Afortunadamente, en Derecho las cosas nunca son blancas o negras y hay resoluciones que ponen un poco de color en el gris panorama que se cierne sobre Internet; como la dictada en el caso nosolomusica.com, en que el titular de la marca del conocido programa de televisión NO SOLO MUSICA, adquirida de su antiguo propietario GESTEVISION TELECINCO, entidad que gestiona el canal de TV TELECINCO, ha perdido su particular batalla por el dominio nosolomusica.com, cuya propiedad, por lo demás, resultaba, según lo manifestado en la resolución, de titularidad algo dudosa o indefinida. O la dictada en el caso viajesecuador.com, que dirime un complicado supuesto sobre la relaciones entre franquiciadora y franquiciada. Estas decisiones suponen una corriente de aire fresco en un ambiente que empezaba a estar bastante enrarecido, a consecuencia de la falta de seguridad jurídica que está generando esta doctrina dispersa y por momentos arbitraria.

Por otro lado, la ICANN también está recibiendo fuertes críticas y ya comienza a extenderse por las listas de discusión la idea de que hay que prescindir de esta organización privada californiana y empezar de nuevo. El vacío de poder creado en los Estados Unidos, a consecuencia de su vergonzoso sistema electoral, constituye una oportunidad única para ello.

Algunos medios tradicionales, que siguen sin enterarse de qué va esto, cuando critican la actual situación, lo hacen, acaso conscientemente, de una forma pueril e irreflexiva. Véase el caso madonna.com en el que, pretendiendo defender a un hospital infantil, tan sólo hacen el juego a la industria pornográfica (perfectamente respetable, por lo demás) de whitehouse.com, cuyo titular también lo es de madonna.com. El hospital opera bajo el dominio madonna.org, y sus responsables ya han manifestado que no quieren tener nada que ver con esta guerra. En fin, escribir sobre aquello que no se tiene ni idea puede llegar a ser todo un arte.

Estos comentarios superfluos acaso tengan como objeto despistar a la opinión pública sobre los verdaderos casos sangrantes, como es el de barcelona.com, que ha dado lugar, según se reconoce por un amplio consenso, a una de las decisiones más execrables que haya evacuado algún árbitro de la OMPI y que, por lo demás, acabará costando a la ciudad condal un ojo de la cara y parte del otro, pues ya se ha presentado una demanda en Estados Unidos que tiene toda la pinta de, al menos, ser admitida a trámite.

La indicada decisión considera un plan de negocio, solicitado a instancias del entorno del demandante, como muestra de mala fe que evidencia un intento de venta. Además, estima que una iniciativa empresarial ofreciendo servicios e información sobre una determinada ciudad no presenta un interés legítimo. Y por último, muestra un absoluto desprecio por las instituciones y categorías jurídicas actuales al considerar que la denominación "barcelona", por sí sola, está protegida por derechos de propiedad industrial, cuando ninguna marca con esa denominación exclusivamente podría acceder a al registro de patentes y marcas, siendo, por lo demás, su titular

una persona sin interés empresarial.

Desde luego, tales planteamientos, unido a una especie de balanceamiento de intereses, suponen dejar a un lado las normas en que ha de basarse la decisión, para utilizarlas tan sólo como una mera excusa. En el último estudio publicado por Milton Mueller se considera esta decisión como una de las siete (el profesor analiza centenares de ellas) que caen dentro de la categoría "really bad decisions", que hacen de verdad un flaco error a la justicia, en la era de la "sociedad de la información".

La opinión de todos los juristas es prácticamente unánime y coincide básicamente con la posición de M. Mueller. Pero en Derecho, o más bien en política, nada goza de unanimidad absoluta y aquí no falta algún heterodoxo discordante que, en infantil ejercicio de ciencia ficción al estimar como derecho aplicable no el que es sino el que conviene, expone como axioma inapelable lo que no es más que un vano anhelo de futuro o, a lo sumo y al igual que este artículo, una mera opinión criticable, si bien, francamente minoritaria.

Algunos de estos actores del panorama jurídico de los "servicios de la sociedad de la información", inconscientes de la gran responsabilidad que se deposita en sus manos, y con dueños que pagan sus nimios caprichos, merecen toda nuestra compasión. Ya en Roma había esclavos que vivían mejor que muchos hombres libres, ocupándose de los intereses de los poderosos, pero no por ello dejaban de ser esclavos. En consecuencia, hemos de compadecer aún más a aquellos pues, a cambio de una dudosa gloria mundana, y a diferencia de éstos, escogen, libremente, condenarse al infierno de vivir con la angustia de no poder decir lo que piensan sino lo que les ordenan.

En otro orden de consideraciones, no podemos dejar de lado las innovaciones en la regulación del dominio español (.es) que se pretenden introducir con ocasión de la Ley de acompañamiento de presupuestos generales para el año 2.001.

Estas novedades (que se pueden consultar en la web de la AI www.internautas.org) consisten básicamente en dos:

- De un lado, cambiarle el nombre a la entidad que supuestamente gestiona el registro y mantenimiento de los dominios (RETEVISION) que, de verificarse estas previsiones, pasaría a denominarse Entidad Pública Empresarial Red.es.

Para ello, se modifica la Disposición Adicional sexta de la Ley 11/1998, de 24 de abril, General de Telecomunicaciones, que detalla el régimen jurídico al que queda sometida dicha entidad empresarial. Destaca de este régimen el elevado número de funciones que se le encomienda, pues además de las relacionadas con la gestión del dominio, y de participación en los foros internacionales de estas materias, se le asigna la de ser "observatorio del sector de las telecomunicaciones y de la sociedad de la información", así como funciones consultivas y, en general, "el fomento y desarrollo de la Sociedad de la Información".

- Por otro lado, destaca el régimen jurídico que se instaura para las tarifas que se cobran por el registro y mantenimiento de los nombres, que presenta una redacción francamente desafortunada.

El proyecto parte de establecer que la tasa de registro se considera única por cada dominio y que su importe se determinará en función del beneficio esperado por su titular y el precio de mercado.

Tal declaración general se corresponde, según las prescripciones de la Ley de Tasas (Art. 19), con la modalidad prevista por la utilización del Dominio Público y no por la de prestación de servicios, pero, habrá de convenirse, los nombres de dominio no constituyen un Dominio Público, al menos las Cortes no se han pronunciado así todavía, como la Constitución dice que debe hacerse (art. 132), por lo que el sistema nacería viciado desde su origen.

Por otro lado, y en contradicción con la anterior manifestación, se fijan dos sistemas de tasas: una de carácter fijo para los dominios llamados "regulares" (18.000 pts.) que parece encuadrarse dentro de la modalidad de tasa por prestación de servicios, y otra no determinada a priori, para los dominios "especiales", que según la redacción consultada, básicamente, se adjudicarán mediante un sistema de subasta.

Esta situación, plantea dos problemas:

En primer lugar, con esta declaración, en todo caso, se está reconociendo el carácter tributario de las tarifas aplicadas en el registro y mantenimiento de los nombres, por lo que quedaría sometida al principio de reserva de Ley en materia Tributaria que instaura la Constitución (art. 133) y reconoce el artículo 10 de la Ley de Tasas. La consecuencia de ello es que, al igual que lo acontecido en Estados Unidos, los importes que han venido cobrándose por estos conceptos no se encontraban amparados por la legalidad vigente por lo que, como ha sucedido en Norteamérica, los particulares podrían instar la devolución de estas tasas por no haber respetado el principio de reserva de Ley.

En segundo lugar, la tasa, sobre todo para los dominios especiales, se configura en la modalidad de uso del Dominio Público, cuando no ha habido una declaración del legislativo en esa línea. En realidad, la modalidad, dentro de las previstas en la Ley de Tasas, que habría que utilizar es la de prestación de servicios, en cuyo caso, el importe correspondiente ha de determinarse, fundamentalmente, en función del coste del servicio y no por beneficios esperados o precio de mercado. La consecuencia de todo ello, igualmente, sería una falta de adecuación a la legalidad de los importes que se cobren por estos conceptos.

En todo caso, para los dominios especiales, incluso se prevé la posibilidad de que el precio que se alcance sea incluso superior al derivado de los anteriores criterios, al decir que "si el valor de la adjudicación de la licitación [de la subasta, para entendernos] resultase superior al valor de referencia [precio mercado y posible rentabilidad] (.../...), aquél constituirá el importe de la tasa."

Con independencia de las consideraciones de carácter jurídico que de esta regulación podrían hacerse, lo cierto es que merece una profunda crítica. Los poderes públicos, en vez de jalearse al mercado para entrar en la perniciosa espiral de especulación que se ha desatado en torno a los nombres de dominio, deberían adoptar posiciones más equidistantes entre los intereses en juego.

Por otro lado, si salió mal la jugada de las licencias de móviles, no es plan que ahora quieran resarcirse con los dominios. De llevarse a la práctica este sistema previsto, España sería el único país del mundo, al menos de los que podemos considerar mínimamente serios, que saca a subasta los nombres de segundo nivel.

Esperemos que en la tramitación parlamentaria de esta Ley se corrijan las deficiencias advertidas.

Finalmente, tan sólo me resta invitar a todos los lectores de DOMINIURIS al congreso que estamos organizando en Perú. Numerosos juristas y profesionales independientes y no casados con los grandes poderes acudirán al evento. Será sin duda toda una experiencia.

Es el primer congreso independiente de una época de Internet que está dando sus últimos coletazos. Después, desengañense, las cosas no volverán a ser lo mismo. La oportunidad, ciertamente, es única e irrepetible.

CASOS DE LA OMPI. viajesecuador.com

LA FRANQUICIA DE VIAJES ECUADOR DE LUGO GANA EL LITIGIO EN LA

OMPI POR EL DOMINIO VIAJESCUADOR.COM

Ecuador Lugo, S.L., que explota una franquicia de la cadena de agencias de viaje "VIAJES ECUADOR", ha ganado el litigio mantenido frente a "VIAJES ECUADOR, S.A.", entidad franquiciadora de la cadena de agencias, por el dominio viajesecuador.com.

La franquicia de Viajes Ecuador de Lugo, que es la número 1 en ventas de todo el territorio nacional, por tanto, podrá seguir utilizando, como venía haciendo hasta ahora, la dirección en Internet www.viajesecuador.com.

La indicada empresa firmó un contrato de franquicia con VIAJES ECUADOR, S.A. en marzo de 1.997, cuando empezaba a despuntar Internet. En enero de 1.999 decidió, al igual que otras agencias del grupo, conseguir una dirección en Internet para ejercer su negocio de agencia de viajes. Dado que el contrato suscrito le obligaba a utilizar en todas las comunicaciones dirigidas al mercado la denominación VIAJES ECUADOR, consideró oportuno registrar a tal fin la denominación viajesecuador.com que, en aquel momento, se encontraba disponible.

Posteriormente, la entidad franquiciadora planteó una demanda en la OMPI solicitando la transferencia del dominio, al estimar que ECUADOR LUGO no tenía interés legítimo en el registro y mantenimiento del dominio.

Quizás este caso sea el primero de esta envergadura que, afectando a dos empresas españolas, ofrece un resultado favorable al titular del nombre de dominio. La Resolución de la OMPI, citando precedentes anteriores, estima que el demandado, de conformidad con el contrato de franquicia suscrito con VIAJES ECUADOR, S.A., tiene un derecho o interés legítimo respecto al nombre de dominio, lo que "difícilmente permitiría manifestar que su registro se haya realizado de mala fe, especialmente si dicho registro se produjo mucho antes de iniciarse la controversia".

En el Congreso que DOMINIURIS está organizando (www.dominiuris.com/congreso/) junto con el Estudio Jurídico Castillejo & Bardales, que se celebrará en Lima a finales de este mes y principios del que viene, se explicarán los pormenores y detalles de este interesante precedente.

La decisión de la OMPI sobre el dominio viajesecuador.com se encuentra disponible en: <http://www.dominiuris.com/viajesecuador.htm>

El caso en la prensa:

El Progreso de Lugo. El dominio viajesecuador.com, otorgado a la franquicia de Lugo. 5 de diciembre de 2000.

ICANN. ¿Pueden cambiar las cosas?

Andy Mueller-Maguhn del "Chaos Computer Club" ha accedido a uno de los sillones de la ICANN. El activista alemán promete cambiar las cosas desde dentro. Ya veremos como evoluciona todo.

<http://www.zdnet.com/zdnn/stories/news/0,4586,2640449,00.html?chkpt=zdnn101600>

OMPI.

La OMPI pretende regular la relación de los dominios con otras categorías distintivas que no están dentro del ámbito original de actuación de esta Institución.

Según ha comunicado dicha entidad, ya ha publicado, en la dirección electrónica <http://wipo2.wipo.int/>, la segunda solicitud de comentarios para el Segundo Proceso de la OMPI relativo a los Nombres de Dominio de Internet (WIPO2 RFC-2).

En el Segundo Proceso de la OMPI se tratarán distintas cuestiones pendientes relativas al reconocimiento de derechos y el uso de nombres dentro del sistema de nombres de dominio de Internet. La OMPI está intentando estudiar y formular recomendaciones acerca del "uso de mala fe, abusivo, engañoso o injusto" de:

- nombres de persona;
- denominaciones comunes internacionales (DCI) para las sustancias farmacéuticas, recomendadas por la Organización Mundial de la Salud con el fin de proteger la seguridad de los pacientes en todo el mundo, ¿o más bien los intereses de la poderosa industria farmacéutica?;
- nombres de organizaciones internacionales intergubernamentales (como las Naciones Unidas);
- indicaciones geográficas, indicaciones de procedencia y términos geográficos; y
- nombres de marcas.

<http://wipo2.wipo.int/process2/rfc/rfc1/summary-es.html> Resumen de los comentarios presentados respecto de la primera solicitud de comentarios (WIPO2 RFC-1), que se centró en la propuesta de mandato, procedimientos y calendario para el Segundo Proceso de la OMPI.

ANÁLISIS DE LA APLICACIÓN DE LAS NORMAS DE RESOLUCIÓN DE CONFLICTOS DE LA ICANN.

El Profesor Milton Mueller de la "Syracuse University" ha publicado un estudio muy interesante sobre la aplicación de las normas, en el que analiza cientos de decisiones. Es altamente recomendable su visita. El citado trabajo recoge en un apartado las 7 peores decisiones de la OMPI, entre las que se encuentra la dictada en el caso [barcelona.com](http://www.barcelona.com)

<http://dcc.syr.edu/roughjustice.htm>

LA ICANN ES DEMANDADA EN TEXAS.

REGLAND.COMN ha iniciado acciones judiciales en el Estado de Texas contra la ICANN. El litigio gira alrededor de los preregistros que la ICANN, al parecer, no ha aceptado.

El tema de los preregistros estaba llamado a traer cola...

- ENCUESTA SOBRE DOMINIOS. Curiosa iniciativa llevada a cabo por BARRAPUNTO.

<http://barrapunto.com/pollBooth.pl?qid=dominios-okupas&aid=5>

- ICANN. Nuevos dominios: según se ha comentado en infinidad de sitios, se ha aprobado en la reunión de ICANN en Los Angeles, la introducción de nuevos dominios genéricos:

- .biz (negocios)
- .info (información general)
- .name (individuos)
- .pro (profesionales)
- .co-op (cooperativas y cooperación)
- .aero (industria aérea y viajes)
- .museum (museos)

El sistema de registro dependerá del tipo de dominio, de forma que el registro de dominios de segundo nivel será libre para algunos, mientras que para otros se exigirán una serie de requisitos. En fin, mucho ruido para pocas nueces, pues la cuestión es que todavía no han decidido como montar el tinglado ni a quien darle la gestión de los nuevos dominios.

Los nuevos sufijos, que se lanzarán a mediados del 2001, están diseñados, en principio, como alternativas a ".com", ya colapsado por unos 20 millones de registros.

- CASOS JUDICIALES. URUGAY. Caso www.microsoft.com.uy. Primer fallo judicial (interlocutorio) sobre nombres de dominio.

Artículo original de D. Marcelo Bauzá Reilly. Profesor de "Informática Jurídica" en la Universidad de la República, Profesor de "Informática Jurídica2" y de "Derecho de las Telecomunicaciones y de la Informática" en la Universidad de la Empresa (Montevideo, Uruguay). Vicepresidente de FIADI (Federación Iberoamericana de Asociaciones de Derecho e Informática).

La justicia uruguaya ha dictaminado en vía cautelar la cancelación provisoria del registro de dominio www.microsoft.com.uy. La medida obedeció a una acción promovida por el representante legal de Microsoft Corporation, quien expuso como fundamentos de la pretensión el carácter notorio de la denominación Microsoft a nivel mundial, y su inscripción en Uruguay cubriendo los servicios de varias clases internacionales, en particular la Nº 38 del Nomenclator vigente según Arreglo de Niza (servicio de telecomunicaciones, principalmente el recibo y

envío de mensajes, documentos y otros datos por transmisión electrónica).

Las operaciones de registro de nombres de dominio se realizan en Uruguay en la órbita del ente telefónico, en la dirección <http://dns.antel.net.uy>, a través de empresas particulares conocidas como "proveedores de servicios de Internet" (los "ISP" siguiendo la terminología anglosajona), que son las autorizadas a poseer servidores DNS y efectuar el alojamiento de sitios en la red.

Antes de ingresar en la vía judicial, el damnificado intentó otras instancias de solución administrativa a través de su representante legal, pero no tuvo éxito alguno. Ahora se esperan las resultancias del pleito principal, que ya debería haber comenzado a esta fecha, so pena de caducidad de la medida provisoria.

Mientras ello acontece, se aprecia que el fallo provisorio recaído es en realidad un decreto interlocutorio muy escueto, para más datos "decreto 2969 del 11 de octubre del 2000" dictado por el Juzgado Letrado de Primera Instancia de Montevideo de 15º Turno con asiento en la ciudad de Montevideo. Su transcripción textual es la siguiente: "Visto y atento a lo establecido en el Artículo 311 y siguientes del C.G.P. sin noticia contraria decretase como medida cautelar la cancelación provisoria del registro de dominio www.microsoft.com.uy hasta la dilucidación del proceso que deberá promoverse en esta Sede comunicándose a ANTEL. Se acepta la contracautela ofrecida. Cumplido notifíquese a los afectados en los domicilios denunciados en el petitorio tercero de fojas 60 vta."

Como se podrá apreciar, el fallo por sí solo no es precisamente una "pieza doctrinaria", en tanto omite extenderse en fundamentos de mayor alcance que los formales. Apenas agregar que el derecho invocado corresponde al capítulo respectivo del "proceso cautelar" regulado por nuestro Código General del Proceso (C.G.P.). Y que si bien el fallo no lo menciona expresamente, sería dable suponer que se tuvo en cuenta para decretar la medida el art. 88 de la Ley 17.011 (Ley de Marcas) que estatuye la acción en juicio para "prohibición de uso de una marca no registrada, idéntica o semejante", así como el art. 317 del C.G.P, contenido el cuerpo citado por el proveyente, que refiere a "providencias que deciden provisoriamente el litigio en espera de una decisión definitiva", también llamada por la doctrina procesalista "decisiones anticipadas".

El "Acuerdo de Registro de Dominio" que celebran los ISP con ANTEL prevé la cancelación del registro, entre otras causas, "por orden judicial" (nral. 4º), y ello es lo que operó en este caso a la fecha, con carácter provisorio.

El titular del sitio cancelado es un ciudadano argentino con residencia en Uruguay, que ha sido acusado ante organismos internacionales como formando parte de un grupo dedicado a abrir sitios bajo denominaciones registradas antes como marcas por grandes compañías de la industria de la información (Altavista, Yahoo, Microsoft), existiendo pronunciamientos de OMPI al respecto, así como despachos de prensa nacional e internacional que se han venido refiriendo al conjunto de estos casos desde hace un tiempo atrás.

Como dije antes, se trata del primer fallo en la materia dictado por jueces uruguayos, si bien no definitivo. Aunque parecería que no es el primer asunto de esta índole que se plantea en estrados de nuestro país, los anteriores habrían sido abortados por acuerdos o desistimientos. Ene esta oportunidad ell accionante dirigió su pretensión provisoria contra el proveedor del caso, y contra el titular del sitio en cuestión. Tratándose de un procedimiento cautelar, la ley uruguaya obliga a instaurar la demanda principal dentro de los treinta días siguientes a su decreto o efectividad, so pena de caducidad. Por lo pensamos que esta historia seguirá, y próximamente podremos referirnos a las resultancias del juicio principal, o su transacción como también sucede habitualmente en estos casos.

This Bulletin is a little long. That is the truth. Therefore I suggest calmness in its tasting, because of a whole distance, mainly if desire must to investigate, can cause a certain indigestión. Of here to next Christmases, our readers will be able to suitably process and with sufficient reflection the provided information, facing the entrance in the new era, then, as I explain now,

EDITORIAL: The slaves of Rome and the Law of support

By luck or he displeases, the certain thing is that in the traditional press only usually they appear the cases that are

gained by the mark holders, although, at sight of occurred in the case "barcelona.com", there are some to any thing call mark to him, considering the present writing of the norms on which the referees of the OMPI have to base their decisions. Cases like this one, although it insists that insists, the only thing that does is to dim the honest performance of many of the members of the OMPI; institution that almost monopolizes the rising special jurisdiction "cybernetics", because to call arbitration to that, at the present time, a nonsense is everything.

Few, or rather nobody, doubt the necessity already to count on an agile system of resolution of conflicts, mainly for the dominions in which previous verification is not exerted some before the registry. Also, the writing that nowadays has these norms, conceived with the purpose of finishing with the fraudulent and flagrant advantages of other people's enterprise distinguishing signs, also enjoys an ample consensus.

However, the interpretation that are becoming of these norms in some cases, or rather, the use of same as a pretext for "chronicles of resolutions announced", are, certainly, which can get to deslegitimar an initiative that would be to mimar and to take care of as if a small boy it was. Not in vain, we are defining the ways that in the next years will fill with travellers, and the institutions and people who locate themselves to the front of these map courses, we recognize it, have to be consequent with the responsibility that is put in its respectful hands and with the principles and values that made possible Internet. Sure if those people are bought by concrete interests already and, consequently, they are forced by its owners to despise these values that made possible the appearance of the Internet, this one, certainly, has little future for them.

Luckily, in Right the things never are white or black and are resolutions that put a little color in the gray panorama that blossoming on Internet; as dictated in the case nosolomusica.com, in that the holder of the mark of the well-known program of television noncSingle MUSICA, acquired of its old proprietor GESTEVISION TELECINCO, organization that manages the TV channel TELECINCO, is lost its particular battle by the dominion nosolomusica.com, whose property, by the others, it was, according to the declared thing in the resolution, of somewhat doubtful or indefinite titularidad. Or dictated in the case viajesecuador.com, that it dissolves complicated supposed on it relations between franquiciada franquiciadora and. These decisions suppose a fresh airflow in an atmosphere that began to be rarefied enough, as a result of the lack of arbitrary legal security that is generating this doctrine dispersed and per moments.

On the other hand, the ICANN also is receiving strong critics and the idea that already begins to extend by the discussion lists there is to do without this Californian private organization and to begin again. The emptiness of being able created in the United States, as a result of its shameful electoral system, constitutes a unique opportunity for it.

Some traditional means, that follow without finding out of what this goes, when they criticize the present situation, do it, perhaps consciously, of a pueril and irreflexiva form. It see the case madonna.com in which, trying to defend to an infantile hospital, they only match to the pornographic industry (perfectly respectable, by the others) of whitehouse.com, whose holder also is it of madonna.com. The hospital operates under the dominion madonna.org, and their people in charge already have showed that they do not want to have nothing to do with this war. In short, to write on what it is not had nor idea can get to be everything an art.

These superfluous commentaries chance must like object confuse to the public opinion on the true bleeding cases, like is the one of barcelona.com, that has given rise, according to is recognized by an ample consensus, to one of the decisions execrables than it has evacuated some referee of the OMPI and that, by others, will end up costing to city condal eye of face and leaves from another one, because already a demand in the United States has appeared that has all the dot of, at least, to be admitted to proceeding.

The indicated decision considers a plan of business, asked for to instances of the surroundings of the plaintiff, as it shows of bad faith that demonstrates an attempt of sale. In addition, esteem that an enterprise initiative offering services and information on a certain city does not present/display a legitimate interest. And finally, it shows to an absolute scorn by the institutions and present legal categories when considering that the denomination "Barcelona", by itself, is protected by rights of industrial property, when no mark with that denomination exclusively could accede to a the registry of patents and marks, being, by the others, its holder a person without enterprise

interest.

Of course, such expositions, together with a species of balanceamiento of interests, suppose to let to a side the norms on which are to be based the decision, to only use them as a mere excuse. In the last study published by Milton Mueller considers this decision as one of seven (professor analyzes hundreds of them) which decisions ", which they really make a skinny error to justice, in the era of the "society of the information" falls within the category "really bad.

The opinion of all the jurists is practically unanimous and agrees basically with the position of M. Mueller. But in Right, or rather in policy, anything it enjoys absolute unanimity and here it does not lack some heterodox discordant one that, in infantile exercise of science fiction when considering like applicable right not the one that is but the one that agrees, exposes at the most like unquestionable axiom what it is not more than a vain yearning of future or, and like this article, a mere criticizeable, although, frankly minority opinion.

Some of these actors of the legal panorama of the "services of the society of the information", unconscious of the great responsibility that is deposited in its hands, and with owners that pay their insignificant whims, deserve all our compassion. Already in Rome there were slaves who lived better than many free men, taking care of the interests of the powerful ones, but for that reason they did not stop being enslaved. Consequently, we have to feel sorry still more for those then, in exchange for a doubtful worldly glory, and unlike these, they choose, freely, to condemn to hell to live with the anguish on not being able to say what what thinks but they order to them.

In another order of considerations, we cannot leave of side the innovations in the regulation of the Spanish dominion (es) that are tried to introduce with occasion of the Law of support of general budgets for year 2.001.

These new features (that can be consulted in the Web of the AI www.internautas.org) consist basically of two:

- Of a side, to change the name to the organization that supposedly manages the registry and maintenance of the dominions (RETEVISION) that, to verify these forecasts, would happen to denominate Public Organization Enterprise Red.es.

For it, the Additional Disposition sixth of Law 11/1998 is modified, of 24 of April, General of Telecommunications, who details the legal regime to which it is put under this enterprise entidadada. It emphasizes of this regime the high number of functions that is entrusted to him, because in addition to the related ones to the management of the dominion, and participation in the international forums of these matters, the one of being is assigned to him "observatory of the sector of the telecommunications and the society of the information", as well as consultative functions and, in general, "the promotion and development of the Society of the Information".

- On the other hand, it emphasizes the legal regime that it is restored for the tariffs that receive by the registry and maintenance of the names, that an unfortunate writing presents/displays frankly.

The project starts off to establish that the rate of registry is considered only by each dominion and that its amount will determine based on the benefit waited for by its holder and the price of market.

Such general declaration corresponds, according to the prescriptions of the Law of Rates (Art. 19), with the modality anticipated by the use of the Public Dominion and not by the one of benefit of services, but, it will have to be agreed, the dominion names do not constitute a Public Dominion, Cortes have not been pronounced at least thus still, as the Constitution says that it must become (art. 132), reason why the system would be born vitiated from its origin.

On the other hand, and to contradiction with the previous manifestation, two systems of rates pay attention: one of

fixed character for the called dominions "regular" (18,000 pts.) that it seems to fit itself within the modality of rate by benefit of services, and not determined other a priori, for "the special" dominions, that according to the consulted writing, basically, will be adjudged by means of an auction system.

Esta situación, plantea dos problemas:

En primer lugar, con esta declaración, en todo caso, se está reconociendo el carácter tributario de las tarifas aplicadas en el registro y mantenimiento de los nombres, por lo que quedaría sometida al principio de reserva de Ley en materia Tributaria que instaura la Constitución (art. 133) y reconoce el artículo 10 de la Ley de Tasas. La consecuencia de ello es que, al igual que lo acontecido en Estados Unidos, los importes que han venido cobrándose por estos conceptos no se encontraban amparados por la legalidad vigente por lo que, como ha sucedido en Norteamérica, los particulares podrían instar la devolución de estas tasas por no haber respetado el principio de reserva de Ley.

En segundo lugar, la tasa, sobre todo para los dominios especiales, se configura en la modalidad de uso del Dominio Público, cuando no ha habido una declaración del legislativo en esa línea. En realidad, la modalidad, dentro de las previstas en la Ley de Tasas, que habría que utilizar es la de prestación de servicios, en cuyo caso, el importe correspondiente ha de determinarse, fundamentalmente, en función del coste del servicio y no por beneficios esperados o precio de mercado. La consecuencia de todo ello, igualmente, sería una falta de adecuación a la legalidad de los importes que se cobren por estos conceptos.

En todo caso, para los dominios especiales, incluso se prevé la posibilidad de que el precio que se alcance sea incluso superior al derivado de los anteriores criterios, al decir que "si el valor de la adjudicación de la licitación [de la subasta, para entendernos] resultase superior al valor de referencia [precio mercado y posible rentabilidad] (.../...), aquél constituirá el importe de la tasa."

Con independencia de las consideraciones de carácter jurídico que de esta regulación podrían hacerse, lo cierto es que merece una profunda crítica. Los poderes públicos, en vez de jalar al mercado para entrar en la perniciosa espiral de especulación que se ha desatado en torno a los nombres de dominio, deberían adoptar posiciones más equidistantes entre los intereses en juego.

Por otro lado, si salió mal la jugada de las licencias de móviles, no es plan que ahora quieran resarcirse con los dominios. De llevarse a la práctica este sistema previsto, España sería el único país del mundo, al menos de los que podemos considerar mínimamente serios, que saca a subasta los nombres de segundo nivel.

Esperemos que en la tramitación parlamentaria de esta Ley se corrijan las deficiencias advertidas.

Finalmente, tan sólo me resta invitar a todos los lectores de DOMINIURIS al congreso que estamos organizando en Perú. Numerosos juristas y profesionales independientes y no casados con los grandes poderes acudirán al evento. Será sin duda toda una experiencia.

Es el primer congreso independiente de una época de Internet que está dando sus últimos coletazos. Después, desengañense, las cosas no volverán a ser lo mismo. La oportunidad, ciertamente, es única e irrepetible.

CASOS DE LA OMPI. viajesecuador.com

LA FRANQUICIA DE VIAJES ECUADOR DE LUGO GANA EL LITIGIO EN LA OMPI POR EL DOMINIO VIAJESECUADOR.COM

Ecuador Lugo, S.L., que explota una franquicia de la cadena de agencias de viaje "VIAJES ECUADOR", ha ganado el litigio mantenido frente a "VIAJES ECUADOR, S.A.", entidad franquiciadora de la cadena de agencias, por el dominio viajesecuador.com.

La franquicia de Viajes Ecuador de Lugo, que es la número 1 en ventas de todo el territorio nacional, por tanto, podrá seguir utilizando, como venía haciendo hasta ahora, la dirección en Internet www.viajesecuador.com.

La indicada empresa firmó un contrato de franquicia con VIAJES ECUADOR, S.A. en marzo de 1.997, cuando empezaba a despuntar Internet. En enero de 1.999 decidió, al igual que otras agencias del grupo, conseguir una dirección en Internet para ejercer su negocio de agencia de viajes. Dado que el contrato suscrito le obligaba a utilizar en todas las comunicaciones dirigidas al mercado la denominación VIAJES ECUADOR, consideró oportuno registrar a tal fin la denominación viajesecuador.com que, en aquel momento, se encontraba disponible.

Posteriormente, la entidad franquiciadora planteó una demanda en la OMPI solicitando la transferencia del dominio, al estimar que ECUADOR LUGO no tenía interés legítimo en el registro y mantenimiento del dominio.

Quizás este caso sea el primero de esta envergadura que, afectando a dos empresas españolas, ofrece un resultado favorable al titular del nombre de dominio. La Resolución de la OMPI, citando precedentes anteriores, estima que el demandado, de conformidad con el contrato de franquicia suscrito con VIAJES ECUADOR, S.A., tiene un derecho o interés legítimo respecto al nombre de dominio, lo que "difícilmente permitiría manifestar que su registro se haya realizado de mala fe, especialmente si dicho registro se produjo mucho antes de iniciarse la controversia".

En el Congreso que DOMINIURIS está organizando (www.dominiuris.com/congreso/) junto con el Estudio Jurídico Castillejo & Bardales, que se celebrará en Lima a finales de este mes y principios del que viene, se explicarán los pormenores y detalles de este interesante precedente.

La decisión de la OMPI sobre el dominio viajesecuador.com se encuentra disponible en: <http://www.dominiuris.com/viajesecuador.htm>

El caso en la prensa:

El Progreso de Lugo.El dominio viajesecuador.com, otorgado a la franquicia de Lugo. 5 de diciembre de 2000.

ICANN. ¿Pueden cambiar las cosas?

Andy Mueller-Maguhn del "Chaos Computer Club" ha accedido a uno de los sillones de la ICANN. El activista alemán promete cambiar las cosas desde dentro. Ya veremos como evoluciona todo.

<http://www.zdnet.com/zdnn/stories/news/0,4586,2640449,00.html?chkpt=zdnn101600>

OMPI.

La OMPI pretende regular la relación de los dominios con otras categorías distintivas que no están dentro del ámbito original de actuación de esta Institución.

Según ha comunicado dicha entidad, ya ha publicado, en la dirección electrónica <http://wipo2.wipo.int/>, la segunda solicitud de comentarios para el Segundo Proceso de la OMPI relativo a los Nombres de Dominio de Internet (WIPO2 RFC-2).

En el Segundo Proceso de la OMPI se tratarán distintas cuestiones pendientes relativas al reconocimiento de derechos y el uso de nombres dentro del sistema de nombres de dominio de Internet. La OMPI está intentando estudiar y formular recomendaciones acerca del "uso de mala fe, abusivo, engañoso o injusto" de:

- nombres de persona;
- denominaciones comunes internacionales (DCI) para las sustancias farmacéuticas, recomendadas por la Organización Mundial de la Salud con el fin de proteger la seguridad de los pacientes en todo el mundo, ¿o más bien los intereses de la poderosa industria farmacéutica?;
- nombres de organizaciones internacionales intergubernamentales (como las Naciones Unidas);
- indicaciones geográficas, indicaciones de procedencia y términos geográficos; y
- nombres de marcas.

<http://wipo2.wipo.int/process2/rfc/rfc1/summary-es.html> Resumen de los comentarios presentados respecto de la primera solicitud de comentarios (WIPO2 RFC-1), que se centró en la propuesta de mandato, procedimientos y calendario para el Segundo Proceso de la OMPI.

ANÁLISIS DE LA APLICACIÓN DE LAS NORMAS DE RESOLUCIÓN DE CONFLICTOS DE LA ICANN.

El Profesor Milton Mueller de la "Syracuse University" ha publicado un estudio muy interesante sobre la aplicación de las normas, en el que analiza cientos de decisiones. Es altamente recomendable su visita. El citado trabajo recoge en un apartado las 7 peores decisiones de la OMPI, entre las que se encuentra la dictada en el caso barcelona.com

<http://dcc.syr.edu/roughjustice.htm>

LA ICANN ES DEMANDADA EN TEXAS.

REGLAND.COMN ha iniciado acciones judiciales en el Estado de Texas contra la ICANN. El litigio gira alrededor de los preregistros que la ICANN, al parecer, no ha aceptado.

El tema de los preregistros estaba llamado a traer cola...

- ENCUESTA SOBRE DOMINIOS. Curiosa iniciativa llevada a cabo por BARRAPUNTO.

<http://barrapunto.com/pollBooth.pl?qid=dominios-okupas&aid=5>

- ICANN. Nuevos dominios: según se ha comentado en infinidad de sitios, se ha aprobado en la reunión de ICANN en Los Angeles, la introducción de nuevos dominios genéricos:

- .biz (negocios)
- .info (información general)
- .name (individuos)
- .pro (profesionales)
- .co-op (cooperativas y cooperación)
- .aero (industria aérea y viajes)
- .museum (museos)

El sistema de registro dependerá del tipo de dominio, de forma que el registro de dominios de segundo nivel será libre para algunos, mientras que para otros se exigirán una serie de requisitos. En fin, mucho ruido para pocas nueces, pues la cuestión es que todavía no han decidido como montar el tinglado ni a quien darle la gestión de los nuevos dominios.

Los nuevos sufijos, que se lanzarán a mediados del 2001, están diseñados, en principio, como alternativas a ".com", ya colapsado por unos 20 millones de registros.

- CASOS JUDICIALES. URUGAY. Caso www.microsoft.com.uy. Primer fallo judicial (interlocutorio) sobre nombres de dominio.

