the jurisdiction, or at least in the United States. One possibility was to target the domain name, "voteauction.com." Such an approach had been suggested by the author of this article in "Will the Judgment Proof Own Cyberspace."⁶⁴ The offending domain name was present in Illinois—and hundreds or thousands of domain name servers supporting hundreds or thousands of Internet service providers in the vicinity of Chicago. But litigating against all those ISPs quickly was ruled out. Instead, voteauction.com's domain name registrar, Domain Bank, was named as a defendant in the lawsuit, and the draft injunction attached to the complaint included a paragraph ordering that the domain name be withdrawn or cancelled. In October 2000, Judge Murphy of the Circuit Court of Cook County Illinois signed the injunction after a hearing.

73. Domain Bank had been notified of the lawsuit, and had engaged in extensive telephonic discussions with counsel for the Election Commissioners. Domain Bank had, in its standard domain name registration agreement, a provision prohibiting the use of domain names for "illegal purposes." After the injunction was issued, signifying a judicial determination that the domain name was being used illegally, Domain Bank cancelled the voteauction.com domain name, shutting down voteauction.com all over the world.

74. But celebrations of victory in Chicago were tentative, and sure enough, about a week later voteauction.com opened up under a new domain name, "vote-auction.com," and this domain name was registered in Switzerland with CORE. But CORE had a similar prohibition against illegal use in its standard domain name registration agreement. After extensive telephonic and email discussions between counsel for the Election Commissioners and counsel for CORE, CORE also cancelled the vote-auction.com domain name, once again shutting the site down. Subsequently, voteauction.com sought to publicize its IP address, the

⁶² Zippo Mfg. V. Zippo Dot Com, 952 F. Supp. 1119 (W.D.Pa. 1997) (holding that the defendant purposefully availed itself of doing business in the forum state).

⁶³ Millennium Enter. v. Millennium Music, LP, 33 F. Supp. 2d 907, 915-16 (D. Or. 1999) (explaining *Zippo* continuum as a "sliding scale" under which the "likelihood that personal jurisdiction can be constitutionally exercised is directly proportionate to the nature and quality of commercial activity that an entity conducts over the Internet" and suggesting that jurisdiction exists over Web sites only when the forum state is targeted).

⁶⁴ Henry H. Perritt, Jr., *Will the Judgment-proof Own Cyberspace?* 32 INT'L LAWYER 1121 (1998).

use of which would avoid the domain name system all together, but by then, the election had been held.

75. The *voteauction.com* litigation illustrates an interplay between public and private regulation different from *walmart*. The lawsuit and the injunction obviously were traditional adjudicatory processes by a court—a paradigmatic public institution. But an important part of the overall result turned on the private rule, promulgated by a private institution—the domain name registrars—that prohibited illegal use of the domain name. Based on the determination of illegality by the public institution, the private institution used its power over an asset—the domain name—to achieve the result desired by the complainant. *Voteauction.com* can be understood to be an interesting case about judicial jurisdiction, but it also is about enforcement of a very broad rule by a private intermediary.

76. *Voteauction.com* involved the inverse of the usual relationship between public and private institutions. In *voteauction.com*, the public courts in Illinois performed the adjudicatory function, and the private domain name registrars decided whether to enforce the judicial decision. Because no injunction clearly supported by personal jurisdiction bound either of the domain name registrars, their actions in revoking *voteauction.com*'s domain name privileges is best understood as purely private action, informed by the public determination by the Circuit Court of Cook County.

77. *Voteauction.com* also showed the importance and practicability in working out the boundary between public and private regulation. In some theoretical sense, it would have been better to have enforced the injunction against domain name translation in or near Chicago. That would have kept the enforcement action within the sovereign whose laws were being enforced. It also would have comported more comfortably with geographic limits on the jurisdiction of the court issuing the injunction. But doing that was impracticable, given the large number of ISPs and uncertain patterns of use. It was much easier under tight time deadlines imposed by the proximity of the election, to focus enforcement efforts on a single intermediary, the first located in another state but within the United States, and the second located in a foreign country. The theoretical jurisdictional grounds were shakier, but enforcement at this level was practicable.

C. The MAPS Controversy

78. The MAPS⁶⁵ is a form of private regulation that operates completely outside a public law framework. MAPS is a nonprofit California corporation that allows ISPs and email service providers to exclude spam⁶⁶ from their systems. MAPS maintains a list of IP addresses, known as the “Realtime Blackhole List” (“RBL”),⁶⁷ and permits MAPS subscribers automatically to exclude from their systems any email message originating from one of the listed IP addresses. Some 20,000 ISPs, corporations, government agencies and individuals, comprising some 40% of the Internet, subscribe to MAPS.⁶⁷

⁶⁵ <http://maps.vix.com>

⁶⁶ Spam is unsolicited email broadcast to hundreds or thousands of email addresses.

⁶⁷ *Harris Interactive, Inc. v. Mail Abuse Prevention System*, No. 00-CV-6364L(F) (W.D.N.Y. cplt filed Aug. 9, 2000) [hereinafter “Harris Complaint”] at para. 50. MAPS subscribers include Microsoft, BellSouth, Qwest, Micron, and AltaVista. *Id.* at para. 62.

79. MAPS has published rules, known as “Basic Mailing List Management Principles for Preventing Abuse” (BMLMPPA”),⁶⁸ which purport to state Internet standards and best current practices for proper mailing list management. Among other things the rules require use of a “double opt-in procedure”⁶⁹ before mail can be sent to a particular addressee. Complaints about mailers not complying with the rules result in the mailer being put on the RBL,⁷⁰ and owners of IP addresses on the RBL can be removed only by satisfying MAPS they will comply in the future.⁷¹

80. MAPS illustrates the fourth type of private-regulation identified in § III -- regulation enabled by control of a valuable private resource. And MAPS starts, not with ownership of the valuable private resources; the resources are owned by thousands of private internet service providers. MAPS uses technology, “code” in Professor Lessig’s parlance, to extend its private decisions into control of resources owned by others.

81. In August 2000, Harris Interactive, Inc., a public opinion survey organization used MAPS and a number of its subscribers in the United States District Court for the Western District of New York.⁷² The complaint alleges tortious interference with business and contractual relations,⁷³ commercial disparagement,⁷⁴ negligent breach of a duty to administer the RBL in a fair and evenhanded manner,⁷⁵ violation of New York general business law prohibiting deceptive and confusing consumer communications,⁷⁶ defamation per se,⁷⁷ conspiracy to interfere tortiously with plaintiff’s business,⁷⁸ federal antitrust violations for concerted refusal to deal,⁷⁹ attempted monopolization,⁸⁰ monopolization,⁸¹ conspiracy to monopolize by refusal to deal,⁸² forming and operating a trade association that unreasonably restricts competition,⁸³ and violation of the New York “Donnelly Act.”⁸⁴ The suit requests compensatory damages in excess of \$50 million and punitive damages.

The Harris lawsuit reveals the dilemmas faced by a self-regulatory intermediary. The lawsuit alleges that MAPS placed Harris on the RBL without good cause,⁸⁵ and without reasonably investigating facts or giving Harris an opportunity to be heard,⁸⁶ that it promulgated standards

⁶⁸ Harris complaint appendix; <http://maps.vix.com>.

⁶⁹ The double opt-in procedure requires a recipient to indicate affirmatively that it wishes to be on a mailing list and then to respond affirmatively to an email message sent to confirm the subscription. BMLMPPA Rule 1; Harris Complaint para. 47.

⁸⁶ Id. at para. 60.

that interfered with legitimate communications,⁸⁷ and that it imposed conditions for removal from the RBL that were arbitrary and unreasonable.⁸⁸ The suit thus challenges the content of the private rules, claims absence of due process in applying them, and illegality in the sanctions imposed for violating the rules.

82. On November 15, 2000, Exactis.com, Inc. sued MAPS in the United States District Court for the District of Colorado,⁸⁹ alleging claims under the Colorado Wiretapping Act, blocking communications in violation of state law,⁹⁰ the Colorado Organized Crime Control Act,⁹¹ the Sherman Act,⁹² the Colorado Unfair Trade Practices Act,⁹³ intentional interference with contractual relations,⁹⁴ intentional and negligent misrepresentation and extortion,⁹⁵ trade disparagement, and unfair competition. Exactis alleged that among the services blocked by MAPS was requested confirmations of brokerage transactions by Charles Schwab.⁹⁶ The complaint alleges a disagreement over the specific procedures to be used to ensure that a recipient wishes to receive email transmitted through Exactis's service, MAPS insisting on double opt in, Exactis utilizing measures "different from, but not less effective than" double opt in.⁹⁷

83. One can only speculate as to possible outcomes of the litigation. One obvious possibility is that the MAPS self-regulatory regime be allowed to continue according to the desires of its owners and subscribers. Another possibility is that the regime will be shut down under an injunction or because of the magnitude of damages imposed or sought. Or, the court might impose conditions on continued operation of the regulatory regime, analogous to those imposed in the past on private standard-setting organizations,⁹⁸ requiring substantive support for the content of rules and due process in their application and enforcement. Finally, the controversy, and others like it may stimulate legislative action to channel such private self-regulatory activities.

84. The MAPS form of private regulation easily could be extended to other areas. The Christian Right could organize a blacklist for ISPs that handle material that undermines family values. The intellectual property community could organize a blacklist for ISPs that do not have sufficiently stringent policies to discourage infringement. Consumers groups could organize blacklists for ISPs that allow online merchants to operate without appropriate return and refund policies.

85. In all of these cases, ISPs could be coerced into "subscribing" to the blacklist by threats that any non-subscribing ISP will be treated like an ISP that handles offending material.

⁸⁷ Id. at para. 91.

⁸⁸ Id. at para. 64.

⁹¹ Id. Paras. 73-88.

⁹² Id. Paras. 89-101.

⁹³ Id. Paras 49-56.

⁹⁴ Id. Paras. 38-48.

⁹⁵ Id. Paras. 57-64.

⁹⁶ Id. At para. 16.

⁹⁷ Id. At para. 31.

⁹⁸ See *Radiant Burners, Inc. v. Peoples Gas Light & CokeCo.*, 364 U.S. 656, 658 (1961) (arbitrary and capricious application of standard by trade association violated Sherman Act).

Confronted with the threat of being blacklisted, most ISPs would prefer to subscribe and thus become a part of an ever-expanding governance regime, adopting the rules unilaterally determined by the organizer of the blacklist.

86. Now David Post thinks all of this is just fine: “The MAPS ‘vigilantes’ (bad) can just as easily be characterized as ‘activists’ (good), and the kind of ‘bottom-up,’ uncoordinated, decentralized process of which the RBL is a part strikes me as a perfectly reasonable way to make ‘network policy’ and to ‘answer fundamental policy questions about how the Net will work.’”⁹⁹

87. For Post, it is sufficient that the government does not administer the RBL; a private entity does.

88. Post’s preference for private ordering over what he calls “collective” regulation apparently is premised on the possibility of Internet participants freely choosing which regulatory regime they prefer. It is not clear how this process of choice is supposed to work with MAPS. Presumably, Post would say that ISPs are free to subscribe to MAPS or not. That freedom may be illusory if MAPS itself or a future elaboration of MAPS were to blacklist any ISP who does not subscribe.

89. Moreover, an interest conflict exists between subscribing ISPs and ISPs handling “Unsolicited Commercial E-mail” (“UCE”). The former want to eliminate the costs of handling certain types of inbound email; the latter want to use the Internet as a unified whole, any part of which is reachable from any other part. Why should one side of the value argument get to make the decision, because it is in a position to use code to enforce its decision? If the UCE handlers develop code that will circumvent the RBL, should that reverse the value decision? That apparently is the world that Post would prefer.

D. Mechanisms of Accountability

90. Internet-related private regulation and alternative dispute resolution is a reality. As these new legal regimes make rules and apply and enforce them, some affected parties will be disappointed. Every dispute resolution panel proceeding produces a loser. Blacklists implemented through code adversely affect those on the blacklist. Lawsuits in the regular courts provide new data for advocates of different approaches to transnational jurisdiction and judgment execution. Consider the three cases reviewed. Wal-Mart is free to file a trademark infringement action in court and seek a result different from that in Case Number 2000-1104. The case against voteauction.com is still pending in the Circuit Court of Cook County. Further proceedings may complicate the initial outcomes. In any event, as the case becomes better known, domain names registrars may be pressured to change their responses to judicial findings like that in the voteauction.com case.

91. MAPS provides the most fertile ground for development of hybrid regulatory concepts further. Because the MAPS blacklist is self enforcing, it is not obvious how courts or other public institutions can assure accountability by MAPS. The pending litigation, however, and other possible reactions to MAPS should illuminate causes of action and standards of review that can enable judicial scrutiny of the objective rationality and procedural transparency of

⁹⁹ Post, 52 Stan.L.Rev. at 1441.

private regulatory regimes. As these legal doctrines evolve, it also may be appropriate to develop a better understanding of the interests of Internet participants in having access to the Internet as a whole and how those interests might be legally protected without turning Internet service providers—including those who want access—into common carriers.

VI. CONCLUSION

92. Greater use of alternative dispute resolution is necessary to allow the Internet to fulfill its potential. Hybrid legal frameworks always have been necessary to make alternative dispute resolution effective, and the same is true for Internet-oriented ADR. In designing these hybrid frameworks for the Internet, however, greater attention must be paid to the source of rules and to enforcement because new rulemaking institutions have arisen, and code permits enforcement without the involvement of publicly accountable sheriffs and judges. MAPS provides especially fertile ground for exploring and eventually adopting some new techniques for assuring accountability of private regulators.

VI. CONCLUSION92

WIPO/PIL/01/6
Page 2

I. INTRODUCTION. ¹

1. The Internet has heightened interest in private international law and in alternative dispute resolution. The Internet's low economic barriers to entry invite participation in commerce and politics by small entities and individuals who cannot afford direct participation in many traditional markets and political arenas. These low barriers to entry, and greater participation by individuals and small entities, also encourage a greater incidence of small transactions. When dispute resolution costs are high, as they are for traditional administrative and judicial procedures, the transaction costs of dispute resolution threaten to swamp the

value of the underlying transaction,² meaning on the one hand that victims are less likely to seek vindication of their rights and, on the other hand, that actors and alleged wrongdoers may face litigation costs that outweigh the advantages of their offering goods and services in the new electronic markets. To realize the potential of participation by small entities and individuals and of small transactions, it is necessary to reduce the costs of dispute resolution.

2. Second, the geographic openness of electronic commerce makes more likely stranger-to-stranger transactions. The absence of informal means of developing trust, as when one shops regularly at the local bookstore, means that both merchants and consumers will be inhibited in engaging in commerce unless they have some recourse if the deal goes sour. Some accepted form of dispute resolution must be available to establish the requisite confidence for commerce to occur at all.

3. Third, the Internet is inherently global. Goods offered for sale on a Web page published on a server physically located in Kansas are as visible to consumers in Kosovo as in Kansas. In other words, it is difficult to localize injury-producing conduct or the injury itself in Internet-based markets or political arenas. Traditional dispute resolution machinery and private international law rules depend upon localization to determine jurisdiction.

3

Impediments to localization create uncertainty and controversy over assertions of jurisdiction. That uncertainty has two results. It may frustrate communities who resent being unable to reach through their legal machinery conduct occurring in a far off country. It also subjects anyone participating in the Internet to jurisdiction by any one of nearly 200 countries in the world, and in many cases, to their subordinate political units.

4. Even if negotiations succeed over an international treaty on civil judgment enforcement,⁴ that is not enough. A treaty will help reduce uncertainty. But a treaty will not solve the problem of a furniture manufacturer in Thomasville, North Carolina, who sells furniture through the Internet. The treaty may say that the furniture manufacturer must litigate

¹ The author is the Dean and Professor of Law, Chicago-Kent College of Law, Illinois Institute of Technology; member National Research Council Computer Science and Telecommunications Board; author, *Law and the Information Superhighway* (2d ed. Aspen Law & Business 2000); member of the bar: Virginia, Pennsylvania, District of Columbia, Maryland, Illinois, United States Supreme Court. This article summarizes analysis and conclusions developed more fully in Henry H. Perritt, Jr., *Economic and Other Barriers to Electronic Commerce*, 21 U.P. ECON. L. 563 (2000); Henry H. Perritt, Jr., *Dispute Resolution in Cyberspace: Demand for New Forms of ADR*, 15 O. H. ST. J. D. IS. RES. 675 (2000). The accountability mechanisms ideas will be explored further in a forthcoming article in the University of Chicago Legal Forum.

² It is irrational to spend \$5,000 or \$10,000 for a lawsuit over a \$300 transaction.

³ See Restatement (Third) of the Law of Foreign Relations of the United States § 401 (1987) (describing bases for jurisdiction).

⁴ See § II(C).

A.J.I.N.T.'L

in, let's say, Tirana, Albania where one of his customers is. That is not a very attractive proposition if the manufacturer sold \$1,000 worth of furniture, because it will cost it more to litigate there than the transaction was worth. And if the treaty says that the furniture manufacturer gets to litigate at home, in North Carolina, that won't be a very attractive proposition for the purchaser of the furniture in Tirana, Albania. New forms of dispute

resolution can cross boundaries easily and reduce uncertainty with respect to applicable law and enforceability.

5. For electronic commerce and political discourse to flourish in the Internet, new forms of alternative dispute resolution must be designed and deployed. While much of the responsibility for creative design and practicable deployment depends on private initiative rather than governmental mandates, attention also must be paid to the position of private regulation in an overarching legal framework.

6. The Internet needs not only alternative dispute resolution in the adjudicatory sense—as in arbitration and mediation. It also needs rules made by private entities which get applied in alternative dispute resolution forums. Private rulemaking is much more common than many people assume. America Online and Microsoft Network make rules for subscribers; “Internet Corporation for Assigned Names and Numbers” (“ICANN”) makes rules for application in domain name disputes; seal organizations such as Truste make rules for those who wish to use the seal or maintain their membership in a private ordering regime; increasingly, filters and blacklists are being developed that embody rules for conduct in computer code. For these private rulemaking activities, even more than for private adjudicatory activities, public institutions must determine what is permissible and what is not; what will subject the rule maker to liability and what should be privileged.

7. Dispute resolvers outside the context of pure mediation where only party-identified interests count, must be able to make enforceable decisions. Once the dispute resolver has made a decision, that decision must be enforced against the losing party. Absent any possibility for coercive enforcement, the losing party has little incentive to comply voluntarily. ⁵

8. Many arbitration systems allow the parties, the arbitrators, and analysts of the process to take the rules and the enforcement for granted. The arbitrator looks to a contract or ordinary law as the source of rules to be applied. The New York Convention and/or national

arbitration statutes provide for judicial enforcement for any arbitration award.

9. But alternative dispute resolution systems for the Internet offer new sources of rules and of enforcement, making it desirable to think more deeply about rulemaking and enforcement as part of the overall matrix of alternative dispute resolution for the Internet.

Within the analytical framework of private international law, one needs to think about choice of law ⁶ and enforcement ⁷ as well as forum selection. ⁸

⁵ Exceptions may exist when the dispute arises and is resolved in the context of an ongoing relationship. Then, the losing party may comply in order to avoid damage to the relationship.

⁶ What systems of substantive law may be reference points for deciding cases: systems originating with private entities as well as with states? If so, what qualifies as a legitimate private source of law?

⁷ What kinds of private decisions are eligible for enforcement by public officers backed up by coercion? When enforcement takes place privately, what kinds of private enforcement actions give rise to civil or criminal liability?

A. Localization

10. All modern legal systems are pragmatic, in the sense that they limit formal prerogatives according to the practicability of exercising power which is subject to physical limits of space.⁹ In public and private international law, this translates into the concept of sovereignty. A state's power within its own boundaries is plenary,¹⁰ only recently limited by universal conceptions of human rights.¹¹ Outside its boundaries, exercise of coercive power is aggression¹² because it necessarily intrudes upon the sovereign prerogatives of other states. Legislatures and other rule makers may not extend their law to persons lacking relevant connections to the (geographically defined) state of the rule maker.¹³ Courts and other dispute resolution bodies may not make decisions or apply rules to persons lacking connections with their "geographically defined" venues.¹⁴

11. Concepts of prescriptive and adjudicative jurisdiction have evolved to accommodate commerce extending beyond the boundaries of a particular sovereign, but the jurisdictional concepts still depend upon localizing conduct. Tort law rules depend on where injuries

[Footnote continued from previous page]

⁸ What is the class of permissible forums the parties can select and have their selection respected by the regular courts?

occur;¹⁵ contract law rules depend on where contracts are made or performed.
 rules depend on where the property is located.¹⁷

¹⁶ Property law

12. The Internet makes it more difficult to localize legally relevant conduct than preceding technologies of commerce. Where is a contract made when it is executed by the invisible interaction of server and client software on computers located in two different countries, neither of which may be the habitual residence of the buyer or seller?¹⁸ Where does tortious injury occur when a wrongdoer located halfway around the world pirates intellectual property?¹⁹ Where does tortious injury occur when a hacker launches a denial of service attack that clogs up the routers representing the only gateway to an e-commerce vendor but located in another place arbitrarily determined by network engineers? Do the courts of Virginia have in rem jurisdiction over everyone doing business on the Internet through a dot-com domain name merely because the domain names are “located” on a root domain server in Virginia?²⁰

¹⁸ Where does tortious

13. Because of difficulties in localizing conduct in Internet markets, allocating jurisdiction to a formal public institution is uncertain, even as a theoretical matter.²¹ The law is adaptive and creative, however, and making good progress in working out theoretical solutions to problems arising from new technologies. It is not intellectually difficult, when working from established principles of localizing trans-border activities, to formulate rules that localize Internet conduct.²²

²¹ The law is adaptive

14. The concept of targeting is one such solution to the difficulties in localizing conduct in Internet markets.²³ Targeting entails a market participant directing its sales or purchasing

Or. 1999) (explaining *Zippo* continuum as a “sliding scale” under which the “likelihood that personal jurisdiction can be constitutionally exercised is directly proportionate to the nature and quality of commercial activity that an entity conducts over the Internet” and suggesting that jurisdiction exists over Web sites only when the forum

[Footnote continued on next page]

activity to a particular jurisdiction. ²⁴ An Internet merchant wishing to reduce the uncertainty associated with potential regulation by nearly 200 national sovereigns and thousands of subordinate governmental entities can target only one or a few jurisdictions whose legal regime it understands and accepts. Alternately, if such a participant wishes to avoid the requirements or enforcement mechanisms of a particular sovereign, it can exclude or “de-target” that jurisdiction. A growing number of judicial decisions in the United States and guidance issued by administrative agencies such as the Securities and Exchange Commission ²⁶ are refining formulas for targeting and de-targeting.

25

15. The targeting concept avoids the uncertainty associated with subjecting an Internet merchant to the jurisdiction of any place where its Web site is visible, ²⁷ which is usually everywhere in the world. On the other hand, extensive de-targeting has the effect of excluding consumers in de-targeted states from the benefits of global e-commerce.

B. Enforcement against Intermediaries

16. Concluding that the rules emanating from a particular legislature govern a transaction in a formal sense, or that a court or administrative tribunal has personal jurisdiction over a foreign e-commerce vendor, is not the end of the matter. The rules still must be enforced and the adjudicative decisions turned into monetary relief or practical cessation of illegal conduct. ²⁸ Meaningful enforcement and application depends upon the practicality of asserting coercive control over property or persons located within the boundaries of the rule issuing or adjudicating sovereign ²⁹ or the willingness of other sovereigns to recognize and enforce

[Footnote continued from previous page]

state is targeted).

page 7

foreign rules and decisions.³⁰ Whether such persons or property can be located, and whether transnational recognition and enforcement will occur, are additional, and potentially large, sources of uncertainty, in comparison to the uncertainty regarding theories of jurisdiction.

17. Although the Internet's virtual marketplace is indifferent to national borders and therefore sovereignty, it does depend upon physical devices, such as modems, telephone switching equipment, routers, radio transmitters, receivers, antennas and computers that function as servers and clients. While participants in small states conceivably can use the public switched telephone system to connect to Internet service providers located entirely outside their states,³¹ the typical merchant or consumer uses a local Internet service provider, who has leased lines, routers, and servers, and may have radio transmitting and receiving apparatus, in the same jurisdiction where the merchant or consumer is located. The legal system focuses on locally present property as a justification for jurisdiction and, more importantly, as the means for enforcing rules and decisions. This encourages legal institutions to impose liability on intermediaries as a way of reducing uncertainty with respect to jurisdiction and enforcement power over more remote actors who may bear more direct responsibility for disputed conduct.³²

2000) (discussing the practical application of the Brussels Convention to enforce foreign judgments).

³⁰ *Compare de la Mata v. Am. Life Ins. Co.*, 771 F. Supp. 1375, 1383 (D. Del. 1991) (holding that

reciprocity is not a prerequisite to recognition of a judgement) *with* Hilton v. Guyot, 159 U.S. 113, 228 (1895) (holding that comity requires reciprocity).

31 An example would be a consumer located in Skopje, Macedonia, who places a long distance telephone call to a Microsoft Network point of presence in Frankfurt, Germany.

32 See Kim L. Rappaport, *In the Wake of Reno v. ACLU: The Continued Struggle in Western Constitutional Democracies with Internet Censorship and Freedom of Speech Online*, 13 A M . U. I N T ' L L. R E V . 765, 790-91 (1998) (describing prosecution of CompuServe executive for material on Internet site that violated German Information and Communications Services Act). In mid-2000 an anti-Nazi group in France sued Yahoo! for making available material through an American Internet site that contravened French law. See Steve Bold, *Yahoo! In Online Auction Legal Spat with French Authorities*, N E W S B Y T E S N E T W O R K , May 16, 2000, available at 2000 WL 21177244. On november 20, 2000, N E W S C R A and French Union of Jewish Students v. Yahoo! Inc., the Country Court of Paris ordered Yahoo! Inc. to comply with a May 22 order within 3 months from notification, subject to a penalty of 100,000 Francs per day of delay effective from the first day following the expiration of the 3 months period. The May 22, order stated that Yahoo! Inc. must 1) take all necessary measures to make impossible access to Nazi merchandise or any other site or service that may be construed “as an apology for Nazism or contesting the reality of Nazi crimes;” 2) to warn all Internet surfers before proceeding with searches on yahoo.com of the risks involved in continuing to view such sites; and 3) continued the proceeding to allow Yahoo to submit for deliberation by all the interested parties the measures it proposes to take to “put an end to the trouble and damage suffered and to prevent any further trouble.” To do so, Yahoo must not allow surfers of French nationality or calling from French territory to access Nazi merchandise or any other site or service that may be construed “as an apology for Nazism or contesting the reality of Nazi crimes.” Yahoo is also required to warn all Internet surfers before proceeding with searches on yahoo.com of the risks involved in continuing to view such sites. Furthermore, the Court ordered a three month continuance of th proceeding to allow Yahoo to submit for deliberation by all the interested parties the measures it proposes to take to “put an end to the trouble and damage suffered and to prevent any further trouble.” Furthermore, Yahoo is ordered to make payment of 10,000 Francs to each of the plaintiffs. The Court reasoned that even though the “Yahoo Auctions” site does generally target surfers based in the United States, auncions involving symbols of Nazi

page 8

18. While intermediary liability represents a potential solution to the legal uncertainty, it is also a source of additional transaction costs.³³ When intermediaries face liability for conduct engaged in by their customers, they have an incentive to exclude customers who may increase their risk. Risk averseness by intermediaries can undermine the Internet's potential as much as risk averseness by end users.

C. Hague Negotiation

19. Both localization and enforcement are under active discussion in the Hague Conference on Private International Law,³⁴ which has 100 years of experience in facilitating multilateral agreement among states on public law frameworks for private law.³⁵ Now, the Conference is considering a comprehensive treaty for judicial jurisdiction and enforcement of foreign civil judgments.³⁶ An October draft convention on international civil judgments is modelled closely on the European Brussels and Lugano Conventions. The Conference has an opportunity to work out basic ground rules for localizing conduct in Internet markets, through targeting and otherwise.³⁷ It also has an opportunity to define the relationship between private regulation and public enforcement.³⁸

20. As of this writing, the main controversies preventing agreement on the draft convention involve U.S. objections to limitations on general doing business jurisdiction, U.S. objections to extension of tort jurisdiction to the place of injury without regard to the purposefulness test

[Footnote continued from previous page]

ideology “may be of interest to any person.” Furthermore, Yahoo is aware of addressing French viewers because French parties making connections to Yahoo auction site from a terminal located in France receive Yahoo advertising banners written in the French language. The Court stated that the act of displaying objects of Nazi ideology in France is a violation of Article R645-1 of the Penal Code and thus is a “threat to internal public order.” The Court also stated that the technical measures and the initiatives at its disposal “in the name of the simple public morality” give Yahoo an opportunity to satisfy the injunctions of the May 22, order. The two technical procedures identified by the Court, geographical identification and user declaration of nationality, would allow Yahoo! Inc. to filter out French IP addressed at a success rate of 90 %.

33 When intermediaries are concerned about potential liability, they include the expected value of liability into their costs of doing business.

34 <http://www.hcch.net/e/workprog/jdgm.html>.

35 See, e.g. Convention relating to civil procedure 1 March 1954; Convention relating to the settlement of the conflicts between the law of nationality and the law of domicile 15 June 1955; Convention concerning the recognition of the legal personality of foreign companies, associations and institutions 1 June 1956; Convention on Jurisdiction, Applicable Law and Recognition of Decrees Relating to Adoptions 15 November 1965; Convention on the Service Abroad of Judicial and Extrajudicial Documents in Civil or Commercial Matters 15 November 1965; Convention on the Choice of Court 25 November 1965; Convention on the Taking of Evidence Abroad in Civil or Commercial Matters 18 March 1970.

36 <http://www.hcch.net/e/workprog/jdgm.html>(draft convention and associated analyses).

37 http://www.ali.org/ali/Intl_Juris_Proj.htm (analyses of Hague Conference efforts by ALI)

38

In an experts conference convened by the Hague Conference in Ottawa in 2000, the author suggested that the draft convention exception for choice of forum clauses enforceability for consumer contracts could be conditioned on the consumers not having available to them an acceptable private dispute resolution alternative .

of World Wide Volkswagen,³⁹ and the exclusion of consumer and employment contracts from choice of forum clauses. The last issue is of particular importance to the evolution of Internet-related ADR. Usually, the legal position of arbitration is determined with reference to forum selection clauses in contract. Disabling consumers from being able to agree on forum selection would be a setback for consumer ADR on the Internet.

D. The Role of Privately Made Law

21. Private international law long has held a place for private regulation through its acceptance of forum selection and choice of law clauses. A forum selection clause in the contract permits the contracting parties to waive their right to present a dispute to a public court and instead to present it to another tribunal—sometimes a court in another country; sometimes arbitration. A choice of law clause permits parties to a contract to legislate, in the sense that they select a sovereign whose law should be applied to their dispute other than the

sovereign whose laws otherwise would be applied.

22. Long standing controversies exist over the kinds of forums that qualify for deference in forum selection clauses. Uncertainty over whether private arbitration qualifies for forum selection was the stimulus for enactment of the Federal Arbitration Act in the United States and a negotiation of the New York Convention. The Internet renews the debate and increases uncertainty because of the proliferation of new kinds of dispute resolution mechanisms that do not qualify under traditional criteria for arbitration.

23. Party autonomy expressed through choice of law clauses traditionally has been even more limited. Some legal systems and commentators do not permit the parties to select as a source of law anything other than a state bearing some relationship to the transaction. Others would allow designation of any state, but disallow designation of private sources of law. On the other hand, as a matter of contract law, it is difficult to understand why the parties would lack legal competence to incorporate by reference the rules of a private standard setting body. If they can do that, logically they must be able to incorporate by reference the rules of any private body unless the content of a particular rule offends public policy. In a sense, defining the position of new dispute resolution systems—what one might call private regulatory systems—within traditional legal frameworks is a matter of elaborating private international law's forum selection and choice of law concepts. But even when this is done, that will not be enough; private regulation of the Internet is not limited to situations in which contractual relations exist.

III CATEGORIES OF PRIVATE REGULATION

24. As the introduction explained, private dispute resolution systems are but a subset of private regulation, which also includes rulemaking and enforcement. Developing the most

appropriate legal framework for private dispute resolution requires understanding the available legal frameworks for private regulation in general.

- ³⁹ World Wide Volkswagen v. Woodson, 444 U.S. 286, 295 (1980) (foreseeability of contacts with forum state insufficient to support personal jurisdiction; contacts must be purposeful).

25. Private regulation occurs in four basic situations: when public institutions delegate rulemaking and adjudication authority to private institutions or defer after the fact to private decisions, when those subject to private regulation consent in advance to the private regulatory regime, when private decisions are sufficiently acceptable to those affected by them that they acquiesce after the fact rather than presenting their disputes to public institutions, and when persons or entities in control of valuable resources issue rules and enforce them by threatening denial of access to the valuable right. The fourth situation presents greater challenges for structuring hybrid regulation because it lacks the enforcement and judicial-review connections inherent in the first two situations.

26. Few legal systems rely entirely on private regulation to protect consumers and small

businesses. The traditional difficulty with private regulation is that it may not express the political consensus of democratic societies with respect to values to be enforced⁴⁰

40 or the

balance of power to be struck between stronger and weaker market participants.

41

27. Combining the jurisdictional strengths of private regulation, and the greater political legitimacy of public regulation requires development of new hybrid frameworks. Public law can set minimum, and relatively general, standards of conduct and provide backup enforcement, representing the boundaries of a space within which a multiplicity of private regulatory regimes can work out detailed rules and first-level dispute resolution and rule enforcement machinery.⁴³

42

28. The relatively general character of the public law rules makes it easier to achieve consensus among multiple sovereigns with different legal traditions and varying political alignments, while also excluding private regulatory regimes that might be insufficiently protective of weaker parties or too restrictive of competition and innovation in the absence of the public law framework.

A. Public law delegation and deferral

29. The first category of private regulation begins with public power to make and apply law, which is transferred to private entities.

30. Notwithstanding the “non delegation doctrine” which questions the loss of accountability resulting when public institutions performing legislative functions delegate

⁴⁰ See Neil Weinstock Netanel, *Cyberspace Self-Governance: A Skeptical View From Liberal Democratic Theory*, 88 Calif. L. Rev. 395 (2000).

⁴¹ European Commission, *Data Protection Working Party, Working Document: Judging industry*

self-regulation: when does it make a meaningful contribution to the level of data protection in a third country? (14 Jan. 1998),

http://europa.eu.int/comm/internal_market/en/media/dataprot/wpdocs/wp7en.htm.

42

Terminology is a problem in talking and writing about these issues. "Public law" as the phrase is used to describe hybrid regulation, signifies law emanating from legislatures and courts. "Private law" in contrast signifies law emanating from private rule makers and adjudicators. Both of these categories arguably belong to the superset of private international law. Public international law involves relations between sovereigns, and that is not the subject of this paper at all.

43

See Henry H. Perritt, Jr., *The Internet is Changing the Public International Legal System*, 88 *Ky. L. Rev.* 885, 931 (2000).

their authority to private decision makers, ⁴⁴ delegation of rulemaking power is commonplace in the modern regulatory state, including federal delegation to states, ⁴⁵ delegation of authority to set standards for health care to the Joint Commission on Accreditation of Healthcare Organizations ("JCAHO"), ⁴⁶ delegation of authority to approve minimum price orders to agricultural cooperatives, ⁴⁷ delegation of rules and enforcement of airport security arrangements under the Federal Aviation Act, and delegation of authority over railroad trucking rates to Rate Bureaus. Newer examples include the COPPA Safe Harbor Statutory Provisions, and the US/EU Privacy Safe Harbor Agreement.

31. Deferral to private decisions is a slightly different concept. Public adjudicatory institutions have the power to decide disputes, but they abstain from deciding them in favor of private decisions when certain criteria are met. “National Labor Relations Board” (“NRLB”) deferral to collectively bargaining arbitration, suspension of judicial litigation in favor of private arbitration, and eventual enforcement of private arbitration awards under the Federal Arbitration Act and the New York Convention, and abstention by court in cases involving private association decisions all are examples.

32. In this context for private regulation, the inherent power of the public rulemaking and adjudicatory institutions represent the public law framework, while the exercise of delegated power and the making of decisions to which public institutions will defer, represent the private activity within the framework.

33. This context provides a robust source of criteria for making private decisionmaking accountable. The Delegation Doctrine in Administrative Law ensures accountability by requiring “channeling” of private decisionmaking through limits on the scope of the subject matter of the private actors, by enforcing procedural regularity, and by assuring judicial review of decisions.

48

⁴⁴ Schechter Poultry Corp. v. U.S. 295 495 (1935); Panama Refining Co. v. Ryan 293 U.S. 388 (1935), Henry H. Perritt, Jr., *International administrative law for the Internet: mechanisms of accountability* 51 Admin.L.Rev. 871 (1999) (all discussing delegation doctrine). Dean Krent offers a working definition of delegation: “any congressional act which empowers those outside

Congress to enforce or implement a legislative objective and backs those efforts with the coercive force of the federal government.” Harold J. Krent, *Fragmenting The Unitary Executive: Congressional Delegations Of Administrative Authority Outside The Federal Government* , 85 Nw. U. L. Rev. 62, 67 (1990). [hereinafter “Krent on Delegation”].

Michael Froomkin, *Wrong Turn In Cyberspace: Using ICANN To Route Around the APA and the E Constitution*, 50 Duke L.J. 17 (2000).

B. Consent/waiver

34. Most private regulation occurs within a contractual framework, in which those bound by private regulatory decisions agree in advance to be bound. Private associations such as the Boy Scouts,⁴⁹ churches, condominium associations, AOL and Microsoft network all are

examples. In this form of private regulation, contract identifies the legislators, judges, and sheriffs, and also defines subject matter, the processes for making, applying, and enforcing rules. The parties bound by private regulatory decisions are congruent with the parties to the contract.

35. Many private privacy regulatory regimes depend upon intermediaries to revoke membership or seals that immunize members or holders from direct action by public authorities.⁵⁰ In these circumstances, also, the legal framework is contractual.

36. While consent-based private regulatory regimes may appear purely private, they are not. Contract law developed and applied by public institutions provide a public law framework within which the private regimes operate. While usually denominated “private law” rather than “public law,” the frameworks nevertheless represent judgments by public institutions as to the permissible scope of private regulation.

37. Controversies over this kind of private regulation for the Internet center on the meaning of “consent.” Often, the terms of the contractual framework are determined not through negotiation among all affected parties, but by unilateral decision of one party. The law must specify what kind of conduct by the other party(ies) represents assent to the unilaterally developed terms. Whether subjecting oneself to the private regime represents legally effective consent turns on adequate notice of the terms, and on the availability of alternatives to a particular regime. This, in turn, invites evaluation of the “switching costs” for leaving one regime in favor of another.⁵¹

C. Acquiescence

38. Regardless of the construction of public law frameworks some private regulation will occur, in circumstances where participants voluntarily accept it, after the fact.

39. In many cases the effect of private decisionmaking depends, not on explicit delegation by public institutions, and not on before-the-fact consent to the private regulatory regime, but on the practical acceptability of the private decisions. Employees denied promotions or dismissed often accept the employer decisions—supervisory or appellate—rather than suing in court or filing charges with the NLRB or the Equal Opportunity Commission. Private litigants often accept the result of advisory arbitration or other dispute resolution mechanisms rather than pressing for a decision by a jury or judge. Most parties to credit card disputes apparently accept the result of the chargeback process rather than suing in court.

⁴⁹ See *Boy Scouts v. Dale*, 530 U.S. 640 (2000).

⁵⁰ <http://www.truste.org/>; <http://www.bbbonline.org/>

⁵¹ See Neil Weinstock Netanel, *Cyberspace Self Governance: A Skeptical View from Liberal Democratic Theory*, 88 *Calif. L. Rev.* 395, 451 (2000).

40. This category of private regulation definitionally assures accountability, because those adversely effected by private decisions can take their dispute to another level, eventually

ending up before a public institution. Their power to acquiesce or to withhold acquiescence assures accountability to them.

D. Self-enforcing; direct deprivation of valuable right

41. The fourth category of private regulation presents the greatest accountability challenges. In this context, the power of private decision makers stems not from explicit or easily implied consent by those subject to the private governance, nor from explicit delegation of legal authority possessed by public institutions, but from de facto control over a valuable resource by private persons or entities. Self-help repossession of tangible chattels and private control of range land⁵² are pre-Internet examples.

42. Domain name regulation, regulation by private Internet and service content providers, and “Mail Abuse Prevention System” (“MAPS”) are examples in the Internet context. authority of ICANN and of domain name registrars derives not so much from the Department of Commerce/ICANN Memorandum of Agreement, as from the de facto control over the databases that translate domain names into IP addresses. By refusing to list a domain name in authoritative domain name servers, ICANN and domain name registrars can deprive one of access to the Internet. AOL and Microsoft Network can exclude subscribers from access to other subscribers under rules developed privately by the service providers.

53 The

43. MAPS represents an extension of this category of private regulation. The RBL is machinery for blocking access to the Internet. It was created by private unilateral action. It is a valuable resource in the negative sense that one can use the Internet only by not being listed in the RBL.

44. This category of private regulation overlaps the first two categories to some extent. One

can argue that electing to use a private resource represents legal consent to the private regulatory regime associated with the private resource. But this is an attenuated form of consent. Because the resource is valuable, switching costs may be so high as to be infinite. The consent question resolves into a switching cost question, which, in turn, resolves into questions whether the resource to which access potentially is denied can easily be duplicated by others. ⁵⁴

45. How the law should provide a framework for this form of private regulation is problematic. U.S. law long has drawn a sharp distinction between public and private actors.

46. In *Flagg Brothers v. Brooks*, ⁵⁵ the Supreme Court rejected the idea that self-help repossession represented state action, entitling the adversely affected party to the protections

⁵² See Terry L. Anderson & J. Bishop Grewell, Property Rights Solutions For The Global Commons: Bottom-Up Or Top-Down? 10 Duke Envtl. L. & Pol'y F. 73 (1999) (describing private regulation of cattle ranges).

⁵³ See § V of this paper for concrete description.

⁵⁴ See Henry H. Perritt, Jr., Law and the Information Superhighway § 2.10[F] (2d ed. 2000) (describing essential facilities doctrine and citing cases).

⁵⁵ 436 U.S. 149 (1978).

of the due process clause of the Fourteenth Amendment.
dichotomy between public and private acts.”

⁵⁶ It referred to the “essential

⁵⁷ “While as a factual matter any person with sufficient physical power may deprive a person of his property, only a State or a private person whose action may be fairly treated as that of the State itself, may deprive him of an interest encompassed within the Fourteenth Amendment’s protection.”

⁵⁸

47. The central question with respect to this category of private regulation is what form the public law framework should take. That depends, in turn, on the existence of a private right of action to challenge decisions by this category of private regulator, and on the criteria that would entitle the private regulator to a privilege or immunity. These questions cannot be resolved without also considering the appropriate prerogatives of those who control private property.

48. Buried beneath these questions of how past causes of action and models for controversies can be mapped to the Internet is the question whether access to the Internet represents a new kind of interest that should be entitled to legal protection; in other words, should access to the Internet be a right? Even if such a right should be recognized by legal systems, much heavy intellectual lifting remains to define the boundaries of that right.

E. Defensive private regulation

49. Private regulation often occurs as a defensive measure by intermediaries potentially subject to liability for information they handle. Usually these intermediaries find themselves in the fourth situation -- in control of valuable resources.

50. Internet service providers or telecommunications entities may be drawn into a

regulatory role by the threat of liability imposed on them for the conduct of users of their services. To reduce the risk of liability, intermediaries who are subject to liability for harm caused by content originators have a strong incentive to exclude any content or commerce that poses a risk.⁵⁹ Defensive private regulation involves great risk of private censorship and exclusion of risky content and commerce.

IV. LEGAL ANCHORS FOR ALTERNATIVE DISPUTE RESOLUTION

51. Appropriately designed dispute resolution mechanisms offer lower costs, reassure participants, and solve jurisdictional problem because use of them manifests consent.

52. The experience of WIPO in adjudicating nearly a thousand domain name disputes shows the willingness of Internet users to submit their disputes to private dispute resolution institutions applying rules developed by private bodies.⁶⁰

⁵⁶ 436 U.S. at 153.

⁵⁷ 436 U.S. at 165 (internal citations and quotations omitted).

⁵⁸ 436 U.S. at 157 (internal quotations and citations omitted).

⁵⁹ The incentive is reduced by 47 U.S.C. § 233, immunizing certain intermediaries from liability as “publishers.”

⁶⁰ See Henry H. Perritt, Jr., *Dispute Resolution in Cyberspace: Demand for New Forms of ADR*, 15 O H. S T. J. D IS. R ES. 675 (2000).

A. The New Enforcement

53. Larry Lessig has helped us understand that Internet regulation can be profoundly different because enforcement of rules occurs through code rather than by the human intervention of judges and sheriffs.⁶¹

54. This means the elimination of the usual opportunity for public legal institutions to assure accountability of private rulemaking, adjudication, and enforcement at the point when an ADR decision is enforced in a regular court.

55. When code-based enforcement is involved, as often is the case in Internet disputes, new mechanisms, and some new criteria, must be used to assure accountability of private regulatory decisionmakers.

56. The need for new thinking and new doctrine is most obvious with respect to the development of causes of action to permit review of MAPS rules and rule application, but some commentators believe the same is necessary to reform ICANN rulemaking and adjudication as well.

V. THREE NEW CASES

57. Three cases involving Internet disputes make more concrete some of the open issues relating to choice of law and enforcement. All three of them involve enforcement or the

possibility of enforcement through technical means, not requiring coercion by public authorities. Two of them involve revocation of domain names by domain registrars; the other involves enforcement by blocking IP addresses of rule violators.

58. The three cases differ in the source of rules applied. The first involved application of a rule developed and promulgated by ICANN, and adjudication by the WIPO domain name dispute resolution process—one of the most successful alternative dispute resolution systems for the Internet.

59. The second involved application of a criminal statute of the State of Illinois to a Web server based in Austria. The adjudicator in this case was a regular Illinois court of general jurisdiction.

60. The third case is the most interesting because it raises the most novel issues and presents the greatest challenges for designing hybrid regulatory systems for the Internet. In it, the rule maker was a private individual, with no contractual relationship with those to whom the rule is applied, and there was no independent adjudicator.

A. Walmartcanadasucks

61. Wal-Mart Stores, Inc v. walmartcanadasucks.com, Case No. D2000-1104, was the third case involving disputes between the respondent and Wal-Mart. The two earlier cases, involving domain names confusingly similar to the Wal-Mart trademark, were resolved in Wal-Mart's favor. The third case involved a much narrower question: whether a domain

⁶¹ Lawrence Lessig, *Code and Other Laws of Cyberspace*, 218-219 (2000).

WIPO/PIL/01/6

page 16

name including the suffix “sucks” can be confusingly similar to the text string to which “sucks” is appended. The sole panelist, the author of this paper, concluded that a domain name including the word “sucks” cannot be confusingly similar, and that a privilege for criticism and parody reinforces that conclusion.

62. The respondent hardly had clean hands. He had been found in the past to be a cybersquatter with respect to this complainant.

63. But, the panel concluded, distasteful conduct should not stampede UDRP decision makers into an unwarranted expansion of the domain name dispute process. The UDRP has a narrow scope. It is meant to protect against trademark infringement, not to provide a general remedy for all misconduct involving domain names. Posting defamatory material on a Web site would not justify revocation of a domain name under the UDRP. Posting child pornography on a Web site would not justify domain name revocation. While a domain name registrar may be privileged to revoke a domain name for “illegal use” under § 2 of the Uniform Registration Agreement, whether a use is illegal in general is beyond the subject matter jurisdiction of an administrative panel under the UDRP.

64. Transfer or revocation of a domain name as a remedy in a dispute panel proceeding is authorized only when the panel finds (1) that the domain name is identical to or confusingly similar to a trademark and (2) when there is bad faith.

65. Bad faith, no matter how egregious, cannot supply a likelihood of confusion where it does not otherwise exist. Suppose the owner of the trademark Acmebytes registers and uses the domain name Acmebytes.com. Suppose further that the proprietor is named Agnes. If someone registers the domain name “agnesisawitch.com” and offers to surrender it in exchange for the payment of money, the bad faith elements of the ICANN policy no doubt would be satisfied. But Agnesisawitch.com is not confusingly similar to Acmebytes.com and the presence of bad faith cannot make it so.

66. I do not see how a domain name including “sucks” ever can be confusingly similar to a trademark to which “sucks” is appended. But whether or not a per se privilege for use of “sucks” is appropriate, the record in this case did not support a finding that the ICANN policy was violated.

67. Thus whether wallmartcanadasucks is effective criticism of Wal-Mart, whether it is in good taste, whether it focuses on the right issues, all are immaterial; the only question is whether it is criticism or parody rather than free-riding on another’s trade mark.

68. Because the accused domain name was not identical or confusingly similar to a trademark or service mark in which the complainant has rights, I concluded that the complainant did not establish the elements of a violation of the ICANN Policy.

B. Voteauction.com

69. In October, 2000, the Chicago Board of Election Commissioners became concerned that a Web site located in Austria, voteauction.com, had the potential to corrupt or, at least, to undermine confidence in the general election subsequently held on 7 November 2000 in Chicago and elsewhere in the United States. voteauction.com solicited voters in the then forthcoming election to offer to sell their votes, and also solicited persons interested in buying

those votes. The Web site was constructed so that offers to sell and offers to buy were made

WIPO/PIL/01/6

page 17

by filling out a form that included the address, with a pull down list including Illinois as an option. Moreover, the Web site also included a summary of outstanding offers with Illinois as a specific listing. There was, thus, little difficulty in concluding that Illinois courts could exercise jurisdiction over the Web site under the Zippo Continuum⁶² and the targeting concept of Millennium Enterprises.⁶³

70. Accordingly, the Board of Election Commissioners filed a civil lawsuit in the Circuit Court of Cook County against voteauction.com and its individual organizers and managers.

71. But the existence of theoretical jurisdiction was not enough; any judgment also must be enforced, and the procedures for transnational enforcement of judgments not only are uncertain, they would take months. The election was scheduled in weeks.

72. So, the Election Commissioners thought about practicable enforcement measures that might be taken against property located in the jurisdiction, or at least in the United States. One possibility was to target the domain name, “voteauction.com.” Such an approach had been suggested by the author of this article in “Will the Judgment Proof Own Cyberspace.”

The offending domain name was present in Illinois—and hundreds or thousands of domain name servers supporting hundreds or thousands of Internet service providers in the vicinity of Chicago. But litigating against all those ISPs quickly was ruled out. Instead, voteauction.com’s domain name registrar, Domain Bank, was named as a defendant in the lawsuit, and the draft injunction attached to the complaint included a paragraph ordering that the domain name be withdrawn or cancelled. In October 2000, Judge Murphy of the Circuit Court of Cook County Illinois signed the injunction after a hearing.

73. Domain Bank had been notified of the lawsuit, and had engaged in extensive telephonic discussions with counsel for the Election Commissioners. Domain Bank had, in its standard domain name registration agreement, a provision prohibiting the use of domain names for “illegal purposes.” After the injunction was issued, signifying a judicial determination that the domain name was being used illegally, Domain Bank cancelled the voteauction.com domain name, shutting down voteauction.com all over the world.

74. But celebrations of victory in Chicago were tentative, and sure enough, about a week later voteauction.com opened up under a new domain name, “**vote-auction**.com,” and this domain name was registered in Switzerland with CORE. But CORE had a similar prohibition against illegal use in its standard domain name registration agreement. After extensive telephonic and email discussions between counsel for the Election Commissioners and counsel for CORE, CORE also cancelled the **vote-auction**.com domain name, once again shutting the site down. Subsequently, voteauction.com sought to publicize its IP address, the

⁶² Zippo Mfg. V. Zippo Dot Com, 952 F. Supp. 1119 (W.D.Pa. 1997) (holding that the defendant purposefully availed itself of doing business in the forum state).

⁶³ Millennium Enter. v. Millennium Music, LP, 33 F. Supp. 2d 907, 915-16 (D. Or. 1999) (explaining *Zippo* continuum as a “sliding scale” under which the “likelihood that personal jurisdiction can be constitutionally exercised is directly proportionate to the nature and quality

of commercial activity that an entity conducts over the Internet” and suggesting that jurisdiction exists over Web sites only when the forum state is targeted).

Henry H. Perritt, Jr., *Will the Judgment-proof Own Cyberspace?* 32 I
(1998).

NT 'L LAWYER 1121

WIPO/PIL/01/6

page 18

use of which would avoid the domain name system all together, but by then, the election had been held.

75. The voteauction.com litigation illustrates an interplay between public and private regulation different from walmart. The lawsuit and the injunction obviously were traditional adjudicatory processes by a court—a paradigmatic public institution. But an important part of the overall result turned on the private rule, promulgated by a private institution—the domain name registrars—that prohibited illegal use of the domain name. Based on the determination of illegality by the public institution, the private institution used its power over an asset—the domain name—to achieve the result desired by the complainant. Voteauction.com can be understood to be an interesting case about judicial jurisdiction, but it also is about enforcement of a very broad rule by a private intermediary.

76. Voteauction.com involved the inverse of the usual relationship between public and

private institutions. In *voteauction.com*, the public courts in Illinois performed the adjudicatory function, and the private domain name registrars decided whether to enforce the judicial decision. Because no injunction clearly supported by personal jurisdiction bound either of the domain name registrars, their actions in revoking *voteauction*'s domain name privileges is best understood as purely private action, informed by the public determination by the Circuit Court of Cook County.

77. *Voteauction.com* also showed the importance and practicability in working out the boundary between public and private regulation. In some theoretical sense, it would have been better to have enforced the injunction against domain name translation in or near Chicago. That would have kept the enforcement action within the sovereign whose laws were being enforced. It also would have comported more comfortably with geographic limits on the jurisdiction of the court issuing the injunction. But doing that was impracticable, given the large number of ISPs and uncertain patterns of use. It was much easier under tight time deadlines imposed by the proximity of the election, to focus enforcement efforts on a single intermediary, the first located in another state but within the United States, and the second located in a foreign country. The theoretical jurisdictional grounds were shakier, but enforcement at this level was practicable.

C. The MAPS Controversy

78. The MAPS⁶⁵ is a form of private regulation that operates completely outside a public law framework. MAPS is a nonprofit California corporation that allows ISPs and email service providers to exclude spam⁶⁶ from their systems. MAPS maintains a list of IP addresses, known as the "Realtime Blackhole List" ("RBL"),⁶⁷ and permits MAPS subscribers automatically to exclude from their systems any email message originating from one of the listed IP addresses. Some 20,000 ISPs, corporations, government agencies and individuals, comprising some 40% of the Internet, subscribe to MAPS.

⁶⁵ <http://maps.vix.com>

⁶⁶ Spam is unsolicited email broadcast to hundreds or thousands of email addresses.

⁶⁷ Harris Interactive, Inc. v. Mail Abuse Prevention System, No. 00-CV-6364L(F) (W.D.N.Y. cplt filed Aug. 9, 2000) [hereinafter "Harris Complaint"] at para. 50. MAPS subscribers include Microsoft, BellSouth, Qwest, Micron, and AltaVista. Id. at para. 62.

79. MAPS has published rules, known as “Basic Mailing List Management Principles for Preventing Abuse” (BMLMPPA”),⁶⁸ which purport to state Internet standards and best current practices for proper mailing list management. Among other things the rules require use of a “double opt-in procedure”⁶⁹ before mail can be sent to a particular addressee. Complaints about mailers not complying with the rules result in the mailer being put on the RBL,⁷⁰ and owners of IP addresses on the RBL can be removed only by satisfying MAPS they will comply in the future.⁷¹

80. MAPS illustrates the fourth type of private-regulation identified in § III -- regulation enabled by control of a valuable private resource. And MAPS starts, not with ownership of the valuable private resources; the resources are owned by thousands of private internet

service providers. MAPS uses technology, “code” in Professor Lessig’s parlance, to extend its private decisions into control of resources owned by others.

81. In August 2000, Harris Interactive, Inc., a public opinion survey organization used MAPS and a number of its subscribers in the United States District Court for the Western District of New York.⁷² The complaint alleges tortious interference with business and contractual relations,⁷³ commercial disparagement,⁷⁴ negligent breach of a duty to administer the RBL in a fair and evenhanded manner,⁷⁵ violation of New York general business law prohibiting deceptive and confusing consumer communications,⁷⁶ defamation per se,⁷⁷ conspiracy to interfere tortiously with plaintiff’s business,⁷⁸ federal antitrust violations for concerted refusal to deal,⁷⁹ attempted monopolization,⁸⁰ monopolization,⁸¹ conspiracy to monopolize by refusal to deal,⁸² forming and operating a trade association that unreasonably restricts competition,⁸³ and violation of the New York “Donnelly Act.”⁸⁴ The suit requests compensatory damages in excess of \$50 million and punitive damages.

The Harris lawsuit reveals the dilemmas faced by a self-regulatory intermediary. The lawsuit alleges that MAPS placed Harris on the RBL without good cause,⁸⁵ and without reasonably investigating facts or giving Harris an opportunity to be heard,⁸⁶ that it promulgated standards

⁶⁸ Harris complaint appendix; <http://maps.vix.com>.

⁶⁹ The double opt-in procedure requires a recipient to indicate affirmatively that it wishes to be on a mailing list and then to respond affirmatively to an email message sent to confirm the subscription. BMLMPPA Rule 1; Harris Complaint para. 47.

page 20

that interfered with legitimate communications,⁸⁷ and that it imposed conditions for removal from the RBL that were arbitrary and unreasonable.⁸⁸ The suit thus challenges the content of the private rules, claims absence of due process in applying them, and illegality in the sanctions imposed for violating the rules.

82. On November 15, 2000, Exactis.com, Inc. sued MAPS in the United States District Court for the District of Colorado,⁸⁹ alleging claims under the Colorado Wiretapping Act,

blocking communications in violation of state law, the Colorado Organized Crime Control Act, the Sherman Act, the Colorado Unfair Trade Practices Act, intentional interference with contractual relations,⁹⁴ intentional and negligent misrepresentation and extortion,⁹⁵ trade disparagement, and unfair competition. Exactis alleged that among the services blocked by MAPS was requested confirmations of brokerage transactions by Charles Schwab.⁹⁶ The complaint alleges a disagreement over the specific procedures to be used to ensure that a recipient wishes to receive email transmitted through Exactis's service, MAPS insisting on double opt in, Exactis utilizing measures "different from, but not less effective than" double opt in.⁹⁷

83. One can only speculate as to possible outcomes of the litigation. One obvious possibility is that the MAPS self-regulatory regime be allowed to continue according to the desires of its owners and subscribers. Another possibility is that the regime will be shut down under an injunction or because of the magnitude of damages imposed or sought. Or, the court might impose conditions on continued operation of the regulatory regime, analogous to those imposed in the past on private standard-setting organizations,⁹⁸ requiring substantive support for the content of rules and due process in their application and enforcement. Finally, the controversy, and others like it may stimulate legislative action to channel such private self-regulatory activities.

84. The MAPS form of private regulation easily could be extended to other areas. The Christian Right could organize a blacklist for ISPs that handle material that undermines family values. The intellectual property community could organize a blacklist for ISPs that do not have sufficiently stringent policies to discourage infringement. Consumers groups could organize blacklists for ISPs that allow online merchants to operate without appropriate return and refund policies.

85. In all of these cases, ISPs could be coerced into "subscribing" to the blacklist by threats that any non-subscribing ISP will be treated like an ISP that handles offending material.

98 See Radiant Burners, Inc. v. Peoples Gas Light & CokeCo., 364 U.S. 656, 658 (1961) (arbitrary
and capricious application of standard by trade association violated Sherman Act).

Confronted with the threat of being blacklisted, most ISPs would prefer to subscribe and thus become a part of an ever-expanding governance regime, adopting the rules unilaterally determined by the organizer of the blacklist.

86. Now David Post thinks all of this is just fine: “The MAPS ‘vigilantes’ (bad) can just as easily be characterized as ‘activists’ (good), and the kind of ‘bottom-up,’ uncoordinated, decentralized process of which the RBL is a part strikes me as a perfectly reasonable way to make ‘network policy’ and to ‘answer fundamental policy questions about how the Net will work.”⁹⁹

87. For Post, it is sufficient that the government does not administer the RBL; a private entity does.

88. Post’s preference for private ordering over what he calls “collective” regulation apparently is premised on the possibility of Internet participants freely choosing which regulatory regime they prefer. It is not clear how this process of choice is supposed to work with MAPS. Presumably, Post would say that ISPs are free to subscribe to MAPS or not. That freedom may be illusory if MAPS itself or a future elaboration of MAPS were to blacklist any ISP who does not subscribe.

89. Moreover, an interest conflict exists between subscribing ISPs and ISPs handling “Unsolicited Commercial E-mail” (“UCE”). The former want to eliminate the costs of handling certain types of inbound email; the latter want to use the Internet as a unified whole, any part of which is reachable from any other part. Why should one side of the value argument get to make the decision, because it is in a position to use code to enforce its decision? If the UCE handlers develop code that will circumvent the RBL, should that reverse the value decision? That apparently is the world that Post would prefer.