Artículo original de D. Marcelo Bauzá Reilly. Profesor de "Informática Jurídica" en la Universidad de la República, Profesor de "Informática Jurídica2" y de "Derecho de las Telecomunicaciones y de la Informática" en la Universidad de la Empresa (Montevideo, Uruguay). Vicepresidente de FIADI (Federación Iberoamericana de Asociaciones de Derecho e Informática).

La justicia uruguaya ha dictaminado en vía cautelar la cancelación provisoria del registro de dominio www.microsoft.com.uy. La medida obedeció a una acción promovida por el representante legal de Microsoft Corporation, quien expuso como fundamentos de la pretensión el carácter notorio de la denominación Microsoft a nivel mundial, y su inscripción en Uruguay cubriendo los servicios de varias clases internacionales, en particular la Nº 38 del Nomenclator vigente según Arreglo de Niza (servicio de telecomunicaciones, principalmente el recibo y envío de mensajes, documentos y otros datos por transmisión electrónica).

Las operaciones de registro de nombres de dominio se realizan en Uruguay en la órbita del ente telefónico, en la dirección <http://dns.antel.net.uy>, a través de empresas particulares conocidas como "proveedores de servicios de Internet" (los "ISP" siguiendo la terminología anglosajona), que son las autorizadas a poseer servidores DNS y efectuar el alojamiento de sitios en la red.

Antes de ingresar en la vía judicial, el damnificado intentó otras instancias de solución administrativa a través de su representante legal, pero no tuvo éxito alguno. Ahora se esperan las resultancias del pleito principal, que ya debería haber comenzado a esta fecha, so pena de caducidad de la medida provisoria.

Mientras ello acontece, se aprecia que el fallo provisorio recaído es en realidad un decreto interlocutorio muy escueto, para más datos "decreto 2969 del 11 de octubre del 2000" dictado por el Juzgado Letrado de Primera Instancia de Montevideo de 15º Turno con asiento en la ciudad de Montevideo. Su transcripción textual es la siguiente: "Visto y atento a lo establecido en el Artículo 311 y siguientes del C.G.P. sin noticia contraria decretase como medida cautelar la cancelación provisoria del registro de dominio www.microsoft.com.uy hasta la dilucidación del proceso que deberá promoverse en esta Sede comunicándose a ANTEL. Se acepta la contracautela ofrecida. Cumplido notifíquese a los afectados en los domicilios denunciados en el petitorio tercero de fojas 60 vta."

Como se podrá apreciar, el fallo por sí solo no es precisamente una "pieza doctrinaria", en tanto omite extenderse en fundamentos de mayor alcance que los formales. Apenas agregar que el derecho invocado corresponde al capítulo respectivo del "proceso cautelar" regulado por nuestro Código General del Proceso (C.G.P.). Y que si bien el fallo no lo menciona expresamente, sería dable suponer que se tuvo en cuenta para decretar la medida el art. 88 de la Ley 17.011 (Ley de Marcas) que estatuye la acción en juicio para "prohibición de uso de una marca no registrada, idéntica o semejante", así como el art. 317 del C.G.P, contenido el cuerpo citado por el proveyente, que refiere a "providencias que deciden provisoriamente el litigio en espera de una decisión definitiva", también llamada por la doctrina procesalista "decisiones anticipadas".

El "Acuerdo de Registro de Dominio" que celebran los ISP con ANTEL prevé la cancelación del registro, entre otras causas, "por orden judicial" (nral. 4º), y ello es lo que operó en este caso a la fecha, con carácter provisorio.

El titular del sitio cancelado es un ciudadano argentino con residencia en Uruguay, que ha sido acusado ante organismos internacionales como formando parte de un grupo dedicado a abrir sitios bajo denominaciones registradas antes como marcas por grandes compañías de la industria de la información (Altavista, Yahoo, Microsoft), existiendo pronunciamientos de OMPI al respecto, así como despachos de prensa nacional e internacional que se han venido refiriendo al conjunto de estos casos desde hace un tiempo atrás.

Como dije antes, se trata del primer fallo en la materia dictado por jueces uruguayos, si bien no definitivo. Aunque parecería que no es el primer asunto de esta índole que se plantea en estrados de nuestro país, los anteriores habrían sido abortados por acuerdos o desistimientos. En esta oportunidad el accionante dirigió su pretensión provisoria contra el proveedor del caso, y contra el titular del sitio en cuestión. Tratándose de un procedimiento cautelar, la ley uruguaya obliga a instaurar la demanda principal dentro de los treinta días siguientes a su decreto o efectividad, so pena de caducidad. Por lo pensamos que esta historia seguirá, y próximamente podremos referirnos a las resultancias del juicio principal, o su transacción como también sucede habitualmente en estos casos.

Este Boletín es un poco largo. Esa es la verdad. Por tanto sugiero sosiego en su degustación, pues de una tirada entera, sobre todo si se tienen ganas de investigar, puede causar una cierta indigestión. De aquí a las próximas Navidades, nuestros lectores podrán procesar adecuadamente y con suficiente reflexión la información proporcionada, de cara a la entrada en la nueva era, pues, como explicaré ahora,

EDITORIAL: Los esclavos de Roma y la Ley de acompañamiento

Por ventura o desgracia, lo cierto es que en la prensa tradicional tan sólo suelen aparecer los casos que son ganados por los titulares de marca, aunque, a la vista de lo acontecido en el caso "barcelona.com", hay algunos que a cualquier cosa le llaman marca, teniendo en cuenta la redacción actual de las normas en que los árbitros de la OMPI han de basar sus decisiones. Casos como éste, pese a que se empeñe quien se empeñe, lo único que hacen es empañar la honrada actuación de muchos de los miembros de la OMPI; institución que casi monopoliza la nascente jurisdicción especial "cibernética", porque llamar arbitraje a eso, hoy por hoy, es todo un despropósito.

Pocos, o más bien nadie, dudan ya de la necesidad de contar con un sistema ágil de resolución de conflictos, sobre todo para los dominios en que no se ejerce comprobación previa alguna antes del registro. Igualmente, la redacción que hoy en día tienen estas normas, concebidas con el fin de terminar con los aprovechamientos fraudulentos y flagrantes de signos distintivos empresariales ajenos, también goza de un amplio consenso.

Ahora bien, la interpretación que se está haciendo de estas normas en algunos casos, o más bien, la utilización de las mismas a modo de pretexto para "crónicas de resoluciones anunciadas", es, ciertamente, lo que puede llegar a deslegitimar una iniciativa que habría que mimar y cuidar como si de un niño pequeño se tratara. No en vano, estamos definiendo los caminos que en los próximos años se poblarán de viajeros, y las instituciones y personas que se sitúan al frente de estos derroteros, reconozcámoslo, han de ser consecuentes con la responsabilidad que se pone en sus manos y respetuosos con los principios y valores que hicieron posible Internet. Pero claro, si esas personas se encuentran ya compradas por unos intereses concretos y, consecuentemente, se ven obligados por sus dueños a despreciar estos valores que posibilitaron la aparición del Internet, ésta, ciertamente, tiene poco futuro para ellos.

Afortunadamente, en Derecho las cosas nunca son blancas o negras y hay resoluciones que ponen un poco de color en el gris panorama que se cierne sobre Internet; como la dictada en el caso nosolomusica.com, en que el titular de la marca del conocido programa de televisión NO SOLO MUSICA, adquirida de su antiguo propietario GESTEVISION TELECINCO, entidad que gestiona el canal de TV TELECINCO, ha perdido su particular batalla por el dominio nosolomusica.com, cuya propiedad, por lo demás, resultaba, según lo manifestado en la resolución, de titularidad algo dudosa o indefinida. O la dictada en el caso viajesecuador.com, que dirime un complicado supuesto sobre la relaciones entre franquiciadora y franquiciada. Estas decisiones suponen una corriente de aire fresco en un ambiente que empezaba a estar bastante enrarecido, a consecuencia de la falta de seguridad jurídica que está generando esta doctrina dispersa y por momentos arbitraria.

Por otro lado, la ICANN también está recibiendo fuertes críticas y ya comienza a extenderse por las listas de discusión la idea de que hay que prescindir de esta organización privada californiana y empezar de nuevo. El vacío de poder creado en los Estados Unidos, a consecuencia de su vergonzoso sistema electoral, constituye una oportunidad única para ello.

Algunos medios tradicionales, que siguen sin enterarse de qué va esto, cuando critican la actual situación, lo hacen, acaso conscientemente, de una forma pueril e irreflexiva. Véase el caso madonna.com en el que,

pretendiendo defender a un hospital infantil, tan sólo hacen el juego a la industria pornográfica (perfectamente respetable, por lo demás) de whitehouse.com, cuyo titular también lo es de madonna.com. El hospital opera bajo el dominio madonna.org, y sus responsables ya han manifestado que no quieren tener nada que ver con esta guerra. En fin, escribir sobre aquello que no se tiene ni idea puede llegar a ser todo un arte.

Estos comentarios superfluos acaso tengan como objeto despistar a la opinión pública sobre los verdaderos casos sangrantes, como es el de barcelona.com, que ha dado lugar, según se reconoce por un amplio consenso, a una de las decisiones más execrables que haya evacuado algún árbitro de la OMPI y que, por lo demás, acabará costando a la ciudad condal un ojo de la cara y parte del otro, pues ya se ha presentado una demanda en Estados Unidos que tiene toda la pinta de, al menos, ser admitida a trámite.

La indicada decisión considera un plan de negocio, solicitado a instancias del entorno del demandante, como muestra de mala fe que evidencia un intento de venta. Además, estima que una iniciativa empresarial ofreciendo servicios e información sobre una determinada ciudad no presenta un interés legítimo. Y por último, muestra un absoluto desprecio por las instituciones y categorías jurídicas actuales al considerar que la denominación "barcelona", por sí sola, está protegida por derechos de propiedad industrial, cuando ninguna marca con esa denominación exclusivamente podría acceder a al registro de patentes y marcas, siendo, por lo demás, su titular una persona sin interés empresarial.

Desde luego, tales planteamientos, unido a una especie de balanceamiento de intereses, suponen dejar a un lado las normas en que ha de basarse la decisión, para utilizarlas tan sólo como una mera excusa. En el último estudio publicado por Milton Mueller se considera esta decisión como una de las siete (el profesor analiza centenares de ellas) que caen dentro de la categoría "really bad decisions", que hacen de verdad un flaco error a la justicia, en la era de la "sociedad de la información".

La opinión de todos los juristas es prácticamente unánime y coincide básicamente con la posición de M. Mueller. Pero en Derecho, o más bien en política, nada goza de unanimidad absoluta y aquí no falta algún heterodoxo discordante que, en infantil ejercicio de ciencia ficción al estimar como derecho aplicable no el que es sino el que conviene, expone como axioma inapelable lo que no es más que un vano anhelo de futuro o, a lo sumo y al igual que este artículo, una mera opinión criticable, si bien, francamente minoritaria.

Algunos de estos actores del panorama jurídico de los "servicios de la sociedad de la información", inconscientes de la gran responsabilidad que se deposita en sus manos, y con dueños que pagan sus nimios caprichos, merecen toda nuestra compasión. Ya en Roma había esclavos que vivían mejor que muchos hombres libres, ocupándose de los intereses de los poderosos, pero no por ello dejaban de ser esclavos. En consecuencia, hemos de compadecer aún más a aquellos pues, a cambio de una dudosa gloria mundana, y a diferencia de éstos, escogen, libremente, condenarse al infierno de vivir con la angustia de no poder decir lo que piensan sino lo que les ordenan.

En otro orden de consideraciones, no podemos dejar de lado las innovaciones en la regulación del dominio español (.es) que se pretenden introducir con ocasión de la Ley de acompañamiento de presupuestos generales para el año 2.001.

Estas novedades (que se pueden consultar en la web de la AI www.internautas.org) consisten básicamente en dos:

- De un lado, cambiarle el nombre a la entidad que supuestamente gestiona el registro y mantenimiento de los dominios (RETEVISION) que, de verificarse estas previsiones, pasaría a denominarse Entidad Pública Empresarial Red.es.

Para ello, se modifica la Disposición Adicional sexta de la Ley 11/1998, de 24 de abril, General de

Telecomunicaciones, que detalla el régimen jurídico al que queda sometida dicha entidad empresarial. Destaca de este régimen el elevado número de funciones que se le encomienda, pues además de las relacionadas con la gestión del dominio, y de participación en los foros internacionales de estas materias, se le asigna la de ser "observatorio del sector de las telecomunicaciones y de la sociedad de la información", así como funciones consultivas y, en general, "el fomento y desarrollo de la Sociedad de la Información".

- Por otro lado, destaca el régimen jurídico que se instaura para las tarifas que se cobran por el registro y mantenimiento de los nombres, que presenta una redacción francamente desafortunada.

El proyecto parte de establecer que la tasa de registro se considera única por cada dominio y que su importe se determinará en función del beneficio esperado por su titular y el precio de mercado.

Tal declaración general se corresponde, según las prescripciones de la Ley de Tasas (Art. 19), con la modalidad prevista por la utilización del Dominio Público y no por la de prestación de servicios, pero, habrá de convenirse, los nombres de dominio no constituyen un Dominio Público, al menos las Cortes no se han pronunciado así todavía, como la Constitución dice que debe hacerse (art. 132), por lo que el sistema nacería viciado desde su origen.

Por otro lado, y en contradicción con la anterior manifestación, se fijan dos sistemas de tasas: una de carácter fijo para los dominios llamados "regulares" (18.000 pts.) que parece encuadrarse dentro de la modalidad de tasa por prestación de servicios, y otra no determinada a priori, para los dominios "especiales", que según la redacción consultada, básicamente, se adjudicarán mediante un sistema de subasta.

Esta situación, plantea dos problemas:

En primer lugar, con esta declaración, en todo caso, se está reconociendo el carácter tributario de las tarifas aplicadas en el registro y mantenimiento de los nombres, por lo que quedaría sometida al principio de reserva de Ley en materia Tributaria que instaura la Constitución (art. 133) y reconoce el artículo 10 de la Ley de Tasas. La consecuencia de ello es que, al igual que lo acontecido en Estados Unidos, los importes que han venido cobrándose por estos conceptos no se encontraban amparados por la legalidad vigente por lo que, como ha sucedido en Norteamérica, los particulares podrían instar la devolución de estas tasas por no haber respetado el principio de reserva de Ley.

En segundo lugar, la tasa, sobre todo para los dominios especiales, se configura en la modalidad de uso del Dominio Público, cuando no ha habido una declaración del legislativo en esa línea. En realidad, la modalidad, dentro de las previstas en la Ley de Tasas, que habría que utilizar es la de prestación de servicios, en cuyo caso, el importe correspondiente ha de determinarse, fundamentalmente, en función del coste del servicio y no por beneficios esperados o precio de mercado. La consecuencia de todo ello, igualmente, sería una falta de adecuación a la legalidad de los importes que se cobren por estos conceptos.

En todo caso, para los dominios especiales, incluso se prevé la posibilidad de que el precio que se alcance sea incluso superior al derivado de los anteriores criterios, al decir que "si el valor de la adjudicación de la licitación [de la subasta, para entendernos] resultase superior al valor de referencia [precio mercado y posible rentabilidad] (.../...), aquél constituirá el importe de la tasa."

Con independencia de las consideraciones de carácter jurídico que de esta regulación podrían hacerse, lo cierto es que merece una profunda crítica. Los poderes públicos, en vez de jalear al mercado para entrar en la perniciosa espiral de especulación que se ha desatado en torno a los nombres de dominio, deberían adoptar posiciones más equidistantes entre los intereses en juego.

Por otro lado, si salió mal la jugada de las licencias de móviles, no es plan que ahora quieran resarcirse con los dominios. De llevarse a la práctica este sistema previsto, España sería el único país del mundo, al menos de los que podemos considerar mínimamente serios, que saca a subasta los nombres de segundo nivel.

Esperemos que en la tramitación parlamentaria de esta Ley se corrijan las deficiencias advertidas.

Finalmente, tan sólo me resta invitar a todos los lectores de DOMINIURIS al congreso que estamos organizando en Perú. Numerosos juristas y profesionales independientes y no casados con los grandes poderes acudirán al evento. Será sin duda toda una experiencia.

Es el primer congreso independiente de una época de Internet que está dando sus últimos coletazos. Después, desengañense, las cosas no volverán a ser lo mismo. La oportunidad, ciertamente, es única e irrepetible.

CASOS DE LA OMPI. viajesecuador.com

LA FRANQUICIA DE VIAJES ECUADOR DE LUGO GANA EL LITIGIO EN LA OMPI POR EL DOMINIO VIAJESECUADOR.COM

Ecuador Lugo, S.L., que explota una franquicia de la cadena de agencias de viaje "VIAJES ECUADOR", ha ganado el litigio mantenido frente a "VIAJES ECUADOR, S.A.", entidad franquiciadora de la cadena de agencias, por el dominio viajesecuador.com.

La franquicia de Viajes Ecuador de Lugo, que es la número 1 en ventas de todo el territorio nacional, por tanto, podrá seguir utilizando, como venía haciendo hasta ahora, la dirección en Internet www.viajesecuador.com.

La indicada empresa firmó un contrato de franquicia con VIAJES ECUADOR, S.A. en marzo de 1.997, cuando empezaba a despuntar Internet. En enero de 1.999 decidió, al igual que otras agencias del grupo, conseguir una dirección en Internet para ejercer su negocio de agencia de viajes. Dado que el contrato suscrito le obligaba a utilizar en todas las comunicaciones dirigidas al mercado la denominación VIAJES ECUADOR, consideró oportuno registrar a tal fin la denominación viajesecuador.com que, en aquel momento, se encontraba disponible.

Posteriormente, la entidad franquiciadora planteó una demanda en la OMPI solicitando la transferencia del dominio, al estimar que ECUADOR LUGO no tenía interés legítimo en el registro y mantenimiento del dominio.

Quizás este caso sea el primero de esta envergadura que, afectando a dos empresas españolas, ofrece un resultado favorable al titular del nombre de dominio. La Resolución de la OMPI, citando precedentes anteriores, estima que el demandado, de conformidad con el contrato de franquicia suscrito con VIAJES ECUADOR, S.A., tiene un derecho o interés legítimo respecto al nombre de dominio, lo que "difícilmente permitiría manifestar que su registro se haya realizado de mala fe, especialmente si dicho registro se produjo mucho antes de iniciarse la controversia".

En el Congreso que DOMINIURIS está organizando (www.dominiuris.com/congreso/) junto con el Estudio Jurídico Castillejo & Bardales, que se celebrará en Lima a finales de este mes y principios del que viene, se explicarán los pormenores y detalles de este interesante precedente.

La decisión de la OMPI sobre el dominio viajesecuador.com se encuentra disponible en: <http://www.dominiuris.com/viajesecuador.htm>

El caso en la prensa:

El Progreso de Lugo.El dominio viajesecuador.com, otorgado a la franquicia de Lugo. 5 de diciembre de 2000.

<http://www.elprogreso.es/diario/20001205/Lugo/N18027.asp>

El Mundo. Esta vez, la razón era del demandado. Viernes, 1 de diciembre de 2000.

ICANN. ¿Pueden cambiar las cosas?

Andy Mueller-Maguhn del "Chaos Computer Club" ha accedido a uno de los sillones de la ICANN. El activista alemán promete cambiar las cosas desde dentro. Ya veremos como evoluciona todo.

<http://www.zdnet.com/zdnn/stories/news/0,4586,2640449,00.html?chkpt=zdnn101600>

OMPI.

La OMPI pretende regular la relación de los dominios con otras categorías distintivas que no están dentro del ámbito original de actuación de esta Institución.

Según ha comunicado dicha entidad, ya ha publicado, en la direccion electronica <http://wipo2.wipo.int/>, la segunda solicitud de comentarios para el Segundo Proceso de la OMPI relativo a los Nombres de Dominio de Internet (WIPO2 RFC-2).

En el Segundo Proceso de la OMPI se trataran distintas cuestiones pendientes relativas al reconocimiento de derechos y el uso de nombres dentro del sistema de nombres de dominio de Internet. La OMPI esta intentando estudiar y formular recomendaciones acerca del "uso de mala fe, abusivo, engañoso o injusto" de:

- nombres de persona;
- denominaciones comunes internacionales (DCI) para las sustancias farmaceuticas, recomendadas por la Organizacion Mundial de la Salud con el fin de proteger la seguridad de los pacientes en todo el mundo, ¿o más bien los intereses de la poderosa industria farmacéutica?;
- nombres de organizaciones internacionales intergubernamentales (como las Naciones Unidas);
- indicaciones geograficas, indicaciones de procedencia y terminos geograficos; y
- nombres de marcas.

<http://wipo2.wipo.int/process2/rfc/rfc1/summary-es.html> Resumen de los comentarios presentados respecto de la primera solicitud de comentarios (WIPO2 RFC-1), que se centro en la propuesta de mandato, procedimientos y calendario para el Segundo Proceso de la OMPI.

ANALISIS DE LA APLICACION DE LAS NORMAS DE RESOLUCION DE CONFLICTOS DE LA ICANN.

El Profesor Milton Mueller de la "Syracuse University" ha publicado un estudio muy interesante sobre la aplicación de las normas, en el que analiza cientos de decisiones. Es altamente recomendable su visita. El citado trabajo recoge en un apartado las 7 peores decisiones de la OMPI, entre las que se encuentra la dictada en el caso barcelona.com

<http://dcc.syr.edu/roughjustice.htm>

LA ICANN ES DEMANDADA EN TEXAS.

REGLAND.COMN ha iniciado acciones judiciales en el Estado de Texas contra la ICANN. El litigio gira alrededor de los preregistros que la ICANN, al parecer, no ha aceptado.

El tema de los preregistros estaba llamado a traer cola...

<http://www.regland.com/lawsuit/ Demanda.>

<http://www.regland.com/ Demandante>

<http://www.icann.org/ Demandada>

Fuente: <http://www.bakerinfo.com/elaw>

También en: <http://www.newsbytes.com/> y en <http://www.zdnet.com/>

- ENCUESTA SOBRE DOMINIOS. Curiosa iniciativa llevada a cabo por BARRAPUNTO.

<http://barrapunto.com/pollBooth.pl?qid=dominios-okupas&aid=5>

- ICANN. Nuevos dominios: según se ha comentado en infinidad de sitios, se ha aprobado en la reunion de ICANN en Los Angeles, la introduccion de nuevos dominios genéricos:

- .biz (negocios)
- .info (informacion general)
- .name (individuos)
- .pro (profesionales)
- .co-op (cooperativas y cooperacion)
- .aero (industria aerea y viajes)
- .museum (museos)

El sistema de registro dependerá del tipo de dominio, de forma que el registro de dominios de segundo nivel será libre para algunos, mientras que para otros se exigirán una serie de requisitos. En fin, mucho ruido para pocas nueces, pues la cuestión es que todavía no han decidido como montar el tinglado ni a quien darle la gestión de los nuevos dominios.

Los nuevos sufijos, que se lanzarán a mediados del 2001, están diseñados, en principio, como alternativas a ".com", ya colapsado por unos 20 millones de registros.

- CASOS JUDICIALES. URUGAY. Caso www.microsoft.com.uy. Primer fallo judicial (interlocutorio) sobre nombres de dominio.

Artículo original de D. Marcelo Bauzá Reilly. Profesor de "Informática Jurídica" en la Universidad de la República, Profesor de "Informática Jurídica" y de "Derecho de las Telecomunicaciones y de la Informática" en la Universidad de la Empresa (Montevideo, Uruguay). Vicepresidente de FIADI (Federación Iberoamericana de Asociaciones de Derecho e Informática).

La justicia uruguaya ha dictaminado en vía cautelar la cancelación provisoria del registro de dominio www.microsoft.com.uy. La medida obedeció a una acción promovida por el representante legal de Microsoft Corporation, quien expuso como fundamentos de la pretensión el carácter notorio de la denominación Microsoft a nivel mundial, y su inscripción en Uruguay cubriendo los servicios de varias clases internacionales, en particular la N° 38 del Nomenclator vigente según Arreglo de Niza (servicio de telecomunicaciones, principalmente el recibo y envío de mensajes, documentos y otros datos por transmisión electrónica).

Las operaciones de registro de nombres de dominio se realizan en Uruguay en la órbita del ente telefónico, en la dirección <http://dns.antel.net.uy>, a través de empresas particulares conocidas como "proveedores de servicios de Internet" (los "ISP" siguiendo la terminología anglosajona), que son las autorizadas a poseer servidores DNS y efectuar el alojamiento de sitios en la red.

Antes de ingresar en la vía judicial, el damnificado intentó otras instancias de solución administrativa a través de su representante legal, pero no tuvo éxito alguno. Ahora se esperan las resultancias del pleito principal, que ya debería haber comenzado a esta fecha, so pena de caducidad de la medida provisoria.

Mientras ello acontece, se aprecia que el fallo provisorio recaído es en realidad un decreto interlocutorio muy escueto, para más datos "decreto 2969 del 11 de octubre del 2000" dictado por el Juzgado Letrado de Primera Instancia de Montevideo de 15° Turno con asiento en la ciudad de Montevideo. Su transcripción textual es la siguiente: "Visto y atento a lo establecido en el Artículo 311 y siguientes del C.G.P. sin noticia contraria decretase como medida cautelar la cancelación provisoria del registro de dominio www.microsoft.com.uy hasta la dilucidación del proceso que deberá promoverse en esta Sede comunicándose a ANTEL. Se acepta la contracautela ofrecida. Cumplido notifíquese a los afectados en los domicilios denunciados en el petitorio tercero de fojas 60 vta."

Como se podrá apreciar, el fallo por sí solo no es precisamente una "pieza doctrinaria", en tanto omite extenderse en fundamentos de mayor alcance que los formales. Apenas agregar que el derecho invocado corresponde al capítulo respectivo del "proceso cautelar" regulado por nuestro Código General del Proceso (C.G.P.). Y que si bien el fallo no lo menciona expresamente, sería dable suponer que se tuvo en cuenta para decretar la medida el art. 88 de la Ley 17.011 (Ley de Marcas) que estatuye la acción en juicio para "prohibición de uso de una marca no registrada, idéntica o semejante", así como el art. 317 del C.G.P, contenido el cuerpo citado por el proveyente, que refiere a "providencias que deciden provisoriamente el litigio en espera de una decisión definitiva", también llamada por la doctrina procesalista "decisiones anticipadas".

El "Acuerdo de Registro de Dominio" que celebran los ISP con ANTEL prevé la cancelación del registro, entre otras causas, "por orden judicial" (nral. 4º), y ello es lo que operó en este caso a la fecha, con carácter provisorio.

El titular del sitio cancelado es un ciudadano argentino con residencia en Uruguay, que ha sido acusado ante organismos internacionales como formando parte de un grupo dedicado a abrir sitios bajo denominaciones registradas antes como marcas por grandes compañías de la industria de la información (Altavista, Yahoo, Microsoft), existiendo pronunciamientos de OMPI al respecto, así como despachos de prensa nacional e internacional que se han venido refiriendo al conjunto de estos casos desde hace un tiempo atrás.

Como dije antes, se trata del primer fallo en la materia dictado por jueces uruguayos, si bien no definitivo. Aunque parecería que no es el primer asunto de esta índole que se plantea en estrados de nuestro país, los anteriores habrían sido abortados por acuerdos o desistimientos. En esta oportunidad el accionante dirigió su pretensión provisoria contra el proveedor del caso, y contra el titular del sitio en cuestión. Tratándose de un procedimiento cautelar, la ley uruguaya obliga a instaurar la demanda principal dentro de los treinta días siguientes a su decreto o efectividad, so pena de caducidad. Por lo pensamos que esta historia seguirá, y próximamente podremos referirnos a las resultancias del juicio principal, o su transacción como también sucede habitualmente en estos casos.

RTMark

RTMark ist eine Gruppe von Internetaktivisten, die subversive kapitalismuskritische Medienaktionen organisiert und über Spendenaktionen finanziert.

RTMark ist als ein eingetragenes Unternehmen organisiert, das Aktivisten, die Projekte planen, mit Spendern zusammenbringt, die diese Projekte finanzieren.

Bekannte Aktionen, die von Rtmak betrieben oder unterstützt wurden, waren der [toywar](#), *gwbush.com* (eine gefakte Wahlkampfseite von [George W. Bush](#)), die [Barbie Liberation Organisation](#) und [voteauction](#).

Der Name ist eine Anspielung auf "Registered Trademark" (registriertes [Warenzeichen](#)) - Auswüchse des internationalen [Markenrechts](#) wie der *Toywar* sind eine beliebte Zielscheibe von RTMarks Aktionen.

Blank Mark

Blank Mark is a group of InterNet activists, which finances subversive capitalism-critical medium actions organized and over donation actions.

Blank Mark is organized as a registered enterprise, which brings activists together, which plan projects, with donors, who finance these projects.

Admitted actions, which were operated or supported by Rtmark, toywar , gw bush.com (a gefakte election campaign side of George [W. Bush](#)), the Barbie *was liberation organization* and [voteauction](#) .

The name is an allusion on "registered trademark" (registered [registered trade mark](#)) - excrescences of the international [trademark law](#) like *the Toywar* are a popular target of RTMarks actions.

RTMark

RTMark ist eine Gruppe von Internetaktivisten, die subversive kapitalismuskritische Medienaktionen organisiert und über Spendenaktionen finanziert.

RTMark ist als ein eingetragenes Unternehmen organisiert, das Aktivisten, die Projekte planen, mit Spendern zusammenbringt, die diese Projekte finanzieren.

Bekannte Aktionen, die von Rtmak betrieben oder unterstützt wurden, waren der [toywar](#), *gwbush.com* (eine gefakte Wahlkampfseite von [George W. Bush](#)), die *Barbie Liberation Organisation* und **voteauction**.

Der Name ist eine Anspielung auf "Registered Trademark" (registriertes [Warenzeichen](#)) - Auswüchse des internationalen [Markenrechts](#) wie der *Toywar* sind eine beliebte Zielscheibe von RTMarks Aktionen.

Welcome to my collection of "Entertaining Links". Ya, ya, I know it's not very professional, but who cares. It's not like I'm trying to be the funny one. I'm just showing you where to find web comedy.

At regular intervals, an automated e-mail will be sent out to notify list members of any new links that have been added to this page. **If you want to get on (or off of) the e-mail list or have an "Entertaining Link" to submit, then contact me at [emandy\(at\)triticom.com](mailto:emandy(at)triticom.com).**

Also, check out the [Flavor Forum](#) to chat about anything you want to.

<u>Entertaining Link</u>	<u>Description</u>	<u>Date Added</u>
http://www.quantumpicture.com/Flo_Control/flo_control.htm...	What do you do when you want your cat to have the freedom to come and go as it pleases, but you don't want it to bring in unwanted guests? Toss in a little geek entertainment and this is what you end up with.	3-07-05
http://www.savetoby.com/	For just pennies a day, you could help save Toby.	3-04-05
http://babynamewizard.com/namevoyager/Inv0105.html	The NameVoyager shows you some interesting historical information about popular names and displays it in a rather entertaining way.	2-17-05
https://implicit.harvard.edu/implicit/demo/selectatest.ht...	This is interesting. You might not even realize that you have prejudices towards/against or pre-conceived associations on certain topics. Now you can find out.	2-10-05

http://boingboing.net/	A directory of wonderful things.	2-08-05
http://www.boreme.com/	If there's a current popular video or image out on the net, these guys probably have it. Most of the top 10 are rather entertaining.	1-31-05
http://www.puzzles.com/products/RushHour/RushHourApp.htm	Rush Hour is an actual puzzle board game that's pretty fun/challenging. Here's a web applet to pique your interest. Also see these other online versions .	1-31-05
http://www.hackaday.com/	Geek Entertainment: It seems like they have a new hack every day, and I'm not talking about how to break into a website. It's more like how to install Linux on your iPod or how to speed up Firefox.	1-11-05
http://www.gametunnel.com/html/section-viewarticle-74.htm...	2004's Top Indie Games. Actually, some of these look pretty cool, especially if you're tired of the same ol' stuff that comes out of the major studios. More 2004 awards .	1-05-05
http://www.fantasymusicleague.com/	I lost a couple ELinks candidates recently when my browser crashed, so if you sent me something that I haven't posted, you may want to re-send. This link is an odd mix of fantasy football and the music industry.	12-02-04

http://www.archive.org/movies/movies.php	I already had a previous link to archive.org, but I never realized they had pages like this. For video game geek entertainment, try the the speed runs arcive .	12-02-04
http://budlight.whipnet.com/	Real American Heroes and Real Men Of Genius	11-02-04
http://www.retrocrush.com/costumes/	Halloween Costumes. Can you tell I haven't submitted my updates for a while? Also check the base site for more entertainment.	11-02-04
http://www.ews.uiuc.edu/~gokli/endoftheworld.swf	A nice message about global thermonuclear war.	11-02-04
http://www.ritsumeai.ac.jp/~akitaoka/index-e.html	Look at all these illusions. You can find more links at the bottom. There are some pretty interesting items to be found.	9-28-04
http://www.csupomona.edu/~jelerma/springfield/index.html	The map of Springfield. You will want this just in case you ever want to see the sights in the city where "The Simpsons" is filmed.	9-14-04
http://www.pbs.org/kcts/videogamerevolution/	This website is set up around a PBS TV special, but the site is done very nicely and is rather interesting and entertaining.	9-09-04
http://www.hugi.is/hahradi/bigboxes.php?box_id=51208	With 11 pages of videos like "og mitt næsta trix" you'll be laughing for minutes (or at least seconds).	9-08-04

http://acg.media.mit.edu/people/fry/zipdecode/	Geek Entertainment: Type in the zip code and watch the map zone in on your selection.	9-01-04
http://www.eskimolabs.com/hp/listen.htm	"Harry and the Potters" is the name of the band. You guess what they sing about.	8-10-04
http://www.rockpapersaddam.com/	Saddam vs. The Judge: A showdown in RPS.	7-19-04
http://www.buildfest.com/	I guess this guy actually has a wife. I dunno if he has any kids, and with the time he spends with his toys, I'm guessing that he doesn't either. Check out the videos if you really want to get an idea of what he's up to.	7-19-04
http://playlist.yahoo.com/makeplaylist.dll?id=1277881&sdm...	Why pay to see the Spiderman movie when you can see this for free?	7-14-04
http://www.jibjab.com/new.aspx	If you're wondering who to vote for, check out this completely objective nonpartisan video.	7-14-04
http://www.sandalandsoxer.co.uk/	Sandals and Socks	7-09-04
http://www.jimmyco.net/cookie.html	Who needs those overpriced Chinese restuarants when this is free on the internet?	6-22-04
http://www.20q.net/	I'll give you 20 chances to figure out what this is about. Either that, or just one link.	6-15-04

http://www.angryalien.com/	They have whole movies that are viewable in 30 seconds re-enacted by bunnies, and if that isn't enough, they have other diversions.	6-11-04
http://www.wayoftherodent.com/pa/bs_paperarcade2.htm	If you always wanted an arcade machine to sit on your desk, then this is where you want to go. They have other stuff "Back Home," but nobody actually knows if it's entertaining.	6-11-04
http://triadfrog.home.comcast.net/index.html	TransFormers, Breakdancing, and some guys with lots of free time.	6-10-04
http://www.bash.org/	Check out the "Top 100-200" IRC quotes.	6-09-04
http://www.wingwomen.com/	Sounds like a fair theory, now where are the testimonials?	6-04-04
http://www.kokogiak.com/	Geek Entertainment: The "MegaPenny Project" was the original submission, but the rest of the site is equally entertaining.	6-02-04
http://www.ebaumsworld.com/	A good sized collection of funny stuff. In particular, I like a lot of the images (link on left side of main index).	5-27-04
http://www.noonelikesyou.net/TFT-robots/	Protesting robots handing out binary flyers and dancing to Kraftwerk. Need I say more?	5-25-04

http://www.ryano.net/iraq/?662841	Wow, I've gone global with my messages of entertainment and unity. Now, I just have to look up what that message means.	5-12-04
http://www.iusedtobelieve.com/	If you were stupid when you were young, this is the place to go to let the whole world know. Perhaps that would mean that you never outgrew the problem.	5-06-04
http://pacmanhattan.com/	When people that normally exist in the real world want to do academic research, they can work on technical things, like virtual reality. Here's what you get when the research is done by someone who's reality is typically virtual in the first place.	5-06-04
http://www.jimflorentine.com/download.htm	There's not a lot of MP3s here, but I found some to be rather amusing. Check out the "Brothers" one.	4-29-04
http://www.takeoneforthecountry.com/article.asp	Says one operation TOFTC member, "What a bunch of bay-auches! Those femi-nazis really make me mad."	4-29-04
http://www.alexchiu.com/affiliates/clickthru.cgi?id=Flavo...	It's a bit TimeCube-esque, if you ask me. Didn't I see this guy on The Daily Show once?	4-22-04
http://www.wackywarnings.com/	Wacky Warning Labels (and more)	4-13-04
http://www.subserviantchicken.com/	A chicken that will obey your commands.	4-13-04

http://www.sperare.com/spam_poetry/blogger.html	Take some e-mail SPAM and mix it with a liberal arts degree and you just might cook up some entertainment.	3-30-04
http://www.hcs.harvard.edu/~golder/dialect/maps.php	This is kinda funny. You can see what parts of the US say things in different ways.	3-29-04
http://www.avalanchetankers.us/archives/000058.html	This is probably good to read if you're considering joining the US Military. If not, it's just humorous.	3-05-04
http://www.worth1000.com/	Recipe: Take Photoshop, add some people with too much free time, stir.	3-04-04
http://www.williamhung.net/	"The #1 Website Dedicated to the Man, The Myth, The Singing and Dancing LEGEND-- William Hung!"	2-13-04
http://benjamin.francois.free.fr/artwork/gcubix/	Do you remember Sidetalkin'? Well, check the bottom of this page for screenshots of a new GameCube emulator running on all kinds of platforms.	2-12-04
http://homepage.ntlworld.com/tubby.toast/mrporkpieman/	Mr. Pork Pie Man The song says it best. "When you're feeling kinda peckish a Pork Pie is nice"	2-04-04

http://www.puzzledonkey.com	If you like puzzles, you might like Puzzle Donkey. "B.F.Skinner's work with donkeys in the forties showed that they can solve logic puzzles even faster than pigeons, though they struggle with word play due to their limited vocabulary."	1-27-04
http://www.madville.com/corporate.php?id=4	If you played arcade games in the '80s, this might drive you crazy for a while.	1-23-04
http://www.notfoolinganybody.com	I'm sure you have seen a store that obviously used to be another store. Well, check these out.	1-15-04
http://micro.magnet.fsu.edu/primer/java/scienceopticsu/po...	I accidentally did this, but I found it interesting to start completely zoomed in and then zoom out.	1-06-04
http://www.columbinepaintball.com/	See what it was like to be part of the Trench Coat Mafia, the SWAT team, or just an innocent student/faculty.	12-17-03
http://bigmouth.here-n-there.com/	Big Mouth Billy Bass hacking. Take a talking fish and make him talk (more).	12-17-03
http://jpbrown.i8.com/cubesolver.html	Geek Entertainment: A robot that solves the Rubik's Cube.	12-08-03

http://www.gotorion.com/orion/singles.php?t1=Nintendo%20P...	If you want to make paper versions of your favorite Nintendo characters, this is where you need to go for help. No, I don't mean mental help.	12-04-03
http://www.miniclip.com/heli2.htm	A cool little game where you shoot helicopters and slow down time. It's like a 2D Max Payne where all the enemies are helicopters and you jump a lot.	11-25-03
http://www.powerstrike.net/Tehkan/mamejump.html	What do MAME and Van Halen have in common? Jump	11-18-03
http://www.insanearcade.com/	Tons of web-based games to play (seems like quantity over quality).	11-18-03
http://www.419eater.com/	A great attempt to scam the scammers (and maybe SPAM the SPAMMERS). The letters archives holds some pretty amusing material.	11-17-03
http://www.bushparty.com/htms/hockeylogos.htm	The worst hockey logos shown with entertaining comments.	11-13-03
http://bfcgroup.com/helluvatough/	A site about Colt 45 and other crazy Jibber Jabber!	11-11-03
http://www.sidetalkin.com/	A tribute to the ergonomic genius that is Nokia N-Gage.	10-29-03
http://www.datelinealabama.com/article/2003/03/06/3983_ar...	MacBeth + Homer Simpson = MacHomer	10-21-03
http://grouphug.us/	An online confessional.	10-21-03

http://www.egmmag.com/article2/0,4364,1338767,00.asp	Give kids some old video games and see what they say.	10-16-03
http://www.shockwave.com/contentPlay/shockwave.jsp?id=red...	A very cool Shockwave racing game.	10-15-03
http://www.the-underdogs.org	I probably should have added this link years ago. The site is full of old games that you can download for free. They call it "abandonware" because nobody seems to care about 'em, but there are great titles now living in the Home Of The Underdogs.	10-13-03
http://www.railroadtycoon3.com/rt3/uk/downloads.html	Ever play "Pipe Mania" or "Pipe Dreams?" If so, you'll probably like this game that you can download or play right on the web page.	10-10-03
http://jet.ro/dismount/	Oh yeah, I'm back in the game after a 5+ month hiatus! Try Truck Dismount. Disturbingly hilarious!	10-07-03
http://www.puzzlepirates.com/	Massively Multiplayer Online Role-[ERRR] Puzzle-Playing Game. This is a pretty good game for puzzle lovers. I'm not sure if it's free anymore, though.	10-07-03
http://www.ntv.co.jp/channel/kasoh/	The top one is Ping-Pong Matrix style. I also liked the "2002.9.20" Basketball clip.	10-07-03

http://ant.digitaldonkey.com /dir.php?path=games	Some classics (like International Karate Plus and Mario Bros) that you can play online.	10-07-03
http://www.dyson.co.uk /game/play.asp	This is a pretty slick puzzle game along the same lines of Reflections.	10-07-03
http://www.terrawind.com/	"The world's first luxury Amphibious Motor Coach / Yacht" is odd.	10-07-03
http://www.try2hack.nl/	Learn to become a hacker! Then maybe you can attract girls like Angelina Jolie.	10-07-03
http://www.freshsensation.com /samorost.swf	A nifty game. You will have to click around to figure it out.	10-07-03
http://www.cybermoonstudios.com /flashm.html	Check out the 8 - Bit Reenactment of Dungeons and Dragons.	4-25-03
http://www. welovetheiraqiinformationminister. com/	He fights for truth, justice, and then flees the country. That's why we love the Iraqi (dis)Information Minister.	4-16-03
http://www.b0g.org/	I found this URL today and they had the same Iraqi Information Minister link that I posted earlier. Thus, it must be an entertaining site!	4-16-03

Welcome to my collection of "Entertaining Links". Ya, ya, I know it's not very professional, but who cares. It's not like I'm trying to be the funny one. I'm just showing you where to find web comedy.

At regular intervals, an automated e-mail will be sent out to notify list members of any new links that have been added to this page. **If you want to get on (or off of) the e-mail list or have an "Entertaining Link" to submit, then contact me at [emandy\(at\)triticom.com](mailto:emandy(at)triticom.com).**

Also, check out the [Flavor Forum](#) to chat about anything you want to.

<u>Entertaining Link</u>	<u>Description</u>	<u>Date Added</u>
http://www.savetoby.com/	For just pennies a day, you could help save Toby.	3-04-05
http://babynamewizard.com/namevoyager/Inv0105.html	The NameVoyager shows you some interesting historical information about popular names and displays it in a rather entertaining way.	2-17-05

https://implicit.harvard.edu/implicit/demo/selectatest.ht...	This is interesting. You might not even realize that you have prejudices towards/against or pre-conceived associations on certain topics. Now you can find out.	2-10-05
http://boingboing.net/	A directory of wonderful things.	2-08-05
http://www.puzzles.com/products/RushHour/RushHourApp.htm	Rush Hour is an actual puzzle board game that's pretty fun/challenging. Here's a web applet to pique your interest. Also see these other online versions .	1-31-05
http://www.boreme.com/	If there's a current popular video or image out on the net, these guys probably have it. Most of the top 10 are rather entertaining.	1-31-05
http://www.hackaday.com/	Geek Entertainment: It seems like they have a new hack every day, and I'm not talking about how to break into a website. It's more like how to install Linux on your iPod or how to speed up Firefox.	1-11-05
http://www.gametunnel.com/html/section-viewarticle-74.htm...	2004's Top Indie Games. Actually, some of these look pretty cool, especially if you're tired of the same ol' stuff that comes out of the major studios. More 2004 awards .	1-05-05

http://www.archive.org/movies/movies.php	I already had a previous link to archive.org, but I never realized they had pages like this. For video game geek entertainment, try the the speed runs arcive .	12-02-04
http://www.fantasymusicleague.com/	I lost a couple ELinks candidates recently when my browser crashed, so if you sent me something that I haven't posted, you may want to re-send. This link is an odd mix of fantasy football and the music industry.	12-02-04
http://www.retrocrush.com/costumes/	Halloween Costumes. Can you tell I haven't submitted my updates for a while? Also check the base site for more entertainment.	11-02-04
http://budlight.whipnet.com/	Real American Heroes and Real Men Of Genius	11-02-04
http://www.ews.uiuc.edu/~gokli/endoftheworld.swf	A nice message about global thermonuclear war.	11-02-04
http://www.ritsumei.ac.jp/~akitaoka/index-e.html	Look at all these illusions. You can find more links at the bottom. There are some pretty interesting items to be found.	9-28-04
http://www.csupomona.edu/~jelerma/springfield/index.html	The map of Springfield. You will want this just in case you ever want to see the sights in the city where "The Simpsons" is filmed.	9-14-04

http://www.pbs.org/kcts/videogamerevolution/	This website is set up around a PBS TV special, but the site is done very nicely and is rather interesting and entertaining.	9-09-04
http://www.hugi.is/hahradi/bigboxes.php?box_id=51208	With 11 pages of videos like "og mitt næsta trix" you'll be laughing for minutes (or at least seconds).	9-08-04
http://acg.media.mit.edu/people/fry/zipdecode/	Geek Entertainment: Type in the zip code and watch the map zone in on your selection.	9-01-04
http://www.eskimolabs.com/hp/listen.htm	"Harry and the Potters" is the name of the band. You guess what they sing about.	8-10-04
http://www.rockpapersaddam.com/	Saddam vs. The Judge: A showdown in RPS.	7-19-04
http://www.buildfest.com/	I guess this guy actually has a wife. I dunno if he has any kids, and with the time he spends with his toys, I'm guessing that he doesn't either. Check out the videos if you really want to get an idea of what he's up to.	7-19-04
http://www.jibjab.com/new.aspx	If you're wondering who to vote for, check out this completely objective nonpartisan video.	7-14-04
http://playlist.yahoo.com/makeplaylist.dll?id=1277881&sdm...	Why pay to see the Spiderman movie when you can see this for free?	7-14-04
http://www.sandalandsoxer.co.uk/	Sandals and Socks	7-09-04

http://www.jimmyco.net/cookie.html	Who needs those overpriced Chinese restuarants when this is free on the internet?	6-22-04
http://www.20q.net/	I'll give you 20 chances to figure out what this is about. Either that, or just one link.	6-15-04
http://www.angryalien.com/	They have whole movies that are viewable in 30 seconds re-enacted by bunnies, and if that isn't enough, they have other diversions.	6-11-04
http://www.wayoftherodent.com/pa/bs_paperarcade2.htm	If you always wanted an arcade machine to sit on your desk, then this is where you want to go. They have other stuff "Back Home," but nobody actually knows if it's entertaining.	6-11-04
http://triadfrog.home.comcast.net/index.html	TransFormers, Breakdancing, and some guys with lots of free time.	6-10-04
http://www.bash.org/	Check out the "Top 100-200" IRC quotes.	6-09-04
http://www.wingwomen.com/	Sounds like a fair theory, now where are the testimonials?	6-04-04
http://www.kokogiak.com/	Geek Entertainment: The "MegaPenny Project" was the original submission, but the rest of the site is equally entertaining.	6-02-04

http://www.ebaumsworld.com/	A good sized collection of funny stuff. In particular, I like a lot of the images (link on left side of main index).	5-27-04
http://www.noonelikesyou.net/TFT-robots/	Protesting robots handing out binary flyers and dancing to Kraftwerk. Need I say more?	5-25-04
http://www.ryano.net/iraq/?662841	Wow, I've gone global with my messages of entertainment and unity. Now, I just have to look up what that message means.	5-12-04
http://www.iusedtobelieve.com/	If you were stupid when you were young, this is the place to go to let the whole world know. Perhaps that would mean that you never outgrew the problem.	5-06-04
http://pacmanhattan.com/	When people that normally exist in the real world want to do academic research, they can work on technical things, like virtual reality. Here's what you get when the research is done by someone who's reality is typically virtual in the first place.	5-06-04
http://www.jimflorentine.com/download.htm	There's not a lot of MP3s here, but I found some to be rather amusing. Check out the "Brothers" one.	4-29-04
http://www.takeoneforthecountry.com/article.asp	Says one operation TOFTC member, "What a bunch of bay-auches! Those femi-nazis really make me mad."	4-29-04

http://www.alexchiu.com/affiliates/clickthru.cgi?id=Flavo...	It's a bit TimeCube-esque, if you ask me. Didn't I see this guy on The Daily Show once?	4-22-04
http://www.subserviantchicken.com/	A chicken that will obey your commands.	4-13-04
http://www.wackywarnings.com/	Wacky Warning Labels (and more)	4-13-04
http://www.sperare.com/spam_poetry/blogger.html	Take some e-mail SPAM and mix it with a liberal arts degree and you just might cook up some entertainment.	3-30-04
http://www.hcs.harvard.edu/~golder/dialect/maps.php	This is kinda funny. You can see what parts of the US say things in different ways.	3-29-04
http://www.avalanchetankers.us/archives/000058.html	This is probably good to read if you're considering joining the US Military. If not, it's just humorous.	3-05-04
http://www.worth1000.com/	Recipe: Take Photoshop, add some people with too much free time, stir.	3-04-04
http://www.williamhung.net/	"The #1 Website Dedicated to the Man, The Myth, The Singing and Dancing LEGEND-- William Hung!"	2-13-04
http://benjamin.francois.free.fr/artwork/gcubix/	Do you remember Sidetalkin'? Well, check the bottom of this page for screenshots of a new GameCube emulator running on all kinds of platforms.	2-12-04

http://homepage.ntlworld.com/tubby.toast/mrporkpieman/	Mr. Pork Pie Man The song says it best. "When you're feeling kinda peckish a Pork Pie is nice"	2-04-04
http://www.puzzledonkey.com	If you like puzzles, you might like Puzzle Donkey. "B.F.Skinner's work with donkeys in the forties showed that they can solve logic puzzles even faster than pigeons, though they struggle with word play due to their limited vocabulary."	1-27-04
http://www.madville.com/corporate.php?id=4	If you played arcade games in the '80s, this might drive you crazy for a while.	1-23-04
http://www.notfoolinganybody.com	I'm sure you have seen a store that obviously used to be another store. Well, check these out.	1-15-04
http://micro.magnet.fsu.edu/primer/java/scienceopticsu/po...	I accidentally did this, but I found it interesting to start completely zoomed in and then zoom out.	1-06-04
http://www.columbinepaintball.com/	See what it was like to be part of the Trench Coat Mafia, the SWAT team, or just an innocent student/faculty.	12-17-03
http://bigmouth.here-n-there.com/	Big Mouth Billy Bass hacking. Take a talking fish and make him talk (more).	12-17-03
http://jpbrown.i8.com/cubesolver.html	Geek Entertainment: A robot that solves the Rubik's Cube.	12-08-03

http://www.gotorion.com/orion/singles.php?t1=Nintendo%20P...	If you want to make paper versions of your favorite Nintendo characters, this is where you need to go for help. No, I don't mean mental help.	12-04-03
http://www.miniclip.com/heli2.htm	A cool little game where you shoot helicopters and slow down time. It's like a 2D Max Payne where all the enemies are helicopters and you jump a lot.	11-25-03
http://www.insanearcade.com/	Tons of web-based games to play (seems like quantity over quality).	11-18-03
http://www.powerstrike.net/Tehkan/mamejump.html	What do MAME and Van Halen have in common? Jump	11-18-03
http://www.419eater.com/	A great attempt to scam the scammers (and maybe SPAM the SPAMMERS). The letters archives holds some pretty amusing material.	11-17-03
http://www.bushparty.com/htms/hockeylogos.htm	The worst hockey logos shown with entertaining comments.	11-13-03
http://bfcgroup.com/helluvatough/	A site about Colt 45 and other crazy Jibber Jabber!	11-11-03
http://www.sidetalkin.com/	A tribute to the ergonomic genius that is Nokia N-Gage.	10-29-03
http://grouphug.us/	An online confessional.	10-21-03
http://www.datelinealabama.com/article/2003/03/06/3983_ar...	MacBeth + Homer Simpson = MacHomer	10-21-03

http://www.egmmag.com/article2/0,4364,1338767,00.asp	Give kids some old video games and see what they say.	10-16-03
http://www.shockwave.com/contentPlay/shockwave.jsp?id=red...	A very cool Shockwave racing game.	10-15-03
http://www.the-underdogs.org	I probably should have added this link years ago. The site is full of old games that you can download for free. They call it "abandonware" because nobody seems to care about 'em, but there are great titles now living in the Home Of The Underdogs.	10-13-03
http://www.railroadtycoon3.com/rt3/uk/downloads.html	Ever play "Pipe Mania" or "Pipe Dreams?" If so, you'll probably like this game that you can download or play right on the web page.	10-10-03
http://www.terrawind.com/	"The world's first luxury Amphibious Motor Coach / Yacht" is odd.	10-07-03
http://www.puzzlepirates.com/	Massively Multiplayer Online Role-[ERRR] Puzzle-Playing Game. This is a pretty good game for puzzle lovers. I'm not sure if it's free anymore, though.	10-07-03
http://www.freshsensation.com/samorost.swf	A nifty game. You will have to click around to figure it out.	10-07-03
http://ant.digitaldonkey.com/dir.php?path=games	Some classics (like International Karate Plus and Mario Bros) that you can play online.	10-07-03

http://jet.ro/dismount/	Oh yeah, I'm back in the game after a 5+ month hiatus! Try Truck Dismount. Disturbingly hilarious!	10-07-03
http://www.ntv.co.jp/channel/kasoh/	The top one is Ping-Pong Matrix style. I also liked the "2002.9.20" Basketball clip.	10-07-03
http://www.try2hack.nl/	Learn to become a hacker! Then maybe you can attract girls like Angelina Jolie.	10-07-03
http://www.dyson.co.uk/game/play.asp	This is a pretty slick puzzle game along the same lines of Reflections.	10-07-03
http://www.cybermoonstudios.com/flashm.html	Check out the 8 - Bit Reenactment of Dungeons and Dragons.	4-25-03
http://www.b0g.org/	I found this URL today and they had the same Iraqi Information Minister link that I posted earlier. Thus, it must be an entertaining site!	4-16-03
http://www.welovetheiraqiinformationminister.com/	He fights for truth, justice, and then flees the country. That's why we love the Iraqi (dis)Information Minister.	4-16-03
http://www.silencethemusical.com/	Silence Of The Lambs: The Musical	4-14-03
http://gulwardrinkinggame.com/	The Gulf War Drinking Game of course	4-01-03
http://www.thereverend.com/brick_testament/	What do you get when you mix Legos, the Bible, a camera, and lots of free time?	4-01-03

http://www.protestwarrior.com/	War Has Never Solved Anything (except for ending slavery, fascism, nazism, and communism)	4-01-03
http://mr-31238.mr.valuehost.co.uk/assets/Flash/psychic.s...	It can read your mind! I can, too! I can tell that you're about to go to the URL!	3-18-03
http://www.tensecondfilms.com/view.php	It doesn't take long to decide if the film sucks or not. Try searching for "Lightning Test," "Idiot," and "School Fight Turns Deadly."	3-12-03
http://www.orton.demon.co.uk/ff/cpp_interview.html	Is this for real? Well, at least this seems to indicate it's a hoax.	3-07-03
http://www.mchawking.com/	"your ultimate resource for information about Stephen Hawking the gangsta rapper"	2-25-03
http://www.japander.com/	"a western star who uses his or her fame to make large sums of money in a short time by advertising products in Japan"	2-05-03

e- Government Bulletin

ISSUE 94, DECEMBER 2000

IN THIS ISSUE:

Section One: News

- Minor glitches, major ambitions for UK citizen gateway; E-government: a legal minefield?; 'Cybersquatting' a threat to password security; Stoke library service is best on the web; Electronic health library goes live; Teledemocracy centre launches new e-petition; News round-up - Govern your school, Social services web, Mailbase becomes JISCmail.

Section Two: Conference Report

- Local Government Solutions

Section Three: Analysis

- Information Overload

Section Four: US Case Study

- Digital Petitions

[End of contents]

SECTION ONE: NEWS

MINOR GLITCHES, MAJOR AMBITIONS FOR UK CITIZEN GATEWAY

The government has unveiled a 'beta' test version of its new online gateway to information for citizens, the UK Online Citizen Portal, amid technical glitches and problems with the site's accessibility for visually impaired people.

When E-Government Bulletin tried to log on the morning after its launch, all that could be obtained was a message saying: "We are sorry but the UK online Citizen Portal is temporarily unavailable. Please try again later".

Three hours later the site - managed by BT subsidiary Syntegra - was up and running once more, and the Cabinet Office put down the hiatus to "minor hardware problems - it's a large, complex new project, and we were expecting some glitches".

Also embarrassing is the line running at the bottom of the portal, which says: "The government-backed service UK online should not be confused with the Internet Service Provider UK Online." This clash was of course known about for some time, but in the absence of an outright name purchase the disclaimer will now have to remain, and of course the confusion will remain as well.

More serious is the apparent lack of accessibility of the beta site. The government's own web site guidelines stipulate all public sector sites should be readable by the special text-to-speech and text-

to-Braille readers used by blind and visually impaired Internet users. This involves tagging images with text descriptions using the 'Alt' attribute of HTML. However the test site simply provides empty tags.

The general direction of the site has met with approval from most commentators, however. Many services are grouped around 'life episodes', of which the first four are 'Having a baby', 'Dealing with crime', 'Moving house' and 'Going away'. Others will be added as the portal is developed, including one in the pipeline for dealing with the death of a friend or relative.

There is also an option to customise the portal by UK nation, with further customisation planned allowing an individual user's ongoing service requirements to be stored. The service will also eventually be extended to a range of delivery mechanisms including digital TV and mobile phones. See: <http://www.ukonline.gov.uk/>

E-GOVERNMENT: A LEGAL MINEFIELD?

Local authorities face many legal pitfalls in drawing up e-government strategies, a new report from the local government IT association SOCITM finds.

Officers and members must fully understand the requirements placed on them by a wide range of recent legislation, the report says. Relevant legislation to ponder - some of which is still in a state of flux - includes The Electronic Communications Act 2000; the Regulation of Investigatory Powers Act 2000; the EU Distance Selling Directive; the Draft EU e-Commerce Directive; the Human Rights Act 1998; and the Freedom of Information Bill.

In some cases, there are potential conflicts between the various laws, the report finds. For example, a council may find itself liable for offences committed by its employees using email; but if it acts to monitor all email use it could be infringing the Human Rights Act.

Meanwhile SOCITM also published its annual review of IT trends in local authorities, which found that some 63% of councils now provide some form of technology support - typically a PC and printer - for their councillors in their homes. More than 80% of council staff have access to internal email but only 64% can use it to communicate externally.

'E-Government, Best Value and the Law' and 'IT Trends 2000/1' can be accessed (the latter at a price) via: <http://www.socitm.gov.uk/>

'CYBERSQUATTING' A THREAT TO PASSWORD SECURITY

Public sector organisations may need to reassess their Internet security strategies, as cybercrime based around the abuse of Internet domain names is set to become increasingly widespread and sophisticated, according to one leading expert.

Neil Barrett, a computer criminologist with Information Risk Management plc, told E-Government Bulletin last week that the dangers surrounding the practice known as 'cybersquatting' - the registration of a domain name similar to that used by another organisation, with the intent of holding

it to ransom - is set to worsen, with implications for data security and protection of passwords

Hackers have hit on the idea that people commonly mis-spell domains when they type them in, he said. This means that if they register a common misspelling or mistyping of an existing web site, some of its traffic will be channelled through the hacker's site. Indeed, it is estimated that an astonishing 15%-20% of web addresses entered by hand are likely to be misspelled at any one time.

Hackers could therefore set up a dummy site at a misspelled domain which pretends to be the genuine site and asks people to key in their passwords, which are then captured and used on the original site to commit fraud.

For many public sector bodies, which operate in highly controlled '.gov' domains, this may not be such a large problem. However, public bodies often work in partnership with private firms that use vulnerable .com domains, or may use .com, .net or .org domains themselves for individual projects.

Unlike with mainstream 'cybersquatting', organisations have no right to take legal action to recover domains which relate to misspellings of their own name or brands, Barrett said. And another tactic used by the hackers could be to list the misspelled domains in web directories or portals, making it easy to mislead users of the directory.

The dangers do not stop there - criminals could also try to contact one the many organisations involved in the routing of domain names and convince them that they are an authorised person to change that routing to their own Internet address. If they manage to do that - and sometimes, it can require little more than a letter on headed notepaper - they can steal your web traffic lock stock and barrel.

Barrett made the observations at the launch of a new report on cybersquatting by the European domain name registry Speednames (<http://www.speednames.com>).

STOKE LIBRARY SERVICE IS BEST ON THE WEB

Stoke-on-Trent City Council's library service (<http://www.stoke.gov.uk/council/libraries/>) has won first prize in this year's 'Best on the web' awards for library web sites, hosted by EARL, the consortium for public library networking.

The service was cited for making excellent use of local content; developing lively and educational resources for children; and introducing some innovative interactive services such as the ability for library users to send in their own book reviews to be posted online.

The runners-up were Nottinghamshire library service (<http://www.nottsc.gov.uk/libraries/>), which has developed NEWLiNC, an exemplary online gateway to local community sites; and the London Borough of Hillingdon libraries (<http://www.hillingdon.gov.uk/library/>) which also features a readers' book review area.

Judges for the awards included E-Government Bulletin editor Dan Jellinek. For more information see: <http://www.earl.org.uk/bestonweb/>

ELECTRONIC HEALTH LIBRARY GOES LIVE

The National Electronic Library for Health - billed as part of a developing 'digital nervous system' for the health service – went live last week in pilot form. Targeted mainly at health professionals and NHS librarians, the service is a huge gateway to resources ranging from the National Institute of Clinical Excellence's database of clinical guidelines to medical book reviews.

Within the library a 'virtual branch library' system collates information on particular health issues or conditions, such as cancer or primary care.

In the short term the service aims to provide clinicians with access to information within 15 seconds, with a longer term goal of just one second. The system will be reviewed over the next 12 months and further features will be added according to user needs.

The main NELH site is at: <http://www.nhs.uk/nelh/>

And there is an excellent 'FAQ' document containing answers to all your questions about the electronic library at: <http://www.nhs.uk/nelh/faq.asp>

TELEDEMOCRACY CENTRE LAUNCHES NEW E-PETITION

The International Teledemocracy Centre in Edinburgh has launched a new 'e-petition' calling on the Scottish Parliament and Scottish Executive tackle the 'digital divide' and ensure everyone in Scotland has access to the Internet.

The centre, based at Napier University, is continuing its pioneering work on online petitions which has seen it run a number of pilot projects with the Scottish Executive and Downing Street (see E-Government Bulletin, July and August 2000). For more information see: <http://www.e-petitioner.org/>

NEWS ROUND-UP:

GOVERN YOUR SCHOOL - When Steve Smith became a governor of his childrens' primary school he found there was quite a lot of useful guidance for governors but no single resource drawing it all together. So he created one, on the web - 'Govern your School'. The site is also a forum for sharing best practice: <http://www.governyourschool.co.uk>

SOCIAL SERVICES WEB - The Association of Directors of Social Services has an Information Management group which advises the society on all issues relating to information management and technology in council social services departments. The group has a web site that houses a projects database: <http://www.ssimg.freemove.co.uk>

MAILBASE BECOMES JISCMail - The fabulous, free National Academic Mailing List Service formerly housed at the University of Newcastle's Mailbase (<http://www.mailbase.ac.uk>) has been moved and renamed JISCMail following an open tender process. After a few teething problems the migration appears to have been quite smooth and membership of existing email lists should not have

been affected. See: <http://www.jiscmail.ac.uk/>

[Section One ends]

SECTION TWO: CONFERENCE REPORT - LOCAL GOVERNMENT SOLUTIONS

MAKING IT UP AS WE GO ALONG

The weakness of the government's targets for wiring up public services; the need for local councils to get their own technology in order before seeking 'joined-up government' partnerships; and the danger that modernisation money in the health service could be hijacked were all among topics discussed by delegates at last month's Electronic Government Forum (<http://www.electronic-government.com>).

At a series of discussion workshops, delegates - whose identities have been protected here for the purposes of a frank report - disagreed on the value of the government's targets for all public sector services becoming available online by 2005. "There is not one word in those targets about business justification - it is just saying 'do it'", said one.

Another thought that the targets were nevertheless effective as a general catalyst to spur the public sector into e-government activity. "The new services will have to provide improvements", he said. "Yes, but that's not the line central government have taken" came back the response.

A few were cynical on the age-old subject of how meaningful the '100% online service' targets actually area - the targets are for services to be available online, not actually used; they include telephone services; and they also now preclude services where to digitise them would contravene data protection or other laws.

"Let's face it, we're all just going to make up figures next year when asked to record how far we are towards the targets", one said. "It's just a PR exercise".

Another delegate questioned the feasibility of measuring what services are online, when it is hard enough to get a clear idea of the extent of a council's measurable transactions with the public. "We're trying at the moment to compile a record of what activities actually take place between the council and the public, and are finding there are scores of transactions in all corners of the council, which no-one monitors centrally. And as soon as you start to monitor transactions, you also begin to look at all the processes that manage the transactions, and the information relating to the transactions that moves around internally, and before you know it you can have a piece of paper that is 20 foot square".

One contributor to the discussion said councils needed to focus strongly on getting their own house in order before any visions of partnerships for e-government, or 'joined-up government', could be realised. "It is all very well to talk about joined-up government

and partnerships, but we need to first implement our own methods of seamless working within the council, not just the front-end services but with the back-end processes fully integrated using knowledge management, document management and the right staff culture.

"Some councils don't even have email yet, so what chance do they have at implementing joined-up government? But if we get this right we should be able to easily meet the requirements for public interfaces across tiers of local government or between public bodies as they come about".

Another barrier to partnership between organisations is that e-government services may not be as high on a potential partner's agenda as on yours, the delegate said. "The only way forward is to look at the strategic objectives of your potential partner and your own organisation, see where they meet and launch a project there".

Most participants agreed that an e-government strategy needed to be drawn up as a corporate management document, not a new kind of IT strategy. "An e-government strategy should be seen as part of our core business delivery, a means of delivering better services. It is a corporate objective", said one. "It needs someone very senior with clout across the local authority to drive it forward".

Several delegates warned that e-government may not lead to a reduction in costs. "The assumption is that money is going to be saved - I can't see why", said one. "We may have to spend more now, to develop and provide better services. The accountants don't like this - they want to see savings, and that is the main problem with the whole e-government agenda".

Another agreed: "Number-crunching accountants pull your e-government cost saving projections to pieces because there is no basis to them. So at least the central government target can be used as a weapon when your back is to the wall - the target is there and we have to meet it, even if it means spending more money".

The government realises the modernisation agenda is expensive and has demonstrated as much by pumping funds into the health service to wire it up, another delegate said. "But it is hard to convince chief officers in NHS trusts of that - they are short of money in other areas, such as coping with demographic trends and winter pressures, things they haven't been able to do for several years, so the money is constantly going to be hijacked".

Delegates agreed that it was good policy to consult citizens on what Internet or e-government services they require or prefer to receive, but not necessarily to conduct a separate consultation process. "It's best to slip the questions into your existing Best Value consultation process", said one. "A special e-government consultation just turns people off, and encourages the PC addicts, so we just ask in our other consultations 'would you like to do this on the Internet?'".

Linking the e-government agenda to the Best Value agenda in this and other ways might also help drive e-government up the agenda, one delegate said. "Best Value has hit everyone now, everyone is terrified by it. How do we make people notice e-government in the same way? By linking the two".

[Section two ends]

SECTION THREE: ANALYSIS - INFORMATION OVERLOAD

WELCOME TO A WORLD OF SPAM

Monty Python's 'spam' sketch will never be the same again, for although the delightful processed meat product has largely disappeared from our supermarket shelves, lobbyists are alive to the possibilities of the digitised version.

We're talking, of course, about email spam - unsolicited email - and the related problem of email overload: the new challenge facing public bodies in the digital age.

In the US Congress, Senators and Members of the House of Representatives have already had to learn to be canny in their handling of effectively unlimited, undifferentiated in-bound cyber sackfuls of mail.

The Representatives use intelligent software agents to sift out the repeat transmissions and much of the junk, and automatic responders warn that no email will be read unless it contains a 'zip code' (postal code) from the politician's constituency. We can expect such devices to proliferate and become ever more intelligent: but what if one of the purposes of an institution is to examine both solicited and, even more vitally, unsolicited material? And cynics might consider that in an age of political cowardice, politicians would be happy to 'lead from behind' after sampling public opinion in any way they can.

Although tricky, it is possible to manage unsolicited input at the level of an individual such as a politician. However, the problem is much more extreme in the case of large institutions.

It may not be such a problem at the departmental level in government where, except for consultation procedures, it is quite difficult to locate the precise recipient for a message. Soon, however, the persistent will not discriminate but will, rather, load a list of names and merrily spam.

The most serious problems, however, will occur at the level of local government, particularly where there is a unitary authority with a variety of functions. Unless councils are much more disciplined about their in-box allocation, lobbyists and spammers will be tempted to go to the appropriate web site, download a list of names and whoosh!

Public bodies - and private bodies, for that matter - are not prepared for this deluge, mainly because they think of the Internet as a propaganda (sorry, information) and marketing tool which allows the high and mighty to impose their goods, services and importance ever more weightily upon the masses.

Of course there are fine examples of interactive good practice on the Internet, but such facilities have largely been established as a source of reliable and free, if narrow, marketing information.

Worse is yet to come. There may currently be a few cranks trying to infiltrate the book review chit-chat facility on Amazon.com, but that's nothing to what Borsetshire County Council will have to deal with when e-mail and web facilities are attached to digital

television.

Just picture the scene - a local digital TV station sets up a response template to a scandal story with an automatic email link to the council's in-box. The response could be overwhelming - but councils, of course, can't simply empty the lot into the digital dustbin. There is no reason why a response should be regarded as more trivial just because it's digital rather than in Sandhurst copperplate.

Imagine too the state of the Railtrack email server once all delayed passengers have Internet-enabled mobile phones. There will, for instance, need to be separate systems for receiving complaints and keeping the operational network running. In an emergency any institution will want absolutely maximum Internet efficiency at precisely the same time as customers will want maximum complaint impact; it will be the cyber equivalent of crash voyeurs blocking the ambulances.

Add to this, for good measure, the need to differentiate in-bound information and you have an information management agenda of great magnitude. When stuff comes pouring in that you want to keep, where does this fit in with your data protection policies and data protection legislation? And what do councils do with information from clients which is the privileged domain of social services or education?

It is time to start thinking hard about email and information management.

* Article by Kevin Carey, Director of HumanITy. E-Government Bulletin would love to hear from anyone with creative solutions to the email management issue. Please email the editor Dan Jellinek on dan@headstar.com

[Section three ends]

SECTION FOUR: US CASE STUDY - DIGITAL PETITIONS

TOWARDS AN OPEN SOURCE DEMOCRACY

In our last issue, we looked at how US citizens can initiate legislative measures in some states through the 'initiative process', under which they are required to collect a certain number of signatures on petitions. If they collect the requisite number of valid signatures, the proposed measure goes onto the next public election ballot, and voters can then pass or defeat the initiative at the polls.

The nearest one can come at the moment to collecting signatures over the Internet for these purposes is to create a 'PDF' graphical file version of the initiative petition, post it on the web or email it to those requesting it, and let them print it out, sign it, and post it in.

This is an inelegant and often difficult way of proceeding, given the need to print the forms out on two sides of the paper, compress the text to fit in limited space and so on.

The obvious way to have people sign initiative petitions over the Internet is to let them sign them

using digital certificates. As of 1 October 1 2000, the US federal E-Sign bill is in effect, authorising the use of these online credentials to sign contracts online. It's only logical to say that if digital certificates are now good enough to sign multi-million dollar contracts, they ought to be good enough to indicate your desire to see a particular legislative proposal voted on in your state.

The 'Smart Initiatives Initiative' currently being circulated in California was created to implement this idea in practice. Its primary aim is to allow people to vote on a measure requiring the state to provide all citizens with a digital identity certificate. The project has until March 12, 2001 to collect 419,260 valid signatures of California voters who want to see it on the primary ballot in 2002.

With Smart Initiative petitions, as with any petition, verifying the identity of the signer is key. Still, while the identity of the signer must be knowable by the authorities that check the signatures, it need not be made available to the general public. In fact, under the provisions of the proposed Smart Initiatives Initiative, it is protected by the same restrictions on disclosure as are legacy pen-on-paper signatures.