D. Mechanisms of Accountability

90. Internet-related private regulation and alternative dispute resolution is a reality. As these new legal regimes make rules and apply and enforce them, some affected parties will be

disappointed. Every dispute resolution panel proceeding produces a loser. Blacklists implemented through code adversely affect those on the blacklist. Lawsuits in the regular courts provide new data for advocates of different approaches to transnational jurisdiction and judgment execution. Consider the three cases reviewed. Wal-Mart is free to file a trademark infringement action in court and seek a result different from that in Case Number 2000-1104. The case against voteauction.com is still pending in the Circuit Court of Cook County. Further proceedings may complicate the initial outcomes. In any event, as the case becomes better known, domain names registrars may be pressured to change their responses to judicial findings like that in the voteauction.com case.

91. MAPS provides the most fertile ground for development of hybrid regulatory concepts further. Because the MAPS blacklist is self enforcing, it is not obvious how courts or other public institutions can assure accountability by MAPS. The pending litigation, however, and other possible reactions to MAPS should illuminate causes of action and standards of review that can enable judicial scrutiny of the objective rationality and procedural transparency of

⁹⁹ Post, 52 Stan.L.Rev. at 1441.

private regulatory regimes. As these legal doctrines evolve, it also may be appropriate to

develop a better understanding of the interests of Internet participants in having access to the Internet as a whole and how those interests might be legally protected without turning Internet service providers—including those who want access—into common carriers.

VI. CONCLUSION

92. Greater use of alternative dispute resolution is necessary to allow the Internet to fulfill its potential. Hybrid legal frameworks always have been necessary to make alternative dispute resolution effective, and the same is true for Internet-oriented ADR. In designing these hybrid frameworks for the Internet, however, greater attention must be paid to the source of rules and to enforcement because new rulemaking institutions have arisen, and code permits enforcement without the involvement of publicly accountable sheriffs and judges. MAPS provides especially fertile ground for exploring and eventually adopting some new techniques for assuring accountability of private regulators.

PERSONAL NOTE: Today's episode of MOOKIE is dedicated to my friend Ornella Superina who passed away suddenly this past Friday when she accidently fell and hit her head. She was this charming little Italian woman that lived in my apartment building. Of course, after being shocked by the news of her death, I immediately did the New York thing and called the building manager to ask if I could move into her now vacant one bedroom apartment. Thanks Ornella, May You Rest In Peace.

WOW !! Yesterday was quite

WOW !!

Yesterday was quite an historic day.

- [The Revolution Will Be Televised !!](#)

The people of Belgrade, Yugoslavia peacefully took to the streets to uphold their election results and oust President Milosevic.

- [Can we vote for the Cheney/Lieberman ticket?](#)

Excellent debate. Two very competent men, almost no personal attacks, good points from both sides and they often agreed on certain issues.

My favorite one liners:

Lieberman: Dick are you better off then you were 8 years ago?

Cheney: Yes, but not because of the government. (Because you make \$5 million a year).

Cheney: The Republicans want to cut taxes and give the some of that surplus back to the American people. It's their money NOT the government's.

You don't need to be a CPA to figure that out!

- [Oil Dips Below \\$30 Per Barrel](#) - I guess releasing the oil reserves actually worked.

- [The European Central Bank Raised Interest Rates](#) but the Euro is still weak. I think I'll be snowboarding in the Alps this winter. Nice and CHEAP!!

Secretary Dick Cheney, Comedian Phil Hartman - Separated at birth?

Not that this makes any difference but [Dick Cheney Has A Gay Daughter](#)

[Gore's Nose Is Growing Again](#) - more "un-truths" from the man who invented the internet.

[Snoring Makes You Loud . . . And Stupid](#) ... So that's what's wrong with my dad :)

Users expect to pay for

Users expect to pay for music downloads - I definitely want to pay my favorite artists to keep making music that I like. But the music industry should stop fighting Napster and come up with a better solution for us consumers to download music.

MOST PEOPLE THAT I KNOW:

- Do NOT have hi-speed internet access.
- Do NOT download music.
- Did NOT know about Napster until they saw it on the news.
- Do NOT know any other file sharing programs.
- Do NOT know enough about computers to have any effect on the music industry.
- Still BUY lots of CDs.

PERSONAL NOTE: Today's episode of

PERSONAL NOTE: Today's episode of MOOKIE is dedicated to my friend Ornella Superina who passed away suddenly this past Friday when she accidently fell and hit her head. She was this charming little Italian woman that lived in my apartment building. Of course, after being shocked by the news of her death, I immediately did the New York thing and called the building manager to ask if I could move into her now vacant one bedroom apartment. Thanks Ornella, May You Rest In Peace.

WOW !! Yesterday was quite

WOW !!

Yesterday was quite an historic day.

- [The Revolution Will Be Televised !!](#)

The people of Belgrade, Yugoslavia peacefully took to the streets to uphold their election results and oust President Milosevic.

- [Can we vote for the Cheney/Lieberman ticket?](#)

Excellent debate. Two very competent men, almost no personal attacks, good points from both sides and they often agreed on certain issues.

My favorite one liners:

Lieberman: Dick are you better off then you were 8 years ago?

Cheney: Yes, but not because of the government. (Because you make \$5 million a year).

Cheney: The Republicans want to cut taxes and give the some of that surplus back to

the American people. It's their money NOT the government's.

You don't need to be a CPA to figure that out!

- [Oil Dips Below \\$30 Per Barrel](#) - I guess releasing the oil reserves actually worked.
- [The European Central Bank Raised Interest Rates](#) but the Euro is still weak. I think I'll be snowboarding in the Alps this winter. Nice and CHEAP!!

Secretary Dick Cheney, Comedian Phil Hartman - Separated at birth?

Not that this makes any difference but [Dick Cheney Has A Gay Daughter](#)

[Gore's Nose Is Growing Again](#) - more "un-truths" from the man who invented the internet.

[Snoring Makes You Loud . . . And Stupid](#) ... So that's what's wrong with my dad :)

[Microsoft Linux??](#) - Priceless.

ATTENTION NYC Commuters: [Straphangers.org](#) - One click to a better commute.

Illustrative Risks to the Public in the Use of Computer Systems and Related Technology

Peter G. Neumann, Computer Science Laboratory,
SRI International, Menlo Park CA 94025-3493
EXCERPT: Election Problem cases as of November 25, 2004

Copyright 2004, Peter G. Neumann, SRI International EL243, Menlo Park CA 94025-3493 (e-mail Neumann@csl.sri.com; <http://www.CSL.sri.com/neumann>; telephone 1-650-859-2375; fax 1-650-859-2844).

This list summarizes items that have appeared in the Internet Risks Forum Digest (RISKS) – which I moderate (comp.risks newsgroup) – and/or published ACM SIGSOFT *Software Engineering Notes* (SEN). In this collection of mostly one-liner summaries, (R i j) denotes RISKS volume i issue j; (S vol no:page) denotes an issue of SEN, where there has been one volume per year, with vol 29 being the year 2004; page numbers are given regularly from 1993 on; (SAC vol no) indicates an item in the quarterly SIGSAC Security and Control Review, where vol 16 is 1998, which was the final volume. The RISKS-relevant SEN material prior to 1995 is summarized in my Computer-Related Risks, Addison-Wesley, 1995. SEN material is now being brought on-line by Will Tracz: <http://www.acm.org/sigsoft>
The complete Illustrative Risks document is on-line: [illustrative.html](#); ([illustrative.pdf](#); [illustrative.ps](#)). It includes

Descriptor Symbols

The following descriptor symbols characterize each entry.

! = Loss of life/lives; * = Potentially life-critical or safety problem

V = Overall system or subsystem **ViV**ability problems (with respect to diVerse adVersities, including attacks *and* malfunctions).

\$ = Loss of resources, primarily financial

S = Security/integrity/misuse problem; P = Privacy/rights abuse or concern

H = Intentional **H**uman misuse (e.g., user-administrator-operator-penetrator)

h = Accidental **H**uman misuse or other inadvertence

I = **I**nsider; O = **O**utsider; A = Inadequate **A**uthentication, **A**ccess control, or **A**ccountability

d = System **D**evelopment problems

e = Improper **E**volution/maintenance/upgrade. (H,h,i,f,d,e involve human foibles.)

r = Problems with **R**equirements for system or operation (including the overall system concept)

f = **F**laws (or **F**eatures in design, or hardware/software implementation)

i = Mis**I**nterpretation/confusion/human errors at a man-system **I**nterface; documentation problems

m = Hardware **M**alfunction attributable to system deficiencies, the physical environment, acts of God, etc.

1 Election Problems

We have reported election problems in *Software Engineering Notes* and RISKS for many years. Many of these problems are summarized below. More recently, in the 2000 election, particularly in Florida, the chickens of neglect have come home to roost, exemplifying everything we have been saying all these many years – and more. Similar to the 1988 fiasco where a 210,000-ballot undervote occurred in the Senate Race in four counties run by BCR/Cronus, 19,000 votes were disqualified for the presidential race in Palm Beach County, and many more in Broward County – perhaps because of the confusion raised by the butterfly ballots. There are also some reports of the left-hand and right-hand pages being improperly aligned, so that a vote for one candidate actually counted for another candidate. Dimpled chad became important – perhaps resulting in part from blocked and never-cleaned chad trays (and there was a lot of extra chad resulting the invalidated multiple votes!). There were many irregularities involving improper voter disenfranchisement, with at least 91,000 voters being unable to vote because of a largely erroneous list of supposed convicted felons – including one election commissioner who found herself incorrectly on the list, and was apparently the only one to block use of the list in her region. Also, see the November CACM Inside Risks articles from 1990 (PGN), 1992, 1993, 2000 (Rebecca Mercuri), and January 2001 (<http://www.csl.sri.com/neumann/insiderisks.html>). Numerous problems are noted in the on-line RISKS, along with various commentaries (R 21 10-14). We note that punched-card systems are inherently flaky (!), and that even optical scanning is problematic, but that direct-recording electronic systems tend to be subject to serious potentials for fraud and manipulation. Internet voting is a disaster waiting to happen in light of the inadequate security of the Internet, personal computer systems, and subvertible servers. For example, the SERVE system appears to be seriously flawed. Proposals to vote from automated teller machines (R 21 15-16) are also problematic, and basically undesirable. Election 2000 demonstrated once again that we need to reexamine the entire election process objectively, and devise less-easily subvertible checks and balances that can provide much greater assurance. Election 2002 still had vastly too many problems, many of which have not been eliminated for Election 2004.

Integrity throughout the election process is essential. And yet we repeatedly hear about unexplained anomalies (enumerated below, including the 1985 articles by David Burnham noted below) and various suspicions of fraud – some with convictions. For example, Ransom Shoup II (purveyor of the ShoupTronic election machines) was convicted of two felony counts – election fraud and conspiracy to commit election fraud. In 1996, Senator Chuck Hagel was CEO of the election company (now a part of ES&S) used by most of Nebraska in his first-term election (e.g., see Thom Hartmann, If you want to win an election, just control the voting machines, *The Hill*, 31 Jan 2003 – R 22 55); this may not have affected the outcome, but the early denial of the association is certainly ethically curious. In 1999, 22 people were indicted in Louisiana and 9 admitted guilt in a huge bribery/kickback election scam involving the acquisition of Sequoia voting systems.

Numerous Web sites are springing up with timely information in addition to mine and Rebecca's. For example, see David Dill's Voter Verification Newsletter and subscribe: www.VerifiedVoting.org Also, see Lynn Landes's Web site www.ecotalk.org/VotingSecurity.htm and particularly www.ecotalk.org/VotingMachineErrors.htm for considerable detail on election fraud and irregularities. Another useful site is <http://www.epic.org/privacy/voting/>.

If you are seriously interested in what might be needed for a high-integrity election process, and a further study of the inherent risks, see the outstanding University of Pennsylvania PhD thesis <http://www.notablessoftware.com/evote.html> of Rebecca Mercuri (mercuri@acm.org), *Electronic Vote Tabulation Checks and Balances*, 2000. What we are calling the Mercuri Method involves voter-verified paper ballot-images that become part of the official records. Useful URLs for various other relevant organizations are included at the end of that Web site. See also "Explanation of Voter-Verified Ballot Systems" (Rebecca Mercuri, S 27 6:15-16, R 22 17). See also my later comments (S 28 2:16-17) based on R 22 36 and R 22 38.

If the risks of voting concern you, including potential conflicts of interest among owners, you might find some provocative information at <http://www.ecotalk.org/VotingSecurity.htm>, clicking on Ownership – privatizing, monopolizing, and politicizing the voting process. You can report voting irregularities you see for posting at <http://www.VoteWatch.us/>.

S Role of standards (Roy Saltman)(S 18 1:17); see also (R 14 08-11) [Roy has retired from NBS/NIST, and was evidently the government person most knowledgeable about punched-card systems. He is still active.] See "Accuracy, Integrity, and Security in Computerized Vote-Tallying, Roy G. Saltman, National Bureau of Standards (now NIST) special publication, 1988, for a definitive report.

+/-? US Federal Election Commission Voting Systems Standards update: draft available (R 21 51); the final version is on the FEC Web site at <http://www.fec.gov>. It still fails to address some of the most important integrity issues.

..... U.S. election events, 1984 and before:

1982: Elkhart, Indiana, program failed in midstream, programmer rebooted or patched the system on the fly during the election process. (S 10 3:8); more in (S 10 4)

SH 1984: Series of articles by David Burnham in *The New York Times*, (29Jul, 30Jul, 4Aug, 21Aug, 23Sep, 24Sep, 18Dec 1985) documents vulnerabilities to tampering in Computer Election Systems (then the dominant electronic vendor); elections with their machines challenged in Indiana, WVirginia, and Maryland, with rigging suspected in the 1984 election in the first two states; Federal Election Commission standards inadequate; Texas also investigated numerous discrepancies, involving Business Records Corporation (which subsequently was involved in the Florida fiasco of 1988) – formerly known as Computer Election Systems; NSA asked to investigate if CES systems were open to fraud; California and Florida also investigated; Michael Shamos quoted – CES systems equipment "is a security nightmare open to tampering in a multitude of ways." The Burnham articles are a startling warning shot that was almost completely ignored. [Most lawsuits later thrown out: not guilty or lack of evidence, particularly in the absence of audit trails!].

1984: McCloskey McIntyre Congressional election in Illinois long questioned, with only a few votes making the difference depending on which were thrown out in which recount. Other problems in Dade County in 1984, West Virginia, St. Louis (S 10 3:8)

S[H?] Election frauds, lawsuits, spaghetti code, same memory locations used for multiple races simultaneously, undocumented GOTOs, COBOL ALTER verb allowing self-modifying code, calls to undocumented/unknown subroutines, bypassable audit trails (S 11 3);

Report from the Computerized Voting Symposium, August 1986 (S 11 5)

h Clerical error blamed for election computer program mishap (S 11 5)

SHrf System designs, bad software engineering, standards (Eva Waskell, S 11 3)

S[H?] Alabama, Georgia election irregularities (S 12 1)

Sh Texas beefs up security of computerized voting (S 12 1)

..... 1988 U.S. election events:

SH Computers in Elections (see the excellent article by Ronnie Dugger, *The New Yorker*, 7 Nov 1988, and several cited reports); 1988 problems in Florida – 210,000 votes fewer for Senate race (Connie Mack vs. Buddy Mackay) than for President in 4 counties administered by Business Records Corporation, part of Cronus Industries of Dallas, Texas (*The New York Times*, 12 Nov 1988, S 14 1:20, R 7 78); jammed chad slots? post-election multiply punched ballots? at least one disappearing ballot box reported? other possible scenarios?

..... 1992 U.S. election events:

m Misaligned Votomatic in Berkeley caused mispunched cards (S 18 1:15)

S? Sandia helps NM develop "uncrackable" phone voting system (S 18 1:15)

hf Oregon computer error reversed election results (S 18 1:16)

hf Programming error reverses DistAtty election landslide in Oregon (S 18 1:16)

h Ventura Cty CA votes reversed on 13 state propositions (S 18 1:16)

h/H? Another voting machine misaligned, biased toward Bush (S 18 1:16)

..... **1996 U.S. election events:**

+ Hanging chad removal in punch-card ballots overturns Massachusetts primary election (S 22 1:21)

? Louisiana results questioned because of evidence of misrecorded votes

Ethics? Senator Hagel of Nebraska was CEO of the company whose voting machines got him elected, and had denied the connection (R 22 55)

..... **1998 U.S. election events:**

h ABC News accidentally posted test election results before the election (they were correct in 61 out of 70 Senate and Governor races!);

Fox TV did a similar thing for a Yankee-Padre World Series game (R 20 05)

..... **2000 U.S. election events:**

hifm(H?) U.S. and Florida Presidential race complexities discussed (S 26 2:7-9), relating to RISKS items and others (R 21.09-15) [noted at the beginning of the section]. Sanity in the Election Process (Lauren Weinstein and PGN, R 21 12). Statement by Don Dillman on Palm Beach ballot layout (R 21 12). The early recount process showed many irregularities (R 21 12). Perspective from PGN (R 21 13) reminds us of many earlier warnings from 1985 (David Burnham) and 1988 (Ronnie Dugger, who quoted Willis Ware: "There is probably a Chernobyl or a Three Mile Island waiting to happen in some election, just as a Richter 8 earthquake is waiting to happen in California.") (R 21 13). Discussions on Internet and electronic voting by PGN, Rebecca Mercuri, and Lauren Weinstein (R 21 14), and others (R 21 13-14). Criteria for voting systems (Rebecca Mercuri's PhD thesis, <http://www.notablessoftware.com>), also Fred Cohen (R 21 15-16). Testimony of Doug Jones before U.S. Civil Rights Commission (R 21 20). DUMvoting 1.0, Gene N. Haldeman's parody on Dell/Unisys/Microsoft consortium (R 21 20). Later study by Doug Jones shows certain specific slots were more likely to jam and result in pregnant chad in Votomatic machines used in Florida (S 27 1:17, R 21 70-71), which could be relevant to the 1988 Florida Senate race as well. (See Mack/Mackay election, noted above.) Discussion of the Caltech/MIT report and what Los Angeles County is doing about it in attempting to upgrade to all-electronic systems (S 27 1:17, R 21 70)

h Exit polls blamed for misleading results in disputed Florida counties, although those polls seemingly correctly reflected the intent of voters whose ballots were invalid! (R 21 11, S 26 1:17)

f(h or H?) Florida election erroneous disenfranchisement of thousands of voters also traced to bogus Choicepoint data; Choicepoint blames its data aggregator, DBT (R 21 42)

fmiH 4 to 6 million votes uncounted in 2000 U.S. election (S 26 6:15, R 21 51)

Sfh Broward County FL officials consider letting students hack election systems, but later overruled (S 26 6:15, R 21 61)

fe New voting protocol and new ballot tally system in Cochise County AZ special election resulted in miscounting (R 21 07; S 26 1:21)

S Vote auction Web site moves overseas after being outlawed (R 21 11, S 26 1:18)

..... **Other year 2000 items:**

fS? Contribution from Douglas W. Jones, Chair of Iowa State Board of Examiners for Voting Machines and Electronic Voting Systems (S 26 1:15-16, R 21 10). This updates his earlier report on risks in electronic voting in Iowa (R 18 15).

dfeSPHh NSF workshop on feasibility of e-voting, commentary by Avi Rubin and others (S 26 1:16-17, R 21 10-11)

Sf House Science Committee hearings on electronic and other voting systems, 22 May 2001: testimony by Stephen Ansolabehere, Rebecca Mercuri, Roy Saltman, Douglas Jones (R 21 44)

SP Risks of receipts for voting machines (R 21 23); potential risks in "open" development of voter data standards (R 21 33)

fHh Discussion of the use of ATMs for voting (R 21 15-16)

f\$ Also in 2000, Pennsylvania county wins \$1M for faulty MicroVote computer voting machines (R 21 10)

SHA Minnesota election fraud accused in e-mail sent by Christine Gunhus (using a Hotmail alias) disparaging her husband Senator Rod Gram's opponent; identity revealed by X-Originating-IP: header sent from a campaign computer, and by GUIDs included in Word documents! (But Gram lost.) (R 21 50)

Shmf New Mexico: at least 678 votes lost in 2000 early voting, greater than the presidential margin (R 23 50, correction R 23 51);

..... **2001 U.S. election events:**

f Programming error scrambles San Bernadino election results (S 27 1:15, R 21 74)

VSm Implications of power outage during Nov 2001 Pennsylvania election (R 21 80)

m Mercer County NJ voting problems 2001 due to Anthrax scare delaying Internet voting info (S 27 1:16, R 21 74)

h Election problems before the election in Virginia result from 2000 census redistricting; electronic rolls lost 18,000 voters (S 27 1:17, R 21 74)

@hP Erroneous law-enforcement data from Choicepoint: Privacy Foundation's Richard Smith discovered he had been dead since 1976, and had aliases with Texas convicts; Chicago woman misidentified as shoplifter and drug dealer, and fired. (Florida election erroneous disenfranchisement of thousands of voters also traced to bogus Choicepoint data; Choicepoint blames its data aggregator, DBT.) (R 21 42)

..... **2002 U.S. election events:**

h Compton California Mayoral election screwup from lack of randomization of candidate ordering (S 27 3:16, R 21 91)

SP Miami-Dade OKs touchscreen voting for Nov 2002 (S 27 3:16-17, R 21 90,92,93)

SAf Palm Beach's new electronic voting machines have problems (S 27 6:15, R 22 16) and more on lack of accountability (S 27 6:16, R 22 17)

fmiSP(HI?) Florida Primary 2002 problems: touchscreen machines not working, showing the wrong candidate, or nonworking

authorization cards; some huge voter delays, Governor authorized two-hour extensions although some already shut-down machines could not be restarted; lame testing; purchase contract makes it a felony violation if any devices provided for internal examination; serious reliability problems reported in Georgia and Maryland; comments from the Georgia Secretary of State (R 22 25); comments from Mercuri on MIT/Caltech press release (R 22 26);

fmiSP(HI?) U.S. general election 2002: Glitches widely reported in FL, TX, AL, NV, GA, CA, SC, NE, NJ; Voter News Service outage (R 22 38); iVotronic machines lose 294 votes in Wake County NC (R 22 33); 2-3 hour waits in Florida early voting result from voter anticipation of election day problems! (R 22 34); factual errors reported in CNN article, particularly regarding use of old FEC standards, not new, and still voluntary; other errors (R 22 36); in FL Palm Beach and Broward counties and Georgia, voters found touch-screen machines that showed votes for untouched candidates; Broward programming error omitted 34,000 votes; 70,000 absentee and Spanish-language ballots missing from turnout but (supposedly) included in counts; Houston voters in 5 precincts had straight-party votes rejected; half of the Pulaski County AK had not been assigned precincts after redistricting, were not allowed to vote; NE long-shot candidate was given a premarked ballot for his opponent (R 22 36); more on exit polls (R 22 35,37); Broward County vote total short by 104,000 votes (R 22 36-37); 67 memory cards misplaced in Georgia, representing 2,180 ballots (R 22 37); “The right to have the vote counted is infringed, and we have lost the integrity of our voting system, when the ease with which ballots can be manipulated is greater than the ease with which the manipulation can be detected.” (Kevin Craig, 2000) www.electionguardians.org (R 22 37); chip glitch hands victory to wrong candidate in Nebraska (R 22 38); Voters can report election irregularities at VoteWatch.us (R 22 38); problem in White Plains NY with sticking lever machine (R 22 44); vote only by mail in Oregon (R 22 35)

Sm?f?H? 2002 unofficial election results in Alabama reversed, cause still unexplained: electronic results wrong, hardcopy results correct (R 22 60-61, S 28 3:10)

fiSP(HI?) Columns by Lynn Landes on questionable ownership of voting machine companies (felons, etc.), also citing VoteScam, 1992 book by James and Kenneth Collier; interactive modems capable of controlling voting machines in real-time (R 22 25,37-38); ideal voting systems? (R 22 34); further discussion of the Mercuri Method, alternatives, and butterfly ballots again, and other discussions (R 22 27-31,38)

SHPfi Boston gets Diebold AccuVote marked-paper reader systems, seemingly lacking in assurance of correct tabulation (but at least recounts by independent systems are possible – if requested) (R 22 39)

SH? Diebold AccuVote system integrity questioned in Georgia because of the use of an unprotected FTP site for storing election software, election results files, upgrade files, etc. (for example, see *The Register*, 8 Feb 2003; surprising Max Cleland defeat linked?)

SPH Powervote electronic vote machines open to tampering: bogus ballot face (R 22 44)

*m Explosion of nickel-cadmium batteries used in electronic voting (R 22 28)

Sf Panel reports DoD SERVE System fatally flawed; bureaucrats in denial (R 23 14-15)

SHf How to Hack an Election; Maryland (R 23 17); Physical security of voting machines (R 23 20); blank page anomaly (R 23 24)

SH Online poll rigging (R 23 13)

S+/- Avi Rubin’s experiences as an election judge: <http://www.avirubin.com/judge.html> (R 23 25)

S(Denial of Service!) Many new e-voting machines won’t boot in San Diego County (California) primary election (R 23 25)

fh Lost e-votes could flip Napa County race: Sequoia Optech optical scanner failed to record votes, detected by random 1% recount (R 23 27)

m Many California voters turned away in Alameda and San Diego Counties in 2004 primary; Diebold DRE authorization machines failed, supply of paper ballots ran out; 200 calls for help from poll workers (R 23 27)

..... **2003 U.S. election events:**

SH Chief of Diebold voting machine company writes Republicans in fund-raiser he is “committed to helping Ohio deliver its electoral votes to the President next year.” (R 22 89, S 28 6:11)

SH “According to election industry officials, electronic voting systems are absolutely secure, because they are protected by passwords and tamperproof audit logs. But the passwords can easily be bypassed, and in fact the audit logs can be altered. Worse, the votes can be changed without anyone knowing, even the County Election Supervisor who runs the election system.” (R 22 83)

fS(H?) Avi Rubin et al. analyze serious flaws in Diebold electronic voting systems (R 22 82)

mh Voting tech problems galore in Mississippi: locked precincts, machine malfunctions, erroneous ballots, voters given wrong ballots (R 22 83)

f?m?SH? (who knows?) NYCity: Blank ovals sensed as votes, legitimate votes disqualified as overvotes (R 22 75)

H? UC Riverside student arrested for allegedly derailing student election, casting 800 votes for a fabricated candidate (R 22 78)

f?m?SH? Boone County Indiana’s MicroVote election software returned about 144,000 votes with only 19,000 registered voters; final review counted 5,352 votes (R 23 03)

f More voting snafus in Palm Beach and Broward Counties: Florida House District 91, 6Jan2004, winner Ellyn Bogdanoff by only 12 votes over Oliver Parker, out of 10,844 cast ballots, with 137 supposedly blank ballots in the only item in a special election; no mandated recount possible with ES&S touch-screen voting (R 23 12)

m?f? Report of Diebold voting machines in Volusia County FL registering -16,022 votes! (R 22 93,94)

Sie Data transfer Excel-COBOL loses voter data in 2003 Greenville Mississippi election (R 22 95)

hi\$ Grant Parish, Louisiana, election results reversed by doubled absentee counts; new election to be held (R 23 02)

SH Hackers break in to VoteHere (which claims “best-of-breed security”) (R 23 12)

ei Pleasanton CA school board election displays instructions for the previous election (R 23 01)

SHfe At least eight Fairfax County VA WinVote machines failed, seals were broken, and machines fixed (!) for reuse (R 23 01,02); more problems in Fairfax CO: WinVote machines subtract one in each hundred votes for a particular candidate (R 23 02)

S(m/f/H) Analysis of California recall data confirms doubts about voting systems (R 22 94-96)

Se California halts e-vote certification of Diebold machines after uncertified software installed in Alameda County CA (R 23 01,03); also, outsiders could make changes to vote-counting software (R 23 03); Diebold machines in 17 California counties had not been state-certified, three had not been Federally certified; changes after certification commonplace! (R 23 07); At least FIVE convicted felons among Diebold voting subsidiary employees (R 23 07)

SHhfme California Secretary of State requires voter-verified paper audit trail by 2006 (R 22 04)

Smf\$ Broward County FL considers dumping \$17 million in touch voting machines or retrofitting voter-verified audit trails, after serious errors (R 22 93)

SHfm Avante Vote-Trakker voter-verified ballot printout mechanisms disabled by registrar when discrepancy occurred (R 23 03); What if DRE and paper trail disagree? DISABLE the system immediately (R 23 06)

SHfm Congressional Research Service report raises more questions about electronic voting machines (R 23 03)

S\$ Nevada to apply slot-machine security to e-voting hardware? (R 23 06)

SH(I/O) Another case of electronic vote-tampering? IEEE standards process broken (R 22 92); unsecure wireless communications would satisfy draft IEEE standards (R 23 02)

SP Sensitive voter information publicly up for grabs (R 23 07,09,10)

Hm Mechanical voting machines also risky (R 23 03); Why not just mark a piece of paper? Much of the rest of the world does. (R 23 06-08,10-12)

SHf VoteHere reports computer break-in (R 23 10)

+/- Essay on social aspects of electronic voting (R 23 10)

..... **2004 U.S. election events:**

\$f California bans Diebold e-vote machines (R 23 35)

\$fh Republicans walk out on Federal civil rights hearing on voting machines (R 23 32)

SPhie Florida's list of felons ineligible to vote in 2004 is still full of eligible voters (R 23 44)

Sfd eVoting standards and testing (R 23 40)

Sfi Washington State primary irregularities (R 23 53)

SHVfmie Some thoughts on the November 2004 U.S. election process: almost everything in the election process was a potential weak link. Numerous anomalies were reported: Palm Beach County logged 88,000 more votes than voters; A Franklin County Ohio machine error gave Bush 3,893 extra votes; Broward County FL balloting for Amendment 4, software counted backwards after reaching $2^{15} - 1$, in signed 16-bit field, in tabulating absentee ballots; numerous reports of screens "jumping" votes from Kerry to Bush; many cases of long lines and long waits only in certain politically skewed precincts, legitimate voters who were disenfranchised, special optical scan pens that were not capable of being tallied, and so on. Many other problems include weak standards and secret system evaluations, partisan oversight, inadequate funding for NIST and Election Assistance Commission, poor training, dirty tricks (S 30 1, elaborating on R 23 58,59); Better standards needed for elections (R 23 59; S 30 1)

f Preferential voting software breaks down in San Francisco (R 23 58-59; S 30 1)

SHPhi Perils of database matching on voter purges (R 23 45; S 30 1)

SPHmf, etc. Rebecca Mercuri's challenge at Black Hat Convention (R 23 47); The Mr Micawber Syndrome relating to incidents (R 23 47); Al Kolwicz evicted for submitting real accuracy/logic tests in Boulder County (R 23 48); Obion County Tennessee vote counting problems, failing to count early votes (R 23 49); Sequoia's new paper audit-trail system demo failed to record test votes cast by California State Senators (R 23 50); that Sequoia system used in Nevada in 2004 (R 23 52,53); Maryland rules against opponents of e-voting machines (R 23 53); Robert Heinlein scenario in "The Moon is a Harsh Mistress" (1966): computerized voting with no audit trail or ability to recount (R 23 53) Touchscreen voting spawns glitches (R 23 58)

SHA Ohio: Columbus Ohio voters report fake elections board calls as election 2004 neared (R 23 57); Thieves steal campaign computers with sensitive information in Toledo (R 23 57);

SHf Diebold GEMS central tabulator contains a stunning security hole: two-digit code alters results; this is a real doozer (R 23 52)

SPfff (you-gotta-be-kidding department) Missouri military absentees in 2004 could have absentee ballots scanned, sent by unencrypted e-mail to Omega Technologies (partisan "trusted third party"), which then faxes the printed version to the appropriate precinct! Signed waivers of your privacy rights required. (R 23 52)

S+ California Secretary of State Kevin Shelley (who mandated voter-verified paper trail by 2006) established more stringent requirements for touch-screen machines (R 23 45); Gov. Schwarzenegger signs California paper trail bill into law (R 23 55)

SHhmf etc. Lost records of 2002 Florida vote raise 2004 concern (R 23 46); Alabama 2003, ES&S machines reversed the governor's race, not detected until long afterward! Bev Harris records 51 cases in which voting machines recorded the wrong outcomes, including Wayne County NC (reversed in time); 100% error in Orange County in 1998 bond issue (yes/no reversed) (R 23 51; more on Bev Harris's crusade, R 23 45 [her predictions were fairly prescient])

Sm A. Appel and S. Govindavajhala, "Using Memory Errors to Attack a Virtual Machine, it IEEE Symposium on Security and Privacy, 2003. (R 23 48) [Not specific to voting systems, but relevant!]

..... **Internet and remote voting:**

Internet voting systems are potentially even riskier than electronic voting systems, especially if you (and everyone else) can vote from anywhere in the world on a PC with inadequate security using code that you have downloaded from some supposedly trustworthy site on the Internet. The California Commission studying Internet voting suggested that the risks were too high for such a balloting method to be used, although it considered using such a scheme under carefully controlled physical surroundings. See <http://www.pfir.org/statements/2000-02> for a discussion by Lauren Weinstein of risks in Internet voting, and later by PGN, Rebecca Mercuri, and Lauren Weinstein (S 26 2:, R 21 14), and others (R 21 13-14).

SPf More on risks in Internet voting: NSF report (R 21 28-30,32,34)

rSH Garciaparricide in 1999 All-Star balloting? 25,259 on-line votes cast by a Perl devotee; 22-vote max detected: same e-mail address; needed IP spoofing (R 20 47-48)

SAOf Vote early, vote often for your favorite California quarter design – via the Internet (R 22 49)

SP 2000 Arizona Democratic primary allows Internet voting (R 20 83) and more people voted that way than all votes in the 1996 election. Needs for privacy and anonymity difficult to meet (R 20 84); crypto for voting (R 20 85);

Illustrative Risks to the Public in the Use of Computer Systems and Related Technology

Peter G. Neumann, Computer Science Laboratory,

SRI International, Menlo Park CA 94025-3493

EXCERPT: Election Problem cases as of November 25, 2004

Copyright 2004, Peter G. Neumann, SRI International EL243, Menlo Park CA 94025-3493 (e-mail Neumann@csl.sri.com;
<http://www.CSL.sri.com/neumann>; telephone 1-650-859-2375; fax 1-650-859-2844).

This list summarizes items that have appeared in the Internet Risks Forum Digest (RISKS) – which I moderate (comp.risks
and/or published ACM SIGSOFT *Software Engineering Notes* (SEN). In this collection of mostly one-liner summaries, (R i j)
RISKS volume i issue j; (S vol no:page) denotes an issue of SEN, where there has been one volume per year, with vol 29 being
100 year page numbers are given regularly from 1993 on; (SAC vol no) indicates an item in the quarterly SIGSAC Security and
Control, where vol 16 is 1998, which was the final volume. The RISKS-relevant SEN material prior to 1995 is summarized in
Computer-Related Risks, Addison-Wesley, 1995. SEN material is now being brought on-line by Will Tracz: <http://www.acm.org/sigsoft>
The complete Illustrative Risks document is on-line: [illustrative.html](#); ([illustrative.pdf](#); [illustrative.ps](#)). It includes

Descriptor Symbols

The following descriptor symbols characterize each entry.

! = Loss of life/lives; * = Potentially life-critical or safety problem

V = Overall system or subsystem **surViVability** problems (with respect to diVerse adVersities, including attacks *and* malfunctions)
\$ = **malfunction** resources, primarily financial

S = **Security/integrity/misuse** problem; P = **Privacy/rights** abuse or concern

H = Intentional **Human** misuse (e.g., user-administrator-operator-penetrator)

h = Accidental **Human** misuse or other inadvertence

I = **Insider**; O = **Outsider**; A = Inadequate **Authentication**, **Access** control, or **Accountability**

d = System **Development** problems

e = Improper **Evolution/maintenance/upgrade**. (H,h,i,f,d,e involve human foibles.)

r = Problems with **Requirements** for system or operation (including the overall system concept)

f = **Flaws** (or **Features** in design, or hardware/software implementation)

i = Mis**Interpretation/confusion/human** errors at a man-system **Interface**; documentation problems

m = Hardware **Malfunction** attributable to system deficiencies, the physical environment, acts of God, etc.

1 Election Problems

We have reported election problems in *Software Engineering Notes* and RISKs for many years. Many of these problems are summarized below. More recently, in the 2000 election, particularly in Florida, the chickens of neglect have come home to roost, exemplifying everything we have been saying all these many years – and more. Similar to the 1988 fiasco where a 210,000-ballot undervote in the Senate Race in four counties run by BCR/Cronus, 19,000 votes were disqualified for the presidential race in Palm Beach County, many more in Broward County – perhaps because of the confusion raised by the butterfly ballots. There are also some reports of the right-hand pages being improperly aligned, so that a vote for one candidate actually counted for another candidate had become important – perhaps resulting in part from blocked and never-cleaned chad trays (and there was a lot of extracting the invalidated multiple votes!). There were many irregularities involving improper voter disenfranchisement, with at least 100 voters being unable to vote because of a largely erroneous list of supposed convicted felons – including one election commissioner who found herself incorrectly on the list, and was apparently the only one to block use of the list in her region. Also, see the November CACM Inside Risks articles from 1990 (PGN), 1992, 1993, 2000 (Rebecca Mercuri), and January 2001 (<http://www.csl.sri.com/neumann/insiderisks.html>). Numerous problems are noted in the on-line RISKs, along with various commentaries (R 21 10-14). We note that punched-card systems are inherently flaky (!), and that even optical scanning is problematic – direct-recording electronic systems tend to be subject to serious potentials for fraud and manipulation. Internet voting

disaster waiting to happen in light of the inadequate security of the Internet, personal computer systems, and subvertible servers. For example, the SERVE system appears to be seriously flawed. Proposals to vote from automated teller machines (R 21 15-16) are also problematic, and basically undesirable. Election 2000 demonstrated once again that we need to reexamine the entire election process, and devise less-easily subvertible checks and balances that can provide much greater assurance. Election 2002 still had many problems, many of which have not been eliminated for Election 2004.

Integrity throughout the election process is essential. And yet we repeatedly hear about unexplained anomalies (enumerated below, including the 1985 articles by David Burnham noted below) and various suspicions of fraud – some with convictions. For example, Ransom Shoup II (purveyor of the ShoupTronic election machines) was convicted of two felony counts – election fraud and conspiracy to commit election fraud. In 1996, Senator Chuck Hagel was CEO of the election company (now a part of ES&S) used by most of Nebraska's first-term election (e.g., see Thom Hartmann, If you want to win an election, just control the voting machines, *The Hill*, 2003a R 22 55); this may not have affected the outcome, but the early denial of the association is certainly ethically curious. In 1991-23 were indicted in Louisiana and 9 admitted guilt in a huge bribery/kickback election scam involving the acquisition of Sequoia systems.

Numerous Web sites are springing up with timely information in addition to mine and Rebecca's. For example, see David Mercuri's Voter Election Newsletter and subscribe: www.VerifiedVoting.org Also, see Lynn Landes's Web site www.ecotalk.org/VotingSecurity.htm and www.ecotalk.org/VotingMachineErrors.htm for considerable detail on election fraud and irregularities. Another useful site is <http://www.epic.org/privacy/voting/>.

If you are seriously interested in what might be needed for a high-integrity election process, and a further study of the inherent risks, see the outstanding University of Pennsylvania PhD thesis <http://www.notablessoftware.com/evote.html> of Rebecca Mercuri (mercuri@acm.org), *Electronic Vote Tabulation Checks and Balances*, 2000. What we are calling the Mercuri Method involves voter-verified paper ballot-images that become part of the official records. Useful URLs for various other relevant organizations are provided at the end of that Web site. See also "Explanation of Voter-Verified Ballot Systems" (Rebecca Mercuri, S 27 6:15-16, R 22 15) and my later comments (S 28 2:16-17) based on R 22 36 and R 22 38.

If the risks of voting concern you, including potential conflicts of interest among owners, you might find some provocative

information@votecotalk.org/VotingSecurity.htm, clicking on Ownership – privatizing, monopolizing, and politicizing the voting process. You can report voting irregularities you see for posting at <http://www.vote-watch.us/>.
 S Role of standards (Roy Saltman)(S 18 1:17); see also (R 14 08-11) [Roy has retired from NBS/NIST, and was evidently the person most knowledgeable about punched-card systems. He is still active.] See "Accuracy, Integrity, and Security in Computerized Voting", Roy G. Saltman, National Bureau of Standards (now NIST) special publication, 1988, for a definitive report.
 +/-? US Federal Election Commission Voting Systems Standards update: draft available (R 21 51); the final version is on the FEC Web site www.fec.gov. It still fails to address some of the most important integrity issues.

..... **U.S. election events, 1984 and before:**

1982: Elkhart, Indiana, program failed in midstream, programmer rebooted or patched the system on the fly during the election process; Smore in (S 10 4)

SH 1984: Series of articles by David Burnham in *The New York Times*, (29Jul, 30Jul, 4Aug, 21Aug, 23Sep, 24Sep, 18Dec 1985) documents vulnerabilities to tampering in Computer Election Systems (then the dominant electronic vendor); elections with machines challenged in Indiana, WVirginia, and Maryland, with rigging suspected in the 1984 election in the first two states; Election Commission standards inadequate; Texas also investigated numerous discrepancies, involving Business Records Corporation (subsequently was involved in the Florida fiasco of 1988) – formerly known as Computer Election Systems; NSA asked to investigate if CES systems were open to fraud; California and Florida also investigated; Michael Shamos quoted – CES systems equipment “is a security nightmare open to tampering in a multitude of ways.” The Burnham articles are a startling warning about that was completely ignored. [Most lawsuits later thrown out: not guilty or lack of evidence, particularly in the absence of audit trails]

1984: McCloskey McIntyre Congressional election in Illinois long questioned, with only a few votes making the difference depending on whether recount. Other problems in Dade County in 1984, West Virginia, St. Louis (S 10 3:8)

S[H?] Election frauds, lawsuits, spaghetti code, same memory locations used for multiple races simultaneously, undocumented **GOOOB** ALTER verb allowing self-modifying code, calls to undocumented/unknown subroutines, bypassable audit trails (S 11 5)
 Report from the Computerized Voting Symposium, August 1986 (S 11 5)

h Clerical error blamed for election computer program mishap (S 11 5)
 SHrf System designs, bad software engineering, standards (Eva Waskell, S 11 3)

S[H?] Alabama, Georgia election irregularities (S 12 1)
 Sh Texas beefs up security of computerized voting (S 12 1)

..... **1988 U.S. election events:**

SH Computers in Elections (see the excellent article by Ronnie Dugger, *The New Yorker*, 7 Nov 1988, and several cited reports in 1988 Florida – 210,000 votes fewer for Senate race (Connie Mack vs. Buddy Mackay) than for President in 4 counties administered by Business Records Corporation, part of Cronus Industries of Dallas, Texas (*The New York Times*, 12 Nov 1988, R 14 7B:20) jammed chad slots? post-election multiply punched ballots? at least one disappearing ballot box reported? other possibilities?

..... **1992 U.S. election events:**

- m Misaligned Votomatic in Berkeley caused mispunched cards (S 18 1:15)
- S? Sandia helps NM develop "uncrackable" phone voting system (S 18 1:15)
- hf Oregon computer error reversed election results (S 18 1:16)
- hf Programming error reverses DistAtty election landslide in Oregon (S 18 1:16)
- h Ventura Cty CA votes reversed on 13 state propositions (S 18 1:16)

h/H? Another voting machine misaligned, biased toward Bush (S 18 1:16)

..... **1996 U.S. election events:**

+ Hanging chad removal in punch-card ballots overturns Massachusetts primary election (S 22 1:21)

? Louisiana results questioned because of evidence of misrecorded votes

Ethics? Senator Hagel of Nebraska was CEO of the company whose voting machines got him elected, and had denied the connection (R 22)

..... **1998 U.S. election events:**

h ABC News accidentally posted test election results before the election (they were correct in 61 out of 70 Senate and Governor races); similar thing for a Yankee-Padre World Series game (R 20 05)

..... **2000 U.S. election events:**

hfm(H?) U.S. and Florida Presidential race complexities discussed (S 26 2:7-9), relating to RISKS items and others (R 21.09-15) [note that the intro of the section]. Sanity in the Election Process (Lauren Weinstein and PGN, R 21 12). Statement by Don Dillman on Ballot layout (R 21 12). The early recount process showed many irregularities (R 21 12). Perspective from PGN (R 21 13) reminds of earlier warnings from 1985 (David Burnham) and 1988 (Ronnie Dugger, who quoted Willis Ware: "There is probably a Three Mile Island waiting to happen in some election, just as a Richter 8 earthquake is waiting to happen in California). Discussions on Internet and electronic voting by PGN, Rebecca Mercuri, and Lauren Weinstein (R 21 14), and others (R 21 14). Criteria for voting systems (Rebecca Mercuri's PhD thesis, <http://www.notablessoftware.com>), also Fred Cohen (R 21 15). Testimony of Doug Jones before U.S. Civil Rights Commission (R 21 20). DUMvoting 1.0, Gene N. Haldeman's parody on Dell/Unisys/Microsoft consortium (R 21 20). Later study by Doug Jones shows certain specific slots were more likely to jam in prominent chad in Votomatic machines used in Florida (S 27 1:17, R 21 70-71), which could be relevant to the 1988 Florida

See Mack/Mackay election, noted above.) Discussion of the Caltech/MIT report and what Los Angeles County is attempting to upgrade to all-electronic systems (S 27 1:17, R 21 70)

h Exit polls blamed for misleading results in disputed Florida counties, although those polls seemingly correctly reflected the intent of whose ballots were invalid! (R 21 11, S 26 1:17)

f(h or H?) Florida election erroneous disenfranchisement of thousands of voters also traced to bogus Choicepoint data; Choicepoint blames its data aggregator, DBT (R 21 42)

fmmH 4 to 6 million votes uncounted in 2000 U.S. election (S 26 6:15, R 21 51)

Sfh Broward County FL officials consider letting students hack election systems, but later overruled (S 26 6:15, R 21 61)

fe New voting protocol and new ballot tally system in Cochise County AZ special election resulted in miscounting (R 21 07; S 26 1:18)

Vote auction Web site moves overseas after being outlawed (R 21 11, S 26 1:18)

..... **Other year 2000 items:**

fS? Contribution from Douglas W. Jones, Chair of Iowa State Board of Examiners for Voting Machines and Electronic Voting Systems (S 26 1:15, R 21 10). This updates his earlier report on risks in electronic voting in Iowa (R 18 15).

dfeisPHh NSF workshop on feasibility of e-voting, commentary by Avi Rubin and others (S 26 1:16-17, R 21 10-11)

Sf House Science Committee hearings on electronic and other voting systems, 22 May 2001: testimony by Stephen Anandarajan, Roy Siderman, Douglas Jones (R 21 44)

SP Risks of receipts for voting machines (R 21 23); potential risks in "open" development of voter data standards (R 21 33)

fHh Discussion of the use of ATMs for voting (R 21 15-16)

f\$ Also in 2000, Pennsylvania county wins \$1M for faulty MicroVote computer voting machines (R 21 10)

SHA Minnesota election fraud accused in e-mail sent by Christine Gunhus (using a Hotmail alias) disparaging her husband Senator Rod Gram; identity revealed by X-Originating-IP: header sent from a campaign computer, and by GUIDs included in Word documents! (But Gram lost.) (R 21 50)

Shmf New Mexico: at least 678 votes lost in 2000 early voting, greater than the presidential margin (R 23 50, correction R 23 51); **2001 U.S. election events:**

f Programming error scrambles San Bernadino election results (S 27 1:15, R 21 74)

VSm Implications of power outage during Nov 2001 Pennsylvania election (R 21 80)

m Mercer County NJ voting problems 2001 due to Anthrax scare delaying Internet voting info (S 27 1:16, R 21 74)

h Election problems before the election in Virginia result from 2000 census redistricting; electronic rolls lost 18,000 voters (S 27 1:17, R 21 74)

@hP Erroneous law-enforcement data from Choicepoint: Privacy Foundation's Richard Smith discovered he had been dead since 1976; aliases with Texas convicts; Chicago woman misidentified as shoplifter and drug dealer, and fired. (Florida election disenfranchisement of thousands of voters also traced to bogus Choicepoint data; Choicepoint blames its data aggregator, DBT (R 21 42))

..... **2002 U.S. election events:**

h Compton, California Mayoral election screwup from lack of randomization of candidate ordering (S 27 3:16, R 21 91)
SP Miami-Dade OKs touchscreen voting for Nov 2002 (S 27 3:16-17, R 21 90,92,93)

SAf Palm Beach's new electronic voting machines have problems (S 27 6:15, R 22 16) and more on lack of accountability (S 27 6:16, R 22

fmiSP(HI?) Florida Primary 2002 problems: touchscreen machines not working, showing the wrong candidate, or nonworking

authorization cards; some huge voter delays, Governor authorized two-hour extensions although some already shut-down machines could not be restarted; lame testing; purchase contract makes it a felony violation if any devices provided for internal examination; serious reliability problems reported in Georgia and Maryland; comments from the Georgia Secretary of State (R 22 25); comments Mercuri on MIT/Caltech press release (R 22 26);

fmiSP(HI?) U.S. general election 2002: Glitches widely reported in FL, TX, AL, NV, GA, CA, SC, NE, NJ; Voter News Service (VNS) Ric machines lose 294 votes in Wake County NC (R 22 33); 2-3 hour waits in Florida early voting result from anticipation of election day problems! (R 22 34); factual errors reported in CNN article, particularly regarding use of old FEC standards, and still voluntary; other errors (R 22 36); in FL Palm Beach and Broward counties and Georgia, voters found touchscreen machines that showed votes for untouched candidates; Broward programming error omitted 34,000 votes; 70,000 absentee and Spanish-language ballots missing from turnout but (supposedly) included in counts; Houston voters in 5 precincts had straight-party rejected; half of the Pulaski County AK had not been assigned precincts after redistricting, were not allowed to vote; NE legislator was given a premarked ballot for his opponent (R 22 36); more on exit polls (R 22 35,37); Broward County vote total 104,000 votes (R 22 36-37); 67 memory cards misplaced in Georgia, representing 2,180 ballots (R 22 37); "The right to have the vote is infringed, and we have lost the integrity of our voting system, when the ease with which ballots can be manipulated is greater ease with which the manipulation can be detected." (Kevin Craig, 2000) www.electionguardians.org (R 22 37); chip glitchy hands wrong candidate in Nebraska (R 22 38); Voters can report election irregularities at VoteWatch.us (R 22 38); problem in Wis NY with sticking lever machine (R 22 44); vote only by mail in Oregon (R 22 35)

Sm?f?H? 2002 unofficial election results in Alabama reversed, cause still unexplained: electronic results wrong, hardcopy results correct (R 22 60-61, S 28 3:10)

fiSP(HI?) Columns by Lynn Landes on questionable ownership of voting machine companies (felons, etc.), also citing VoteScan Jan 99 and Kenneth Collier; interactive modems capable of controlling voting machines in real-time (R 22 25,37-38);

identical systems? (R 22 34); further discussion of the Mercuri Method, alternatives, and butterfly ballots again, and other discussions (R 22 31, 38)

SHPfi Boston gets Diebold AccuVote marked-paper reader systems, seemingly lacking in assurance of correct tabulation (but at least counts by independent systems are possible – if requested) (R 22 39)

SH? Diebold AccuVote system integrity questioned in Georgia because of the use of an unprotected FTP site for storing election software, files, upgrade files, etc. (for example, see *The Register*, 8 Feb 2003; surprising Max Cleland defeat linked?

SPH Powervote electronic vote machines open to tampering: bogus ballot face (R 22 44)

*m Explosion of nickel-cadmium batteries used in electronic voting (R 22 28)

Sf Panel reports DoD SERVE System fatally flawed; bureaucrats in denial (R 23 14-15)

SHf How to Hack an Election; Maryland (R 23 17); Physical security of voting machines (R 23 20); blank page anomaly (R 23 24) Online poll rigging (R 23 13)

S+/- Avi Rubin's experiences as an election judge: <http://www.avirubin.com/judge.html> (R 23 25)

S(Denial of Service!) Many new e-voting machines won't boot in San Diego County (California) primary election (R 23 25)

fh Lost e-votes could flip Napa County race: Sequoia Optech optical scanner failed to record votes, detected by random 1% recount (R 23 27)

m Many California voters turned away in Alameda and San Diego Counties in 2004 primary; Diebold DRE authorization machine failed; paper ballots ran out; 200 calls for help from poll workers (R 23 27)

..... **2003 U.S. election events:**

SH Chief of Diebold voting machine company writes Republicans in fund-raiser he is “committed to helping Ohio deliver its electoral votes to the President next year.” (R 22 89, S 28 6:11)

SH “According to election industry officials, electronic voting systems are absolutely secure, because they are protected by passwords and audit logs. But the passwords can easily be bypassed, and in fact the audit logs can be altered. Worse, the votes changed without anyone knowing, even the County Election Supervisor who runs the election system.” (R 22 83)

fS(H?) Avi Rubin et al. analyze serious flaws in Diebold electronic voting systems (R 22 82)

mh Voting tech problems galore in Mississippi: locked precincts, machine malfunctions, erroneous ballots, voters given wrong ballots (R 22 83)

f?m?SH? (who knows?) NYCity: Blank ovals sensed as votes, legitimate votes disqualified as overvotes (R 22 75)

H? UC Riverside student arrested for allegedly derailing student election, casting 800 votes for a fabricated candidate (R 22 78)

f?m?SH? Boone County Indiana's MicroVote election software returned about 144,000 votes with only 19,000 registered voters; final count 5,352 votes (R 23 03)

f More voting snafus in Palm Beach and Broward Counties: Florida House District 91, 6Jan2004, winner Ellyn Bogdanoff by only 2 votes over Peter Parker, out of 10,844 cast ballots, with 137 supposedly blank ballots in the only item in a special election; no mandated possible with ES&S touch-screen voting (R 23 12)

m?f? Report of Diebold voting machines in Volusia County FL registering -16,022 votes! (R 22 93,94)

+/- Essay on social aspects of electronic voting (R 23 10)

..... **2004 U.S. election events:**

\$f California bans Diebold e-vote machines (R 23 35)

\$fh Republicans walk out on Federal civil rights hearing on voting machines (R 23 32)

SPhie Florida's list of felons ineligible to vote in 2004 is still full of eligible voters (R 23 44)

Sfd eVoting standards and testing (R 23 40)

Sfi Washington State primary irregularities (R 23 53)

SHVfmie Some thoughts on the November 2004 U.S. election process: almost everything in the election process was a

potential for problems were reported: Palm Beach County logged 88,000 more votes than voters; A Franklin County Ohio

machine counted 893 extra votes; Broward County FL balloting for Amendment 4, software counted backwards after reaching $\frac{3}{4}$ $\frac{1}{2}$ $\frac{1}{2}$, in

signed 16-bit field, in tabulating absentee ballots; numerous reports of screens "jumping" votes from Kerry to Bush; many cases of long

lines and long waits only in certain politically skewed precincts, legitimate voters who were disenfranchised, special optical

scan pens not capable of being tallied, and so on. Many other problems include weak standards and secret system evaluations,

poor oversight, inadequate funding for NIST and Election Assistance Commission, poor training, dirty tricks (S 30 1, elaborating on

B8239); Better standards needed for elections (R 23 59; S 30 1)

f Preferential voting software breaks down in San Francisco (R 23 58-59; S 30 1)

SHPhi Perils of database matching on voter purges (R 23 45; S 30 1)

SPHhmf, etc. Rebecca Mercuri's challenge at Black Hat Convention (R 23 47); The Mr Micawber Syndrome relating to

in 47, etc. As (R 23 47); Policz evicted for submitting real accuracy/logic tests in Boulder County (R 23 48); Obion County Tennessee vote

problems, failing to count early votes (R 23 49); Sequoia's new paper audit-trail system demo failed to record test votes cast by

California State Senators (R 23 50); that Sequoia system used in Nevada in 2004 (R 23 52,53); Maryland rules against

opponents of machines (R 23 53); Robert Heinlein scenario in "The Moon is a Harsh Mistress" (1966): computerized voting with

no auditability to recount (R 23 53) Touchscreen voting spawns glitches (R 23 58)

SHA Ohio: Columbus Ohio voters report fake elections board calls as election 2004 neared (R 23 57); Thieves steal campaign

computer sensitive information in Toledo (R 23 57);

SHf Diebold GEMS central tabulator contains a stunning security hole: two-digit code alters results; this is a real doozer (R 23

SPff (you-gotta-be-kidding department) Missouri military absentees in 2004 could have absentee ballots scanned, sent by

unencrypted Omega Technologies (partisan "trusted third party"), which then faxes the printed version to the appropriate precinct!

Signed of your privacy rights required. (R 23 52)

S+ California Secretary of State Kevin Shelley (who mandated voter-verified paper trail by 2006) established more stringent

requirements for touchscreen machines (R 23 45); Gov. Schwarzenegger signs California paper trail bill into law (R 23 55)

SHhmf etc. Lost records of 2002 Florida vote raise 2004 concern (R 23 46); Alabama 2003, ES&S machines reversed the

word order until long afterward! Bev Harris records 51 cases in which voting machines recorded the wrong outcomes,

including Wayne

County, NC (reversed in time); 100% error in Orange County in 1998 bond issue (yes/no reversed) (R 23 51; more on Bev
Crusade, R 23 45 [her predictions were fairly prescient])

..... **Internet and remote voting:**

Internet voting systems are potentially even riskier than electronic voting systems, especially if you (and everyone else) can vote from anywhere in the world on a PC with inadequate security using code that you have downloaded from some supposedly trustworthy site. The California Commission studying Internet voting suggested that the risks were too high for such a balloting method, although it considered using such a scheme under carefully controlled physical surroundings. See

<http://www.pfir.org/statements/2000-02> for a discussion by Lauren Weinstein of risks in Internet voting, and later by PGN,

Rebecca, and Lauren Weinstein (S 26 2:, R 21 14), and others (R 21 13-14).

SPf More on risks in Internet voting: NSF report (R 21 28-30,32,34)

rSH Garciaparricide in 1999 All-Star balloting? 25,259 on-line votes cast by a Perl devotee; 22-vote max detected: same e-mail address; IP spoofing (R 20 47-48)

SAOf Vote early, vote often for your favorite California quarter design – via the Internet (R 22 49)

SP 2000 Arizona Democratic primary allows Internet voting (R 20 83) and more people voted that way than all votes in the 1996 election; privacy and anonymity difficult to meet (R 20 84); crypto for voting (R 20 85);

El ambiguo caso de los subastadores de votos

Antes de las furiosas modas del B2B (Business to Business, negocio a negocio), y el B2C (Business to Consumer, negocio a consumidor) existió un proyecto P2V (Político a Votante). Voteauction.com, un website que comenzó como ejercicio de un estudiante de arte, acabó saltando fronteras, protagonizando segmentos especiales en CNN y obligando a las autoridades europeas de internet a cometer una ilegalidad para cerrarlo. Tras una entrevista a LizVlx, una de las artífices de la impostura, se vierten aquí los resultados de la pesquisa, enredados, cómo no, en su propio mar de incógnitas.

Javier Candeira, 27 de Diciembre de 2000

¿Me dices [qué te parece el artículo?](#)

Érase una vez una trama internacional, orquestada desde una empresa austríaca, para socavar el sistema democrático estadounidense. No mejor esto: se trataba sólo de un bromazo de contenido político, perpetrado por unos agitadores que hacen de la acción política su forma de arte. Ni siquiera. En realidad todo comenzó en la tesis de fin de carrera de un estudiante de Bellas Artes.

James Baumgartner, alumno de una escuela de arte en el estado norteamericano de Nueva York, diseñó y realizó el primer site de subastas de votos por internet como un proyecto artístico. Voteauction.com sería su tesis de fin de carrera. El proyecto tenía también una vertiente de comentario político.

"La persona que consigue más financiación se la persona que, casi invariablemente, siempre gana", declaró Baumgartner a la revista Wired. "y tratan al votante como un producto final, del mismo modo que

la industria de la televisión trata a sus espectadores".

Diagrama de financiación alternativa de campañas políticas a través de Voteauction.com

"El votante es un producto que se vende"

"En el sistema electoral actual, el votante es un producto que se vende a las corporaciones. Pero se venden por el retorcido método de anuncios publicitarios, consultores, y viajes. Voteauction traza una línea más directa; el viejo truco de saltarse al intermediario", comentaba Baumgartner.

En agosto hay pocas noticias para los periódicos, y voteauction saltó a las portadas de los medios, especialmente los medios basados en internet. Durante el verano y el otoño del año 2000, wired.com tenía prácticamente una noticia semanal sobre "el sitio web que vendía votos en la red".