Moving the initiative-signing process online benefits all parties involved. For proponents, it reduces the cost of circulating their petitions by several orders of magnitude. For citizen-signers, it makes it much easier to study a proposed initiative and then, if they want, to sign it from home, office, or other location.

For the election officials who currently need to spend months checking a mere random fraction of the submitted signatures before extrapolating according to arcane formulas to determine the 'official' number of valid signatures, the power and convenience of a digital system to rapidly and comprehensively tabulate the results would be a much-welcomed improvement.

Because the first major provision of the Smart Initiatives Initiative is the distribution by the state of a high-level digital certificate to each citizen, citizens-as-consumers and citizens-as-commercial entities will benefit as well. They will be able to use these certificates not just to sign initiative petitions but to buy insurance, order groceries, tele-commute, check their children's homework assignments, and do anything possible now or in the future that requires them to establish their identity online.

At a minimum cost of ten dollars each, however, providing 20 million Californians with a digital certificate will not come cheap. Hence another proposal that could lower this cost and pay other dividends as well, a proposal to develop Open Source Public Key Infrastructure (PKI) software.

Open Source software is computer programming code that is not secret. The instructions that make it run are available openly to everyone. It makes sense to consider the creation of an Open Source PKI Foundation to facilitate the creation of Open Source PKI code, not only to save the State of California a lot of money, but also to set the stage for using open source software to eventually provide Internet voting services.

In addition to the cost savings for the government, building a PKI and using Internet voting software where the internal code is open would mean that it could be properly understood by the people who use it. It would provide a technological analogue of the

political openness and participation that is central to this entire vision of what could be termed 'Open Source Democracy.'

Nor would it be inappropriate, eventually, to move many other existing and future e-government applications to an Open Source model. In such an environment, we could avail ourselves of a seamless web of information, decision-making, and functionality. As the reach and power of the web steadily evolve, these principles of openness and self-determination would be a concrete realisation of the long-sought ideal of 'government of the people, by the people, and for the people.'

[End of contents]

SECTION ONE: NEWS

E-GOVERNMENT NEEDS PUSH FROM THE TOP

Public sector organisations like local authorities must provide their staff with strong leadership from the top - chief executive level - to successfully push forward the e-government agenda, delegates at last week's Electronic Government Forum heard.

In a series of round-table debates at the Westminster event, a consensus emerged that, just as leadership from the Prime Minister is the best way of galvanising central government into developing online public services, other public sector bodies need an 'e-champion'. The individual selected must carry weight across all service departments, and the ideal person is therefore the most senior manager such as the council chief executive.

"The provision of services on the web has to be devolved, as it is front-line staff who have the knowledge to provide up-to-date information", one delegate said. "But many staff say they have too much else on to do it, they don't see it as part of their mainstream work. It needs leadership from the top to ensure they see online work as part of their day job".

The way to smooth full integration between staff's everyday 'offline' work and web-based work is to install a fully web-enabled information and knowledge management system, including document sharing, across an entire organisation, delegates agreed.

This was likely to mean purchasing an off-the-peg portal solution at relatively high cost, but the cheaper alternative of developing systems piecemeal in-house was unlikely to prove scalable and robust enough in the long-term to roll out across a whole organisation, and is therefore a false economy.

It emerged during the discussions that most councils had not yet drawn up coherent e-government strategies, pulling together service, information management and technology issues, although almost all acknowledged they needed one, and fast. Some bemoaned a lack of central government leadership on strategies for hitting e-government targets.

The event web site is at:

<http://www.electronic-government.com>

- Further reporting in our next issue.

POST OFFICES TAILOR WEB SERVICE

Around 1,000 post offices have taken up an opportunity to tailor a free web site provided under a nationwide deal reached last month between The Post Office and UKVillages.co.uk, an independent community web company.

Under the deal - whose financial terms have not been disclosed - all 18,500 UK post offices have been allocated a site with information about their opening times and product lines. There is also an interactive chat facility.

UKVillages.co.uk told E-Government Bulletin this week it hopes that half of all post offices will have taken up the opportunity to adapt and enhance their basic sites within six months. So far 970 have done so.

The project forms part of an 'e-government general practitioner' vision for post offices which will see trained advisers in each post office helping the public to access government information and services online. This idea was first floated in the 'Counter revolution' report from the Cabinet Office in June 2000:

<http://www.cabinet-office.gov.uk/innovation/2000/postoffice/postindex.htm>

and restated in last week's Trade and Industry Select Committee report 'The Post Office and the future of the network':

<http://www.publications.parliament.uk/pa/cm199900/cmselect/cmtrdind/724/72402.htm>

TACKLING WORKPLACE VIOLENCE ONLINE

A web site providing a focal point for managers and staff to share ideas and solutions to tackle violence in the workplace has been created by The Association of Local Authority Risk Managers and Sussex Police with the Confederation of British Industry and other public, private and voluntary bodies.

The site offers access to best practice for managers in drawing up strategies for preventing workplace violence as well as research, case studies and an interactive 'clinic' where people can ask questions and contribute ideas. See: <http://www.workplaceviolence.co.uk/>

MUSEUMS ENTER THEIR OWN DOMAIN

The museum and gallery community is to have its own top level Internet domain name, '.museum', as part of a tranche of seven new domains to be added from June next year by the global Internet domain registry ICANN.

However a request by the World Health Organization for a '.health' domain, which the WHO would have regulated to ensure online health-related information was safe and quality-controlled, was turned down amid fears it would be too costly and difficult to regulate properly.

The other domains to appear are '.info' for general information sites; '.coop' for co-operatives; '.name' for individuals, '.biz' for businesses; '.pro' for professionals; and '.aero' for the air transport industry. If the introduction of the domains is smooth more could follow. For more see:
<http://www.icann.org/tlds/>

COMPANIES HOUSE WINS E-BUSINESS AWARD

Companies House, the government agency responsible for company registration and dissemination of company information, has won the 'government' category of Computer Weekly's e-business awards.

Visitors to its website can search for information on businesses through a simple interface with a vast database. Before the site was built, customers had to go through a lengthy system of inquiries to obtain the same information. See:
<http://www.companieshouse.gov.uk>

Runners up were the Lord Chancellor's Department's for the 'Just ask' Community Legal Service legal information site (<http://www.justask.org.uk>) and the Surrey Police Information and Knowledge Environment (Spike), a secure mobile system by which officers can input and receive crime information when out on the beat.

CHANGE OF ADDRESS TRIALS GO LIVE

A long-promised facility for citizens to notify all government departments of a change of address with a single online form has been quietly launched in pilot format in a partnership between the Cabinet Office and three private sector web sites, according to the KableNET news service (<http://www.kablenet.com>)

The six-month pilot will transfer the information to six different government departments, with local authority involvement a longer term aim. There are security concerns, however, which may not be fully resolved until there is widespread use of electronic signatures.

The three test sites are 'Change of Address' from the Post Office at: <https://www.addressingthechange.com> (note the address begins 'https')
'ihavemoved' at: <http://www.ihavemoved.com>
and 'Simplymove' at: <http://www.simplymove.co.uk/>

CALL FOR MORE INTERDEPARTMENTAL WORK-GROUPS

The government must set up inter-departmental task groups to drive through modernisation if it is to succeed in its goal of providing a range of services electronically, according to a new report.

Published by EURIM, the collaborative Parliamentary/industry information society policy group, the report says ministers must completely re-organise departmental structures if modernisation is to be successful. Civil service career structures and training facilities need to encourage, facilitate and reward cross-departmental working, it says.

"Government must be joined-up from the perspective of the citizen with a choice of user-friendly interfaces (including the option of personal contact) which put them at the centre," it says. "There should be no 'wrong portal'; all channels likely to be used by the citizen should cross-refer."

The report praises local authorities for creating 'one-stop-shop' electronic centres, which eradicate traditional boundaries between services. 'A shock to the system - joined up electronic government' can be found at: <http://www.eurim.org/briefings/BR29FD.html>

'HUMAN ASPECTS' CONFERENCE

A conference on research into the 'human aspects' of the Information Society is to be hosted by the Information Management Research Unit at the University of Northumbria in Newcastle in April 2001. The conference will bring together researchers in information science, social sciences, psychology, information and communication technologies, education and learning, media, culture and

business. See:

<http://is.unn.ac.uk/imri/index.htm>

ELECTRIC DECEMBER RIDES AGAIN

Bristol City Council and South West Arts are among public and private sector bodies backing this year's 'Electric December', an online advent calendar which doubles as a showcase for high-tech creative industries centred around Bristol.

The project, which was first run last year to widespread acclaim, is a collaboration between such broadcast, film and multimedia luminaries as Aardman Animations, creators of Wallace and Gromit, and BBC Bristol. Each day a new 'box' will appear to open on the web, featuring 'virtual chocolates' which can be emailed to your friends and participatory events using broadband technology. See: <http://www.electricdecember.org>

[Section One ends]

SECTION TWO: US ELECTION SPECIAL - ONLINE RACE 2000

ALL ABOARD THE E-TRAIN

Internet voting has played an interesting cameo role in the US Presidential electoral shenanigans, as a pilot project to allow the first ever online votes to be cast in a Federal election has included two counties in the key state of Florida.

Several hundred absentee voters, mostly members of the military and their families, cast their ballots through the internet in a defence department pilot project called the Federal Voting Assistance Program (<http://www.fvap.ncr.gov>)

The program was set up because US citizens abroad were having trouble obtaining their ballot papers from local voting offices. Two counties in Florida - Okaloosa and Orange - were among five across the US selected to test the concept.

Hundreds of thousands of Americans did participate in other pilot electronic voting projects at polling stations in various states, but they also had to cast regular ballot papers and it was the latter that counted.

In September, California Governor Gray Davis vetoed legislation that would have permitted binding tests of Internet voting in local

elections. He cited a need for better protections against fraud and abuse. There are fears that viruses could be created which would change a vote before encryption. The Internet is also vulnerable to hacking attacks, which could tie up networks and prevent voting.

Meanwhile both Al Gore and George W Bush used the web and email as publicity and organisational tools in their battle for the White House, and in such a close race it may yet prove that whoever was most successful online wins the race.

Both candidates used email extensively to contact voters in their homes, with campaign teams working around the clock to send out messages.

The candidates' web sites carried a range of background information for voters including the obligatory photographs of the two men en famille. Visitors to the Bush site (<http://www.georgewbush.com>) were also invited to 'download some stuff', which turned out to be Bush logos and graphics for every conceivable situation, including a head-and-shoulders photo montage of George W for your computer desktop and the 'Bush-Cheney Outlook Today' customisation of Microsoft Outlook Express.

Al Gore's site (<http://www.algore.com>) offered similar options, with a pictorial journey through his childhood and formative years, focusing on all-American themes like his time in the army and holidays down on the farm: "While in Carthage he works on the family farm - getting up before dawn to help feed the livestock, cleaning out hog parlours and helping to clear and plough fields".

Gore's 'Internet tools for families' is aimed at people worried about their children accessing unmentionables through the web, and contains links to security software downloads such as 'NetNanny'.

The web, however, is a passive medium: far more significant is the size of a candidate's email list. Before the election, the Bush campaign set out to capture around two million email addresses from supporters, urging people to 'join the e-train' and receive regular news bulletins and, of course, exhortations to vote.

One email sent to the e-train list was entitled 'Will you be the difference?' reminding them that Kennedy beat Nixon on the strength of a few extra votes in Illinois, Missouri and New Jersey. The potential reward for voting the right way was a return mail saying: 'President-elect George W Bush thanks you.'

It is not yet known how close they got to that target figure of two million, but it is estimated the

Republicans spent \$5.7 million on their Internet initiative.

Other ways the Internet played a part in these elections included the rumoured emergence of 'vote-swapping', the use or potential use of the Internet for people to trade votes tactically between states. The concept appealed to people who wanted the independent candidate Ralph Nader to win the 5% of the total vote needed to gain state funding for his next campaign, but who did not want to disadvantage Al Gore's race for the Presidency.

The thinking was that such a person could swap their vote with someone in a strongly Republican state who wanted to vote for Gore but whose vote was unlikely to count there - the latter person would vote for Nader and the first for Gore, and both would achieve their goal. One site touting the idea in California was shut down, and it is unclear whether the practice did actually take place on any significant scale. For more see: <http://www.nadertrader.com/>

More alarmingly, a site was set up called Voteauction.com purporting to help people auction their votes to the highest bidder: this was shut down by a Chicago judge, although its owner later claimed the exercise had been satirical.

Beyond the Presidential race, the most widely admired online campaign was fought for the Senate in Washington State by Internet millionairess Maria Cantwell, formerly of the streaming media company RealNetworks.

Cantwell, who spent millions of dollars of her own cash on her campaign, set up a genuinely interactive policy discussion email list in which citizens could debate issues continually with her and her advisors. Separate email lists were run for campaign news and for voting reminders, so people could choose exactly what sorts of information they did and did not receive from the campaign, showing a rare grasp of Internet ethics. See: <http://www.cantwell2000.com/>

[Section Two ends]

SECTION THREE: US ELECTION SPECIAL - DIGITAL PETITIONS

THE TELEDEMOCRACY REVOLUTION THAT NEVER WAS

The two most common criticisms of fully-fledged, remote Internet voting are that it's not safe and that it's not fair.

The safety argument says that securing Internet voting against cybervandals and perpetrators of electronic election fraud simply can't be done, given existing technologies. The argument against Internet voting as unfair revolves around the so-called 'digital divide', the uneven distribution of access to the Internet within society.

There is something to be said for each of these objections. However, a more powerful complaint about Internet voting, which comes from a purely political viewpoint, is simply that it won't actually have much effect on the operation of the political process or the distribution of power in advanced societies.

The widespread implementation of remote Internet voting will be important to the companies that hope to make money by providing out-sourced election services to political jurisdictions. It will make voting easier and more convenient for those voters who already vote. Beyond that, there will be little to distinguish the political landscape of a jurisdiction using remote Internet voting from one using any of the legacy systems now in place.

If the current election campaign has shown anything, it's that a political system organised around and dominated by money, packaged candidates, and show-biz production values is, at best, able only to generate the same kind of interest created by a mediocre television series and a resoundingly negative reaction, ranging from apathy to disgust, on the part of a majority of those who are supposed to be deciding how they are governed. After months of this, letting people vote for their favourite candidate on the Net instead of at the traditional polling place just doesn't make any difference.

This isn't to say that the Internet is not capable of mediating the political process in ways that would give citizens more choices, that would significantly reduce the influence of money in the process, and that would give them more control over the outcome of disputes over issues.

But what's required to bring about these genuine reforms is the legal recognition of citizens' right to have an impact online and the practical means to accomplish this. And 'having an impact' in this context does not merely mean the right to be heard, it means the right to actually participate in the making of decisions.

More and more, 'Internet democracy' is being forced into various definitions that don't actually give people any power, merely the appearance of it. Elected representatives, for years reluctant even to give out their e-mail addresses (if they had them), now want to 'listen' to their constituents online. Their staffers in charge of listening build websites for this

purpose and log the incoming email the way they used to (and still) log the paper mail.

Sometimes the tabulated results even figure into decisions made by the representatives. But often they don't, and often they are quietly repressed by the whispered 'suggestions' of major campaign contributors that may run counter to the expressed desires of the listened-to but ignored mass of citizens.

Listening to the concerns of citizens over the Net is good. Posting campaign contributions in a timely manner on easily-accessed and easily-understood web pages is good. Letting people pay their taxes, apply for licenses, or find out about government services online is very good, since it saves government money and makes the lives of citizens easier. But any of these, or all of these, is not electronic democracy, it is not using the Net as it could be used to make government better, not 'more responsive,' but 'more democratic.'

Making government more democratic by means of the Internet means changing the laws and institutional arrangements we have now to include the active, daily participation of regular citizens in the formulation, discussion, and enactment of the laws by which society is governed. It means letting us govern ourselves with the best tools available, including especially the Internet.

So, is there an existing political process or structure that could be cyberized and then serve as a lever by which the actual will of real citizens can play a substantial role in the formulation and creation of laws and, through these laws, public policy.

It so happens that in the United States - or in about half the US states, at any rate - there is. It's called the initiative process, and allows citizens unhappy with the inaction of their elected representatives on a certain issue to formulate their own proposed law addressing that issue.

Proponents of such an initiative are required to collect a certain number of signatures of their fellow citizens on petitions. If they collect the requisite number of valid signatures, the proposed measure goes on the next election ballot. Voters can then pass or defeat the initiative at the polls.

In practice, the most significant element in getting an initiative on the ballot is the need to raise the necessary money to pay professional signature-gatherers. In California, where initiative proponents need to collect 419,260 valid signatures, the going

rate for these services is approaching one million dollars.

So what's the best course of action for a group or individual with a complaint or proposal they'd like everyone to vote on, but without a million dollars? Right now, there is nothing they can do. But if signatures could be collected over the Internet, it would be a different story.

That story could be about to unfold, thanks to a reusable, 'open source' online petitioning initiative called the Smart Initiatives Initiative. In the next issue of E-Government Bulletin we will set out how this works, and how it could shift the balance of democratic power towards the citizen in a new 'open source democracy' in the US.

* Article by Marc Strassman, Author of the Smart Initiatives Initiative and Founder and Executive Director of the Smart Initiatives Project. See:
<http://www.smartinitiatives.org>

[Section Three ends]

SECTION FOUR: ONLINE DEBATE - FUTURE HEALTH FORUM

KITEMARKS AND KITCHEN TABLE WEB SITES

The safety and quality of health information available over the Internet and the need to involve patients in developing information services were among the topics of debate in Future Health Forum, an online think-tank run earlier this month by E-Government Bulletin publisher Headstar with sponsorship from Deloitte and Touche.

Bob Gann, Managing Director of NHS Direct Online, told the debate: "We cannot possibly police the Internet - nor should we seek to do so. Our objective in NHS Direct Online is simply to make it easier for people to find good information than bad.

"We still need to do a lot of work on developing criteria for good information. The NHS Plan recognises this in its commitment to kitemarking under the aegis of 'NHSPPlus'. We need to strike a balance between quality criteria which focus on the issues of design, navigability, production values and so on and those of content value. A parent of a child with a rare disorder for example may find considerable support in a 'kitchen table' website which may be crudely designed but contain uniquely valuable information and shared experience."

However Rod Ward, Lecturer at the School of Nursing and Midwifery, University of Sheffield, said: "I do not believe in kitemarking or star ratings because of the problems in deciding who you are kitemarking it for, or what their needs are - and the changing nature of the information. Codes of conduct such as that run by the Health on the Net Foundation are useful, however it has already been found that these have been abused and policing them is a nightmare.

"Any site or organisation which attempts to evaluate and filter the quality sites must publish its evaluation criteria".

Paul Johnson, Director of Telemonitoring Research at the Women's Centre, John Radcliffe Hospital NHS Trust, said: "One approach to the problem of authentic websites and the digital divide created by e-health is to involve the patient in the development of websites. Many studies already show that patients do not understand the disease they have, any guidelines provided or the relevance to themselves.

"This applies especially to the socially excluded. A website could include patient health information (controlled by the patient) and a website that addresses their needs including health information in a format that they want. After years of conducting research on risk aspects of pregnancy as well as care in the community and failing to enlist the most socially disadvantaged women - often teenagers in the UK - we have embarked on developing a website for antenatal care (not just advice), information and education in the widest sense in partnership with such women.

"Many other clinical conditions should be amenable to this approach. Merely warning people of good and bad sites will have limited benefit as long as the public feel disenchanting with the health service on offer. There are no short cuts to patient empowerment - unwitting disempowerment is only one risk".

Tim Willis, Assistant Director of the UK government's 'Foresight' research programme, said: "There may be an emerging role for 'infomediaries' - systems and organisations that weed information targeted to the individual. I agree that the NHS has a particularly strong brand name to exploit opportunities, but there are others. Parallel to this is the increasing role of patient group websites providing information for the professions, public and patients. Information from experienced patients is valuable to those recently diagnosed."

The role of online learning for clinical professionals and others in the health services also came under the spotlight. Ruth Garner,

Consultant Occupational Therapist with Learn Net Advisors and Research, said: "Centrally-funded continuing professional development resources which use the multimedia capabilities of the web to provide up to date educational materials for clinical practice is a good idea. However, this is mainly useful on one end of the spectrum of learning - where there is an immediate need to know something.

"The other end of the spectrum is the learning that can be applied in the wider context of the organisation - collaborative learning that allows people to share knowledge, skills and experience. This type of learning needs to be based within the virtual classroom. Virtual learning doesn't necessarily take people away from the patient's bedside if it is constructed in a way that allows people to study when and where they are able to.

"In Birmingham we have also applied this methodology to people with disabilities - providing remote vocational guidance to them in their own home, opening up opportunities they wouldn't otherwise have had. This has involved developing new roles such as virtual mentoring.

"However, we have a long way to go in terms of changing the hearts and minds of healthcare professionals to find new ways of studying and working. We also have a long way to go in terms of awarding bodies accepting on-line learning as a credible way of learning and being assessed."

Ellaine Muscroft, Regional Consultant with the family support charity Home Start, said: "The voluntary sector appears to be leading in practical IT applications in preventative health care - for example the reduction of isolation and anxiety. The Samaritans 'listen' online. The growth of the electronic village hall has been swift - Barnsley electronic village hall has approximately 100 members, many of whom are unemployed and/or elderly. The Virtual Volunteering movement has clear potential for massive health benefit".

The full report of the debate will be published in the New Year at its web site:

ISSUE 92, OCTOBER 2000

IN THIS ISSUE:

Section One: News

- Birth of a HERO and an e-University; Property prices on the move; Companies fail internet shoppers; Gateway to culture; SOCITM strengthens international ties; Health information at the supermarket; Win a webby; Web round-up - e-government, e-taxation, parent zone.

Section Two: Conference report

- Institute of Healthcare Management

Section Three: Policy

- One stop shops

Section Four: Focus

- The Domain Name System

[End of contents]

SECTION ONE: NEWS

BIRTH OF A HERO AND AN E-UNIVERSITY

HERO, the new Internet portal for higher education (see E-Government Bulletin, March 2000), yesterday unveiled a prototype 'holding

site' ahead of its formal launch at the Higher Education Funding Council for England's annual meeting on 20 November.

The site at <http://www.hero.ac.uk> will act as a single access point to information on all higher education institutions and courses in the UK. HERO stands for 'Higher Education and Research Opportunities'.

Meanwhile the e-University project - a web-based college backed by a consortium of higher education institutions and also led by the HEFCE - has announced it could be making an operating profit within three years of its launch, planned for the 2001-02 academic year.

The e-University will develop web-based courses to compete in the 50 billion UK Pound global online learning market, targeting postgraduates, businesses and students worldwide.

The body will not act as a separate university, developing its own courses, but rather as a virtual learning 'brand' drawing together approved courses from various institutions. The idea is that a consortium of institutions can provide investment and economies of scale that outweigh the advantages of competing separately on a global stage.

For further information on HERO and eU see the left-hand menu on the home page of the HEFCE web site:

<http://www.hefce.ac.uk/>

PROPERTY PRICES ON THE MOVE

A service allowing people to search for average property prices using Wireless Application Protocol (WAP) enabled mobile devices has been launched by the Land Registry.

The service, available at <http://www.landreg.gov.uk/wap/>, allows members of the public and property professionals such as estate agents, surveyors and valuers, to make on-the-spot enquiries about residential property prices in a given area.

The prices are updated quarterly and can be searched by postcode, area or countrywide. The service also includes help finding the correct regional office, with contact details, and a calculator for its fees. Those without a WAP device can view the service on the web using the WAP emulator at <http://www.gelon.net/>

The Land Registry is also set to launch an online service to simplify the process of buying and selling property. The National Land Information Service, due to go live early in 2001, will allow property searches to be carried out via

the Internet, offering faster and more accurate property identification.

The Land Registry service is thought to be only the second to be developed by a public sector body in the UK. Earlier this year, Hampshire County Library launched the UK's first WAP-enabled public service, a directory of county libraries, at <http://wap.hants.gov.uk/library> (E-Government Bulletin, August 2000).

COMPANIES FAIL INTERNET SHOPPERS

One of the largest surveys of Internet shopping sites ever undertaken has found problems with more than a third of purchases.

Trading Standards officers in Warwickshire, Oxfordshire and Shropshire made test purchases from 102 UK-based companies.

In 38 per cent of cases orders did not arrive in the specified time and 17 per cent never arrived.

Reasons given were systems crashing, companies disappearing, items being out of stock or orders simply being forgotten. Nearly a third of orders were not confirmed and in almost half of cases no notification of dispatch was given.

The survey coincided with National Consumer Week (16-20 October), whose theme this year was Internet shopping. The Trading Standards Institute has issued a free booklet, *Shopping on the Internet - Better Safe than Sorry!*, which addresses consumers' concerns and offers advice on safe Internet shopping. It is available by ringing 0845 130 8080 or see: <http://www.tradingstandards.gov.uk>

GATEWAY TO CULTURE

Plans have been unveiled by the Department for Culture, Media and Sport for an online gateway to British culture and the arts.

Following a 5 million UK Pound consultation and development process, Culture Online will become a key resource for schoolchildren and adults, allowing people to explore the UK's national museum and gallery collections, films and music and stage performances.

Children studying Shakespeare, for example, will be able to download the text of a play, watch an online performance and take part in discussion groups with other students and the most recent director of the play. They will also be able to call up costume designs and programmes of past performances.

SOCITM STRENGTHENS INTERNATIONAL TIES

The Society of IT Management in local government (SOCITM) has signed co-operation agreements with similar professional bodies in the US and Sweden.

The agreements, with Government Management Information Sciences in the US and Kommunal IT-Samverken in Sweden, will allow information and best practice to be exchanged and members of the different bodies to attend each other's conferences.

SOCITM already has co-operation arrangements with its Dutch sister organisation, VIAG, and it is in discussions with sister organisations in Australia, New Zealand, Denmark, Germany and Eire.

Meanwhile, as part of its autumn training programme, SOCITM is running a series of three one-day courses in e-government.

'E-government explained', 'Developing local portals', and 'Introduction to XML' take place in Winchester on 25- 27 October and Leyland on 20-22 November. For booking information, email: bobg@socitm.gov.uk.

HEALTH INFORMATION AT THE SUPERMARKET

Some 153 free information kiosks linked to the NHS Direct web site and telephone information service are to be sited in accessible public places around the country by the end of this year, health minister Gisela Stuart has announced. The kiosks will be located in places such as supermarkets, pharmacies, hospital accident and emergency departments and walk-in medical centres.

The NHS National Plan, published in July, outlined a commitment to provide more than 500 NHS Direct information points by 2004.

The NHS Direct site is at:
<http://www.nhsdirect.nhs.uk/>

WIN A WEBBY

The international Webby Awards, the glitzy San Francisco-based equivalent of the Oscars for the Internet, has added a 'Government and law' category for its fifth annual event in the summer of 2001.

For a chance to win and hobnob with stars like David Bowie and Francis Ford Coppola (who are among the judges), visit <http://www.webbyawards.com> for submission rules and an online entry form. The deadline for entries is December 15, 2000.

WEB ROUND-UP

E-GOVERNMENT is the topic of this month's 'iMP', the online magazine on information impacts published by the Center for Information Strategy and Policy in the US. Contributors include E-Government Bulletin editor Dan Jellinek. See: <http://www.cisp.org/imp/>

E-TAXATION A site dedicated to the discussion of e-commerce taxation has been created by Italian academic Gualdo Tadino at: <http://www.e-commercetaxation.com>

PARENT ZONE: The Scottish arm of the National Grid for Learning has produced a new section collating resources for parents and guardians of school age children: <http://www.ngflscotland.gov.uk/parentzone>

[Section One ends]

SECTION TWO: CONFERENCE REPORT - INSTITUTE OF HEALTHCARE MANAGEMENT

TELEMEDICINE CUTS COSTS WITHOUT REDUCING QUALITY

Electronic consultation by doctors with hospital outpatients, including email and videolinks, can cut healthcare costs by 20% without reducing quality, delegates at the Institute of Healthcare Management (<http://www.ihm.org.uk/>) annual conference in Harrogate heard earlier this month.

Ian Jardine, a member of the IHM's Telemedicine and Telecare Programme Team, said research completed in Finland in 1999 found that the use of electronic consultation with outpatients over a four-year period increased the number of consults by 20% but reduced physical visits to the doctor by some 40%, leading to the cost cuts.

And the evidence was that the quality of electronic consultation was just as high, he said. "It was of variable quality - but then so is real-life consultation - the variation between doctors was the same". It is also easier to audit the quality of electronic consultations.

Another advantage of 'telemedicine' - defined as the use of information and communications technologies to provide healthcare at a distance - is the ability to access specialised expertise, Jardine said. With services like pathology, for example, results are

better where a pathologist has specialised experience in the area under examination, for example breast cancer pathology. Unless a test is carried out in a very large hospital, this expertise will not be readily to hand, but pictures of a high enough quality can easily be sent over the Internet for remote examination by an expert. Even more advanced systems are being developed that allow a pathologist to manipulate a robot arm online to alter a microscope angle and view the results using a live video feed.

Telemedicine can provide good back-up for nurse-led treatment centres as well, he said. One nurse-led minor injury clinic in Cornwall gains input from doctors when needed via a video link to the local hospital, for example to view an x-ray. As well as making efficient use of everyone's time, this is excellent training for nurses, who can play a more active role than usual in the consultation.

Home care is another area where remote communications links can prove invaluable. Jardine said a US project had introduced 'virtual visiting' by health professionals to residents of an old people's home using cheap web-cams on top of television monitors. The system allowed more regular communication, making people feel less lonely.

He said he had heard that with a small tweak to the system, users had found they could begin to communicate with each other as well, starting up a virtual support community.

Systems like these are likely to develop in the future to include remote monitoring of physiological signs like pulse rate, or even daily activities like how often a person goes to the toilet - such personal monitoring would be subject to the full approval of the patient, he said, but the evidence showed people were willing to be monitored in this way, as it made them feel more secure.

More frequent contact with patients through virtual visiting can also be of tremendous value in mental healthcare, Jardine said.

"When it comes to psychiatry, telemedicine works very well. Perhaps it is because many psychiatrists don't want to be in the same room as their patients - and certainly patients don't want to be in the same room as their psychiatrists".

Virtual visiting was good for people suffering from depression, for example, because such people often benefit greatly from frequent contact which it is not always possible to provide with physical visits due to the cost and time restrictions on health professionals.

"Even though the visits are virtual it is better than making contact less frequently", he said. "It might also mean that occasionally a GP can also take part via videolink in a contact between a community worker and a patient of that GP, where a combined physical visit would be impractical".

This latter example demonstrates that the benefits of telemedicine multiply once a range of professionals or healthcare organisations use the same system. Clinicians may be able to collate data more easily from a range of tests or sources to provide a more complete record of a patient, for example.

Of course, telemedicine is not restricted to high-tech applications - as well as web and email services, videoconferencing and robotics, it can include services conducted over the good old-fashioned telephone line.

The telephone can often be the most powerful telemedicine tool of all, Jardine said: one GP in Manchester already conducts half of his outpatient follow-up consultations by telephone, saving on the time and effort of a house-call and ensuring all follow-ups are carried out in good time.

Nurse-led telephone call centres will increasingly be developed to serve multiple functions, he said, for example combining the NHS Direct patient advice service with ambulance calls, home alarm systems and even physiological monitoring.

Of course, telemedicine is not without its problems. One issue is that the companies that make the expensive equipment needed to carry out consultations and other procedures by videolink or other remote communications technologies are keen to sell as many such machines as possible - one to each hospital. It is more efficient for the health service, on the other hand, to buy one machine centrally for a region and simply cable different hospitals and clinics into it. This difference in outlook can cause tension.

There is also a great deal of discontent with the development of the health service's internal network, NHSNet. Delegates took turns to grumble about how the service simply "doesn't work". "It gets you on the Net but very little else", said one. "It's email system doesn't work" said another.

All agreed NHSNet was secure, but Jardine said overtight security was actually causing absurdities of its own. "There is an automatic system for stopping the exchange of pornographic images over the network. But for some reason, it identified the IHM logo as pornographic and wouldn't transmit it".

Eventually advances in telemedicine combined with staff shortages in the UK could also lead to the NHS drawing on the online services of health professionals from all over the world, he said. People could send images for radiology checks as far away as India, he said, and already Surrey social services is interviewing people for jobs from Australia and New Zealand via a videolink.

[Section Two ends]

SECTION THREE: POLICY - ONE STOP SHOPS

CENTRALISED DELIVERY - R.I.P.

The centralised one-stop-shop approach to service delivery has been growing in popularity for over a decade now, but is it always helpful, and can it really solve the problems faced by councils in today's political and technological environment?

There are a growing range of issues which are critical to those considering the development of physical, 'bricks and mortar' one-stop-shops.

There is plenty of pressure on councils, not least from central government, to deliver the wide-ranging 'modernisation agenda'. However, the language of partnership, joined-up thinking, participation and consultation can be little more than empty rhetoric. For the sake of customers and the communities we serve, it is vital that the interconnections are genuinely made between the various agencies which serve them.

Public services are hampered in tackling the modernisation agenda by a series of organisational cultures derived from their functional, departmental and professional inheritance. In the small market town where I work, if you became unemployed you may need to see up to six different agencies, in six different buildings, filling out six different sets of forms.

Future services must be constructed around life episodes such as birth, death, changes of address, becoming unemployed and so on.

One-stop-shops can help in this regard, but only if they facilitate the creation of multi-agency

frontline teams. The bricks and mortar approach can no longer be regarded as being sustainable for just one organisation. These teams must be accountable for achieving holistic outcomes, and so must be properly empowered by their component organisations. To deliver, they must have access to information and systems that cut across organisations: interconnections must be made, and relevant data assembled on individuals and their needs.

Telephone call centres are encouraging centralised service delivery and no doubt this trend will continue to accelerate. Those providing services to rural communities are aware of the potential downside of this approach. There is an urgent need to move to closer community service delivery in such areas as neighbourhood renewal, tenant compacts and community plans.

Currently some of my staff work alongside the police in a mobile police station to serve isolated communities across 250 square miles. This is only a 'first stop' service. We need to turn our staff into local, mobile one-stop-shops, making use of new technologies such as WAP and mobile videoconferencing. However, mobile working will merely be a continuation of the status quo unless opportunities are taken now to facilitate decision-making on the ground.

Of course, this locally-led, multi-agency service delivery must not be merely a one-way process. We need to complete the loop. Systems need to be able to capture and analyse data about customer needs and trends.

This information must be used to inform future patterns of service delivery and budgetary priorities. As technology improves, employees will gain almost instant communications, be able to perform multi-tasking and obtain and respond to data sensitive to time, place and preferences.

Flexibility will allow us to break away from 9-5 service delivery. The centralised one-stop-shop approach can move us forward, but it can also be a hindrance, and significant resources can be released if our staff become locally-based one-stop delivery points.

* Article by Stephen Brown, Head of Services (Bassetlaw East), Bassetlaw District Council. The article was written to stimulate debate at a discussion group due to run on 15 November in London at this year's Local Government Solutions event, part of the Electronic Government Forum. For more information see: <http://www.electronic-government.com/>

[Section Three ends]

SECTION FOUR: FOCUS - THE DOMAIN NAME SYSTEM

EUROPEAN RIVAL TO THE US-LED DOT.COM REVOLUTION

The Internet domain name system, which translates maps numerical 'IP' (Internet Protocol) addresses for Internet-connected computers into more user-friendly words - is about to undergo several major changes which will be of keen interest to public sector bodies.

The changes include the creation of a '.eu' top level domain as a European rival to the US-centric '.com' revolution. The move was initiated by the European Commission, which in July 2000 confirmed its intention to create and manage the new domain. The announcement can be seen at:
<http://www.ispo.cec.be/eif/InternetPoliciesSite/DotEU/WorkDocEN.html>

The commission received strong backing for its initial proposals, which were released for consultation in February. The responses are online at:
http://www.ispo.cec.be/eif/InternetPoliciesSite/DotEU/Analysis_of_responses.html. Further consultation will now take place on the concrete steps to be taken to establish the domain, including how the EU will work with ICANN (<http://www.icann.org>), the international body which oversees the Internet domain name system.

The commission says the .eu domain will strengthen the image and infrastructure of the Internet in Europe, acting as a counterbalance to the historical dominance of the Internet by US concerns. It could also increase the ability for European companies to run e-commerce operations in an atmosphere of adherence to EU law and policies such as competition, data protection and consumer rights.

In this way European organisations would be offered an alternative to the choice between operating under US-led top level domains like .com, or operating under their national country codes, which can be too limiting in today's global marketplace.

However, there are various questions to answer in introducing the new domain. Will it be a generic top level domain like '.com', which will allow free registration by anyone or any organisation within the EU, or will it have any restrictions on the types of organisations that can apply and how they use second-level domains within the space?

For example, one way of proceeding might be to replicate the existing generic names like .com

under .eu, so you would have .com.eu, allowing Europeans with existing '.com' registrations to have first chance to register a '.eu' equivalent without fear of 'cyberpiracy' - the registration of domain names by others in bad faith in an attempt to sell them. An alternative, or additional measure, might be to create several a series of chartered spaces within '.eu' such as 'museum.eu', to provide rights and opportunities to various sectors like, in this example, the museums sector.

There could be some knotty problems surrounding which European public sector organisations, if any, will use the .eu top level domain. If it is restricted to a generic domain or generic second level domains like .com.eu, or to chartered domains with a commercial flavour like .bank.eu, then it would not be a problem. But if some government agencies in some countries wanted to create a '.gov.eu' domain, there could be political headaches for many - would any UK or Danish government agencies move to use the domain, for example, with such strong anti-European sections within their electorates?

Another imminent development in the global Internet domain name system is the creation of a series of new top level domains by ICANN itself, including the possible introduction of one or more personal domains.

Personal top level domains would for the first time offer a structured name system for individual Internet users - a fascinating prospect and a vital key in expanding the Internet's potential for ordinary citizens.

Possible structures for such as domain could revolve around a top level domain such as '.person', '.nom' or even '.individual'. The second, third and possibly even fourth levels of the domain system would be used to reflect the individual's name and geographical location in some way, making the whole domain personalised but distinguishing it from other people with similar names.

Thus for example the top level domain could come with a stipulation that all registrations must be at three levels, and that the second level must reflect the user's surname and the third level their first name. So the domain for Jane Doe could be jane.doe.person; and if a second person came along with the same name, they could register a domain such as jane.doe2.person

An alternative would be to use one of the levels to express a geographic location, so it could be jane.doe.copenhagen.person

Registration under a personal domain would have to be exempt from all regulations surrounding infringement of trademark or copyright law. This protection should remain so long as the domain is used for personal purposes, for example

to receive email or for a personal home page, and not for commercial trading purposes.

This would ensure for example that people with names corresponding to trademarks could not be pursued by the trademark owners: it would not be satisfactory for everyone with the name Mickey to be under threat of action from Disney, for example.

Personal domains will be of vital importance for Internet users in the future, because they could be used to confirm their identity in all sorts of situations, from e-commerce to legal transactions. They could also become a key part of an individual's social identity and image - families often already build up home pages together, so in future the personal domain will become the focus for all that kind of activity. One's email address is already an important identifier.

The concept will therefore emerge of a person's 'digital identity', and this is likely to be closely linked to their personal domain name. A generic top level domain reserved for personal domains will allow peoples' digital identities to better reflect their names, and most importantly will allow them to be controlled by the individual.

* This article is extracted from 'Connecting to the Internet - a response to ICANN's proposal to reform Internet Top Level Domains', a new report by the domain registrar Speednames. The research for the report was carried out by Headstar, publisher of E-Government Bulletin. The report can be found at <http://www.speednames.com/> or email mpower@hillandknowlton.com

E-GOVERNMENT BULLETIN

The Email Newsletter On Electronic Government,
UK And Worldwide.

ISSUE 91, SEPTEMBER 2000

IN THIS ISSUE:

Section One: News- Plans to boost repackaging of official data; Online elections a cure for voter apathy; Blair presents UK online policy package; Online procurement trials a success; Plugging Asian women into the digital economy; A guide to government web sites; Best libraries on the web; E-government and local politics.

Section Two: Education - The online learning revolution

Section Three: E-government- Social inclusion

Section Four: E-democracy - Electoral reform

SECTION ONE: NEWS

PLANS TO BOOST REPACKAGING OF OFFICIAL DATA

The UK's e-Minister Patricia Hewitt has announced plans to streamline the way government information - from health data to crime figures, school league tables and census results - can be purchased and repackaged for consumers by Internet and publishing businesses.

The 'Government Information Review' includes a pledge to make Crown Copyright public information available in digital format wherever possible; and to ensure that most information is available at marginal cost price - covering merely the expense of making the data available, not of producing it in the first place.

However, the cheap data deal excludes a vital group of government 'trading funds', agencies which create high value information and trade as businesses including Ordnance Survey, the Meteorological Office, HM Land Registry and Companies House. There was a vaguer pledge to "improve pricing and dissemination of information" for these bodies.

Other plans include a new on-line licensing service, "Click-Use-Pay" being implemented by Her Majesty's Stationery Office (HMSO); a consultation paper on the future role of HMSO operating in a regulatory capacity, including a new complaints procedure for customers; and all government bodies to speed up creation of information asset registers linking to an 'inforoute' website being developed by HMSO.

Government departments and agencies will continue to be free to develop their own value-added information services charging market prices provided there is a level playing field among all participants, the minister said. There was also a recommendation that other public bodies such as local authorities and quangos review their charging and licensing strategies for copyright material.

Fred Perkins, chief executive of The Stationery Office - the company formed from the privatisation of HMSO's publishing operations and one of the main providers of value-added services for official information - said the new proposals were "interesting . . . but the devil is in the detail. Crown Copyright is only one factor in the exploitation of government information: freedom of information is another, and the whole spectrum of joined-up government and e-government infrastructure issues.

"The government is at a very early stage in committing itself on several interrelated fronts. These things won't be delivered overnight - the detail will determine how fast, where, and how large will be the opportunities". For the new proposals in full, see: <http://www.hmso.gov.uk/govinfoev.htm>

ONLINE ELECTIONS A CURE FOR VOTER APATHY?

The Hansard Society for Parliamentary government is to exhibit a 'Virtual MP's office' at all three main political party conferences this month - a mock-up of how technology could be used in the future by our elected politicians. The society, with backing from BT, will also publish a guide for MPs on the use of technology to enhance their constituency and other work.

The office and guide will be unveiled first on 17 September at the Liberal Democrats' conference in Bournemouth.

The society is also hosting fringe meetings at each conference on "Voter apathy and what is to be done", where leading politicians and commentators will consider solutions to poor election turnouts including whether Internet voting could help. Further information on the project is due to be posted up shortly at: <http://www.hansard-society.org.uk/edemocracy2.htm>

According to a recent nationwide survey conducted by pollsters ICM on behalf of digital television company Ondigital, people would indeed be more likely to vote if elections were to take place online. More than half of respondents said they would be more likely to register their political preference in an election if they could vote on the Internet.

However, the Electoral Reform Society (<http://www.electoral-reform.org.uk/>) believes there are significant problems to be overcome before on-line voting is a viable option. Their worries include barriers to access and the danger of fraud.

The society has set up a commission to report by the end of the year on the experimental pilot voting schemes run in May's local elections, which included electronic voting procedures, allowing people to cast their votes over the Internet or using touchscreen computers in polling stations.

The pilots were enabled by the Representation of the People Act 2000, and if successful, the intention is to apply them to national parliamentary elections in due course. For more information see:

<http://www.homeoffice.gov.uk/ccpd/cnu/evalcont.htm>

BLAIR PRESENTS 'UK ONLINE' E-POLICY PACKAGE

The Cabinet Office's Performance and Innovation Unit this week published a plan to boost e-government, including financial incentives for 'joined-up' working between government agencies, as part of a wave of 'UK Online' policy announcements unveiled by Tony Blair.

The PIU report, 'e.gov', is to be backed by a £1 billion investment in electronic service delivery over three years. Key points include the focusing of services on the needs of users, rather than government departments; backing up services with advice and support, to ensure high levels of take up; and partnership with the private and voluntary sectors.

The centrepiece of the document is a pledge to reinvent how government works internally, with "powerful incentives to change and radical shifts to cross-boundary working . . . including sharpened financial incentives to promote electronic service delivery, and the creation of a government incubator to develop new service ideas". See:
<http://www.cabinet-office.gov.uk/innovation>

As part of the broader UK online campaign launched by the Prime Minister, the locations were unveiled of the first 600 'UK online centres' for free public Internet training in some of the UK's poorest communities. The government is aiming to create some 6,000 such centres, including all public libraries, supported by a national online education service 'learndirect'. See:
<http://www.ukonline.gov.uk/>

A linked initiative to help small businesses exploit new technologies with advice available face to face, online or by telephone was launched by the Department and Trade and Industry. See:
<http://www.ukonlineforbusiness.gov.uk/>

ONLINE PROCUREMENT TRIALS A SUCCESS

The Buying Agency (<http://www.tba.gov.uk/>), the government procurement agency operating within the Treasury's Office of Government Commerce (<http://www.ogc.gov.uk/>), is set to expand trials of its electronic procurement catalogue.

Initial trials began in April, with around 30 organisations including central and local government bodies and universities using the catalogues to purchase a range of some 500,000 goods and services online from 400 different suppliers.

Following the success of these pilots, a further group of organisations will be added over the next month or two. The service will be made available to all government bodies later this year, to meet the government's target of handling 90% of all procurement electronically by 2001. See:

PLUGGING ASIAN WOMEN INTO THE DIGITAL ECONOMY

A new report on how to overcome the problems faced by women in the Asia-Pacific region in taking part in the digital economy was published this week by 'WomenAsia.com'.

The report, by WomenAsia.com founder Rosemary Brisco, was presented to the World Economic Forum's Asia Pacific summit on the gender digital divide, which ran from 11-13 September in

Melbourne, Australia.

It examines issues relating to women in the workforce; women as entrepreneurs and as consumers; and 'the invisible digital divide'. Suggested solutions included better training, corporate sponsorships and government subsidies. See:
<http://www.womenasia.com/divide/>

A GUIDE TO GOVERNMENT WEB SITES - SECOND EDITION

'Official UK', a comprehensive directory of government and other public sector web sites featuring reviews of more than 1,000 sites, was published in its second edition this month.

The book, written by E-Government Bulletin editor Dan Jellinek, lists sites by subject area such as Foreign Affairs and Defence or Education and Science, with separate chapters for Scotland, Wales and Northern Ireland. The new edition also features reviews of the web sites of international bodies such as the EU and the UN. An appendix contains links to the main UK political party sites.

The guide costs £25, ISBN no: 0117024465. For more information and to order a copy visit:
<http://www.official-uk.co.uk/>

THE BEST LIBRARIES ON THE WEB

EARL, the consortium for public library networking, has launched its 'Best on Web 2000' awards for UK public library web sites. The initiative seeks to reward libraries with sites that are informative, fun and interesting to use.

Anyone can nominate up to three sites for the awards, bearing in mind that the judges will be looking out for the best information content, interactive features, and design and usability of sites. Winners will be announced at the EARL annual conference in November 2000.

Full judging criteria can be found on the awards' web site, as can a list of public library websites to choose your nominations from. Nominations, which can be sent via an online form, must be received by 6 October. See:
<http://www.earl.org.uk/bestonweb/2000.html>

E-GOVERNMENT AND LOCAL POLITICS

The implications of e-government for local politics and local government structure will be among topics discussed at an October meeting of the Promoting Electronic Government (PEG) project. PEG is run by a consortium of councils and the consultancy CDW and backed by the Department of the Environment, Transport and the Regions.

Bob Kerlake, Chief Executive of Sheffield City Council, will address the 'Community and e-government' meeting on 24-25 October in Sheffield. Other issues to be covered include partnerships for electronic services. See:
http://www.eipdg.org/sheffield_oct2000.htm

SECTION TWO: EDUCATION

- THE ONLINE LEARNING REVOLUTION

The steady rise of Internet-based and other forms of interactive online learning in higher education are set to force both academics and students to radically rethink the way they work and study, according to a leading UK expert.

Diana Laurillard, Professor of Educational Technology at the Open University, told E-Government Bulletin: "The ways academics spend their time will have to change. Currently, university academics spend most of their time lecturing, marking assignments and holding tutorials, and their teaching role is that of a 'craft amateur'. With an increase in online learning, they will have to become more professional in developing high quality online educational resources.

"It will not be adequate to simply put their lecture slides up on the web - that is a bit like dumping students in a library and telling them to get on with it. They will need to develop online resources that are interactive, offering feedback, automated assessments of work, and other forms of support".

The way students employ their time is also undergoing changes, she says. "Increasingly, students are having to work part-time to cover increasing costs and reduced financial support for learning, or with a growing number of mature students, are spending more time with their families.

"If they are working 20 hours a week, they will have to fit their studies around this, so there will be less time for lectures",

Laurillard says. "They need the flexibility to be gained from more online learning, although it is not suitable for everything, and it is important to obtain a balance across different learning technology media".

Her assessment of progress to date is not rosy, however. "We're not yet exploiting technology for these purposes nearly enough - there is a long way to go".

Ms Laurillard was among speakers at this week's seventh annual ALT-C conference on integrated learning technology at the University of Science and Technology in Manchester.

Elsewhere at the conference, a new working group spearheaded by the UK Office for Library and Information Networking (UKOLN) was examining the development of national standards for the description of educational resources in digital formats.

The 'Metadata for Education Group' (MEG) was formed to reach a consensus across the educational, public library, museum and data archive community on how to describe learning tools such as CD-ROMs and online courses, and to disseminate best practice.

"At the moment there are a lot of public sector agencies producing educational content online, from the National Grid for Learning to the Environment Agency", says the group's leader, Dr Paul Miller of UKOLN. "The problem is that they are all described in different ways, using systems developed locally, and learners can become confused".

Examples might be descriptions of who a particular course is for; what format it takes; or what UK educational qualifications it is working towards. In some cases different terms may be used to describe the same objects, and in others, the same terms will cover completely different objects.

An increasing number of publishers and other organisations are creating databases of educational resources, and the main problems with descriptions arise when people try to search across these

databases, Miller says.

The MEG is developing recommendations for standards, by examining best practice in the UK and internationally. It first met in June, and again this week, when members drew up guidance for public sector bodies on selecting and implementing description standards.

The group will meet again in Edinburgh in November. In the meantime, it is setting up a register of what work is currently being carried out by various public sector bodies in this field. For more information see:

<http://www.ukoln.ac.uk/metadata/education/>

Learning and Technology Minister Michael Wills MP used ALT-C 2000 to launch a new award scheme to reward organisations using new technologies to develop lifelong learning opportunities in their local communities.

The BT Lifelong Learning Awards will offer more than £500,000 per year - divided into awards of up to £75,000 per project - to universities, further education and sixth form colleges, libraries and any community partners for projects promoting access to technology, innovation and teamwork.

See:

<http://www.bt.com/lifelonglearning>

And for further information on ALT-C 2000 see:

<http://www.umist.ac.uk/alt-c2000/>

SECTION THREE: E-GOVERNMENT - SOCIAL INCLUSION

Raw percentage targets for the provision of public services online - as already set for central government and likely to emerge shortly for local government - must be implemented in the context of a range of vital social issues including social inclusion and equal opportunities, according to a new e-government think-tank.

The high-level 'E-government to E-community' group, launched this month by the local authority chief executives' society SOLACE, is the brainchild of James Hehir, chief executive of Ipswich Borough Council and president elect of SOLACE.

An initial 'scoping' paper prepared for the group sets out its aim to focus strongly on how technology will affect local communities, including tackling 'digital divide' issues.

"Government targets for the conduct of business using electronic means . . . need to be supplemented by a series of other themes including social inclusion, the development of citizen centric approaches, and the relationship between e-government and the modernisation agenda, including the drive for Best Value", the paper says. The effects of technology on working patterns and local economies should also be examined, it says.

The think-tank will stress the importance of leadership both from and within local authorities, urging the need for "positive attitudes of engagement rather than defensiveness or fear". Ways in which councils could take a lead include working with local training providers to boost technology skills among their own

employees, so helping to create a training culture in the external community, the report says.

Other questions the think-tank will address include:

- * Should local government be actively promoting access to new technologies within the local community?
- * To what extent should councils lead by example? Will they be taken seriously by their communities, and be able to achieve community leadership, if they do not embrace new technology itself ourselves in everything they do?
- * Flexible working can have many benefits, but can equally create problems. Should the local authority play a role in promoting an awareness of the implications of flexible working within the community?
- * How will changing working patterns affect local authority service delivery?
- * How can councils help people in all parts of society, for example people for whom English is a second language cope or young single parents, access technology and digital services?
- * Is there a danger that some sections of the community will become economically disadvantaged?

The think-tank is divided into a core group and a wider consultation group. The core group is comprised of Mr Hehir; David Henshaw, chief executive of Liverpool City Council and current SOLACE president; Clive Grace and Mike Sanders of SOLACE; Gordon Mitchell, chief executive of Bracknell Forest BC; Annie Ralph, chief executive at Braintree District Council; Rob Garnett, chief executive at Breckland Council; Claire Dimitros, head of IT at Essex County Council; Martyn Harwood, director of corporate services at Gloucester City Council; Martin Ferguson and Martin Greenwood of the Society of IT Management (SOCITM); Steve Baker, head of facilities management at Ipswich; and representatives of the group's three sponsors BT, Oracle and Zurich Municipal. A representative of the government's Central IT Unit is due to join the group shortly.

A final report will be produced by the group in February 2001, to include a range of case studies reflecting the challenges faced by different types of council such as urban redevelopment and rural issues. It will also include check-lists for councils and others for present and future action; suggestions for the role of business; and suggested areas where central government action or action from local authorities collectively may be needed to drive progress.

Ipswich, where the think-tank is based, has a strong recent track-record of community technology projects including a recent project in which Internet screens were installed in tea rooms run by Age Concern for use by elderly people.

The city is also positioning itself as a leading UK centre for high-technology companies under the 'IP-City' initiative, after some bright spark in the regeneration department noticed the local 'IP' postcode also stood for 'Internet Protocol'. The initiative forms part of a 'Cambridge-Ipswich High-Tech Corridor' programme, in which the city is looking to partner Cambridge as a major European centre of innovation.

For further information or to contribute to the think-tank's deliberations, Bulletin readers should contact James Hehir or Steve Baker on james.hehir@ipswich.gov.uk or stephen.baker@ipswich.gov.uk

The SOLACE web site is at:
<http://www.solace.org.uk/>

And for more on 'IP-City' see:
<http://www.ip-city.com/>

SECTION FOUR: E-DEMOCRACY - ELECTORAL REFORM

TIME TO MOVE TO A VIRTUAL CONSTITUENCY?

As well as potentially improving the speed and efficiency of the electoral system, electronic voting - including Internet voting - and electronic vote-counting could revolutionise the very fabric of democracy in the UK.

The annihilation of geographic distance by Internet use and the gradual shift towards adoption of proportional voting systems for elections at various levels could combine to create the potential for a move away from geographic constituency politics to the politics of interest groups or communities of interest.

The prospect was raised in a recent issue of E-Government Bulletin (August 2000, Section Four). In his review of the Government Computing Northern Ireland conference, Dr David Newman of Queen's University Belfast wrote: "What if some MPs represented an interest group right across the country, rather than a physical constituency, using the Internet to keep in touch with this dispersed group?"

How would such a system work in practice? Could such a seismic shift in our political landscape really occur?

Currently, the key institution of British politics is the political party. The accountability of MPs is far greater to their party than it is to their constituents, and the pressure on them to obey the party whip is immense. With the growing availability of internet access, it has now become much easier to involve most of the people in the control of government and eliminate the wastage of votes that occurs under the present, first-past-the-post (FPTP) electoral system.

One stated aim of the Jenkins Commission on voting reform - that of maintaining geographical links - need no longer imply single-member constituencies, since it is now as easy to confer with a representative anywhere in the country as with one maintaining an office in the nearest large town. Multi-member constituencies, served by a varied team of elected representatives, could even strengthen community links by giving almost all voters someone that they have helped to elect.

Of the various systems currently under consideration, the Alternative Vote (AV) does extend voter choice to some extent by allowing electors to identify a second preference candidate to whom their vote is transferred if their first preference candidate stands no chance of election. Experience with AV in Australia, however, was that the third largest party, the Democrats, failed to get a single seat, despite getting some 15% of the vote.

The Additional Member System, in which some members are directly elected and some are elected from party lists drawn up by the parties themselves, provides better proportionality.

However, this system enhances the power of party organisations to the detriment of the electors.

A better choice, especially now that ballot calculations can be carried out by computer, is for the single transferable vote (STV) system with multi-member constituencies. Electors mark a list of candidates in order of preference, and the counting process involves the transfer of the unused portions of first preference votes to the respective second preference candidates and so on, until no further fractions can be used.

The sizes of the constituencies would vary according to geographical or natural communities, but could typically be of such a size as to elect five, six or seven representatives. The limit depends on the number of candidates, typically 20 to 30, that may conveniently be listed on the ballot paper or screen and from which the voter may select an order of preference.

One problem with STV is how to decide the order in which candidates' names appear so as to avoid unfair advantage to those near the top of the list. With a fully electronic system, however, names could be presented in different random order for each elector, eliminating any bias. The whole process would be much quicker and more reliable when using computers.

The experience with STV in the Republic of Ireland shows that the result is broadly proportional and that governments emerging from the process will generally be stable.

So where does the issue of 'constituencies of interest' fit in with this system of voting? Under STV, it might indeed be possible for a number of 'special interest' candidates to stand for virtual constituencies. Voters could nominate which special-interest constituency they wished to inhabit, removing themselves from their geographical constituency as they did so.

This process would entail a national register of all voters showing their respective constituencies, and allowing ballot forms with the correct lists of candidates to be supplied. For those voting electronically via the internet, this task could be automated and it may be acceptable for special interest constituencies to be limited to those with internet access.

Some way would have to be found to allocate fairly the number of special interest members to be elected. After all, the current ratio is only about 1.5 members per 100,000 electors, so to merit a five member entitlement, you would need more than 300,000 voters to opt for the relevant special interest constituency rather than their geographical location. That might be difficult to achieve.

An alternative solution may be to have special interest members elected to the House of Lords, but either way it would be important to have preference voting by STV.

Proportional representation and electronic voting are both ideas whose time has come. And in combination, they could lay the groundwork for an exciting new era in democratic representation.

* Article by Owen Dumpleton, a member of the Electoral Reform Society and a former green party Euro candidate.

SECTION ONE: NEWS

NHS TECHNOLOGY PLAN FACES UPHILL STRUGGLE

The new NHS National Plan, which charts the way forward for information technology in the health service, is not powerful enough to overturn the NHS computing mistakes of the past, according to one leading commentator.

Roy Lilley, a former NHS trust chairman and author and broadcaster on health management issues, told E-Government Bulletin: "The NHS has a disastrous history on IT issues and I am not sure much is set to change. The management of information using technology could be the salvation of much of the NHS's problems. The difficulty is the legacy of the Thatcher years - by devolving responsibility to NHS trusts, the service became disaggregated.

"Some trusts made progress on technology, but most did not. Now the new NHS

IT agency should select a system for the whole of the NHS and railroad it through. There would be critics, comments about whether or not the system is the right one - but at least it would be a start".

However the IT agency - itself introduced after the failure of the former NHS Information Management Group - was not taking a strong lead, he said. "The agency is doing more harm than good. Civil servants who have never experienced what an IT system can do are too timid to make procurement decisions. It will take the agency until 2005 to agree common standards with industry, never mind get the British Medical Association to sign-up, trusts to agree and comply with EU procurement rules."

The National Plan, launched last month by Tony Blair and funded by £13 billion from the government's comprehensive spending review, proposes an ambitious range of IT initiatives ranging from issuing smart-cards to patients to providing TVs and telephones at every hospital bed.

Other plans include access to electronic personal medical records for patients by 2004; electronic prescribing of medicines by 2004; electronic booking of appointments for hospital treatment by 2005; facilities for telemedicine across the UK by 2005, allowing patients to connect with staff electronically for advice; and smart cards for patients allowing easier access to health records "when the necessary infrastructure has been put in place".

"Not everything can be put right overnight - the decades of neglect make that impossible. But over the next few years the NHS will start to look and feel like a different place", the plan says.

However, Lilley warns it may not be that simple. "The electronic patient record has defeated just about everyone. I was at an Arizona conference on the topic last year and the Americans can't agree on common data input standards, data warehousing facilities or patient confidentiality issues. I have no grounds for hoping the UK is any different."

CALL CENTRES MUST BE BACKED BY SERVICE RESTRUCTURE

A new report on the use of telephone call centres by local councils finds that although they are beginning to be used quite widely, there is a real danger they will underachieve or fail if they are not implemented alongside a much wider programme of reshaping service delivery around a single point of entry.

The report, by the Foundation for Information Technology in Local Government (FITLOG), cites the case of Hertfordshire CC which began its call centre work by identifying that "people contacted the council through a number of channels and a critical element in developing a consistent response was a common technological platform.

"The county set out to design and build a database capable of holding the answers to all of the questions it might be asked and, more importantly, to

begin to change the way the authority managed its information", the report says. "The call centre is the first mechanism by which Hertfordshire will provide access for the public to that new database. It will be complemented in due course by a new web site, which will provide transactional capability as well as information content".

The report predicts that interaction with call centres over the Internet will be a major growth area in the future. "As more citizens gain access to the Internet and as more technologies such as digital television are introduced, the breadth of activity handled by call centres will grow. These new contact centres can be expected over time to exploit a variety of emerging technologies, such as voice recognition, to improve their operations.

"Technology integration will also increase . . . commercial web sites are beginning to include a button which can be used to establish a dialogue with a call centre adviser. Similar devices could be developed for information kiosks". Connections would also be made between call centres and back office systems like the automatic digital printing and despatch of a letter or form.

In time, call centres could even play an active role in policy delivery such as social exclusion - perhaps offering freephone access to excluded groups - or customer champion, holding the rest of the council to account for agreed service standards, the report says.

Making contact - developing successful call centres in local government is available from FITLOG, price £45 to non-commercial and £90 to commercial organisations. See:
<http://www.fitlog.com>

LORDS' COMMITTEE URGES ACCELERATION OF INTERNET REGULATION

The House of Lords - of all bodies - showed a fine grasp of the overarching policy issues surrounding regulation of the Internet and e-commerce this month with the publication of a report by its European Union select committee.

On policy development in the UK for regulation of e-commerce, the committee says: "The government has made a good start and we have no doubt about its intentions and commitment in this area. But we have yet to be persuaded that real change is happening and at the speed which the new technologies demand."

At the EU level, the committee is more complimentary, although it warns that current informal arrangements should be hardened into a formal European fast-track system for Internet policy.

"It is . . . essential that the processes of legislation be speeded up. There should be a faster track. The way in which the Commission and the

Parliament worked to adopt the e-commerce framework Directive is a model of how these institutions can react rapidly. However . . . the European Parliament was unhappy at the way in which the Parliamentary process was applied in this instance.

"The improvised procedures which achieved success in the case of the e-commerce Directive will have to give way to a more formal system. We would argue that this requires a serious look at the way in which legislation is processed in and between the institutions of the European Union to see whether or not a fast-track system can be established.

"It is important, too, that member states revise their own systems of transposition into national law so that the impetus gained by fast action in the institutions of the EU is not dissipated at national level".

The report concludes: "The Internet has turned the concept of jurisdiction upside down, and we see a serious need for international conventions to deal with this new phenomenon". For the full report, see the 14th report of the EU committee, in the select committees section of the House of Lords web site:

<http://www.publications.parliament.uk/pa/ld/ldhome.htm>

SECOND US GOVERNMENT PORTAL ANNOUNCED

The Clinton administration has announced plans for a second major cross-government Internet portal, to go live this autumn.

The secure service, 'pay.gov' (<http://www.pay.gov>), will allow US citizens to make a wide variety of electronic payments to the government, from families paying for a camping licence for a national park to corporations paying fines and even certain taxes. Eventually the service will have the potential to handle any of the 80 million transactions the US government now processes each year. See:

<http://www.treas.gov/>

The announcement follows plans announced last month for the launch this autumn of 'FirstGov', a new single online gateway to US government information on the web. See:

<http://www.firstgov.gov/>

CONFERENCE ROUND-UP: E-GOVERNMENT AND THE DIGITAL DIVIDE

The Electronic Government Forum, hosted by the publishers of the e-government bulletin, takes place in London from 15-16 November. This annual networking forum provides the opportunity to share best practice and explore partnerships with suppliers. The first day is for local authorities and the second for central government departments and agencies. For more information and to register visit: <http://www.electronic-government.com>

Meanwhile Business in the Community, a grouping of UK companies committed to

continually improving their positive impact on society, is holding a conference on the digital divide on 28 November in London. The conference will explore the implications of a digital divide for society and business; ethical investment and corporate citizenship; and technology issues for rural areas. Contact Barbara Murphy at comm.unity@bitc.org.uk or see: <http://www.comm.unity.uk.net/>

IS YOUR COUNCIL BETTER CONNECTED?

'MAPIT', the research arm of the Society of Information Technology Management (SOCITM), has begun to plan its third comprehensive survey of council web sites, Better Connected? 2001. Representatives of all councils are invited to email mapit@socitm-ssl.co.uk with brief details of any innovation that your site has seen in the past 12 months.

Please email one-line responses to the following questions, with a web address if relevant: Have you introduced any new interactive application? Have you introduced some other innovation of special interest? Have you made any formal assessment of user needs? Have you learned any specific lessons from assessing usage statistics? And are there any ways other than simple links in which the website is designed to work with neighbours, local agencies and other partners?

As a new extension of its 'Better Connected' project, MAPIT has also launched a local authority web site review service. Under the service a review team tests each site from the perspective of various kinds of user, such as single parents or tourists, and issues recommendations for improvement. In association with the RNIB, it also checks for accessibility to people with visual impairment. The charge is £495 to MAPIT subscriber councils and £950 to non-subscribers - contact Martin Greenwood on 01926 498703 or email: mapit@socitm-ssl.co.uk

NEWS IN BRIEF:

LITERACY LEVELS: The literacy of a country's workforce is a crucial element in ensuring a high proportion of knowledge jobs in its economy, a new report from the OECD finds. Initial educational attainment is the key to improving literacy, far outweighing adult education, it finds. However, the UK has poor literacy rates among developed nations, with more than 15% of its population possessing only the most rudimentary literacy skills. 'Literacy in the information age' is available priced 200 French Francs from the OECD: <http://www.oecd.org/>

E-PETITION: Downing Street is to accept an electronic petition for the first time, in a move predicted exclusively in last month's E-Government Bulletin. The global environment network WWF has launched the project as part of its Oceans Recovery Campaign, calling for action by the government to regenerate the seas by piloting fishing-free zones and protected areas. The online petition system 'e-petitioner' was designed by the International

Teledemocracy Centre at Napier University in Scotland, which already has a formal agreement with the Scottish Parliament to host online petitions. For more see:

<http://www.e-petitioner.org/>

E-DEMOCRACY: The Hansard Society for Parliamentary government is stepping up its work on evaluating the use of the Internet and other new technologies to enhance the democratic process. A new report, 'New media and social inclusion', looks at the lessons to be learned from a recent pilot online policy consultation run for victims of domestic violence. Next month the society will run two public consultations for the UK government's planned new Internet portal, UK Online. Further work is planned to analyse the content and quality of online democratic debate, and look at the role of digital TV. See:

<http://www.hansardsociety.org.uk/>

The Office of Government Commerce within the Treasury (<http://www.ogc.gov.uk/>) has announced the creation of a new forum between government and the IT industry - led by the Computing Services and Software Association (CSSA) - to try to improve the government's dismal track record on major IT procurement projects. It will examine ways of eliminating "systemic problems" in processes for the placing and delivery of government IT contracts. However in a briefing paper the leading IT journal Computer Weekly said the establishment of a forum was no substitute for action, and what was needed was genuinely independent assessment of government projects. See: <http://www.computerweekly.com/cwarchive/chinook/20000803/ITdisaster.DOC>

[Section One ends]

SECTION TWO: TECHNOLOGY - WIRELESS APPLICATION PROTOCOL (WAP)

HAMPSHIRE MOVES EARLY TO HARNESS WAP

In May this year, Hampshire County Library launched the UK's first WAP-enabled local authority web site. County residents can now access a complete directory of libraries from wherever they are using a WAP-enabled mobile phone or other WAP device. The service covers all 54 libraries in Hampshire and includes addresses, contact details, opening times and information on access for people with mobility difficulties.

The site is at:

<http://wap.hants.gov.uk/library/>

You cannot access it directly using an ordinary web browser, so if you do not have a WAP device but would like to see what it looks like, you can use the WAP simulator at <http://www.gelon.net/> to view it. You scroll down the screen using the little button below the centre of the screen, and click on the links as you would on an ordinary web page.

WAP stands for Wireless Application Protocol (WAP), an open specification

that allows users of mobile, wireless communications devices to access and interact with online information and services. The standard is overseen by the WAP Forum, an industry association with more than 200 members - see: <http://www.wapforum.org/>

Currently, the mobile Internet offers access to predominantly textual information, supplemented by simple single-colour graphics - a far cry from the colourful world of the web. There has also been some controversy surrounding the download speed of WAP information, and whether or not the standard will survive in the long term or be replaced by more powerful systems. However Hampshire Library decided that the technology, though still in its infancy, could already benefit the county's citizens by offering quick, precise, tailored information to those on the move.

Development of the site started in April this year, with help from a local computer games company, IO Productions (<http://www.ioproductions.co.uk/>). The site was developed using the WAP Toolkit from mobile phone company and WAP champion Nokia, available for free download from <http://www.forum.nokia.com/>

WAP pages are written in a programming language called wireless markup language (WML). This is similar in many respects to the language in which ordinary web pages are written, hypertext markup language (HTML). However, WML is not as forgiving as HTML: unlike ordinary web code, if you forget a tag or put a line of code in where it is not expected, your page will not be displayed at all.

There is also a maximum size of page that the phone's browser can process. The library site was designed to work on the Nokia 7110e phone, with no page exceeding 1,397 bytes, a limit which is very quickly reached! But the advantage is that any page that is viewable on the 7110e is viewable by almost all other WAP-enabled mobile phones on the market.

The site is being hosted on the Hampshire County Council web server, which was reconfigured to handle WML documents. This is fairly easily done, and there is plenty of information about server configuration for WAP on the web - see for example: <http://www.wapdesign.org.uk/server.html>

It is important to think very carefully about the design of a WAP site. Generally people will not be happy to scroll and click through pages and pages of information to find what they require. And it is important to think of where people might be accessing the Internet with their mobile phone - on a train, shopping or out for a walk perhaps. What type of information would people need or like to access when they are mobile?

The library site is just the first step in Hampshire's initiative to build Hantswap (<http://wap.hants.gov.uk/>), a complete WAP directory of council services (again, this page can be viewed with an ordinary web browser using the simulator at <http://www.gelon.net/>).

Sister to the council's award winning web site Hantsweb (<http://www.hants.gov.uk>), Hantswap is generating very positive feedback from the public. Traffic to the site is being monitored closely to help the council gauge demand for information delivery using this new technology. In June this year the library site received more than 1,400 hits.

Hantswap is still in its infancy, and is currently based purely on a directory of services, but future possibilities are very exciting. Much will depend on the way mobile technologies develop, but future mobile phones will be capable of connecting to the Internet at very fast speeds, and will have colour screens and be capable of downloading music and other data.

We are entering a new phase of the technological revolution . . . accessible now on a mobile phone near you!

[Section Two ends]

SECTION THREE: INTERNATIONAL CASE STUDY - FINNISH ID CARD

CITIZEN SMART CARD UNLOCKS PUBLIC AND PRIVATE SERVICES

In December 1999 Finland became the first country to offer its citizens a digital ID card for secure transactions both online and offline. The solution, based on public key infrastructure (PKI) technology, paved the way for a new generation of electronic services.

The work was undertaken in the same spirit as building railroads and highways was undertaken in the past. The ability to use secure electronic transactions has become a basic infrastructure in Finnish society, for everyone to use and to build services on.

Finland has the highest Internet use rate per capita in the world, and public services on the Internet have also been developed at a brisk pace. This means citizens can take care of official business and duties at home or work without having to worry about office hours, weekends or the physical location of government bureaux.

When dealing with sensitive business, it is vitally important to know with certainty with whom we are communicating - what is known as 'strong authentication'. Also, documents transferred via the Internet may have to be encrypted, and sometimes a digital signature is required.

The Finnish Population Register Centre (FPRC), a state agency, now offers all citizens the possibility of having an electronic ID card - a plastic smart card complete with a micro chip, similar to a tiny computer. Alongside its traditional use as a photographic ID card and a travel document within Europe, the 'FINEID' card contains a government-branded digital certificate

allowing the user to perform secure online transactions, create trustworthy digital signatures and send secure e-mails.

Designed as a national infrastructure with services available to millions of Finns, the requirement was to have a solution that could not only support the high-volume management of digital certificates but also work to common, open standards. This was pivotal in allowing third party organisations to integrate their own online services and make use of the infrastructure.