LizVlx es la empresaria que, con su socio Hans Berhard, compró el dominio voteauction.com junto con todos sus activos (página web, usuarios y subastas en curso) a finales de agosto del 2000, cuando las autoridades norteamericanas comenzaron a meter en pleitos a Baumgartner. El precio fue una auténtica ganga: un euro. "Baumgartner lo empezó, como una especie de chiste político, para sus estudios de Bellas Artes. Pero cuando recibió la primera carta legal de una institución electoral en Nueva York, se puso en contacto con RTMark, quienes a su vez se pusieron en contacto con nosotros. Ubermorgen.com compró el sitio entero, y lo volvimos a poner en la red".

Estados Unidos es una fuerza cultural tan poderosa que se podría decir que es el nuevo Imperio, y que los ciudadanos del mundo occidental tenemos con los EEUU la misma relación que los estados clientes tenían con Roma durante su esplendor. La política norteamericana nos afecta, nos interesa. Y no es de extrañar que un colectivo como Ubermorgen, empresa que dedica el 50% de su tiempo a proyectos comerciales y el otro 50% a proyectos artísticos, decidiera tomar como suyo el proyecto de Baumgartner. Les ayudaba el hecho de residir en Austria, más allá de la jurisdicción estatal de Nueva York.

"Al principio no hicimos nada, sólo hablar con los medios europeos, contestar sus preguntas, pero no teníamos intención de hacer nada.

Pero entonces Chicago nos puso un pleito, y James Baumgartner se separó por completo del proyecto, sus abogados le recomendaron que no hablara con nosotros. Según parece había tenido una visita del FBI. No conozco personalmente a James, pero al final sólo es un estudiante de arte que se ha metido en un lío, y no quiere saber más del asunto", afirma LizVlx.

Apelación a la Primera Enmienda

La defensa de James Baumgartner era una sólida apelación a la Primera Enmienda de la Constitución de los Estados Unidos: la libertad de expresión.

Voteauction.com sería sólo un ejemplo de sátira política sobre un fenómeno real, del que todos habían oído hablar: la compra de votos por parte de empresas mediante contribuciones a las campañas electorales de los candidatos que les puedan ser más favorables.

Jamin Raskin, profesor de derecho en la American University, analizaba voteauction muy positivamente en una entrevista para wired.com. "Lo que se está poniendo a prueba es si la teoría general de que está bien que el dinero compre elecciones (aprobada esencialmente en 1976 en una sentencia del Tribunal Supremo de los EEUU) se puede extender a la compra de votos individuales. Los autores de voteauction.com señalan que hemos desarrollado un sistema en el que está bien que el dinero compre elecciones, y sin embargo

Entre el negocio y el arte con Ubermorgen: Entrevista con LizVlx

LizVlx hace su presentación en el CCC sin ordenador. Utiliza unas transparencias de acetato que trae en un bolso rosa de Cartier. Tras la presentación habla con hiperactivo!

¿Qué o quién es Ubermorgen?

Mi socio Hans Bernhard y yo somos Ubermorgen.com, una empresa basada en Viena. La mitad del trabajo que hacemos es comercial, la otra mitad son proyectos propios. Comercialmente hacemos webs, márceting multimedia para compañías de internet, esas cosas. Nuestros proyectos propios son artísticos, proyectos político-culturales. Por ejemplo, este año empezamos Micromusic.net, un proyecto cuyo eslógan es "low tech music for high tech people" y que consiste en distribuir música hecha con Commodore 64s, rollo 8 bits. Otro proyectos que tenemos es Bannster.net, que consiste en meter contenido en el espacio de los banners de anuncio, hacer pequeñas obras de arte del tamaño de un banner.

nos aferramos a la fantasía de que hay algo profundamente inmoral en la compra de un voto individual".

Por supuesto que las instituciones electorales actuaron con rapidez, pero al mismo tiempo las ONGs dedicadas a los derechos civiles y la limpieza del proceso electoral hacían declaraciones sobre la peligrosidad de un "negocio" que ponía patas arriba la representación del pueblo en las urnas. Tanto la ACLU (American Civil Liberties Union - www.aclu.org) como grupos más pequeños y especializados, al estilo de The Voting Integrity Project (www.votingintegrity.org), pusieron el grito en el cielo en la prensa norteamericana, aumentando en el proceso la publicidad que recibía [voteauction](http://voteauction.com).

Los gestores austriacos del site contribuían al desconcierto. LizVlx comenta que "mientras que James Baumgartner, aconsejado por sus abogados, lanzaba una nota de prensa en la que decía que todo era una broma, nuestras propias notas de prensa hablaban de un nuevo modelo de negocio, de que esto sólo era una prueba para poner en marcha un sistema masivo durante las elecciones europeas, y rediseñamos todo el site para que funcionara mejor".

Algunos periodistas cayeron en la trampa por completo: mientras que Baumgartner aceptaba hacer una entrevista en exclusiva para un periodista de Wired, y el periodista en cuestión se guardaba la historia durante el fin de semana (para colgarla de la web el lunes, en el momento de más lectores), Hans Bernhard y LizVlx preparaban su propia nota de prensa, en la que señalaban que la subasta de votos era "un nuevo modelo de negocio y un nuevo modelo de democracia" que "racionalizaba los flujos de capital en el presente sistema electoral".

Nada ha sucedido hasta que no ha salido por televisión

En estos tiempos mediáticos, no se puede decir que nada haya sucedido realmente hasta que no sale

Está bien eso de repoblar el espacio publicitario con contenidos artísticos, pero no se puede vender. ¿Es vendible el net.art?

Es un debate estéril. Somos amigos de [Jodi](#) y tenemos proyectos con ellos, ellos tienen experiencia vendiendo su arte. Pero creo que el asunto va más por donde estoy, que se financian vendiendo acciones. Creo que vender cosas, como en otros tipos de arte, no funciona. Los proyectos son más colaborativos, el net.art tiene menos que ver con el diseño y más con el action art, que realmente no se puede vender. La mayor parte del tiempo son sólo acontecimientos. Es la hora de decir "el net.art ha muerto, viva el net.art" y pasar al siguiente nivel.

¿Como el Pop Art, que muere pero sobrevive?

Sí, como el pop art, y la música pop, la cultura pop, creo que ése es el camino. Hay que librarse de la estrella del pop y poner en su lugar al programador como net.artista.

Eso ya está pasando en los videojuegos

Exactamente, pero son gente virtual, aunque esto está bien. El arte no trata acerca de ese objeto en la pared, hay que cambiar esa visión. Una amiga mía hizo cuadros al óleo de websites, y eso encaja.

Un cambio de tema: ®™ark hablan de voteauction.com como si lo hubieran hecho ellos...

Siempre lo hacen, hablan de los proyectos como si fueran suyos, y ¿sabes qué? Yo lo apoyo.

Así que no es que yo lo entendiera mal. En aquel momento era su proyecto.

Sí, es su proyecto, lo que sea, al carajo el copyright.

por la televisión. "Tuvimos media hora en CNN en todo el mundo", declara LizVlex. "Los medios estaban encantados con nosotros", repite LizVlx un par de veces, visiblemente satisfecha. "Resulta que la compra de votos es algo de lo que todos quieren hablar, pero normalmente no tienen ocasión de hacerlo. Nosotros les dábamos la excusa para hablar de compra-venta de votos, de cómo el dinero influía en el proceso electoral, y el que lo hiciéramos con la cara seria, sin guiñar el ojo y decir 'esto es sólo una broma', les permitía hacerlo con más profundidad".

Tanto voteauction.com como vote-auction.com fueron cerrados por las autoridades, en algún caso de forma ilegal, según Ubermorgen. El sitio sigue accesible mediante la dirección voteauction.at y su número IP; 62.116.31.68. Hans Bernhard, el titular oficial del dominio, afirmaba que "tenemos el servidor en Bulgaria, y estamos dispuestos a llevárnoslo a donde sea. No estamos sujetos a las leyes de cada estado de los EEUU, sino sólo a leyes internacionales. Y no sólo no estamos haciendo nada ilegal, sino que creemos en la viabilidad económica y empresarial de la idea".

El escándalo creado por voteauction.com ya ha sido acallado por el propio escándalo del recuento de votos en las elecciones presidenciales del 2000. Pero todavía hay alguien que los tiene en cuenta. Jamin Raskin, el profesor de derecho de la American University, tiene la última palabra:

"Esta gente esá adelantada a su tiempo, quizá 50 años, en darse cuenta de que el destino último del proceso electoral es que todo estará a la venta - desde los votos de los ciudadanos hasta los votos de los legisladores e incluso, Dios no lo quiera, de los jueces del Tribunal Supremo".

®™ark: mediadores de agitación cultural

®™ark son los responsables de convertir el pequeño proyecto de Baumgartner en una conspiración a escala mundial. Ellos fueron los mediadores entre el estudiante de Bellas Artes norteamericano y los empresarios-artistas-agitadores de Ubermorgen.com.

[®™ark \(pronúciase art-mark\)](#) es una corporación muy particular. Su

objetivo no son los beneficios económicos, sino la cuota de atención en los medios. Las acciones de ®™ark no producen beneficios, sino tan sólo los "dividendos culturales" de sus acciones artísticas. Son agitadores artístico-políticos, y para realizar su trabajo (el arte es un trabajo sucio, pero alguien tiene que hacerlo, que se decía en los 80) se han convertido en aquello que más odian: una corporación.

Dicen llamarse Ray Thomas y Frank Guerrero, pero estos alias son tan falsos como el nombre (Andreas Bilchbauer) con el que uno de ellos se presentó, en nombre de la Organización Mundial del Comercio, en una conferencia sobre comercio internacional. Por supuesto que ellos dirán que ®™ark (pronúnciese art-mark) no tuvo nada que ver con esto, que fue un grupo

de impostores llamados [The Yes Men](#), dueños actuales del dominio [Gatt.org](#), quienes cometieron la barrabasada. Esta estrategia oblicua es buena para corporaciones "legítimas", desde Mobil Exxon hasta los bancos que sólo sirven para blanquear dinero o las empresas fantasmas cuyo único fin es evadir impuestos. ¿Por qué no les iba a funcionar a ellos también?

Son profesores de arte, y también artistas. Su medio de expresión es la acción política. El pasado otoño participaron en las jornadas del Museo de Arte Contemporáneo de Barcelona sobre "La acción directa como una de las bellas artes", y durante su visita hablaron de voteauction.com como de un proyecto propio. Siempre lo hacen, atribuirse todo el mérito (y descargar gran parte de las culpas) forma parte de su estilo artístico, por así decirlo. En una posterior entrevista por e-mail repartían la atribución del proyecto voteauction entre sus verdaderos autores colectivos, ellos mismos incluidos:

> ¿Qué era voteauction.com: un comentario político, una "broma como forma de arte", un proyecto de rtmark desde el comienzo...?

®™ark: Comentario político *y* proyecto de RTMark

> Si los proyectos de ®™ark no son nada de lo anterior, ¿qué son?

®™ark: Son comentarios políticos fraguados en un vehículo

Imagen del sitio web de ®™ark donde se atribuyen la responsabilidad de voteauction.com

Ray Thomas y Frank Guerrero quedan perfectamente retratados en esta entrevista con ®™ark realizada por José Luis de Vicente.

entretenido que permite que sean absorbidos entre risas. Como la capa de azúcar de una píldora medicinal.

> ¿Pueden darme una breve cronología de cómo se desarrolló la saga voteauction.com -> vote-auction.com etc?

®™ark: ®™ark Lo patrocinó en Junio. Consiguió mucha prensa. Fue amenazado por varias entidades y vendido al empresario austríaco Hans Bernhard. Cerrado ilegalmente por Internic en Noviembre.

> ¿Cuál fue la respuesta de los medios a esta historia? Disfrutaron de la oportunidad de hablar abiertamente de compra de votos? Analizaron los medios a fondo esta actividad?

®™ark: A fondo no, pero sí, los medios la analizaron. Los medios recogieron la noticia.

The ambiguous case of the auctioneers of votes

Before the furious fashions of the B2B (Business to Business, business to business), and the B2C (Business to Consumer, business to consumer) a project P2V existed (Politician to Voter).

Voteauction.com, website that began like exercise of an art student, ended up jumping border, carrying out special segments in Cnn and forcing the European authorities of Internet to commit an illegality to close it. After an interview to LizVlx, one of the creators of the impostura, the results of the search are spilled here, romped, how no, in their own sea of incognitos.

Javier Candeira, 27 of December of 2000

You say to me what seems to you the article?

Érase once an international plot, orchestrated from an Austrian company, to undermine the American democratic system. Not better this: one was only a stupid joke of political content, perpetrated by agitators who make of the political action their form of art. Not even. In fact everything began in the thesis of aim of race of a student of Beautiful Arts.

James Baumgartner, student of a school of art in the North American state of New York, designed and made first site of auctions of votes by Internet like an artistic project. Voteauction.com would be its thesis of race aim. The project also had a slope of political commentary.

"the person who obtains to more financing the person who, almost invariably, always wins", Baumgartner to the Wired magazine declared. "and they treat to the voter like an end item, in the same way that the industry of the television treats its spectators".

"the voter is a product that is sold"

Diagram of alternative financing of political campaigns through Voteauction.com

"In the present electoral system, the voter is a product that is sold to the corporations. But they are sold by the doubling method of advertising, consulting announcements, and trips. Voteauction draws up one more a more direct line; the old trick to skip to the intermediary ", commented Baumgartner.

In August there are few news for newspapers, and voteauction jumped to the covers of means, specially the means based on Internet. During the summer and the autumn of year 2000, wired.com had practically the weekly news on "the Web site that sold votes in the network".

LizVlx is the industrialist who, with her partner Hans Bernhard, bought the dominion along with voteauction.com all her assets (page Web, users and auctions in course) at the end of August of the 2000, when the North American authorities began to put in lawsuits to Baumgartner. The price was an authentic gangue: euro. "Baumgartner began it, like a species of political joke, for its studies of Beautiful Arts. But when it received the first legal letter of an electoral institution in New York, it was put in contact with RTMark, who put themselves as well in contact with us. Ubermorgen.com bought the whole site, and we returned it to put in the network ".

The United States is a so powerful cultural force that it would be possible to be said that is the new Empire, and that the citizens of the western world we have with the U.S.A. the same relation that the states clients had with Rome during their splendor. The North American policy affects to us, interests to us. And it is no wonder a group like Ubermorgen, company that dedicates to 50% of its time to commercial projects and other 50% to artistic projects, decided to take like his the project from Baumgartner. The fact helped them to reside in Austria, beyond the state jurisdiction of New York.

"we did not do anything In the beginning, to only speak with European means, to answer its questions, but we did not have inención to do nothing. But then Chicago put a lawsuit to us, and James Baumgartner separated completely of the project, his lawyers recommended to him that he did not speak with us. According to it seems had had a visit of the FBI. I do not know James personally, but in the

end she is only an art student that has put in a mess, and does not want to know more of the subject ", affirms LizVlx.

Appeal to the First Amendment

The defense of James Baumgartner was a solid appeal to the First Amendment of the Constitution of the United States: the freedom of expression. Voteauction.com would be only an example of political satire on a real phenomenon, of which all had heard speak: the purchase of votes on the part of companies by means of contributions to the electoral campaigns of the candidates who them can be more favorable.

Jamin Raskin, professor of right in the American University, very positively analyzed voteauction in an interview for wired.com. "What it is being put on approval it is if the general theory that it is well that the money buys elections (approved esenciamente in 1976 in a sentence of the Supreme Court of the U. S.A.) can extend to the purchase of individual votes. The authors of voteauction.com indicate that we have developed a system in which she is well that the money buys elections, and nevertheless we clung to the fantasy of which there is something deeply immoral in the purchase of an individual vote ".

Of course that the electoral institutions acted quickly, but at the same time the ONGs dedicated to the civil rights and the cleaning of the electoral process made declarations on the danger of a "business" that put legs above the representation of the town in the ballot boxes. As much the ACLU (Civil American Liberties Union - www.aclu.org) like smaller and specialized

Between the business and the art with Ubermorgen: Interview with LizVlx

LizVlx makes its presentation in the CCC without computer. It uses acetate transparencies that bring in a pink purse of Cartier. After the presentation it speaks with hyperactive!

What or who is Ubermorgen?

My partner Hans Bernhard and I am Ubermorgen.com, a company based on Vienna. Half of the work that we do is commercial, other half are own projects. Commercially we do webs, márceting multimedia for companies of Internet, those things. Our own projects are artistic, political-cultural projects. For example, this year we began Micromusic.net, a project whose they eslógan is "low tech music for high tech people" and that consists of distributing to music done with Commodore 64s, roll 8 bits. Another projects that we have are Bannster.net, that consists of putting content in the space of banners of announcement, to make small works of art as large as banner.

He is that of repoblar the advertising space with artistic contents well, but it is not possible to be sold. Is saleable net.art?

It is a sterile debate. We are friends of Jodi and we have projects with them, they have experience selling its art. But I believe that the subject goes more by where etoy, which they finance selling actions. I believe that to sell things, like in other types of art, it does not work. The projects are colaborativos, net.art less has to do with the design and more with action art, that really cannot be sold. Most of the time is only events. It is the hour to say "net.art there is dead, it lives net.art" and to happen to the following level.

Like the Pop Art, that dies but it survives?

Yes, like pop art, and pop music, the pop culture, I believe that that one is the way. There is qie to get rid of the star of the pop one and to put in its place to the programmer like net.artista.

That already is happening in the videojuegos

Exactly, but they are virtual people, although this is well. The art does not treat about that object in the wall, is necessary to change that vision. A friend mine made pictures to the oil of websites, and that fits.

A change of subject: ®™Mark speaks of voteauction.com as if they had done it...

They do it, always they speak of the projects as if they were his, and you know that '? I support it.

So he is not that I understood it bad. At that moment it was his

groups, in the style of The Voting Integrity Project (www.votingintegrity.org), raised the roof in the North American press, increasing in the process the publicity that received voteauction. *project.* Yes, it is his project, which is, to carajo copyright.

The Austrian managers of site contributed to the disagreement. LizVlx comments that "whereas James Baumgartner, advised by his lawyers, sent a press note in which he said that everything was a joke, our own notes of press spoke of a new model of business, of which this was only a test to start up a massive system during the European elections, and we redesigned all site so that he worked better".

Some journalists fell completely in the trap: whereas Baumgartner accepted to make an interview in exclusive right for a journalist of Wired, and the journalist at issue kept history during the weekend (to hang it of the Web Monday, at the moment of more readers), Hans Bernhard and LizVlx prepared their own note of press, in which they indicated that the auction of votes was "a new model of business and a new model of democracy" that "the present rationalized the flows of capital in electoral system".

Nothing has happened until it has not left by television

In these mediatic times, it is not possible to be said that nothing has happened really until it does not leave by the television. "We had half an hour in Cnn anywhere in the world", declares LizVlex. "the means were enchanted with us", repeats LizVlx a pair of times, visibly satisfied. "It is that the purchase of votes is something of which all want to speak, but normally do not have occasion to do it. We gave the excuse to speak them of transaction of votes, of how the money influa in the electoral process, and the one that we did it with the serious face, without yawing the eye and saying ' this is only one bromá, allowed them to do it with more depth ".

As much voteauction.com as votes-auction.com were closed by the authorities, in algun case of illegal form, according to Ubermorgen. The site follows by means of the direction voteauction.at [accessible](#) and its number IP; 62,116,31,68, Hans Bernhard, the official holder of the dominion, affirmed that "we have the servant in Bulgaria, and we are arranged to take it to us to where it is. We are not subject to the laws of each state of the U.S.A., but only to international laws. And we are not not only making anything illegal, but that we create in the economic and enterprise viability of the idea ".

El escándalo creado por voteauction.com ya ha sido acallado por el propio escándalo del recuento de votos en las elecciones presidenciales del 2000. Pero todavía hay alguien que los tiene en cuenta. Jamin Raskin, el profesor de derecho de la American University, tiene la última palabra:

"Esta gente esá adelantada a su tiempo, quizá 50 años, en darse cuenta de que el destino último del proceso electoral es que todo estará a la venta - desde los votos de los ciudadanos hasta los votos de los legisladores e incluso, Dios no lo quiera, de los jueces del Tribunal Supremo".

El ambiguo caso de los subastadores de votos

Antes de las furiosas modas del B2B (Business to Business, negocio a negocio), y el B2C (Business to Consumer, negocio a consumidor) existió un proyecto P2V (Político a Votante). [Voteauction.com](#), un website que comenzó como ejercicio de un estudiante de arte, acabó saltando fronteras, protagonizando segmentos especiales en CNN y obligando a las autoridades europeas de internet a cometer una ilegalidad para cerrarlo. Tras una entrevista a LizVlx, una de las artífices de la impostura, se vierten aquí los resultados de la pesquisa, enredados, cómo no, en su propio mar de incógnitas.

Javier Candeira, 27 de Diciembre de 2000

¿Me dices [qué te parece el artículo?](#)

Érase una vez una trama internacional, orquestada desde una empresa austríaca, para socavar el sistema democrático estadounidense. No mejor esto: se trataba sólo de un bromazo de contenido político, perpetrado por unos agitadores que hacen de la acción política su forma de arte. Ni siquiera. En realidad todo comenzó en la tesis de fin de carrera de un estudiante de Bellas Artes.

James Baumgartner, alumno de una escuela de arte en el estado norteamericano de Nueva York, diseñó y realizó el primer site de subastas de votos por internet como un proyecto artístico. Voteauction.com sería su tesis de fin de carrera. El proyecto tenía también una vertiente de comentario político.

"La persona que consigue más financiación se la persona que, casi invariablemente, siempre gana", declaró Baumgartner a la revista Wired. "y tratan al votante como un producto final, del mismo modo que la industria de la televisión trata a sus espectadores".

Diagrama de financiación alternativa de campañas políticas a través de Voteauction.com

"El votante es un producto que se vende"

"En el sistema electoral actual, el votante es un producto que se vende a las corporaciones. Pero se venden por el retorcido método de anuncios publicitarios, consultores, y viajes. Voteauction traza una línea más directa; el viejo truco de saltarse al intermediario", comentaba Baumgartner.

En agosto hay pocas noticias para los periódicos, y voteauction saltó a las portadas de los medios, especialmente los medios basados en internet. Durante el verano y el otoño del año 2000, wired.com tenía prácticamente una noticia semanal sobre "el sitio web que vendía votos en la red".

LizVlx es la empresaria que, con su socio Hans Berhard, compró el dominio voteauction.com junto con todos sus activos (página web, usuarios y subastas en curso) a finales de agosto del 2000, cuando las autoridades norteamericanas comenzaron a meter en pleitos a Baumgartner. El precio fue una auténtica ganga: un euro. "Baumgartner lo empezó, como una especie de chiste político, para sus estudios de Bellas Artes. Pero cuando recibió la primera carta legal de una institución electoral en Nueva York, se puso en contacto con RTMark, quienes a su vez se pusieron en contacto con nosotros. Ubermorgen.com compró el sitio entero, y lo volvimos a poner en la red".

Estados Unidos es una fuerza cultural tan poderosa que se podría decir que es el nuevo Imperio, y que los ciudadanos del mundo occidental tenemos con los EEUU la misma relación que los estados clientes tenían con Roma durante su esplendor. La política norteamericana nos afecta, nos interesa. Y no es de extrañar que un colectivo como Ubermorgen, empresa que dedica el 50% de su tiempo a proyectos comerciales y el otro 50% a proyectos artísticos, decidiera tomar como suyo el proyecto de Baumgartner. Les ayudaba el hecho de residir en Austria, más allá de la jurisdicción estatal de Nueva York.

"Al principio no hicimos nada, sólo hablar con los medios europeos, contestar sus preguntas, pero no teníamos intención de hacer nada. Pero entonces Chicago nos puso un pleito, y James Baumgartner se separó por completo del proyecto, sus abogados le recomendaron que no hablara con nosotros. Según parece había tenido una visita del FBI. No conozco personalmente a James, pero al final sólo es un estudiante de arte que se ha metido en un lío, y no quiere saber más del asunto", afirma LizVlx.

Apelación a la Primera Enmienda

La defensa de James Baumgartner era una sólida apelación a la Primera Enmienda de la Constitución de los Estados Unidos: la libertad de expresión. Voteauction.com sería sólo un ejemplo de sátira política sobre un fenómeno real, del que todos habían oído hablar: la compra de votos por parte de empresas mediante contribuciones a las campañas electorales de los candidatos que les puedan ser más favorables.

Jamin Raskin, profesor de derecho en la American University, analizaba voteauction muy positivamente en una entrevista para wired.com. "Lo que se está poniendo a prueba es si la teoría general de que está bien que el dinero compre elecciones (aprobada esencialmente en 1976 en una sentencia del Tribunal Supremo de los EEUU) se puede extender a la compra de votos individuales. Los

Entre el negocio y el arte con Ubermorgen: Entrevista con LizVlx

LizVlx hace su presentación en el CCC sin ordenador. Utiliza unas transparencias de acetato que trae en un bolso rosa de Cartier. Tras la presentación habla con hiperactivo!

¿Qué o quién es Ubermorgen?

Mi socio Hans Bernhard y yo somos Ubermorgen.com, una empresa basada en Viena. La mitad del trabajo que hacemos es comercial, la otra mitad son proyectos propios. Comercialmente hacemos webs, márceting multimedia para compañías de internet, esas cosas. Nuestros proyectos propios son artísticos, proyectos político-culturales. Por ejemplo, este año empezamos Micromusic.net, un proyecto cuyo eslógan es "low tech music for high tech people" y que consiste en distribuir música hecha con Commodore 64s, rollo 8 bits. Otro proyectos que tenemos es Bannster.net, que consiste en meter contenido en el espacio de los banners de anuncio, hacer pequeñas obras de arte del tamaño de un banner.

autores de voteauction.com señalan que hemos desarrollado un sistema en el que está bien que el dinero compre elecciones, y sin embargo nos aferramos a la fantasía de que hay algo profundamente inmoral en la compra de un voto individual".

Por supuesto que las instituciones electorales actuaron con rapidez, pero al mismo tiempo las ONGs dedicadas a los derechos civiles y la limpieza del proceso electoral hacían declaraciones sobre la peligrosidad de un "negocio" que ponía patas arriba la representación del pueblo en las urnas. Tanto la ACLU (American Civil Liberties Union - www.aclu.org) como grupos más pequeños y especializados, al estilo de The Voting Integrity Project (www.votingintegrity.org), pusieron el grito en el cielo en la prensa norteamericana, aumentando en el proceso la publicidad que recibía voteauction.

Los gestores austriacos del site contribuían al desconcierto. LizVlx comenta que "mientras que James Baumgartner, aconsejado por sus abogados, lanzaba una nota de prensa en la que decía que todo era una broma, nuestras propias notas de prensa hablaban de un nuevo modelo de negocio, de que esto sólo era una prueba para poner en marcha un sistema masivo durante las elecciones europeas, y rediseñamos todo el site para que funcionara mejor".

Algunos periodistas cayeron en la trampa por completo: mientras que Baumgartner aceptaba hacer una entrevista en exclusiva para un periodista de Wired, y el periodista en cuestión se guardaba la historia durante el fin de semana (para colgarla de la web el lunes, en el momento de más lectores), Hans Bernhard y LizVlx preparaban su propia nota de prensa, en la que señalaban que la subasta de votos era "un nuevo modelo de negocio y un nuevo modelo de democracia" que "racionalizaba los flujos de capital en el presente sistema electoral".

Está bien eso de repoblar el espacio publicitario con contenidos artísticos, pero no se puede vender. ¿Es vendible el net.art?

Es un debate estéril. Somos amigos de [Jodi](#) y tenemos proyectos con ellos, ellos tienen experiencia vendiendo su arte. Pero creo que el asunto va más por donde estoy, que se financian vendiendo acciones. Creo que vender cosas, como en otros tipos de arte, no funciona. Los proyectos son más colaborativos, el net.art tiene menos que ver con el diseño y más con el action art, que realmente no se puede vender. La mayor parte del tiempo son sólo acontecimientos. Es la hora de decir "el net.art ha muerto, viva el net.art" y pasar al siguiente nivel.

¿Como el Pop Art, que muere pero sobrevive?

Sí, como el pop art, y la música pop, la cultura pop, creo que ése es el camino. Hay que librarse de la estrella del pop y poner en su lugar al programador como net.artista.

Eso ya está pasando en los videojuegos

Exactamente, pero son gente virtual, aunque esto está bien. El arte no trata acerca de ese objeto en la pared, hay que cambiar esa visión. Una amiga mía hizo cuadros al óleo de websites, y eso encaja.

Un cambio de tema: @™ark hablan de voteauction.com como si lo hubieran hecho ellos...

Siempre lo hacen, hablan de los proyectos como si fueran suyos, y ¿sabes qué? Yo lo apoyo.

Así que no es que yo lo entendiera mal. En aquel momento era su proyecto.

Sí, es su proyecto, lo que sea, al carajo el copyright.

Nada ha sucedido hasta que no ha salido por televisión

En estos tiempos mediáticos, no se puede decir que nada haya sucedido realmente hasta que no sale por la televisión. "Tuvimos media hora en CNN en todo el mundo", declara LizVlex. "Los medios estaban encantados con nosotros", repite LizVlx un par de veces, visiblemente satisfecha. "Resulta que la compra de votos es algo de lo que todos quieren hablar, pero normalmente no tienen ocasión de hacerlo. Nosotros les dábamos la excusa para hablar de compra-venta de votos, de cómo el dinero influía en el proceso electoral, y el que lo hiciéramos con la cara seria, sin guñar el ojo y decir 'esto es sólo una broma', les permitía hacerlo con más profundidad".

Tanto voteauction.com como **vote-auction**.com fueron cerrados por las autoridades, en algún caso de forma ilegal, según Ubermorgen. El sitio sigue accesible mediante la dirección voteauction.at y su número IP; 62.116.31.68. Hans Bernhard, el titular oficial del dominio, afirmaba que "tenemos el servidor en Bulgaria, y estamos dispuestos a llevárnoslo a donde sea. No estamos sujetos a las leyes de cada estado de los EEUU, sino sólo a leyes internacionales. Y no sólo no estamos haciendo nada ilegal, sino que creemos en la viabilidad económica y empresarial de la idea".

El escándalo creado por voteauction.com ya ha sido acallado por el propio escándalo del recuento de votos en las elecciones presidenciales del 2000. Pero todavía hay alguien que los tiene en cuenta. Jamin Raskin, el profesor de derecho de la American University, tiene la última palabra:

"Esta gente esá adelantada a su tiempo, quizá 50 años, en darse cuenta de que el destino último del proceso electoral es que todo estará a la venta - desde los votos de los ciudadanos hasta los votos de los legisladores e incluso, Dios no lo quiera, de los jueces del Tribunal Supremo".

®™ark: mediadores de agitación cultural

®™ark son los responsables de convertir el pequeño proyecto de Baumgartner en una conspiración a escala mundial. Ellos fueron los mediadores entre el estudiante de Bellas Artes norteamericano y los empresarios-artistas-agitadores de Ubermorgen.com.

[®™ark \(pronúciense art-mark\)](#) es

una corporación muy particular. Su objetivo no son los beneficios económicos, sino la cuota de atención en los medios. Las acciones de ®™ark no producen beneficios, sino tan sólo los "dividendos culturales" de sus acciones artísticas. Son agitadores artístico-políticos, y para realizar su trabajo (el arte es un trabajo sucio, pero alguien tiene que hacerlo, que se decía en los 80) se han convertido en aquello que más odian: una corporación.

Dicen llamarse Ray Thomas y Frank Guerrero, pero estos alias son tan falsos como el nombre (Andreas Bilchbauer) con el que uno de ellos se presentó, en nombre de la Organización Mundial del Comercio, en una conferencia sobre comercio internacional. Por supuesto que ellos dirán que ®™ark (pronúnciese art-mark) no tuvo nada

que ver con esto, que fue un grupo de impostores llamados [The Yes Men](#), dueños actuales del dominio [Gatt.org](#), quienes cometieron la barrabasada. Esta estrategia oblicua es buena para corporaciones "legítimas", desde Mobil Exxon hasta los bancos que sólo sirven para blanquear dinero o las empresas fantasmas cuyo único fin es evadir impuestos. ¿Por qué no les iba a funcionar a ellos también?

Son profesores de arte, y también artistas. Su medio de expresión es la acción política. El pasado otoño participaron en las jornadas del Museo de Arte Contemporáneo de Barcelona sobre "La acción directa como una de las bellas artes", y durante su visita hablaron de voteauction.com como de un proyecto propio. Siempre lo hacen, atribuirse todo el mérito (y descargar gran parte de las culpas) forma parte de su estilo artístico, por así decirlo. En una posterior entrevista por e-mail repartían la atribución del proyecto voteauction entre sus verdaderos autores colectivos, ellos mismos incluidos:

> ¿Qué era voteauction.com: un comentario político, una "broma como forma de arte", un proyecto de rtmark desde el comienzo...?

®™ark: Comentario político *y* proyecto de RTMark

> Si los proyectos de ®™ark no son nada de lo anterior, ¿qué son?

Imagen del sitio web de ®™ark donde se atribuyen la responsabilidad de voteauction.com

Ray Thomas y Frank Guerrero quedan perfectamente retratados en esta entrevista con ®™ark realizada por José Luis de Vicente.

®™ark: Son comentarios políticos fraguados en un vehículo entretenido que permite que sean absorbidos entre risas. Como la capa de azúcar de una píldora medicinal.

> ¿Pueden darme una breve cronología de cómo se desarrolló la saga voteauction.com -> **vote-auction**.com etc?

®™ark: ®™ark Lo patrocinó en Junio. Consiguió mucha prensa. Fue amenazado por varias entidades y vendido al empresario austríaco Hans Bernhard. Cerrado ilegalmente por Internic en Noviembre.

> ¿Cuál fue la respuesta de los medios a esta historia? Disfrutaron de la oportunidad de hablar abiertamente de compra de votos? Analizaron los medios a fondo esta actividad?

®™ark: A fondo no, pero sí, los medios la analizaron. Los medios recogieron la noticia.

INTERNET

Duizenden websites zijn er aan de Amerikaanse presidentsverkiezingen gewijd. De kandidaten hebben zelf uitgebreide sites en talloze 'fansites'. Op de officiële campagnesite van George W. Bush is per onderwerp te zien wat zijn standpunt is. Onder het kopje guns valt te lezen dat volgens Bush een strenge aanpak van illegaal wapenbezit de beste manier is om ongelukken te voorkomen. Wapenbezit is sinds de schietpartijen op middelbare scholen en openbare gelegenheden een hot issue in de Verenigde Staten. Om aan te tonen dat Bush de jeugd graag wil beschermen tegen geweld worden enkele wapenfeiten uit Bush' gouverneurschap in Texas genoemd. In Texas heeft Bush gezorgd voor wetgeving op grond waarvan minderjarigen die met een illegaal wapen rondlopen gevangenisstraf kunnen krijgen. Ook is hij verantwoordelijk voor 'weapon-free school zones'. In een straal van 100 meter rond een school met een wapen rondlopen, is in Texas een misdrijf.

Hoe denkt Al Gore over wapens? Gore heeft op zijn site net zo'n lijstje met issues als Bush, wat het vergelijken gemakkelijk maakt. Gore wil het wapenbezit aan banden leggen, maar is minder uitgesproken dan Bush. Waarschijnlijk om de kiezers die geen wapenverbod voor particulieren willen, niet af te schrikken. In plaats van ferme taal over wapens is er bij Gore discussie. 'Can you respond on the shootings today in California with the little kids? I am 11 years old.' Op deze vraag van Richard uit Californië geeft Gore een tamelijk nietszeggend antwoord. 'Our prayers must go out to the families affected by this tragedy.' Uiteindelijk verschilt zijn standpunt nauwelijks van dat van Bush. Ook Gore wil een wettelijk verbod op het verkopen van wapens aan kinderen en criminelen.

Er zijn ook onafhankelijke websites die de standpunten van de presidentskandidaten vergelijken, zoals Public Agenda en Vote 2000.

Opiniepeilingen zijn erg belangrijk bij de verkiezingen. De Republikeinen waren bang dat de Democraten een digitale voorsprong zouden hebben en gebruikten spam (ongewenste massamail) als middel om zoveel mogelijk

kiezers te mobiliseren om mee te doen aan webpolls, die steeds belangrijker worden. Waarom de Republikeinen het nodig vonden om tienduizenden internetgebruikers te spammen is onduidelijk. In de peilingen op het web heeft Bush vrijwel permanent een voorsprong op Gore.

Internet wordt een steeds belangrijker campagnemiddel in de verkiezingsstrijd. Zowel de Democraten als de Republikeinen hebben medewerkers die zich uitsluitend met internet bezighouden. De E-leaders (Democraten) en E-Champions (Republikeinen) proberen per e-mail en eigen websites hun familie, vrienden en internetvrienden over te halen om op de juiste kandidaat te stemmen.

De Democratische internetvrijwilligers gebruiken het net ook om Bush in de gaten te houden. Onder GOP-Watch (GOP staat voor Grand Old Party, een andere naam voor de Republikeinse partij) is onder meer een speciale zoekmachine te vinden voor uitspraken van Bush. Wie zich afvraagt hoe vaak Bush een bepaalde doodoener al heeft gebruikt, kan de Bush Stump Speech Search Engine raadplegen. De GOP-watchers tonen ook aan dat het slecht gaat met vrouwen in Texas door het beleid van Bush.

Gore en Bush debatteren dagelijks op de website Web White & Blue. Ze mogen elke dag een 'message of the day' plaatsen en beantwoorden een vraag van kiezers. Ook de andere, kansloze, presidentskandidaten als Ralph Nader (Groenen) en Pat Buchanan (Reform Party) zijn te vinden op Web White & Blue. Voor hen is internet nog belangrijker dan voor Gore en Bush omdat de kandidaten die niet tot de twee grootste partijen behoren traditiegetrouw worden genegeerd door de media. 'Talk to the press' heet een van de secties op de website van Ralph Nader. Nader, een tegenstander van milieuvervuiling, racisme en te hoge uitgaven voor defensie, roept kiezers op brieven te schrijven naar kranten waarin ze vertellen waarom Nader de beste president zou zijn. Ook in online-discussiegroepen moeten Nader-aanhangers campagne voeren voor hun kandidaat.

Kiezers die geen keuze kunnen maken, kunnen hun stem verkopen aan de hoogstbiedende op de site Voteauction.com. Onder het motto 'Bringing capitalism and democracy closer together' begon de student James Baumgartner uit Troy, New York, in augustus een veilingsite voor stemmen. Alleen in de staat New York is het kopen en verkopen van stemmen uitdrukkelijk verboden. Uit angst voor vervolging sloot Baumgartner, die wilde afstuderen op de veiling, de site. Een Oostenrijks bedrijf nam de domeinnaam over en inmiddels bieden ruim 17.000 Amerikanen hun stem te koop aan. De nieuwe eigenaar, zakenman Hans Bernhard, denkt dat hij uit handen blijft van justitie omdat hij niet de Amerikaanse nationaliteit bezit en de server waar de site op draait in Bulgarije staat, waar men wel iets anders te doen heeft dan websites afsluiten.

TIME INC. SITES:

'Nader trader' vote swap site shut down

October 31, 2000
 Web posted at: 2:15 PM EST (1915 GMT)

[SACRAMENTO, California](#) (Reuters) -- California authorities have shut down a vote swap Web site aimed at so-called "Nader traders" -- people in battleground states who agree to vote for Democrat Al Gore if someone in a less contested state votes for the Green Party's Ralph Nader.

"We did notify the site manager that they were in violation of California election law and they did need to cease activities on the Web site, and they complied," Shad Balch, a spokesman for California Secretary of State Bill Jones, said Tuesday.

The site, ([www.voteswap2000.com](#)), was one of a number of Internet trading sites that sprang up after political pundits suggested vote swapping as a way of backing Nader without costing Gore the election.

According to the theory, Nader supporters in toss-up states sign up to vote for Gore. In exchange, their votes are "swapped" for Nader votes by people in states already solidly behind either Gore or Republican candidate George W. Bush -- helping Nader toward his goal of five percent of the popular vote, the threshold needed for the Green Party to obtain federal matching funds for the 2004 election.

→ ALSO
[Gore, Nader supporters agree to swap votes online](#)

Balch said Jones sent Web site managers Jim Cody and Ted Johnson a letter explaining that their swap site "is engaged in criminal activity in the state of California" through violations of state laws prohibiting the brokering of votes.

"The right to free and fair elections is a cornerstone of American democracy. Any person or entity that tries to exchange votes or brokers the exchange of votes will be pursued with the utmost vigor," Jones' letter said.

In a message on the site Tuesday, Cody and Johnson said they had turned their software off to comply with Jones' order. "At the time we set the Web site up we understood that what we were doing was legal," the message said.

Launched less than a week ago, the Los Angeles-based Web site claimed almost 5,000 traded votes. Along with their closing message, the site listed a number of other Web sites where people can go to trade their votes.

Afraid Napster is going to turn to dust, well maybe so but here are some links to make you happy.

NAPIGATOR	Allows you to use the napster client with offshore servers.
Server listing	Ahhh, all the servers you could ever want.
Shuban	Another client for going offshore
Offshoremp3s	A group trying to set up an offshore server for file sharing.

Afraid Napster is going to turn to dust, well maybe so but here are some links to make you happy.

<u>NAPIGATOR</u>	Allows you to use the napster client with offshore servers.
<u>Server listing</u>	Ahhh, all the servers you could ever want.
<u>Shuban</u>	Another client for going offshore
<u>Offshoremp3s</u>	A group trying to set up an offshore server for file sharing.

Sell your vote

Keyword: [activistic](#) + [strategic](#)

Sellthevote.com is a website that mediates contact between U.S voters who wish to sell their electoral votes and citizens in other countries who wish to buy them.

The concept is developed by Austrian art-activist [www.ubermorgen.com](#) who is known for a similar project in the past called Voteauction, which offered US citizens to sell their presidential vote to the highest bidder during the Presidential Elections 2000.

Back then, several US States issued temporary restraining orders or injunctions for alleged illegal vote trading. This led to the shutdown of 2 domains ([voteauction.com](#) and [vote-auction.com](#)).

In 2000, CNN asked the makers of Voteauction: "Why on earth are you europeans intervening in a U.S. election?", Voteauction replied: "Because the U.S. President has the power and the means to change the face of the world, so the world should have the democratic power to elect the U.S. President."

In 2004, this proposition became real with the website [www.sellthevote.com](#) and U.S. voters were now able to sell their votes to citizens of any country of the world wanting to democratically influence the U.S. presidential elections 2004, Kerry vs Bush.

• [sellthevote.com/](#)

Sell your vote

Dec 27, 2004. [activistic](#) + [strategic](#)

Sellthevote.com is a website that mediates contact between U.S voters who wish to sell their electoral votes and citizens in other countries who wish to buy them.

The concept is developed by Austrian art-activist www.ubermorgen.com who is known for a similar project in the past called Voteauction, which offered US citizens to sell their presidential vote to the highest bidder during the Presidential Elections 2000.

Back then, several US States issued temporary restraining orders or injunctions for alleged illegal vote trading. This led to the shutdown of 2 domains (voteauction.com and vote-auction.com).

In 2000, CNN asked the makers of Voteauction: "Why on earth are you europeans intervening in a U.S. election?", Voteauction replied: "Because the U.S. President has the power and the means to change the face of the world, so the world should have the democratic power to elect the U.S. President."

In 2004, this proposition became real with the website www.sellthevote.com and U.S. voters were now able to sell their votes to citizens of any country of the world wanting to democratically influence the U.S. presidential elections 2004, Kerry vs Bush.

Abstract. We introduce a model for electronic election schemes that involves a more powerful adversary than in previous work. In particular, we allow the adversary to demand of coerced voters that they vote in a particular manner, abstain from voting, or even disclose their secret keys. We define a scheme to be *coercion-resistant* if it is infeasible for the adversary to determine whether a coerced voter complies with the demands.

A first contribution of this paper is to describe and characterize a new and strengthened adversary for coercion in elections. (In doing so, we additionally present what we believe to be the first formal security definitions for electronic elections of *any* type.) A second contribution is to demonstrate a protocol that is secure against this adversary. While it is clear that a strengthening of attack models is of theoretical relevance, it is important to note that our results lie close to practicality. This is true both in that we model real-life threats (such as vote-buying and vote-cancelling), and in that our proposed protocol combines a fair degree of efficiency with an unusual lack of structural complexity. Furthermore, while previous schemes have required use of an untappable channel, ours only carries the much more practical requirement of an anonymous channel.

Key words: coercion-resistance, electronic voting, mix networks, receipt-freeness

1 Introduction

Most voters participating in shareholder elections in the United States have the option of casting ballots via a Web browser [1]. Some voters near Geneva participating in recent referenda in Switzerland in 2003-4 have been able to cast binding votes electronically [19]. The UK government has enunciated plans to allow its citizens to vote electronically “some time after 2006” [18]. These are just a few instances of a broadening trend toward Internet-based voting. While voting of this kind appears to encourage higher voter turnout [37] and make accurate accounting for votes easier, it also carries the potential of making abuse easier to perform, and easier to perform at a large scale. A number of papers in the cryptographic literature have described ways of achieving robust and verifiable *electronic* elections, i.e., elections in which ballots and processing data are posted to a publicly accessible bulletin board. For some recent examples (but not by any means an exhaustive list), see [8, 16, 21, 22, 27, 29, 33, 36, 39].

There are two other threats, however, that it is equally crucial to address in a fair and democratic election process: We speak of *voter coercion* and *vote buying*. Internet-based voting does not introduce these problems, but it does have the potential to exacerbate them by extending the reach and data collection abilities of an attacker. This is highlighted in one way by the presence of a notorious Web site that provides a forum for the auctioning of votes [2]. Seller compliance was in that case merely voluntary. Conventional Internet voting schemes, however, including those described in the literature, actually provide an attacker with ready-made tools for verifying voter behavior and thereby exerting influence or control over voters. Without careful system design, the threats of coercion and vote buying are potentially far more problematic in Internet voting schemes than in ordinary, physical voting schemes.

One commonly proposed way of achieving secure electronic voting systems is to use a cryptographic system known as a *mix network* [14]. This is a tool that enables a collection of servers to take as input a collection of ciphertexts and to output the corresponding plaintexts according to a secret permutation. A straightforward way

to achieve an election system that preserves the privacy of voters, then, is to assign a private digital signing key to each voter. To cast a ballot, the voter encrypts her choice and signs it, and then posts it to a bulletin board (i.e., a publicly accessible memory space). When all ballots have been collected and the corresponding signatures have been checked, the ciphertexts are passed through a mix network. The resulting plaintext versions of the voter choices may then be tallied. Thanks to the privacy preserving property of the mix network, an adversary cannot tell which vote was cast by which voter. This approach is frequently advocated in the mix-network literature, as in, e.g., [8, 14, 22, 27].

In an ordinary mix-based scheme of this kind, an adversary can coerce a voter straightforwardly. The adversary can simply furnish the voter with a ciphertext on a particular candidate, and then verify that the voter posted a ballot containing that ciphertext. Alternatively, the adversary can demand the private signing key of the voter and verify its correctness against the corresponding public key. An adversary attempting to buy votes can use the same means. Other types of cryptographic voting schemes, namely homomorphic schemes [5, 16] and schemes based on blind signatures [20, 36], suffer from similar vulnerabilities.

1.1 Previous work

Previous investigations of coercion-resistant voting have been confined to a property known as *receipt-freeness*. Roughly stated, receipt-freeness is the inability of a voter to prove to an attacker that she voted in a particular manner, even if the voter wishes to do so. For a more formal definition, see [36]. The property of receipt-freeness ensures that an attacker cannot determine exact voter behavior and therefore cannot coerce a voter by dictating her choice of candidate. It also protects against vote-buying by preventing a potential vote buyer from obtaining proof of the behavior of voters; voters can thereby *pretend* to sell their votes, but defraud the vote buyer. The notion of receipt-freeness first appeared in work by Benaloh and Tuinstra [5]; their scheme, based on homomorphic encryption, was shown in [25] not to possess receipt-freeness as postulated. An independent introduction of the idea appeared in Niemi and Renvall [34]. Okamoto [35] proposed a voting scheme which he himself later showed to lack the postulated receipt-freeness; a repaired version by the same author, making use of blind signatures, appears in [36]. Sako and Kilian [38] proposed a multi-authority scheme employing a mix network to conceal candidate choices, and a homomorphic encryption scheme for production of the final tally. The modelling of their scheme was clarified and refined by Michels and Horster [32]. The Sako and Kilian scheme served as a conceptual basis for the later work of Hirt and Sako [25], followed by the more efficient approach of [3]; these two are the most efficient (and correct) receipt-free voting schemes to date. A recently proposed scheme by Magkos *et al.* [31] distinguishes itself by an approach relying on tamper-resistant hardware, but is flawed.¹

All of these receipt-free voting schemes include somewhat impractical assumptions. For example, these schemes assume the availability of an *untappable channel* between the voter and the authorities, that is, a channel that provides perfect secrecy in an information-theoretic sense. (I.e., even encryption does not provide an untappable channel.) The scheme in [36] makes the even stronger assumption of an *anonymous* untappable channel. (It is also not very practical in that it requires voter interaction with the system three times in the course of an election.) Moreover, all of these schemes (excepting [36]) lose the property of coercion-resistance if the attacker is able to corrupt even one of the tallying authorities in a distributed setting. The scheme of Hirt and Sako still retains coercion-resistance when such corruption takes place, but only under the strong assumption that the voter knows *which* tallying authorities have been corrupted; the proposal of Baudron *et al.* has a similar property.

A still more serious problem with all of the receipt-free voting schemes described in the literature, however, is the fact that the property of receipt-freeness alone fails to protect an election system against several forms of serious, real-world attack, which we enumerate here:

¹ We are unaware of any mention of a break of this scheme in the literature, and therefore briefly describe one here. The Magkos *et al.* system employs an interactive honest-verifier ZK proof made by a smartcard to the voter. Presumably because of the simulability of this proof, the authors describe the proof as being “non-transferable”. This is not true. In particular, an adversary can stipulate that the voter engage in the proof using a challenge that the adversary has pre-selected. The proof then becomes transferable, yielding a means of receipt construction by the adversary. As noted in [25], this type of attack also explains why *deniable encryption* [13] does not solve the problem of coercion in a voting system.

Randomization attack: This attack was noted by Schoenmakers in 2000 [40]; he described its applicability to the scheme of Hirt and Sako. The idea is for an attacker to coerce a voter by requiring that she submit randomly composed balloting material. In this attack, the attacker (and perhaps even the voter) is unable to learn what candidate the voter cast a ballot for. The effect of the attack, however, is to nullify the choice of the voter with a large probability. For example, an attacker favoring the Republican party in a United States election would benefit from mounting a randomization attack against voters in a heavily Democratic district.

Forced-abstention attack: This is an attack related to the previous one based on randomization. In this case, the attacker coerces a voter by demanding that she refrain from voting. All of the schemes cited above are vulnerable to this simple attack. This is because the schemes authenticate voters directly in order to demonstrate that they are authorized to participate in the election. Thus, an attacker can see who has voted, and use this information to threaten and effectively bar voters from participation.²

Simulation attack: The receipt-free schemes described above assume that the attacker cannot coerce a voter by causing her to divulge her private keying material after the registration process but prior to the election process. Such an attack, however, is a real and viable one in previously proposed schemes, because these permit an attacker to verify the correctness of private keying material. For example, in [36], the voter provides a digital signature which, if correct, results in the authority furnishing a blind digital signature. In [25], the voter, when casting a ballot, proves knowledge of a private key relative to a publicly committed or published value. In general, receipt-freeness does not prevent an attacker from coercing voters into divulging private keys or buying private keys from voters and then *simulating* these voters at will, i.e., voting on their behalf.

1.2 Our contribution

Our contribution in this paper is twofold. First, we investigate a stronger and broader notion of coercive attacks than receipt-freeness. This notion, which we refer to as *coercion-resistance*, captures what we believe to be the fullest possible range of adversarial behavior in a real-world, Internet-based voting scheme. A coercion-resistant scheme offers not only receipt-freeness, but also defense against randomization, forced-abstention, and simulation attacks – all potentially in the face of corruption of a minority of tallying authorities. We propose a formal definition of coercion-freeness in the body of this paper. Two other properties are essential for any voting scheme, whether or not it is coercion-resistant. These are *correctness* and *verifiability*. As formal definitions for these properties are to the best of our knowledge lacking in the literature, we provide them as well in the paper appendix; we thus provide what we believe to be the first formal security framework for electronic elections in general.

To demonstrate the practical realizability of our definitions, we describe a voting scheme that possesses the strong property of coercion-resistance proposed in this paper – and also naturally possesses the properties of correctness and verifiability. Our scheme does not require untappable channels, but instead assumes voter access to an anonymous channel at some point during the voting process. Anonymous channels can be realized in a practical way by use of mixnets, e.g., [22, 33], while untappable channels require largely unrealistic physical assumptions. We note in fact that anonymous channels are in fact a minimal requirement for *any* coercion-resistant schemes: An attacker that can identify which voters have participated can obviously mount a forced-abstention attack. A drawback of our scheme is that, even with use of asymptotically efficient mix networks as in [22, 33], the overhead for tallying authorities is quadratic in the number of voters. Thus the scheme is only practical for small elections. Our hope and belief, however, is that our proposed scheme might serve as the basis for refinements with a higher degree of practical application. We provide a security proof for our proposed scheme in the paper appendix.

² An exception is the scheme in [36], which does not appear to be vulnerable to a forced-abstention attack. This is because the scheme seems to assume that the authority checks voter enrollment privately. In other words, the scheme does not permit public verification that participating voters are present on a published voter roll. This is potentially a problem in its own right.

1.3 Intuition behind our scheme

In a conventional voting scheme, and also in receipt-free schemes like [25], the voter V_i identifies herself at the time she casts her ballot. This may be accomplished by means of a digital signature on the ballot, or by an interactive authentication protocol. The key idea behind our scheme is for the identity of a voter to remain hidden during the election process, and for the validity of ballots instead to be checked blindly against a voter roll. When casting a ballot, a voter incorporates a concealed credential. This takes the form of a ciphertext on a secret value σ that is unique to the voter. The secret σ is a kind of *anonymous credential*, quite similar in spirit to, e.g., [9, 10]. To ensure that ballots are cast by legitimate voters, the tallying authority \mathcal{T} performs a blind comparison between hidden credentials and a list L of encrypted credentials published by an election registrar \mathcal{R} alongside the plaintext names of registered voters.

By means of mixing and blind comparison of ciphertext values, it is possible to check whether a concealed credential is in the list L or not, without revealing which voter the credential has been assigned to. In consequence, an attacker who is given a fake credential $\tilde{\sigma}$ by a coerced voter cannot tell whether or not the credential is valid. (The attacker will learn how many ballots were posted with bad credentials. Provided, however, that some spurious ones are injected by honest players, authorities, or even outsiders, the individuals associated with bad ballots will remain concealed.) Moreover, the attacker cannot mount randomization or forced-abstention attacks, since there is no feasible way to determine whether an individual voter has posted a ballot or not. In particular, after divulging fake credential $\tilde{\sigma}$, a voter can go and vote again using her real credential σ .

1.4 Organization

In section 2, we describe our setup and attack models and sketch a few of the major adversarial strategies. We provide formal definitions for the security property of coercion-resistance in section 3. We describe the particulars of our proposed scheme in section 4, prefaced by a summary of the underlying cryptographic building blocks. In the appendices to the paper, we offer formal definitions for the correctness and verifiability of election schemes, a detailed security-proof outline, and details on our choice of primitives for realizing our proposed scheme.

2 Modelling

An election system consists of several sets of entities:

1. *Registrars*: Denoted by $\mathcal{R} = \{R_1, R_2, \dots, R_{n_R}\}$, this is a set of n_R entities responsible for jointly issuing keying material, i.e., credentials to voters.
2. *Authorities (Talliers)*: Denoted by $\mathcal{T} = \{T_1, T_2, \dots, T_{n_T}\}$, authorities are responsible for processing ballots and jointly counting votes and publishing a final tally.
3. *Voters*: The set of n_V voters, denoted by $\mathcal{V} = \{V_1, V_2, \dots, V_{n_V}\}$, are the entities participating in a given election administered by \mathcal{R} . We let i be a public identifier for V_i .

We make use of a *bulletin board*, denoted by \mathcal{BB} . This is a piece of universally accessible memory to which all players have appendive-write access. In other words, any player can write data to \mathcal{BB} , but cannot overwrite or erase existing data. Moreover, voters will be able to read the contents of \mathcal{BB} once the vote casting phase has ended. For notational convenience, we assume that data are written to \mathcal{BB} in μ -bit blocks for an appropriate choice of μ . Shorter data segments may be padded appropriately. For simplicity of exposition, we assume no ordering on the contents of \mathcal{BB} .

2.1 Functions

We define a *candidate slate* C to be an ordered set of n_C distinct identifiers $\{c_1, c_2, \dots, c_{n_C}\}$, each of which corresponds to a voter choice, typically a candidate or party name. In an election, choice c_j may be identified according to its index j . Thus, for cryptographic purposes the candidate slate consists of the integers $\{1, 2, \dots, n_C\}$

and may be specified by n_C alone. We define a *tally* on an election under slate C to be a vector \mathbf{X} of n_C positive integers x_1, x_2, \dots, x_{n_C} such that x_j indicates the number of votes cast for choice c_j . The protocols composing an election system are then as follows:

- **Registering:** The function $\text{register}(SK_{\mathcal{R}}, i, k_1) \rightarrow (sk_i, pk_i)$ takes as input the private registrar key $SK_{\mathcal{R}}$, a (voter) identifier i and a security parameter k_1 , and outputs a key pair (sk_i, pk_i) . This is computed jointly by players in \mathcal{R} , possibly in interaction with voter V_i .
- **Voting:** The function $\text{vote}(sk, PK_{\mathcal{T}}, n_C, \beta, k_2) \rightarrow \text{ballot}$ takes as input a private voting key, the public key of the authorities \mathcal{T} , the candidate-slate specification n_C , a candidate selection β , and a security parameter k_2 , and yields a ballot of bit length at most μ . The form of the ballot will vary depending on the design of the election system, but is in essence a digitally signed vote choice encrypted under $PK_{\mathcal{T}}$.
- **Tallying:** The function $\text{tally}(SK_{\mathcal{T}}, \mathcal{BB}, n_C, \{pk_i\}_{i=1}^{n_V}, k_3) \rightarrow (\mathbf{X}, P)$ takes as input the private key of the authority \mathcal{T} , the full contents of the bulletin board, the candidate-slate size, all public voting keys, and a security parameter k_3 and outputs a vote tally \mathbf{X} , along with a non-interactive proof P that the tally was correctly computed.
- **Verifying:** The function $\text{verify}(PK_{\mathcal{T}}, \mathcal{BB}, n_C, \mathbf{X}, P) \rightarrow \{0, 1\}$ takes as input the public key of the authorities, the contents of the bulletin board, the candidate-slate size, the voting tally, and a non-interactive proof of correct tallying. It outputs a ‘0’ if the tally is incorrect and a ‘1’ otherwise. (We characterize the behavior of verify more formally in the paper appendix.)

We define an election scheme ES as the collection of these functions. Thus $\text{ES} = \{\text{register}, \text{vote}, \text{tally}, \text{verify}\}$.

Remark: There are many election models in use throughout the world. The model we propose here excludes important variants. In some systems, for example, voters are asked to rank candidate choices, rather than just listing those they favor. Many systems permit the use of *write-in* votes, i.e., the casting of a ballot in favor of a candidate not listed on the slate for the election. We exclude write-in voting from our model because it undermines the possibility of coercion resistance in any scheme where an observer can see a complete election tally including write-in votes. An attacker may, for example, require coerced voters to cast write-in ballots for candidate names consisting of random strings pre-specified by the attacker. This way, the attacker can: (1) Verify that coerced voters complied with instructions, by looking for the random strings the attacker furnished, and (2) Ensure that the votes of coerced voters are not counted, since random strings will most likely not correspond to real election choices. (Thus, this would combine the forced abstention attack and the randomization attack.)

2.2 Summary of the attack model

We consider the process for a single election as proceeding in these phases, corresponding largely with the functions enumerated in section 2.1:

1. **Setup:** If not already available, key pairs are generated for or by \mathcal{R} and \mathcal{T} . The candidate slate C for the election is published by \mathcal{R} with appropriate integrity protection.
2. **Registration:** The identities and eligibility of would-be participants in the election are verified by \mathcal{R} . Given successful verification, an individual becomes a registered voter, receiving from \mathcal{R} a credential permitting participation in the election. Previously registered voters may be able to re-use their credentials. \mathcal{R} publishes a voter roll L .
3. **Voting:** Referring to the candidate slate C , registered voters use their credentials to cast ballots.
4. **Tallying:** The authority \mathcal{T} processes the contents of the bulletin board \mathcal{BB} so as to produce a tally vector \mathbf{X} specifying the outcome of the election, along with a proof of correctness P of the tally.
5. **Verification:** Any player, whether or not a participant in the election, can refer to \mathcal{BB} , P and L to verify the correctness of the tally produced by \mathcal{T} in the previous phase.