The FPRC has outsourced all of the elements of the technology infrastructure required for the certification system. ICL Invia acts as the main technology integrator, and iD2 Technologies as the supplier of the PKI technology. The telecom operator Sonera won the helpdesk contract for revocation services and NovaCall won the contract for a user helpdesk. Elisa Communications now manages the database of public keys and the archive or repository of certificates. Smart cards are supplied by Setec.

By using the electronic identification infrastructure, private individuals can make use of a wide range of services provided both by public administration and the private sector, round the clock. Service outlets are being made available to people at public libraries and municipal service centres as well as at particular information kiosks. Moreover, these services can be accessed directly from a computer at home or work via the Internet. Also the use of mobile phones and digital TV as end user terminals is being developed.

For example, an online change of address registration system allows citizens to notify the government of any changes to their address over the Internet, while automatically updating the Finnish Post Office in the same transaction. It also provides the government with a centralized, up-to-date database of citizens' addresses.

The new online, infrastructure is also already being used by private companies to communicate and trade with their customers. FPRC has introduced a trademark or logo for users to recognise compliant software, services, card readers and so on. OKO Bank, for example, has become one of the first organizations to use the ID smart cards and PKI system to enable citizens to manage their finances over the Internet with the FINEID card.

The new online infrastructure is therefore bringing time and cost savings to the government, corporations and citizens. For more information on FINEID see:

<http://www.vaestorekisterikeskus.fi/prc.htm>

[Section Three ends]

SECTION FOUR: CONFERENCE REVIEW

GOVERNMENT COMPUTING NORTHERN IRELAND

Northern Ireland is a small place, yet around 300 people turned up for this year's Government Computing magazine Northern Ireland conference in Belfast in June to learn about new ways of using computing to help deliver public services.

Many were from government agencies, trying to learn some of the jargon of the Internet and e-commerce that is only just starting to be used widely in the somewhat conservative public and private sectors over here. In contrast, the community and voluntary sectors in Northern Ireland started down the same road over six years ago - they are the exception to statistics showing that Northern Ireland is one of the worst regions of the UK for take-up of the Internet.

Dermott Nesbitt, the junior minister in the Northern Ireland Executive who addressed the conference, is not the most wired up of people, but might nevertheless be the most IT-literate minister in the executive. Then again, how many ministers or permanent secretaries in London could pass the European Computer Driving Licence test?

Nesbitt said the Northern Ireland Executive was aware of the importance of computing and the Internet for delivering government services, particularly for economic development and education. It will shortly be publishing two papers: 'Citizens First', a framework for modernising government to serve citizens, and 'E-government for Northern Ireland', which will look at getting the government itself connected.

What does this mean in practice? We don't know yet, but we can pick up a few clues from the things said and left unsaid by the various conference speakers.

Several public and voluntary sector speakers gave practical examples of what has already been achieved. The Social Security and Employment Agencies in Northern Ireland have already set up pilot one stop shops in which both sets of staff (and both IT systems) worked together to serve their common clients. Unemployment is now 30% lower in the Dungannon pilot area than in the matched control of Armagh.

The Northern Ireland Association of Citizens Advice Bureaux has been using Lotus Notes information and discussion databases for years to keep their offices up to date across the province. This is now being copied by NACAB in England (using inferior technology). Service to citizens is now becoming important - not just information provision, but personal advice and services.

For many of the speakers who came over from England, the next big thing in e-government will be 'customer' transactions. If e-commerce can sometimes deliver savings to private companies, let's try it in government.

There were three types of talk on transactional services. Some simply repeated a standard sales pitch, with no thought for the audience, such as the technical explanation of smart cards without any mention of their possible application in verifying voter identity in an island with a tradition of "vote early and vote often".

Others seemed to be blind to the fact that citizens are more than just customers. We actually own the government, through our votes and taxes. That's why civil servants are called servants, not masters.

When Rob Watts from Compaq talked about Cabinet Office projects, his vision was of individuals using a smart card to identify themselves to a web portal or call centre. Then up would pop all their records with all parts of government, so that the customer could fill in an application and pay for several related licences at one step, rather than traipsing from office to office. But nowhere in the design is a way for citizens to complain that they shouldn't have to fill in the form at all. He managed to make it sound so centralised it could be an electronic version of the former East German government. This definitely would not sell in nationalist, let alone republican or loyalist, areas of Northern Ireland.

More inspiring was the talk by Charles Lowe of BT, whose group will be developing the 'me.gov' central government portal. Lowe contrasted technologies that develop by small improvements in what exists, such as TV, with 'disruptive' technologies which transform the way we live.

He invited us to think of some of the possible radical changes that portals might lead on to. Regional and local government might collect tax and pass some along to central government. And what if some MPs represented an interest group right across the country, rather than a physical constituency, using the Internet to keep in touch with this dispersed group?

What seems to be absent from consideration of e-government in Northern Ireland, however, is a consideration of the use of technology to support public participation in decision-making. The province has a new assembly, with many new laws being introduced. Most of these require that all affected authorities and agencies should carry out several stages of public consultation.

For example, some 120 agencies have had to consult on how to do equality impact assessments. How did they do this? They put adverts in the newspapers inviting people to write in for a paper copy, then send back their written comments on paper. People in several hundred community, business and union groups spent over a month doing nothing but replying to these consultation documents. Now civil servants are working through these paper replies and producing reports.

Such ridiculously inefficient processes cry out for transformation through technology. But not one speaker at this conference seems to have noticed.

> IN THIS ISSUE:

> Section One: News

> - Downing Street follows Scotland to accept e-petitions; New Statesman award winners; UN and OECD target digital divide; Standards in education; Health Development Agency and Health Promotion England; US government to launch new web portal; The internet and democratic participation; July round-up - government online.

>

>

> Section Two: Conference preview

> - Live trials for superfast city network

>

> Section Three: Teledemocracy

> - Scotland leads the way to electronic petitions

>

> Section Four: International case study

> - Danish government pioneers one-stop business reporting

>

> [End of contents]

>

>

> SECTION ONE: NEWS

>

> DOWNING STREET FOLLOWS SCOTLAND TO ACCEPT E-PETITIONS

>

> The government is set to announce a pilot scheme to accept electronic petitions from its citizens, E-Government Bulletin has learned.

>

> Electronic petitions will break new ground for the UK government, although a trial system is already up and running at the Scottish Parliament in association with the International Teledemocracy Centre at Napier University. It is this same system - dubbed 'e-Petitioner' - that will be used UK-wide.

>

> The trial - due to be announced by Downing Street on 20 July - is likely to allow people to sign petitions entirely over the Internet, subject to controls including postcode checks to verify addresses and spot checks. The Scottish trials show that fears the system may be open to abuse appear unfounded, and if anything the greater level of background information on the web as opposed to paper petitions lead to a higher quality of debate.

>

> The scheme is an early success for the Scottish Parliament's aim to create an information age democracy, with the UK Parliament now running to catch up with its newer counterpart.

>

> * See also section three, this issue.

>

>

> NEW STATESMAN AWARD WINNERS

>

> The London Borough of Hackney has won this year's New Statesman new media award in the government category, for its web site 'Hackney Live' (<http://www.hackney.gov.uk/>). The colourful site was picked for its vibrancy and interactivity that reflected the diversity of its local community.

> Another London borough, Camden, won a commendation for its site 'Camden Connect' (<http://www.camden.gov.uk>) as did Hampshire County Council for its compendious county-wide 'Hantsnet' project (<http://www.hants.gov.uk/>)

>

> The winner of the elected representative award was Paul Flynn, MP for Newport West, for an entertaining and hard-hitting site (<http://www.paulflynnmp.co.uk/>) Also commended in this category was the Cambridge Labour representative and the first MP to have a web site, Anne Campbell (<http://ds.dial.pipex.com/anne.campbell.mp/>)

>

> There was a special mention in this category for Andy White, not an MP and therefore not technically eligible, whose Professional Contractors Group web site (<http://www.ir35update.co.uk/>) alerting independent contractors to the government's IR35 tax proposals was the first ever national, regional and local political and media campaign run entirely through the web.

>

> The overall merit award went to the Brookmans Park Newsletter (<http://www.brookmans.com/>), a lively and informative community web project

> run by Dave Brewer of Brookmans Park in Hertfordshire. The newsletter
> content is assembled by local individuals and organisations like the local
> bobby and the local history society. There are also innovations like a
> historical slide show and a 'have your say' section where local issues are
> aired and often referred directly to the local authorities or companies
> involved.

>
> For more on the awards see:
> <http://www.newstatesman.co.uk/nma2000about.htm>

>
> UN AND OECD TARGET DIGITAL DIVIDE

>
> The United Nations and the Organisation for Economic Co-operation and
> Development are urging richer nations to help the developing world reap the
> benefits of modern technologies.

>
> Information technology was the central theme of the United Nations Economic
> and Social Council meeting from 5-7 July in New York, where UN
> Secretary-General Kofi Annan stressed the importance of ensuring that
> technology-driven globalisation is for the benefit of all. See:
> <http://www.un.org/esa/coordination/ecosoc/itforum/index.html>

>
> And in a statement to be presented to this month's G8 summit in Okinawa,
> Japan, Mr Annan will call on the world's richest nations to make "a major
> commitment of resources" to bringing technology to the developing world. IT
> has the potential to improve health care, education, governance, agriculture
> and trade in poorer nations, he will say. See:
> <http://www.g8kyushu-okinawa.go.jp/e/index.html>

>
> Japan's Prime Minister Yoshiro Mori has already announced that his country -
> the G8 host - is considering a comprehensive package of assistance for
> developing countries including intellectual assistance towards formulation
> of policy and institution building; training and education; assistance for
> the development of telecommunications infrastructures; and promotion of the
> use of IT through development assistance.

>
> Meanwhile the United Nations Volunteers programme (<http://www.unv.org/>) has
> launched the United Nations Information Technology Service (UNITeS) website
> to mobilise volunteers around the world to help bridge the technological
> divide between developed and developing countries. And the UN Development
> Fund for Women (UNIFEM) (<http://www.undp.org/unifem/>), the International
> Telecommunication Union (ITU) and the UN Development Programme (UNDP) last
> week signed a formal agreement guaranteeing the impact of information and
> communications technologies on women will be included in policy dialogue and
> decision-making. The three agencies will encourage governments and the
> telecommunications industry to recruit, employ and train women on fair and
> equitable access to technology.

>
> Not to be outdone, the OECD Council ministerial meeting on 26-27 June 2000

> also warned against the creation of a digital divide. The organisation has
> begun a major study to identify whether a 'new economy' is taking shape and
> if so, what are the sources of growth and how government policies need to
> adjust. The study is due to be completed in 2001. See:
> <http://www.oecd.org/media/release/nw00-70a.htm>

>
>
> STANDARDS IN EDUCATION

> Readers of E-Government Bulletin in the education sector are invited to take
> part in an online debate on standards in education and the involvement of
> the private sector in education, to be held on the web from 25-27 July.

> The debate is being hosted by The Stationery Office, the UK's main publisher
> of government and official information, in association with the bulletin's
> publisher Headstar. The use of technology in schools will be an important
> strand of the debate. If you are interested in taking part please email the
> bulletin's editor Dan Jellinek on dan@headstar.com

>
>
> HEALTH DEVELOPMENT AGENCY AND HEALTH PROMOTION ENGLAND

> Following our report on the Health Development Agency and Health Promotion
> England, the two bodies which took over the work of the former Health
> Education Authority (HEA) on 1 April this year, both agencies have
> recontacted E-Government Bulletin to update us on their plans.

> The HDA says a new temporary web site was launched on 2 June, at:
> <http://www.hda-online.org.uk/>

> The agency says that Evidence Base 2000, one of the HDA's major electronic
> projects, started life last year under the management of the HEA, and has
> transferred directly to the HDA. However, it was not possible to start work
> on the HDA site until decisions had been made about the organisation's
> structure and visual identity. A permanent site is under construction and
> will be ready later this year.

> Health Promotion England says it is soon to launch a new corporate site, to
> be located at <http://www.hpe.org.uk/>

> Like the HDA, the agency says it has been delayed in setting up a site as it
> awaits decisions from the Department of Health about its structure,
> workplans and identity.

> HPE says it has taken over a number of websites which the HEA initially
> developed and it is now in the process of rebranding them. These include the
> drugs information website 'Trashed' (<http://www.trashed.co.uk>), as well as
> other well established sites with information on alcohol, sexual health and
> immunisation. It has plans to launch several new innovative sites in these
> areas in the next few months.

>

> US GOVERNMENT TO LAUNCH NEW WEB PORTAL

>

> US President Bill Clinton used his first Internet webcast last month to
> announce plans for the launch this autumn of 'FirstGov', a new online portal
> to US government information on the web.

>

> Mr Clinton also announced plans to step up transactional public services
> online, such as application for government grants and competition for public
> sector contracts. A competition was launched in association with the
> non-profit Council for Excellence in Government to award up to 50,000 US
> Dollars to students, researchers, private sector workers or government
> employees who present the most creative ideas for new electronic government
> services. See:

> <http://www.firstgov.gov/>

>

>

> THE INTERNET AND DEMOCRATIC PARTICIPATION

>

> The State of Texas is seeking information and case study material from
> readers of this bulletin on live public participation in central or local
> government processes using the Internet, such as webcasting of council
> meetings, or live participation in open meetings online. The state's
> Department of Information Resources is drawing up a legislative study on
> broadcasting open meetings, to include a review of such activities
> worldwide.

>

> If you have relevant information you would like to submit to this study,
> please email Becky Lentz on becky.lentz@dir.state.tx.us

>

>

> JULY ROUND-UP - UK GOVERNMENT ONLINE

>

> The House of Commons Public Accounts Committee has published a report
> critical of the quality of UK government web sites. It said sites were often
> hard to navigate. See:

> <http://www.publications.parliament.uk/pa/cm199900/cmselect/cmpublicacc/331/33102.htm>

>

> The Department of the Environment, Transport and the Regions has published a
> consultation document on how far local government should emulate the target
> set by the Prime Minister for central government of 100% electronic service
> delivery capability by 2005. The document covers corporate approaches to
> managing information as well as service-specific targets, and response are
> invited by Thursday 10 August 2000. See:

> <http://www.local-regions.detr.gov.uk/consult/iag/index.htm>

>

> Health Secretary Alan Milburn has announced an additional 60 million UK
> pounds of spending to allow GPs to receive diagnostic test results over the
> NHS-wide secure network, NHSNet. It will also be possible for GPs to book

> hospital outpatient consultations while the patient is in their surgery,
> allowing patients to agree dates that suit them. Pilot projects will also be
> set up to allow GPs to send prescriptions electronically to their local
> pharmacy. See the press release section of the Department of Health web site
> for the second quarter 2000:
> <http://www.doh.gov.uk/>

>
> HM Land Registry has launched Land Registry Direct, providing low cost
> access over a secure extranet to 17 million computerised property registers
> and title plans to property, legal and finance professionals - a step
> towards the holy grail for house buyers of electronic conveyancing. The aim
> is to scan in more than 100 million filed images by 2004. See:
> <http://www.landregistrydirect.gov.uk/>

>
> Scottish Ministers have given initial approval to 46 of 104 bids for a share
> of the Scottish Parliament's 25 million UK Pound modernising government
> fund, to support innovative projects which harness new technology and
> promote joined-up working between public sector bodies and partnership with
> the private or voluntary sectors. The 46 shortlisted bidders have until 29
> September to submit more detailed plans. They include West Lothian Council,
> for a web site for 13 local public sector agencies; Aberdeen City Council,
> for smartcard technology allowing residents to pay for services; and the
> Scottish Executive Rural Affairs Department, for an electronic system for
> farmers' grant and subsidy claims.

>
> [Section One ends]

>
>
> SECTION TWO: CONFERENCE PREVIEW
> - NET SUCCESS

>
> LIVE TRIALS FOR SUPERFAST CITY NETWORK

>
> A blueprint for a super-fast computer network linking citizens and
> businesses in a regional or local area with a complete range of local public
> and private sector services is to be unveiled in Norwich this week.

>
> The project is a partnership between the University of East Anglia's Centre
> for Applied Research in Education (CARE) and the government's Central
> Computer and Telecommunications Agency, and will be launched at the 'Net
> Success' conference hosted by CARE on July 19-21.

>
> The conference will examine both the technological implications of
> constructing local broadband networks and the knowledge management issues of
> how organisations from different sectors can work together to provide
> information through a single gateway or service. It will also include the
> live demonstration of a high-speed network.

>
> The trial 'City-Plus' Metropolitan Area Network will feature high-speed
> communications and data connections to schools, GPs and small businesses. It

> will use xDSL and 100mbit services, operating at speeds of up to 10 times
> faster than ISDN, which is currently the fastest available to ordinary
> users. This will enable applications like videoconferencing to be run at
> costs affordable to individuals and small organisations.

>
> Professor John Schostak, director of CARE, says: "The key to all this is the
> cost, as we are concerned that all citizens should have access to these
> types of networks, and the message we want to get across is that you can
> obtain very high speed networking at relatively low cost.

>
> "There are two aspects to the creation of a city network: one is the
> technical side, and the other is the human side - how does one create the
> kinds of applications and networks that are appropriate for how people
> actually work and what they need?"

>
> Applications to be woven into the Norwich network include education,
> libraries, health, policing and land management - all areas that have
> already made moves to use large-scale networking to provide services online.

>
> For citizens, local networks would take the guesswork out of finding local
> services, Schostak says. With information organised into a directory format
> and everything based locally, you would know that if you want to find a
> doctor in Norwich you will not, as happened to him recently using a web
> search engine, be directed to a doctor in Norwich USA.

>
> The networks could feature high-speed external connections as well, using
> satellite technology, he says.

>
> The conference is the start of a year-long campaign to get organisations of
> all kinds interested in setting up city networks across the UK. Schostak
> says that local network projects need to be consortia-based, alliances
> between public and private sector bodies. "At the moment the picture is
> fragmented, with the sectors not working together properly. The difficulty
> is in getting different types of organisation to hold a dialogue and work
> towards a network with mutual benefits. There needs to be a core group of
> bodies that see the network as their main strategy for their region or city"

> .
>
> He says universities, councils and other public sector bodies are a natural
> starting point. But each region or locality has different needs, for example
> rural areas will have completely different networking needs to cities, so
> each will need a different group of organisations to meet those needs.

>
> Although public sector bodies are likely to lead the creation of local
> high-speed networks, businesses will stand to gain a great deal as well, as
> they will be able to reach their customers more easily, and vice versa. "The
> growth of e-commerce is hindered because internet businesses can't reach
> their customers effectively - the UK has Europe's largest e-commerce market
> but has the smallest market penetration".

>

> Some other cities including Manchester and Bristol have already linked some
> organisations with broadband technology, but Norwich is aiming to be the
> first to introduce a comprehensive city wide network. It is planned to keep
> this networking infrastructure operational at CARE to allow public sector
> service developers to use it for future trials and workshops.

>
> For more information see:
> <http://www.open.gov.uk/km>

>
> [Section Two ends]

> SECTION THREE: TELEDEMOCRACY

> SCOTLAND LEADS THE WAY TO ELECTRONIC PETITIONS

>
> Next month sees the first birthday of the International Teledemocracy Centre
> at Napier University in Scotland, a ground-breaking body that in 12 short
> months has positioned itself as a European leader in electronic petitioning
> and online democratic consultation.

>
> The centre was set up in August 1999, soon after the creation of the new
> Scottish Parliament. "It was an exciting time, because when a new Parliament
> is set up it doesn't have any legacy systems to hinder it", says Anne
> Macintosh, the centre's director. "And the standing orders that set up the
> Parliament said it wanted to encourage the use of technology".

>
> The centre was created to promote e-democracy - the use of information and
> communications technology in democracy - in the UK and across Europe. It
> also has a parallel academic role, to examine its own programmes and
> research whether and how technologies can improve participation in
> democracy. "There is no hard evidence yet to say that technology does
> increase participation", Macintosh says, "so the research aspect is
> important".

>
> The 'e-Petitioner' project is one of the centre's key initial programmes. It
> has a formal agreement with the public petitions committee of the Scottish
> Parliament to act as the sole third party agent for the submission of
> electronic petitions for a one-year trial period, which began in mid-May
> this year.

>
> Earlier in the year, a small pilot project was run with the World Wildlife
> Fund in Scotland, compiling a petition calling on the Scottish Parliament to
> include Marine national parks in the National Parks for Scotland Bill. The
> petition attracted more than 200 signatures.

>
> The first electronic petition raised under the trial proper is now underway,
> calling on the Parliament to implement in full the 1999 Cubie report on
> student fees and grants before the start of the academic year in September
> 2000.

- >
- > Since its creation on 19 May this petition has gathered around 450
- > signatures, mainly from Scotland, but with a significant minority from
- > England and Wales and a handful from Australia, Canada, Finland, Ireland and
- > the US. It has always been the case that people anywhere in the world can
- > sign a UK petition, as long as it is of relevance to them (for example they
- > are coming to study in Scotland, have relatives in Scotland or visit
- > Scotland regularly).
- >
- > After the trial has been running for a few months, the centre will initiate
- > a six-month programme of research into the effectiveness of the e-Petitioner
- > system, from how it works to its democratic implications. A full-time
- > researcher is to be appointed from September 2000 to undertake this work,
- > with funding obtained from the Joseph Rowntree Foundation.
- >
- > The early signs are that electronic petitions work very well, and fears in
- > some quarters about them being open to abuse seem ill-founded. In fact, they
- > may prove to be of a higher quality and more interactive than the standard
- > petition in the street, where someone shoves a clip-board at you in a
- > shopping centre and you make a snap decision to sign it or ignore it based
- > on very little background information.
- >
- > "In a street where you sign a petition you just see the text", says
- > Macintosh. "We make it easier and more comfortable to read at your leisure,
- > and we add all the background to the debate and the rationale for the
- > petition. Then you decide.
- >
- > "There is also actually a place on the petition where you can add comments,
- > even if you decide not to sign it: so both sides of the debate can be
- > recorded, unlike an ordinary petition. We didn't want to simply implement an
- > electronic version of the paper-based system: there are new possibilities
- > with the electronic format".
- >
- > Various quality and confidence checks are implemented on the signatures,
- > like checks against postcode records to verify whether addresses are real,
- > checks for repeat signatures and so on. Spoof names like Bart Simpson are
- > also picked up, although Macintosh says there have been surprisingly few
- > pranks like this. After the checks are carried out, confidence scores are
- > assigned to each signature, and the Parliament can then decide what scores
- > it will accept. The full names and addresses are also provided to the
- > Parliament, although only a name and a country are reproduced publicly on
- > the centre's web site for reasons of privacy and data protection.
- >
- > MSPs have also expressed an interest in being provided with information
- > about which opinions are typically expressed from which postcodes, to help
- > them target campaigns.
- >
- > Alongside the e-Petitioner project, an e-Consultant project is being
- > developed by the centre to support and facilitate best practice in online
- > democratic consultation by setting up online debates and evaluating the

> results.

>

> The first consultation exercise is being carried out on behalf of the
> Scottish Executive, to consult 16-18-year-olds in Scotland about policy in a
> wide range of areas including drugs, alcohol and sexual health. There have
> been around 600 submissions to the debate so far, an appreciable amount for
> that type of exercise.

>

> Interest in the consultation exercise was drummed up by the Scottish
> Executive by placing banner advertisements on web sites popular with young
> people, including the Neighbours site at <http://www.neighbours.com> and the
> Trouble site <http://www.trouble.co.uk>

>

> For the future, Macintosh is excited about the possibilities that mobile
> Internet devices like mobile phones will bring to teledemocratic
> participation. Other work planned includes involving small businesses in
> teledemocracy projects to influence business policy, and working with
> schools and local education authorities to ensure full participation by
> children of all ages.

>

> All in all, the centre is off to a flying start, and with new trials lined
> up for the UK Parliament (see news, this issue) is set to cement its
> positions as a European leader in teledemocracy.

>

> For more information see the centre's web site at:
> <http://www.teledemocracy.org/>

>

> And the e-Petitioner sub-site is at:
> <http://www.e-petitioner.org.uk/>

>

> [Section Three ends]

>

>

> SECTION FOUR:

> INTERNATIONAL CASE STUDY

>

> DANISH GOVERNMENT PIONEERS ONE-STOP BUSINESS REPORTING

>

> A one-stop government Internet service in Denmark, for businesses of all
> sizes to find out about their reporting requirements to public agencies, and
> to submit many forms online, is one of around 100 case studies in a new EU
> survey 'One-stop government in Europe'.

>

> The survey was undertaken as part of Action A14 of the European Union's COST
> research programme, on government and democracy in the information age. It
> examines projects in 11 European states: Austria, Belgium, Denmark, England
> and Wales, Finland, France, Germany, Ireland, Italy, Netherlands and Spain.

>

> The Danish business reporting project (<http://www.indberetning.dk/>) is a
> partnership between the Danish Ministry of Business and Industry, the Labour

> Market Pension Fund, the National Bureau of Statistics, the Directorate of
> Finances, the Directorate of Environment, the Directorate of Energy, the
> Customs and Taxation agency and many more - in all, 37 agencies or
> authorities. Representatives from industry have also been actively involved
> in the process. The idea is that no matter what kind of report, payment or
> application the company has to submit to a public body, it should be able to
> go through the internet portal.

>
> From the home page several routes can be chosen, depending on the type of
> company and the reporting situation. A user can choose a profile suitable
> for the company, and reports required for that type of company will be
> listed. After that the service can be fully customised, with each company
> tailors its own reporting profile. The system then notifies the company
> automatically when deadlines for the various relevant reports are
> approaching.

>
> Finally the system offers assistance based on a particular new situation or
> circumstance for the company. For example, it offers help on legal
> requirements if a company wants to hire new employees; on labour-related
> injuries in the workplace, on what is required if a company wants to set up
> shop in a particular region; on seeking apprentices or trainees, on the
> requirements of converting a farm from traditional to organic methods; and
> so on.

>
> So far, only 18 forms are available to complete online in a fully
> interactive electronic format, but some 200 others are available to download
> and print out to return by post. The site's goal is eventually to make every
> company-related report form available in electronic format, no small task as
> there are currently an estimated 1,000 company forms.

>
> Test work is also being carried out on EDI (Electronic Data Interchange)
> solutions, with the goal of using EDI for any reports that can make use of
> data already within the information systems of companies such as annual
> balance sheets. These solutions will be offered in cases where the amount of
> data is large and the frequency of reporting is high. EDI has not diffused
> throughout companies as quickly as expected so there is not yet a large
> demand for these solutions, although it is expected to rise in the near
> future.

>
> Testing is also being carried out on a system of digital signatures for
> companies, to boost security, using smart cards.

>
> The entire system is run by one and a half full-time employees, assisted by
> some consultants. The annual budget is around 5 million Danish Krone
> (400,000 UK Pounds), and 10 million Krone was spent initially establishing
> the system. Productivity benefits have already begun to emerge in the
> department, and a recent survey found that 70% of the companies said service
> from the department was improved by the system. It is also estimated that
> companies are already saving on average 5.5 minutes every day by using the
> system.

- >
- > Implementation has not been without its problems, however. The
- > re-engineering of data transfers between public authorities, going from
- > manual or analogue transfers to digital transfers, is a tremendous task in
- > which many different information systems must be oriented towards common
- > data-formats and interfaces.
- >
- > For every one-stop application it is necessary to negotiate new
- > relationships within and in between involved agencies and institutions. All
- > agencies possess relative autonomy to some extent, and their engagement may
- > vary according to the relative benefits they obtain from the common
- > projects.
- >
- > The main battles have occurred when different public agencies have proved
- > hesitant to adopt to the common standards that the system tries to impose on
- > them, and sought instead to create different individual profiles on their
- > own web sites. These conflicts are handled by running pilot projects that
- > demonstrate the productivity benefits to all.
- >
- > The project as a whole is based on the fact that major productivity benefits
- > in one-stop government may be harvested in areas where the amount of data
- > transfers and their frequency are high. This is certainly the case for the
- > report demands imposed on companies.
- >
- > However overall, the European survey found that only a few countries such as
- > the Netherlands, Italy or Finland have embraced an active
- > one-stop-government strategy at the national level, and that new management
- > methods are needed from governments across Europe to deliver new electronic
- > services alongside traditional, physically based services. Crucial barriers
- > are lack of consistent funding and political leadership.
- >
- > * Article by Christian Sørbye Friis and Ole Buch of the University of
- > Roskilde, Denmark. 'One-stop government in Europe' is available online, with
- > information on how to order in print, at:
- > <http://www.fgtk.informatik.uni-bremen.de/cost/one-stop-government>

E-GOVERNMENT BULLETIN

- > The Email Newsletter On Electronic Government,
- > UK And Worldwide.

> ISSUE 88, JUNE 2000

> IN THIS ISSUE:

> Section One:

- > News - Hampshire libraries the first to WAP; New NHS portal launched; . . .
- > and new portal for local government; Yell web awards; Exchanging information
- > with the public; European Commission presents eEurope action plan.

> Section Two:

- > Conference report - Citizens Online

> Section Three:

- > Analysis - Multi-lingual services

> Section Four:

- > Online debate - E-government

> [End of contents]

> SECTION ONE: NEWS

> HAMPSHIRE LIBRARIES THE FIRST TO WAP?

- > Hampshire County Council's library department has developed a WAP (Wireless
- > Access Protocol) service which allows users with WAP-enabled mobile phones
- > or other portable devices to find the address, contact details and opening
- > times of all Hampshire libraries. Small text links allow access to the
- > information via an alphabetical index.

> WAP-enabled devices can access the service at:

> www.hants.gov.uk/library/wap/

>

> If you do not have a WAP device, you can access a WAP simulator using a
> normal web browser at www.gelon.net - simply key in the above address and
> the simulator will run itself in a new browser window. Further information
> on developing WAP systems including the Nokia WAP Toolkit 1.2 can be found
> at the WAP Developer Forum site at:
> www.forum.nokia.com

>

> According to EARL, The Consortium for Public Library Networking, the
> Hampshire project is the first example of a local authority WAP service - if
> E-Government Bulletin readers are aware of any others, please email us on
> egb@headstar.com

>

> EARL's web site at www.earl.org.uk has also been given a makeover. Its new
> site has been designed to be easy to navigate and to conform with the World
> Wide Web Consortium's accessibility guidelines (see www.w3.org/WAI/).
> Features at the site include the ever-popular free online information
> service, 'Ask a Librarian'.

>

>

> NEW NATIONAL HEALTH SERVICE PORTAL LAUNCHED . . .

>

> The NHS Executive, the body that runs the National Health Service within the
> Department of Health, has launched a prototype for a new online portal to
> NHS web sites including hospital sites - NHS.uk (www.nhs.uk).

>

> Astonishingly, until now no such gateway site existed. There was an internal
> NHS network, NHSNet; an external site for public medical advice - the web
> arm of NHS Direct; and the Department of Health and other bodies also
> produced some public-facing sites in areas of health promotion. But no
> comprehensive public portal existed for NHS sites in people's local areas.

>

> The NHS management body the NHS Confederation used to run such an online
> gateway, but ceased production of the service due to budget cuts. A few
> months ago the NHS Executive formed a project board to step into the breach,
> and a contract has now been awarded to Cable and Wireless for the expansion
> of the prototype.

>

> The service will eventually combine NHS links with a public news service
> about the work of the NHS and background information about what the health
> service is and what it does. Such a service could be useful to help combat
> future NHS scare stories or bad publicity about waiting lists or doctors'
> real or perceived malpractice.

>

> Meanwhile there are still no web sites for the new Health Development Agency
> or Health Promotion England, the two bodies that have taken over the work of
> the former Health Education Authority, England's main provider of health
> promotion material. The HEA's innovative multimedia unit became known for
> online campaigns such as Trashed (www.trashed.co.uk), an educational site

> about the effects of street drugs targeted at young people.

>

> However, although the new bodies have been in place since 1 April, no plans
> were formulated in advance of the changeover to carry forward the web work,
> a surprising oversight. And when E-Government Bulletin contacted Health
> Promotion England, it could provide no timetable for future web work.
> Meanwhile the HEA web site remains up as an archive at:

> www.hea.org.uk

>

>

> . . . AND A NEW PORTAL TOO FOR LOCAL GOVERNMENT

>

> The Local Government Association is to launch a new online portal for local
> government and public sector news and information, 'local-government.net',
> at its annual conference on 27 June. The site, to be available at:

> www.local-government.net

> will replace the current LGAnet web service with a range of content
> 'channels' for each part of the public sector, in association with a number
> of third-party content providers, including your very own E-Government
> Bulletin.

>

> LGAnet already receives around a million hits a month, and the new service
> is intended to boost this figure with a news feed updated daily.

>

>

> LITTLE TO YELL ABOUT

>

> Government and public sector agencies were notable by their absence as the
> final shortlists were announced last week for this year's Yell UK Web Awards
> 2000, the fifth annual awards hosted by the information portal from the
> Yellow Pages Group.

>

> In fact, only the BBC made it through with a nomination for Best Youth Web
> Site - one of 11 awards categories - for its 'Kids site:

> www.bbc.co.uk/kids

>

> In the Non-Profit Making Organisations category, where a public service
> showing might have been expected, the shortlist of three was: The Royal
> National Lifeboats Institution (www.lifeboats.org.uk); Friends of the Earth
> (www.foe.org.uk); and STAND (www.stand.org.uk), a web site that allows you
> to lobby your MP online via a web to fax gateway.

>

> In the previous round of judging, which narrowed the field down to a
> shortlist of 10, there had been two public sector nominees in the form of
> The Science Museum (www.sciencemuseum.org.uk) and The British Council
> (www.britishcouncil.org). Others were The Royal Horticultural Society
> (www.rhs.org.uk); school-web.co.uk (www.school-web.co.uk), an educational
> reference source for teachers, students and parents; The UK Home
> Repossession Page (www.home-repo.org); the Multiple Sclerosis Society
> (www.mssociety.org.uk); and the AIDS education and research trust AVERT

> (www.avert.org).

>

> After a further round of judging, winners will be announced on 11 July. For

> more information see:

> www.yell.com/awards

>

>

> EXCHANGING INFORMATION WITH THE PUBLIC

>

> The EIP Group of around 90 local authorities - the acronym stands for

> Exchanging Information with the Public - is to hold a meeting of its

> development group in London on 20-21 June.

>

> The group was set up to share experiences of single access approaches to

> service delivery. It is facilitated by consultants CDW & Associates as part

> of the £1.7 million Treasury-funded PEG (Promoting Electronic Government)

> project, whose members also include the Local Government Improvement and

> Development Agency (I&DeA) and The Federation of the Electronics Industry.

>

> For more information see the 'Events' section of the EIP web site at:

> www.eipdg.org

>

>

> EUROPEAN COMMISSION PRESENTS E-EUROPE ACTION PLAN

>

> The European Commission has presented its contribution to the eEurope Action

> Plan, due to be agreed by EU leaders at the Feira summit in Portugal on

> 19-20 June. It sets out a strategy to establish a thriving and equitable

> information society in Europe, including access for all parts of society.

>

> The submission includes several suggested targets relating to the provision

> of public information online, including that all essential public data

> including legal, administrative cultural and environmental information is

> placed online by end 2002; the development of a co-ordinated approach for

> public sector information, including at European level, by end 2000; the

> creation of pan-European portals for interactive public services by mid

> 2001; the promotion of the use of open source software in the public sector

> and international exchange of e-government best practice during 2001; and

> all basic transactions with the European Commission (such as funding,

> research contracts, recruitment and procurement) to be online by end 2001.

> SECTION TWO: CONFERENCE REPORT

> - CITIZENS ONLINE

>

> POT OF MILLIONS SOUGHT TO BRIDGE THE DIGITAL DIVIDE

>

> Citizens Online (www.citizensonline.org.uk), a charity set up to carry out
> research into the social and cultural impacts of the Internet and help
> bridge the 'digital divide', was launched last month with an ambitious plan
> to raise some 16 million UK pounds in sponsorship between now and 2005.

>

> John Fisher, Citizens Online's founder and Chief Executive, told a one-day
> launch conference in London that the charity would undertake high quality
> research into the nature and extent of the current digital divide in the UK,
> as well as compiling and managing a database of all research in this field
> carried out so far.

>

> It would also seek to act in partnership with other bodies to generate
> sponsorship and pool resources for projects, Fisher said. Citizens Online
> has already forged a partnership with comm.unity, the digital divide arm of
> the charity Business in the Community which gains sponsorship from big
> business to help regenerate deprived communities (www.comm.unity.uk.net).

>

> Other projects included in an action plan for the charity's first year
> include the creation of a national think-tank into the digital divide;
> funding for 10 new local projects across the UK; and work on a definition of
> the digital divide to inform all their other initiatives.