Assumptions in setup phase: Our security definitions permit the possibility of static, active corruption by the adversary of a minority of players in \mathcal{R} and \mathcal{T} in the setup phase. The security of our construction then relies on generation of the key pairs $(SK_{\mathcal{T}}, PK_{\mathcal{T}})$ and $(SK_{\mathcal{R}}, PK_{\mathcal{R}})$ by a trusted third party, or, alternatively, on an interactive, computationally secure key-generation protocol such as [24] between the players in \mathcal{R} and those in \mathcal{T} .

Assumptions prior to registration: The adversary may coerce a voter prior to the registration phase in the sense of requesting in advance that the voter retain transcripts of the registration process, or by providing data in an attempt to dictate voter interaction with the registrar.

Assumptions in registration phase: We make the assumption that the registration phase proceeds without any corruption of voters. This assumption is at some level a requirement for a coercion-free election, as an attacker capable of corrupting and seizing the credentials of a voter in this initial phase can mount a simulation attack. More precisely, we must make *at least one* of three assumptions about the registration phase:

1. Erasure of data from voter interaction with \mathcal{R} is compulsory by the voter (e.g., enforced by smartcards provided to voters). This prevents an attacker from requesting registration transcript data after the fact; or
2. The adversary cannot corrupt any players in \mathcal{R} ; or
3. Voters become aware of the identity of any corrupted player in \mathcal{R} .

The reason we require at least one of these assumptions is as follows. If none of these assumptions holds, then the adversary can, on demanding information from a voter, verify the correctness of some portion thereof, where the voter would not know what portion is being checked. In other words, the adversary can perform spot checks, with a high probability of successfully detecting false transcripts. In consequence, the adversary can coerce voters into divulging full transcripts of their interactions with \mathcal{R} , thereby enabling a simulation attack. In contrast, if at least one of the assumptions holds, we show that it is possible to formulate a protocol that is coercion-resistant.

Assumptions on voting, tallying and verification phases: Subsequent to the registration phase, we assume that the adversary may seize control of a minority of players in \mathcal{T} and any number of voters in a static, active manner. (Since \mathcal{R} does not participate in the process subsequent to registration, we need not consider adversarial corruption of \mathcal{R} at this point.) The adversary may also attempt to coerce voters outside its control by requesting that they divulge private keying material³ or behave in a prescribed manner in voting. Voters are assumed to be able to cast their ballots via fully anonymous channels, i.e., channels such that an attacker cannot determine whether or not a given voter cast a ballot. This assumption is a requirement for any election scheme to be fully coercion-resistant: If an attacker can tell whether or not a given voter cast a ballot, then the attacker can easily mount a forced-abstention attack. In practice, an anonymous channel may be achieved by enabling voters to cast ballots in public places, thereby mixing their votes with others, or by use of anonymizing, asynchronous mix-networks, and so forth.

3 Formal definitions

We now turn our attention to formal security definitions of the essential properties of *correctness*, *verifiability*, and *coercion-resistance*, respectively abbreviated *corr*, *ver*, and *c-resist*. Our definitions hinge on a set of experiments involving an adversary \mathcal{A} in interaction with components of the election system ES. This adversary is assumed to retain state throughout the duration of an experiment. We formulate our experiments such that in all cases, the aim of the adversary is to cause an output value of ‘1’. Thus, for experiment $\mathbf{Exp}_{\text{ES},\mathcal{A}}^E(\cdot)$ on property $E \in (\text{ver}, \text{corr}, \text{c-resist})$, we define $\mathbf{Succ}_{\text{ES},\mathcal{A}}^E(\cdot) = \Pr[\mathbf{Exp}_{\text{ES},\mathcal{A}}^E(\cdot) = \text{‘1’}]$.

³ We assume that the coercion takes place remotely. For example, the adversary may not continuously watch over the shoulder of a voter, monitor her hard-drive, etc. Our proposed protocol does potentially defend against some shoulder-surfing, however, by permitting voters to use fake keys and/or re-vote.

According to the standard definition, we say that a quantity $f(k)$ is *negligible* in k if for every positive integer c there is some l_c such that $f(k) < k^{-c}$ for $k > l_c$. In most cases, we use the term negligible alone to mean negligible with respect to the full set of relevant security parameters. Similarly, in saying that an algorithm has *polynomial running time*, we mean that its running time is asymptotically bounded by some polynomial in the relevant security parameters. As the properties of correctness and verifiability are of less relevance to our work than coercion-resistance, we relegate the first two definitions to appendices A and B.

Coercion resistance: Coercion resistance may be regarded as an extension of the basic property of privacy. Privacy in an election system is defined in terms of an adversary that cannot interact with voters during the election process. In particular, we say that an election is private if such an adversary cannot guess the vote of any voter better than an adversarial algorithm whose only input is the election tally. (Note, for example, in an election where all voters vote Republican, the system may have the property of privacy, even though the adversary knows how all voters cast their ballots in that election.)

Coercion resistance is a strong form of privacy in which it is assumed that the adversary may interact with voters. In particular, the adversary may instruct targeted voters to divulge their private keys subsequent to registration, or may specify that these voters cast ballots of a particular form. If the adversary can determine whether or not voters behaved as instructed, then the adversary is capable of blackmail or otherwise exercising undue influence over the election process. Hence a coercion-resistant voting system is one in which the user can deceive the adversary into thinking that she has behaved as instructed, when the voter has in fact cast a ballot according to her own intentions.

Our definition of coercion resistance requires addition of a new function to voting system ES:

- The function $\text{fakekey}(PK_{\mathcal{T}}, sk, pk) \rightarrow \tilde{sk}$ takes as input the public key of the authorities, and the private/public key pair of the voter. It outputs a spurious key \tilde{sk} .

Of course, for the function fakekey to enable coercion resistance, the key \tilde{sk} must be indistinguishable by the adversary \mathcal{A} from a valid key, and only distinguishable by a majority of talliers \mathcal{T} . This property is captured in our experiment characterizing coercion resistance. To simplify the formulation of the experiment, we assume implicitly that tally is computed by an oracle (with knowledge of $SK_{\mathcal{T}}$). It suffices, however, for \mathcal{T} to be computed via a protocol that achieves correct output and is computationally simulable by the adversary \mathcal{A} (who, it will be recalled, may corrupt a minority of \mathcal{T}).

Our definition of coercion resistance centers on a kind of game between the adversary \mathcal{A} and a voter targeted by the adversary for coercive attack. A coin is flipped; the outcome is represented by a bit b . If $b = 0$, then the voter casts a ballot with a particular choice β , and provides the adversary with a false voting key \tilde{sk} ; in other words, the voter attempts to evade adversarial coercion. If $b = 1$, on the other hand, then the voter submits to the coercion of the adversary; she simply furnishes the adversary with her valid voting key sk , and does not cast a ballot. The task of the adversary is to guess the value of the coin b , that is, to determine whether or not the targeted voter in fact cast a ballot. We permit the adversary in this definitional game to specify the ballot value β . While it is somewhat unnatural for the adversary thus to specify the intention of the voter, this permits us to achieve the strongest possible security definition.

If the adversary has perfect knowledge about the intentions of all voters, then coercion is unavoidable. For example, if the adversary is attempting to coerce one voter in a given election and knows that all hundred of the other eligible voters will cast ballots, then the adversary can mount an abstention attack straightforwardly. The adversary in this case simply threatens the voter in the case that the total tally for the election is one hundred and one. Similarly, suppose that the adversary does not know whether or not any given voter will cast a ballot, but knows that all participating voters will cast a ballot for the Republican party. In this case, the adversary can win the game we describe above by specifying a ballot value $\beta = \text{“Democrat”}$.

It is evident therefore that for any definition of coercion-resistance to be meaningful, the adversary must have uncertain knowledge about how – and indeed whether – some voters will cast their ballots. In other words, coercion-resistance requires that there be some “noise” or statistical uncertainty in the adversary’s view of voting

patterns. To our benefit, it is natural to expect that in a real-world election an adversary can obtain only fragmentary knowledge about the likely behavior of voters. This means that coercion-resistance is a viable possibility.⁴ For a collection of n voters outside the control of the adversary – i.e., voters not subject to coercion – we characterize the view of the adversary in terms of a probability distribution D_{n,n_C} . We let ϕ be a symbol denoting a null ballot, i.e., an abstention, and let λ denote a ballot cast with an invalid credential. Then D_{n,n_C} is a distribution over vectors $(\beta_1, \beta_2, \dots, \beta_n) \in (n_C \cup \phi \cup \lambda)^n$, i.e., over the set of possible ballot choices for an election plus abstentions and invalid ballots. Thus, the distribution D_{n,n_C} serves the purpose in our experiment of defining the distribution of the “noise” that conceals the behavior of voters targeted by the adversary for coercion. For a set of n voting credentials $\{sk_i\}$, we let $\text{vote}(\{sk_i\}, PK_{\mathcal{T}}, n_C, D_{n,n_C}, k_2)$ denote the casting of ballots according to distribution D_{n,n_C} . In other words, a vector $(\beta_1, \beta_2, \dots, \beta_n)$ is drawn from D_{n,n_C} and vote β_i is cast using credential sk_i .

We are now ready to present an experiment *c-resist* that defines the game described above between an adversary and a voter targeted for coercion. Recall that k_1, k_2 , and k_3 are security parameters defined above, n_V is the total number of eligible voters for the election, and n_C is the number of candidates, i.e., the size of the candidate slate. We let n_A denote the number of voters that may be completely controlled, i.e., corrupted by the adversary. We define $n_U = n_V - n_A - 1$. In other words, the number of uncertain votes n_U equals the total number of possible votes, minus those coming from voters controlled by the attacker, minus the vote coming from the voter the attacker is trying to coerce (in the experiment). Note that n_U is therefore the number of voters that contribute “noise” to the experiment.

We consider a static adversary, i.e., one that selects voters to corrupt prior to protocol execution. We assume that the adversary has a list of “voter names,” i.e., a roll of potential participating voters.

We let \leftarrow denote assignment and \Leftarrow denote the append operation, while $\%$ denotes the beginning of an annotative comment on the experiment. Our experiment treats the case in which the adversary seeks to coerce a single voter; extension of the definition to coercion of multiple voters is straightforward. The experiments defined here halt when an output value is produced.

⁴ Additionally, it is possible for voting authorities – or indeed any entity – intentionally to inject “chaff” in the form of blank and invalid ballots into an election system.

Experiment $\text{Exp}_{\text{ES}, \mathcal{A}, H}^{c\text{-resist}}(k_1, k_2, k_3, n_V, n_A, n_C)$

```

 $V \leftarrow \mathcal{A}(\text{voter names, "control voters"});$  %  $\mathcal{A}$  corrupts voters
 $\{(sk_i, pk_i) \leftarrow \text{register}(SK_{\mathcal{R}}, i, k_2)\}_{i=1}^{n_V};$  % voters are registered
 $(j, \beta) \leftarrow \mathcal{A}(\{sk_i\}_{i \in V}, \text{"set target voter and vote"});$  %  $\mathcal{A}$  sets coercive target
if  $|V| \neq n_A$  or  $j \notin \{1, 2, \dots, n_V\} - V$  or
 $\beta \notin \{1, 2, \dots, n_C\} \cup \phi$  then % outputs of  $\mathcal{A}$  checked for validity
    output '0';
 $b \in_U \{0, 1\};$  % coin is flipped
if  $b = 0$  then % voter evades coercion
     $\tilde{sk} \leftarrow \text{fakekey}(PK_{\mathcal{T}}, sk_j, pk_j);$ 
     $\mathcal{BB} \leftarrow \text{vote}(sk_j, PK_{\mathcal{T}}, n_C, \beta, k_2);$ 
else % voter submits to coercion
     $\tilde{sk} \leftarrow sk_j;$ 
 $\mathcal{BB} \leftarrow \text{vote}(\{sk_i\}_{i \neq j, i \notin V}, PK_{\mathcal{T}}, n_C, D_{n_U, n_C}, k_2);$  % ballots posted for honest voters
 $\mathcal{BB} \leftarrow \mathcal{A}(\tilde{sk}, \mathcal{BB}, \text{"cast ballots"});$  %  $\mathcal{A}$  posts to  $\mathcal{BB}$ 
 $(\mathbf{X}, P) \leftarrow \text{tally}(SK_{\mathcal{T}}, \mathcal{BB}, n_C, \{pk_i\}_{i=1}^{n_V}, k_3);$  % election results are tallied
 $b' \leftarrow \mathcal{A}(\mathbf{X}, P, \text{"guess } b\text{"});$  %  $\mathcal{A}$  guesses coin flip
if  $b' = b$  then % experimental output determined
    output '1';
else
    output '0';

```

The adversary \mathcal{A} in the above experiment is quite powerful, being capable (when $b = 1$) of complete coercion of the targeted voter. In order to characterize the success of \mathcal{A} , we must compare \mathcal{A} with a second adversary \mathcal{A}' . \mathcal{A}' is capable of coercion only within the framework of an ideal voting experiment *c-resist-ideal*. In other words, \mathcal{A}' characterizes the type of security against coercion that we would like to achieve in ES.

The main feature we are aiming for in our ideal experiment *c-resist-ideal* is for \mathcal{A}' to learn nothing from the private keys she acquires from corrupted players and from the coerced player. In particular, \mathcal{A}' cannot use private keys to perform active attacks. We cause \mathcal{A}' to express voting choices in a direct, ideal process; \mathcal{A}' cannot cast ballots, but merely enumerates the choices of players in her control. Additionally, \mathcal{A} cannot use private keys to learn information about the voting behavior of honest players or the coerced player. The *only* information that \mathcal{A}' gets is the grand total \mathcal{X} of votes in the election.

One feature of our experiment is counterintuitive. Because this is an ideal experiment, \mathcal{A}' is *always* given \tilde{sk} as the key of the coerced player. This is because \mathcal{A}' should be unable to determine, on the basis of keying material, from the situation in which coercion is successful or unsuccessful.

We require a function for the definition. We include here an ideal function *ideal-tally* that tallies the ballots posted to \mathcal{BB} in a special way. *ideal-tally* tallies in a normal manner all of the ballots cast by honest voters, i.e., prior to adversarial posting. The ballots cast by \mathcal{A}' , however, are treated specially. In particular, the function *ideal-tally* determines for each ballot B what the underlying private key sk_i is. If $i \notin V$, i.e., if the private key is not one assigned to one of the corrupted players, then the corresponding vote is not counted. Additionally, any double vote is not counted, i.e., *ideal-tally* performs the weeding of double votes that normally occurs during the tallying procedure. Finally, *ideal-tally* does the following based on the value of the secret bit b . If $b = 0$, then *ideal-tally* does not count any ballot cast (by the adversary) using private key \tilde{sk} . If $b = 1$, then *ideal-tally* does include in the final tally a ballot cast using \tilde{sk} (excluding double votes).

Our definition of *ideal-tally* here assumes that every ballot has a unique corresponding private key. This is true of most natural ballot structures (and true of our proposed scheme). This definition, of course, also assumes ideal functionality in *ideal-tally*, namely the ability to extract private keys and plaintext votes from ballots. We do not specify in our definition how this “oracle” power is achieved. In our proofs, we construct a simulator capable of performing this functionality required from *ideal-tally*.

Note that although \mathcal{A}' learns the secret keys of voters, in our ideal experiment these secret keys in fact provide \mathcal{A}' with no information useful in voting – the ideal function `ideal-tally` ensures against misuse of keys – and no information useful in learning votes – because \mathcal{A}' never sees \mathcal{BB} .

We are now ready to present the experiment *c-resist-ideal* that characterizes the success of \mathcal{A}' .

Experiment $\text{Exp}_{\text{ES},\mathcal{A},H}^{c\text{-resist-ideal}}(k_1, k_2, k_3, n_V, n_A, n_C)$

```

 $V \leftarrow \mathcal{A}'$  (voter names, “control voters”);           %  $\mathcal{A}'$  corrupts voters
 $\{(sk_i, pk_i) \leftarrow \text{register}(SK_{\mathcal{R}}, i, k_2)\}_{i=1}^{n_V}$ ;   % voters are registered
 $(j, \beta) \leftarrow \mathcal{A}'$  (“set target voter and vote”);     %  $\mathcal{A}'$  sets coercive target
if  $|V| \neq n_A$  or  $j \notin \{1, 2, \dots, n_V\} - V$  or
   $\beta \notin \{1, 2, \dots, n_C\} \cup \phi$  then                % outputs of  $\mathcal{A}'$  checked for validity
  output ‘0’;
 $b \in_U \{0, 1\}$ ;                                           % coin is flipped
if  $b = 0$  then                                              % voter evades coercion
   $\mathcal{BB} \leftarrow \text{vote}(sk_j, PK_{\mathcal{T}}, n_C, \beta, k_2)$ ;
 $\tilde{sk} \leftarrow sk_j$ ;
 $\mathcal{BB} \leftarrow \text{vote}(\{sk_i\}_{i \neq j, i \in V}, PK_{\mathcal{T}}, n_C, D_{n_U, n_C}, k_2)$ ; % ballots posted for honest voters
 $\mathcal{BB} \leftarrow \mathcal{A}'(\tilde{sk}, \{sk_i\}_{i \in V}, \text{“cast ballots”})$ ; %  $\mathcal{A}'$  specifies vote choices
 $(\mathbf{X}, P) \leftarrow \text{ideal-tally}(SK_{\mathcal{T}}, \mathcal{BB}, n_C, \{pk_i\}_{i=1}^{n_V}, k_3)$ ; % election results are tallied
 $b' \leftarrow \mathcal{A}(\mathbf{X}, \text{“guess } b\text{”})$ ;                       %  $\mathcal{A}'$  guesses coin flip
if  $b' = b$  then                                           % experimental output determined
  output ‘1’;
else
  output ‘0’;

```

4 A Coercion-Resistant Election Protocol

We are now ready to introduce our protocol proposal. We begin by describing the cryptographic building blocks we employ. Where appropriate, we model these as ideal primitives, as discussed in appendix D.

Threshold cryptosystem with re-encryption: Our first building block is a threshold public-key cryptosystem CS that permits re-encryption of ciphertexts with knowledge only of public parameters and keys. The private key for CS is held by \mathcal{T} in our construction.

To describe our aim in the ideal, we would like any ciphertext E to be perfectly hiding. We would like decryption to be possible only by having a majority of players in \mathcal{T} agree on a ciphertext to be decrypted. We model this latter ideal property as in terms of a special decryption oracle denoted by \tilde{DEC} . We assume further that any decryption performed by \tilde{DEC} is publicly verifiable.

Selected cryptosystem: El Gamal [23] represents a natural choice of cryptosystem for our purposes, and is our focus in this paper. For reasons that will become apparent later on we will adopt a modified version of the basic El-Gamal scheme which can be seen as a simplified version of the well known Cramer-Shoup [17] cryptosystem (only providing semantic security with respect to a passive adversary). We let \mathcal{G} denote the algebraic group over which we employ this modified El Gamal (which we’ll call simply M-El Gamal), and q denote the group order. For semantic security, we require that the Decision Diffie-Hellman assumption hold over \mathcal{G} [7, 41]. The public key is (g_1, g_2, h) where g_1, g_2, h are elements in \mathcal{G} . The secret key is $x \in \mathbb{Z}_q$ such that $h = g_1^x$.

To encrypt m one simply computes $(g_1^r, g_2^r, h^r m)$ for random r . Decryption is like plain El Gamal (one uses term g_1^r only).

We let \in_U here and elsewhere denote uniform, random selection from a set. A ciphertext in M-El Gamal on message $m \in \mathcal{G}$ takes the form $(\alpha, \beta, \gamma) = (mh^r, g_1^r, g_2^r)$ for $r \in_U \mathbb{Z}_q$. For succinctness of notation, we sometimes let $E_h[m]$ denote a ciphertext on message m under public key h (assuming that g_1 and g_2 are considered public parameters).

Further details on the security of the scheme may be found in appendix E. An important feature of the M-El Gamal cryptosystem is that, exactly as the original version, it may be easily implemented in a threshold setting. In other words, the private key x may be distributed such that decryption can be performed by any quorum of share holders, without leakage of additional information. We exploit this distributed form of M-El Gamal in our proposed election scheme. As explained above, rather than focusing on a particular embodiment, we model the process by a decryption oracle denoted by \tilde{DEC} . We refer the reader to appendix E and to [12] for further discussion of threshold decryption in (plain) El Gamal.

Plaintext Equivalence Test (PET): A *plaintext equivalence test* (PET) [26, 30] is cryptographic primitive that operates on ciphertexts in a threshold cryptosystem. The input to PET is a pair of ciphertexts; the output is a single bit indicating whether the corresponding plaintexts are equal or not. PET may be realized as an efficient distributed protocol that reveals no additional, non-negligible information about plaintexts. For a detailed description of efficient methods to perform this verification, along with proofs of the properties of the construction, see [30]. Rather than focusing on a specific embodiment of PET, we model the ideal properties of the primitive by means of an oracle denoted by \tilde{PET} , and with the property of public verifiability.

Mix network: A (re-encryption) mix network (MN) is a distributed protocol that takes as input an ordered set $\mathbf{E} = \{E_1, E_2, \dots, E_d\}$ of ciphertexts generated in a cryptosystem like El Gamal that permits re-encryption. The output of MN is an ordered set $\mathbf{E}' = \{E'_{\pi(1)}, E'_{\pi(2)}, \dots, E'_{\pi(d)}\}$. Here, $E'_{\pi(i)}$ is a re-encryption of E_i , while π is a uniformly random, secret permutation. This is to say that MN randomly and secretly permutes and re-encrypts inputs. Thus, the special privacy property of a mix network is this: An adversary cannot determine which output ciphertext corresponds to which input ciphertext, i.e., which inputs and outputs have common plaintexts. Stated another way, an adversary cannot determine $\pi(j)$ for any j with probability non-negligibly better than a random guess. A number of mix network constructions have been proposed that offer privacy and robustness against a static, active adversary capable of corrupting any minority of the n players (servers) performing the mix network operation. Some of these constructions offer the additional property of *verifiability*. In other words, a proof is output that is checkable by any party and demonstrates, relative to \mathbf{E} and the public key of the ciphertexts that \mathbf{E}' is correctly constructed. It is convenient to conceptualize MN as an ideal primitive in terms of an oracle \tilde{MN} for MN with the property of public verifiability.

There are many good choices of mix networks for our scheme; some examples of such schemes are those of Furukawa and Sako [22] and Neff [33]. For further details, see appendix E.

Proofs of knowledge: As sketched in the above descriptions, we make use of NIZK (non-interactive zero-knowledge) proofs of knowledge [6] in a number of places. We do not describe these tools in detail, as they are standard tools in the cryptographic literature. Instead, we refer the reader to, e.g. [15], for discussion of construction and logical composition of such protocols, and [11] for a notational overview and discussion of efficient realization. As is the usual case, our use of NIZK proofs enforces a reliance on the random oracle model in the security proofs for our scheme [4].

4.1 Our proposed protocol

Setup: The key pairs $(SK_{\mathcal{R}}, PK_{\mathcal{R}})$ and $(SK_{\mathcal{T}}, PK_{\mathcal{T}})$ are generated (in an appropriately trustworthy manner, as described above), and $PK_{\mathcal{T}}$ and $PK_{\mathcal{R}}$ are published along with all system parameters.

Registration: Upon sufficient proof of eligibility from V_i , the registrar \mathcal{R} generates and transmits to V_i a random string $\sigma_i \in_U \mathcal{G}$ that serves as the credential of the voter. Such credentials can be generated in a distributed threshold manner (as in [24]), with each active server of \mathcal{R} sending the voter V_i its credential. \mathcal{R} then adds $S_i = E_{PK_{\mathcal{T}}}[\sigma_i]$ to the voter roll L .⁵ The voter roll L is maintained on the bulletin board \mathcal{BB} and digitally signed as appropriate by \mathcal{R} .

We assume that the majority of players in \mathcal{R} are honest, and can thus ensure that the \mathcal{R} provides V_i with a correct credential. Nonetheless, it is possible for \mathcal{R} to furnish V_i with a proof that S_i is a ciphertext on σ_i . To enforce coercion-resistance in the case where erasure of secrets by voters is not automatic, a *designated verifier proof* [28] must be employed for this proof. We note that credentials may be used for multiple elections.

Candidate-slate publication: \mathcal{R} or some other appropriate authority publishes a candidate slate C containing the names and unique identifiers in \mathcal{G} for n_C candidates, with appropriate integrity protection. This authority also publishes a unique, random election identifier ϵ .

Voting: Voter V_i casts a ballot for candidate c_j comprising M-El Gamal ciphertexts $(E_1^{(i)}, E_2^{(i)})$ respectively on choice c_j and credential σ_i . In particular, for $a_1, a_2 \in_U Z_q$:

$$E_1^{(i)} = (\alpha_1, \alpha'_1, \beta_1) = (g_1^{a_1}, g_2^{a_1}, c_j h^{a_1}), E_2^{(i)} = (\alpha_2, \alpha'_2, \beta_2) = (g_1^{a_2}, g_2^{a_2}, \sigma_i h^{a_2}).$$

The first is a ciphertext on the candidate choice of the voter, the second a ciphertext on the credential of the voter.

Additionally, V_i includes NIZK proofs of knowledge of σ_i and c_j , a NIZK that α_i, α'_i have the same discrete logarithm with respect to basis g_1 and g_2 and also a NIZK proof that $c_j \in C$, i.e., that c_j represents a valid candidate choice. The latter can be accomplished, for example, using a disjunctive proof that the ciphertext constitutes a valid encryption of a candidate choice in C . These three NIZK proofs, which we denote collectively by Pf , may be accomplished efficiently using standard techniques. As is standard practice, the challenge values for Pf are constructed using a call to a cryptographic hash function, modeled in our security analysis by a random oracle \tilde{OW} . Input to \tilde{OW} for these challenge values includes ϵ, E_1, E_2 and commitment values required for realization of the NIZK proofs. V_i posts $B_i = (E_1, E_2, Pf)$ to \mathcal{BB} via an anonymous channel.

Tallying: To tally the ballots posted to \mathcal{BB} , the authority \mathcal{T} performs the following steps:

1. **Checking proofs:** \mathcal{T} verifies the correctness of all proofs on \mathcal{BB} . Any ballots with invalid proofs are discarded. For the valid, remaining ballots, let A_1 denote the list of ciphertexts on candidate choices (i.e., the E_1 ciphertexts), and let B_1 denote the list of ciphertexts on credentials (i.e., the E_2 ciphertexts).
2. **Eliminating duplicates:** The tallying authority \mathcal{T} performs pairwise PETs on all ciphertexts in B_1 , and removes duplicates according to some pre-determined policy, using e.g., order of postings to \mathcal{BB} . When an element is removed from B_1 , the corresponding element (i.e., that with the same index) is removed from A_1 . We let B'_1 and A'_1 be the resulting “weeded” vectors. This is equivalent to retaining at most one ballot per given credential.
3. **Mixing:** \mathcal{T} applies MN to A'_1 and B'_1 (using the same, secret permutation for both). Let A_2 and B_2 be the resulting lists of ciphertexts.
4. **Checking credentials:** \mathcal{T} applies mix network MN to the encrypted list L of credentials from the voter roll. \mathcal{T} then compares each ciphertext of B_2 to the ciphertexts of L using PET. \mathcal{T} retains a vector A_3 of all ciphertexts of A_2 for which the corresponding elements of B_2 match an element of L according to PET. This step achieves the weeding of ballots based on invalid voter credentials.
5. **Tallying:** \mathcal{T} decrypts all ciphertexts in A_3 and tallies the final result.

⁵ In our definitions above, we use the common terminology of private and public keys – with corresponding notation sk_i and pk_i – to describe the credentials associated with voters. Shifting from a general exposition to our specific protocol, we now use σ_i instead of sk_i to denote a voter credential, and S_i instead of pk_i to denote a public representation thereof. This change of notation aims to reflect the fact that voters do not employ a conventional form of public-key authentication in our scheme.

How to cheat a coercer: One possible implementation of the function `fakekey` is simply for the coerced voter V_i to select and reveal a random group element $\tilde{\sigma}_i$, claiming that this is the credential σ_i . (If coerced multiple times – whether for one or more elections – the voter V_i would, of course, release the same value $\tilde{\sigma}_i$.) In addition, partial or full transcripts from the registration phase may be given to the adversary. We discuss the process of faking voting keys in more detail in appendix C.

We offer further discussion of security and a formal security proof in appendix D.

A Definitions of Correctness and Verifiability

Correctness: We first consider the property of correctness. This property is in fact twofold: First, it stipulates that an adversary \mathcal{A} cannot pre-empt, alter, or cancel the votes of honest, i.e., voters that are not *controlled*; Second, it stipulates that \mathcal{A} cannot cause voters to cast ballots in such a way as to achieve double voting, i.e., use of one credential to vote multiple times, where more than one vote per credential is counted in the tally.

In our experiment characterizing correctness, we give the adversary powers she does not normally have. Namely, apart from getting to select a set V of voters she will control, we also allow her to choose the candidate-slate size n_C , and to choose what votes will be cast by voters she does not control. The latter voters will indeed vote according to the adversary’s wish – but only for the purposes of our thought experiment defining correctness, of course. If the adversary still cannot cause an incorrect tally to be computed (i.e., one not corresponding to the votes cast), then the scheme has the correctness property even in the real-world scenario in which the adversary has less power. The aim of the adversary is to cause more than $|V|$ ballots to be counted in the final tally on behalf of the controlled voters, or to alter or delete the vote of at least one honest voter. (This corresponds to the condition that: (1) The verification of the tally succeeds, and (2) That either a vote is “dropped” or “added”.) Our definition assumes implicitly that tally is computed correctly by the authority \mathcal{T} . (The next property we consider, namely verifiability, addresses the possibility that this is not so.) In what follows, we let $\langle \mathbf{Y} \rangle$ denote the multiset corresponding to entries in the vector \mathbf{Y} , and $|Y|$ denote the cardinality of set Y .

Experiment $\text{Exp}_{\text{ES},\mathcal{A}}^{\text{corr}}(k_1, k_2, k_3, n_C, n_V)$

$\{(sk_i, pk_i) \leftarrow \text{register}(SK_{\mathcal{R}}, i, k_2)\}_{i=1}^{n_V};$	% voters are registered
$V \leftarrow \mathcal{A}(\{pk_i\}_{i=1}^{n_V}, \text{“choose controlled voter set”});$	% \mathcal{A} corrupts voters
$\{\beta_i\}_{i \notin V} \leftarrow \mathcal{A}(\text{“choose votes for uncontrolled voters”});$	% \mathcal{A} chooses votes for honest voters
$\mathcal{BB} \leftarrow \{\text{vote}(sk_i, PK_{\mathcal{T}}, n_C, \beta_i, k_2)\}_{i \notin V};$	% honest voters cast ballots
$(\mathbf{X}, P) \leftarrow \text{tally}(SK_{\mathcal{T}}, \mathcal{BB}, n_C, \{pk_i\}_{i=1}^{n_V}, k_3);$	% honest ballots are tallied
$\mathcal{BB} \leftarrow \mathcal{A}(\text{“cast ballots”}, \mathcal{BB});$	% \mathcal{A} posts ballots to \mathcal{BB}
$(\mathbf{X}', P') \leftarrow \text{tally}(SK_{\mathcal{T}}, \mathcal{BB}, n_C, \{pk_i\}_{i=1}^{n_V}, k_3);$	% all ballots are tallied
if $\text{verify}(PK_{\mathcal{T}}, \mathcal{BB}, n_C, \mathbf{X}', P') = \text{‘1’}$ and	% does function verify accept?
$(\{\beta_i\} \not\subseteq \langle \mathbf{X}' \rangle$ or $ \langle \mathbf{X}' \rangle - \langle \mathbf{X} \rangle > V)$ then	% did \mathcal{A} successfully tamper?
output ‘1’;	
else	
output ‘0’;	

We say that ES possesses the property of correctness if for all polynomial-time adversaries \mathcal{A} , it is the case that $\text{Succ}_{\text{ES},\mathcal{A}}^{\text{corr}}(k_1, k_2, k_3, n_V)$ is negligible.

Verifiability: As explained above, an election system has the property of correctness if computation of tally always yields a valid tabulation of ballots. Given the ability of an adversary \mathcal{A} , however, to corrupt some number of authorities among \mathcal{T} , we cannot be assured that tally is always computed correctly. The property of verifiability is the ability for any player to check whether the tally \mathbf{X} has been correctly computed, that is, to detect any misbehavior by \mathcal{T} in applying the function tally.

A strong security definition for verifiability is appropriate given the high level of auditability required for trustworthy elections. Such a definition considers an attacker \mathcal{A} capable of controlling *all* of the voters and tallying authorities in \mathcal{T} . This attacker seeks to construct a set of ballots on \mathcal{BB} and a corresponding tally \mathbf{X} and proof P of correct tabulation such that the proof is accepted by verify, but the tally is in fact incorrect. By an incorrect tally, we mean one in which all of the valid ballots of a particular voter (i.e., corresponding to a particular credential) are discounted, or else where multiple votes are tallied that could have been generated by the same voting credential. Our experiment characterizing verifiability is as follows.

Experiment $\text{Exp}_{\text{ES},\mathcal{A}}^{\text{ver}}(k_1, k_2, k_3, n_C, n_V)$

$\{(sk_i, pk_i) \leftarrow \text{register}(SK_{\mathcal{R}}, i, k_2)\}_{i=1}^{n_V};$	% voters are registered
$(\mathcal{BB}, \mathbf{X}, P) \leftarrow \mathcal{A}(SK_{\mathcal{T}}, \{(sk_i, pk_i)\}_{i=1}^{n_V}, \text{“forge election”});$	% \mathcal{A} concocts full election
$(\mathbf{X}', P') \leftarrow \text{tally}(SK_{\mathcal{T}}, \mathcal{BB}, n_C, \{pk_i\}_{i=1}^{n_V}, k_3);$	% tally is taken on \mathcal{BB}
if $\mathbf{X} \neq \mathbf{X}'$	% does \mathcal{A} 's tally differ from correct \mathcal{BB} tally?
and $\text{verify}(PK_{\mathcal{T}}, \mathcal{BB}, n_C, \mathbf{X}, P) = \text{‘1’}$ then	% does function verify accept?
output ‘1’;	
else	
output ‘0’;	

We say that ES possesses the property of verifiability if for all positive integers n_V and all adversaries \mathcal{A} with polynomial running time, the quantity $\text{Succ}_{\text{ES},\mathcal{A}}^{\text{ver}}(k_1, k_2, k_3, n_V)$ is negligible. A technical strengthening of this definition and that for correctness is possible, and discussed in the next section, appendix B, of this paper.

Another aspect of verifiability that we do not formally define, but do mention here and incorporate into our proposed protocol is that of verification against voter rolls. In particular, it may be desirable for any election observer to check that credentials were assigned only to voters whose names are on a published roll. This is not technically a requirement if we rule out corruption of players \mathcal{R} , but may still be desirable for high assurance of election integrity. Our definitions can be modified accordingly.

B Remark on strong verifiability

We set forth our definitions of correctness and verifiability in appendix A to meet the minimal requirements for a fair election and to achieve some measure of conceptual simplicity. These definitions are adequate for most election scenarios, but have a technical deficiency that may be of concern in some cases. In particular, our definitions allow for the possibility that a voter controlled by \mathcal{A} casts a ballot corresponding to vote β , but that the ballot gets counted as a vote for β' . Since \mathcal{A} can choose the vote cast by a controlled voter in any case, this technical deficiency only means that \mathcal{A} can potentially cause the votes of *controlled voters only* to change in the midst of the election process. It does not provide \mathcal{A} with control of a larger number of votes. Most importantly, we note that this definitional weakness does not apply to our proposed protocol, which meets the stronger definition we now set forth.

Nonetheless, one can envisage some (somewhat artificial) scenarios in which stronger guarantees may be desirable. For example, \mathcal{A} might have the aim of causing the victor in an election to win by the slimmest possible margin. In this case, if \mathcal{A} controls a majority of \mathcal{T} , then \mathcal{A} might seek to decrypt all of the ballots cast in an election and alter the votes of controlled voters so as to favor the losing candidate.

We discuss now how our definition of verifiability may be modified to discount the possibility of this type of attack. (Analogous modifications may be made to the definition of correctness.) In particular, we can require that P be a proof that every tallied vote corresponds uniquely to a credential for which a valid ballot has been cast. For this, we require a natural technical restriction on `vote`. Let $\langle \text{vote}(\cdot) \rangle$ denote the set of possible outputs for the randomized function `vote` on a particular input. We require that an output ballot be wholly unambiguous with respect to both the vote β and the credential sk . In other words, we require $\langle \text{vote}(sk_0, PK_{\mathcal{T}}, n_C, \beta_0, k_2) \rangle \cap \langle \text{vote}(sk_1, PK_{\mathcal{T}}, n_C, \beta_1, k_2) \rangle = \phi$ if $\beta_0 \neq \beta_1$ or $sk_0 \neq sk_1$.

To achieve our strengthened definition of verifiability, we alter experiment $\text{Exp}_{\text{ES}, \mathcal{A}}^{\text{ver}}(k_1, k_2, k_3, n_V)$ such that if the following conditions 1 and 2 are met, then the output of the experiment is '1'. Otherwise it is '0'.

1. $\text{verify}(PK_{\mathcal{T}}, \mathcal{BB}, n_C, \mathbf{X}, P) = '1'$
2. For every injective mapping $f : \langle \mathbf{X} \rangle \rightarrow Z_{n_V}$ one of two conditions holds:
 - (a) $\exists B : B \in \mathcal{BB}, B \in \langle \text{vote}(sk_i, PK_{\mathcal{T}}, n_C, \beta, k_2) \rangle, \forall j f(j) \neq i$
 - (b) $\exists \beta \in \mathbf{X} : f(\beta) = i, \forall B \in \mathcal{BB}, B \notin \langle \text{vote}(sk_i, PK_{\mathcal{T}}, n_C, \beta, k_2) \rangle$

Conditions 2(a) and 2(b) here respectively specify that the adversary has successfully defeated the verifiability of the system either by causing all of the valid ballots associated with a particular credential not to be counted or else enabling multiple votes to be tallied for a single credential.

Given use of a verifiable mix network, our proposed protocol meets this stronger security definition for verifiability.

C The Faking of Voting Keys

We provide some more detail here on the process whereby a voter fakes a voting credential in our proposed protocol. Upon receiving a claimed credential $\tilde{\sigma}_i$, the adversary would like to verify if it is correct. Let us consider the possibility of doing so under each of our three possible assumptions on the registration phase discussed in the body of the paper; in doing so, recall that we always assume that the adversary can corrupt only a minority of servers in \mathcal{T} , and so, will not be able to decrypt any of the semantically secure encryptions of credentials.

1. Assume that there is a mechanism forcing erasure of voter information no longer needed at the end of the registration phase, and that only a minority of servers in \mathcal{R} may be corrupted. At the end of the registration process, each voter will erase information specifying what part of the transcript leading to the credential σ_i he got from what registration server. Without proofs or transcripts from individual servers of \mathcal{R} , it is not possible for the adversary to verify the correctness of $\tilde{\sigma}_i$.

2. Assume that the adversary cannot corrupt *any* server in \mathcal{R} . As mentioned, the registration servers may if desired use designated verifier proofs to prove to each voter that the share they send is authentic (i.e., will be part of the recorded transcript S_i). While the voter will be convinced of these proofs, the adversary will not; in fact, he cannot distinguish between real such proofs and proofs simulated by V_i . Therefore, V_i can convincingly release full *simulated* transcripts from the registration phase, corresponding to a credential $\tilde{\sigma}_i$.
3. Assuming that the user knows what (minority of) servers in \mathcal{R} are corrupted, but is not necessarily able to erase data, he can present the adversary with registration transcripts that are consistent with the view of the servers he knows to be corrupted, but inconsistent (in terms of the real share of σ_i) with the view of the servers that are not. The latter transcripts will be accompanied by simulated designated verifier proofs. Since the adversary may only corrupt a minority of servers in \mathcal{R} , and a majority is required to compute the credential σ_i , there will be at least one share of σ_i that V_i can change to obtain a fake credential $\tilde{\sigma}_i \neq \sigma_i$, without the detection of the adversary.

D Proving Coercion-Freeness

In this section, we provide a detailed outline for proof of the property of coercion-freeness in our proposed election protocol. (We do not consider correctness or verifiability here, as these are more standard properties, and the associated proofs are more straightforward.) For the purposes of this proof, we assume the use of the M-El Gamal cryptosystem over a preselected group \mathcal{G} of order q . The coercion-freeness of our scheme is dependent on the Decision-Diffie Hellman (DDH) assumption on \mathcal{G} . Briefly stated, this assumption states that no algorithm with running-time polynomial in the security parameters for \mathcal{G} can distinguish between the two distributions D and D' with non-negligible probability: Here, D is the distribution of tuples of the form (y_1, g_1, y_2, g_2) , where $g_1, g_2 \in_U \mathcal{G}$, $y_1 = g_1^x$, and $y_2 = g_2^x$ for $x \in_U \mathbb{Z}_q$; i.e., the pair (y_1, g_1) and (y_2, g_2) are related by a common exponent. D' is the distribution of random tuples, i.e., tuples of the form (y_1, g_1, y_2, g_2) , where $y_1, g_1, y_2, g_2 \in_U \mathcal{G}$. For detailed treatment of this assumption (expressed in an alternative, equivalent form), see, e.g., [7].

D.1 Assumptions

As explained above, we simplify our analysis by assuming ideal constructions for a number of components in our election protocol. Our aim in doing so is twofold: (1) Our protocol is flexible enough to accommodate a range of cryptographic building blocks from the literature and (2) We wish to retain a focus on the conceptual and definition elements of our paper, and not on protocol details. Hence, we assume the availability of oracles for the four following cryptographic operations in our protocol: mixing, plaintext equivalence testing (PET), threshold ciphertext decryption, and calls to the one-way or hash function required for NIZK proofs. As in the main body of the paper, denote these oracles respectively by $\tilde{M}N$, $P\tilde{E}T$, $D\tilde{E}C$ and $\tilde{O}W$. Although the functioning of these oracles should be clear from our protocol description, we present it again here:

- The oracle $\tilde{M}N$ performs exactly the same function as a mix network. It accepts as input an ordered list $\mathbf{E} = \{E_1, E_2, \dots, E_d\}$ of ciphertexts under the public key $PK_{\mathcal{T}}$ of the tallying authorities. Its output on \mathbf{E} is an ordered set $\mathbf{E}' = \{E'_{\pi(1)}, E'_{\pi(2)}, \dots, E'_{\pi(d)}\}$ for a secret, random permutation π , where $E'_{\pi(i)}$ represents a re-encryption of ciphertext E_i .
- The oracle $P\tilde{E}T$ takes as input a pair of ciphertexts (E, E') under $PK_{\mathcal{T}}$. It outputs a ‘1’ if E and E' have identical corresponding plaintexts, and outputs ‘0’ otherwise.
- The oracle $D\tilde{E}C$ takes as input a ciphertext E under $PK_{\mathcal{T}}$. It outputs the corresponding plaintext.
- The oracle $\tilde{O}W$ takes as input a query value in $\{0, 1\}^*$, and outputs a random value $\{0, 1\}^{k_4}$, where k_4 is a security parameter (that may depend on k_1, k_2 and k_3). The output of $\tilde{O}W$ is consistent, in the sense that a given input value always yields the same output value. This oracle may be viewed as the ideal embodiment of a cryptographic hash function.

Each of these oracles accepts publicly viewable input from all participating authorities (talliers). Each tallier may be thought of as having a publicly readable tape to which it may write input values for a given oracle; each tape contains a write portion for each time-step of the protocol, which we assume to be synchronous. At the end of a given timestep, an oracle produces output according to the following procedure. If a majority of talliers have furnished identical non-null values Z on their tapes, then the oracle processes input Z and yields the corresponding output. If there is no non-null majority input, then the oracle simply outputs the special symbol \perp . The requirement for majority input ensures that the protocol execution is determined by honest players, i.e., effectively reduces \mathcal{A} to an honest-but-curious adversary once the ballot-posting phase for the election is complete.

We additionally assume for simplicity that key setup and registration are performed by a trusted entity. Our proofs may be extended to accommodate more general assumptions in which these two processes are performed in a distributed manner.

D.2 Proof overview

Recall that our definition of coercion-freeness revolves around a game played between an adversary \mathcal{A} and a voter targeted for coercion. The aim of \mathcal{A} is to guess which of the following two behaviors the voter has adopted during the execution of an election system ES: (1) The voter has divulged valid voting credentials and abstained from voting or (2) The voter has divulged fake credentials and cast a ballot. In order to demonstrate that ES possesses coercion-freeness, we must show that \mathcal{A} can guess successfully with probability only negligibly better than a weaker poly-time adversary \mathcal{A}' interacting with an ideal election system. This adversary \mathcal{A}' is passive, and its only input is the final tally \mathcal{X} of votes cast by honest voters in the completed election plus Γ , the number of ballots eliminated for invalid associated credentials.

Our proof strategy is to construct a polynomial-time algorithm \mathcal{S} that takes a set of ballots W of honest voters and simulates the election system ES in the experiment *c-resist*. If the simulation is indistinguishable to \mathcal{A} from use of the true functional components of ES, and \mathcal{A} cannot cause the simulation to deviate from correct execution, then we see that \mathcal{A} learns nothing more than the correct election tally \mathcal{X} and the number of bad ballots Γ . This means in turn that \mathcal{A} is no more powerful than the ideal adversary \mathcal{A}' characterized in our experiment *c-resist-ideal*. Thus ES is coercion-free.

The inability of the adversary to cause deviation in the experiment from correct execution hinges on our oracle definitions, which require majority agreement on input values. Given this, we show that the simulation produced by \mathcal{S} is indistinguishable by \mathcal{A} from a real experimental execution of *c-resist* under the DDH assumption on \mathcal{G} . Our proof relies on the semantic security of M-El Gamal (see appendix E). In particular, we make use of the following, useful fact implied by the DDH assumption: A poly-time adversary that selects a plaintext m cannot distinguish between the distribution of M-El Gamal ciphertexts on m (A_1, A_2, B) and the distribution of triplets of the form $(\alpha_1, \alpha_2, \beta)$, where $\beta \in_U \mathcal{G}$ and α_1, α_2 are distributed exactly as (A_1, A_2) , with non-negligible probability (in the security parameters for \mathcal{G}). In consequence of this observation, it is possible for \mathcal{S} to simulate the election process by substituting *random ciphertexts*, i.e., random triplets of group elements, for the real ciphertexts that would be processed in a true execution of the experiment *c-resist*. In particular, \mathcal{S} can simulate the ballots of voters not controlled by \mathcal{A} with a list of random ciphertexts. Additionally, \mathcal{S} can simulate the oracle $\tilde{M}N$ by setting its simulated output to a list of random ciphertexts. Under the DDH assumption, \mathcal{A} cannot distinguish between the random ciphertexts furnished by \mathcal{S} and the ciphertexts that would be processed in a true execution of ES.

D.3 The simulation

We now outline the steps of the simulation of *c-resist* executed by \mathcal{S} . Throughout the simulation, according to the usual technique in the literature, \mathcal{S} maintains state for the simulated oracle $\tilde{O}W$ so as to ensure consistency of output values. Let $W \in D_{n_U, n_C}$ represent a set of ballots input into the simulation as representing the posting of

honest voters. At the very beginning the simulator receives a quadruple (g_1, g_2, h_1, h_2) which is either a Diffie-Hellman quadruple or a random one, according to some hidden bit d . More formally, $d = 1$ if the quadruple is a DH one and $d = 0$ otherwise. The goal of the simulator is to guess which situation is dealing with.

1. **Setup:** \mathcal{S} chooses uniformly and at random two elements $x_1, x_2 \in_U Z_q$ and sets $h = g_1^{x_1} g_2^{x_2} \bmod p$. \mathcal{S} publishes the public key (g_1, g_2, h) and also a randomized candidate slate $\mathbf{C} = \{c_i\}_{i=1}^{n_C}$ such that $c_i = g_1^{r_i}$ for $r_i \in_U Z_q$. (For technical reasons in our proof, we require that candidate identifiers here be random, rather than comprising the set $\{1, 2, \dots, n_C\}$.)
2. **Registration:** \mathcal{S} simulates the registrar \mathcal{R} , generating a set of credentials $\{\sigma_i = g_1^{s_i}\}$ for $s_i \in_U Z_q$. For the encrypted credential list \mathbf{L}_0 , the simulator \mathcal{S} publishes a list of n_V ciphertexts (using a public key generated as above).
3. **Adversarial corruption:** The adversary \mathcal{A} selects a set V of n_A voters to corrupt, as well as a voter j for coercion and a target vote β . If any of these selections are invalid, i.e., if $V \neq n_A$ or $j \notin \mathcal{V} - V$ or $\beta \notin \mathbf{C} \cup \phi$, then the simulation is terminated.
4. **Coin flip:** A coin $b \in_U \{0, 1\}$ is flipped.
5. **Credential release:** \mathcal{S} gives \mathcal{A} the set of credentials $\{\sigma_i\}_{i \in V}$ as well as a credential σ for the targeted voter j . If $b = 1$, then \mathcal{S} gives $\sigma = \sigma_j$; otherwise σ is a random string.
6. **Honest voter simulation:** For each ballot element in W , the simulator posts a ballot consisting of two ciphertexts $(\alpha_{i,1}, \alpha'_{i,1}, \beta_{i,1}), (\alpha_{i,2}, \alpha'_{i,2}, \beta_{i,2})$. \mathcal{S} also furnishes the associated NIZK proofs of the form specified above. Since the associated challenges value comes from $\tilde{O}W$, and may therefore be predetermined by \mathcal{S} , the NIZK proof may be simulated using standard techniques. Let \mathbf{A}_0 be the list of these ballots. Let \mathbf{A}^* be the associated set of plaintext ballot choices in W for which the associated credential is correct, i.e., excluding λ elements.

The simulator creates the ciphertexts above as follows. For each ballot element in W , \mathcal{S} chooses two elements r_i, k_i at random in Z_q and sets $(\alpha_{i,1} = h_1^{r_i}, \alpha'_{i,1} = h_2^{r_i}, \beta_{i,1} = h_1^{r_i x_1} h_2^{r_i x_2} c_j), (\alpha_{i,2} = h_1^{k_i}, \alpha'_{i,2} = h_2^{k_i}, \beta_{i,2} = h_1^{k_i x_1} h_2^{k_i x_2} \sigma_i)$

7. **Adversarial ballot posting:** The adversary \mathcal{A} posts a set of ballots \mathbf{B}_0 and associated NIZK proofs.
8. **Decryption of ballots posted by the adversary** \mathcal{S} checks the NIZK proofs in \mathbf{B}_0 . Let \mathbf{B}_1 be the list of ballots with correct proofs. For each ballot in \mathbf{B}_1 and each credential in $\{\sigma_i\}_{i \in V} \cup \sigma_j$, the simulator decrypts using his own private key (see above).
9. **Tallying simulation:** \mathcal{S} simulates the behavior of honest tallying authorities. Since these are a majority, any deviating behavior by tallying authorities in the control of \mathcal{A} may be ignored. This part of the simulation proceeds as follows:
 - (a) **Proof checking:** Let \mathbf{E}_0 denote the combined list of input ballots \mathbf{A}_0 and \mathbf{B}_0 . \mathcal{S} simulates the behavior of honest tallying authorities in rejecting all ballots with invalid associated NIZK proofs. Let \mathbf{E}_1 be the resulting ballot list.
 - (b) **Eliminating duplicates:** Since no mixing has yet occurred, \mathcal{S} may simulate the elimination of duplicate ballots using its own decryption key. Let \mathbf{E}_2 be the resulting ballot list.
 - (c) **Mixing:** \mathcal{S} simulates the oracle $\tilde{M}N$ as applied to \mathbf{E}_2 by outputting an equal-length list \mathbf{E}_3 of random ciphertext triples. Likewise, \mathcal{S} simulates the mixing of \mathbf{L}_0 by outputting an equal-lengthed list \mathbf{L}_1 of random ciphertexts.
 - (d) **Checking credentials:** \mathcal{S} simulates the process of credential checking. In a true protocol execution, this would involve sequential comparison using $\tilde{P}ET$ between each ballot in \mathbf{E}_3 (more precisely, the credential ciphertext therein) and the ciphertexts in \mathbf{L}_1 . Either a match is found, in which case a ballot is deemed to be based on a valid credential, or else the list \mathbf{L}_1 is exhausted, and the ballot is rejected. \mathcal{S} simulates the output of $\tilde{P}ET$ for this phase of the protocol using its own decryption key as before. Let \mathbf{E}_4 be the resulting ballot list.
 - (e) **Decryption:** This is done straightforwardly.

Now if the adversary outputs a guess bit b' the simulator returns b' as his own guess for the decisional Diffie-Hellman challenge.

Observe that if the simulator's input is a Diffie-Hellman triplet (that is $d = 1$) then the simulation above is perfectly indistinguishable from the experiment $\mathbf{Exp}_{\mathcal{ES}, \mathcal{A}, H}^{c\text{-resist}}$.

As a matter of fact, assuming $g_1 = g, g_2 = g^a, h_1 = g^b, h_2 = g^{ab}$ for some g , any ciphertext of the form $(\alpha_{i,1} = h_1^{r_i}, \alpha'_{i,1} = h_2^{r_i}, \beta_{i,1} = h_1^{r_i x_1} h_2^{r_i x_2} m)$ is actually a valid one. Indeed $h_1^{r_i} = g^{br_i} = g_1^{br_i}, h_2^{r_i} = g^{abr_i} = g_2^{br_i}$ and $h_1^{r_i x_1} h_2^{r_i x_2} m = g^{br_i x_1} g^{abr_i x_2} m = g_1^{br_i x_1} g_2^{br_i x_2} m = h^{br_i} m$.

This means that

$$\Pr[\mathcal{S} = 1 | d = 1] = \Pr[\mathbf{Exp}_{\mathcal{ES}, \mathcal{A}, H}^{c\text{-resist}}(\mathcal{V}) = 1] = \mathbf{Succ}_{\mathcal{ES}, \mathcal{A}}^{c\text{-resist}}(\mathcal{V})$$

where we denoted with \mathcal{V} the view of the adversary.

On the other hand if the simulator's input is not a Diffie-Hellman triplet (that is $d = 0$) then the view produced by the simulation above does not give any information (in a strong information theoretic sense) about the votes posted by the honest parties. This is because, assuming $g_1 = g, g_2 = g^a, h_1 = g^b, h_2 = g^c$ for some $c \in_U Z_q$, one has that a ciphertext of the form $(\alpha_{i,1} = h_1^{r_i}, \alpha'_{i,1} = h_2^{r_i}, \beta_{i,1} = h_1^{r_i x_1} h_2^{r_i x_2} m)$ actually "masks" the message m perfectly. Indeed $h_1^{r_i} = g^{br_i} = g_1^{br_i}, h_2^{r_i} = g^{cr_i} = g_2^{c' r_i}$ and $h_1^{r_i x_1} h_2^{r_i x_2} m = g^{br_i x_1} g^{cr_i x_2} m = g_1^{br_i x_1} g_2^{c' r_i x_2} m = g_1^{br_i x_1} g_2^{br_i x_2} g_2^{c' r_i x_2} m = h^{br_i} g_2^{c' r_i x_2} m$.

This means that, in this case, the probability that the simulator outputs one is equal to the probability that the adversary outputs one in experiment $\mathbf{Exp}_{\mathcal{ES}, \mathcal{A}, H}^{c\text{-resist-ideal}}$.

More formally

$$\Pr[\mathcal{S} = 1 | d = 0] = \Pr[\mathbf{Exp}_{\mathcal{ES}, \mathcal{A}, H}^{c\text{-resist-ideal}}(\mathcal{V}) = 1] = \mathbf{Succ}_{\mathcal{ES}, \mathcal{A}}^{c\text{-resist-ideal}}(\mathcal{V})$$

This means that

$$\mathbf{Adv}_{\mathcal{S}}^{\text{dh}} = \Pr[\mathcal{S} = 1 | d = 1] - \Pr[\mathcal{S} = 1 | d = 0] = \mathbf{Adv}_{\mathcal{ES}, \mathcal{A}}^{c\text{-resist}}$$

under the Decisional Diffie-Hellman Assumption this quantity is negligible.

E Some details on primitives

El Gamal: As explained in the body of the paper, El Gamal [23] represents a natural choice of cryptosystem for our purposes, and is our focus in this paper. Recall that we let \mathcal{G} denote the algebraic group over which we employ El Gamal, and q denote the group order. For semantic security, we require that the Decision Diffie-Hellman assumption hold over \mathcal{G} [7, 41]. A public/private key pair in El Gamal takes the form $(y (= g^x), x)$, where $x \in_U Z_q$. We let \in_U here and elsewhere denote uniform, random selection from a set. The private key x may be distributed among the n_T players in \mathcal{T} using (t, n_T) -Shamir secret sharing [?] over $GF[q]$, for $t > n_T/2$. This private key may be generated by a trusted third party or via a computationally secure simulation of this process [24]. Each player then holds a public/private key pair $(y_i (= g^{x_i}), x_i)$, where x_i is a point on the polynomial used for the secret sharing. A ciphertext in El Gamal on message $m \in \mathcal{G}$ takes the form $(\alpha, \beta) = (my^r, g^r)$ for $r \in_U Z_q$. For succinctness of notation in the body of the paper, we sometimes let $E_y[m]$ denote a ciphertext on message m under public key y . To re-encrypt a ciphertext (α, β) , it suffices to multiply it pairwise by a ciphertext on $m = 1$, i.e., to compute a new ciphertext $(\alpha', \beta') = (y^{r'} \alpha, g^{r'} \beta)$ for $r' \in_U Z_q$.

To decrypt a ciphertext (α, β) , the plaintext $m = \alpha/\beta^x$ is computed. To achieve a threshold decryption of ciphertext (α, β) , each active player i publishes a decryption share $\beta_i = \beta^{x_i}$. The value β^x , and thus m , may be computed using standard LaGrange interpolation. Player i may prove the correctness of its share using an NIZK proof of the form $PK\{s : \beta_i = \beta^s \wedge u_i = g^s\}$ – essentially two Schnorr identification proofs [?] with conjunction achieved using techniques described in, e.g., [15]. We omit many details in this description regarding the scheduling of these operations and the use of commitments to avoid adversarial bias. (The reader is referred to, e.g., [12, 24] for some discussion of these issues in relation to key generation.)

We note that another possible choice of cryptosystem for our voting scheme is that of Paillier [?].

Modified El Gamal: As mentioned before our modified version of the El Gamal cryptosystem can be seen as a simplified version of the Cramer-Shoup [17], method. It is rather straightforward to prove that the scheme is actually semantically secure under the decisional Diffie-Hellman assumption. The argument closely follows the one presented in [17]. Here we provided a sketched version of such an argument. Imagine there exists a probabilistic polynomial time algorithm A which can break the semantic security of the proposed scheme. Then our goal is to describe a different algorithm S (a simulator) which uses A to break the decisional DH problem. So assume S receives on input a quadruple (g_1, g_2, h_1, h_2) and has to determine if this is a DDH quadruple or not. S constructs the public key (for the M-El Gamal scheme) as follows. It chooses x_1 and x_2 at random and sets $h = g_1^{x_1} g_2^{x_2}$ the rest is unchanged.

What is different is the decryption procedure because on input $(A, B, C) = (g_1^r, g_2^r, h^r m)$, S retrieves the message m as $m = C \cdot (A^{x_1} B^{x_2})^{-1}$

Note that in this way the simulator can always decrypt (and the distribution of the key is perfectly indistinguishable from real).

Next when the adversary comes up with the two messages m_0, m_1 he wants to be challenged on S proceeds as follows. It flips a random (private) bit b , and encrypts m_b as follows

$$(h_1^{kx_1} h_2^{kx_2} m, h_1^k, h_2^k)$$

(where k is a random value)

Note that if the given quadruple is a DH one the ciphertext has the right distribution. This is because $h_1^k = g_1^{k'}$ and $h_2^k = g_2^{k'}$ for some k'

and $(h_1^{x_1} h_2^{x_2})^k = h^{k'}$ (for the same k')

If, on the other hand, the given quadruple is not a DH one then it is easy to check that the A gains no information at all about the encrypted message (this is because this time to decrypt adv has to know the secret exponents x_1 and x_2 which remains information theoretically hidden by h).

Mix networks: As explained above, there are many good choices of mix networks for our scheme. The examples with the strongest security properties are the constructions of Furukawa and Sako [22] and Neff [33]. Both of these employ El Gamal as the underlying cryptosystem, i.e., an input ciphertext $E_i = (\alpha, \beta) = (my^k, g^k)$ for some public key y and published generator g . Security in these constructions is reducible to the Decision Diffie-Hellman assumption and a random-oracle assumption on a hash function. We also note that the security of these and most other mix network constructions relies on a second input $\mathcal{P} = \{P_1, P_2, \dots, P_d\}$, where P_i is an NIZK proof of knowledge of the plaintext for E_i . This serves the purpose of rendering the cryptosystem chosen-ciphertext-attack secure while still permitting re-encryption.

Abstract. We introduce a model for electronic election schemes that involves a more powerful adversary than in previous work. In particular, we allow the adversary to demand of coerced voters that they vote in a particular manner, abstain from

voting, or even disclose their secret keys. We define a scheme to be *coercion-resistant* if it is infeasible for the adversary to determine whether a coerced voter complies with the demands.

A first contribution of this paper is to describe and characterize a new and strengthened adversary for coercion in elections. (In doing so, we additionally present what we believe to be the first formal security definitions for electronic elections of *any type*.) A second contribution is to demonstrate a protocol that is secure against this adversary. While it is clear that a strengthening of attack models is of theoretical relevance, it is important to note that our results lie close to practicality. This is true both in that we model real-life threats (such as vote-buying and vote-cancelling), and in that our proposed protocol combines a fair degree of efficiency with an unusual lack of structural complexity. Furthermore, while previous schemes have required use of an untappable channel, ours only carries the much more practical requirement of an anonymous channel.

Key words: coercion-resistance, electronic voting, mix networks, receipt-freeness

1 Introduction

Most voters participating in shareholder elections in the United States have the option of casting ballots via a Web browser [1]. Some voters near Geneva participating in recent referenda in Switzerland in 2003-4 have been able to cast binding votes electronically [19]. The UK government has enunciated plans to allow its citizens to vote electronically “some time after 2006” [18]. These are just a few instances of a broadening trend toward Internet-based voting. While voting of this kind appears to encourage higher voter turnout [37] and make accurate accounting for votes easier, it also carries the potential of making abuse easier to perform, and easier to perform at a large scale. A number of papers in the cryptographic literature have described ways of achieving robust and verifiable *electronic* elections, i.e., elections in which ballots and processing data are posted to a publicly accessible bulletin board. For some recent examples (but not by any means an exhaustive list), see [8,16, 21,22, 27,29, 33,36, 39].

There are two other threats, however, that it is equally crucial to address in a fair and democratic election process: We speak of *voter coercion* and *vote buying*. Internet-based voting does not introduce these problems, but it does have the potential to exacerbate them by extending the reach and data collection abilities of an attacker. This is highlighted in one way by the presence of a notorious Web site that provides a forum for the auctioning of votes [2]. Seller compliance was in that case merely voluntary. Conventional Internet voting schemes, however, including those described in the literature, actually provide an attacker with ready-made tools for verifying voter behavior and thereby exerting influence or control over voters. Without careful system design, the threats of co-

ercion and vote buying are potentially far more problematic in Internet voting schemes than in ordinary, physical voting schemes.

One commonly proposed way of achieving secure electronic voting systems is to use a cryptographic system known as a *mix network* [14]. This is a tool that enables a collection of servers to take as input a collection of ciphertexts and to output the corresponding plaintexts according to a secret permutation. A straightforward way

to achieve an election system that preserves the privacy of voters, then, is to assign a private digital signing key to each voter. To cast a ballot, the voter encrypts her choice and signs it, and then posts it to a bulletin board (i.e., a publicly accessible memory space). When all ballots have been collected and the corresponding signatures have been checked, the ciphertexts are passed through a mix network. The resulting plaintext versions of the voter choices may then be tallied. Thanks to the privacy preserving property of the mix network, an adversary cannot tell which vote was cast by which voter. This approach is frequently advocated in the mix-network literature, as in, e.g., [8, 14, 22,27].

In an ordinary mix-based scheme of this kind, an adversary can coerce a voter straightforwardly. The adversary can simply furnish the voter with a ciphertext on a particular candidate, and then verify that the voter posted a ballot containing that ciphertext. Alternatively, the adversary can demand the private signing key of the voter and verify its correctness against the corresponding public key. An adversary attempting to buy votes can use the same means. Other types of cryptographic voting schemes, namely homomorphic schemes [5, 16] and schemes based on blind signatures [20,36], suffer from similar vulnerabilities.

1.1 Previous work

Previous investigations of coercion-resistant voting have been confined to a property known as *receipt-freeness*. Roughly stated, receipt-freeness is the inability of a voter to prove to an attacker that she voted in a particular manner, even if the voter wishes to do so. For a more formal definition, see [36]. The property of receipt-freeness ensures that an attacker cannot determine exact voter behavior and therefore cannot coerce a voter by dictating her choice of candidate. It also protects against vote-buying by preventing a potential vote buyer from obtaining proof of the behavior of voters; voters can thereby *pretend* to sell their votes, but defraud the vote buyer. The notion of receipt-freeness first appeared in work by Benaloh and Tuinstra [5]; their scheme, based on homomorphic encryption, was shown in [25] not to possess receipt-freeness as postulated. An independent introduction of the idea appeared in Niemi and Renvall [34]. Okamoto [35] proposed a voting scheme which he himself later showed to lack the postulated receipt-freeness; a repaired version by the same author, making use of blind signatures, appears in [36]. Sako and Kilian [38] proposed a multi-authority scheme employing a mix network to conceal candidate choices, and a homomorphic encryption scheme for production of the final tally. The modelling of their scheme was clarified and refined by Michels and Horster [32]. The Sako and Kilian scheme served as a conceptual basis for the later work of Hirt and Sako [25], followed by the more efficient approach of [3]; these two are the most efficient (and correct) receipt-free voting schemes to date. A recently proposed scheme by Magkos *et al.* [31] distinguishes itself by an approach relying on tamper-resistant hardware, but is flawed.¹

All of these receipt-free voting schemes include somewhat impractical assumptions. For example, these schemes assume the availability of an *untappable channel* between the voter and the authorities, that is, a channel that provides perfect secrecy in an information-theoretic sense. (I.e., even encryption does not provide an untappable channel.) The scheme in [36] makes the even stronger assumption of an *anonymous untappable channel*. (It is also not very practical in that it requires voter interaction with the system three times in the course of an election.) Moreover, all of these schemes (excepting [36]) lose the property of coercion-resistance if the attacker is able to corrupt even one of the tallying authorities in a distributed setting. The scheme of Hirt and Sako still retains coercion-resistance when such corruption takes place, but only under the strong assumption that the voter knows *which* tallying authorities have been corrupted; the proposal of Baudron *et al.* has a similar property.

A still more serious problem with all of the receipt-free voting schemes described in the literature, however, is the fact that the property of receipt-freeness alone fails to protect an election system against several forms of serious, real-world attack, which we enumerate here:

¹ We are unaware of any mention of a break of this scheme in the literature, and therefore briefly describe one here. The Magkos *et al.* system employs an interactive honest-verifier ZK proof made by a smartcard to the voter. Presumably because of the simulability of

this proof, the authors describe the proof as being “non-transferable”. This is not true. In particular, an adversary can stipulate that the voter engage in the proof using a challenge that the adversary has pre-selected. The proof then becomes transferable, yielding a receipt construction by the adversary. As noted in [25], this type of attack also explains why *deniable encryption* [13] does not solve the problem of coercion in a voting system.

Randomization attack: This attack was noted by Schoenmakers in 2000 [40]; he described its applicability to the scheme of Hirt and Sako. The idea is for an attacker to coerce a voter by requiring that she submit randomly composed balloting material. In this attack, the attacker (and perhaps even the voter) is unable to learn what candidate the voter cast a ballot for. The effect of the attack, however, is to nullify the choice of the voter with a large probability. For example, an attacker favoring the Republican party in a United States election would benefit from mounting a randomization attack against voters in a heavily Democratic district.

Forced-abstention attack: This is an attack related to the previous one based on randomization. In this case, the attacker coerces a voter by demanding that she refrain from voting. All of the schemes cited above are vulnerable to this simple attack. This is because the schemes authenticate voters directly in order to demonstrate that they are authorized to participate in the election. Thus, an attacker can see who has voted, and use this information to threaten and effectively bar voters from participation.

Simulation attack: The receipt-free schemes described above assume that the attacker cannot coerce a voter by causing her to divulge her private keying material after the registration process but prior to the election process. Such an attack, however, is a real and viable one in previously proposed schemes, because these permit an attacker to verify the correctness of private keying material. For example, in [36], the voter provides a digital signature which, if correct, results in the authority furnishing a blind digital signature. In [25], the voter, when casting a

ballot, proves knowledge of a private key relative to a publicly committed or published value. In general, receipt-freeness does not prevent an attacker from coercing voters into divulging private keys or buying private keys from voters and then *simulating* these voters at will, i.e., voting on their behalf.

1.2 Our contribution

Our contribution in this paper is twofold. First, we investigate a stronger and broader notion of coercive attacks than receipt-freeness. This notion, which we refer to as *coercion-resistance*, captures what we believe to be the fullest possible range of adversarial behavior in a real-world, Internet-based voting scheme. A coercion-resistant scheme offers not only receipt-freeness, but also defense against randomization, forced-abstention, and simulation attacks – all potentially in the face of corruption of a minority of tallying authorities. We propose a formal definition of coercion-freeness in the body of this paper. Two other properties are essential for any voting scheme, whether or not it is coercion-resistant. These are *correctness* and *verifiability*. As formal definitions for these properties are to the best of our knowledge lacking in the literature, we provide them as well in the paper appendix; we thus provide what we believe to be the first formal security framework for electronic elections in general.

To demonstrate the practical realizability of our definitions, we describe a voting scheme that possesses the strong property of coercion-resistance proposed in this paper – and also naturally possesses the properties of correctness and verifiability. Our scheme does not require untappable channels, but instead assumes voter access to an anonymous channel at some point during the voting process. Anonymous channels can be realized in a practical way by use of mixnets, e.g., [22,33], while untappable channels require largely unrealistic physical assumptions. We note in fact that anonymous channels are in fact a minimal requirement for *any* coercion-resistant schemes: An attacker that can identify which voters have participated can obviously mount a forced-abstention attack. A drawback of our scheme is that, even with use of asymptotically efficient mix networks as in [22,33], the overhead for tallying authorities is quadratic in the number of voters. Thus the scheme is only practical for small elections. Our hope and belief, however, is that our proposed scheme might serve as the basis for refinements with a higher degree of practical application. We provide a security proof for our proposed scheme in the paper appendix.

² An exception is the scheme in [36], which does not appear to be vulnerable to a forced-abstention attack. This is because the scheme

seems to assume that the authority checks voter enrollment privately. In other words, the scheme does not permit public verification that participating voters are present on a published voter roll. This is potentially a problem in its own right.

1.3 Intuition behind our scheme

In a conventional voting scheme, and also in receipt-free schemes like [25], the voter V_i identifies herself at the time she casts her ballot. This may be accomplished by means of a digital signature on the ballot, or by an interactive authentication protocol. The key idea behind our scheme is for the identity of a voter to remain hidden during the election process, and for the validity of ballots instead to be checked blindly against a voter roll. When casting a ballot, a voter incorporates a concealed credential. This takes the form of a ciphertext on a secret value σ that is unique to the voter. The secret σ is a kind of *anonymous credential*, quite similar in spirit to, e.g., [9, 10]. To ensure that ballots are cast by legitimate voters, the tallying authority T performs a blind comparison between hidden credentials and a list L of encrypted credentials published by an election registrar R alongside the plaintext names of registered voters.

By means of mixing and blind comparison of ciphertext values, it is possible to check whether a concealed credential is in the list L or not, without revealing which voter the credential has been assigned to. In consequence, an attacker who is given a fake credential $\tilde{\sigma}$ by a coerced voter cannot tell whether or not the credential is valid. (The attacker will learn how many ballots were posted with bad credentials. Provided, however, that some spurious ones are injected by honest players, authorities, or even outsiders, the individuals associated with bad ballots will remain concealed.) Moreover, the attacker cannot mount randomization or forced-abstention attacks, since there is no feasible way to determine whether an individual voter has posted a ballot or not. In particular, after divulging fake credential $\tilde{\sigma}$, a voter can go and vote again using her real credential σ .

1.4 Organization

In section 2, we describe our setup and attack models and sketch a few of the major adversarial strategies. We provide formal definitions for the security property of coercion-resistance in section 3. We describe the particulars of our proposed scheme in section 4, prefaced by a summary of the underlying cryptographic building blocks. In the appendices to the paper, we offer formal definitions for the correctness and verifiability of election schemes, a detailed security-proof outline, and details on our choice of primitives for realizing our proposed scheme.

2 Modelling

An election system consists of several sets of entities:

1. *Registrars*: Denoted by $R = \{R_1, R_2, \dots, R_{n_R}\}$, this is a set of n_R entities responsible for jointly issuing keying material, i.e., credentials to voters.
2. *Authorities (Talliers)*: Denoted by $T = \{T_1, T_2, \dots, T_{n_T}\}$, authorities are responsible for processing ballots and jointly counting votes and publishing a final tally.
3. *Voters*: The set of n_V voters, denoted by $V = \{V_1, V_2, \dots, V_{n_V}\}$, are the entities participating in a given election administered by R . We let i be a public identifier for V_i .

We make use of a *bulletin board*, denoted by BB . This is a piece of universally accessible memory to which all players have appendive-write access. In other words, any player can write data to BB , but cannot overwrite or erase existing data. Moreover, voters will be able to read the contents of BB once the vote casting phase has ended. For notational convenience, we assume that data are written to BB in μ -bit blocks for an appropriate choice of μ . Shorter data segments may be padded appropriately. For simplicity of exposition, we assume no ordering on the contents of BB .

2.1 Functions

We define a *candidate slate* C to be an ordered set of n_C distinct identifiers $\{c_1, c_2, \dots, c_{n_C}\}$, each of which corresponds to a voter choice, typically a candidate or party name. In an election, choice c_j may be identified according to its index j . Thus, for cryptographic purposes the candidate slate consists of the integers $\{1, 2, \dots, n_C\}$.

and may be specified by n_c alone. We define a *tally* on an election under slate C to be a vector X of n_c positive integers x_1, x_2, \dots, x_{n_c} such that x_j indicates the number of votes cast for choice c_j . The protocols composing an election system are then as follows:

- **Registering:** The function $\text{register}(SK_R, i, k_1) \rightarrow (sk_i, pk_i)$ takes as input the private registrar key SK_R , a (voter) identifier i and a security parameter k_1 , and outputs a key pair (sk_i, pk_i) . This is computed jointly by players in R , possibly in interaction with voter V_i .
- **Voting:** The function $\text{vote}(sk, PK_T, n_c, \beta, k_2) \rightarrow \text{ballot}$ takes as input a private voting key, the public key of the authorities T , the candidate-slate specification n_c , a candidate selection β , and a security parameter k_2 , and yields a ballot of bit length at most μ . The form of the ballot will vary depending on the design of the election system, but is in essence a digitally signed vote choice encrypted under PK_T .
- **Tallying:** The function $\text{tally}(SK_T, BB, n_c, \{pk_i\}_{i=1}^{n_v}, k_3) \rightarrow (X, P)$ takes as input the private key of the authority T , the full contents of the bulletin board, the candidate-slate size, all public voting keys, and a security parameter k_3 and outputs a vote tally X , along with a non-interactive proof P that the tally was correctly computed.
- **Verifying:** The function $\text{verify}(PK_T, BB, n_c, X, P) \rightarrow \{0, 1\}$ takes as input the public key of the authorities, the contents of the bulletin board, the candidate-slate size, the voting tally, and a non-interactive proof of correct tallying. It outputs a ‘0’ if the tally is incorrect and a ‘1’ otherwise. (We characterize the behavior of verify more formally in the paper appendix.)

We define an election scheme ES as the collection of these functions. Thus $ES = \{\text{register}, \text{vote}, \text{tally}, \text{verify}\}$.

Remark: There are many election models in use throughout the world. The model we propose here excludes important variants. In some systems, for example, voters are asked to rank candidate choices, rather than just listing those they favor. Many systems permit the use of *write-in* votes, i.e., the casting of a ballot in favor of a candidate not listed on the slate for the election. We exclude write-in voting from our model because it undermines the possibility of coercion resistance in any scheme where an observer can see a complete election tally including write-in votes. An attacker may, for example, require coerced voters to cast write-in ballots for candidate names consisting of random strings pre-specified by the attacker. This way, the attacker can: (1) Verify that coerced voters complied with instructions, by looking for the random strings the attacker furnished, and (2) Ensure that the votes of coerced voters are not counted, since random strings will most likely not correspond to real election choices. (Thus, this would combine the forced abstention attack and the randomization attack.)

2.2 Summary of the attack model

We consider the process for a single election as proceeding in these phases, corresponding largely with the functions enumerated in section 2.1:

1. **Setup:** If not already available, key pairs are generated for or by R and T . The candidate slate C for the election is published by R with appropriate integrity protection.
2. **Registration:** The identities and eligibility of would-be participants in the election are verified by R . Given successful verification, an individual becomes a registered voter, receiving from R a credential permitting participation in the election. Previously registered voters may be able to re-use their credentials. R publishes a voter roll L .
3. **Voting:** Referring to the candidate slate C , registered voters use their credentials to cast ballots.
4. **Tallying:** The authority T processes the contents of the bulletin board BB so as to produce a tally vector X specifying the outcome of the election, along with a proof of correctness P of the tally.
5. **Verification:** Any player, whether or not a participant in the election, can refer to BB, P and L to verify the correctness of the tally produced by T in the previous phase.

Assumptions in setup phase: Our security definitions permit the possibility of static, active corruption by the adversary of a minority of players in R and T in the setup phase. The security of our construction then relies on generation of the key pairs (SK_T, PK_T) and (SK_R, PK_R) by a trusted third party, or, alternatively, on an interactive, computationally secure key-generation protocol such as [24] between the players in R and those in T .

Assumptions prior to registration: The adversary may coerce a voter prior to the registration phase in the sense of requesting in advance that the voter retain transcripts of the registration process, or by providing data in an attempt to dictate voter interaction with the registrar.

Assumptions in registration phase: We make the assumption that the registration phase proceeds without any corruption of voters. This assumption is at some level a requirement for a coercion-free election, as an attacker capable of corrupting and seizing the credentials of a voter in this initial phase can mount a simulation attack. More precisely, we must make *at least one* of three assumptions about the registration phase:

1. Erasure of data from voter interaction with R is compulsory by the voter (e.g., enforced by smartcards provided to voters). This prevents an attacker from requesting registration transcript data after the fact; or
2. The adversary cannot corrupt any players in R ; or
3. Voters become aware of the identity of any corrupted player in R .

The reason we require at least one of these assumptions is as follows. If none of these assumptions holds, then the adversary can, on demanding information from a voter, verify the correctness of some portion thereof, where the voter would not know what portion is being checked. In other words, the adversary can perform spot checks,

with a high probability of successfully detecting false transcripts. In consequence, the adversary can coerce voters into divulging full transcripts of their interactions with R , thereby enabling a simulation attack. In contrast, if at least one of the assumptions holds, we show that it is possible to formulate a protocol that is coercion-resistant.

Assumptions on voting, tallying and verification phases: Subsequent to the registration phase, we assume that the adversary may seize control of a minority of players in T and any number of voters in a static, active manner. (Since R does not participate in the process subsequent to registration, we need not consider adversarial corruption of R at this point.) The adversary may also attempt to coerce voters outside its control by requesting that they divulge private keying material³ or behave in a prescribed manner in voting. Voters are assumed to be able to cast their ballots via fully anonymous channels, i.e., channels such that an attacker cannot determine whether or not a given voter cast a ballot. This assumption is a requirement for any election scheme to be fully coercion-resistant: If an attacker can tell whether or not a given voter cast a ballot, then the attacker can easily mount a forced-abstention attack. In practice, an anonymous channel may be achieved by enabling voters to cast ballots in public places, thereby mixing their votes with others, or by use of anonymizing, asynchronous mix-networks, and so forth.

3 Formal definitions

We now turn our attention to formal security definitions of the essential properties of *correctness*, *verifiability*, and *coercion-resistance*, respectively abbreviated *corr*, *ver*, and *c-resist*. Our definitions hinge on a set of experiments involving an adversary A in interaction with components of the election system ES . This adversary is assumed to retain state throughout the duration of an experiment. We formulate our experiments such that in all cases, the aim of the adversary is to cause an output value of ‘1’. Thus, for experiment $\mathbf{Exp}_{ES,A}^E(\cdot)$ on property $E \in (\textit{ver}, \textit{corr}, \textit{c-resist})$, we define $\mathbf{Succ}_{ES,A}^E(\cdot) = \Pr[\mathbf{Exp}_{ES,A}^E(\cdot) = '1']$.

³ We assume that the coercion takes place remotely. For example, the adversary may not continuously watch over the shoulder of a voter, monitor her hard-drive, etc. Our proposed protocol does potentially defend against some shoulder-surfing, however, by permitting voters to use fake keys and/or re-vote.

According to the standard definition, we say that a quantity $f(k)$ is *negligible* in k if for every positive integer c there is some $l = l(c)$ such that $f(k) < k^{-c}$ for $k > l$. In most cases, we use the term negligible alone to mean negligible with respect to the full set of relevant security parameters. Similarly, in saying that an algorithm has *polynomial running time*, we mean that its running time is asymptotically bounded by some polynomial in the relevant security parameters. As the properties of correctness and verifiability are of less relevance to our work than coercion-resistance, we relegate the first two definitions to appendices A and B.

Coercion resistance: Coercion resistance may be regarded as an extension of the basic property of privacy. Privacy in an election system is defined in terms of an adversary that cannot interact with voters during the election process. In particular, we say that an election is private if such an adversary cannot guess the vote of any voter better than an adversarial algorithm whose only input is the election tally. (Note, for example, in an election where all voters vote Republican, the system may have the property of privacy, even though the adversary knows how all voters cast their ballots in that election.)

Coercion resistance is a strong form of privacy in which it is assumed that the adversary may interact with voters. In particular, the adversary may instruct targeted voters to divulge their private keys subsequent to registration, or may specify that these voters cast ballots of a particular form. If the adversary can determine whether or not voters behaved as instructed, then the adversary is capable of blackmail or otherwise exercising undue influence over the election process. Hence a coercion-resistant voting system is one in which the user can deceive the adversary into thinking that she has behaved as instructed, when the voter has in fact cast a ballot according to her own intentions.

Our definition of coercion resistance requires addition of a new function to voting system ES:

- The function $\text{fakekey}(PK_{\text{auth}}, sk, pk) \rightarrow \tilde{sk}$ takes as input the public key of the authorities, and the private/public key pair of the voter. It outputs a spurious key \tilde{sk} .

Of course, for the function `fakekey` to enable coercion resistance, the key sk must be indistinguishable by the adversary A from a valid key, and only distinguishable by a majority of talliers T . This property is captured in our experiment characterizing coercion resistance. To simplify the formulation of the experiment, we assume implicitly that tally is computed by an oracle (with knowledge of SK_T). It suffices, however, for T to be computed via a protocol that achieves correct output and is computationally simulable by the adversary A (who, it will be recalled, may corrupt a minority of T).

Our definition of coercion resistance centers on a kind of game between the adversary A and a voter targeted by the adversary for coercive attack. A coin is flipped; the outcome is represented by a bit b . If $b = 0$, then the voter casts a ballot with a particular choice β , and provides the adversary with a false voting key \tilde{sk} ; in other words, the voter attempts to evade adversarial coercion. If $b = 1$, on the other hand, then the voter submits to the coercion of the adversary; she simply furnishes the adversary with her valid voting key sk , and does not cast a ballot. The task of the adversary is to guess the value of the coin b , that is, to determine whether or not the targeted voter in fact cast a ballot. We permit the adversary in this definitional game to specify the ballot value β . While it is somewhat unnatural for the adversary thus to specify the intention of the voter, this permits us to achieve the strongest possible security definition.

If the adversary has perfect knowledge about the intentions of all voters, then coercion is unavoidable. For example, if the adversary is attempting to coerce one voter in a given election and knows that all hundred of the other eligible voters will cast ballots, then the adversary can mount an abstention attack straightforwardly. The adversary in this case simply threatens the voter in the case that the total tally for the election is one hundred and one. Similarly, suppose that the adversary does not know whether or not any given voter will cast a ballot, but knows that all participating voters will cast a ballot for the Republican party. In this case, the adversary can win the game we describe above by specifying a ballot value $\beta = \text{“Democrat”}$.

It is evident therefore that for any definition of coercion-resistance to be meaningful, the adversary must have uncertain knowledge about how – and indeed whether – some voters will cast their ballots. In other words, coercion-resistance requires that there be some “noise” or statistical uncertainty in the adversary’s view of voting

patterns. To our benefit, it is natural to expect that in a real-world election an adversary can obtain only fragmentary knowledge about the likely behavior of voters. This means that coercion-resistance is a viable possibility. For a collection of n voters outside the control of the adversary – i.e., voters not subject to coercion – we characterize the view of the adversary in terms of a probability distribution D_{n,n_c} . We let ϕ be a symbol denoting a null ballot, i.e., an abstention, and let λ denote a ballot cast with an invalid credential. Then D_{n,n_c} is a distribution over vectors $(\beta_1, \beta_2, \dots, \beta_n) \in (n_c \cup \{\phi, \lambda\})^n$, i.e., over the set of possible ballot choices for an election plus abstentions and invalid ballots. Thus, the distribution D_{n,n_c} serves the purpose in our experiment of defining the distribution of the “noise” that conceals the behavior of voters targeted by the adversary for coercion. For a set of n voting credentials $\{sk_i\}$, we let $\text{vote}(\{sk_i\}, PK_T, n_c, D_{n,n_c}, k_2)$ denote the casting of ballots according to distribution D_{n,n_c} . In other words, a vector $(\beta_1, \beta_2, \dots, \beta_n)$ is drawn from D_{n,n_c} and vote β_i is cast using credential sk_i .

We are now ready to present an experiment *c-resist* that defines the game described above between an adversary and a voter targeted for coercion. Recall that k_1, k_2 , and k_3 are security parameters defined above, n_v is the total number of eligible voters for the election, and n_c is the number of candidates, i.e., the size of the candidate slate. We let n_A denote the number of voters that may be completely controlled, i.e., corrupted by the adversary. We define $n_U = n_v - n_A - 1$. In other words, the number of uncertain votes n_U equals the total number of possible votes, minus those coming from voters controlled by the attacker, minus the vote coming from the voter the attacker is trying to coerce (in the experiment). Note that n_U is therefore the number of voters that contribute “noise” to the experiment.

We consider a static adversary, i.e., one that selects voters to corrupt prior to protocol execution. We assume that the adversary has a list of “voter names,” i.e., a roll of potential participating voters.

We let \leftarrow denote assignment and \leftarrow denote the append operation, while $\%$ denotes the beginning of an annotative comment on the experiment. Our experiment treats the case in which the adversary seeks to coerce a single voter; extension of the definition to coercion of multiple voters is straightforward. The experiments defined here halt when an output value is produced.

⁴ Additionally, it is possible for voting authorities – or indeed any entity – intentionally to inject “chaff” in the form of blank and invalid ballots into an election system.

Experiment Exp $\overset{c\text{-resist}}{ES,A,H}(k_1, k_2, k_3, n_V, n_A, n_C)$

```

 $V \leftarrow A(\text{voter names, "control voters"});$  % A corrupts voters
 $\{(sk_i, pk_i) \leftarrow \text{register}(SK_R, i, k_2)\}_{i=1}^{n_V};$  % voters are registered
 $(j, \beta) \leftarrow A(\{sk_i\}_{i \in V}, \text{"set target voter and vote"});$  % A sets coercive target
if  $|V| = n_A$  or  $j \in \{1, 2, \dots, n_V\} - V$  or
 $\beta \in \{1, 2, \dots, n_C\} \cup \phi$  then % outputs of A checked for validity
    output '0';
 $b \in_U \{0, 1\};$  % coin is flipped
if  $b = 0$  then % voter evades coercion
     $\tilde{sk} \leftarrow \text{fakekey}(PK_T, sk_j, pk_j);$ 
     $BB \leftarrow \text{vote}(sk_j, PK_T, n_C, \beta, k_2);$ 
else % voter submits to coercion
     $\tilde{sk} \leftarrow sk_j;$ 
 $BB \leftarrow \text{vote}(\{sk_i\}_{i=j, i \in V}, PK_T, n_C, D_{n_U, n_C}, k_2);$  % ballots posted for honest voters
 $BB \leftarrow A(\tilde{sk}, BB, \text{"cast ballots"});$  % A posts to BB
 $(X, P) \leftarrow \text{tally}(SK_T, BB, n_C, \{pk_i\}_{i=1}^{n_V}, k_3);$  % election results are tallied
 $b \leftarrow A(X, P, \text{"guess } b\text{"});$  % A guesses coin flip
if  $b = b$  then % experimental output determined
    output '1';
else
    output '0';

```

The adversary A in the above experiment is quite powerful, being capable (when $b = 1$) of complete coercion of the targeted voter. In order to characterize the success of A , we must compare A with a second adversary A' . A' is capable of coercion only within the framework of an ideal voting experiment *c-resist-ideal*. In other words, A' characterizes the type of security against coercion that we would like to achieve in ES.

The main feature we are aiming for in our ideal experiment *c-resist-ideal* is for A to learn nothing from the private keys she acquires from corrupted players and from the coerced player. In particular, A cannot use private keys to perform active attacks. We cause A to express voting choices in a direct, ideal process; A cannot cast ballots, but merely enumerates the choices of players in her control. Additionally, A cannot use private keys to learn information about the voting behavior of honest players or the coerced player. The *only* information that A gets is the grand total X of votes in the election.

One feature of our experiment is counterintuitive. Because this is an ideal experiment, A is *always* given \tilde{sk} as the key of the coerced player. This is because A should be unable to determine, on the basis of keying material, from the situation in which coercion is successful or unsuccessful.

We require a function for the definition. We include here an ideal function *ideal-tally* that tallies the ballots posted to BB in a special way. *ideal-tally* tallies in a normal manner all of the ballots cast by honest voters, i.e., prior to adversarial posting. The ballots cast by A , however, are treated specially. In particular, the function *ideal-tally* determines for each ballot B what the underlying private key sk_i is. If $i \in V$, i.e., if the private key is not one assigned to one of the corrupted players, then the corresponding vote is not counted. Additionally, any double vote is not counted, i.e., *ideal-tally* performs the weeding of double votes that normally occurs during the tallying procedure. Finally, *ideal-tally* does the following based on the value of the secret bit b . If $b = 0$, then *ideal-tally* does not count any ballot cast (by the adversary) using private key \tilde{sk} . If $b = 1$, then *ideal-tally* does include in the final tally a ballot cast using \tilde{sk} (excluding double votes).

Our definition of *ideal-tally* here assumes that every ballot has a unique corresponding private key. This is true of most natural ballot structures (and true of our proposed scheme). This definition, of course, also assumes ideal functionality in *ideal-tally*, namely the ability to extract private keys and plaintext votes from ballots. We do not specify in our definition how this “oracle” power is achieved. In our proofs, we construct a simulator capable of performing this functionality required from *ideal-tally*.

Note that although A learns the secret keys of voters, in our ideal experiment these secret keys in fact provide A with no information useful in voting – the ideal function ideal-tally ensures against misuse of keys – and no information useful in learning votes – because A never sees BB .

We are now ready to present the experiment $c\text{-resist-ideal}$ that characterizes the success of A .

Experiment **Exp** $\text{ES,A,H}^{c\text{-resist-ideal}}(k_1, k_2, k_3, n_V, n_A, n_C)$

```

 $V \leftarrow A$  (voter names, “control voters”);           % A corrupts voters
 $\{(sk_i, pk_i) \leftarrow \text{register}(SK_R, i, k_2)\}_{i=1}^{n_V}$ ;   % voters are registered
 $(j, \beta) \leftarrow A$  (“set target voter and vote”);       % A sets coercive target
if  $|V| = n_A$  or  $j \in \{1, 2, \dots, n_V\} - V$  or
 $\beta \in \{1, 2, \dots, n_C\} \cup \phi$  then                   % outputs of A checked for validity
    output ‘0’;
 $b \in_U \{0, 1\}$ ;                                           % coin is flipped
if  $b = 0$  then                                              % voter evades coercion
     $BB \leftarrow \text{vote}(sk_j, PK_T, n_C, \beta, k_2)$ ;
 $\tilde{sk} \leftarrow sk_j$ ;
 $BB \leftarrow \text{vote}(\{sk_i\}_{i=j, i \in V}, PK_T, n_C, D_{n_U, n_C}, k_2)$ ; % ballots posted for honest voters
 $BB \leftarrow A(\tilde{sk}, \{sk_i\}_{i \in V}, \text{“cast ballots”})$ ;     % A specifies vote choices
 $(X, P) \leftarrow \text{ideal-tally}(SK_T, BB, n_C, \{pk_i\}_{i=1}^{n_V}, k_3)$ ; % election results are tallied
 $b \leftarrow A(X, \text{“guess } b\text{”})$ ;                             % A guesses coin flip
if  $b = b$  then                                             % experimental output determined
    output ‘1’;
else
    output ‘0’;
```

4 A Coercion-Resistant Election Protocol

We are now ready to introduce our protocol proposal. We begin by describing the cryptographic building blocks we employ. Where appropriate, we model these as ideal primitives, as discussed in appendix D.

Threshold cryptosystem with re-encryption: Our first building block is a threshold public-key cryptosystem CS that permits re-encryption of ciphertexts with knowledge only of public parameters and keys. The private key for CS is held by T in our construction.

To describe our aim in the ideal, we would like any ciphertext E to be perfectly hiding. We would like decryption to be possible only by having a majority of players in T agree on a ciphertext to be decrypted. We model this latter ideal property as in terms of a special decryption oracle denoted by $D\tilde{E}C$. We assume further that any decryption performed by $D\tilde{E}C$ is publicly verifiable.

Selected cryptosystem: El Gamal [23] represents a natural choice of cryptosystem for our purposes, and is our focus in this paper. For reasons that will become apparent later on we will adopt a modified version of the basic El-Gamal scheme which can be seen as a simplified version of the well known Cramer-Shoup [17] cryptosystem (only providing semantic security with respect to a passive adversary). We let G denote the algebraic group over which we employ this modified El Gamal (which we'll call simply M-El Gamal), and q denote the group order. For semantic security, we require that the Decision Diffie-Hellman assumption hold over G [7, 41]. The public key is (g_1, g_2, h) where g_1, g_2, h are elements in G . The secret key is $x \in \mathbb{Z}_q$ such that $h = g_1^x$.

To encrypt m one simply computes $(g_1^r, g_2^r, h^r m)$ for random r . Decryption is like plain El Gamal (one uses term g_1^r only).

We let ϵ_U here and elsewhere denote uniform, random selection from a set. A ciphertext in M-El Gamal on message $m \in G$ takes the form $(\alpha, \beta, \gamma) = (mh^r, g_1^r, g_2^r)$ for $r \in_U \mathbb{Z}_q$. For succinctness of notation, we sometimes let $E_h[m]$ denote a ciphertext on message m under public key h (assuming that g_1 and g_2 are considered public parameters).

Further details on the security of the scheme may be found in appendix E. An important feature of the M-El Gamal cryptosystem is that, exactly as the original version, it may be easily implemented in a threshold setting. In other words, the private key x may be distributed such that decryption can be performed by any quorum of share holders, without leakage of additional information. We exploit this distributed form of M-El Gamal in our proposed election scheme. As explained above, rather than focusing on a particular embodiment, we model the process by a decryption oracle denoted by \tilde{DEC} . We refer the reader to appendix E and to [12] for further discussion of threshold decryption in (plain) El Gamal.

Plaintext Equivalence Test (PET): A *plaintext equivalence test* (PET) [26, 30] is cryptographic primitive that operates on ciphertexts in a threshold cryptosystem. The input to PET is a pair of ciphertexts; the output is a single bit indicating whether the corresponding plaintexts are equal or not. PET may be realized as an efficient distributed protocol that reveals no additional, non-negligible information about plaintexts. For a detailed description of efficient methods to perform this verification, along with proofs of the properties of the construction, see [30]. Rather than focusing on a specific embodiment of PET, we model the ideal properties of the primitive by means of an oracle denoted by \tilde{PET} , and with the property of public verifiability.

Mix network: A (re-encryption) mix network (MN) is a distributed protocol that takes as input an ordered set $E = \{E_1, E_2, \dots, E_d\}$ of ciphertexts generated in a cryptosystem like El Gamal that permits re-encryption. The output of MN is an ordered set $E = \{E_{\pi(1)}, E_{\pi(2)}, \dots, E_{\pi(d)}\}$. Here, $E_{\pi(i)}$ is a re-encryption of E_i , while π is a uniformly random, secret permutation. This is to say that MN randomly and secretly permutes and re-encrypts inputs. Thus, the special privacy property of a mix network is this: An adversary cannot determine which output ciphertext corresponds to which input ciphertext, i.e., which inputs and outputs have common plaintexts. Stated another way, an adversary cannot determine $\pi(j)$ for any j with probability non-negligibly better than a random guess. A number of mix network constructions have been proposed that offer privacy and robustness against a static, active adversary capable of corrupting any minority of the n players (servers) performing the mix network

operation. Some of these constructions offer the additional property of *verifiability*. In other words, a proof is output that is checkable by any party and demonstrates, relative to E and the public key of the ciphertexts that E is correctly constructed. It is convenient to conceptualize MN as an ideal primitive in terms of an oracle for MN with the property of public verifiability.

 $M\tilde{N}$

There are many good choices of mix networks for our scheme; some examples of such schemes are those of Furukawa and Sako [22] and Neff [33]. For further details, see appendix E.

Proofs of knowledge: As sketched in the above descriptions, we make use of NIZK (non-interactive zero-knowledge) proofs of knowledge [6] in a number of places. We do not describe these tools in detail, as they are standard tools in the cryptographic literature. Instead, we refer the reader to, e.g. [15], for discussion of construction and logical composition of such protocols, and [11] for a notational overview and discussion of efficient realization. As is the usual case, our use of NIZK proofs enforces a reliance on the random oracle model in the security proofs for our scheme [4].

4.1 Our proposed protocol

Setup: The key pairs (SK_R, PK_R) and (SK_T, PK_T) are generated (in an appropriately trustworthy manner, as described above), and PK_T and PK_R are published along with all system parameters.

Registration: Upon sufficient proof of eligibility from V_i , the registrar R generates and transmits to V_i a random string $\sigma_i \in U_G$ that serves as the credential of the voter. Such credentials can be generated in a distributed threshold manner (as in [24]), with each active server of R sending the voter V_i its credential. R then adds $S_i = E_{PK_T}[\sigma_i]$ to the voter roll L .⁵ The voter roll L is maintained on the bulletin board BB and digitally signed as appropriate by R .

We assume that the majority of players in R are honest, and can thus ensure that the R provides V_i with a correct credential. Nonetheless, it is possible for R to furnish V_i with a proof that S_i is a ciphertext on σ_i . To enforce coercion-resistance in the case where erasure of secrets by voters is not automatic, a *designated verifier proof* [28] must be employed for this proof. We note that credentials may be used for multiple elections.

Candidate-slate publication: R or some other appropriate authority publishes a candidate slate C containing the names and unique identifiers in G for n_C candidates, with appropriate integrity protection. This authority also publishes a unique, random election identifier.

Voting: Voter V_i casts a ballot for candidate c_j comprising M-El Gamal ciphertexts $(E_1^{(i)}, E_2^{(i)})$ respectively on choice c_j and credential σ_i . In particular, for $a_1, a_2 \in U_{Z_q}$:

$$E_1^{(i)} = (\alpha_1, \alpha_1, \beta_1) = (g_1^{a_1}, g_2^{a_1}, c_j h^{a_1}), E_2^{(i)} = (\alpha_2, \alpha_2, \beta_2) = (g_1^{a_2}, g_2^{a_2}, \sigma_i h^{a_2}).$$

The first is a ciphertext on the candidate choice of the voter, the second a ciphertext on the credential of the voter.

Additionally, V_i includes NIZK proofs of knowledge of σ_i and c_j , a NIZK that α_i, α_i have the same discrete logarithm with respect to basis g_1 and g_2 and also a NIZK proof that $c_j \in C$, i.e., that c_j represents a valid candidate choice. The latter can be accomplished, for example, using a disjunctive proof that the ciphertext constitutes a valid encryption of a candidate choice in C . These three NIZK proofs, which we denote collectively by Pf , may be accomplished efficiently using standard techniques. As is standard practice, the challenge values for Pf are constructed using a call to a cryptographic hash function, modeled in our security analysis by a random oracle $\tilde{O}W$. Input to $\tilde{O}W$ for these challenge values includes E_1, E_2 and commitment values required for realization of the NIZK proofs. V_i posts $B_i = (E_1, E_2, Pf)$ to BB via an anonymous channel.

Tallying: To tally the ballots posted to BB , the authority T performs the following steps:

1. **Checking proofs:** T verifies the correctness of all proofs on BB . Any ballots with invalid proofs are discarded. For the valid, remaining ballots, let A_1 denote the list of ciphertexts on candidate choices (i.e., the E_1 ciphertexts), and let B_1 denote the list of ciphertexts on credentials (i.e., the E_2 ciphertexts).
2. **Eliminating duplicates:** The tallying authority T performs pairwise PETs on all ciphertexts in B_1 , and removes duplicates according to some pre-determined policy, using e.g., order of postings to BB . When an element is removed from B_1 , the corresponding element (i.e., that with the same index) is removed from A_1 . We let B_2 and A_2 be the resulting “weeded” vectors. This is equivalent to retaining at most one ballot per given credential.
3. **Mixing:** T applies MN to A_2 and B_2 (using the same, secret permutation for both). Let A_3 and B_3 be the resulting lists of ciphertexts.
4. **Checking credentials:** T applies mix network MN to the encrypted list L of credentials from the voter roll. T then compares each ciphertext of B_3 to the ciphertexts of L using PET. T retains a vector A_4 of all ciphertexts of A_3 for which the corresponding elements of B_3 match an element of L according to PET. This step achieves the weeding of ballots based on invalid voter credentials.
5. **Tallying:** T decrypts all ciphertexts in A_4 and tallies the final result.

⁵ In our definitions above, we use the common terminology of private and public keys – with corresponding notation sk_i and pk_i – to describe the credentials associated with voters. Shifting from a general exposition to our specific protocol, we now use σ_i instead of sk_i to denote a voter credential, and S_i instead of pk_i to denote a public representation thereof. This change of notation aims to reflect the fact that voters do not employ a conventional form of public-key authentication in our scheme.

How to cheat a coercer: One possible implementation of the function `fakekey` is simply for the coerced voter

V_i to select and reveal a random group element $\tilde{\sigma}_i$, claiming that this is the credential σ_i . (If coerced multiple

times – whether for one or more elections – the voter V_i would, of course, release the same value $\tilde{\sigma}_i$.) In addition, partial or full transcripts from the registration phase may be given to the adversary. We discuss the process of faking voting keys in more detail in appendix C.

We offer further discussion of security and a formal security proof in appendix D.

A Definitions of Correctness and Verifiability

Correctness: We first consider the property of correctness. This property is in fact twofold: First, it stipulates that an adversary A cannot pre-empt, alter, or cancel the votes of honest, i.e., voters that are not *controlled*; Second, it stipulates that A cannot cause voters to cast ballots in such a way as to achieve double voting, i.e., use of one credential to vote multiple times, where more than one vote per credential is counted in the tally.

In our experiment characterizing correctness, we give the adversary powers she does not normally have. Namely, apart from getting to select a set V of voters she will control, we also allow her to choose the candidate-slate size $n - c$, and to choose what votes will be cast by voters she does not control. The latter voters will indeed vote according to the adversary's wish – but only for the purposes of our thought experiment defining correctness, of course. If the adversary still cannot cause an incorrect tally to be computed (i.e., one not corresponding to the votes cast), then the scheme has the correctness property even in the real-world scenario in which the adversary has less power. The aim of the adversary is to cause more than $|V|$ ballots to be counted in the final tally on behalf

of the controlled voters, or to alter or delete the vote of at least one honest voter. (This corresponds to the condition that: (1) The verification of the tally succeeds, and (2) That either a vote is “dropped” or “added”.) Our definition assumes implicitly that tally is computed correctly by the authority T . (The next property we consider, namely verifiability, addresses the possibility that this is not so.) In what follows, we let Y denote the multiset corresponding to entries in the vector Y , and $|Y|$ denote the cardinality of set Y .

Experiment **Exp** $\text{ES}_{A}^{\text{corr}}(k_1, k_2, k_3, n_C, n_V)$

$\{(sk_i, pk_i) \leftarrow \text{register}(SK_R, i, k_2)\}_{i=1}^{n_V}$; % voters are registered

$V \leftarrow A(\{pk_i\}_{i=1}^{n_V}, \text{“choose controlled voter set”})$; % A corrupts voters

$\{\beta_i\}_{i \in V} \leftarrow A(\text{“choose votes for uncontrolled voters”})$; % A chooses votes for honest voters

$BB \leftarrow \{\text{vote}(sk_i, PK_T, n_C, \beta_i, k_2)\}_{i \in V}$; % honest voters cast ballots

```

( $X, P$ )  $\leftarrow$  tally( $SK_T, BB, n_C, \{pk_i\}_{i=1}^{n_V}, k_3$ );           % honest ballots are tallied
 $BB \leftarrow A$ (“cast ballots”,  $BB$ );                               % A posts ballots to  $BB$ 
( $X, P$ )  $\leftarrow$  tally( $SK_T, BB, n_C, \{pk_i\}_{i=1}^{n_V}, k_3$ );       % all ballots are tallied
if verify( $PK_T, BB, n_C, X, P$ ) = ‘1’ and                          % does function verify accept?
  ( $\beta_i \in X$  or  $|X| - |X'| > |V|$ ) then                            % did A successfully tamper?
  output ‘1’;
else
  output ‘0’;

```

We say that ES possesses the property of correctness if for all polynomial-time adversaries A , it is the case that $\text{Succ}_{\text{ES}, A}^{\text{corr}}(k_1, k_2, k_3, n_V)$ is negligible.

Verifiability: As explained above, an election system has the property of correctness if computation of tally always yields a valid tabulation of ballots. Given the ability of an adversary A , however, to corrupt some number of authorities among T , we cannot be assured that tally is always computed correctly. The property of verifiability is the ability for any player to check whether the tally X has been correctly computed, that is, to detect any misbehavior by T in applying the function tally.

A strong security definition for verifiability is appropriate given the high level of auditability required for trustworthy elections. Such a definition considers an attacker A capable of controlling *all* of the voters and tallying authorities in T . This attacker seeks to construct a set of ballots on BB and a corresponding tally X and proof P of correct tabulation such that the proof is accepted by verify, but the tally is in fact incorrect. By an incorrect tally, we mean one in which all of the valid ballots of a particular voter (i.e., corresponding to a particular credential) are discounted, or else where multiple votes are tallied that could have been generated by the same voting credential. Our experiment characterizing verifiability is as follows.

```

Experiment  $\text{Exp}_{\text{ES}, A}^{\text{ver}}(k_1, k_2, k_3, n_C, n_V)$ 
   $\{(sk_i, pk_i) \leftarrow \text{register}(SK_R, i, k_2)\}_{i=1}^{n_V}$ ;           % voters are registered
   $(BB, X, P) \leftarrow A(SK_T, \{(sk_i, pk_i)\}_{i=1}^{n_V}, \text{“forge election”})$ ; % A concocts full election
   $(X, P) \leftarrow \text{tally}(SK_T, BB, n_C, \{pk_i\}_{i=1}^{n_V}, k_3)$ ;   % tally is taken on  $BB$ 
  if  $X \neq X'$                                                     % does A’s tally differ from correct  $BB$  tally?

```

```

    and verify( $PK_T, BB, n_C, X, P$ ) = '1' then
        output '1';
    else
        output '0';

```

% does function verify accept?

We say that ES possesses the property of verifiability if for all positive integers n and all adversaries A with polynomial running time, the quantity $\text{Succ}_{ES,A}^{ver}(k_1, k_2, k_3, n, \nu)$ is negligible. A technical strengthening of this definition and that for correctness is possible, and discussed in the next section, appendix B, of this paper.

Another aspect of verifiability that we do not formally define, but do mention here and incorporate into our proposed protocol is that of verification against voter rolls. In particular, it may be desirable for any election observer to check that credentials were assigned only to voters whose names are on a published roll. This is not technically a requirement if we rule out corruption of players R , but may still be desirable for high assurance of election integrity. Our definitions can be modified accordingly.

B Remark on strong verifiability

We set forth our definitions of correctness and verifiability in appendix A to meet the minimal requirements for a fair election and to achieve some measure of conceptual simplicity. These definitions are adequate for most election scenarios, but have a technical deficiency that may be of concern in some cases. In particular, our definitions allow for the possibility that a voter controlled by A casts a ballot corresponding to vote β , but that

the ballot gets counted as a vote for β . Since A can choose the vote cast by a controlled voter in any case, this technical deficiency only means that A can potentially cause the votes of *controlled voters only* to change in the midst of the election process. It does not provide A with control of a larger number of votes. Most importantly, we note that this definitional weakness does not apply to our proposed protocol, which meets the stronger definition we now set forth.

Nonetheless, one can envisage some (somewhat artificial) scenarios in which stronger guarantees may be desirable. For example, A might have the aim of causing the victor in an election to win by the slimmest possible margin. In this case, if A controls a majority of T , then A might seek to decrypt all of the ballots cast in an election and alter the votes of controlled voters so as to favor the losing candidate.

We discuss now how our definition of verifiability may be modified to discount the possibility of this type of attack. (Analogous modifications may be made to the definition of correctness.) In particular, we can require that P be a proof that every tallied vote corresponds uniquely to a credential for which a valid ballot has been cast. For this, we require a natural technical restriction on $\text{vote}(\cdot)$. Let $\text{vote}(\cdot)$ denote the set of possible outputs for the randomized function vote on a particular input. We require that an output ballot be wholly unambiguous with respect to both the vote β and the credential sk . In other words, we require

$$\text{vote}(sk_0, PK_T, n_C, \beta_0, k_2) \cap \text{vote}(sk_1, PK_T, n_C, \beta_1, k_2) = \emptyset \text{ if } \beta_0 \neq \beta_1 \text{ or } sk_0 \neq sk_1.$$

To achieve our strengthened definition of verifiability, we alter experiment $\text{Exp}_{ES,A}^{ver}(k_1, k_2, k_3, n_v)$ such that if the following conditions 1 and 2 are met, then the output of the experiment is '1'. Otherwise it is '0'.

1. $\text{verify}(PK_T, BB, n_C, X, P) = '1'$
2. For every injective mapping $f: X \rightarrow Z$ one of two conditions holds:
 - (a) $\exists B: B \in BB, B \in \text{vote}(sk_i, PK_T, n_C, \beta, k_2), \forall j f(j) = i$
 - (b) $\exists \beta \in X: f(\beta) = i, \forall B \in BB, B \in \text{vote}(sk_i, PK_T, n_C, \beta, k_2)$

Conditions 2(a) and 2(b) here respectively specify that the adversary has successfully defeated the verifiability of the system either by causing all of the valid ballots associated with a particular credential not to be counted or else enabling multiple votes to be tallied for a single credential.

Given use of a verifiable mix network, our proposed protocol meets this stronger security definition for verifiability.

C The Faking of Voting Keys

We provide some more detail here on the process whereby a voter fakes a voting credential in our proposed protocol. Upon receiving a claimed credential $\tilde{\sigma}_i$, the adversary would like to verify if it is correct. Let us consider the possibility of doing so under each of our three possible assumptions on the registration phase discussed in the body of the paper; in doing so, recall that we always assume that the adversary can corrupt only a minority of servers in T , and so, will not be able to decrypt any of the semantically secure encryptions of credentials.

1. Assume that there is a mechanism forcing erasure of voter information no longer needed at the end of the registration phase, and that only a minority of servers in R may be corrupted. At the end of the registration process, each voter will erase information specifying what part of the transcript leading to the credential σ_i he got from what registration server. Without proofs or transcripts from individual servers of R , it is not possible for the adversary to verify the correctness of $\tilde{\sigma}_i$.

2. Assume that the adversary cannot corrupt *any* server in R . As mentioned, the registration servers may if desired use designated verifier proofs to prove to each voter that the share they send is authentic (i.e., will be part of the recorded transcript S_i). While the voter will be convinced of these proofs, the adversary will not; in fact, he cannot distinguish between real such proofs and proofs simulated by V_i . Therefore, V_i can convincingly release full *simulated* transcripts from the registration phase, corresponding to a credential $\tilde{\sigma}_i$.
3. Assuming that the user knows what (minority of) servers in R are corrupted, but is not necessarily able to erase data, he can present the adversary with registration transcripts that are consistent with the view of the servers he knows to be corrupted, but inconsistent (in terms of the real share of σ_i) with the view of

the servers that are not. The latter transcripts will be accompanied by simulated designated verifier proofs. Since the adversary may only corrupt a minority of servers in R , and a majority is required to compute the credential σ_i , there will be at least one share of σ_i that V_i can change to obtain a fake credential $\tilde{\sigma}_i = \sigma_i$, without the detection of the adversary.

D Proving Coercion-Freeness

In this section, we provide a detailed outline for proof of the property of coercion-freeness in our proposed election protocol. (We do not consider correctness or verifiability here, as these are more standard properties, and the associated proofs are more straightforward.) For the purposes of this proof, we assume the use of the M-El Gamal cryptosystem over a preselected group G of order q . The coercion-freeness of our scheme is dependent on the Decision-Diffie Hellman (DDH) assumption on G . Briefly stated, this assumption states that no algorithm with running-time polynomial in the security parameters for G can distinguish between the two distributions D and D with non-negligible probability: Here, D is the distribution of tuples of the form (y_1, g_1, y_2, g_2) , where $g_1, g_2 \in U G$, $y_1 = g_1^x$, and $y_2 = g_2^x$ for $x \in U Z_q$; i.e., the pair (y_1, g_1) and (y_2, g_2) are related by a common exponent. D is the distribution of random tuples, i.e., tuples of the form (y_1, g_1, y_2, g_2) , where $y_1, g_1, y_2, g_2 \in U G$. For detailed treatment of this assumption (expressed in an alternative, equivalent form), see, e.g., [7].

D.1 Assumptions

As explained above, we simplify our analysis by assuming ideal constructions for a number of components in our election protocol. Our aim in doing so is twofold: (1) Our protocol is flexible enough to accommodate a range of cryptographic building blocks from the literature and (2) We wish to retain a focus on the conceptual and definition elements of our paper, and not on protocol details. Hence, we assume the availability of oracles for the four following cryptographic operations in our protocol: mixing, plaintext equivalence testing (PET), threshold ciphertext decryption, and calls to the one-way or hash function required for NIZK proofs. As in the main body of the paper, denote these oracles respectively by $\tilde{M}\tilde{N}$, $\tilde{P}\tilde{E}\tilde{T}$, $\tilde{D}\tilde{E}\tilde{C}$ and $\tilde{O}\tilde{W}$. Although the functioning of these oracles should be clear from our protocol description, we present it again here:

- The oracle $\tilde{M}\tilde{N}$ performs exactly the same function as a mix network. It accepts as input an ordered list

- $E = \{E_1, E_2, \dots, E_d\}$ of ciphertexts under the public key PK_T of the tallying authorities. Its output on E is an ordered set $E = \{E_{\pi(1)}, E_{\pi(2)}, \dots, E_{\pi(d)}\}$ for a secret, random permutation π , where $E_{\pi(i)}$ represents a re-encryption of ciphertext E_i .
- The oracle $P\tilde{E}T$ takes as input a pair of ciphertexts (E, E') under PK_T . It outputs a ‘1’ if E and E' have identical corresponding plaintexts, and outputs ‘0’ otherwise.
 - The oracle $D\tilde{E}C$ takes as input a ciphertext E under PK_T . It outputs the corresponding plaintext.
 - The oracle $O\tilde{W}$ takes as input a query value in $\{0, 1\}^*$, and outputs a random value $\{0, 1\}^{k_4}$, where k_4 is a security parameter (that may depend on k_1, k_2 and k_3). The output of $O\tilde{W}$ is consistent, in the sense that a given input value always yields the same output value. This oracle may be viewed as the ideal embodiment of a cryptographic hash function.

Each of these oracles accepts publicly viewable input from all participating authorities (talliers). Each tallier may be thought of as having a publicly readable tape to which it may write input values for a given oracle; each tape contains a write portion for each time-step of the protocol, which we assume to be synchronous. At the end of a given timestep, an oracle produces output according to the following procedure. If a majority of talliers have furnished identical non-null values Z on their tapes, then the oracle processes input Z and yields the corresponding output. If there is no non-null majority input, then the oracle simply outputs the special symbol \perp . The requirement for majority input ensures that the protocol execution is determined by honest players, i.e., effectively reduces A to an honest-but-curious adversary once the ballot-posting phase for the election is complete.

We additionally assume for simplicity that key setup and registration are performed by a trusted entity. Our proofs may be extended to accommodate more general assumptions in which these two processes are performed in a distributed manner.

D.2 Proof overview

Recall that our definition of coercion-freeness revolves around a game played between an adversary A and a voter targeted for coercion. The aim of A is to guess which of the following two behaviors the voter has adopted during the execution of an election system ES: (1) The voter has divulged valid voting credentials and abstained from voting or (2) The voter has divulged fake credentials and cast a ballot. In order to demonstrate that ES possesses coercion-freeness, we must show that A can guess successfully with probability only negligibly better than a weaker poly-time adversary A interacting with an ideal election system. This adversary A is passive, and its only input is the final tally X of votes cast by honest voters in the completed election plus Γ , the number of ballots eliminated for invalid associated credentials.

Our proof strategy is to construct a polynomial-time algorithm S that takes a set of ballots W of honest voters and simulates the election system ES in the experiment $c\text{-resist}$. If the simulation is indistinguishable to A from use of the true functional components of ES, and A cannot cause the simulation to deviate from correct execution, then we see that A learns nothing more than the correct election tally X and the number of bad ballots Γ . This means in turn that A is no more powerful than the ideal adversary A characterized in our experiment $c\text{-resist-ideal}$. Thus ES is coercion-free.

The inability of the adversary to cause deviation in the experiment from correct execution hinges on our oracle definitions, which require majority agreement on input values. Given this, we show that the simulation produced by S is indistinguishable by A from a real experimental execution of $c\text{-resist}$ under the DDH assumption on G . Our proof relies on the semantic security of M-El Gamal (see appendix E). In particular, we make use of the following, useful fact implied by the DDH assumption: A poly-time adversary that selects a plaintext m cannot distinguish between the distribution of M-El Gamal ciphertexts on m ((A^{g_1}, A^{g_2}, B)) and the distribution of triplets of the form $(\alpha_1, \alpha_2, \beta)$, where $\beta \in G$ and α_1, α_2 are distributed exactly as (A^{g_1}, A^{g_2}) , with non-negligible probability (in the security parameters for G). In consequence of this observation, it is possible for S to simulate the election process by substituting *random ciphertexts*, i.e., random triplets of group elements, for the real ciphertexts that would be processed in a true execution of the experiment $c\text{-resist}$. In particular, S can

simulate the ballots of voters not controlled by A with a list of random ciphertexts. Additionally, S can simulate the oracle \tilde{MN} by setting its simulated output to a list of random ciphertexts. Under the DDH assumption, A cannot distinguish between the random ciphertexts furnished by S and the ciphertexts that would be processed in a true execution of ES.

D.3 The simulation

We now outline the steps of the simulation of c -resist executed by S . Throughout the simulation, according to the usual technique in the literature, S maintains state for the simulated oracle \tilde{OW} so as to ensure consistency of output values. Let $W \in D_{n_U, n_C}$ represent a set of ballots input into the simulation as representing the posting of

honest voters. At the very beginning the simulator receives a quadruple (g_1, g_2, h_1, h_2) which is either a Diffie-Hellman quadruple or a random one, according to some hidden bit d . More formally, $d = 1$ if the quadruple is a DH one and $d = 0$ otherwise. The goal of the simulator is to guess which situation is dealing with.

- Setup:** S chooses uniformly and at random two elements $x_1, x_2 \in_U \mathbb{Z}_q$ and sets $h = g_1^{x_1} g_2^{x_2} \pmod p$. S publishes the public key (g_1, g_2, h) and also a randomized candidate slate $\mathbf{C} = \{c_i\}_{i=1}^{n_C}$ such that $c_i = g_1^{r_i}$ for $r_i \in_U \mathbb{Z}_q$. (For technical reasons in our proof, we require that candidate identifiers here be random, rather than comprising the set $\{1, 2, \dots, n_C\}$.)
- Registration:** S simulates the registrar R , generating a set of credentials $\{s_i\}_{i=1}^{n_U}$ for $s_i \in_U \mathbb{Z}_q$. For the encrypted credential list \mathbf{L}_0 , the simulator S publishes a list of n_U ciphertexts (using a public key generated as above).