>

> The conference was launched with a powerful first-hand experience of the
> value of access for all from the young entrepreneur Ben Way. Way is dyslexic
> and as a result was set for low achievement at school despite his high
> intelligence - at the age of nine he was told he would never read or write.
> However, he a few years later he discovered that it was much easier for him
> to write and spell using a computer keyboard - "I type faster than I wrote,
> and sometimes I can't read my own writing, but on a computer it is all neat"
> , he said.

>

> His achievement levels and confidence soon soared and after gaining 11
> GCSEs, he set up an e-commerce search company from his bedroom -
> Waysearch.com - that attracted 25 million pounds worth of venture capital
> and is now a major success.

>

> "Without access to a computer, I would have been stunted in my development",
> he said. "There must now be access for all".

>

> Marian Scott, a consultant for Women Connect (www.womenconnect.org), said it
> was vital to bring gender issues into the mainstream, and help women use the
> Internet without barriers or prejudice.

>

> "Worldwide, women have made some extremely positive uses of the Internet,
> and in some areas lead the way, but still face a struggle in most areas. We
> need a focus on women and gender - men and women may need to be served in
> different ways".

>

> She said women were often invisible as a disadvantaged group because they
> were such a diverse group, including sub-groups of age, social scale and
> race, which made them harder to analyse. "But this does not mean they should
> be passed over. It is not going to be enough to stop when women are 50-50
> users of the Internet: there are also issues of stereotyped, limited and
> sexist content online, and a lack of women at the top of new media
> businesses."

>

> Women-friendly approaches to technology access and training which had been
> taken up by Women Connect included linking learning about technology to
> practice; offering safe and relevant learning spaces; creating learning
> networks; and offering mutual support, Scott said. "Our trainers understood
> the insidious internalised feelings of inadequacy women feel in relating to
> some technologies, and the need for task-related learning."

>

> She said while it was true that not all women need services from women's
> organisations, or could not make headway in the mainstream, many face
> serious difficulties and a gender analysis and mainstream approach across
> all online services was needed.

>

> In tackling the problem of the digital divide, it was important to challenge
> received wisdom on the nature of the problem, and approach it with a degree
> of 'positive scepticism', Professor Steve Woolgar of the 'Virtual Society?'
> research programme told the conference.

>

> Virtual Society? has drawn together new research from more than 20
> universities over the past three years. Woolgar said its research had shown
> that the provision of public Internet access points like cybercafes and
> telecottages do attract a broad cross-section of users. However, they tend
> to augment, and not replace, existing patterns of Internet access from the
> home: in other words, almost all users of Internet cafes already have home
> access, and so they do not act as access points for the unconnected.

>

> Access is a social, not a technical issue, Woolgar said. Cyberspace had its
> own social structures, which were self-organising and tended to reinforce
> class structure already present offline, so middle class people came off
> best. So mere technical access may even be counter-productive - it needs the
> right social context to be in place, and to build on existing social
> arrangements, he said.

>

> In conclusion, he said it was important to resist and single definition of
> the digital divide, but to look at what technology can do, what people want
> from it, and how they can benefit.

>

> Virtual Society? is due to present its final findings at a major conference
> at the QEII Conference Centre in London on 19 June. For more information see
> its web site:

> www.virtualsociety.org.uk

>

> [Section Two ends]

>

>

> SECTION THREE: ANALYSIS

> - MULTI-LINGUAL SERVICES

>

> WORKING TO DISMANTLE THE LANGUAGE BARRIER

>

> Many public sector organisations, particularly those in areas with diverse ethnic communities, accept that the information and services they provide have to be accessible by people speaking languages other than English. This may mean producing copies of booklets in other languages, or the provision of interpreters. But what about the provision of information on the Internet? What information should be available in what language, and what demand might there be for each?

>

> The UK is home to many people who do not speak English as a first language. They range from people who have lived here for long periods of time, to recent arrivals who may be refugees and asylum seekers. Language is a real problem for them in accessing advice, public services, facilities and benefits.

>

> While it may be the case that some people don't read the language they speak, in which case text based sources are of little use, it is also the case that some people entering the UK with limited or no English are educated people who could deal with complex information in their own languages.

>

> These issues are of particular importance to organisations that dispense advice to the public, including information about benefits. Local authorities which receive large numbers of visitors might also want to produce information in different languages aimed at tourists; and it could also be useful in attracting business investment from overseas. The European Investment Bank recently decided to locate to London because it was the only European capital city in which the 38 languages which the bank requires are spoken.

>

> As Internet technologies become more powerful and more bandwidth becomes available, more possibilities emerge for their use with sophisticated language applications. Services such as translated materials, audio and video clips could eventually be centralised and then shared across a large dispersed area.

>

> Instead of each organisation and public sector body producing their own separate translated material, these could be produced in partnership and shared across several organisations. Another advantage of the internet is that material can be stored centrally in a digital form, saving organisations the need to find valuable storage space.

>

> The main forms of storage for translated materials could initially be video

- > clips, Adobe 'pdf' files which can preserve the characters and layouts of
- > many alphabets and languages, and audio clips.
- >
- > There is some evidence to suggest that many enquiries to public sector
- > organisations are 'stock' or frequently asked questions. It would therefore
- > be extremely efficient to produce a databank of material which many
- > organisations could create, develop and share. The use of centralised
- > technical resources such as video servers would also be a huge cost
- > advantage, saving each organisation the trouble and expense of installing
- > and maintaining their own.
- >
- > Such a project should begin with an attempt to gain some idea of what
- > internet language work, if any, is already going on across the country.
- > Interested and relevant public sector associations could send out a
- > questionnaire to their members asking questions such as:
- >
- > * What demand is there for online information or services in community
- > languages?
- > * What sort of information should be provided?
- > * In what format should it be provided?
- > * Should it be aimed at users, intermediaries or both?
- > * Would a centralised database of multilingual information be viable?
- >
- > As well as local government associations, other organisations which might be
- > interested in addressing this issue could include the National Association
- > of Citizens Advice Bureaux and the Refugee Council. The London Advice
- > Services Alliance (LASA) is also starting a pilot project in Haringey, with
- > an internet service in 14 community languages.
- >
- > It will be important to carry out further online research via the internet
- > and e-mail lists to ask people in the field what their experiences are, what
- > solutions - if any - they have arrived at, and what sort of demand they
- > register for information in multiple languages.
- >
- > It would then perhaps be possible to more fully develop what questions we
- > are trying to address, and what the demand is. It might also highlight with
- > different groups the possibility of joint working and a partnership approach
- > to this issue.
- >
- > For other examples of existing good practice, there are a number of sites in
- > Australia which are ahead of anything seen in the UK. These include The
- > Babel Tree Project to provide translated information on disability and
- > disability services, at:
- > www.adec.org.au/babeltree/
- > and the community language section of New South Wales' Migrant Skills
- > initiative at:
- > www.migrantskills.org/languages.asp
- > Both these sites are well worth seeing for some idea of what can be
- > achieved.
- >

> * Article by Danny Budzak of the London Borough of Newham. The article is a
> personal view, and is not the official position of Newham Council. If any
> Bulletin reader is interested in contributing to this debate or has examples
> of online language work, please email the editor on egb@headstar.com

>
>
> SECTION FOUR: ONLINE DEBATE

> - E-GOVERNMENT

> EMAIL OVERLOAD - A REAL OR IMAGINED THREAT?

>
> The problem of 'email overload' - both real and perceived - is holding back
> many public bodies from proper use of email to communicate with their
> citizens, according to last month's report of the global online debate
> Boosting the Net Economy 2000.

>
> A think-tank spanning more than 40 nations was assembled for the event,
> which was hosted by the publisher of E-Government Bulletin, Headstar, with
> backing from Bull Information Systems (see also our April and May issues).

>
> Jean-Paul Baquiast of Admiroutes, France, said: "In France public sector
> bodies are now able to develop web sites, but they are still unable to use
> email for real-time communication and co-operative work with citizens. This
> is particularly obvious when environment, health or security problems
> require quick answers from responsible bodies.

>
> "In the recent Erika oil pollution crisis on the West coast of France for
> instance, public bodies never answered emails asking questions or proposing
> solutions. The alleged reason of that is that they do not have enough people
> to manage email communication. But my personal feeling is that they still
> generally consider that citizens are troublesome, dangerous, and that the
> less they are associated with administrative business, the better."

>
> However, Bruno Mannoni of the Ministry of Culture and Communication, France,
> said: "It is not as easy as it seems to be. Email has to be answered by the
> civil servant in charge of the matter, which may have legal implications.

>
> In my ministry all email is routed to the person in charge to be answered. A
> very technical question can be difficult to answer, and we must provide a
> clear and correct answer. In a crisis situation, I do not think that e-mail
> is of any help: mass media like TV, radio, newspapers and the web are more
> efficient."

>
> Steven Clift of Democracies Online in the US said: "Email is the fundamental

- > tool of the Internet. Elected officials and government agencies need to
- > develop or apply tools that make it an effective communication tool.
- > Citizens will expect it, and to be competitive with commercial sites,
- > government has no choice but to ensure a right of e-mail correspondence with
- > citizens to remain legitimate.

- >
- > "The truth is that e-mail from insiders to government staff is one of the
- > most effective tools to influence government, while general email from
- > citizens to general addresses is often the least effective."

- >
- > Other topics relating to electronic government that were covered in the
- > wide-ranging debate included the use of technology for the regeneration of
- > deprived communities.

- >
- > Stefano Kluzer of the development agency of the Emilia-Romagna Regional
- > Authority in Italy (ERVET) said that there was a lack of understanding by
- > governments and other public entities about how technology can be used to
- > promote local regeneration and local development in general. He said three
- > measures could address this issue:

- >
- > "First, you need to increase awareness of what new technologies are and what
- > they can be used for, among decision-makers at all levels, including within
- > local communities where development must be rooted.

- >
- > "Second, you need well analysed and presented reference cases of actual
- > experiences of technology adoption and implementation in local communities.
- > I'm always amazed by how difficult it is to find good quality case studies
- > showing the positive as well as negative effects, the actual costs, the
- > strategies adopted and so on by local authorities, small firms, and the
- > like.

- >
- > "Third, you need to stimulate and facilitate wide [public] participation and
- > a social discourse on the changes ahead."

- >
- > Jean-Paul Baquiast said an increasing number of non-profit organisations are
- > now mature enough to share some public responsibilities by delegation,
- > especially in the fields of social or environment protection, and the web
- > would make an ideal medium for co-operation, but administrations are still
- > reluctant to co-operate.

- >
- > "Charters protecting both sides would be surely necessary. But, as far as
- > public sector bodies are concerned, the idea that they may use Internet
- > networks and non-profit partners for providing services which they cannot
- > assure alone would have to be encouraged by governments."

- >
- > Finally, a short exchange took place on the radical concept of citizens from
- > one state receiving online services from governments of another.

- >
- > Horace Mitchell of European Telework Online, UK, said that there was no
- > 'natural law' that says a citizen must take her public services from her own

- > government. "It takes a leap of the imagination to perceive that something
- > that is reserved for the state to deliver might be delivered to the same
- > citizens by another state.
- >
- > "Free access to global information may make citizens aware of the
- > differences between what one government delivers for one amount of tax and
- > what another government delivers for another amount of tax. It is a little
- > difficult to work out exactly how citizens will start to make a virtual move
- > to get this service from this government while still taking that service
- > from that government; but then the future has never been entirely obvious
- > until it becomes history."
- >

e- Government Bulletin

ISSUE 94, DECEMBER 2000

IN THIS ISSUE:

Section One: News

- Minor glitches, major ambitions for UK citizen gateway; E-government: a legal minefield?; 'Cybersquatting' a threat to password security; Stoke library service is best on the web; Electronic health library goes live; Teledemocracy centre launches new e-petition; News round-up - Govern your school, Social services web, Mailbase becomes JISCmail.

Section Two: Conference Report

- Local Government Solutions

Section Three: Analysis

- Information Overload

Section Four: US Case Study

- Digital Petitions

[End of contents]

SECTION ONE: NEWS

MINOR GLITCHES, MAJOR AMBITIONS FOR UK CITIZEN GATEWAY

The government has unveiled a 'beta' test version of its new online gateway to information for citizens, the UK Online Citizen Portal, amid technical glitches and problems with the site's

accessibility for visually impaired people.

When E-Government Bulletin tried to log on the morning after its launch, all that could be obtained was a message saying: "We are sorry but the UK online Citizen Portal is temporarily unavailable. Please try again later".

Three hours later the site - managed by BT subsidiary Syntegra - was up and running once more, and the Cabinet Office put down the hiatus to "minor hardware problems - it's a large, complex new project, and we were expecting some glitches".

Also embarrassing is the line running at the bottom of the portal, which says: "The government-backed service UK online should not be confused with the Internet Service Provider UK Online." This clash was of course known about for some time, but in the absence of an outright name purchase the disclaimer will now have to remain, and of course the confusion will remain as well.

More serious is the apparent lack of accessibility of the beta site. The government's own web site guidelines stipulate all public sector sites should be readable by the special text-to-speech and text-to-Braille readers used by blind and visually impaired Internet users. This involves tagging images with text descriptions using the 'Alt' attribute of HTML. However the test site simply provides empty tags.

The general direction of the site has met with approval from most commentators, however. Many services are grouped around 'life episodes', of which the first four are 'Having a baby', 'Dealing with crime', 'Moving house' and 'Going away'. Others will be added as the portal is developed, including one in the pipeline for dealing with the death of a friend or relative.

There is also an option to customise the portal by UK nation, with further customisation planned allowing an individual user's ongoing service requirements to be stored. The service will also eventually be extended to a range of delivery mechanisms including digital TV and mobile phones. See: <http://www.ukonline.gov.uk/>

E-GOVERNMENT: A LEGAL MINEFIELD?

Local authorities face many legal pitfalls in drawing up e-government strategies, a new report from the local government IT association SOCITM finds.

Officers and members must fully understand the requirements placed on them by a wide range of recent legislation, the report says. Relevant legislation to ponder - some of which is still in a state of flux - includes The Electronic Communications Act 2000; the Regulation of Investigatory Powers Act 2000; the EU Distance Selling Directive; the Draft EU e-Commerce Directive; the Human Rights Act 1998; and the Freedom of Information Bill.

In some cases, there are potential conflicts between the various laws, the report finds. For example, a council may find itself liable for offences committed by its employees using email; but if it acts to monitor all email use it could be infringing the Human Rights Act.

Meanwhile SOCITM also published its annual review of IT trends in local authorities, which found

that some 63% of councils now provide some form of technology support - typically a PC and printer - for their councillors in their homes. More than 80% of council staff have access to internal email but only 64% can use it to communicate externally.

'E-Government, Best Value and the Law' and 'IT Trends 2000/1' can be accessed (the latter at a price) via: <http://www.socitm.gov.uk/>

'CYBERSQUATTING' A THREAT TO PASSWORD SECURITY

Public sector organisations may need to reassess their Internet security strategies, as cybercrime based around the abuse of Internet domain names is set to become increasingly widespread and sophisticated, according to one leading expert.

Neil Barrett, a computer criminologist with Information Risk Management plc, told E-Government Bulletin last week that the dangers surrounding the practice known as 'cybersquatting' - the registration of a domain name similar to that used by another organisation, with the intent of holding it to ransom - is set to worsen, with implications for data security and protection of passwords

Hackers have hit on the idea that people commonly mis-spell domains when they type them in, he said. This means that if they register a common misspelling or mistyping of an existing web site, some of its traffic will be channelled through the hacker's site. Indeed, it is estimated that an astonishing 15%-20% of web addresses entered by hand are likely to be misspelled at any one time.

Hackers could therefore set up a dummy site at a misspelled domain which pretends to be the genuine site and asks people to key in their passwords, which are then captured and used on the original site to commit fraud.

For many public sector bodies, which operate in highly controlled '.gov' domains, this may not be such a large problem. However, public bodies often work in partnership with private firms that use vulnerable .com domains, or may use .com, .net or .org domains themselves for individual projects.

Unlike with mainstream 'cybersquatting', organisations have no right to take legal action to recover domains which relate to misspellings of their own name or brands, Barrett said. And another tactic used by the hackers could be to list the misspelled domains in web directories or portals, making it easy to mislead users of the directory.

The dangers do not stop there - criminals could also try to contact one the many organisations involved in the routing of domain names and convince them that they are an authorised person to change that routing to their own Internet address. If they manage to do that - and sometimes, it can require little more than a letter on headed notepaper - they can steal your web traffic lock stock and barrel.

Barrett made the observations at the launch of a new report on cybersquatting by the European domain name registry Speednames (<http://www.speednames.com>).

STOKE LIBRARY SERVICE IS BEST ON THE WEB

Stoke-on-Trent City Council's library service (<http://www.stoke.gov.uk/council/libraries/>) has won first prize in this year's 'Best on the web' awards for library web sites, hosted by EARL, the consortium for public library networking.

The service was cited for making excellent use of local content; developing lively and educational resources for children; and introducing some innovative interactive services such as the ability for library users to send in their own book reviews to be posted online.

The runners-up were Nottinghamshire library service (<http://www.nottscc.gov.uk/libraries/>), which has developed NEWLiNC, an exemplary online gateway to local community sites; and the London Borough of Hillingdon libraries (<http://www.hillingdon.gov.uk/library/>) which also features a readers' book review area.

Judges for the awards included E-Government Bulletin editor Dan Jellinek. For more information see: <http://www.earl.org.uk/bestonweb/>

ELECTRONIC HEALTH LIBRARY GOES LIVE

The National Electronic Library for Health - billed as part of a developing 'digital nervous system' for the health service – went live last week in pilot form. Targeted mainly at health professionals and NHS librarians, the service is a huge gateway to resources ranging from the National Institute of Clinical Excellence's database of clinical guidelines to medical book reviews.

Within the library a 'virtual branch library' system collates information on particular health issues or conditions, such as cancer or primary care.

In the short term the service aims to provide clinicians with access to information within 15 seconds, with a longer term goal of just one second. The system will be reviewed over the next 12 months and further features will be added according to user needs.

The main NELH site is at: <http://www.nhs.uk/nelh/>

And there is an excellent 'FAQ' document containing answers to all your questions about the electronic library at: <http://www.nhs.uk/nelh/faq.asp>

TELEDEMOCRACY CENTRE LAUNCHES NEW E-PETITION

The International Teledemocracy Centre in Edinburgh has launched a new 'e-petition' calling on the Scottish Parliament and Scottish Executive tackle the 'digital divide' and ensure everyone in Scotland has access to the Internet.

The centre, based at Napier University, is continuing its pioneering work on online petitions which has seen it run a number of pilot projects with the Scottish Executive and Downing Street (see E-Government Bulletin, July and August 2000). For more information see: <http://www.e-petitioner.org/>

NEWS ROUND-UP:

GOVERN YOUR SCHOOL - When Steve Smith became a governor of his childrens' primary school he found there was quite a lot of useful guidance for governors but no single resource drawing it all together. So he created one, on the web - 'Govern your School'. The site is also a forum for sharing best practice: <http://www.governyourschool.co.uk>

SOCIAL SERVICES WEB - The Association of Directors of Social Services has an Information Management group which advises the society on all issues relating to information management and technology in council social services departments. The group has a web site that houses a projects database: <http://www.ssimg.freemove.co.uk>

MAILBASE BECOMES JISCMail - The fabulous, free National Academic Mailing List Service formerly housed at the University of Newcastle's Mailbase (<http://www.mailbase.ac.uk>) has been moved and renamed JISCMail following an open tender process. After a few teething problems the migration appears to have been quite smooth and membership of existing email lists should not have been affected. See: <http://www.jiscmail.ac.uk/>

[Section One ends]

SECTION TWO: CONFERENCE REPORT - LOCAL GOVERNMENT SOLUTIONS

MAKING IT UP AS WE GO ALONG

The weakness of the government's targets for wiring up public services; the need for local councils to get their own technology in order before seeking 'joined-up government' partnerships; and the danger that modernisation money in the health service could be hijacked were all among topics discussed by delegates at last month's Electronic Government Forum (<http://www.electronic-government.com>).

At a series of discussion workshops, delegates - whose identities have been protected here for the purposes of a frank report - disagreed on the value of the government's targets for all public sector services becoming available online by 2005. "There is not one word in those targets about business justification - it is just saying 'do it'", said one.

Another thought that the targets were nevertheless effective as a general catalyst to spur the public sector into e-government activity. "The new services will have to provide improvements", he said. "Yes, but that's not the line central government have taken" came back the response.

A few were cynical on the age-old subject of how meaningful the '100% online service' targets actually are - the targets are for services to be available online, not actually used; they include telephone services; and they also now preclude services where to digitise them would contravene

data protection or other laws.

"Let's face it, we're all just going to make up figures next year when asked to record how far we are towards the targets", one said. "It's just a PR exercise".

Another delegate questioned the feasibility of measuring what services are online, when it is hard enough to get a clear idea of the extent of a council's measurable transactions with the public.

"We're trying at the moment to compile a record of what activities actually take place between the council and the public, and are finding there are scores of transactions in all corners of the council, which no-one monitors centrally. And as soon as you start to monitor transactions, you also begin to look at all the processes that manage the transactions, and the information relating to the transactions that moves around internally, and before you know it you can have a piece of paper that is 20 foot square".

One contributor to the discussion said councils needed to focus strongly on getting their own house in order before any visions of partnerships for e-government, or 'joined-up government', could be realised. "It is all very well to talk about joined-up government and partnerships, but we need to first implement our own methods of seamless working within the council, not just the front-end services but with the back-end processes fully integrated using knowledge management, document management and the right staff culture.

"Some councils don't even have email yet, so what chance do they have at implementing joined-up government? But if we get this right we should be able to easily meet the requirements for public interfaces across tiers of local government or between public bodies as they come about".

Another barrier to partnership between organisations is that e-government services may not be as high on a potential partner's agenda as on yours, the delegate said. "The only way forward is to look at the strategic objectives of your potential partner and your own organisation, see where they meet and launch a project there".

Most participants agreed that an e-government strategy needed to be drawn up as a corporate management document, not a new kind of IT strategy. "An e-government strategy should be seen as part of our core business delivery, a means of delivering better services. It is a corporate objective", said one. "It needs someone very senior with clout across the local authority to drive it forward".

Several delegates warned that e-government may not lead to a reduction in costs. "The assumption is that money is going to be saved - I can't see why", said one. "We may have to spend more now, to develop and provide better services. The accountants don't like this - they want to see savings, and that is the main problem with the whole e-government agenda".

Another agreed: "Number-crunching accountants pull your e-government cost saving projections to pieces because there is no basis to them. So at least the central government target can be used as a weapon when your back is to the wall - the target is there and we have to meet it, even if it means spending more money".

The government realises the modernisation agenda is expensive and has demonstrated as much by pumping funds into the health service to wire it up, another delegate said. "But it is hard to convince

chief officers in NHS trusts of that - they are short of money in other areas, such as coping with demographic trends and winter pressures, things they haven't been able to do for several years, so the money is constantly going to be hijacked".

Delegates agreed that it was good policy to consult citizens on what Internet or e-government services they require or prefer to receive, but not necessarily to conduct a separate consultation process. "It's best to slip the questions into your existing Best Value consultation process", said one. "A special e-government consultation just turns people off, and encourages the PC addicts, so we just ask in our other consultations 'would you like to do this on the Internet?'".

Linking the e-government agenda to the Best Value agenda in this and other ways might also help drive e-government up the agenda, one delegate said. "Best Value has hit everyone now, everyone is terrified by it. How do we make people notice e-government in the same way? By linking the two".

[Section two ends]

SECTION THREE: ANALYSIS - INFORMATION OVERLOAD

WELCOME TO A WORLD OF SPAM

Monty Python's 'spam' sketch will never be the same again, for although the delightful processed meat product has largely disappeared from our supermarket shelves, lobbyists are alive to the possibilities of the digitised version.

We-re talking, of course, about email spam - unsolicited email - and the related problem of email overload: the new challenge facing public bodies in the digital age.

In the US Congress, Senators and Members of the House of Representatives have already had to learn to be canny in their handling of effectively unlimited, undifferentiated in-bound cyber sackfuls of mail.

The Representatives use intelligent software agents to sift out the repeat transmissions and much of the junk, and automatic responders warn that no email will be read unless it contains a 'zip code' (postal code) from the politician's constituency. We can expect such devices to proliferate and become ever more intelligent: but what if one of the purposes of an institution is to examine both solicited and, even more vitally, unsolicited material? And cynics might consider that in an age of political cowardice, politicians would be happy to 'lead from behind' after sampling public opinion in any way they can.

Although tricky, it is possible to manage unsolicited input at the level of an individual such as a politician. However, the problem is much more extreme in the case of large institutions.

It may not be such a problem at the departmental level in government where, except for consultation procedures, it is quite difficult to locate the precise recipient for a message. Soon, however, the persistent will not discriminate but will, rather, load a list of names and merrily spam.

The most serious problems, however, will occur at the level of local government, particularly where there is a unitary authority with a variety of functions. Unless councils are much more disciplined about their in-box allocation, lobbyists and spammers will be tempted to go to the appropriate web site, download a list of names and whoosh!

Public bodies - and private bodies, for that matter - are not prepared for this deluge, mainly because they think of the Internet as a propaganda (sorry, information) and marketing tool which allows the high and mighty to impose their goods, services and importance ever more weightily upon the masses.

Of course there are fine examples of interactive good practice on the Internet, but such facilities have largely been established as a source of reliable and free, if narrow, marketing information.

Worse is yet to come. There may currently be a few cranks trying to infiltrate the book review chit-chat facility on Amazon.com, but that's nothing to what Borsetshire County Council will have to deal with when e-mail and web facilities are attached to digital television.

Just picture the scene - a local digital TV station sets up a response template to a scandal story with an automatic email link to the council's in-box. The response could be overwhelming - but councils, of course, can't simply empty the lot into the digital dustbin. There is no reason why a response should be regarded as more trivial just because it's digital rather than in Sandhurst copperplate.

Imagine too the state of the Railtrack email server once all delayed passengers have Internet-enabled mobile phones. There will, for instance, need to be separate systems for receiving complaints and keeping the operational network running. In an emergency any institution will want absolutely maximum Internet efficiency at precisely the same time as customers will want maximum complaint impact; it will be the cyber equivalent of crash voyeurs blocking the ambulances.

Add to this, for good measure, the need to differentiate in-bound information and you have an information management agenda of great magnitude. When stuff comes pouring in that you want to keep, where does this fit in with your data protection policies and data protection legislation? And what do councils do with information from clients which is the privileged domain of social services or education?

It is time to start thinking hard about email and information management.

* Article by Kevin Carey, Director of HumanITy. E-Government Bulletin would love to hear from anyone with creative solutions to the email management issue. Please email the editor Dan Jellinek on dan@headstar.com

[Section three ends]

SECTION FOUR: US CASE STUDY - DIGITAL PETITIONS

TOWARDS AN OPEN SOURCE DEMOCRACY

In our last issue, we looked at how US citizens can initiate legislative measures in some states through the 'initiative process', under which they are required to collect a certain number of signatures on petitions. If they collect the requisite number of valid signatures, the proposed measure goes onto the next public election ballot, and voters can then pass or defeat the initiative at the polls.

The nearest one can come at the moment to collecting signatures over the Internet for these purposes is to create a 'PDF' graphical file version of the initiative petition, post it on the web or email it to those requesting it, and let them print it out, sign it, and post it in.

This is an inelegant and often difficult way of proceeding, given the need to print the forms out on two sides of the paper, compress the text to fit in limited space and so on.

The obvious way to have people sign initiative petitions over the Internet is to let them sign them using digital certificates. As of 1 October 1 2000, the US federal E-Sign bill is in effect, authorising the use of these online credentials to sign contracts online. It's only logical to say that if digital certificates are now good enough to sign multi-million dollar contracts, they ought to be good enough to indicate your desire to see a particular legislative proposal voted on in your state.

The 'Smart Initiatives Initiative' currently being circulated in California was created to implement this idea in practice. Its primary aim is to allow people to vote on a measure requiring the state to provide all citizens with a digital identity certificate. The project has until March 12, 2001 to collect 419,260 valid signatures of California voters who want to see it on the primary ballot in 2002.

With Smart Initiative petitions, as with any petition, verifying the identity of the signer is key. Still, while the identity of the signer must be knowable by the authorities that check the signatures, it need not be made available to the general public. In fact, under the provisions of the proposed Smart Initiatives Initiative, it is protected by the same restrictions on disclosure as are legacy pen-on-paper signatures.

Moving the initiative-signing process online benefits all parties involved. For proponents, it reduces the cost of circulating their petitions by several orders of magnitude. For citizen-signers, it makes it much easier to study a proposed initiative and then, if they want, to sign it from home, office, or other location.

For the election officials who currently need to spend months checking a mere random fraction of the submitted signatures before extrapolating according to arcane formulas to determine the 'official' number of valid signatures, the power and convenience of a digital system to rapidly and comprehensively tabulate the results would be a much-welcomed improvement.

Because the first major provision of the Smart Initiatives Initiative is the distribution by the state of a high-level digital certificate to each citizen, citizens-as-consumers and citizens-as-commercial entities will benefit as well. They will be able to use these certificates not just to sign initiative petitions but to buy insurance, order groceries, tele-commute, check their children's homework assignments, and do anything possible now or in the future that requires them to establish their

identity online.

At a minimum cost of ten dollars each, however, providing 20 million Californians with a digital certificate will not come cheap. Hence another proposal that could lower this cost and pay other dividends as well, a proposal to develop Open Source Public Key Infrastructure (PKI) software.

Open Source software is computer programming code that is not secret. The instructions that make it run are available openly to everyone. It makes sense to consider the creation of an Open Source PKI Foundation to facilitate the creation of Open Source PKI code, not only to save the State of California a lot of money, but also to set the stage for using open source software to eventually provide Internet voting services.

In addition to the cost savings for the government, building a PKI and using Internet voting software where the internal code is open would mean that it could be properly understood by the people who use it. It would provide a technological analogue of the political openness and participation that is central to this entire vision of what could be termed 'Open Source Democracy.'

Nor would it be inappropriate, eventually, to move many other existing and future e-government applications to an Open Source model. In such an environment, we could avail ourselves of a seamless web of information, decision-making, and functionality. As the reach and power of the web steadily evolve, these principles of openness and self-determination would be a concrete realisation of the long-sought ideal of 'government of the people, by the people, and for the people.'

[End of contents]

SECTION ONE: NEWS

E-GOVERNMENT NEEDS PUSH FROM THE TOP

Public sector organisations like local authorities must provide their staff with strong leadership from the top - chief executive level - to successfully push forward the e-government agenda, delegates at last week's Electronic Government Forum heard.

In a series of round-table debates at the Westminster event, a consensus emerged that, just as leadership from the Prime Minister is the best way of galvanising central government into developing online public services, other public sector bodies need an 'e-champion'. The individual selected must carry weight across all service departments, and the ideal person is therefore the most senior manager such as the council chief executive.

"The provision of services on the web has to be devolved, as it is front-line staff who have the knowledge to provide up-to-date

information", one delegate said. "But many staff say they have too much else on to do it, they don't see it as part of their mainstream work. It needs leadership from the top to ensure they see online work as part of their day job".

The way to smooth full integration between staff's everyday 'offline' work and web-based work is to install a fully web-enabled information and knowledge management system, including document sharing, across an entire organisation, delegates agreed.

This was likely to mean purchasing an off-the-peg portal solution at relatively high cost, but the cheaper alternative of developing systems piecemeal in-house was unlikely to prove scalable and robust enough in the long-term to roll out across a whole organisation, and is therefore a false economy.

It emerged during the discussions that most councils had not yet drawn up coherent e-government strategies, pulling together service, information management and technology issues, although almost all acknowledged they needed one, and fast. Some bemoaned a lack of central government leadership on strategies for hitting e-government targets.

The event web site is at:
<http://www.electronic-government.com>
- Further reporting in our next issue.

POST OFFICES TAILOR WEB SERVICE

Around 1,000 post offices have taken up an opportunity to tailor a free web site provided under a nationwide deal reached last month between The Post Office and UKVillages.co.uk, an independent community web company.

Under the deal - whose financial terms have not been disclosed - all 18,500 UK post offices have been allocated a site with information about their opening times and product lines. There is also an interactive chat facility.

UKVillages.co.uk told E-Government Bulletin this week it hopes that half of all post offices will have taken up the opportunity to adapt and enhance their basic sites within six months. So far 970 have done so.

The project forms part of an 'e-government general practitioner' vision for post offices which will see trained advisers in each post office helping the public to access government information and services online. This idea was first floated in the 'Counter revolution' report from the Cabinet Office in June 2000:

<http://www.cabinet-office.gov.uk/innovation/2000/postoffice/postindex.htm>

and restated in last week's Trade and Industry Select Committee report 'The Post Office and the

future of the network':

<http://www.publications.parliament.uk/pa/cm199900/cmselect/cmtrdind/724/72402.htm>

TACKLING WORKPLACE VIOLENCE ONLINE

A web site providing a focal point for managers and staff to share ideas and solutions to tackle violence in the workplace has been created by The Association of Local Authority Risk Managers and Sussex Police with the Confederation of British Industry and other public, private and voluntary bodies.

The site offers access to best practice for managers in drawing up strategies for preventing workplace violence as well as research, case studies and an interactive 'clinic' where people can ask questions and contribute ideas. See: <http://www.workplaceviolence.co.uk/>

MUSEUMS ENTER THEIR OWN DOMAIN

The museum and gallery community is to have its own top level Internet domain name, '.museum', as part of a tranche of seven new domains to be added from June next year by the global Internet domain registry ICANN.

However a request by the World Health Organization for a '.health' domain, which the WHO would have regulated to ensure online health-related information was safe and quality-controlled, was turned down amid fears it would be too costly and difficult to regulate properly.

The other domains to appear are '.info' for general information sites; '.coop' for co-operatives; '.name' for individuals, '.biz' for businesses; '.pro' for professionals; and '.aero' for the air transport industry. If the introduction of the domains is smooth more could follow. For more see: <http://www.icann.org/tlds/>

COMPANIES HOUSE WINS E-BUSINESS AWARD

Companies House, the government agency responsible for company registration and dissemination of company information, has won the 'government' category of Computer Weekly's e-business awards.

Visitors to its website can search for information on businesses through a simple interface with a vast database. Before the site was built, customers had to go through a lengthy system of inquiries to obtain the same information. See:

<http://www.companieshouse.gov.uk>

Runners up were the Lord Chancellor's Department's for the 'Just ask' Community Legal Service legal information site

(<http://www.justask.org.uk>) and the Surrey Police Information and Knowledge Environment (Spike), a secure mobile system by which officers can input and receive crime information when out on the beat.

CHANGE OF ADDRESS TRIALS GO LIVE

A long-promised facility for citizens to notify all government departments of a change of address with a single online form has been quietly launched in pilot format in a partnership between the Cabinet Office and three private sector web sites, according to the KableNET news service (<http://www.kablenet.com>)

The six-month pilot will transfer the information to six different government departments, with local authority involvement a longer term aim. There are security concerns, however, which may not be fully resolved until there is widespread use of electronic signatures.

The three test sites are 'Change of Address' from the Post Office at: <https://www.addressingthechange.com> (note the address begins 'https') 'ihavemoved' at: <http://www.ihavemoved.com> and 'Simplymove' at: <http://www.simplymove.co.uk/>

CALL FOR MORE INTERDEPARTMENTAL WORK-GROUPS

The government must set up inter-departmental task groups to drive through modernisation if it is to succeed in its goal of providing a range of services electronically, according to a new report.

Published by EURIM, the collaborative Parliamentary/industry information society policy group, the report says ministers must completely re-organise departmental structures if modernisation is to be successful. Civil service career structures and training facilities need to encourage, facilitate and reward cross-departmental working, it says.

"Government must be joined-up from the perspective of the citizen with a choice of user-friendly interfaces (including the option of personal contact) which put them at the centre," it says. "There should be no 'wrong portal'; all channels likely to be used by the

citizen should cross-refer."

The report praises local authorities for creating 'one-stop-shop' electronic centres, which eradicate traditional boundaries between services. 'A shock to the system - joined up electronic government' can be found at: <http://www.eurim.org/briefings/BR29FD.html>

'HUMAN ASPECTS' CONFERENCE

A conference on research into the 'human aspects' of the Information Society is to be hosted by the Information Management Research Unit at the University of Northumbria in Newcastle in April 2001. The conference will bring together researchers in information science, social sciences, psychology, information and communication technologies, education and learning, media, culture and business. See: <http://is.unn.ac.uk/imri/index.htm>

ELECTRIC DECEMBER RIDES AGAIN

Bristol City Council and South West Arts are among public and private sector bodies backing this year's 'Electric December', an online advent calendar which doubles as a showcase for high-tech creative industries centred around Bristol.