3. **Adversarial corruption:** The adversary A selects a set V of n voters to corrupt, as well as a voter j for coercion and a target vote β . If any of these selections are invalid, i.e., if $V = n$ or $j \in V - V$ or $\beta \in C \setminus \phi$, then the simulation is terminated.
4. **Coin flip:** A coin $b \in \{0, 1\}$ is flipped.
5. **Credential release:** S gives A the set of credentials $\{\sigma_i\}_{i \in V}$ as well as a credential σ for the targeted voter j . If $b = 1$, then S gives $\sigma = \sigma_j$; otherwise σ is a random string.
6. **Honest voter simulation:** For each ballot element in W , the simulator posts a ballot consisting of two ciphertexts $(\alpha_{i,1}, \alpha_{i,1}, \beta_{i,1}), (\alpha_{i,2}, \alpha_{i,2}, \beta_{i,2})$. S also furnishes the associated NIZK proofs of the form specified above. Since the associated challenge value comes from $\tilde{O}W$, and may therefore be predetermined by S , the NIZK proof may be simulated using standard techniques. Let A_0 be the list of these ballots. Let A^* be the associated set of plaintext ballot choices in W for which the associated credential is correct, i.e., excluding λ elements.
 The simulator creates the ciphertexts above as follows. For each ballot element in W , S chooses two elements r_i, k_i at random in Z_q and sets $(\alpha_{i,1} = h_1^{r_i}, \alpha_{i,1} = h_2^{r_i}, \beta_{i,1} = h_1^{r_i x_1} h_2^{r_i x_2} c_j), (\alpha_{i,2} = h_1^{k_i}, \alpha_{i,2} = h_2^{k_i}, \beta_{i,2} = h_1^{k_i x_1} h_2^{k_i x_2} \sigma_i)$
7. **Adversarial ballot posting:** The adversary A posts a set of ballots B_0 and associated NIZK proofs.
8. **Decryption of ballots posted by the adversary** S checks the NIZK proofs in B_0 . Let B_1 be the list of ballots with correct proofs. For each ballot in B_1 and each credential in $\{\sigma_i\}_{i \in V} \setminus \sigma_j$, the simulator decrypts using his own private key (see above).
9. **Tallying simulation:** S simulates the behavior of honest tallying authorities. Since these are a majority, any deviating behavior by tallying authorities in the control of A may be ignored. This part of the simulation proceeds as follows:
 - (a) **Proof checking:** Let E_0 denote the combined list of input ballots A_0 and B_0 . S simulates the behavior of honest tallying authorities in rejecting all ballots with invalid associated NIZK proofs. Let E_1 be the resulting ballot list.
 - (b) **Eliminating duplicates:** Since no mixing has yet occurred, S may simulate the elimination of duplicate ballots using its own decryption key. Let E_2 be the resulting ballot list.
 - (c) **Mixing:** S simulates the oracle $\tilde{M}N$ as applied to E_2 by outputting an equal-length list E_3 of random ciphertext triples. Likewise, S simulates the mixing of L_0 by outputting an equal-length list L_1 of

random ciphertexts.

- (d) **Checking credentials:** S simulates the process of credential checking. In a true protocol execution, this would involve sequential comparison using $P\tilde{E}T$ between each ballot in E_3 (more precisely, the credential ciphertext therein) and the ciphertexts in L_1 . Either a match is found, in which case a ballot is deemed to be based on a valid credential, or else the list L_1 is exhausted, and the ballot is rejected. S simulates the output of $P\tilde{E}T$ for this phase of the protocol using its own decryption key as before. Let E_4 be the resulting ballot list.
- (e) **Decryption:** This is done straightforwardly.

Now if the adversary outputs a guess bit b the simulator returns b as his own guess for the decisional Diffie-Hellman challenge.

Observe that if the simulator's input is a Diffie-Hellman triplet (that is $d = 1$) then the simulation above is perfectly indistinguishable from the experiment $\mathbf{Exp}_{ES,A,H}^{c-resist}$.

As a matter of fact, assuming $g_1 = g, g_2 = g^a, h_1 = g^b, h_2 = g^{ab}$ for some g , any ciphertext of the form $(\alpha_{i,1} = h_1^{r_i}, \alpha_{i,1} = h_2^{r_i}, \beta_{i,1} = h_1^{r_i x_1} h_2^{r_i x_2} m)$ is actually a valid one. Indeed $h_1^{r_i} = g^{br_i} = g_1^{br_i}, h_2^{r_i} = g^{abr_i} = g_2^{br_i}$ and $h_1^{r_i x_1} h_2^{r_i x_2} m = g^{br_i x_1} g^{abr_i x_2} m = g_1^{br_i x_1} g_2^{br_i x_2} m = h^{br_i} m$.

This means that

$$\Pr[S = 1/d = 1] = \Pr[\mathbf{Exp}_{ES,A,H}^{c-resist}(V) = 1] = \mathbf{Succ}_{ES,A}^{c-resist}(V)$$

where we denoted with V the view of the adversary.

On the other hand if the simulator's input is not a Diffie-Hellman triplet (that is $d = 0$) then the view produced by the simulation above does not give any information (in a strong information theoretic sense) about the votes

posted by the honest parties. This is because, assuming $g_1 = g, g_2 = g^a, h_1 = g^b, h_2 = g^c$ for some $c \in \mathbb{U} \mathbb{Z}_q$, one has that a ciphertext of the form $(\alpha_{i,1} = h_1^{r_i}, \alpha_{i,1} = h_2^{r_i}, \beta_{i,1} = h_1^{r_i x_1} h_2^{r_i x_2} m)$ actually "masks" the message m perfectly. Indeed $h_1^{r_i} = g^{br_i} = g_1^{br_i}, h_2^{r_i} = g^{cr_i} = g_2^{cr_i}$ and $h_1^{r_i x_1} h_2^{r_i x_2} m = g^{br_i x_1} g^{cr_i x_2} m = g_1^{br_i x_1} g_2^{cr_i x_2} m = g_1^{br_i x_1} g_2^{br_i x_2} g_2^{cr_i x_2} m = h^{br_i} g_2^{cr_i x_2} m$.

This means that, in this case, the probability that the simulator outputs one is equal to the probability that the adversary outputs one in experiment $\mathbf{Exp}_{c-resist, -ideal}$.

More formally

$$\Pr[S = 1/d = 0] = \Pr[\mathbf{Exp}_{c-resist, -ideal}(V) = 1] = \mathbf{Succ}_{c-resist, -ideal}(V)$$

This means that

$$\mathbf{Adv}_S^{\text{ddh}} = \Pr[S = 1/d = 1] - \Pr[S = 1/d = 0] = \mathbf{Adv}_{c-resist, ES,A}$$

under the Decisional Diffie-Hellman Assumption this quantity is negligible.

E Some details on primitives

El Gamal: As explained in the body of the paper, El Gamal [23] represents a natural choice of cryptosystem for our purposes, and is our focus in this paper. Recall that we let G denote the algebraic group over which we employ El Gamal, and q denote the group order. For semantic security, we require that the Decision Diffie-Hellman assumption hold over G [7, 41]. A public/private key pair in El Gamal takes the form $(y (= g^x), x)$, where $x \in \mathbb{U} \mathbb{Z}_q$. We let $\in \mathbb{U}$ here and elsewhere denote uniform, random selection from a set. The private key x may be distributed among the n players in T using (t, n) -Shamir secret sharing [?] over $GF[q]$, for $t > n/2$. This private key may be generated by a trusted third party or via a computationally secure simulation of this process [24]. Each player then holds a public/private key pair $(y_i (= g^{x_i}), x_i)$, where x_i is a point on the polynomial used for the secret sharing. A ciphertext in El Gamal on message $m \in G$ takes the form $(\alpha, \beta) = (m y^r, g^r)$ for $r \in \mathbb{U} \mathbb{Z}_q$. For succinctness of notation in the body of the paper, we sometimes let $E_y[m]$ denote a ciphertext on message m under public key y . To re-encrypt a ciphertext (α, β) , it suffices to multiply it pairwise by a ciphertext on $m = 1$, i.e., to compute a new ciphertext $(\alpha, \beta) = (y^r \alpha, g^r \beta)$ for $r \in \mathbb{U} \mathbb{Z}_q$.

To decrypt a ciphertext (α, β) , the plaintext $m = \alpha/\beta^x$ is computed. To achieve a threshold decryption of

ciphertext (α, β) , each active player i publishes a decryption share $\beta_i = \beta^{x_i}$. The value β^x , and thus m , may be computed using standard Lagrange interpolation. Player i may prove the correctness of its share using an NIZK proof of the form $PK\{s : \beta_i = \beta^s \mid u_i = g^s\}$ – essentially two Schnorr identification proofs [?] with conjunction achieved using techniques described in, e.g., [15]. We omit many details in this description regarding the scheduling of these operations and the use of commitments to avoid adversarial bias. (The reader is referred to, e.g., [12, 24] for some discussion of these issues in relation to key generation.)

We note that another possible choice of cryptosystem for our voting scheme is that of Paillier [?].

Modified El Gamal: As mentioned before our modified version of the El Gamal cryptosystem can be seen as a simplified version of the Cramer-Shoup [17], method. It is rather straightforward to prove that the scheme is actually semantically secure under the decisional Diffie-Hellman assumption. The argument closely follows the one presented in [17]. Here we provided a sketched version of such an argument. Imagine there exists a probabilistic polynomial time algorithm A which can break the semantic security of the proposed scheme. Then our goal is to describe a different algorithm S (a simulator) which uses A to break the decisional DH problem. So assume S receives on input a quadruple (g_1, g_2, h_1, h_2) and has to determine if this is a DDH quadruple or not. S constructs the public key (for the M-El Gamal scheme) as follows. It chooses x_1 and x_2 at random and sets $h = g_1^{x_1} g_2^{x_2}$ the rest is unchanged.

What is different is the decryption procedure because on input $(A, B, C) = (g_1^r, g_2^r, h^r m)$, S retrieves the message m as $m = C \cdot (A^{x_1} B^{x_2})^{-1}$.

Note that in this way the simulator can always decrypt (and the distribution of the key is perfectly indistinguishable from real).

Next when the adversary comes up with the two messages m_0, m_1 he wants to be challenged on S proceeds as follows. It flips a random (private) bit b , and encrypts m_b as follows

$$(h_1^{kx_1} h_2^{kx_2} m, h_1^k, h_2^k)$$

(where k is a random value)

Note that if the given quadruple is a DH one the ciphertext has the right distribution. This is because h_1^k and $h_2^k = g_2^k$ for some k and $(h_1^{x_1} h_2^{x_2})^k = h^k$ (for the same k)

If, on the other hand, the given quadruple is not a DH one then it is easy to check that the A gains no information at all about the encrypted message (this is because this time to decrypt adv has to know the secret exponents x_1 and x_2 which remains information theoretically hidden by h).

Mix networks: As explained above, there are many good choices of mix networks for our scheme. The examples with the strongest security properties are the constructions of Furukawa and Sako [22] and Neff [33]. Both of these employ El Gamal as the underlying cryptosystem, i.e., an input ciphertext $E_i = (\alpha, \beta) = (my^{\alpha}, g^{\beta})$ for some public key y and published generator g . Security in these constructions is reducible to the Decision Diffie-Hellman assumption and a random-oracle assumption on a hash function. We also note that the security of these and most other mix network constructions relies on a second input $P = \{P_1, P_2, \dots, P_d\}$, where P_i is an NIZK proof of knowledge of the plaintext for E_i . This serves the purpose of rendering the cryptosystem chosen-ciphertext-attack secure while still permitting re-encryption.

VODAFONE BRING YOU BLACKBERRY 7100V

EATING BLACKBERRYS OUT OF THE PALM OF OUR HANDS

It's finally getting closer – some might say it's finally here. The truly portable and international complete wireless communication solution for people on the move that delivers e-mail to you through the extensive and global vodafone network. Visitors to <http://www.a1-cellphones-plus.com> can find out about the best of Blackberry and Vodafone's new partnership.

The BlackBerry 7100v is the newest edition to Vodafone's handheld mobile email range. This device combines full BlackBerry functionality with all the features you would expect from a mobile phone, all in one device. This product is ideal for those people that require a more voice centric email solution – It's really exciting and impressive and practical for personal and business use.

THE BEST THING ABOUT IT IS THE SPECS – CHECK THIS OUT:

Size (HxWxD) 119 x 56 x 19 mm

Weight Only 120g

Display 240 x 260 pixels, high-resolution portrait LCD colour screen

Keyboard - SureType™ QWERTY keyboard

Voice input / output - Integrated speaker and microphone

Hands-free speakerphone

Hands-free headset capable

Bluetooth for hands-free

Battery - Removable/rechargeable Lithium cell

Memory - 32 MB flash memory, 4 MB SRAM

With all this you can be sure that you can fit it into your pocket, briefcase or even your purse ... your

friends, colleagues and peers will be eating out of the palm of your hands.

Vodafone BlackBerry is the leading wireless connectivity solution, providing access to a wide range of applications on a variety of wireless devices globally. Vodafone BlackBerry keeps you 'in-the-loop' while you're on the go with push-based technology that automatically delivers email and other data to your Vodafone BlackBerry device. And with the integrated phone, SMS, browser and organizer applications, you can easily manage all your information and communications from a single, integrated device – How good is that?

It's all about speed and response time – with Vodafone BlackBerry, it can be immediate – It could make or break that sale.

Vodafone BlackBerry gives you the freedom to stay in touch with your work and home, with access to multiple existing corporate and/or personal email accounts from a single device.

THE POSSIBILITIES ARE ENDLESS – GO VODAFONE BLACKBERRY

Today's Online Auction Related Article

iPod users start to get the picture and it's turning out to be colorful fun!!

The latest generation of hi tech gadget users are watching the different media they use start to converge as Apple launches its latest grab for the market with iPod Photo. Not only can you listen to all your music on the go, or organize your business and social life, but now your entire photo collection can be viewed at hand too. With the latest color screens iPod users can turn the favorite toy into a slideshow which is set to music. Watch this with friends hanging out at the beach or connect it to your TV and away you go.

Imagine putting your holiday photos to your own sound track and being able to view it wherever you want, well this is now possible to do, and with the 60GB version you can hold up to 25,000 photos. Of course, if you want to mix these up with music the storage would be shared but still with the longer lasting battery in the new generation of iPod you can get up to 5 hours of slideshow or 15 hours of music according to Apple.

All this is possible to use with your Apple Mac or PC using Autosync to make the synchronization of your music and pictures automatic. Visitors to <http://www.auctions-andmore.com/articles2/3> are informed of many of the features of the latest iPods and the best deals around for purchasing these items. From their website you can access hundreds of online deals for the whole range of iPod products.

The latest iPods are set to rock the market once again with their latest visual addition. The only question is....where will all this convergence end up? Soon these multi function devices may move into the area of telecommunications with the prospect of watching digital TV or videos. Perhaps our mobile phone will become our MP3, video and still camera with 5 mega-pixel definition. Who knows? But for the time being Apple have once again moved ahead in the hard-drive, hand-held multi-media gadget race.

iPod is produced by Apple which can be found at:

Vodafone Mobile Connect Roams the World

While many new servers are offering wireless internet connections from metropolitan hotspots and cafes, Vodafone's new Mobile Connect data card offers you coverage from as far afield as remote outback Australia to the cosmopolitan beaches of Bali with coverage in up to 16 different countries including the UK and the US.

It's as simple as slipping a card into your laptop computer and firing up. [more](#)

InterNet censorship

26 juillet 2003 (suspension tower)

In former times the world-wide net was considered as home place to free expression of opinion, unhindered communication and internationality. But today we see many efforts to limit these liberties always further. The right citizen are commercial and national interests to be sacrificed. Also Germany is affected by these measures.

↗ The district government Duesseldorf with her ↗ head of the provincial government Juergen Buessow has all Provider of the country North Rhine-Westphalia in February 2002 obligates ↗ two InterNet sides from the USA for German customers to close . This was a first step. In the meantime ↗ a censorship infrastructure is planned, which is to permit it to close country-wide to web pages by mouse-clicks.

This is not the first case of censorship measures in the World Wide Web.

Examples

- **Summer 1996:** The Federal Prosecutor's Office demands the blockage of the web page of the magazine "radical" go-eastconstant in the Netherlands from the German Providern. Even the homepage of the deputy Party of Democratic Socialism Federal leaders Angela Marquardt becomes closed, because it set a left to the radical side. After dozens of Mirrorseiten developed, the authority adds small.
- **Autumn 2000:** On operation of the

Campaign for the boycott of the music industry

Contenu:

"examples
 "why net barriers are bad
 "press review

Data centrifuge #085

US Berhoerden Hans Bernhard the Domain is extracted from the Austrian vote auction.com, which had registered these in Switzerland. Neither in Switzerland, nor in Austria contents offended against valid right.

- **Spring 2002:** On operation of Scientology sect the US enterprise Cignal cuts the connections of the Dutch Providers Xtended InterNet. A customer of the Providers had placed a side in the net, which argues critically with the sparkling wines.
- **Autumn 2002:** Those Swiss Untersuchungsrichterin Françoise Dessaux requests Swiss Provider to close two web pages and threatens even with an accusation because of aid. It concerns a simple case from honouring injury. While the Provider of the arrangement must respond, the author of the sides remains ungeschoren for the time being.

↗ **Further examples** can be reread in the Wiki of the chaos computer club Cologne and in ↗ **the gathering of material** (pdf) the German working group for the defense of the unformativeness in data networks (DAVID).

Why net barriers are bad

The oft-quoted problems of Nazi propaganda and child pornography cannot be solved by view screens in the InterNet. The sides still remain in the net. It does not become anybody the Nazi racquet, only because it erred on an InterNet side. One cannot fade out the Nazis in the net, if they march material by German cities. For the extremists represent the barriers, as one ↗ **in the past** to see could, no special handicap.

"also right-wing extremist propaganda is useful as information. It refers to social problems, with which we must set ourselves apart." ↗, our press speaker

says [↗](#) *Andy Mueller Maguhn* .

The homicide argument child pornography fails likewise. [↗](#) Kinder pornos are world-wide illegal. Where always such pictures emerge, the law of the state can intervene directly and pursue the authors. View screens are thus unnecessary.

In principle the net barriers can be classified as insufficient. [↗](#) The entrance is made more difficult, but prevented not completely. Only quite against the complained of side one does not proceed. The current barriers can be gone around simply by [↗](#) the change of the DNS.

In the drawers of some enterprises concepts for a complete blockage infrastructure already lie. As soon as this is established it will not for a long time last to thousands sides to become closed, it is from political, economic or other motives. The international Konnektivitaet is lastingly endangered!

Internet-Zensur

26 juillet 2003 (Pylon)

Früher galt das weltweite Netz als Heimstatt für freie Meinungsäußerung, ungehinderte Kommunikation und Internationalität. Doch heute sehen wir viele Bestrebungen, diese Freiheiten immer weiter einzuschränken. Rechte der Bürger sollen kommerziellen und staatlichen Interessen geopfert werden. Auch Deutschland ist von diesen Maßnahmen betroffen.

Die [Bezirksregierung Düsseldorf](#) mit ihrem [Regierungspräsident Jürgen Büsow](#) hat im Februar 2002 alle Provider des Landes Nordrhein-Westfalen verpflichtet [zwei Internet-Seiten aus den USA](#) für deutsche Kunden zu sperren. Dieses war ein erster Schritt. Inzwischen wird eine [Zensur-Infrastruktur](#) geplant, die es erlauben soll, landesweit Webseiten per Mausklick zu sperren.

Dies ist nicht der erste Fall von Zensurmaßnahmen im World Wide Web.

Beispiele

- **Sommer 1996:** Die Bundesanwaltschaft fordert von den deutschen Providern die Sperrung der in den Niederlanden gehosteten Webseite der Zeitschrift "Radikal". Selbst die Homepage der stellvertretenden PDS-Bundesvorsitzenden Angela Marquardt wird gesperrt, weil sie einen Link zur Radikal-Seite gesetzt hat. Nachdem Dutzende von Mirrorseiten entstanden sind, gibt die Behörde klein bei.
- **Herbst 2000:** Auf Betreiben der US-Behörden wird dem Österreicher Hans Bernhard die Domain **vote-auction.com** entzogen, die dieser in der Schweiz registriert hatte. Weder in der Schweiz, noch in Österreich verstießen die Inhalte gegen geltendes Recht.
- **Frühjahr 2002:** Auf Betreiben von Scientology kappt das US-Unternehmen Signal die Verbindungen des holländischen Providers Xtended Internet. Ein Kunde des Providers hatte eine Seite ins Netz gestellt, die sich kritisch mit der Sekte auseinandersetzt.
- **Herbst 2002:** Die schweizer Untersuchungsrichterin Françoise Dessaux fordert die Schweizer Provider auf, zwei Webseiten zu sperren und droht sogar mit einer Anklage wegen Beihilfe. Es geht um einen simplen Fall von Ehrverletzung. Während die Provider der Anordnung Folge leisten müssen, bleibt der Urheber der Seiten vorerst ungeschoren.

↗ [Weitere Beispiele](#) lassen sich im Wiki des Chaos Computer Club Cologne nachlesen als auch in der ↗ [Materialsammlung](#) (PDF) der Deutschen Arbeitsgemeinschaft zur Verteidigung der Informationsfreiheit in

Datennetzen (DAVID).

Warum Netzsperrern schlecht sind

Die vielzitierten Probleme Nazi-Propaganda und Kinderpornographie lassen sich nicht durch Sichtblenden im Internet lösen. Die Seiten bleiben nach wie vor im Netz. Es wird niemand zum Nazischläger, nur weil er sich auf einer Internetseite verirrt hat. Man kann die Nazis im Netz nicht ausblenden, wenn sie real durch deutsche Städte marschieren. Für die Extremisten selbst stellen die Sperren, wie man [in der Vergangenheit](#) sehen konnte, keine besondere Behinderung dar.

"Auch rechtsradikale Propaganda ist als Information nützlich. Sie verweist auf gesellschaftliche Probleme, mit denen wir uns auseinander setzen müssen." , sagt unser Pressesprecher [Andy Müller-Maguhn](#).

Das Totschlagargument Kinderpornographie schlägt ebenso fehl. [Kinder pornos sind weltweit illegal](#). Wo immer solche Bilder auftauchen, kann die Justiz des Staates direkt eingreifen und die Täter verfolgen. Sichtblenden sind also unnötig.

Grundsätzlich können die Netzsperrern als unzureichend eingestuft werden. [Der Zugang wird erschwert, aber nicht vollends verhindert](#). Erst recht nicht wird gegen die beanstandete Seite vorgegangen. Die jetzigen Sperren lassen sich einfach durch die [Änderung des DNS](#) umgehen.

In den Schubladen einiger Unternehmen liegen bereits Konzepte für eine komplette Sperrungs-Infrastruktur. Sobald diese etabliert ist wird es nicht lange dauern bis tausende Seiten gesperrt werden, sei es

aus politischen, wirtschaftlichen oder sonstigen Motiven. Die internationale Konnektivität ist nachhaltig gefährdet!

Legalidad de los votos por Internet

He oído que en las elecciones a Presidente de EEUU se podía votar por e-mail ¿es cierto? ¿es legal?

No es cierto que en las elecciones a Presidente de los EEUU se pudiese votar directamente por correo electrónico. Imaginemos el conflicto que se hubiese añadido al ya complejo recuento si así hubiera sido. Sin embargo, se ha utilizado Internet para facilitar la inscripción como votante y para animar la hasta ahora aletargada vida política americana. Sólo un 50% de los americanos con derecho a voto depositan su papeleta en las urnas de las distintas elecciones. Internet se ha utilizado para luchar, pues, contra la abstención.

Era posible acceder en Internet a los formularios para inscribirse como votante, para informar del cambio de nombre o dirección y para inscribirse como votante de uno u otro partido. Hay que decir que el sistema electoral americano se diferencia bastante del español, en donde la Administración es quien elabora los censos electorales. En algunos Estados de EEUU es preciso inscribirse como votante de un determinado partido político para poder participar en las elecciones primarias, las reuniones electorales (las llamadas *caucus*) o las convenciones de un partido determinado. Además, algunos Estados exigen, a la hora de inscribirse, que el elector indique si pertenece a alguna raza o grupo étnico (indio americano o nativo de Alaska, nativo de Hawai, negro no de origen hispano, blanco no de origen hispano, hispano, etc..) con el fin de aplicarle la *Federal Voting Rights Act*.

¿Se podía mandar por correo electrónico el formulario de inscripción como votante?

Pues tampoco, aunque el correo electrónico se utilizó como instrumento en algunas de las gestiones.

Si se accede al formulario de inscripción a través de las páginas del Gobierno Federal o de cada uno de los Estados de la Unión, se encontrarán los formularios que se pueden rellenar directamente, pero que necesitan ser imprimidos, firmados a mano y remitidos por correo convencional. El sobre también se facilitaba en Internet. Tras la accidentada elección de Presidente de EEUU, hemos comprobado que los Estados tienen normas electorales diferentes. Por ejemplo, las leyes electorales de New Hampshire, Dakota del Norte y Wyoming, no permitían el uso del formulario colgado en Internet; en unos casos porque se exigía que la remisión del formulario en blanco al votante se efectuara por correo postal, y en otros porque no tenían prevista la inscripción de votantes en sus leyes electorales.

Por su parte, la iniciativa BeAVoter, patrocinada por AARP (una ONG de defensa de los derechos de mayores de 50), AOL, MCI WorldCom y Time Warner, remitía por correo electrónico a los votantes americanos el formulario de inscripción perfectamente cumplimentado, a partir de los datos que el propio votante iba facilitando a esta página. Se trataba de evitar errores de cumplimentación que hiciera imposible la inscripción en plazo de los votantes que no entendieran el formulario. En el caso *asistido*, igual que en el *autodidacta-avanzado*, era obligado imprimir el formulario con el sobre, firmarlo y mandarlo por correo ordinario.

A pesar de haberse aprobado a mediados de este año la Ley Federal sobre Firma Digital (ya existían leyes parecidas en algunos Estados, empezando por la pionera Utah), parece que este sistema no ofrece la misma confianza o las garantías necesarias para una elección de este calibre, a pesar de que las recientes discusiones sobre "papeletas preñadas" nos hayan trasladado a las tarjetas perforadas de los años 50.

En las elecciones al Congreso u Senado español ¿se puede votar por correo electrónico?

De nuevo la respuesta es no. La Ley Electoral General española prevé el voto por correo postal, que ha de depositarse con antelación en las oficinas de correos, con los formularios allí facilitados y con garantías de identidad del emisor del voto, para evitar fraudes. Pensemos que en el *voto*

presencial, el Presidente de la mesa electoral y los interventores de los partidos políticos controlan la identidad del votante, su presencia en las listas del censo y que no vota dos veces.

El problema de la identidad del votante y la integridad del voto emitido, subyace en la resistencia a aceptar el voto por correo electrónico: hay que identificar de manera fiel y auténtica al remitente del voto, hay que asegurarse de que el voto no es cambiado o alterado por el camino y que, efectivamente, llegan todos los emitidos, que no se han perdido entre *router* y *router*. Todo ello requiere un desarrollo pleno de las medidas de seguridad que pasan por la criptografía y el desarrollo total de la firma digital.

Soy el Presidente de una asociación relacionada con Internet. Todos los miembros están dispersos por España y resulta imposible reunirlos físicamente para las asambleas y votaciones ¿podría hacer cibervotaciones legalmente?

Lo primero que has de considerar es si los Estatutos de la Asociación permiten el voto por correo postal y correo electrónico, y en tal caso, en que condiciones de seguridad y fiabilidad se contemplan las votaciones para evitar pucherazos y recursos. Si no lo tienes contemplado, tendrás que modificar tus estatutos en ese sentido.

Si te sirve como ejemplo, ICANN acaba de celebrar una cibervotación para cubrir algunos puestos de su órgano de gobierno. Concretamente, 5 de los 19 miembros de su Consejo fueron elegidos por los internautas, a razón de 1 representante por región-continente (*At large Director Selection Process*). Recordemos que ICANN pasa por ser "el gobierno de Internet" y que, desde su creación en 1998, tiene el encargo de coordinar el sistema de nombres de dominio y gestionar la DNS.

Los candidatos habían de ser ciudadanos de la *región* por la que se presentaban. Entre el 25 de febrero y el 31 de julio, los electores se suscribieron como miembro *at large* de ICANN, para lo que tuvieron que cumplir los siguientes requisitos: ser mayor de 16 años, facilitar una dirección válida de correo electrónico permanentemente activa, su nombre legal completo (no valían los *nicks*) y una dirección postal verdadera. Quedaba terminantemente prohibido el uso de nombres o direcciones anónimas o ficticias en el trato con ICANN y en las intervenciones en sus foros.

Para la campaña electoral, el ICANN habilitó un forum donde los electores podían interrogar a los candidatos a razón de 10 preguntas por votante. Los candidatos no podían dirigirse directamente a los electores.

La votación se efectuó directamente en la web de ICANN, para lo que el internauta registrado como miembro *at large* tenía que introducir su número de usuario, su clave de acceso y su número PIN. Por razones de seguridad, el nombre de usuario y la clave de acceso se remitían por correo electrónico y el PIN por correo convencional.

La mesa electoral virtual, formada en parte por miembros independientes del ICANN, controló y auditó tanto los votos emitidos y como a los emisores, para evitar dobles votos o *votantes avatar*. La propia ICANN reconoce que no es un método infalible, pero los resultados no han podido ser más independientes de la línea oficial de ICANN: una hacker alemán por Europa y un ingeniero de Cisco, por EEUU, profundamente crítico con la política de ICANN.

He encontrado algunas web que se dedican únicamente a realizar votaciones sobre cualquier tema sin ninguna medida de seguridad ¿son válidos esos votos?

Los humanos nos pasamos el día votando inconscientemente. Lo que pasa es que no es lo mismo elegir Presidente de la nación que decidir a *vidrio alzado* dónde vamos a cenar esta noche. Ambas son votaciones, pero la trascendencia de la decisión que se toma en uno y otro caso es directamente proporcional a las medidas de seguridad que hay que adoptar.

Es cierto que existen en Internet algunas páginas como *vote.com*, en donde se puede votar a favor o en contra de casi cualquier cosa. El valor de los resultados de estas votaciones lo acercan más al sondeo *de andar por casa* que a una encuesta científicamente realizada. *Vote.com* sólo exige para participar en sus votaciones un código postal y una dirección de correo electrónico, datos

insuficientes para evitar que una persona vote 100 veces. Sólo vale para hacerse una idea aproximada de alguna cuestión y, esencialmente, para vender publicidad.

Legality of the votes by Internet

I have heard that in the elections to President of the U.S.A. could be voted by email is certain? he is legal?

It is not certain that in the elections to President of the U.S.A. it was possible to be voted directly by electronic mail. We imagine the conflict that had been added already to the complex count if thus it had been. Nevertheless, Internet has been used to facilitate the inscription like voter and to animate now until lethargic American political life. Only a 50% of the Americans with right to vote deposit their problem in the ballot boxes of the different elections. Internet has been used to fight, then, against the abstention.

It was possible to accede in Internet to the forms to register like voter, to inform into the direction or name change and to register like voter of one or another party. It is necessary to say that to the American electoral system enough difference of the Spanish, in where the Administration is the one who elaborates the electoral rolls. In some States of the U.S.A. it is precise to register like voter of a determined political party to be able to participate in the primary elections, the electoral meetings (the calls *caucus*) or the conventions of a certain party.

In addition, some State demands, at the time of registering, that the voter indicates if he belongs to some race or ethnic group (Indian native American or of Alaska, native of Hawaii, black not of Hispanic, white origin not of Hispanic, Hispanic origin, etc..) with the purpose of applying the Federal *to him Voting Rights Act* .

Could be commanded by electronic mail the form of inscription like voter?

Then either, although the electronic mail was used like instrument in some of the managements.

If it is acceded to the form of inscription through the pages of the Federal Government or of each one of the States of the Union, will be the forms that can be filled up directly, but that needs to be imprimidos, to be signed and by hand to be sent by conventional mail. On also it was facilitated in Internet. After the rough election of President of the U.S.A., we have verified that the States have different electoral norms. For example, the electoral laws of New Hampshire, Dakota of Norte and Wyoming. they did not allow the use of the form hung in Internet; in cases because it was demanded that the remission of the form in target to the voter took place by postal mail, and in others because they did not have predicted the inscription of voters in his electoral laws.

On the other hand, the BeAVoter initiative, sponsored by AARP (a ONG of defense of the rights of greater of 50), AOL, MCI WorldCom and Time Warner, sent by electronic mail to the American voters the perfectly complimented form of inscription, from the data that the own voter was facilitating to this page. One was to avoid cumplimentación errors that made the inscription in term impossible of the voters who did not understand the form. In the attended *case* , just as in *the self-taught person-advanced one* , he was forced to print the form with on, to sign it and to send it by ordinary mail.

In spite of to have approved in the middle of this year the Federal Law on Digital Company (or similar laws in some States existed, beginning by the Utah pioneer), seems that this system does not offer the same confidence or the necessary guarantees for an election of this caliber, although the recent discussions on "pregnant problems" have transferred to us to punched cards of years 50.

In the elections to the Congress or Spanish Senate it is possible to be voted by electronic mail? Again the answer is no. The Electoral Law General Spanish anticipates the vote by postal mail, that is to deposit itself in advance in the post offices, with the forms facilitated there and

guarantees of identity of the emitter of the vote, to avoid frauds. Let us think that in *the actual vote*, the President of the electoral table and the inspectors of the political parties they control the identity of the voter, his presence in the lists of the census and that it does not vote twice.

The problem of the identity of the voter and the integrity of the emitted vote, sublie in the resistance to accept the vote by electronic mail: it is necessary to identify of faithful and authentic way the sender of the vote, is necessary to make sure that the vote is not changed or altered by the way and that, indeed, arrive all the emitted ones, that are not had lost between *router* and *router*. All it requires a total development of the safety measures that pass through the cryptography and the total development of the digital company/signature.

I am the President of an association related to Internet. All the members are in favor dispersed of Spain and is impossible to physically reunite them for the assemblies and votings could make cibervotaciones legally?

First that there are to consider it is if the Statutes of the Association allow to the vote by postal mail and electronic mail, and in such case, in that conditions of security and reliability are contemplated the votings to avoid election falsifications and resources. If you do not have it contemplated, you will have to modify your statutes in that sense.

If it serves to you like example, ICANN finishes celebrating a cibervotación to cover some positions with their control system. Concretely, 5 of the 19 members of their Advice were chosen by the internauts, at the rate of 1 representative by region-continent (*AT large Director Selection Process*). Let us remember that ICAN happens being "the government of Internet" and that, from its creation in 1998, has the order to coordinate the system of dominion names and to manage the DNS.

The candidates had to be citizen of *the region* by which they appeared. Between the 25 of February and the 31 of July, the voters subscribed like member *AT large* of ICANN, for which they had to fulfill the following requirements: to be greater of 16 years, to facilitate a valid direction of electronic mail permanently activates, its complete legal name (they were not worth *nicks*) and true a mailing dress. It was prohibited the use of names or anonymous or fictitious directions in the deal with ICANN and the interventions in its forums final.

For the electoral campaign, the ICANN qualified a forum where the voters could interrogate to the candidates at the rate of 10 questions by voter. The candidates could not go directly to the voters.

The voting took place directly in the ICANN Web, for which the registered internaut as member *AT large* had to introduce his I number of user, its key of access and its number PIN. For security reasons, the name of user and the key of access were sent by electronic mail and the PIN by conventional mail.

The virtual electoral table, formed partly by independent members of the ICANN, controlled and auditó so many the votes emitted and as to the emitters, to avoid doubles votes or *voters to avatar*. The own ICANN recognizes that it is not an infallible method, but the results could not have been more independent of the official line of ICANN: hacker German by Europe and an engineer of Cisco, by the U.S.A., deeply critical with the ICANN policy.

I have found some Web that is dedicated solely to make votings on any subject without no safety measure are valid those votes?

The humans we spent the day voting unconsciously. What happens is that it is not the same to choose President of the nation that to decide to *raised glass* where we are going to have supper tonight. Both are votings, but the importance of the decision that is taken in both case is directly proportional to the safety measures that there is to adopt.

It is certain that some pages like vote.com exist in Internet, in where is possible to be voted to

favor or against almost any thing. The value of the results of these votings approaches more the sounding *to walk by house* that to a survey scientifically made. Vote.com only demands to participate in its votings a postal code and a direction of electronic mail, insufficient data to avoid that a person votes 100 times. It is only worth to be done an idea approximated of some question and, essentially, to sell publicity.

Legalidad de los votos por Internet

He oído que en las elecciones a Presidente de EEUU se podía votar por e-mail ¿es cierto? ¿es legal?

No es cierto que en las elecciones a Presidente de los EEUU se pudiese votar directamente por correo electrónico. Imaginemos el conflicto que se hubiese añadido al ya complejo recuento si así hubiera sido. Sin embargo, se ha utilizado Internet para facilitar la inscripción como votante y para animar la hasta ahora aletargada vida política americana. Sólo un 50% de los americanos con derecho a voto depositan su papeleta en las urnas de las distintas elecciones. Internet se ha utilizado para luchar, pues, contra la abstención.

Era posible acceder en Internet a los formularios para inscribirse como votante, para informar del cambio de nombre o dirección y para inscribirse como votante de uno u otro partido. Hay que decir que el sistema electoral americano se diferencia bastante del español, en donde la Administración es quien elabora los censos electorales. En algunos Estados de EEUU es preciso inscribirse como votante de un determinado partido político para poder participar en las elecciones primarias, las reuniones electorales (las llamadas *caucus*) o las convenciones de un partido determinado. Además, algunos Estado exigen, a la hora de inscribirse, que el elector indique si pertenece a alguna raza o grupo étnico (indio americano o nativo de Alaska, nativo de Hawai, negro no de origen hispano, blanco no de origen hispano, hispano, etc..) con el fin de aplicarle la *Federal Voting Rights Act*.

¿Se podía mandar por correo electrónico el formulario de inscripción como votante?

Pues tampoco, aunque el correo electrónico se utilizó como instrumento en algunas de las gestiones.

Si se accede al formulario de inscripción a través de las páginas del Gobierno Federal o de cada uno de los Estados de la Unión, se encontrarán los formularios que se pueden rellenar directamente, pero que necesitan ser imprimidos, firmados a mano y remitidos por correo convencional. El sobre también se facilitaba en Internet. Tras la accidentada elección de Presidente de EEUU, hemos comprobado que los Estados tienen normas electorales diferentes. Por ejemplo, las leyes electorales de New Hampshire, Dakota del Norte y Wyoming, no permitían el uso del formulario colgado en Internet; en unos casos porque se exigía que la remisión del formulario en blanco al votante se efectuara por correo postal, y en otros porque no tenían prevista la inscripción de

votantes en sus leyes electorales.

Por su parte, la iniciativa BeAVoter, patrocinada por AARP (una ONG de defensa de los derechos de mayores de 50), AOL, MCI WorldCom y Time Warner, remitía por correo electrónico a los votantes americanos el formulario de inscripción perfectamente cumplimentado, a partir de los datos que el propio votante iba facilitando a esta página. Se trataba de evitar errores de cumplimentación que hiciera imposible la inscripción en plazo de los votantes que no entendieran el formulario. En el caso *asistido*, igual que en el *autodidacta-avanzado*, era obligado imprimir el formulario con el sobre, firmarlo y mandarlo por correo ordinario.

A pesar de haberse aprobado a mediados de este año la Ley Federal sobre Firma Digital (ya existían leyes parecidas en algunos Estados, empezando por la pionera Utah), parece que este sistema no ofrece la misma confianza o las garantías necesarias para una elección de este calibre, a pesar de que las recientes discusiones sobre "papeletas preñadas" nos hayan trasladado a las tarjetas perforadas de los años 50.

En las elecciones al Congreso u Senado español ¿se puede votar por correo electrónico?

De nuevo la respuesta es no. La Ley Electoral General española prevé el voto por correo postal, que ha de depositarse con antelación en las oficinas de correos, con los formularios allí facilitados y con garantías de identidad del emisor del voto, para evitar fraudes. Pensemos que en el *voto presencial*, el Presidente de la mesa electoral y los interventores de los partidos políticos controlan la identidad del votante, su presencia en las listas del censo y que no vota dos veces.

El problema de la identidad del votante y la integridad del voto emitido, subyace en la resistencia a aceptar el voto por correo electrónico: hay que identificar de manera fiel y auténtica al remitente del voto, hay que asegurarse de que el voto no es cambiado o alterado por el camino y que, efectivamente, llegan todos los emitidos, que no se han perdido entre *router* y *router*. Todo ello requiere un desarrollo pleno de las medidas de seguridad que pasan por la criptografía y el desarrollo total de la firma digital.

Soy el Presidente de una asociación relacionada con Internet. Todos los miembros están dispersos por España y resulta imposible reunirlos físicamente para las asambleas y votaciones ¿podría hacer cibervotaciones legalmente?

Lo primero que has de considerar es si los Estatutos de la Asociación permiten el voto por correo postal y correo electrónico, y en tal caso, en que condiciones de seguridad y fiabilidad se contemplan las votaciones para evitar pucherazos y recursos. Si no lo tienes contemplado, tendrás que modificar tus estatutos en ese sentido.

Si te sirve como ejemplo, ICANN acaba de celebrar una cibervotación para cubrir algunos puestos de su órgano de gobierno. Concretamente, 5 de los 19 miembros de su Consejo fueron elegidos por los internautas, a razón de 1 representante por región-continente (*At large Director Selection Process*). Recordemos que ICANN pasa por ser "el gobierno de Internet" y que, desde su creación en 1998, tiene el encargo de coordinar el sistema de nombres de dominio y gestionar la DNS.

Los candidatos habían de ser ciudadanos de la *región* por la que se presentaban. Entre el 25 de febrero y el 31 de julio, los electores se suscribieron como miembro *at large* de ICANN, para lo que tuvieron que cumplir los siguientes requisitos: ser mayor de 16 años, facilitar una dirección válida de correo electrónico permanentemente activa, su nombre legal completo (no valían los *nicks*) y una dirección postal verdadera. Quedaba terminantemente prohibido el uso de nombres o direcciones anónimas o ficticias en el trato con ICANN y en las intervenciones en sus foros.

Para la campaña electoral, el ICANN habilitó un forum donde los electores podían interrogar a los candidatos a razón de 10 preguntas por votante. Los candidatos no podían dirigirse directamente a los electores.

La votación se efectuó directamente en la web de ICANN, para lo que el internauta registrado como miembro *at large* tenía que introducir su número de usuario, su clave de acceso y su número PIN.

Por razones de seguridad, el nombre de usuario y la clave de acceso se remitían por correo electrónico y el PIN por correo convencional.

La mesa electoral virtual, formada en parte por miembros independientes del ICANN, controló y auditó tanto los votos emitidos y como a los emisores, para evitar dobles votos o *votantes avatar*. La propia ICANN reconoce que no es un método infalible, pero los resultados no han podido ser más independientes de la línea oficial de ICANN: una hacker alemán por Europa y un ingeniero de Cisco, por EEUU, profundamente crítico con la política de ICANN.

He encontrado algunas web que se dedican únicamente a realizar votaciones sobre cualquier tema sin ninguna medida de seguridad ¿son válidos esos votos?

Los humanos nos pasamos el día votando inconscientemente. Lo que pasa es que no es lo mismo elegir Presidente de la nación que decidir a *vidrio alzado* dónde vamos a cenar esta noche. Ambas son votaciones, pero la trascendencia de la decisión que se toma en uno y otro caso es directamente proporcional a las medidas de seguridad que hay que adoptar.

Es cierto que existen en Internet algunas páginas como [vote.com](http://www.vote.com), en donde se puede votar a favor o en contra de casi cualquier cosa. El valor de los resultados de estas votaciones lo acercan más al sondeo *de andar por casa* que a una encuesta científicamente realizada. [Vote.com](http://www.vote.com) sólo exige para participar en sus votaciones un código postal y una dirección de correo electrónico, datos insuficientes para evitar que una persona vote 100 veces. Sólo vale para hacerse una idea aproximada de alguna cuestión y, esencialmente, para vender publicidad.

RADAR KUNST

VEGA1. - 4. april kl. 13-19 - Fri entré

CHRISTINA BACK

Rum: ASTRAY I / Rum: ASTRAY II

Til RADAR 2004 har Christina Back skabt to helt nye installationer i VEGAs trapperum. I ³Rum: ASTRAY I² indgår et antal elastiske vægge, der både i udtryk og placering går i dialog med trapperummets egen arkitektur. De elastiske vægge er monteret med kædetræk, så publikum selv kan skabe nye fragmenteringer og opdelinger af rummet. Hver væg er udstyret med højttalere, hvis lyd skifter efter væggenes og publikums placering. ³Rum: ASTRAY II² involverer et større antal fladskærme. Enkelte af skærmene er forbundet til web-kameraer på andre etager. Hver skærm har et individuelt forløb, hvor der vises billeder og videosekvenser fra andre etager, både direkte og forsinkede, fra ting der måske foregår, foregik eller kunne foregå. Ideen er at fragmentere rummet via de oplevelser, der foregår og ikke foregår i forhold til den besøgendes placering og bevægelse i rummet, således at rummet opdages på ny i jagten på ²den skønne kvinde på fjerde afsats² eller detaljen i hjørnet.

PETRI RAAPPANA

AlphaByte

AlphaByte er et audiovisuelt program, der er blevet til i et tæt samarbejde mellem Petri Raappana og en række musikere. AlphaByte findes med forskellige lydsider afhængig af de udstillinger og rum, hvor det har været præsenteret. Til RADAR 2004 er der skabt en ny lydside, som tager udgangspunkt i netop VEGA. Andre versioner af AlphaByte er tidligere blevet vist både på internettet og som en del af sociale events, hvor publikums interaktioner kunne opleves som en ¹semikoncert¹.

Lille VEGA

www.kopenhagen.dk/netkunst/articles/petrii.htm

SOPHIE HJERL

CurtainCalls

CurtainCalls er et videoværk om rum og fortætning, sprækker og fortælling. Optagelse og projektion af et scenetæppe, heraf titlen CurtainCalls - fremkaldelse. Men er der nogen? Musikken er komponeret ud fra 48 samplinger af lyde fra Lille VEGA. Billede og lyd kører forskudt i tid, så den samlede oplevelse af det fortalte er i evig bevægelse og transformation - noget forgår, mens nyt

opstår.

Store VEGA Foyer Bar

AGNIESZKA WILK

Lay Down

Agnieszka Wilks animationsfilm tematiserer oplevelsen af lykke som en mulighed men ikke som et livsvilkår. Den handler også om, at enhver lever i sin egen, individuelle verden - fuldkommen alene. Historien er ikke fortalt på traditionel vis men gennem symboler og transformationer. Den ledsagende musik er skabt af Konrad Korabiewski med samples fra det danske elektroniske orkester Amstrong.

Store VEGA Foyer

JOHANNA DOMKE

Let the Wind Blow

En mand, en kvinde, et tæppe af blinkende storbylys ledsaget af en let vind. Mens landskabet skifter, bliver nat til dag og dag til nat på ingen tid. De to personer i Johanna Domkes nyeste videoværk forbliver fuldkommen ubevægelige i billedet. Kun nogle få vindstød i tøjet nu og da gør dem levende. Let the Wind Blow beretter om at overvinde de sædvanlige synspunkter og forlade den normale tidsstruktur.

Store VEGA Foyer

www.johannadomke.net

FAST VIDEO

Videoer

FAST VIDEO er en forening stiftet i 1999 bestående af billedkunstnere, der helt eller delvist arbejder med elektroniske medier. RADAR præsenterer 11 videoværker, der udgør et bredt udsnit af FAST VIDEOS samlede produktion. Der præsenteres videoer af Andrea Creutz, Michelle Eistrup, Marika Seidler, Bettina Fürstenberg, Lennard Grahn, Sophie Hjerl, Elin Kromann, Søren Martinsen, Niels Plenge, Steen Møller Rasmussen, Jeanette Schou og Hartmut Stockter.

BASEMENT 1. - 4. april kl. 13-19 - Fri entré

TATIANA LYNG PEDERSEN / SONJA THOMSEN

Two Arms, Two Legs

I Two Arms, Two Legs bliver du filmet foran en to meter høj projektion af en silhuetlignende skikkelse. Via en computer genereres optagelsen til et tilfældigt kvadrat, der indgår i projektionen. Når du forlader rummet, efterlader du derfor et spor af dig selv og din tilstedeværelse - et spor som forbliver, indtil det udskiftes med andre personers fragmenter. Projektionen er i stadig bevægelse - den fælles skikkelse forandres konstant.

www.tati.dk/radar

TATIANA LYNG PEDERSEN

Det Tonale Rum

Det Tonale Rum er et interaktivt lydunivers, som bliver styret af brugerens bevægelser på en gyngende pladeret i et ellers tomt rum. Samspillet mellem gyngen og brugerens leg med denne aktiverer forskellige former for lydunivers alt efter, hvordan stemningen omkring legen med gyngen er. Gynger man forsigtigt, vil lydoplevelsen være anderledes, end hvis man gynger højt og ovovet. Lydsiden er skabt af den islandske lydkunstner Asta Magnúsdóttir.

THE YES MEN

The Horribly Stupid Stunt

Hvad ville du gøre, hvis du som erklæret antikapitalist blev inviteret til at tale til en konference som repræsentant for WTO? Det spørgsmål måtte den amerikanske kunstnergruppe The Yes Men (Nikkedukkerne) stille sig, da arrangørerne af en konference om international handelslovgivning i Salzburg blev narret af The Yes Mens fupnummer på WTOs hjemmeside. Deres svar: Parodierte WTOs handelspolitik på mest groteske vis for at fremkalde en kritisk stillingstagen hos tilhørerne, tale nedladende om italienernes arbejdsmoral, prise Hitlers økonomiske politik, forsvare vold mod demonstranter og iscenesætte et tærteattentat, som fører til repræsentantens død. Hvordan tilhørerne reagerede, kan man se i dokumentarfilmen The Horrible Stupid Stunt.

www.theyesmen.org

THE BURDEN OF PROOF

Hans Bernhard på CNN

Da amerikanerne gik til præsidentvalg i 2000, lancerede mediehackeren Hans Bernhard websitet vote-auction.com, der i al sin enkelhed var en virtuel platform, hvor vælgerne kunne sælge deres stemmer til højstbydende. Fup, undergravende virksomhed eller udemokratisk foretagende?

Bernhard fik en halv times program på CNN, hvor tørre eksperter og oprørte studieværter forsøgte at begribe fænomenets juridiske status og moralske karakter.

THE NET WANTS TO BE FREE - THE SAGA CONTINUES

Natural Selection, The File Room, gatt.org, Anti-Capitalist Operating System

²Internettet er stadig et ufærdigt projekt.² Sådan siger en af den digitale revolutions intellektuelle Geert Lovink. Drømmene om et frit, globalt kommunikations-netværk er kun delvis gået i opfyldelse, og i dag synes udviklingen snarere at gå i retning af en stigende kommercialisering og kontrol med informationsstrømmen. CIA sniffer e-mails som aldrig før, korporationer får lukket kritiske websites ved at vifte med omskrevne lovgivninger forklædt som en check, og Microsoft sidder på 90 procent af markedet. Og hvad er det egentligt for en Texasbaseret virksomhed, som ejer landområdet .iq?

GALLERI BO BJERGGGAARD 1.-2. april kl. 16-19 - Fri entré 3.-4. april kl. 12-16 - Fri entré

ANNE KATRINE DOLVEN

Videoværker: Puberty / Portrait with Cigarette

Den norske kunstner Anne Katrine Dolven har i de seneste år fået betydelig opmærksomhed for sine køligt komponerede og tankevækkende videoer og for den nye drejning, hun giver klassiske temaer som landskaber og stilleben. I de to video-værker, som præsenteres på denne udstilling, parafaserer Anne Katrine Dolven over to malerier af den norske kunstner Edvard Munch, nemlig Pubertet og Selvportræt med cigaret. Hun holder sig respektfuldt til originalerne og gentager deres farvespil - efterligner rammer og komposition samtidig med, at hun introducerer nye visuelle elementer, som skaber et mere nutidigt udtryk.

www.bjerggaard.com

KOPENHAGENSHOP 1.-4. april kl. 10-18 - Fri entré

AUTOPILOT

Generativ kunst af Thor Magnusson, Birta Thrastardottir, Pablo Miranda Carranza, Ole Kristensen

Generativ kunst er en særlig gren inden for den computerbaserede kunst. I generativ kunst overlades en del af værkets konstruktion til autonome processer i computeren. På udstillingen vises tre generative kunstværker, som repræsenterer hver sin æstetiske tilgang til genren: Generativ arkitektur, generative tegninger og generativ lyd/animation.

GALLERI 24B 1. - 4. april kl. 17-20 - Fri entré

ARTNODE

Artnode gets physical

Siden midten af 90'erne har kollektivet Artnode udstillet digital kunst på deres website, og selvom deres aktiviteter således har stået i virtualitetens tegn, er de ikke bange for at inddrage den fysiske verden som udstillingsrum. Faktisk er grænsefladen mellem det virtuelle rum, det digitale kredsløb og den fysiske verden et gennemgående tema i Artnodes projekter. På RADAR viser de otte medlemmer værker, som alle placerer sig i en gråzone mellem det virtuelle, digital og fysiske - mellem software og hardware.

www.artnode.org

MUSEET FOR SAMTIDSKUNST ROSKILDE 2. april - 6. juni tir-fre 11-17 lør-søn 10-16 (Entré 30/15 - voksen/barn)

SYNS (((I))) PUNKT

Hovedværker fra museets samling

Udstillingen viser værker med ideer og visioner, der repræsenterer/afspejler nybrud i den elektroniske kunst og problematiserer værkbegrebet. Nogle af værkerne har traditionel værkarakter mens andre - for eksempel aktioner, performances og installationer, der som fællestræk har en flygtig karakter - i dag udelukkende kan opleves gennem video- og lydoptagelser eller andre former for dokumentation. Udstillingen rummer værker af bl.a. Anne Katrine Dolven, Yoko Ono, Carl Fredrik Reuterswärd, Nam June Paik, Laurie Anderson, John Cage, William Anastasi, Dove Bradshaw og Christian Marclay.

www.samtidskunst.dk

NEON GALLERY 27. marts - 25. april tir-fre kl. 10-17 lør-søn kl. 12-16 - Fri entré

SYN (((I))) PUNKT

Værker fra Museet for Samtidskunst Roskilde

Fra Museet for Samtidskunst Roskilde har Neon Gallery lånt værker, der forholder sig til Fluxus-bevægelsen og 60'ernes lydkunst. To af værkerne er relaterede til en af Fluxus-bevægelsens forgrundsfigurer George Maciunas: In memoriam George Maciunas af Joseph Beuys

RADAR KUNST

VEGA1. - 4. april kl. 13-19 - Fri entré

CHRISTINA BACK

Rum: ASTRAY I / Rum: ASTRAY II

Til RADAR 2004 har Christina Back skabt to helt nye installationer i VEGAs trapperum. I ³Rum: ASTRAY I² indgår et antal elastiske vægge, der både i udtryk og placering går i dialog med trapperummets egen arkitektur. De elastiske vægge er monteret med kædeutræk, så publikum selv kan skabe nye fragmenteringer og opdelinger af rummet. Hver væg er udstyret med højttalere, hvis lyd skifter efter væggenes og publikums placering. ³Rum: ASTRAY II² involverer et større antal fladskærme. Enkelte af skærmene er forbundet til web-kameraer på andre etager. Hver skærm har et individuelt forløb, hvor der vises billeder og videosekvenser fra andre etager, både direkte og forsinkede, fra ting der måske foregår, foregik eller kunne foregå. Ideen er at fragmentere rummet via de oplevelser, der foregår og ikke foregår i forhold til den besøgendes placering og bevægelse i rummet, således at rummet opdages på ny i jagten på ²den skønne kvinde på fjerde afsats² eller detaljen i hjørnet.

PETRI RAAPPANA

AlphaByte

AlphaByte er et audiovisuelt program, der er blevet til i et tæt samarbejde mellem Petri Raappana og en række musikere. AlphaByte findes med forskellige lydsider afhængig af de udstillinger og rum, hvor det har været præsenteret. Til RADAR 2004 er der skabt en ny lydside, som tager udgangspunkt i netop VEGA. Andre versioner af AlphaByte er tidligere blevet vist både på internettet og som en del af sociale events, hvor publikums interaktioner kunne opleves som en 'semikoncert'¹.

Lille VEGA

www.kopenhagen.dk/netkunst/articles/petrii.htm

SOPHIE HJERL

CurtainCalls

CurtainCalls er et videoværk om rum og fortætning, sprækker og fortælling. Optagelse og projektion af et scenetæppe, heraf titlen CurtainCalls - fremkaldelse. Men er der nogen? Musikken er komponeret ud fra 48 samplinger af lyde fra Lille VEGA. Billede og lyd kører forskudt i tid, så den samlede oplevelse af det fortalte er i evig bevægelse og transformation - noget forgår, mens nyt opstår.

Store VEGA Foyer Bar

AGNIESZKA WILK

Lay Down

Agnieszka Wilks animationsfilm tematiserer oplevelsen af lykke som en mulighed men ikke som et livsvilkår. Den handler også om, at enhver lever i sin egen, individuelle verden - fuldkommen alene. Historien er ikke fortalt på traditionel vis men gennem symboler og transformationer. Den ledsagende musik er skabt af Konrad Korabiewski med samples fra det danske elektroniske orkester Armstrong.

Store VEGA Foyer

JOHANNA DOMKE

Let the Wind Blow

En mand, en kvinde, et tæppe af blinkende storbylys ledsaget af en let vind. Mens landskabet skifter, bliver nat til dag og dag til nat på ingen tid. De to personer i Johanna Domkes nyeste videoværk forbliver fuldkommen ubevægelige i billedet. Kun nogle få vindstød i tøjet nu og da gør dem levende. Let the Wind Blow beretter om at overvinde de sædvanlige synspunkter og forlade den normale tidsstruktur.

Store VEGA Foyer

www.johannadomke.net

FAST VIDEO

Videoer

FAST VIDEO er en forening stiftet i 1999 bestående af billedkunstnere, der helt eller delvist arbejder med elektroniske medier. RADAR præsenterer 11 videoværker, der udgør et bredt udsnit af FAST VIDEOS samlede produktion. Der præsenteres videoer af Andrea Creutz, Michelle Eistrup, Marika Seidler, Bettina Fürstenberg, Lennard Grahn, Sophie Hjerl, Elin Kromann, Søren Martinsen, Niels Plenge, Steen Møller Rasmussen, Jeanette Schou og Hartmut Stockter.

BASEMENT 1. - 4. april kl. 13-19 - Fri entré**TATIANA LYNG PEDERSEN / SONJA THOMSEN**

Two Arms, Two Legs

I Two Arms, Two Legs bliver du filmet foran en to meter høj projektion af en silhuetlignende skikkelse. Via en computer genereres optagelsen til et tilfældigt kvadrat, der indgår i projektionen. Når du forlader rummet, efterlader du derfor et spor af dig selv og din tilstedeværelse - et spor som forbliver, indtil det udskiftes med andre personers fragmenter. Projektionen er i stadig bevægelse - den fælles skikkelse forandres konstant.

www.tati.dk/radar

TATIANA LYNG PEDERSEN

Det Tonale Rum

Det Tonale Rum er et interaktivt lydunivers, som bliver styret af brugerens bevægelser på en gyngel placeret i et ellers tomt rum. Samspillet mellem gyngelen og brugerens leg med denne aktiverer forskellige former for lydunivers alt efter, hvordan stemningen omkring legen med gyngelen er. Gyngel man forsigtigt, vil lydoplevelsen være anderledes, end hvis man gyngel højt og vovet. Lydsiden er skabt af den islandske lydkunstner Asta Magnúsdóttir.

THE YES MEN

The Horribly Stupid Stunt

Hvad ville du gøre, hvis du som erklæret antikapitalist blev inviteret til at tale til en konference som repræsentant for WTO? Det spørgsmål måtte den amerikanske kunstnergruppe The Yes Men (Nikkedukkerne) stille sig, da arrangørerne af en konference om international handelslovgivning i Salzburg blev narret af The Yes Mens fupnummer på WTOs hjemmeside. Deres svar: Parodiere WTOs handelspolitik på mest groteske vis for at fremkalde en kritisk stillingtagen hos tilhørerne, tale nedladende om italienernes arbejdsmoral, prise Hitlers økonomiske politik, forsvare vold mod demonstranter og iscenesætte et tærteattentat, som fører til repræsentantens død. Hvordan tilhørerne reagerede, kan man se i dokumentarfilmen The Horrible Stupid Stunt.

www.theyesmen.org

THE BURDEN OF PROOF

Hans Bernhard på CNN

Da amerikanerne gik til præsidentvalg i 2000, lancerede mediehackeren Hans Bernhard websitet vote-auction.com, der i al sin enkelthed var en virtuel platform, hvor vælgerne kunne sælge deres stemmer til højstbydende. Fup, undergravende virksomhed eller udemokratisk foretagende? Bernhard fik en halv times program på CNN, hvor tørre eksperter og oprørte studieværter forsøgte at begribe fænomenets juridiske status og moralske karakter.

THE NET WANTS TO BE FREE - THE SAGA CONTINUES

Natural Selection, The File Room, gatt.org, Anti-Capitalist Operating System

²Internettet er stadig et ufærdigt projekt.² Sådan siger en af den digitale revolutions intellektuelle Geert Lovink. Drømmene om et frit, globalt kommunikations-netværk er kun delvis gået i opfyldelse, og i dag synes udviklingen snarere at gå i retning af en stigende kommercialisering og kontrol med informationsstrømmen. CIA sniffer e-mails som aldrig før, korporationer får lukket kritiske websites ved at vifte med omskrevne lovgivninger forklædt som en check, og Microsoft sidder på 90 procent af markedet. Og hvad er det egentligt for en Texasbaseret virksomhed, som ejer landområdet .iq?

GALLERI BO BJERGGAARD 1.-2. april kl. 16-19 - Fri entré 3.-4. april

kl. 12-16 - Fri entré**ANNE KATRINE DOLVEN**

Videoværker: Puberty / Portrait with Cigarette

Den norske kunstner Anne Katrine Dolven har i de seneste år fået betydelig opmærksomhed for sine køligt komponerede og tankevækkende videoer og for den nye drejning, hun giver klassiske temaer som landskaber og stilleben. I de to video-værker, som præsenteres på denne udstilling, parafaserer Anne Katrine Dolven over to malerier af den norske kunstner Edvard Munch, nemlig Pubertet og Selvportræt med cigaret. Hun holder sig respektfuldt til originalerne og gentager deres farvespil - efterligner rammer og komposition samtidig med, at hun introducerer nye visuelle elementer, som skaber et mere nutidigt udtryk.

www.bjerggaard.com

KOPENHAGENSHOP 1.-4. april kl. 10-18 - Fri entré**AUTOPILOT**

Generativ kunst af Thor Magnusson, Birta Thrastardottir, Pablo Miranda Carranza, Ole Kristensen

Generativ kunst er en særlig gren inden for den computerbaserede kunst. I generativ kunst overlades en del af værkets konstruktion til autonome processer i computeren. På udstillingen vises tre generative kunstværker, som repræsenterer hver sin æstetiske tilgang til genren: Generativ arkitektur, generative tegninger og generativ lyd/animation.

<http://www.kopenhagen.dk/net.art>

GALLERI 24B 1. - 4. april kl. 17-20 - Fri entré**ARTNODE**

Artnode gets physical

Siden midten af 90'erne har kollektivet Artnode udstillet digital kunst på deres website, og selvom deres aktiviteter således har stået i virtualitetens tegn, er de ikke bange for at inddrage den fysiske verden som udstillingsrum. Faktisk er grænsefladen mellem det virtuelle rum, det digitale kredsløb og den fysiske verden et gennemgående tema i Artnodes projekter. På RADAR viser de otte medlemmer værker, som alle placerer sig i en gråzone mellem det virtuelle, digital og fysiske - mellem software og hardware.

MUSEET FOR SAMTIDSKUNST ROSKILDE 2. april - 6. juni tir-fre 11-17 lør-søn 10-16 (Entré 30/15 - voksen/barn)**SYNS (((I))) PUNKT**

Hovedværker fra museets samling

Udstillingen viser værker med ideer og visioner, der repræsenterer/afspejler nybrud i den elektroniske kunst og problematiserer værkbegrebet. Nogle af værkerne har traditionel værkarakter mens andre - for eksempel aktioner, performances og installationer, der som fællestræk har en flygtig karakter - i dag udelukkende kan opleves gennem video- og lydoptagelser eller andre former for dokumentation. Udstillingen rummer værker af bl.a. Anne Katrine Dolven, Yoko Ono, Carl Fredrik Reuterswärd, Nam June Paik, Laurie Anderson, John Cage, William Anastasi, Dove Bradshaw og Christian Marclay.

www.samtidskunst.dk

NEON GALLERY 27. marts - 25. april tir-fre kl. 10-17 lør-søn kl. 12-16 - Fri entré**SYN (((I))) PUNKT**

Værker fra Museet for Samtidskunst Roskilde

Fra Museet for Samtidskunst Roskilde har Neon Gallery lånt værker, der forholder sig til Fluxus-

bevægelsen og 60'ernes lydkunst. To af værkerne er relaterede til en af Fluxus-bevægelsens forgrundsfigurer George Maciunas: In memoriam George Maciunas af Joseph Beuys

Le Japon traque le crime par téléphones mobiles

La police cherche à solliciter la coopération de millions d'internautes et notamment de tous les Japonais qui utilisent l'i-mode, standard de l'internet mobile au Japon. Objectif : permettre l'identification des criminels par le public, où qu'il se promène. Sur le web, un site bilingue, en japonais et en anglais, présente le peu ragoûtant minois des sélectionnés du jour, face et profils tirés lors de missions de surveillances secrètes ou d'une précédente peine de prison.

Les critiques pourront trouver à cette initiative un air de déjà-vu, et comparer cette "i-mode surveillance du territoire" avec la "police de la pensée", qui avant-guerre, s'imposait dans les moindres

Un russe sachant réprimer fait honneur au KGB

Le quotidien Izvestia rapporte que la production de films pornographiques et pédophiles a fortement augmenté depuis la chute de l'URSS, représentant aujourd'hui 20% du marché alors qu'il y a 10 ans il n'y en avait pas, rien, nada. On notera déjà le parti-pris de la chose : d'après vous, à quoi, ou qui, ça sert d'associer pornographie et pédophilie dans le même sac (même à patates) ?

Au FSB, le successeur du KGB. On apprend en effet que "son programme de surveillance internet Sorm-2 a réussi à mettre au jour plusieurs dizaines de sites pédophiles ou pornographiques et, dans certains cas, à remonter la filière jusqu'aux auteurs de ces sites." Génial, la surveillance électronique de tout le trafic internet du pays (les FAI russes se doivent d'installer un commutateur renvoyant tout le trafic internet au FSB...) !

Eh bien non, c'est ce qu'on appelle vulgairement un "cache-sexe". Le vrai problème, c'est que "les peines dérisoires

Big Brotherisé?) Bug Brotherisable!)

REGULATION : processus par lequel les gouvernements veulent contrôler la liberté d'expression (cf [article11.net](#))

SECURITE : façon de faire passer les hackers pour des voleurs, et que vive l'e-commerce ! (cf [kitetoo.com](#))

SURVEILLANCE : réponse des forces de l'ordre à l'adage de l'internet : information=pouvoir (cf [lambda.eu.org](#))

Politiciens, marchands et forces de l'ordre veulent réguler, sécuriser et surveiller l'internet alors même que ceux qui ont bâti, et bâtissent encore, l'internet, s'inquiètent de ces dérives totalitaires à la Big Brother (voir [altern.org](#)).

L'internaute, au mépris des droits de l'homme et du citoyen, est de plus en plus considéré comme un cybercriminel potentiel... mais qui va l'aider à protéger sa vie privée, sécuriser son

qui attendent les pédophiles russes n'ont rien pour décourager leurs activités : les actes sexuels avec mineur de moins de seize ans sont passibles tout au plus de quatre ans de camp de travail et les "actes de débauche avec mineur sans emploi de violence" sont punis de quelques dizaines de dollars d'amendes. La peine la plus sévère, six ans de camp, peut être appliquée pour prostitution ou implication dans des activités pornographiques"...

Le FSB se sert donc du fait que les pédophiles ne risquent pas gros pour faire la promo de leur système de surveillance et d'interception généralisée. Ce serait donc ça, le fameux "vide juridique" de l'internet, cette "zone de non-droit" ? Au lieu de sanctionner plus sévèrement les pédophiles, surveillons gaiement les internautes, et qu'ça saute ! On pourrait aussi ouvrir tout le courrier postal, vu qu'on n'a pas encore trouvé d'autre moyen pour faire transiter les K7 vidéos incriminées... non ?

On notera enfin le parti-pris du titre de la dépêche de l'AFP : "La Russie, un important centre de production de films pédophiles". Pas un mot sur l'amalgame pornographie-pédophilie, sur la clémence des sanctions, pas un chiffre non plus sur le nombre de films pédophiles ou le nombre de condamnations, pas un commentaire non plus sur le fait que le FSB aurait, "dans certains cas", pu remonter la filière, alors même que SORM-2 est censé tout surveiller : le FSB chercherait-il à faire la promo de son système tout en laissant entendre qu'il n'est fiable que "dans certains cas" ?

Gageons en tout cas qu'ils ne s'en servent certainement pas pour surveiller les opposants à Poutine en général ou à la guerre en Tchétchénie en particulier. Au fait, combien ça prend un déserteur russe, devant un tribunal militaire, en pleine "guerre" ?

Le dortoir des voyeurs est expulsable

Libération rapportait jeudi 9 que voyeurdorm.com venait de perdre le procès que lui intentait la municipalité de Tampa, où se trouve la maison, truffée de webcams et remplie d'"étudiantes", que les internautes peuvent observer à loisirs (strip tease, douches et tout tout tout compris, jour et nuit) pour 260 F/mois. La ville exigeait le déménagement du "dortoir des voyeurs" en vertu d'une loi qui proscriit la présence de commerces de X dans les zones résidentielles.

La société, qui s'était aussi fait connaître en portant plainte pour plagiat contre les créateurs de l'émission TV Big Brother, ou encore en lançant askoj.com (posez vos questions à O.J. Simpsons, vedette de football et vrai-faux tueur de sa femme), avançait pour sa défense que voyeurdorm ne nuisait en rien au voisinage, les voyeurs voyant via l'web. Elle vient de faire appel. Elle vient aussi, du coup, de se refaire un bon coup de pub.

Le Maroc imposerait un cyber-couvre-feu

Les députés islamistes du Parti de la justice et du développement (PJD) ne sont pas contents. La pornographie, strictement interdite d'entrée sur le territoire marocain, fait florès sur le marché parallèle, mais aussi sur l'internet. S'il est encore difficile de censurer l'accès aux 200 000 internautes recensés dans la pays, le gouvernement envisage par contre sérieusement de réglementer les horaires d'ouverture des cybercafés et de fixer un âge minimum pour les internautes qui les fréquentent.

Autrement dit, pour lutter contre la pornographie, le meilleur moyen est de n'ouvrir les cybercafés que lorsque le

soleil brille, brille, brille, et d'interdire aux mineurs d'y entrer. Et puis tant pis pour ses lycéens interdits de recherches sur le net, tant pis pour ces employés qui ne pourront plus surfer le soir après l'bureau, tant pis pour les dommages collatéraux que cela provoquera. Tant pis.

Le PJD et l'Istiqlal (un autre parti conservateur) ont par ailleurs lancé une campagne visant à censurer le "courrier du coeur" du quotidien populaire "Al Aath al Maghribya", qui connaît un grand succès, notamment auprès des adolescents, mais qu'ils jugent pornographique. A quand la censure des journaux du coeur sur les pages perso, et puis les pages persos tout court, et les forums de discussion, et puis l'internet pour les femmes, vous y avez pensez, faudrait peut-être aussi les en éloigner, non ?

AFP : <http://fr.news.yahoo.com/001109/5/qb5q.html>

Un pro-filtre vire sa cutie

Victime de sa propre campagne en faveur des filtres censé protéger les petits enfants des contenus offensants, un candidat républicain, conservateur et chrétien, vient de virer sa cutie. Il s'oppose en effet aujourd'hui à la mise en place de filtres dans les écoles et bibliothèques après s'être aperçus que ceux qui bloquaient l'accès à la nudité (partielle ou totale) ainsi qu'aux actes et textes à caractère sexuels bloquaient également... son propre site.

Probablement à cause de ses prises de position en matière d'avortement, de viol et d'inceste, mots interdits dans l'internet filtré. Une étude de Netelection.org et de Peacefire.org, spécialiste de la lutte anti-filtre, révèle par ailleurs que les sites web de quatre autres républicains, un libertarien et cinq démocrates sont eux aussi bloqués par le célèbre et décrié Cyber Patrol.

9.11.00

La surveillance du web au travail

Chez Noos, la charte d'usage des nouvelles technologies plagie d'ailleurs bizarrement les Tables de la Loi, multipliant les « toujours mettras », « n'utiliseras pas », etc. Certains vont jusqu'à préciser l'usage des nouvelles technologies dans les contrats de travail, soulignant par exemple que tous les messages sont la propriété de l'entreprise. D'autres interdisent tout bonnement l'accès au web, comme chez France Telecom. D'autres enfin restreignent l'accès de 13 à 14h, ou pas plus de 3h par mois, ou restreignent le nombre, et le type, de sites visitables, tout ça grâce à Websense, SurfControl et autres Little Brother, autant de logiciels de la famille des « Employee Internet Management Software » (EIM, gestion de l'Internet) dont le marché est en pleine explosion: 59 millions de dollars en 1999, selon le cabinet IDC, avec une croissance prévue de près de 900 % jusqu'en 2004.

Pour Serge Gauthronet, sociologue, "le fait est qu'un employé qui ne travaille pas, cela se voit: il ne tient pas ses objectifs, sa tâche n'avance pas. Il n'y a pas besoin d'aller chercher les traces de son utilisation des moyens informatiques. Les traces sur le réseau, c'est la même chose: une ligne de chiffres et de codes ne peut pas refléter une journée de travail. Prenons un exemple: un salarié de la Fnac s'est fait licencier au motif qu'il avait volé un téléviseur, le film de la caméra de surveillance le montrant la télé dans les bras. Donc arrestation au petit matin, menottes, garde à vue, etc. Or en fait, il s'agissait de son propre téléviseur qu'il avait mis en réparation et venait rechercher."

[ZDNet - L'Inde adopte des lois contre le cybercrime](#)

L'opérateur dominant en Inde a prévenu la semaine dernière les abonnés de ses services internet qu'ils étaient surveillés. VSNL dit ne faire qu'appliquer la loi, puisque le 17 octobre a été promulgué par l'État fédéral un train de lois sur la société de l'information, qui mettent en œuvre des mesures préconisées par le projet de traité sur le cybercrime du Conseil de l'Europe.

.ref#[1314975](#)

[LinuxFr- Attention voilà les Pirates-Busters !](#)

Le BSA (Business Software Alliance), organisme pour la lutte contre le piratage financé par de grands éditeurs de logiciels avec Microsoft en tête, connu pour ses méthodes intimidatrices vient de présenter sa nouvelle arme secrète : un Van Ford Transit équipé d'un radar et d'une antenne satellite sur le toit dont plusieurs exemplaires sillonnent en ce moment l'Ecosse. Selon les consultants de cette organisation, avec cet équipement ils sont capable de détecter l'usage de logiciels piratés à distance ! Selon [The Register](#), le BSA aurait menacé celui qui, ayant découvert la chose, exprimait quelque incrédulité. Le système TEMPEST permet effectivement de capter le rayonnement d'un écran, et donc de lire ce qui y est inscrit, de là à ce que les chasseurs de logiciels pirates s'en servent... Mettons qu'il s'agisse plutôt de désinformation, intimidation, intoxication, piège à cons.

.ref#[1314148](#)

[NoSpoon- Quand le physionomiste est supplanté par la biométrie](#)

[Wired News](#) indique que suite aux nombreux incidents plus ou moins violents dans les nightclubs néerlandais, 15 établissements ont décidé de s'équiper

de systèmes biométriques (scanners de visage, d'empreinte digitale et des système de cartes à puce) pour filtrer l'accès. Les nouveaux venus se voient ainsi demander leur nom, prénom, adresse et age, puis terminent par une séance de scanner du visage ou des empreintes. A leur retour, leur identifiant est immédiatement comparé avec la blacklist et s'il y a une correspondance, la personne est directement refoulée. Selon certains "spécialistes", de telles pratiques sont uniquement un prétexte pour établir une base de données ciblées pouvant être exploitée commercialement une fois les informations agrégés.

[transfert- La Chine lave plus net](#)

La Chine est l'un des premiers pays à mettre en place une véritable régulation de l'Internet, avec déclarations préalables, restrictions a priori et responsabilités mal placées. Les forums de discussion doivent dorénavant effectuer une identification préalable de tous leurs contributeurs. Ils sont également tenus de censurer d'office tout message "illégal" avant d'en rapporter la teneur, et l'identification, aux autorités. Les sites de presse sont l'autre cible de cette nouvelle vague de régulation. Ils devront en effet obtenir toute une série d'autorisations administratives (nationales, régionales et locales) avant de pouvoir exercer. Toute information se doit par ailleurs d'émaner d'une agence de presse officielle, et les e-journalistes d'avoir acquis une "expérience notable" au sein d'un média d'État. Il est bien évidemment interdit aux pages persos de diffuser quelques informations que ce soit.

[Multimédium- Des campus qui deviennent de mini-monopoles Microsoft](#)

Plus d'une centaine d'institutions d'enseignement aux États-Unis et une

demi-douzaine au Canada bénéficient d'un programme de licences baptisé «Microsoft Campus Agreement» qui permet d'acheter des licences d'utilisation des produits Microsoft au prix du gros. En vertu de ce programme, Microsoft exige une redevance fixe pour chaque employé et/ou étudiant de l'université, plutôt que pour chaque ordinateur. Tous les individus sont comptabilisés, qu'ils aient ou non l'intention d'utiliser les logiciels de Microsoft.

Selon [OS Opinion](#), l'Université du Maryland songe à exiger, chaque semestre, une contribution de l'ordre d'environ 20\$ US de la part de tous ses étudiants, sans exception, à la manière d'une assurance scolaire obligatoire. Plus grave encore que ces quelques 120\$ US dépensés inutilement (s'il utilise Linux, par ex.) par un étudiant après trois années passées à l'Université, certains étudiants craignent qu'en raison de ce forfait, certaines fonctionnalités des logiciels de Microsoft fassent partie intégrante de l'enseignement...

[NosPoon- Internet par le petit bout d'AOL](#)

Selon [01net](#), Walt Disney a alerté la Federal Trade Commission sur une particularité de la nouvelle version de l'interface propriétaire d'AOL. Cette dernière impose aux 25 millions d'abonnés du partenaire win-win de Time Warner d'utiliser impérativement comme page d'accueil la home d'AOL. D'après le fournisseur d'accès, qui a qualifié l'initiative de Disney de "non

constructive", cette nouveauté a été introduite à la demande des utilisateurs qui trouvaient le raccourci vers la page d'accueil AOL trop complexe à utiliser... Un comble quand on sait que les AOLeurs naïfs ou peu au fait des subtilités de l'internet ne voient le Net que par le bout de la lorgnette : surf, e-mail, chat... tout passe par des petits boutons AOL ! L'an dernier, [une plainte](#) avait déjà été déposée contre AOL au motif que son système, une fois installé, interdisait aux internautes de se connecter par un autre FAI, tout en altérant certains fichiers systèmes et ressources logicielles...

.ref#[1303518](#)

[Juriscom- OneTel pris à son propre piège](#)

OneTel, connu pour être un fournisseur d'accès on ne peut plus douteux, attaquait Multimania parce qu'il hébergeait des sites qui, tel OneTelFuck, dénonçaient l'arnaque. OneTel réclamait à Multimania les logs et l'identité des auteurs de ces sites. Multimania avait répondu à l'injonction en fournissant les IP incriminées... qui étaient (on s'en doute !) des adresses OneTel. Multimania avait donc logiquement répondu : "identifiez les vous-mêmes puisqu'ils sont chez vous !". Le juge a suivi et OneTel doit verser 8000 F à Multimania ! Le plus drôle c'est que l'ordonnance de référé est publiée sur le net et comporte 6 fois l'expression ONETELFUCK ! Prémice d'un procès contre Juriscom et le TGI de Paris ? (sources : [ZipiZ](#) et [LinuxFr](#)).

Au nom de la liberté d'expression, le milieu activiste lance une campagne de soutien à Vote-auction. Pour contourner la suspension de son nom de domaine, RTMark cherche à faire héberger le site de vente aux enchères de votes et lance un appel au piratage des sites des candidats aux présidentielles américaines.

.ref#[1292229](#)

[AFP- Objets nazis sur Yahoo: les experts préconisent un filtrage pour les Français](#)

Trois experts ont proposé lundi au Tribunal de grande instance de Paris de filtrer les internautes en fonction de leur nationalité et des mots-clés qu'ils utilisent, afin de leur interdire l'accès aux ventes aux enchères d'objets nazis, proposés par le site américain Yahoo.

Mais ce collège d'experts, dont le rapport avait été demandé le 11 août dernier par le Premier vice-président du tribunal, Jean-Jacques Gomez, doute lui-même de l'efficacité des mesures qu'il propose. Selon eux, les solutions consistent à ne pas traiter les demandes des internautes français, dont la nationalité serait automatiquement révélée par leur ordinateur (70% d'entre eux) et dont la recherche serait orientée vers des objets nazis. Pour ceux dont la nationalité n'est

pas révélée (30%), ils proposent de mettre en place un système de déclaration volontaire de nationalité et de filtrage des recherches par mots-clés. Reste qu'il est possible de mentir sur sa nationalité, et de trouver d'autres mots-clés non bloqués. Me Christophe Pecnard, avocat de Yahoo, a fait observer lundi que le filtrage par mots-clés n'était pas parfait puisque le blocage du mot "nazi", par exemple, interdit l'accès aux sites anti-nazis. Vinton Cerf a enfin objecté que l'instauration de systèmes de blocage sur l'internet "qui compte 100 millions de sites aujourd'hui et en comptera un milliard dans cinq ans" pourrait aboutir à "bloquer tout le système".

[ZDnet](#) rapporte que Maître Marc Lévy, avocat de la Licra, a présenté au juge la constatation suivante : Yahoo filtre déjà les internautes de manière à cibler les bandeaux de publicité diffusés sur ses sites. Yahoo France a d'ailleurs repris ces arguments publicitaires dans une note publique intitulée « [Affinité et ciblage](#) ». On peut lire dans ce pensum publicitaire : « Internet permet de cibler précisément les utilisateurs auprès desquels l'annonceur souhaite communiquer (...) ; soit par rapport à un contexte éditorial [mots-clés], soit par rapport à la provenance des internautes (exemple : cibler les internautes belges -.be- sur Yahoo! France) (...) ». Yahoo France avait pris la peine de retirer cette note (trop voyante ?) de ses serveurs, pour la remettre en ligne récemment au milieu du mois d'octobre.

Selon [Transfert](#), en attendant la délibération finale qui aura lieu le 20 novembre, le substitut Pierre Dillange a créé la surprise. Il s'est déclaré perplexe qu'on veuille imposer à Yahoo ! de filtrer l'accès à son site. " La justice française doit statuer à la mesure de ce qui est possible et réalisable ". En l'absence d'une fiabilité à 100 %, le procureur ne voit donc pas pourquoi Yahoo ! appliquerait la condamnation du juge. Pour lui, d'ailleurs, la solution d'une affaire comme celle -ci mériterait plus qu'un arbitrage de la justice : un recours aux autorités politiques.

ZDNet - États-Unis : une loi antipiratage très sévère

Le Bureau du copyright américain n'a pas ménagé d'exceptions notables au controversé DMCA (Digital Millenium Copyright Act), la sévère loi anti-hacking qui ravit les lobbies du disque et du cinéma. Depuis le 28 octobre, il est devenu illégal de « modifier une mesure technologique qui contrôle l'accès » – reverse engineering – à une œuvre musicale ou vidéo numérique soumise au copyright. La peine encourue peut aller jusqu'à 5 ans de prison. Seules exceptions : les travaux de recherche « légitimes » visant à améliorer la sécurité informatique, et notamment la recherche sur les algorithmes de chiffrement. Plutôt préoccupant pour les militants européens du logiciel libre, comme Eurolinux, qui peuvent craindre que cette rigidité américaine ne devienne contagieuse sur le Vieux Continent.

AFP- La Chine renforce son controle sur l'internet

La Chine a publié mardi une nouvelle série de réglementations destinées à contrôler le contenu de l'internet et visant plus particulièrement les forums de discussions et la diffusion d'informations.

Aux termes des deux réglementations, publiées intégralement par le Quotidien du peuple, les sites internet chinois seront tenus pour responsables de la diffusion de toute information sensible, y compris sur les forums de discussions et tous les espaces laissés aux internautes pour s'exprimer.

Les sites étrangers consacrés à la situation des droits de l'homme en Chine, au Tibet ou à la secte interdite Falungong sont pour leur part systématiquement bloqués par les autorités et inaccessibles pour les internautes chinois.

En ce qui concerne les sites chinois spécialisés dans l'information, ils ne pourront fonctionner qu'après avoir reçu diverses autorisations officielles, et pourront être tenus pour responsables de

la diffusion de toute information jugée contestable par les autorités, selon la seconde réglementation publiée par le Quotidien du peuple.

Libération - L'Italie piège ses pédophiles... et les autres avec

La semaine dernière, le procureur Alfredo Ormani a demandé le renvoi devant les tribunaux de 831 internautes italiens et lancé des dizaines de commissions rogatoires à l'encontre de 660 étrangers. Pour démasquer les pédophiles, le magistrat n'a pas hésité à mettre sur pied, avec l'aide de Microsoft, un faux site destiné à servir d'appât. Le Conseil supérieur de la magistrature a, lui aussi, ouvert une enquête, mais à l'encontre du magistrat. On lui reproche d'avoir mis sur pied le site espion et d'avoir de facto «provoqué des délits».

Certains estiment la campagne antipédophiles sur le Net hors de proportion. «Bien sûr, la pédophilie via l'Internet existe, mais c'est un phénomène dérisoire par rapport aux moyens autoritaires et de censure mis en œuvre pour la combattre», réplique Alberto Abruzzese, professeur de sociologie à l'université de Rome. «Les personnes qui s'occupent de pédophilie savent que, sur l'Internet, la pédophilie criminelle est insignifiante. Le lieu le plus dangereux en termes de pédophilie reste la famille.»

En octobre, The Thing Roma et Avana Net ont été débranchés parce qu'ils diffusaient des extraits du livre "Laissez que les enfants"... Consacré à une contre-enquête sur une affaire judiciaire de pédophilie et de satanisme survenue en 1997, l'ouvrage dénonçait le climat d'«hystérie médiatique menaçant les libertés civiles» ayant entouré l'enquête. Légalement vendu en librairie, le livre n'a pas eu droit de cité sur le Net: les sites Thing Roma et Avana Net ont été coupés par leur hébergeur, dépendant de la mairie de Rome, sans même que la justice n'ait à se prononcer.

Japan tracking the crime by mobile telephones

The police force seeks to request the co-operation of million Net surfers and in particular all the Japanese who use the I-mode, standard of the mobile Internet in Japan. Objective: to allow the identification of the criminals by the public, where which it walks. On the Web, a bilingual site, in Japanese and English, presents the little ragoûtant little faces of selected day, drawn face and profiles at the time of or preceding secret prison sentence surveillance missions.

Criticisms will be able to find with this initiative an air of already-considering, and to compare this "monitoring I-fashion of the territory" with the "police force of the thought", which pre-war period, was essential in the least recesses of the life of the islanders and their Chinese and Korean colonies.

Russian knowing to repress made honor with the KGB

The Izvestia daily newspaper reports that the production of films pornographic and pédophiles has to strongly increase since the fall of the USSR, accounting for 20% of the market today whereas there 10 years ago it was not, nothing, nada. One will note already the bias of the thing: according to you, with what, or who, that is used for to associate pornography and pédophilie in the same bag (even with potatoes)?

With the FSB, the successor of the KGB One learns indeed that "his program of monitoring Internet Sorm-2 succeeded in putting at the day several tens of sites pédophiles or pornographic and, in certain cases, to reassemble the die to the authors of these sites." Brilliant, electronic monitoring of all traffic Internet of the country (the Russian FAI must install a switch returning all traffic Internet with the FSB...)!

Eh well not, it is what is called vulgarly a "mask-sex". The true problem, it is that "the ridiculous sorrows which await the Russian pédophiles do not have anything to discourage their activities: the sex acts with minor of less than sixteen years are liable at most four years of camp of work and the "acts of vice with minor without use of violence" are punished of a few tens of dollars of fines. The most severe sorrow, six years of camp, can be applied for prostitution or implication in pornographic activities "...

The FSB is thus useful owing to the fact that the pédophiles do not risk large to make the promo of their generalized interception and monitoring system. It would be thus that, famous "the gap in the law" of the Internet, this "zone of not-right"? Instead of sanctioning the pédophiles more severely, let us supervise the Net surfers merrily, and that that jumps! One could also open all the postal mail, considering which one did not find yet of another means to make forward K7 vidéos not accused...?

One will note finally the bias of the title of the dispatch of the AFP: "Russia, a significant center of production of films pédophiles". Not a word on the amalgam pornography-pédophilie, the leniency of the sanctions, not a figure either on the number of films pédophiles or numbers it judgments, not a comment either on the fact that

Monitoring of the Web to work

Besides at Noos, the charter of use of new technologies plagiarizes oddly the Tables of the Law, multiplying "always will put", "will not use", etc. Some go until specifying the use of new technologies in the contracts of employment, underlining for example that all the messages are the property of the company. Others prohibit all bonnement the access to the Web, as at France Telecom. Others finally restrict the access of 13 to 14h, or not more 3h per month, or restrict the number, and the type, of sites worth visiting, all that thanks to Websense, SurfControl and other Little Brother, as many software of the family of the "Employee Internet Management Software" (EIM, management of the Internet) whose market is in full explosion: 59 million dollars in 1999, according to cabinet IDC, with a growth envisaged of almost 900 % until 2004.

For Serge Gauthronet, sociologist, "the fact is that an employee who does not work, that sees himself: he does not hold his objectives, his task does not advance. There does not need to go to seek the traces of its use of average data processing. The traces on the network, it is the same thing: a line of figures and codes cannot reflect a working day. Let us take an example: an employee of Fnac was made lay off with the reason that it had stolen a television set, the film of the camera of monitoring showing it the tele one in the arms. Thus arrest in the early morning, shackles, police custody, etc. However in fact, it was about its own television set which he had put in repair and came to seek."

La Chine est l'un des premiers pays à mettre en place une véritable régulation de l'Internet, avec déclarations préalables, restrictions a priori et responsabilités mal placées.

Les forums de discussion doivent dorénavant effectuer une identification préalable de tous leurs contributeurs. Ils sont également tenus de censurer d'office tout message "illégal" avant d'en rapporter la teneur, et l'identification, aux autorités. Les sites de presse sont l'autre cible de cette nouvelle vague de régulation. Ils devront en effet obtenir toute une série d'autorisations administratives (nationales, régionales et locales) avant de pouvoir exercer. Toute information se doit par ailleurs d'émaner d'une agence de presse officielle, et les e-journalistes d'avoir acquis une "expérience notable" au sein d'un média d'État. Il est bien évidemment interdit aux pages persos de diffuser quelques

informations que ce soit.

Multimédium- Des campus qui deviennent de mini-monopoles Microsoft

Plus d'une centaine d'institutions d'enseignement aux États-Unis et une demi-douzaine au Canada bénéficient d'un programme de licences baptisé «Microsoft Campus Agreement» qui permet d'acheter des licences d'utilisation des produits Microsoft au prix du gros. En vertu de ce programme, Microsoft exige une redevance fixe pour chaque employé et/ou étudiant de l'université, plutôt que pour chaque ordinateur. Tous les individus sont comptabilisés, qu'ils aient ou non l'intention d'utiliser les logiciels de Microsoft.

Selon [OS Opinion](#), l'Université du Maryland songe à exiger, chaque semestre, une contribution de l'ordre d'environ 20\$ US de la part de tous ses étudiants, sans exception, à la manière d'une assurance scolaire obligatoire. Plus grave encore que ces quelques 120\$ US dépensés inutilement (s'il utilise Linux, par ex.) par un étudiant après trois années passées à l'Université, certains étudiants craignent qu'en raison de ce forfait, certaines fonctionnalités des logiciels de Microsoft fassent partie intégrante de l'enseignement...

.ref# [1303651](#)

Multimédium - Un Espion s'infiltré dans votre cellulaire

Depuis quelques jours, impossible de prendre le bus ou le métro à Montréal sans tomber sur une affiche vantant le nouveau service téléphonique sponsorisé d'Espion, qui offre 300 minutes de communications, valables 60 jours, pour 100\$ CA et des pubs de 7 secondes à écouter avant que de pouvoir passer quelque coup de fil que ce soit.

.ref# [1303557](#)

NosPoon- Internet par le petit bout d'AOL

Selon [01net](#), Walt Disney a alerté la Federal Trade Commission sur une particularité de la nouvelle version de l'interface propriétaire d'AOL. Cette dernière impose aux 25 millions d'abonnés du partenaire win-win de Time Warner d'utiliser impérativement comme page d'accueil la home d'AOL. D'après le fournisseur d'accès, qui a qualifié l'initiative de Disney de "non constructive", cette nouveauté a été introduite à la demande des utilisateurs qui trouvaient le raccourci vers la page d'accueil AOL trop

complexe à utiliser...

Un comble quand on sait que les AOLeurs naïfs ou peu au fait des subtilités de l'internet ne voient le Net que par le bout de la lorgnette : surf, e-mail, chat... tout passe par des petits boutons AOL ! L'an dernier, **une plainte** avait déjà été déposée contre AOL au motif que son système, une fois installé, interdisait aux internautes de se connecter par un autre FAI, tout en altérant certains fichiers systèmes et ressources logicielles...

.ref#[1303518](#)

Juriscom- OneTel pris à son propre piège

OneTel, connu pour être un fournisseur d'accès on ne peut plus douteux, attaquait Multimania parce qu'il hébergeait des sites qui, tel OneTelFuck, dénonçaient l'arnaque. OneTel réclamait à Multimania les logs et l'identité des auteurs de ces sites. Multimania avait répondu à l'injonction en fournissant les IP incriminées... qui étaient (on s'en doute !) des adresses OneTel. Multimania avait donc logiquement répondu : "identifiez les vous-mêmes puisqu'ils sont chez vous !". Le juge a suivi et OneTel doit verser 8000 F à Multimania ! Le plus drôle c'est que l'ordonnance de référé est publiée sur le net et comporte 6 fois l'expression ONETELFUCK ! Prémice d'un procès contre Juriscom et le TGI de Paris ? (sources : [ZipiZ](#) et [LinuxFr](#)).

VNUnet- La BSA incite à la délation en Grande-Bretagne

110 000 francs ! (10 000 livres). C'est la somme que le bureau anglais de la Business Software Alliance (BSA, association internationale de lutte contre le piratage très liée à Microsoft et autres éditeurs de logiciels "propriétaires") propose de verser à toute personne susceptible de dénoncer une entreprise qui exploite illégalement des logiciels. Une récompense dérisoire en regard des 290 millions de livres qu'ont perdues les éditeurs en 1998 à cause du piratage, selon la BSA, mais assez motivante pour franchir le pas de la délation. Les employés licenciés pour de bonnes ou mauvaises raisons vont pouvoir s'en donner à cœur joie.

En attendant, sur le [site de la BSA](#), ben on trouve ça :

```
Warning: MySQL Connection Failed: Can't connect to local MySQL server through socket '/tmp/mysql.sock' (61) in /usr/home/bsa2/usr/local/etc/httpd/php3lib/loadrow.php3 on line 18.
```

[transfert-Les activistes volent au secours de Vote-auction](#)

Au nom de la liberté d'expression, le milieu activiste lance une campagne de soutien à Vote-auction. Pour contourner la suspension de son nom de domaine, RTMark cherche à faire héberger le site de vente aux enchères de votes et lance un appel au piratage des sites des candidats aux présidentielles américaines.

.ref# [1292229](#)

[AFP- Objets nazis sur Yahoo: les experts préconisent un filtrage pour les Français](#)

Trois experts ont proposé lundi au Tribunal de grande instance de Paris de filtrer les internautes en fonction de leur nationalité et des mots-clés qu'ils utilisent, afin de leur interdire l'accès aux ventes aux enchères d'objets nazis, proposés par le site américain Yahoo.

Mais ce collège d'experts, dont le rapport avait été demandé le 11 août dernier par le Premier vice-président du tribunal, Jean-Jacques Gomez, doute lui-même de l'efficacité des mesures qu'il propose. Selon eux, les solutions consistent à ne pas traiter les demandes des internautes français, dont la nationalité serait automatiquement révélée par leur ordinateur (70% d'entre eux) et dont la recherche serait orientée vers des objets nazis. Pour ceux dont la nationalité n'est pas révélée (30%), ils proposent de mettre en place un système de déclaration volontaire de nationalité et de filtrage des recherches par mots-clés. Reste qu'il est possible de mentir sur sa nationalité, et de trouver d'autres mots-clés non bloqués. Me Christophe Pecnard, avocat de Yahoo, a fait observer lundi que le filtrage par mots-clés n'était pas parfait puisque le blocage du mot "nazi", par exemple, interdit l'accès aux sites anti-nazis. Vinton Cerf a enfin objecté que l'instauration de systèmes de blocage sur l'internet "qui compte 100 millions de sites aujourd'hui et en comptera un milliard dans cinq ans" pourrait aboutir à "bloquer tout le système".

ZDnet rapporte que Maître Marc Lévy, avocat de la Licra, a présenté au juge la constatation suivante : Yahoo filtre déjà les internautes de manière à cibler les bandeaux de publicité diffusés sur ses sites. Yahoo France a d'ailleurs repris ces arguments publicitaires dans une note publique intitulée « [Affinité et ciblage](#) ». On peut lire dans ce pensum publicitaire : « Internet permet de cibler précisément les utilisateurs auprès desquels l'annonceur souhaite communiquer (...) ; soit par rapport à un contexte éditorial [mots-clés], soit par rapport à

la provenance des internautes (exemple : cibler les internautes belges -.be- sur Yahoo! France) (...) ». Yahoo France avait pris la peine de retirer cette note (trop voyante ?) de ses serveurs, pour la remettre en ligne récemment au milieu du mois d'octobre.

Selon [Transfert](#), en attendant la délibération finale qui aura lieu le 20 novembre, le substitut Pierre Dillange a créé la surprise. Il s'est déclaré perplexe qu'on veuille imposer à Yahoo ! de filtrer l'accès à son site. " La justice française doit statuer à la mesure de ce qui est possible et réalisable ". En l'absence d'une fiabilité à 100 %, le procureur ne voit donc pas pourquoi Yahoo ! appliquerait la condamnation du juge. Pour lui, d'ailleurs, la solution d'une affaire comme celle - ci mériterait plus qu'un arbitrage de la justice : un recours aux autorités politiques.

[ZDNet - États-Unis : une loi antipiratage très sévère](#)

Le Bureau du copyright américain n'a pas ménagé d'exceptions notables au controversé DMCA (Digital Millenium Copyright Act), la sévère loi anti-hacking qui ravit les lobbies du disque et du cinéma. Depuis le 28 octobre, il est devenu illégal de « modifier une mesure technologique qui contrôle l'accès » – reverse engineering – à une œuvre musicale ou vidéo numérique soumise au copyright. La peine encourue peut aller jusqu'à 5 ans de prison. Seules exceptions : les travaux de recherche « légitimes » visant à améliorer la sécurité informatique, et notamment la recherche sur les algorithmes de chiffrement. Plutôt préoccupant pour les militants européens du logiciel libre, comme Eurolinux, qui peuvent craindre que cette rigidité américaine ne devienne contagieuse sur le Vieux Continent.

[AFP- La Chine renforce son controle sur l'internet](#)

La Chine a publié mardi une nouvelle série de réglementations destinées à contrôler le contenu de l'internet et visant plus particulièrement les forums de discussions et la diffusion d'informations.

Aux termes des deux réglementations, publiées intégralement par le Quotidien du peuple, les sites internet chinois seront tenus pour responsables de la diffusion de toute information sensible, y compris sur les forums de discussions et tous les espaces laissés aux internautes pour s'exprimer.

Les sites étrangers consacrés à la situation des droits de l'homme en Chine, au Tibet ou à la secte interdite Falungong sont pour leur part systématiquement bloqués par les autorités et inaccessibles pour les internautes chinois.

En ce qui concerne les sites chinois spécialisés dans l'information, ils ne pourront fonctionner qu'après avoir reçu diverses autorisations officielles, et pourront être tenus pour responsables de la diffusion de toute information jugée contestable par les autorités, selon la seconde réglementation publiée par le Quotidien du peuple.

Libération - L'Italie piège ses pédophiles... et les autres avec

La semaine dernière, le procureur Alfredo Ormanni a demandé le renvoi devant les tribunaux de 831 internautes italiens et lancé des dizaines de commissions rogatoires à l'encontre de 660 étrangers. Pour démasquer les pédophiles, le magistrat n'a pas hésité à mettre sur pied, avec l'aide de Microsoft, un faux site destiné à servir d'appât. Le Conseil supérieur de la magistrature a, lui aussi, ouvert une enquête, mais à l'encontre du magistrat. On lui reproche d'avoir mis sur pied le site espion et d'avoir de facto «provoqué des délits».

Certains estiment la campagne antipédophiles sur le Net hors de proportion. «Bien sûr, la pédophilie via l'Internet existe, mais c'est un phénomène dérisoire par rapport aux moyens autoritaires et de censure mis en œuvre pour la combattre», réplique Alberto Abruzzese, professeur de sociologie à l'université de Rome. «Les personnes qui s'occupent de pédophilie savent que, sur l'Internet, la pédophilie criminelle est insignifiante. Le lieu le plus dangereux en termes de pédophilie reste la famille.»

En octobre, The Thing Roma et Avana Net ont été débranchés parce qu'ils diffusaient des extraits du livre "Laissez que les enfants"... Consacré à une contre-enquête sur une affaire judiciaire de pédophilie et de satanisme survenue en 1997, l'ouvrage dénonçait le climat d'«hystérie médiatique menaçant les libertés civiles» ayant entouré l'enquête. Légalement vendu en librairie, le livre n'a pas eu droit de cité sur le Net: les sites Thing Roma et Avana Net ont été coupés par leur hébergeur, dépendant de la mairie de Rome, sans même que la justice n'ait à se prononcer.

.ref# [1284471](#)

RSF- Les journalistes ne doivent pas être des auxiliaires de police

La Cour supérieure de justice de Toronto a rejeté le recours présenté par huit médias pour obtenir l'annulation de la saisie, par la police de la même ville, de leur matériel. Entre le 11 et le 14 juillet 2000, des policiers munis de mandats avaient

perquisitionné les locaux de quatorze médias pour saisir des images et photos que ces derniers avaient prises le 15 juin 2000, lors d'une manifestation. La police avait expliqué que ces saisies permettraient d'identifier les manifestants car les photographes de presse avaient pu s'approcher plus près des événements que les photographes de la police. C'est la troisième fois cette année qu'une telle saisie a lieu.

.ref# [1284360](#)

[cyber-rights.net](#) surfe sur la vague de la surveillance électronique

[Cyber-rights.org](#), une association anglaise de défense des libertés sur l'internet, vient de s'associer avec [HushMail](#), une société américaine fournissant un service de webmail crypté. Leur partenariat est clairement dicté par le passage du RIP Act, qui connecte tout le trafic internet anglais aux services secrets de sa Majesté, ainsi qu'à la récente légalisation de la surveillance au travail, au projet de Traité de la Convention Européenne sur la Cybercriminalité, sans oublier Echelon. Par contre, on ne voit pas en quoi cyber-rights.net se distingue d'hushmail.com, sinon par la présentation. Coup de pub ? Reste que l'utilisation régulière de la crypto est, bien sûr, vivement encouragée. Quant à la "sécurité" d'Hushmail, la société avance avoir dévoilé son [code source](#) à la communauté crypto, ce qui constitue, a priori, un gage de fiabilité. Elle avance aussi qu'il est impossible, sauf pour l'auteur et le destinataire, de décrypter les messages. Le service est aussi disponible en [français](#).

Big Brotherisé?) Bug Brotherisable!)
REGULATION : processus par lequel les gouvernements veulent contrôler la liberté d'expression (cf [article11.net](#))
SECURITE : façon de faire passer les hackers pour des voleurs, et que vive l'e-commerce ! (cf [kitetoo.com](#))
SURVEILLANCE : réponse des forces de

Au FSB, le successeur du KGB. On apprend en effet que "son programme de surveillance internet Sorm-2 a réussi à mettre au jour plusieurs dizaines de sites pédophiles ou pornographiques et, dans certains cas, à remonter la filière jusqu'aux auteurs de ces sites." Génial, la surveillance électronique de tout le trafic internet du pays (les FAI russes se doivent d'installer un commutateur renvoyant tout le trafic internet au FSB...) !

Eh bien non, c'est ce qu'on appelle vulgairement un "cache-sexe". Le vrai problème, c'est que "les peines dérisoires qui attendent les pédophiles russes n'ont rien pour décourager leurs activités : les actes sexuels avec mineur de moins de seize ans sont passibles tout au plus de quatre ans de camp de travail et les "actes de débauche avec mineur sans emploi de violence" sont punis de quelques dizaines de dollars d'amendes. La peine la plus sévère, six ans de camp, peut être appliquée pour prostitution ou implication dans des activités pornographiques"...

Le FSB se sert donc du fait que les pédophiles ne risquent pas gros pour faire la promo de leur système de surveillance et d'interception généralisée. Ce serait donc ça, le fameux "vide juridique" de l'internet, cette "zone de non-droit" ? Au lieu de sanctionner plus sévèrement les pédophiles, surveillons gaiement les internautes, et qu'ça saute ! On pourrait aussi ouvrir tout le courrier postal, vu qu'on n'a pas encore trouvé d'autre moyen pour faire transiter les K7 vidéos incriminées... non ?

On notera enfin le parti-pris du titre de la dépêche de l'AFP : "La Russie, un important centre de production de films pédophiles". Pas un mot sur l'amalgame pornographie-pédophilie, sur la clémence des sanctions, pas un chiffre non plus sur le nombre de films pédophiles ou le nombre de condamnations, pas un commentaire non plus sur le fait que le FSB aurait, "dans certains cas", pu remonter la filière, alors même que SORM-2 est censé tout surveiller : le FSB chercherait-il à faire la promo de son système tout en laissant entendre qu'il

l'ordre à l'adage de l'internet :

Le dortoir des voyeurs est expulsable

Libération rapportait jeudi 9 que voyeurdorm.com venait de perdre le procès que lui intentait la municipalité de Tampa, où se trouve la maison, truffée de webcams et remplie d'"étudiantes", que les internautes peuvent observer à loisirs (strip tease, douches et tout tout tout compris, jour et nuit) pour 260 F/mois. La ville exigeait le déménagement du "dortoir des voyeurs" en vertu d'une loi qui proscriit la présence de commerces de X dans les zones résidentielles.

La société, qui s'était aussi fait connaître en portant plainte pour plagiat contre les créateurs de l'émission TV Big Brother, ou encore en lançant askoj.com (posez vos questions à O.J. Simpsons, vedette de football et vrai-faux tueur de sa femme), avançait pour sa défense que voyeurdorm ne nuisait en rien au voisinage, les voyeurs voyant via l'web. Elle vient de faire appel. Elle vient aussi, du coup, de se refaire un bon coup de pub.

Le Maroc imposerait un cyber-couvre-feu

Les députés islamistes du Parti de la

as potential cybercriminals, despite some basic & fundamental human rights... but who's helping those netizens in managing their privacy and improve their knowledge in IT & communications security?

[Welcome to Bug Brothers' world!](#)

justice et du développement (PJD) ne sont pas contents. La pornographie, strictement interdite d'entrée sur le territoire marocain, fait florès sur le marché parallèle, mais aussi sur l'internet. S'il est encore difficile de censurer l'accès aux 200 000 internautes recensés dans le pays, le gouvernement envisage par contre sérieusement de réglementer les horaires d'ouverture des cybercafés et de fixer un âge minimum pour les internautes qui les fréquentent.

Autrement dit, pour lutter contre la pornographie, le meilleur moyen est de n'ouvrir les cybercafés que lorsque le soleil brille, brille, brille, et d'interdire aux mineurs d'y entrer. Et puis tant pis pour ses lycéens interdits de recherches sur le net, tant pis pour ces employés qui ne pourront plus surfer le soir après l'bureau, tant pis pour les dommages collatéraux que cela provoquera. Tant pis.

Le PJD et l'Istiqlal (un autre parti conservateur) ont par ailleurs lancé une campagne visant à censurer le "courrier du coeur" du quotidien populaire "Al Adath al Maghribya", qui connaît un grand succès, notamment auprès des adolescents, mais qu'ils jugent pornographique. A quand la censure des journaux du coeur sur les pages perso, et puis les pages persos tout court, et les forums de discussion, et puis l'internet pour les femmes, vous y avez pensez, faudrait peut-être aussi les en éloigner, non ?

La surveillance du web au travail

Chez Noos, la charte d'usage des nouvelles technologies plagie d'ailleurs bizarrement les Tables de la Loi, multipliant les «toujours mettras», «n'utiliseras pas», etc. Certains vont jusqu'à préciser l'usage des nouvelles technologies dans les contrats de travail, soulignant par exemple que tous les messages sont la propriété de l'entreprise. D'autres interdisent tout bonnement l'accès au web, comme chez France Telecom. D'autres enfin restreignent l'accès de 13 à 14h, ou pas plus de 3h par mois, ou restreignent le nombre, et le type, de sites visitables, tout ça grâce à Websense, SurfControl et autres Little Brother, autant de logiciels de la famille des «Employee Internet Management Software» (EIM, gestion de l'Internet) dont le marché est en pleine explosion: 59 millions de dollars en 1999, selon le cabinet IDC, avec une croissance prévue de près de 900 % jusqu'en 2004.

Pour Serge Gauthronet, sociologue, "le fait est qu'un employé qui ne travaille pas, cela se voit: il ne tient pas ses objectifs, sa tâche n'avance pas. Il n'y a pas besoin d'aller chercher les traces de son utilisation des moyens informatiques.

Les traces sur le réseau, c'est la même chose: une ligne de chiffres et de codes ne peut pas refléter une journée de travail. Prenons un exemple: un salarié de la Fnac s'est fait licencier au motif qu'il avait volé un téléviseur, le film de la caméra de surveillance le montrant la télé dans les bras. Donc arrestation au petit matin, menottes, garde à vue, etc. Or en fait, il s'agissait de son propre téléviseur qu'il avait mis en réparation et venait rechercher."

[LinuxFr- Attention voilà les Pirates-Busters !](#)

Le BSA (Business Software Alliance), organisme pour la lutte contre le piratage financé par de grands éditeurs de logiciels avec Microsoft en tête, connu pour ses méthodes intimidatrices vient de présenter sa nouvelle arme secrète : un Van Ford Transit équipé d'un radar et d'une antenne satellite sur le toit dont plusieurs exemplaires sillonnent en ce moment l'Ecosse. Selon les consultants de cette organisation, avec cet équipement ils sont capable de détecter l'usage de logiciels piratés à distance ! Selon [The Register](#), le BSA aurait menacé celui qui, ayant découvert la chose, exprimait quelque incrédulité. Le système TEMPEST permet effectivement de capter le rayonnement d'un écran, et donc de

lire ce qui y est inscrit, de là à ce que les chasseurs de logiciels pirates s'en servent... Mettons qu'il s'agisse plutôt de désinformation, intimidation, intoxication, piège à cons.

.ref#[1314148](#)

[NoSpoon- Quand le physionomiste est supplanté par la biométrie](#)

[Wired News](#) indique que suite aux nombreux incidents plus ou moins violents dans les nightclubs néerlandais, 15 établissements ont décidé de s'équiper de systèmes biométriques (scanners de visage, d'empreinte digitale et des système de cartes à puce) pour filtrer l'accès. Les nouveaux venus se voient ainsi demander leur nom, prénom, adresse et age, puis terminent par une séance de scanner du visage ou des empreintes. A leur retour, leur identifiant est immédiatement comparé avec la blacklist et s'il y a une correspondance, la personne est directement refoulée. Selon certains "spécialistes", de telles pratiques sont uniquement un prétexte pour établir une base de données ciblées pouvant être exploitée commercialement une fois les informations agrégés.

.ref#[1314069](#)

[transfert- La Chine lave plus net](#)

La Chine est l'un des premiers pays à mettre en place une véritable régulation de l'Internet, avec déclarations préalables, restrictions a priori et responsabilités mal placées. Les forums de discussion doivent dorénavant effectuer une identification préalable de tous leurs contributeurs. Ils sont également tenus de censurer d'office tout message "illégal" avant d'en rapporter la teneur, et l'identification, aux autorités. Les sites de presse sont l'autre cible de cette nouvelle vague de régulation. Ils devront en effet obtenir toute une série d'autorisations administratives (nationales, régionales et locales) avant de pouvoir exercer. Toute information se doit par ailleurs d'émaner d'une agence de presse officielle, et les e-journalistes d'avoir acquis une

"expérience notable" au sein d'un média d'État. Il est bien évidemment interdit aux pages persos de diffuser quelques informations que ce soit.

.ref#[1314055](#)

Multimédium- Des campus qui deviennent de mini-monopoles Microsoft

Plus d'une centaine d'institutions d'enseignement aux États-Unis et une demi-douzaine au Canada bénéficient d'un programme de licences baptisé «Microsoft Campus Agreement» qui permet d'acheter des licences d'utilisation des produits Microsoft au prix du gros. En vertu de ce programme, Microsoft exige une redevance fixe pour chaque employé et/ou étudiant de l'université, plutôt que pour chaque ordinateur. Tous les individus sont comptabilisés, qu'ils aient ou non l'intention d'utiliser les logiciels de Microsoft.

Selon [OS Opinion](#), l'Université du Maryland songe à exiger, chaque semestre, une contribution de l'ordre d'environ 20\$ US de la part de tous ses étudiants, sans exception, à la manière d'une assurance scolaire obligatoire. Plus grave encore que ces quelques 120\$ US dépensés inutilement (s'il utilise Linux, par ex.) par un étudiant après trois années passées à l'Université, certains étudiants craignent qu'en raison de ce forfait, certaines fonctionnalités des logiciels de Microsoft fassent partie intégrante de l'enseignement...

.ref#[1303651](#)

Multimédium - Un Espion s'infiltré dans votre cellulaire

Depuis quelques jours, impossible de prendre le bus ou le métro à Montréal sans tomber sur une affiche vantant le nouveau service téléphonique sponsorisé d'Espion, qui offre 300 minutes de communications, valables 60 jours, pour 100\$ CA et des pubs de 7 secondes à écouter avant que de pouvoir passer quelque coup de fil que ce soit.

.ref#[1303557](#)

NosPoon- Internet par le petit bout d'AOL

Selon [O1net](#), Walt Disney a alerté la Federal Trade Commission sur une particularité de la nouvelle version de l'interface propriétaire d'AOL. Cette dernière impose aux 25 millions d'abonnés du partenaire win-win de Time Warner d'utiliser impérativement comme page d'accueil la home d'AOL. D'après le fournisseur d'accès, qui a qualifié l'initiative de Disney de "non constructive", cette nouveauté a été introduite à la demande des utilisateurs qui trouvaient le raccourci vers la page d'accueil AOL trop complexe à utiliser... Un comble quand on sait que les AOLeurs naïfs ou peu au fait des subtilités de l'internet ne voient le Net que par le bout de la lorgnette : surf, e-mail, chat... tout passe par des petits boutons AOL ! L'an dernier, [une plainte](#) avait déjà été déposée contre AOL au motif que son système, une fois installé, interdisait aux internautes de se connecter par un autre FAI, tout en altérant certains fichiers systèmes et ressources logicielles...

.ref#[1303518](#)

Juriscom- OneTel pris à son propre piège

OneTel, connu pour être un fournisseur d'accès on ne peut plus douteux, attaquait Multimania parce qu'il hébergeait des sites qui, tel OneTelFuck, dénonçaient l'arnaque. OneTel réclamait à Multimania les logs et l'identité des auteurs de ces sites. Multimania avait répondu à l'injonction en fournissant les IP incriminées... qui étaient (on s'en doute !) des adresses OneTel. Multimania avait donc logiquement répondu : "identifiez les vous-mêmes puisqu'ils sont chez vous !". Le juge a suivi et OneTel doit verser 8000 F à Multimania ! Le plus drôle c'est que l'ordonnance de référé est publiée sur le net et comporte 6 fois l'expression ONETELFUCK ! Prémice d'un procès contre Juriscom et le TGI de Paris ? (sources : [ZipiZ](#) et [LinuxFr](#)).

.ref#[1303461](#)

7.11.00

[VNUnet- La BSA incite à la délation en Grande-Bretagne](#)

110 000 francs ! (10 000 livres). C'est la somme que le bureau anglais de la Business Software Alliance (BSA, association internationale de lutte contre le piratage très liée à Microsoft et autres éditeurs de logiciels "propriétaires") propose de verser à toute personne susceptible de dénoncer une entreprise qui exploite illégalement des logiciels. Une récompense dérisoire en regard des 290 millions de livres qu'ont perdues les éditeurs en 1998 à cause du piratage, selon la BSA, mais assez motivante pour franchir le pas de la délation. Les employés licenciés pour de bonnes ou mauvaises raisons vont pouvoir s'en donner à cœur joie.

En attendant, sur le [site de la BSA](#), ben on trouve ça :

```
Warning: MySQL Connection Failed: Can't connect to local MySQL server through socket '/tmp/mysql.sock' (61) in /usr/home/bsa2/usr/local/etc/httpd/php3lib/loadrow.php3 on line 18.
```

.ref#[1292852](#)

[transfert-Les activistes volent au secours de **Vote-auction**](#)

Au nom de la liberté d'expression, le milieu activiste lance une campagne de soutien à **Vote-auction**. Pour contourner la suspension de son nom de domaine, RTMark cherche à faire héberger le site de vente aux enchères de votes et lance un appel au piratage des sites des candidats aux présidentielles américaines.

.ref#[1292229](#)

[AFP- Objets nazis sur Yahoo: les experts préconisent un filtrage pour les Français](#)

Trois experts ont proposé lundi au Tribunal de grande instance de Paris de filtrer les internautes en fonction de leur nationalité et des mots-clés qu'ils

utilisent, afin de leur interdire l'accès aux ventes aux enchères d'objets nazis, proposés par le site américain Yahoo.

Mais ce collège d'experts, dont le rapport avait été demandé le 11 août dernier par le Premier vice-président du tribunal, Jean-Jacques Gomez, doute lui-même de l'efficacité des mesures qu'il propose. Selon eux, les solutions consistent à ne pas traiter les demandes des internautes français, dont la nationalité serait automatiquement révélée par leur ordinateur (70% d'entre eux) et dont la recherche serait orientée vers des objets nazis. Pour ceux dont la nationalité n'est pas révélée (30%), ils proposent de mettre en place un système de déclaration volontaire de nationalité et de filtrage des recherches par mots-clés. Reste qu'il est possible de mentir sur sa nationalité, et de trouver d'autres mots-clés non bloqués. Me Christophe Pecnard, avocat de Yahoo, a fait observer lundi que le filtrage par mots-clés n'était pas parfait puisque le blocage du mot "nazi", par exemple, interdit l'accès aux sites anti-nazis. Vinton Cerf a enfin objecté que l'instauration de systèmes de blocage sur l'internet "qui compte 100 millions de sites aujourd'hui et en comptera un milliard dans cinq ans" pourrait aboutir à "bloquer tout le système".

[ZDnet](#) rapporte que Maître Marc Lévy, avocat de la Licra, a présenté au juge la constatation suivante : Yahoo filtre déjà les internautes de manière à cibler les bandeaux de publicité diffusés sur ses sites. Yahoo France a d'ailleurs repris ces arguments publicitaires dans une note publique intitulée « [Affinité et ciblage](#) ». On peut lire dans ce pendum publicitaire : « Internet permet de cibler précisément les utilisateurs auprès desquels l'annonceur souhaite communiquer (...) ; soit par rapport à un contexte éditorial [mots-clés], soit par rapport à la provenance des internautes (exemple : cibler les internautes belges -.be- sur Yahoo! France) (...) ». Yahoo France avait pris la peine de retirer cette note (trop voyante ?) de ses serveurs, pour la remettre en ligne récemment au milieu du mois d'octobre.

Selon [Transfert](#), en attendant la délibération finale qui aura lieu le 20 novembre, le substitut Pierre Dillange a créé la surprise. Il s'est déclaré perplexe qu'on veuille imposer à Yahoo ! de filtrer l'accès à son site. " La justice française doit statuer à la mesure de ce qui est possible et réalisable ". En l'absence d'une fiabilité à 100 %, le procureur ne voit donc pas pourquoi Yahoo ! appliquerait la condamnation du juge. Pour lui, d'ailleurs, la solution d'une affaire comme celle -ci mériterait plus qu'un arbitrage de la justice : un recours aux autorités politiques.

.ref#[1292104](#)

[ZDNet - États-Unis : une loi antipiratage très sévère](#)

Le Bureau du copyright américain n'a pas ménagé d'exceptions notables au controversé DMCA (Digital Millenium Copyright Act), la sévère loi anti-hacking qui ravit les lobbies du disque et du cinéma. Depuis le 28 octobre, il est devenu illégal de « modifier une mesure technologique qui contrôle l'accès » – reverse engineering – à une œuvre musicale ou vidéo numérique soumise au copyright. La peine encourrue peut aller jusqu'à 5 ans de prison. Seules exceptions : les travaux de recherche « légitimes » visant à améliorer la sécurité informatique, et notamment la recherche sur les algorithmes de chiffrement. Plutôt préoccupant pour les militants européens du logiciel libre, comme Eurolinux, qui peuvent craindre que cette rigidité américaine ne devienne contagieuse sur le Vieux Continent.

.ref#[1291991](#)

[AFP- La Chine renforce son controle sur l'internet](#)

La Chine a publié mardi une nouvelle série de réglementations destinées à contrôler le contenu de l'internet et visant plus particulièrement les forums de discussions et la diffusion d'informations. Aux termes des deux réglementations, publiées intégralement par le Quotidien du peuple, les sites internet chinois

seront tenus pour responsables de la diffusion de toute information sensible, y compris sur les forums de discussions et tous les espaces laissés aux internautes pour s'exprimer.

Les sites étrangers consacrés à la situation des droits de l'homme en Chine, au Tibet ou à la secte interdite Falungong sont pour leur part systématiquement bloqués par les autorités et inaccessibles pour les internautes chinois.

En ce qui concerne les sites chinois spécialisés dans l'information, ils ne pourront fonctionner qu'après avoir reçu diverses autorisations officielles, et pourront être tenus pour responsables de la diffusion de toute information jugée contestable par les autorités, selon la seconde réglementation publiée par le Quotidien du peuple.

6.11.00

[Libération - L'Italie piège ses pédophiles... et les autres avec](#)

La semaine dernière, le procureur Alfredo Ormani a demandé le renvoi devant les tribunaux de 831 internautes italiens et lancé des dizaines de commissions rogatoires à l'encontre de 660 étrangers. Pour démasquer les pédophiles, le magistrat n'a pas hésité à mettre sur pied, avec l'aide de Microsoft, un faux site destiné à servir d'appât. Le Conseil supérieur de la magistrature a, lui aussi, ouvert une enquête, mais à l'encontre du magistrat. On lui reproche d'avoir mis sur pied le site espion et d'avoir de facto «provoqué des délits».

Certains estiment la campagne antipédophiles sur le Net hors de proportion. «Bien sûr, la pédophilie via l'Internet existe, mais c'est un phénomène dérisoire par rapport aux moyens autoritaires et de censure mis en œuvre pour la combattre», réplique Alberto Abruzzese, professeur de sociologie à l'université de Rome. «Les personnes qui s'occupent de pédophilie savent que, sur l'Internet, la pédophilie criminelle est insignifiante. Le lieu le plus dangereux en termes de pédophilie reste la famille.»

En octobre, The Thing Roma et Avana Net ont été débranchés parce qu'ils diffusaient des extraits du livre "Laissez que les enfants"... Consacré à une contre-enquête sur une affaire judiciaire de pédophilie et de satanisme survenue en 1997, l'ouvrage dénonçait le climat d'«hystérie médiatique menaçant les libertés civiles» ayant entouré l'enquête. Légalement vendu en librairie, le livre n'a pas eu droit de cité sur le Net: les sites Thing Roma et Avana Net ont été coupés par leur hébergeur, dépendant de la mairie de Rome, sans même que la justice n'ait à se prononcer.

.ref#[1284471](#)

[RSF- Les journalistes ne doivent pas être des auxiliaires de police](#)

La Cour supérieure de justice de Toronto a rejeté le recours présenté par huit médias pour obtenir l'annulation de la saisie, par la police de la même ville, de leur matériel. Entre le 11 et le 14 juillet 2000, des policiers munis de mandats avaient perquisitionné les locaux de quatorze médias pour saisir des images et photos que ces derniers avaient prises le 15 juin 2000, lors d'une manifestation. La police avait expliqué que ces saisies permettraient d'identifier les manifestants car les photographes de presse avaient pu s'approcher plus près des événements que les photographes de la police. C'est la troisième fois cette année qu'une telle saisie a lieu.

.ref#[1284360](#)

[cyber-rights.net surfe sur la vague de la surveillance électronique](#)

[Cyber-rights.org](#), une association anglaise de défense des libertés sur l'internet, vient de s'associer avec [HushMail](#), une société américaine fournissant un service de webmail crypté. Leur partenariat est clairement dicté par le passage du RIP Act, qui connecte tout le trafic internet anglais aux services secrets de sa Majesté, ainsi qu'à la récente légalisation de la surveillance au travail, au projet de Traité de la Convention Européenne sur la Cybercriminalité, sans oublier Echelon.

Par contre, on ne voit pas en quoi cyber-rights.net se distingue d'hushmail.com, sinon par la présentation. Coup de pub ? Reste que l'utilisation régulière de la crypto est, bien sûr, vivement encouragée. Quant à la "sécurité" d'Hushmail, la société avance avoir dévoilé son [code source](#) à la communauté crypto, ce qui constitue, a priori, un gage de fiabilité. Elle avance aussi qu'il est impossible, sauf pour l'auteur et le destinataire, de décrypter les messages. Le service est aussi disponible en [français](#).

"Ein weiter Weg"

Mit internationalen Abkommen will der Internet-Jurist Henry H. Perritt globalen Glückrittern beikommen

Die Fragen stellte Thomas Fischermann

DIE ZEIT: Die Aufsicht der Nationalstaaten über Internet-Geschäfte funktioniert immer weniger. Zollbeamte können Bits und Bytes nicht an der Grenze abfangen, und jetzt entstehen Computerfirmen sogar auf fernen Inseln. Ein Grund zur Sorge?

HENRY H. PERRITT: Die nationalstaatlichen Institutionen fürchten, dass Unternehmen aus dem Wirkungskreis von Gesetzen verschwinden, die zum Schutz der Bürger gemacht wurden. Dotcom-Unternehmer sollen aber auch nicht von Gerichten und Behörden in aller Welt geknebelt werden. Ich glaube, dass wir uns weltweit darüber verständigen müssen, wie das Internet zu regulieren ist.

ZEIT: Die Staaten der Welt ziehen an einem Strang? Das wäre überraschend.

PERRITT: Einige Gerichtsbeschlüsse zeigen, dass sich überall bestimmte Prinzipien für den Umgang mit dem Internet herauszubilden scheinen. Im Idealfall wird es auf eine Mischung aus verbindlichen staatlichen Grundregeln und einer privaten Selbstaufsicht hinauslaufen. Es gibt auch Debatten über vereinheitlichte nationalstaatliche Regeln in aller Welt, etwa bei der Haager Konferenz für internationales Privatrecht oder der EU-Kommission. Das ist noch ein weiter Weg.

ZEIT: Bis dahin herrscht fröhliche Anarchie, sobald die Unternehmer Grenzen überschreiten?

 PARSHIP.de

PERRITT: So schlimm ist es gar nicht. Wir hatten in Chicago einen Fall, bei dem die Wahlbehörden erfolgreich eine Internet-Site verklagt haben, auf der die Leute Stimmen zur Präsidentschaftswahl kaufen und verkaufen konnten. Der Anbieter saß in Österreich, wir konnten den Gerichtsbeschluss also nicht einfach vollstrecken. Aber jede Website braucht eine Adresse, einen so genannten Domain-Namen - in diesem Fall www.voteauction.com -, und der wird von einem Unternehmen vergeben. Das saß in Pennsylvania. Also hat der zuständige Richter den Betreiber in Pennsylvania angewiesen, den Domain-Namen zurückzuziehen, und plötzlich fand sich unter jener Internet-Adresse nichts mehr.

ZEIT: Dann hat sich der Betreiber dieser Website wohl einen anderen Namen besorgt?

PERRITT: So war es. Er nannte sich fortan www.vote-auction.com und hat diesen Namen in der Schweiz registrieren lassen. Wir haben daraufhin Kontakt mit dem schweizerischen Unternehmen aufgenommen, das diesen Domain-Namen vergibt, und wir haben so argumentiert: Okay, es wird wohl lange dauern, bis wir einen Gerichtsbeschluss aus Illinois durch die schweizerischen Instanzen bringen. Aber Ihre eigenen Geschäftsbedingungen verbieten illegale Aktivitäten auf Ihren Websites. Bei uns hat ein Richter entschieden, dass dieses Angebot illegal ist - wollen Sie die Website nicht abstellen? Die Schweizer hielten das für eine gute Idee.

ZEIT: Solche Erfahrungen treiben Internet-Anbieter auf Inseln oder in ferne Länder.

PERRITT: Man braucht für eine Website immer noch einen Domain-Namen, und der muss registriert sein. Die meisten Computer dafür stehen in den Vereinigten Staaten oder zumindest in anderen respektabel regierten Ländern.

ZEIT: Die Rolle der Vereinigten Staaten passt vielen Ländern nicht ...

PERRITT: ... wir können ruhig offen von US-Hegemonie oder Dominanz sprechen ...

ZEIT: ... und diese Ablehnung könnte die Kontrolle auf Dauer infrage stellen. Die Chinesen haben dagegen protestiert, dass ihr System für die Verwaltung von Domain-Namen von Amerika aus gelenkt werden soll.

PERRITT: Wenn jeder seine eigenen Domain-Namen festlegen könnte, würden wir das Internet balkanisieren. Dann könnte bald auch jeder Betrüger sein eigenes System haben.

ZEIT: Programmierer, Hacker, "Cypherpunks" arbeiten bereits an so etwas - und auch an virtuellen Netzen, in denen man keine Domain-Namen mehr braucht. Beunruhigt Sie das nicht?

PERRITT: Ja, wenn man seine Kommunikation im Internet verschlüsselt, können die Behörden nicht mehr wissen, was da passiert. Man kann aber nicht alles verschlüsseln. Wenn man eine Website betreiben will, die etwas kauft oder verkauft, müssen die Kunden sie ja finden können; sie muss also öffentlich sein. Und selbst wenn man anonyme Korrespondenz mit Geschäftspartnern führt, werden diese Daten immer noch auf einem Computer gespeichert. In den meisten Ländern kann man einen Durchsuchungsbefehl bekommen, um diesen Computer zu beschlagnahmen.

ZEIT: Aber das ist genau der Grund, warum jetzt "Datenparadiese" in Mode kommen.

PERRITT: Ja, aber wer will dort auf Dauer leben? Natürlich werden Betrüger sich stets vor den Behörden zu verstecken versuchen. Das heißt aber nicht, dass sie vom Erdboden verschwinden. Terroristen müssen Bomben legen, Geldwäscher und Steuersünder müssen an irgendeinem Punkt auch mit "richtigem" Geld hantieren. Deshalb sind die traditionellen Waffen der Behörden nicht stumpf geworden.

10/24 00:06 **Freeport-McMoRan, in a Hole in Indonesia, Can't Stop Digging** By Adam Majendie and Kate Linebaugh Timika, Indonesia, Oct. 24 (Bloomberg) **Pollution and Pineapples** San Francisco-based environmental group Project Underground says the tailings are "the biggest source of heavy metal pollution resulting from gold mining." Freeport says the tailings are not toxic, just unsightly, and it spends \$1 million a year to try to find a way to grow pineapples and other crops to cover the gray expanse once mining ends. An environmental audit in 1999 by Montgomery Watson supported Freeport's claim. Critics in the government want more. "I don't feel satisfied with their environmental management," said Surna Djajadiningrat, Indonesia's director general of mining in Jakarta. "Even at the current capacity, they cannot show us that they are able to manage that properly." On May 4 this year, Freeport's environmental record dramatically worsened. That night, after what the company says was a period of unusually high rainfall, a landslide of waste rock from Grasberg slid into nearby Lake Wanagon, sending a wall of water and rock down the valley below. Swept Away Four contractors camped below the lake were swept away and killed, along with the flood-warning system that was supposed to alert the village of Banti, 10 miles down the valley. The river rose 20 feet and washed away pigsties and crops in Banti. "The lake's gone," said Tom Henderson, Grasberg mine superintendent. "You can't get it back." To the local Amungme tribe, who see the mountains as the head of their spiritual mother and the lakes and rivers as her hair, the destruction of the lake is a sacrilege. "I feel as if someone is tearing off my scalp," said Mama Yosepha, an Amungme leader. "This is a sacred place." For the first time since operations began in 1972, the mining ministry forced Freeport to cut output by limiting mining at the Grasberg pit to 200,000 tons a day from 230,000 before the landslide. The cut was made pending the results of an investigation that is now in the hands of Rizal Ramli, economic affairs minister, who took office in August. The local tribes blame Freeport and made it pay compensation. Johny Umaleng, 27, whose pigs were drowned by the deluge, says Freeport paid him 10 million rupiah (\$1,150) -- four times his monthly earnings as a contract worker at the mine. "Morally Obligated" He says he feels the compensation is adequate. Freeport is moving Umaleng's family -- and 45 others that live near the river -- up the hill to new homes. "We've impacted their lives, so we are morally obliged to provide them safe housing," said the sociologist Batey, the Freeport manager in charge of community relations. For Umaleng and other Papuans, there is little alternative employment other than that generated by the mine, and families walk for days over the hills into the tribal lands of the Komoro and the Amungme looking for work. "The reality is that there is almost no other economic engine here in West Papua, and as long as this is the one place where you can get education and good treatment, people will continue to come," said the priest Lowry, Freeport's vice president of social and community affairs. Freeport donates money to the local communities through its so-called 1 percent fund, where about one-hundredth of its revenue from the mine -- \$14.4 million last year -- is spent for projects such as a 100-bed hospital. Bone to a Dog Many local people say that's not enough. "It's like throwing a dry bone to a dog," said Yohannes Deikme of the

Amungme Tribal Association. Said Vanguard's French, "If you were a local tribesman and you suddenly saw this lovely golf course, you'd think you could take a bit of money out of the system, wouldn't you?" Batey acknowledges Freeport has made mistakes and says now the company must work to build respect with the Papuans. It has put tribesman Tom Beanal, a leader of the Papuan independence movement, on the board of its Indonesian unit. Beanal unsuccessfully tried to sue the company in 1996 for "cultural genocide" and has alleged that Freeport's private security force acted in concert with the military in violating human rights. Winning local confidence won't be easy. Accusations against Freeport go back decades and often stem from the company's government-mandated support for troops stationed in the area. Pipeline Cut In July 1977, when a Papuan independence group cut the slurry pipeline that carried Freeport's copper, the army retaliated by bombing the village of Banti -- then called Wa --destroying most of the 17 new houses Freeport had just built for the villagers. Tribal leaders such as Mama Yosepha and Deikme's tribal association allege Freeport was complicit in military torture, detention, and the murder of civilians; Freeport denies all such allegations. With a weakened central government in Jakarta, the company needs to gain the backing of pro-independence groups, which are gaining strength. In October, 30 people were killed in Wamena -- 150 miles east of the mine -- when the army tried to remove separatist flags raised in the town.

There is in this moment a conference going on in Vlodrup, Holland, organized by the Maharishi University of Management where Tribal Leaders are invited to become members of the World Federation of Traditional Leaders. Ursula: I could make sure that those would become members who are the real ones. They also told me that they do not want appointed leaders, who have been appointed by missionaries and politicians, they want those who come from the line of the leaders and chosen by the council of elders. I find that we should have first our conference to find out who would be qualified if ever we go into that. But I have been so eager to do this conference in Cebu and this came as a welcome possibility. I share the same sentiments as you. But the government and the missionaries, miners etc are fielding their people and interfering, those people seem to have respect for the indigenous traditions, they want to revive the traditional ways of farming, combining it with ayurvedic approaches to assure a healthy food-supply, this is the main reason. Rains: Who's going to be teaching who and who will be the winners. Sounds like it could be a raising call to all conference lions of the world, to attend another free get together. The trouble with this is, the ones that hear about it and attend are the western educated ones that seek....often personal ambition and financial gain, or have been brainwashed into some development agenda, by a corporate backed ngo. me: haaah!!! Funny to see confusion about 'real ones' (Why not disqualify all delegates and call only those real who remain within sight of their territory (a live line to a huge screen webcamming feed back and so forth..) and remarks about freeloading 'conflyons'. I does a misanthrope who has just read about a relatively more famous one (LFCeline, incidentally, he worked for the UN between WW's) a heap of good. :o(

Ya'a'tee FREEDOM magazines latest issue has an excellent article on the Big Mountain situation. **A TRUST BROKEN, A HERITAGE BETRAYED: Battle for Native American Rights** by Thomas G Whittle & Carlynn Lee McCormick is well researched, and the authors are not afraid to tell the truth. I HIGHLY RECCOMEND you read it and pass it on to as many as possible. You should find the article at freedommag.org or contact the editor at editor@freedommag.org. And as I have your attention for a moment, for those of you who feel like sending a fax to help us, please fax Hilary Clinton. Weaving For Freedom Foundation has been trying to arrange a meeting with Hillary and the Dine Weavers for seven and a half years. There seems to be openings in Hilarys schedule for December, so please ask that she take the time to meet with the Elders. send the fax to attn:Patty Solis Doyle 202 456 5340 For all my relations BoPeep Is this following message containing misguided info??? Does it refer to an article of yours? I couldn't find it surfing your webpage. Dear Poetpiet, Thank you very much. The only thing misguided about the message is that the article can be found on the website. Please provide us your surface mail address and we will mail you one. It isn't on the web site yet. Best, tom

Allow me to get mad at some Libertarian items here: ----- Voteauction.com reaps cynical voters Author: Justin Matlick "What Internet critics don't recognize is that sites like Voteauction are reflecting, not dictating, cultural attitudes. When hundreds of GenXers flout the law by putting their votes up for auction, they are opting out of the entire American political system." (10/18/00) pacificresearch.org/oped/101800jm.html Americans could not look hard enough to look for Indians willing to sell their land and now you are upset about something that is meaninglessly mercenary already????? ----- Embattled vote auction site returns to the Web Voteauction.com was apparently counted out too soon. The Austrian-based site, which lets Americans sell their votes to the highest bidder, has returned to the Web with a slightly toned-down message. (10/25/00) ----- Government accountability project In 1993 the federal government passed the Government Performance and Results Act. How are

they doing at it? This project relies on the expertise of scholars, government and private sector leaders, and business experts to assess that. The Government Accountability Project's goal is to increase accountability and transparency to bring about more effective government. -mail: mercatus@gmu.edu URL: <http://www.mercatus.org/policy/pslp.htm> ----- Butterfly-adorned Libertarian creating a political flap San Francisco's once-moribund Libertarian Party organization has been revived in a very Bay Area-way, by party chairman Starchild, who's been known to appear in public in a butterfly costume. (10/24/00) www0.mercurycenter.com/columnists/chung/docs/chungstr24sf.htm ----- Is America losing its high-tech edge? Author: Aaron Lukas The U.S. high-tech industry has nothing to worry about as long as Europe continues its current tax and regulatory policies. (10/23/00) URL: cato.org/dailys/10-23-00.html ----- National treasures Author: Lew Rockwell "It is election time, which means open season on the well-to-do. We are supposed to favor expropriating them in (as much as their riches is due to expropriation you assholes!!!!!!) order to meet social needs to be provided by the government. ... It's all nonsense. The rich are the driving force behind wealth creation, economic innovation, job and income growth, and the improvement of living standards generally." (10/18/00) URL: ises.org/fullstory.asp?control=531&FS=National+Treasures ----- Stay and fight! Author: Lindsay Perigo "[T]o all of those understandably tempted to get off the planet because of...relentless nihilism, [Lindsay Perigo says] stay and fight!" (10/19/00) freeradical.co.nz/content/pishow/vol3/pi001019.html Yuuuukkkk!!!!!! Schubart was right (while diagnosing) that love of the far off was a trait of nihilism and betrayal of your neighbours, nearests though obviously not dearest. You all turn that around but such of sleight of devious gland don't pass by me unnoted, does it? Well, herewith. cnn.com/2000/TECH/computing/10/24/vote.auction/index.html ----- Are politicians leaders? Author: William Anderson Elections don't choose society's authentic leaders, says Anderson. Real leaders emerge from within the ranks of the voluntary sector of society. (10/20/00) mises.org/fullstory.asp?control=532&FS=Are+Politicians+Leaders%3F

All the way to two thirds down this file: some typical (and here, probably temporary) Nettime.org (derived places and) posts from this month: a Luther Blissett spoofy one (if that's what you wanna call their insistence on being allowed ((posting)) their porn <<and probably beating it too>>); they seem to wanna be thought of as funny (but I feel like I wasted my time after reading one of their most often, nearly always; pretty frustatious that, but I'll try again on this piece; one of the links gave me a laugh .. just colours flashing across the screen). To: nettime-l@bbs.thing.net Subject: <nettime> NO PROTEST NO PROFIT From: [snafu <snafu@kyuuz.org>](mailto:snafu@kyuuz.org) Date: Thu, 19 Oct 2000 12:22:57 +0200 Delivered-To: nettime-archive@nettime.khm.de NO PROTEST NO PROFIT First International Competition of Net.Protest <<<CALL FOR ENTRIES>>> Following the recent cases of the Roman Civic Network censorships - the Luther Blissett's book "Let the little children..." and Francesca da Rimini's interview - The Thing Rome and 0100101110101101.ORG launch the First International Competition of Net.Protest. All the e-mails of protest sent to the City Council of Rome at the following addresses: [Mariella Gramaglia mailto:m.gramaglia@comune.roma.it](mailto:Mariella.Gramaglia@comune.roma.it) [Mauro Biddau mailto:m.biddau@comune.roma.it](mailto:Mauro.Biddau@comune.roma.it) [Claudia De Paolis mailto:cored@comune.roma.it](mailto:Claudia.DePaolis@comune.roma.it) will be evaluated by an extraordinary international panel composed by Natalie Bookchin (net.artist and teacher, School of Visual Art, Los Angeles), Steve Dietz (Walker Art Center, Minneapolis), Matthew Fuller (: 'artist and writer, London'), Tillman Baumgaertel (journalist and net.art critic, Berlin), Ricardo Dominguez (conceptual net-striker, New York). The Jury have fixed the following criteria of evaluation for the messages of protest: Text-only messages are evaluated on the following basis: a) the coherence with the reasons of the anti-censorship protest. b) the level of emotional charge. c) the capacity to sublimate the emotional charge into an artistic form of writing. Therefore, messages will be economically estimated in this way: Argumentative: 0.50 dollars Scandalized: 1 dollar | Aggressive: 2 dollars || Ironic/Sarcastic: 3 dollars ||| Paranoid: 4 dollars |||| Seductive: 5 dollars ||||| Erotic: 6 dollars ||||| Poetic: 7 dollars ||||| Surreal: 8 dollars ||||| Mytho-poetic: 9 dollars ||||| Other: to be estimated Original Ascii drawings get an extra bonus of 7 dollars. Attached images, animations, movies and sounds will be evaluated on the following criteria: a) Level of coherence or "resonance" with the subject and the body of the text. b) Capacity to drive the imagination of the censors in an uncensored world. The value of each of the attachments is fixed between 1 and 5 dollars. A maximum of 3 attachments per protest email will be evaluated. Attached scripts, applets and software will be evaluated on the following criteria: a) Conceptual interest of the anti-censorship interface. b) Formal interest of dynamic anti-censorship pages. Proprietary softwares are excluded from the competition. The value of original scripts, applets and softwares is estimated between 10 and 100 dollars and will be proportional to the complexity of the code. WARNING: Any message of protest should not be heavier than 1.5 Mb. This is NOT an e-mail bombing campaign, but a net.art competition. Each competitor can apply with only one message. The

Thing Rome and 0100101110101101.ORG declines any responsibility for derogatory or offensive messages, which will be excluded from the competition. The Deadline for all the Net.Protest is fixed for the 30 of October. All of the messages (including the ones already sent) should be sent in BCC to mailto:PROTEST=PROFIT@0100101110101101.ORG

At the end of the competition the Jury will make a total estimation of the e-mails and will establish a final price, as a result of the addition of all the messages. This final price will fix the value of the net.artwork "NO PROTEST NO PROFIT". On the basis of this estimation, The Thing Rome will make an economical offer to the City of Rome, in order to buy the Inboxes and the Outboxes of Mariella Gramaglia, Mauro Biddau and Claudia De Paolis, in the period included between the 2nd and the 30th of October. An important cultural institution, still covered, will buy the right to use the artwork, for a major exhibition. The exhibition will be considered by no means a collective event, whose success will be divided amongst all the participants. The money that will come from the exhibition will be re-invested in the next protest. The authors (shareholders) of the artwork, will have the power to decide in which kind of protest to re-invest their money. The power of decision of each author will be proportional to the contribution (the economical value of the protest message) that each of them produced. In this way, at any new PROTEST, the PROFIT of the protesters will increase, demonstrating that the only way to increase your capital is to fight for it.

PROTEST! INVEST! The Thing Rome ec.n.org/thingnet (this place is all in Italian so lemme add a linklist from A'dam with as many E as G ((and a few more languages)) links:) thing.desk.nl/

(one interesting link there: <http://bug.village.virginia.edu/waxweb>; a feature movie about bees and weapons(bit of a blasphemy to associate target dancers with target destroyers and paranoid superstitions if you ask me but I'm sure nobody will till it is too late for indignant inflections (???); if you look hard enough for it you may find the synopsis series, the 24th (halfway) of which reads: Jacob walks through the night, and the next morning arrives at White Sands, a huge stretch of white dunes made of gypsum particles eroded from a deposit miles away. There, in the dunes, oscillating shapes drop from the sky, breaking through the thin layers of time to show Jacob the variety of forms that the future dead can assume. During this show, the landscape fragments ; Jacob rides the pieces to a tower in the desert. This is a transit point, where he meets the Space Shuttle as it drops from the sky. The shuttle takes him back to his bed at the Garden of Eden, where there is a message waiting for him in his grandfather's diary, written by the dead. The message tells him that he will not be able to stop walking until he has found the victim that the future dead intend for him to kill, somewhere on another planet inside the earth.... the bees, waiting for him there, will identify the victim for him on his arrival. At the end of this communication, Jacob returns to the White Sands.) This is one of the larger sections; as a protest to the awkward forming I stuck the whole second half of the story [here \(temporarily\)](#).

To all the real bandits to all those who sense a bounty coming on their heads to all those who do not want to stay in the new economy saloon anymore load up your guns it's time to settle with the sheriff it's time to take by storm the diligence of institutions stop censorship now ! A NET STRIKE FOR BANDITS!

Monday 23, October 2000 hours 14.00-17.00 (Greenwich Time) target: www.comune.roma.it/index.htm Bandits. Banned. On October 2 the City of Rome banned the webspace of the Rome City Network hosting the **AvAna.net** association. The group was blamed to have published materials "unfit" to a City Network, following an exposition by Father Fortunato Di Noto, a known pedophile-hunter priest, who claimed the Luther Blissett's book "Let the little children..." to be a text fostering pedophilia. Actually, the book - regularly sold in every bookstore of Italy - is just an inquiry on the issue of pedophilia and on the judicial mistakes generated by an irrational and spectacular approach to the matter. Bandits. Banned. Two days later, the same City of Rome banned from the City Network a page of The Thing Rome website, showing an interview with australian artist Francesca Da Rimini (aka Doll Yoko). The group was blamed to have used - as illustration of the article - images "unfit" to a City Network. The images were taken from Doll Space, a known web art work, financed by Australia Council, winner of two international prizes and bought by the University of Westminster. **The artist made these images by using a Dutch print dating back to 1789: one of the first illustration of Marquis De Sade's books.** Bandits. Banned. <<<<snip>>>> Some press: Telepolis: "Sex, Internet, Zensur und Markenzeichen" (german) <http://www.heise.de/tp/deutsch/inhalt/co/8935/1.html> ExibArt: "The City of Rome censors The Thing and AvANA Net" (italian) exibart.com/IDNotizia1451.htm Punto Informatico: "Blind censorship" (italian) <http://punto-informatico.it/p.asp?i=33519> Brainstorm: "Against the online Holy Inquisition" (italian) apogonline.com/berny/inquisizione.html Il manifesto: "censorship.com" and "The censored artist" (italian) <http://www.ilmanifesto.it/Quotidiano-archivio/14-Ottobre-2000/art28.htm> <http://www.ilmanifesto.it/Quotidiano-archivio/14-Ottobre-2000/art29.htm>

HTTP://WWW.0100101110101101.ORG/PROTEST=PROFIT Date: Thu, 19 Oct 2000 15:53:40 -0500 From: "Steve Dietz" steve.dietz@walkerart.org To: m.gramaglia@comune.roma.it, m.biddau@comune.roma.it, cored@comune.roma.it Subject: do not destroy NO PROTEST NO

PROFIT messages Oct. 19, 2000 I am writing to remind you that related to unacceptable censorship actions against The Thing - Italy, the NO PROTEST NO PROFIT competition has been launched. In the net economy, control and restriction of access to information creates economic value--even if that is not the primary goal of the restrictions or the information creators. The messages you receive as part of NO PROTEST NO PROFIT have an economic value both because access to them--via access to your mailboxes--is restricted and because, collectively, they represent an "info-aesthetic" action/object (Manovich).

As an interested party in the evaluation and preservation of such works, I am asking you to save and collect these messages, which have significant economic and historical value in the context of the burgeoning field of net art. insincerely, Steve Dietz Director, New Media Initiatives Walker Art Center subscribe Webwalker: <http://www.walkerart.org/gallery9/webwalker>

2 contributions on the well situated rich **on the well connected rich (3 entries): felix stadler ----- Halfway down it reads: The current buzzword may be "network", but although it conjures up dreams of social internationalism for some, it gives others - who are much more powerful - an appetite for mercantile interconnection. <<<<snip>>>>** The current hotchpotch of journalistic clichés (e-democracy, e-voting, politics dot com, interactive citizens, and so on) is reminiscent of the debate on "free" radio stations in France in the 1970s. Despite their amateur, non-profit origins they could not resist the temptation of advertising revenue and stock market flotation for very long. Here again, the aim is apparently to boost the sagging legitimacy of an increasingly top-heavy, status-conscious system by recharging its civic and democratic batteries. As Armand Mattelart puts it, "The techno-utopia is a highly effective ideological weapon in the struggle to influence people and gain acceptance for the free-market vision of the world order. [...] Short-sighted techno-libertarians help to consolidate the simplistic representation of an abstract, evil state, in contrast with an idealised civil society in which truly sovereign individuals communicate freely" (8). ><<<<snip>>>>>> In a study of the 10,000 demonstrations held in France in 1980-90, Olivier Fillieule established that political involvement has changed less than was suggested. For one thing, protest activity is not characterised "by extreme fluidity, with individual involvement fluctuating as circumstances change". Moreover, militant action is not the work of people operating "outside the traditional movements", for "workers constitute the group most frequently involved in demonstrations." Last, "the largest gatherings are the ones defended by trade unions. The so-called 'post-materialist' movements are not really convincing, regardless of whether they focus on social mores, the environment, abortion rights, pacifism or even politics in general. These movements are generally supported by tiny groups" (14). Nicholas Negroponte (see article by Philippe Breton in this issue) recently said "We will socialise inside digital neighbourhoods where physical space is no longer relevant". Fortunately, protest action will very probably continue elsewhere. And it will involve the collective experiences of people acting together, in the same place, with meetings, demonstrations, meals, distribution of pamphlets and newspapers, crowds. As, for example, was the case with the non-digital demonstrations in France at the end of 1995. These gatherings will continue to occur in a given place, shaped by past history, acting for (and with) large social groups with low mobility and poor "connections". Nor do the latter imagine that new technology will put an end to their isolation. They will continue to resist, not because they are at last connected to some planetary network, but because their social experience, militant activity and understanding of the world have shown them how urgent it is to refuse a "digital" revolution whose main effect would be to perpetuate the power of the traders and masters. **cisler on the well connected rich At the MIT Media Lab's Digital Nations meeting in Cambridge, Massachusetts, we discussed this issue. Here's part of my forthcoming report: William Mitchell, whose book "City of Bits" was one of the first full text works on the World Wide Web, welcomed a group of several hundred consultants, educators, technocrats, government representatives, and company representatives to the Lab, whose director Nicholas Negroponte was recovering from a recent accident in Dublin, Ireland. Mitchell said that the fundamental paradox of technology was that the people, groups, and nations that benefited most were those that were the best educated, most affluent and most powerful. The technology adopted, whether it is an industrial processes, more deadly military hardware, or information systems give even more power to the groups and nations of privilege. Mitchell asked if we can design our way out of this problem? What are the kinds of policies and institutional structures that are needed? And what kind of technologies do we need? Technophobes like Jerry Mander think it's a losing battle, and he's embarrassed that his anti-globalization forum has a web page! Castells says that one option is to ride out the developments by isolating a society from the technological changes, as Bhutan did in the 1930's depression. However, we are so interconnected at some levels (finance, medicine, transport, fuel) that it's just about impossible. It's clear that not everyone is going to use the Internet, and 57% of those not online in the U. S. have no interest in doing so!**

====forward by Phil Graham===== **Dromographic Stress Disorder: How E-Commerce Makes Survivors of Us All** by Steve Beard (on Virilio) This

appeared in issue 18 of the UK "Critical/Information/Services" magazine Mute: Does Paul Virilio still have something to say about cyberspace now it has morphed from an electronic frontier into a 24/7 automated trading post? The wily French theorist has always been a bit of a doom-monger when it comes to new media but he has also been highly adept at making connections between the seductions of platform portability and the dangers of reflex cognitive-behavioural conditioning (have you checked your email/mobile/stock price yet? how long before you reply to an electronic message? the interval defines a breathing space). In fact his particular brand of apocalyptic Catholic moralising means he positively relishes the darkside of the virtual force. Virilio is the electronic desert prophet constantly warning of the "generalised accident" which waits at the end of the technological curve. In the dark days of nuclear deterrence this used to be the threat of extermination posed by the atomic bomb. But in the new times of engineered virtual enlightenment it is the "information bomb" which apparently threatens to exterminate us in something like a global stock market annihilation. Virilio is the great annunciator of the technological endtime, but as demand-management economist Joseph Maynard Keynes remarked long ago in the long term we are all dead anyway (life is determined by human reproduction and not by technological evolution).

Virilio's new book *The Information Bomb* (Verso) is full of dire auguries and sees him beginning to clear new ground with distant early warnings about the dangers of genetic engineering. But it his pronouncements on the domain of e-commerce or what he calls the "global perception market" which are most interesting. Virilio's theoretical roots in Edmund Husserl and the French school of phenomenology means he is particularly well placed to understand that, as a post-nuclear medium of parallel processing and networked communication, the internet not only bypasses any root node of strategic command-and-control but also over-exposes the distributed perceptual cues of the survivors we have all become. In this scenario the spooky Echelon surveillance system is merely a retro-nuclear nostalgia cult while it is the live web-cams which dot the net which are actually doing the real business of turning us all into each other's keepers by heralding privileged "points of view" as future "points of sale" (get your JenniCam T-shirts here).

Virilio himself may be nostalgic for what he regards as the unmediated sustainability of an inhabitable ecological niche, but he also understands that the information landscape is delivered through the "instantaneous superimposition of actual and virtual images." In other words, he understands that the web is a pure advertising medium whose condition of entry is that objects should become commodity-signs in an ecstatic cult of self-reflexive mourning. "Actual" things doubled up as their own "virtual" effigies are like second-hand items displayed in heat-sealed plastic bags: they recover a margin of untouchability whose fetishistic allure begins to incite the fashionable to play the familiar game of provoking death. From here on in it's all really just a matter of joining new media whores to old media punters through the data revenue stream generated by a transaction. What this means in banal terms is a movement towards the discipline of electronic customer relationship management and Virilio begins to hook up from the other side of his cautionary analysis (and probably much to his horror) with a gung-ho digital marketing guru like Seth Godin. Godin is the Vice President of Direct Marketing at the American portal Yahoo! and the author of the cult manual *Permission Marketing: Turning Strangers into Friends and Friends into Customers* (Simon & Schuster). He has argued persuasively that older media like magazines, radio and television depended upon a model of "interruption marketing" in which advertising messages appeared in the intervals between the flow of content. The web however explodes the interval into a new spacetime of instantaneous ubiquity in which the important thing for traffic analysts is not to increase click-through rates but to "make each click worth more." The click defines a hyper attention deficit which is capable of being leveraged by a new science of cognitive-behavioural therapy into an engineered perception of brand value. Godin acknowledges that the basis of permission marketing is "trust" and insists that "you can't market at people anymore: you have to market with them." What makes this functional are the new techniques of data collection and analysis which allow the sustainability of engineered perceptual cues to be measured over the "lifetime value of the average customer." Virilio takes a less sanguine view of this kind of tactical databody capture when he links it to the commercial applications of the human genome map as a form of "cybernetic eugenicism". But what is fascinating is how far ahead the American is of Virilio's own thinking. Godin insists that interruption marketing is not web-friendly because it depends upon the one-to-many massifications of "demographic reach" whereas the secret of permission marketing is the one-to-one personalisation afforded by "frequency" (As he says: "Ten TV ads cost ten times as much as one TV ad. That's why permission marketers tend to focus on reach not frequency. But on the net frequency is free. The people who subscribe to your newsletter get it from you every week and it costs you nothing to send it out. Digital media have zero marginal cost and infinite potential frequency"). It is here that Godin sketches out a science of "dromographics" which succeeds Virilio's own art of "dromology". "Dromographics" might be considered the science of modelling relative analogue speed vectors within a digital spacetime whose absolute limit is defined by the speed of ones and zeros travelling along a fibre-optic cable. (Information now travels at the speed of light unlike the human capacity to process it.) In this sense Godin boundary-rides the flight of perceptions within Virilio's "light-time" of networked electronic commerce. Emergent platforms, file formats and protocols like WAP and MP3 in this scenario become technological vehicles which abstract the flux of disintermediated intersubjective communication in order to deliver new possibility spaces for arresting the structural play of value. This moment of totemic arrest can be identified as a "hit" or a "meme" or a "trend" and at the moment its sequencing still ghosts the older rites of negative taboo whose contours persist like core memory dumps

in the information landscape (Virilio lists some of them as Heaven's Gate, Sensation!, Rape in the Highlands, the Museum of Eroticism and transgressive body art). But it seems that more familiar rites of positive taboo like the gift are just as effective for supporting the extraction of surplus value. Godin suggests that the web user will be gratified to offer up information about themselves in return for something like a free sample, a big discount or even a commodity up for grabs within a specified interval like a download time or an hour of the day. This however is no cybernetic registration of a communist utopia (English cyber-cult scholar Richard Barbrook's late notion of "cyber-communism" as an "evolving synthesis of gift and commodity within the net" is naturally a transparent apology for the Blairite mixed economy). Instead it reinscribes the circuit of profitable exchange within a post-nuclear medium by liquidating its depreciating military-industrial stockpiles of sink capital and reserve labour and flipping them into a chaotic regime of digital recombination where capital becomes human and labour becomes symbolic. What Virilio seems reluctant to admit is that when the nuclear apocalypse failed to occur it precisely detonated the information bomb within whose global impact zone of mutually assured production we all now compete. All of which is perhaps only another way of saying that the sticky path through the jungle of e-commerce leads directly from the start-up dream of an Initial Public Offering into the Xanadu of an interactive fall-out shelter. It looks as if advancing a credible exit strategy really is the only way of receding the symptoms of dromographic stress disorder. # archive: <http://www.nettime.org> contact: nettime@bbs.thing.net ===== "Nothing is true. Phil on the palestinians as myth: What a strange and confusing time. The concept of globalised humanity - once nothing but a Marxist utopia - is now being pushed most hard by institutions such as the WTO, UN, IMF, World Bank, etc, etc, as well as by the most right-wing commercial institutions (by which I mean weapons- and money-mongering monoliths) on whose behalf the former (legislative) group appears to work most successfully. On the one hand, there is the celebration of nationhood by self-professed leftists who would formerly have been committed to internationalisation; on the other, we see the disparagement of nation-states as a dangerous - if not evil - fiction by other self-professed leftists. Meanwhile, humanity has never seemed (at least to me) so destructive, nasty, or farcical in its endeavours, each apparent win signifying a defeat of another qualitative kind. Humanity in the abstract has only ever been of limited usefulness. This is true at any level: "the individual", "the family", "the organisation", "the nation", "the culture", "the ethnic group", "the religion" --- all hopeless abstractions after a certain, very simplistic level of conceptual application. Perhaps this is all we are capable of in the end. Pales was a god who took the form of a donkey. Palestine is the name of a geographically (i.e. geometrically) defined space, the nature of which, as we know, is as movable as collective (mis)understandings and (dis)agreements, which are almost always mediated by violence at some point in history. As far as Judaism goes, I understand it as a religion, and thus as a relation without geographical, ethnic, or cultural borders, like Islam or Catholicism or Buddhism or whatever. I am not sure that juxtaposing the achievements of, say, Kosovars in surviving their own "rescue" by remote control carpet bombing on the part of the "forces for good" (I note Al Gore's statement in the third "debate" that 'not a single human life was lost in the Kosovo war A single American life') to the South African apartheid regime under the aegis of 'national self-determination' is useful or even vaguely commensurable. Put differently, "national self-determination" is an incomprehensible term in the first place. There is no such thing. Hasn't been for decades if there ever was (I very much doubt it). So I wonder what "national self-determination" might mean. I also wonder on what basis a group would claim nationhood in the first place, if not on cultural, ethnic, linguistic, colonial, geographical, militaristic, or religious bases. Which of these - or which collection of these - would be more legitimate bases for claiming nationhood? It seems to me that we keep extrapolating clearly flawed and failed political models out to larger units of organisation, where now we can think of the earth as if we existed outside it (and some people do for periods of time), as if "it" (viz the whole of human activity) could be controlled from a few centres. Richard's comment about taking what many of us have for granted is quite clear and legitimate to my mind (but what is it that most of us have that those less fortunate do not?), especially in the context of the groups he listed. I'm not sure how you relate that comment to a regime based on the assumption that certain "types" of human beings are not really human at all. People claim all sorts of abstract rationales for killing off or dehumanising other people: democracy, freedom, racial hygiene, evolutionary or technological inferiority, economic efficiency, etc. Thus, according to dominant definitions, some people can be bombed, deprived of resources, tortured, murdered, exploited, isparaged as less-than-human, uncared for, and so on. Like I said, weird times. I doubt if we have the

language or conceptual ability to explain and comprehend what is going on. regards, Phil Opinions expressed in this email are my own unless otherwise stated. Phil Graham, Lecturer (Communication), Graduate School of Management University of Queensland, Ph: 617 3381 1083; Fax: 617 3381 1083; Mobile 0401 737 315; homepage: www.uq.edu.au/~uqpggraha ----- In a bit on Nazi's (see previous issue for more on them) he wrote: Will the Balkan region suddenly become something more to the "west" than an advertising billboard for the latest weapons systems? I sincerely hope so, but that will take more than merely sacrificing the "great men". I am also pleased Milosevic is gone. I never liked his wife either. My point, and I think F. Hartmann's too, is that we need to look beyond the great-villain/hero/liberator view of history that obscures the real relations that make mass murder possible and - quite obviously - desirable for *whole populations*. Otherwise we'll never understand it. Then we'll never be able to stop it. I'll start quietly celebrating when there's no more loud noises. My subject to him: invitation to a quiet party of the dead resurectable (plus mailsig) a little while later: I offer material to help rectify your recent assertion your recent nettime post proves you have not followed my slightly less recent advice. oops, I guess I did not do a good job. What I mean to say is that your assertions: Humanity in the abstract has only ever been of limited usefulness. This is true at any level: "the individual", "the family", "the organisation", "the nation", "the culture", "the ethnic group", "the religion" --- all hopeless abstractions after a certain, very simplistic level of conceptual application. Perhaps this is all we are capable of in the end. <<<snip>>> Put differently, "national self-determination" is an incomprehensible term in the first place. There is no such thing. Hasn't been for decades if there ever was (I very much doubt it). Ever is a too big word; surely noman's land has kept people out of each other's hair a lot no? Another reason to be wary of what Jared Diamond seems to believe is 'success' and 'luck' of mass societies ... appear completely false in the light of the likes of Ulrich von Beckerath; please pick on of 10 or so files containing his work for starters: On Sat, 28 Oct 2000 23:24:55 Phil Graham wrote: And you have proved my point by sending me to a website about money: i.e. alienated human life (past present and future). Money in the way it would be set to work in Beckerath's (Bth) sense could telecast as well as microscope; Hello again: At 02:28 AM 29/10/00 -0700, you wrote: On Sat, 28 Oct 2000 23:24:55 Phil Graham wrote: Money can't do anything. People do things. Money is a technology, one of the few initially "neutral" ones. Its use is a symptom of human nature, not its structural characteristics. Money now functions like myth. disperse (product and skill) info as well as ground it (focus on the whereabouts and quality thereof), harmonize outreach and coordinate allocation; par position and identify; discussion and decision. I can't think of a starker contrast to your depiction of bloodless and sterile megamonomaniacal zombiedom such as I myself have given the world an extra sample of recently (Vaneigem's money despising (cause misunderstanding) 'work'), you sound suspiciously much like him now Coincidence??? Mockery? Hmmm ... --- errr .. neither coincidence nor mockery: misunderstanding on your part of what I am trying to say in too few words I would think. Thanks for the information anyway. Phil (concretely) part of the first exchange: The remedy does not lie in any of the symptoms; it is contained in the nature of the problem. Preproblematic nature is what you logically refer to. Problems are unnatural; the emblematicity of nature however is indeed contained, continent and 'emittable, timable (as much as and why not paralelling and modeling for money ones???). First, there is no such thing as "unnatural". Second this: "the emblematicity of nature however is indeed contained, continent and 'emittable, timable (as much as and why not paralelling and modeling for money ones" is to me a bizarre way of thinking that seeks to reduce multidimensional complexity to banal measurement. It's like the problem with maps: they are models of the real which don't show the effects of floods or earthquakes or whatever. They are themed around very narrow aspects of the world and are thus of extremely limited use. Nature is not timeable, nor is it emblematic, not in any useful sense (other than to coordinate massified humanity on the one hand; and denaturalise nature on the other - by reducing it to an "emblem" of itself). Good luck with your journey. I think we see the world in entirely different ways. You think my view needs rectifying. I think yours is confused and over-simplistic (and thus could use some balance). Que sera. Thanks for your mail. Phil Thank you too for your efforts and I agree we disagree but won't admit we must (finding disagreement disagreeable and when it comes to basic extensions of the dull but comforting general platitudes like: all sentient creatures process oxygen ((who cares if they burn with desires as nonmutually as possible??? What decides the right of way when they compete with engines but barely becoming conscious of the indeed magnitude wise 'mythic' consequences) (entirely unnecessary and regrettable), since such types of potentially common sense would and could redeem a social graduation and stratification such as we are stacking up (against??? ahead of????) ourselves. Nicci's modest mass mailing: Dear Friend, At last I have managed to get a website going for the non-profit charity I helped to create last year in Africa. If any of you want to help out with fundraising or sponsoring it would be amazing !!! Otherwise can you forward our address to everyone in your address book so eventually it will reach a billionaire who can perhaps sponsor the little Africans forever and eternity !!!:) :)))) THANKS GUYS Love Nicola OUR WEB ADDRESS: <http://humanitrust.ninhave.net/> presently after checking your URL Great nic, I just pasted and wrote the following into my logs (up to 15th_log.htm now) minutes before being graced with your efforts, I'll have a look soon. love piet PS: still haven't seen any niccipicci's. Care to try sending some again???? Aaaaaah, now I see you!!!!!! To check wether we had been paying attention to the dreadful bible and related readings we as kids used to have to repeat the last word after it (the reading) stopped (thank heaven!!!!!!) the last word on your page is lette; mmmmm, isn't that a famous river one crosses on the way to in- and excarnalation to wash off all (with) knowledge???? hi piet, well currently listening to the interview...a man

of definite soul..thanks for the link...!!

This Message Is From: Frances Beal (Pynchon mentor some say) <fmbeal@igc.org> ***** A little humor to lighten your day: ALL-PURPOSE OFFENSIVE JESUS JOKE THREE PROOFS THAT JESUS WAS MEXICAN: 1. His first name was Jesus. 2. He was bilingual. 3. He was always being harassed by the authorities. But then there were equally good arguments that JESUS WAS BLACK 1. He called everybody "brother." 2. He liked Gospel. 3. He couldn't get a fair trial. But then there were equally good arguments that JESUS WAS JEWISH 1. He went into His Father's business. 2. He lived at home until He was 33. 3. He was sure his mother was a virgin, and his mother was sure He was God. But then there were equally good arguments that JESUS WAS ITALIAN 1. He talked with his hands. 2. He had wine with every meal. 3. He used olive oil. But then there were equally good arguments that JESUS WAS A CALIFORNIAN 1. He never cut his hair. 2. He walked around barefoot. 3. He started a new religion. But then there were equally good arguments that JESUS WAS IRISH 1. He never got married. 2. He was always telling stories. 3. He loved green pastures. But perhaps the most compelling evidence: THREE PROOFS THAT JESUS WAS A WOMAN 1. He had to feed a crowd at a moment's notice when there was no food. 2. He kept trying to get the message across to a bunch of men who JUST DIDN'T GET IT. 3. Even when He was dead, He had to get up because there was more work for him to do.

green (in holland we say 'gifgroen', meaning: poison green and that applies to this alchemystical exclusivity here) section

-Message sent by Barry Carter <bcarte@igc.apc.org> Dear Friends, At 04:01 AM 2/9/99 -0700, MICHAEL SPITZER wrote: THE MIAMI CIRCLE A Key Toward Understanding a Unified Field As Displayed in The Ancient Planetary Archaeomatrix Re-discovered by Carl P. Munck, Sr. After further study, based on the GPS readings given to me over the phone by Richard C. Hoagland on Friday, Feb.5, 1999 ... I have concluded that The Miami Circle site is a major part of the ancient planetary archaeomatrix, re- discovered by Carl P. Munck, Sr. It is becoming more and more apparent that there is a relationship between mathematical form and physical substance. The hard problem has been to identify a physical mechanism which could provide a connection between the universe of thought and the physical world. It is fairly clear that the ancients had some ideas about these connective structures. Modern science has also been searching for this connection. The quantum physicist David Bohm, toward the end of his life, became more and more convinced that there was a connection. He postulated a concept that he called the "implicate order" as the source for this information field. Numerous other modern scientists have proposed similar ideas. Biologist Rupert Sheldrake calls this field of mind the "morphogenic field". Nobel laureat Brian Jospheon has instituted the Mind-Matter Unification Project at Cambridge University. I could list a dozen more world class scientists who are working on the same problem. In quantum physics, finding the connection between mind and matter has been called the "hard problem". **Dr. Philip Callahan**, who in his early years tested chemical biocides for the US Department of Agriculture, noticed an interesting phenomena almost fifty years ago. Dr. Callahan noticed that certain soils were paramagnetic. Paramagnetic means that they have slight magnetic properties. Dr. Callahan also discovered that paramagnetic soils were much more productive in relation to the strength of their measured paramagnetic properties. The most paramagnetic soils were those which contained a high portion of volcanic or limestone based minerals. Dr. Callahan postulated that paramagnetic soils provided a better electromagnetic connection between the atmosphere and the plants growing on these soils. He also noticed another phenomena, certain agricultural fields in Ireland and other countries had cylindrical stone structures which seemed to promote the growth of plants in certain portions of the circle around these structures. Dr. Callahan got lung cancer in the early 1990s, probably as a result of his exposure to agricultural chemicals as a young scientist working for the USDA. Using his knowledge of paramagnetic forces, Dr. Callahan developed a treatment for his cancer which was so successful that when he went back to his doctor, his doctor said that he must have been misdiagnosed and could not have had lung cancer because the form of lung cancer that he was diagnosed with was invariably fatal. Dr.

Callahan is now 75. He has been cancer free for over five years. His cure was what he calls "sackcloth and ashes". He has patented this product. The patent can be found at: http://www.patents.ibm.com/details?pn=US05247933__&language=en An excerpt from one of Dr. Callahan's books can be found at: [//members.tripod.com/~poetpiet/guest_appearances/paramagnetism.htm](http://members.tripod.com/~poetpiet/guest_appearances/paramagnetism.htm) Dr. Callahan claims that what cured his cancer was known in ancient Israel as the "shatnez". Here is Dr. Callahan's description of the shatnez: "The PICRAM is constructed by soaking wool-linen cloth or burlap in seawater. In the top photograph, the cloth is connected to a simple banana plug at the corner and wrapped around the plastic of the plug where it is held in place by two rubber bands. Harry Kornburg, my patent co-author, translated the Hebrew which describes such a piece of cloth worn by the Jewish High Priest. It enhanced his immune system in order that he could safely examine lepers like those sent to him by Christ. The bible is by far the best science book for low energy systems ever written. The Hebrew name for my PICRAM ELF detector is Shatnez. It was worn as a long ribbon strap wrapped around the high priest's body." Another researcher, Don Gerrard published a book in 1990 called "The Paper Doctor". This book was so controversial with the medical establishment that it was promptly banned. In this book, Gerrard claimed that homeopathic medicines had an energy field around them the shape of which could be determined by dowsing. He also claimed that water placed over a shape which duplicated the shape that was dowsed would assume the medicinal properties of the original homeopathic medicine. Though his book was banned, someone has kindly provided a copy of it on the internet. This can be found at: algonet.se/~johnnyfg/books/paperdoc/index.htm There is an ancient Hindu treatment which is quite similar to Gerard's. More information on this can be found at: http://www.oaktree.co.uk/mandala/sanjevini/bk_cover.htm Wherever we look we find evidence that pure form can influence many aspects of our material existence. But what is the physical mechanism which connects mind and matter? Are these just isolated anomalies or is there some common explanation for these phenomena? In the late seventies an agricultural chemist and cotton farmer named David Hudson discovered some materials on his farm with very unusual properties. Over the course of the following decade, Hudson spent several million dollars and much of his time to find out the nature of these materials. In 1988 he filed for US and worldwide patents on these materials. He called them Orbitally Re-arranged Monoatomic Elements or ORMES for short. A couple of Hudson's patents can be found on the web at: triax.com/bmnfa/science/ORMUS/Patents/patents.htm Here is a partial list of the properties of these materials: They are superconductors at body temperature. It has long been suspected in the scientific community that body temperature superconductors exist. See: triax.com/bmnfa/science/ORMUS/research/research.htm Click on "Superconductors in the Brain". These materials are a monoatomic or diatomic form of the precious metal elements. In this form they have an atomic weight which is only 5/9 of their weight in the metallic form. If ORME iridium is slowly heated and cooled it can be induced to have a weight ranging from 575% of normal to 25% less than normal. A chart showing this phenomena accompanied Hudson's patent. This chart can be found at: triax.com/bmnfa/science/ORMUS/Patents/figur012.gif When the ORME iridium loses all weight, it also disappears. Where does it go? The theory is that it goes to a non-physical realm. There is other evidence that these materials might be the connectors between mind and matter. Hudson found that they ORME rhodium and iridium each composed about 2.5% of the dry matter weight of brain tissue. Hudson found that the ORME form of the precious metal elements is over 7000 times more common than these same elements in their metallic form. He found that they are most abundant in volcanic sources and in sedimentary materials. Other researchers have found that they are abundant in salt sea water. A chart which compares their abundance in sea water is available at: triax.com/bmnfa/science/ORMUS/ORMUS/ormus4.htm Hudson and others believe that the ORME materials are present in all water, even distilled water. We believe that they give water many of its properties. As you concentrate ORMES in water, the water becomes more viscous, slipperier and weighs less. We suspect that the ORME materials are easily imprinted with the information inherent in form. Since they form a significant portion of the Earth's core, it is likely that structures which accumulate form energy on the Earth's surface would be able to modify the Earth's magnetic structure. When these elements are first exposed to moving magnetic fields they are paramagnetic, that is, they have a weak magnetic attraction. As exposure continues they become diamagnetic and are repelled by the fluctuating magnetic field. In Dr. Callahan's paramagnetic soils they would exhibit the paramagnetic property. In higher concentrations, with stronger magnetic fields they exhibit the diamagnetic levitation of superconductors. David Hudson also noticed historic connections relating to these materials. He discovered that they matched the properties of the alchemical white powder of gold. In developing his patented process for making these materials he borrowed heavily from alchemical processes. Other researchers have been able to duplicate ancient alchemical processes using an understanding gained from Hudson's theory. Hudson and other historic researchers have linked these materials to the Great Pyramid, Moses on Mt. Horab, manna, shewbread, Hindu and Chinese alchemy and the Essene community on the Dead Sea. Some of these links can be found at: triax.com/bmnfa/science/ORMUS/Historical/historic.htm Of particular interest are some recent lectures by Sir Laurence Gardner. Links to these lectures can be found at: geocities.com/CapitolHill/Congress/2301/Directory.html and at: peg.apc.org/~nexus/starfire1.html Our knowledge of these materials promises to revolutionize all areas of science and completely change our knowledge of ancient history. From working with these materials

over the past few years I have found that they can bring about changes in consciousness and enhance psychic abilities. They really seem to be the link between mind and matter. Most of the public information on the ORME materials can be found from links at: triax.com/bmnfa/science/ORMUS/whatisit.htm This web site also has instructions for three different methods for obtaining these materials from natural sources. Ps couldn't find recent work of or by him

www.ecoworld.com/Trees/ecoworld_Water_Home.cfm is a faulty link I reported: Ps: nice site; I would like to work both ends of it. Out in the field propagating heirloom apples and updating/adding to a website such as yours; it's gonna be great, keep going!!!! How do you like mine? No comparison I know but what else?

on Philip Callahan see also: [\(about other rock powders\)](#) This pageseries is a long detailed polemic against 'Dallas's own **dirtdoctor.com** who's 'guru' is Callahan; in fact they are both contributors to **Acresusa.com** (STILL nothing much at their page, just subbing info; well worth it!!!! - this paper is nevertheless a hardy pioneer when it comes to truth-telling). "I (Field Roebuck?? No email adress provided; he is a rose lover anyway) devote the second half of this website to informing the site visitor about our local source of chaff -- the curious and often ludicrous pronouncements of Dallas' own mountebank of misinformation, John Howard Garrett, the self-anointed and self-serving "Doctor of Dirt." "

Hi Don, Harry, Joanna and all other godchildren of the great late John Hamaker; as you might know there is a big climatodo in the Hague shortly. Is the new edition gonna be done by then Don??? Don't we all get (p)review copies first??? Bit of proofing won't hurt.

<http://forums.gardenweb.com/forums/load/sources/msg0811325114631.html> Posted by LES STAMPER - 7 (lesstamper@earthlink.net) on Sun, Aug 20, 00 at 11:32 Looking for a source for truck load quantities of rock powders. I live in Western North Carolina. Any help appreciated! LES The only one that I know of is "Peacefull Valley Supply Co." in California at www.Groworganic.com.

Heliocentricity My next batch of homing work: this sorta reminds me of a thought I head upon reading danwinter.com's latest wherein he speaks of an obscure (but to him necessary needed to get to the other side of the sun and not in half a years time but at a flash right throught it; I never suspected (or noticed before) that he has a sort of christian dogmatrace flashing through him at strikingly unknown speeds. Just a measure of his alienation and substance shun I guess. www.starcenter.com/ - 7k webworker.com/galactic/center.html - 11k - .. **astroannie.com/curious_examples/helio_animation/** - 2k - heliocentric astrology... Heliocentric, As Seen From the Sun Here, the week is charted from a.....Here, the week is charted from a heliocentric perspective. Notice that. 11th go ogle result: [http://www.elysian.co.uk/reading.htm#Heliocentric Astrology](http://www.elysian.co.uk/reading.htm#Heliocentric_Astrology)The difference in interpretation is that a heliocentric placement in a sign indicates matters of public interest; geocentric positions are more concerned with private, subjective matters. Heliocentric planets describe our more public activities, alliances and actions. <http://www.saros.zynet.co.uk/galast.html#SIDEREAL> Galactic Astrology is relatively new, less than 15 years old as a technique. It is still developing and the body of experience that gives natal astrology its richness is still developing. But in application it has profound implications. It can allow the true path of an individual in the course of human history to be charted. For events, their place in history can be assessed and their long term consequences understood. And ultimately, no longer being exclusively Earth based, the principles can be applied to charts drawn up on other bodies in the Solar System, for that time when humanity may venture beyond the confines of Earth. To conclude, I would like to return to the origins of astrology to speculate on whether or not Galactic Astrology is really new. To the builders of the early stone circles and barrows, some five thousand years ago, the motions of the Sun and Moon seemed to be understood. Stone circles show alignments to key Sun and Moon positions, and the

striking stone rows of Kintraw and Carnac point towards a simple but effective predictor of lunar eclipses. The motions of the planets may have been beyond them, and in appearance they would seem to be moving stars. But the stars themselves would have been very apparent, and the Milky Way even more so. Perhaps they related the Sun and Moon to the background of the stars and that rather striking band of the Milky Way. Perhaps they made larger arrangements of their monuments to mirror the stars. There are certainly many groupings of stone circles that seem to form a pattern that has not yet been explained. For example, three large circles in Derbyshire, Arbor Low, Bull Ring and Wet Withers, form a well defined triangle that is at the centre of a complex of many smaller stone circles. At about the time of their construction, Vega was the Pole star, much brighter than the current pole star. Near it, the bright stars of Deneb and Altair form a triangle that straddles the Milky Way. Perhaps those early builders created a model of the sky on the ground, to enable them to set up relationships on the physical plane that mirrored the stars, the realm of the Galaxy.