The project, which was first run last year to widespread acclaim, is a collaboration between such broadcast, film and multimedia luminaries as Aardman Animations, creators of Wallace and Gromit, and BBC Bristol. Each day a new 'box' will appear to open on the web, featuring 'virtual chocolates' which can be emailed to your friends and participatory events using broadband technology. See: <http://www.electricdecember.org>

[Section One ends]

SECTION TWO: US ELECTION SPECIAL - ONLINE RACE 2000

ALL ABOARD THE E-TRAIN

Internet voting has played an interesting cameo role in the US Presidential electoral shenanigans, as a pilot project to allow the first ever online votes to be cast in a Federal election has included two counties in the key state of Florida.

Several hundred absentee voters, mostly members of the military and their families, cast their ballots through the internet in a defence department pilot project called the Federal Voting Assistance Program (<http://www.fvap.ncr.gov>)

The program was set up because US citizens abroad were having trouble obtaining their ballot papers from local voting offices. Two counties in Florida - Okaloosa and Orange - were among five across the US selected to test the concept.

Hundreds of thousands of Americans did participate in other pilot electronic voting projects at polling stations in various states, but they also had to cast regular ballot papers and it was the latter that counted.

In September, California Governor Gray Davis vetoed legislation that would have permitted binding tests of Internet voting in local elections. He cited a need for better protections against fraud and abuse. There are fears that viruses could be created which would change a vote before encryption. The Internet is also vulnerable to hacking attacks, which could tie up networks and prevent voting.

Meanwhile both Al Gore and George W Bush used the web and email as publicity and organisational tools in their battle for the White House, and in such a close race it may yet prove that whoever was most successful online wins the race.

Both candidates used email extensively to contact voters in their homes, with campaign teams working around the clock to send out messages.

The candidates' web sites carried a range of background information for voters including the obligatory photographs of the two men en famille. Visitors to the Bush site (<http://www.georgewbush.com>) were also invited to 'download some stuff', which turned out to be Bush logos and graphics for every conceivable situation, including a head-and-shoulders photo montage of George W for your computer desktop and the 'Bush-Cheney Outlook Today' customisation of Microsoft Outlook Express.

Al Gore's site (<http://www.algore.com>) offered similar options, with a pictorial journey through his childhood and formative years, focusing on all-American themes like his time in the army and holidays down on the farm: "While in Carthage he works on the family farm - getting up before dawn to help feed the livestock, cleaning out hog parlours and helping to clear and plough fields".

Gore's 'Internet tools for families' is aimed at people worried about their children accessing

unmentionables through the web, and contains links to security software downloads such as 'NetNanny'.

The web, however, is a passive medium: far more significant is the size of a candidate's email list. Before the election, the Bush campaign set out to capture around two million email addresses from supporters, urging people to 'join the e-train' and receive regular news bulletins and, of course, exhortations to vote.

One email sent to the e-train list was entitled 'Will you be the difference?' reminding them that Kennedy beat Nixon on the strength of a few extra votes in Illinois, Missouri and New Jersey. The potential reward for voting the right way was a return mail saying: 'President-elect George W Bush thanks you.'

It is not yet known how close they got to that target figure of two million, but it is estimated the Republicans spent \$5.7 million on their Internet initiative.

Other ways the Internet played a part in these elections included the rumoured emergence of 'vote-swapping', the use or potential use of the Internet for people to trade votes tactically between states. The concept appealed to people who wanted the independent candidate Ralph Nader to win the 5% of the total vote needed to gain state funding for his next campaign, but who did not want to disadvantage Al Gore's race for the Presidency.

The thinking was that such a person could swap their vote with someone in a strongly Republican state who wanted to vote for Gore but whose vote was unlikely to count there - the latter person would vote for Nader and the first for Gore, and both would achieve their goal. One site touting the idea in California was shut down, and it is unclear whether the practice did actually take place on any significant scale. For more see: <http://www.nadertrader.com/>

More alarmingly, a site was set up called **Voteauction**.com purporting to help people auction their votes to the highest bidder: this was shut down by a Chicago judge, although its owner later claimed the exercise had been satirical.

Beyond the Presidential race, the most widely admired online campaign was fought for the Senate in Washington State by Internet millionairess Maria Cantwell, formerly of the streaming media company RealNetworks.

Cantwell, who spent millions of dollars of her own cash on her campaign, set up a genuinely interactive policy discussion email list in which citizens could debate issues continually with her and her advisors. Separate email lists

were run for campaign news and for voting reminders, so people could choose exactly what sorts of information they did and did not receive from the campaign, showing a rare grasp of Internet ethics. See: <http://www.cantwell2000.com/>

[Section Two ends]

SECTION THREE: US ELECTION SPECIAL - DIGITAL PETITIONS

THE TELEDEMOCRACY REVOLUTION THAT NEVER WAS

The two most common criticisms of fully-fledged, remote Internet voting are that it's not safe and that it's not fair.

The safety argument says that securing Internet voting against cybervandals and perpetrators of electronic election fraud simply can't be done, given existing technologies. The argument against Internet voting as unfair revolves around the so-called 'digital divide', the uneven distribution of access to the Internet within society.

There is something to be said for each of these objections. However, a more powerful complaint about Internet voting, which comes from a purely political viewpoint, is simply that it won't actually have much effect on the operation of the political process or the distribution of power in advanced societies.

The widespread implementation of remote Internet voting will be important to the companies that hope to make money by providing out-sourced election services to political jurisdictions. It will make voting easier and more convenient for those voters who already vote. Beyond that, there will be little to distinguish the political landscape of a jurisdiction using remote Internet voting from one using any of the legacy systems now in place.

If the current election campaign has shown anything, it's that a political system organised around and dominated by money, packaged candidates, and show-biz production values is, at best, able only to generate the same kind of interest created by a mediocre television series and a resoundingly negative reaction, ranging from apathy to disgust, on the part of a majority of those who are supposed to be deciding how they are governed. After months of this, letting people vote for their favourite candidate on the Net instead of at the traditional polling place just doesn't make any difference.

This isn't to say that the Internet is not capable of mediating the political process in ways that would

give citizens more choices, that would significantly reduce the influence of money in the process, and that would give them more control over the outcome of disputes over issues.

But what's required to bring about these genuine reforms is the legal recognition of citizens' right to have an impact online and the practical means to accomplish this. And 'having an impact' in this context does not merely mean the right to be heard, it means the right to actually participate in the making of decisions.

More and more, 'Internet democracy' is being forced into various definitions that don't actually give people any power, merely the appearance of it. Elected representatives, for years reluctant even to give out their e-mail addresses (if they had them), now want to 'listen' to their constituents online. Their staffers in charge of listening build websites for this purpose and log the incoming email the way they used to (and still) log the paper mail.

Sometimes the tabulated results even figure into decisions made by the representatives. But often they don't, and often they are quietly repressed by the whispered 'suggestions' of major campaign contributors that may run counter to the expressed desires of the listened-to but ignored mass of citizens.

Listening to the concerns of citizens over the Net is good. Posting campaign contributions in a timely manner on easily-accessed and easily-understood web pages is good. Letting people pay their taxes, apply for licenses, or find out about government services online is very good, since it saves government money and makes the lives of citizens easier. But any of these, or all of these, is not electronic democracy, it is not using the Net as it could be used to make government better, not 'more responsive,' but 'more democratic.'

Making government more democratic by means of the Internet means changing the laws and institutional arrangements we have now to include the active, daily participation of regular citizens in the formulation, discussion, and enactment of the laws by which society is governed. It means letting us govern ourselves with the best tools available, including especially the Internet.

So, is there an existing political process or structure that could be cyberized and then serve as a lever by which the actual will of real citizens can play a substantial role in the formulation and creation of laws and, through these laws, public policy.

It so happens that in the United States - or in about half the US states, at any rate - there is. It's called the initiative process, and allows citizens unhappy with the inaction of their elected representatives on a certain issue to formulate their own proposed law addressing that issue.

Proponents of such an initiative are required to collect a certain number of signatures of their fellow citizens on petitions. If they collect the requisite number of valid signatures, the proposed measure goes on the next election ballot. Voters can then pass or defeat the initiative at the polls.

In practice, the most significant element in getting an initiative on the ballot is the need to raise the necessary money to pay professional signature-gatherers. In California, where initiative proponents need to collect 419,260 valid signatures, the going rate for these services is approaching one million dollars.

So what's the best course of action for a group or individual with a complaint or proposal they'd like everyone to vote on, but without a million dollars? Right now, there is nothing they can do. But if signatures could be collected over the Internet, it would be a different story.

That story could be about to unfold, thanks to a reusable, 'open source' online petitioning initiative called the Smart Initiatives Initiative. In the next issue of E-Government Bulletin we will set out how this works, and how it could shift the balance of democratic power towards the citizen in a new 'open source democracy' in the US.

* Article by Marc Strassman, Author of the Smart Initiatives Initiative and Founder and Executive Director of the Smart Initiatives Project. See:
<http://www.smartinitiatives.org>

[Section Three ends]

SECTION FOUR: ONLINE DEBATE - FUTURE HEALTH FORUM

KITEMARKS AND KITCHEN TABLE WEB SITES

The safety and quality of health information available over the Internet and the need to involve patients in developing information services were among the topics of debate in Future Health Forum, an online think-tank run earlier this month by E-Government Bulletin publisher Headstar with sponsorship from Deloitte and Touche.

Bob Gann, Managing Director of NHS Direct Online, told the debate: "We cannot possibly police the Internet - nor should we seek to do so. Our objective in NHS Direct Online is simply to make it easier for people to find good information than bad.

"We still need to do a lot of work on developing criteria for good information. The NHS Plan recognises this in its commitment to kitemarking under the aegis of 'NHSPlus'. We need to strike a balance between quality criteria which focus on the issues of design, navigability, production values and so on and those of content value. A parent of a child with a rare disorder for example may find considerable support in a 'kitchen table' website which may be crudely designed but contain uniquely valuable information and shared experience."

However Rod Ward, Lecturer at the School of Nursing and Midwifery, University of Sheffield, said: "I do not believe in kitemarking or star ratings because of the problems in deciding who you are kitemarking it for, or what their needs are - and the changing nature of the information. Codes of conduct such as that run by the Health on the Net Foundation are useful, however it has already been found that these have been abused and policing them is a nightmare.

"Any site or organisation which attempts to evaluate and filter the quality sites must publish its evaluation criteria".

Paul Johnson, Director of Telemonitoring Research at the Women's Centre, John Radcliffe Hospital NHS Trust, said: "One approach to the problem of authentic websites and the digital divide created by e-health is to involve the patient in the development of websites. Many studies already show that patients do not understand the disease they have, any guidelines provided or the relevance to themselves.

"This applies especially to the socially excluded. A website could include patient health information (controlled by the patient) and a website that addresses their needs including health information in a format that they want. After years of conducting research on risk aspects of pregnancy as well as care in the community and failing to enlist the most socially disadvantaged women - often teenagers in the UK - we have embarked on developing a website for antenatal care (not just advice), information and education in the widest sense in partnership with such women.

"Many other clinical conditions should be amenable to this approach. Merely warning people of good and bad sites will have limited

benefit as long as the public feel disenchanted with the health service on offer. There are no short cuts to patient empowerment - unwitting disempowerment is only one risk".

Tim Willis, Assistant Director of the UK government's 'Foresight' research programme, said: "There may be an emerging role for 'infomediaries' - systems and organisations that weed information targeted to the individual. I agree that the NHS has a particularly strong brand name to exploit opportunities, but there are others. Parallel to this is the increasing role of patient group websites providing information for the professions, public and patients. Information from experienced patients is valuable to those recently diagnosed."

The role of online learning for clinical professionals and others in the health services also came under the spotlight. Ruth Garner, Consultant Occupational Therapist with Learn Net Advisors and Research, said: "Centrally-funded continuing professional development resources which use the multimedia capabilities of the web to provide up to date educational materials for clinical practice is a good idea. However, this is mainly useful on one end of the spectrum of learning - where there is an immediate need to know something.

"The other end of the spectrum is the learning that can be applied in the wider context of the organisation - collaborative learning that allows people to share knowledge, skills and experience. This type of learning needs to be based within the virtual classroom. Virtual learning doesn't necessarily take people away from the patient's bedside if it is constructed in a way that allows people to study when and where they are able to.

"In Birmingham we have also applied this methodology to people with disabilities - providing remote vocational guidance to them in their own home, opening up opportunities they wouldn't otherwise have had. This has involved developing new roles such as virtual mentoring.

"However, we have a long way to go in terms of changing the hearts and minds of healthcare professionals to find new ways of studying and working. We also have a long way to go in terms of awarding bodies accepting on-line learning as a credible way of learning and being assessed."

Ellaine Muscroft, Regional Consultant with the family support charity Home Start, said: "The voluntary sector appears to be leading in practical IT applications in preventative health care - for example the reduction of isolation and

anxiety. The Samaritans

'listen' online. The growth of the electronic village hall has been swift - Barnsley electronic village hall has approximately 100 members, many of whom are unemployed and/or elderly. The Virtual Volunteering movement has clear potential for massive health benefit".

The full report of the debate will be published in the New Year at its web site:

ISSUE 92, OCTOBER 2000

IN THIS ISSUE:

Section One: News

- Birth of a HERO and an e-University; Property prices on the move; Companies fail internet shoppers; Gateway to culture; SOCITM strengthens international ties; Health information at the supermarket; Win a webby; Web round-up - e-government, e-taxation, parent zone.

Section Two: Conference report

- Institute of Healthcare Management

Section Three: Policy

- One stop shops

Section Four: Focus

- The Domain Name System

[End of contents]

SECTION ONE: NEWS

BIRTH OF A HERO AND AN E-UNIVERSITY

HERO, the new Internet portal for higher education (see E-Government Bulletin, March 2000), yesterday unveiled a prototype 'holding site' ahead of its formal launch at the Higher Education Funding Council for England's annual meeting on 20 November.

The site at <http://www.hero.ac.uk> will act as a single access point to information on all higher education institutions and courses in the UK. HERO stands for 'Higher Education and Research Opportunities'.

Meanwhile the e-University project - a web-based college backed by a consortium of higher education institutions and also led by the HEFCE - has announced it could be making an operating profit within three years of its launch, planned for the 2001-02 academic year.

The e-University will develop web-based courses to compete in the 50 billion UK Pound global online learning market, targeting postgraduates, businesses and students worldwide.

The body will not act as a separate university, developing its own courses, but rather as a virtual learning 'brand' drawing together approved courses from various institutions. The idea is that a consortium of institutions can provide investment and economies of scale that outweigh the advantages of competing separately on a global stage.

For further information on HERO and eU see the left-hand menu on the home page of the HEFCE web site:

<http://www.hefce.ac.uk/>

PROPERTY PRICES ON THE MOVE

A service allowing people to search for average property prices using Wireless Application Protocol (WAP) enabled mobile devices has been launched by the Land Registry.

The service, available at <http://www.landreg.gov.uk/wap/>, allows members of the public and property professionals such as estate agents, surveyors and valuers, to make on-the-spot enquiries about residential property prices in a given area.

The prices are updated quarterly and can be searched by postcode, area or countrywide. The service also includes help finding the correct regional office, with contact details, and a calculator for its fees. Those without a WAP device can view the service on the web using the WAP emulator at <http://www.gelon.net/>

The Land Registry is also set to launch an online service to simplify the process of buying and selling property. The National Land Information Service, due to go live early in 2001, will allow property searches to be carried out via the Internet, offering faster and more accurate property identification.

The Land Registry service is thought to be only the second to be developed by a public sector body in the UK. Earlier this year, Hampshire County Library launched the UK's first WAP-enabled public service, a directory of county libraries, at <http://wap.hants.gov.uk/library> (E-Government Bulletin, August 2000).

COMPANIES FAIL INTERNET SHOPPERS

One of the largest surveys of Internet shopping sites ever undertaken has found problems with more than a third of purchases.

Trading Standards officers in Warwickshire, Oxfordshire and Shropshire made test purchases from 102 UK-based companies.

In 38 per cent of cases orders did not arrive in the specified time and 17 per cent never arrived. Reasons given were systems crashing, companies disappearing, items being out of stock or orders simply being forgotten. Nearly a third of orders were not confirmed and in almost half of cases no notification of dispatch was given.

The survey coincided with National Consumer Week (16-20 October), whose theme this year was Internet shopping. The Trading Standards Institute has issued a free booklet, *Shopping on the Internet - Better Safe than Sorry!*, which addresses consumers' concerns and offers advice on safe Internet shopping. It is available by ringing 0845 130 8080 or see: <http://www.tradingstandards.gov.uk>

GATEWAY TO CULTURE

Plans have been unveiled by the Department for Culture, Media and Sport for an online gateway to British culture and the arts.

Following a 5 million UK Pound consultation and development process, Culture Online will become a key resource for schoolchildren and adults, allowing people to explore the UK's national museum and gallery collections, films and music and stage performances.

Children studying Shakespeare, for example, will be able to download the text of a play, watch an online performance and take part in discussion groups with other students and the most recent director of the play. They will also be able to call up costume designs and programmes of past performances.

SOCITM STRENGTHENS INTERNATIONAL TIES

The Society of IT Management in local government (SOCITM) has signed co-operation agreements with similar professional bodies in the US and Sweden.

The agreements, with Government Management Information Sciences in the US and Kommunal IT-Samverken in Sweden, will allow information and best practice to be exchanged and members of the different bodies to attend each other's conferences.

SOCITM already has co-operation arrangements with its Dutch sister organisation, VIAG, and it is in discussions with sister organisations in Australia, New Zealand, Denmark, Germany and Eire.

Meanwhile, as part of its autumn training programme, SOCITM is running a series of three one-day courses in e-government.

'E-government explained', 'Developing local portals', and 'Introduction to XML' take place in Winchester on 25- 27 October and Leyland on 20-22 November. For booking information, email: bobg@socitm.gov.uk.

HEALTH INFORMATION AT THE SUPERMARKET

Some 153 free information kiosks linked to the NHS Direct web site and telephone information service are to be sited in accessible public places around the country by the end of this year, health minister Gisela Stuart has announced. The kiosks will be located in places such as supermarkets, pharmacies, hospital accident and emergency departments and walk-in medical centres.

The NHS National Plan, published in July, outlined a commitment to provide more than 500 NHS Direct information points by 2004.

The NHS Direct site is at:
<http://www.nhsdirect.nhs.uk/>

WIN A WEBBY

The international Webby Awards, the glitzy San Francisco-based equivalent of the Oscars for the Internet, has added a 'Government and law' category for its fifth annual event in the summer of 2001.

For a chance to win and hobnob with stars like David Bowie and Francis Ford Coppola (who are among the judges), visit <http://www.webbyawards.com> for submission rules and an online entry form. The deadline for entries is December 15, 2000.

WEB ROUND-UP

E-GOVERNMENT is the topic of this month's 'iMP', the online magazine on information impacts published by the Center for Information Strategy and Policy in the US. Contributors include E-Government Bulletin editor Dan Jellinek. See: <http://www.cisp.org/imp/>

E-TAXATION A site dedicated to the discussion of e-commerce taxation has been created by Italian academic Gualdo Tadino at: <http://www.e-commercetaxation.com>

PARENT ZONE: The Scottish arm of the National Grid for Learning has produced a new section collating resources for parents and guardians of school age children: <http://www.ngflscotland.gov.uk/parentzone>

[Section One ends]

SECTION TWO: CONFERENCE REPORT - INSTITUTE OF HEALTHCARE MANAGEMENT

TELEMEDICINE CUTS COSTS WITHOUT REDUCING QUALITY

Electronic consultation by doctors with hospital outpatients, including email and videolinks, can cut healthcare costs by 20% without reducing quality, delegates at the Institute of Healthcare Management (<http://www.ihm.org.uk/>) annual conference in Harrogate heard earlier this month.

Ian Jardine, a member of the IHM's Telemedicine and Telecare Programme Team, said research completed in Finland in 1999 found that

the use of electronic consultation with outpatients over a four-year period increased the number of consults by 20% but reduced physical visits to the doctor by some 40%, leading to the cost cuts.

And the evidence was that the quality of electronic consultation was just as high, he said. "It was of variable quality - but then so is real-life consultation - the variation between doctors was the same". It is also easier to audit the quality of electronic consultations.

Another advantage of 'telemedicine' - defined as the use of information and communications technologies to provide healthcare at a distance - is the ability to access specialised expertise, Jardine said. With services like pathology, for example, results are better where a pathologist has specialised experience in the area under examination, for example breast cancer pathology. Unless a test is carried out in a very large hospital, this expertise will not be readily to hand, but pictures of a high enough quality can easily be sent over the Internet for remote examination by an expert. Even more advanced systems are being developed that allow a pathologist to manipulate a robot arm online to alter a microscope angle and view the results using a live video feed.

Telemedicine can provide good back-up for nurse-led treatment centres as well, he said. One nurse-led minor injury clinic in Cornwall gains input from doctors when needed via a video link to the local hospital, for example to view an x-ray. As well as making efficient use of everyone's time, this is excellent training for nurses, who can play a more active role than usual in the consultation.

Home care is another area where remote communications links can prove invaluable. Jardine said a US project had introduced 'virtual visiting' by health professionals to residents of an old people's home using cheap web-cams on top of television monitors. The system allowed more regular communication, making people feel less lonely.

He said he had heard that with a small tweak to the system, users had found they could begin to communicate with each other as well, starting up a virtual support community.

Systems like these are likely to develop in the future to include remote monitoring of physiological signs like pulse rate, or even daily activities like how often a person goes to the toilet - such personal monitoring would be subject to the full approval of the patient, he said, but the evidence showed people were willing to be monitored in this way, as it made them feel more secure.

More frequent contact with patients through virtual visiting can also be of tremendous value in mental healthcare, Jardine said.

"When it comes to psychiatry, telemedicine works very well. Perhaps it is because many psychiatrists don't want to be in the same room as their patients - and certainly patients don't want to be in the same room as their psychiatrists".

Virtual visiting was good for people suffering from depression, for example, because such people often benefit greatly from frequent contact which it is not always possible to provide with physical visits due to the cost and time restrictions on health professionals.

"Even though the visits are virtual it is better than making contact less frequently", he said. "It might also mean that occasionally a GP can also take part via videolink in a contact between a community worker and a patient of that GP, where a combined physical visit would be impractical".

This latter example demonstrates that the benefits of telemedicine multiply once a range of professionals or healthcare organisations use the same system. Clinicians may be able to collate data more easily from a range of tests or sources to provide a more complete record of a patient, for example.

Of course, telemedicine is not restricted to high-tech applications - as well as web and email services, videoconferencing and robotics, it can include services conducted over the good old-fashioned telephone line.

The telephone can often be the most powerful telemedicine tool of all, Jardine said: one GP in Manchester already conducts half of his outpatient follow-up consultations by telephone, saving on the time and effort of a house-call and ensuring all follow-ups are carried out in good time.

Nurse-led telephone call centres will increasingly be developed to serve multiple functions, he said, for example combining the NHS Direct patient advice service with ambulance calls, home alarm systems and even physiological monitoring.

Of course, telemedicine is not without its problems. One issue is that the companies that make the expensive equipment needed to carry out consultations and other procedures by videolink or other remote communications technologies are keen to sell as many such machines as possible - one to each hospital. It is more efficient for the health service, on the other hand, to buy one machine

centrally for a region and simply cable different hospitals and clinics into it. This difference in outlook can cause tension.

There is also a great deal of discontent with the development of the health service's internal network, NHSNet. Delegates took turns to grumble about how the service simply "doesn't work". "It gets you on the Net but very little else", said one. "It's email system doesn't work" said another.

All agreed NHSNet was secure, but Jardine said overtight security was actually causing absurdities of its own. "There is an automatic system for stopping the exchange of pornographic images over the network. But for some reason, it identified the IHM logo as pornographic and wouldn't transmit it".

Eventually advances in telemedicine combined with staff shortages in the UK could also lead to the NHS drawing on the online services of health professionals from all over the world, he said. People could send images for radiology checks as far away as India, he said, and already Surrey social services is interviewing people for jobs from Australia and New Zealand via a videolink.

* E-Government Bulletin's publisher Headstar is hosting a debate on the Internet from November 7-9 about the future of technology use for healthcare - FutureHealthForum, sponsored by Deloitte and Touche. Anyone interested in taking part should email Dan Jellinek on dan@headstar.com

[Section Two ends]

SECTION THREE: POLICY - ONE STOP SHOPS

CENTRALISED DELIVERY - R.I.P.

The centralised one-stop-shop approach to service delivery has been growing in popularity for over a decade now, but is it always helpful, and can it really solve the problems faced by councils in today's political and technological environment?

There are a growing range of issues which are critical to those considering the development of physical, 'bricks and mortar' one-stop-shops.

There is plenty of pressure on councils, not least from central government, to deliver the wide-ranging 'modernisation agenda'. However, the language of partnership, joined-up thinking, participation and consultation can be little

more than empty rhetoric. For the sake of customers and the communities we serve, it is vital that the interconnections are genuinely made between the various agencies which serve them.

Public services are hampered in tackling the modernisation agenda by a series of organisational cultures derived from their functional, departmental and professional inheritance. In the small market town where I work, if you became unemployed you may need to see up to six different agencies, in six different buildings, filling out six different sets of forms.

Future services must be constructed around life episodes such as birth, death, changes of address, becoming unemployed and so on.

One-stop-shops can help in this regard, but only if they facilitate the creation of multi-agency frontline teams. The bricks and mortar approach can no longer be regarded as being sustainable for just one organisation. These teams must be accountable for achieving holistic outcomes, and so must be properly empowered by their component organisations. To deliver, they must have access to information and systems that cut across organisations: interconnections must be made, and relevant data assembled on individuals and their needs.

Telephone call centres are encouraging centralised service delivery and no doubt this trend will continue to accelerate. Those providing services to rural communities are aware of the potential downside of this approach. There is an urgent need to move to closer community service delivery in such areas as neighbourhood renewal, tenant compacts and community plans.

Currently some of my staff work alongside the police in a mobile police station to serve isolated communities across 250 square miles. This is only a 'first stop' service. We need to turn our staff into local, mobile one-stop-shops, making use of new technologies such as WAP and mobile videoconferencing. However, mobile working will merely be a continuation of the status quo unless opportunities are taken now to facilitate decision-making on the ground.

Of course, this locally-led, multi-agency service delivery must not be merely a one-way process. We need to complete the loop.

Systems need to be able to capture and analyse data about customer needs and trends.

This information must be used to inform future patterns of service delivery and budgetary priorities. As technology improves, employees will gain almost instant communications, be able to perform multi-tasking and obtain and respond to data sensitive to time, place and preferences.

Flexibility will allow us to break away from 9-5 service delivery. The centralised one-stop-shop approach can move us forward, but it can also be a hindrance, and significant resources can be released if our staff become locally-based one-stop delivery points.

* Article by Stephen Brown, Head of Services (Bassetlaw East), Bassetlaw District Council. The article was written to stimulate debate at a discussion group due to run on 15 November in London at this year's Local Government Solutions event, part of the Electronic Government Forum. For more information see: <http://www.electronic-government.com/>

[Section Three ends]

SECTION FOUR: FOCUS - THE DOMAIN NAME SYSTEM

EUROPEAN RIVAL TO THE US-LED DOT.COM REVOLUTION

The Internet domain name system, which translates maps numerical 'IP' (Internet Protocol) addresses for Internet-connected computers into more user-friendly words - is about to undergo several major changes which will be of keen interest to public sector bodies.

The changes include the creation of a '.eu' top level domain as a European rival to the US-centric '.com' revolution. The move was initiated by the European Commission, which in July 2000 confirmed its intention to create and manage the new domain. The announcement can be seen at: <http://www.ispo.cec.be/eif/InternetPoliciesSite/DotEU/WorkDocEN.html>

The commission received strong backing for its initial proposals, which were released for consultation in February. The responses are online at:

http://www.ispo.cec.be/eif/InternetPoliciesSite/DotEU/Analysis_of_responses.html.

Further consultation will now take place on the concrete steps to be taken to establish the domain, including how the EU will work with ICANN (<http://www.icann.org>), the international body which oversees the Internet domain name system.

The commission says the .eu domain will strengthen the image and infrastructure of the Internet in Europe, acting as a counterbalance to the historical dominance of the Internet by US concerns. It could also increase the ability for European companies to run e-commerce operations in an atmosphere of adherence to EU law and policies such as competition, data protection and consumer

rights.

In this way European organisations would be offered an alternative to the choice between operating under US-led top level domains like .com, or operating under their national country codes, which can be too limiting in today's global marketplace.

However, there are various questions to answer in introducing the new domain. Will it be a generic top level domain like '.com', which will allow free registration by anyone or any organisation within the EU, or will it have any restrictions on the types of organisations that can apply and how they use second-level domains within the space?

For example, one way of proceeding might be to replicate the existing generic names like .com under .eu, so you would have .com.eu, allowing Europeans with existing '.com' registrations to have first chance to register a '.eu' equivalent without fear of 'cyberpiracy' - the registration of domain names by others in bad faith in an attempt to sell them. An alternative, or additional measure, might be to create several a series of chartered spaces within '.eu' such as 'museum.eu', to provide rights and opportunities to various sectors like, in this example, the museums sector.

There could be some knotty problems surrounding which European public sector organisations, if any, will use the .eu top level domain. If it is restricted to a generic domain or generic second level domains like .com.eu, or to chartered domains with a commercial flavour like .bank.eu, then it would not be a problem. But if some government agencies in some countries wanted to create a '.gov.eu' domain, there could be political headaches for many - would any UK or Danish government agencies move to use the domain, for example, with such strong anti-European sections within their electorates?

Another imminent development in the global Internet domain name system is the creation of a series of new top level domains by ICANN itself, including the possible introduction of one or more personal domains.

Personal top level domains would for the first time offer a structured name system for individual Internet users - a fascinating prospect and a vital key in expanding the Internet's potential for ordinary citizens.

Possible structures for such as domain could revolve around a top level domain such as '.person', '.nom' or even '.individual'. The second, third and possibly even fourth levels of the domain system would be used to reflect the individual's name and geographical location in some way, making the whole domain personalised but distinguishing it from other people with similar names.

Thus for example the top level domain could come with a stipulation that all registrations must be at three levels, and that the second level must reflect the user's surname and the third level their first name. So the domain for Jane Doe could be jane.doe.person; and if a second person came along with the same name, they could register a domain such as jane.doe2.person

An alternative would be to use one of the levels to express a geographic location, so it could be jane.doe.copenhagen.person

Registration under a personal domain would have to be exempt from all regulations surrounding infringement of trademark or copyright law. This protection should remain so long as the domain is used for personal purposes, for example to receive email or for a personal home page, and not for commercial trading purposes.

This would ensure for example that people with names corresponding to trademarks could not be pursued by the trademark owners: it would not be satisfactory for everyone with the name Mickey to be under threat of action from Disney, for example.

Personal domains will be of vital importance for Internet users in the future, because they could be used to confirm their identity in all sorts of situations, from e-commerce to legal transactions. They could also become a key part of an individual's social identity and image - families often already build up home pages together, so in future the personal domain will become the focus for all that kind of activity. One's email address is already an important identifier.

The concept will therefore emerge of a person's 'digital identity', and this is likely to be closely linked to their personal domain name. A generic top level domain reserved for personal domains will allow peoples' digital identities to better reflect their names, and most importantly will allow them to be controlled by the individual.

* This article is extracted from 'Connecting to the Internet - a response to ICANN's proposal to reform Internet Top Level Domains', a new report by the domain registrar Speednames. The research for the report was carried out by Headstar, publisher of E-Government Bulletin. The report can be found at <http://www.speednames.com/> or email mpower@hillandknowlton.com

The Email Newsletter On Electronic Government,
UK And Worldwide.

ISSUE 91, SEPTEMBER 2000

IN THIS ISSUE:

Section One: News- Plans to boost repackaging of official data; Online elections a cure for voter apathy; Blair presents UK online policy package; Online procurement trials a success; Plugging Asian women into the digital economy; A guide to government web sites; Best libraries on the web; E-government and local politics.

Section Two: Education - The online learning revolution

Section Three: E-government- Social inclusion

Section Four: E-democracy - Electoral reform

SECTION ONE: NEWS

PLANS TO BOOST REPACKAGING OF OFFICIAL DATA

The UK's e-Minister Patricia Hewitt has announced plans to streamline the way government information - from health data to crime figures, school league tables and census results - can be purchased and repackaged for consumers by Internet and publishing businesses.

The 'Government Information Review' includes a pledge to make Crown Copyright public information available in digital format wherever possible; and to ensure that most information is available at marginal cost price - covering merely the expense of making the data available, not of producing it in the first place.

However, the cheap data deal excludes a vital group of government 'trading funds', agencies which create high value information and trade as businesses including Ordnance Survey, the Meteorological Office, HM Land Registry and Companies House. There was a vaguer pledge to "improve pricing and dissemination of information" for these bodies.

Other plans include a new on-line licensing service, "Click-Use-Pay" being implemented by Her Majesty's Stationery Office (HMSO); a consultation paper on the future role of HMSO operating in a regulatory capacity, including a new complaints procedure for customers; and all government bodies to speed up creation of information asset registers linking to an 'inforoute' website being developed by HMSO.

Government departments and agencies will continue to be free to develop their own value-added information services charging market prices provided there is a level playing field among all participants, the minister said. There was also a recommendation that other public bodies such as local authorities and quangos review their charging and licensing strategies for copyright material.

Fred Perkins, chief executive of The Stationery Office - the company formed from the privatisation of HMSO's publishing operations and one of the main providers of value-added services for official information - said the new proposals were "interesting . . . but the devil is in the detail. Crown Copyright is only one factor in the exploitation of government information: freedom of information is another, and the whole spectrum of joined-up government and e-government infrastructure issues.

"The government is at a very early stage in committing itself on several interrelated fronts. These things won't be delivered overnight - the detail will determine how fast, where, and how large will be the opportunities". For the new proposals in full, see: <http://www.hmso.gov.uk/govinfoev.htm>

ONLINE ELECTIONS A CURE FOR VOTER APATHY?

The Hansard Society for Parliamentary government is to exhibit a 'Virtual MP's office' at all three main political party conferences this month - a mock-up of how technology could be used in the future by our elected politicians. The society, with backing from BT, will also publish a guide for MPs on the use of technology to enhance their constituency and other work.

The office and guide will be unveiled first on 17 September at the Liberal Democrats' conference in Bournemouth.

The society is also hosting fringe meetings at each conference on "Voter apathy and what is to be done", where leading politicians and commentators will consider solutions to poor election turnouts including whether Internet voting could help. Further information on the project is due to be posted up shortly at: <http://www.hansard-society.org.uk/edemocracy2.htm>

According to a recent nationwide survey conducted by pollsters ICM on behalf of digital television company Ondigital, people would indeed be more likely to vote if elections were to take place online. More than half of respondents said they would be more likely to register their political preference in an election if they could vote on the Internet.

However, the Electoral Reform Society (<http://www.electoral-reform.org.uk/>) believes there are significant problems to be overcome before on-line voting is a viable option. Their worries include barriers to access and the danger of fraud.

The society has set up a commission to report by the end of the year on the experimental pilot voting schemes run in May's local elections, which included electronic voting procedures, allowing people to cast their votes over the Internet or using touchscreen computers in polling stations.

The pilots were enabled by the Representation of the People Act 2000, and if successful, the intention is to apply them to national parliamentary elections in due course. For more information see:

BLAIR PRESENTS 'UK ONLINE' E-POLICY PACKAGE

The Cabinet Office's Performance and Innovation Unit this week published a plan to boost e-government, including financial incentives for 'joined-up' working between government agencies, as part of a wave of 'UK Online' policy announcements unveiled by Tony Blair.

The PIU report, 'e.gov', is to be backed by a £1 billion investment in electronic service delivery over three years. Key points include the focusing of services on the needs of users, rather than government departments; backing up services with advice and support, to ensure high levels of take up; and partnership with the private and voluntary sectors.

The centrepiece of the document is a pledge to reinvent how government works internally, with "powerful incentives to change and radical shifts to cross-boundary working . . . including sharpened financial incentives to promote electronic service delivery, and the creation of a government incubator to develop new service ideas". See:

<http://www.cabinet-office.gov.uk/innovation>

As part of the broader UK online campaign launched by the Prime Minister, the locations were unveiled of the first 600 'UK online centres' for free public Internet training in some of the UK's poorest communities. The government is aiming to create some 6,000 such centres, including all public libraries, supported by a national online education service 'learndirect'. See:

<http://www.ukonline.gov.uk/>

A linked initiative to help small businesses exploit new technologies with advice available face to face, online or by telephone was launched by the Department and Trade and Industry. See:

<http://www.ukonlineforbusiness.gov.uk/>

ONLINE PROCUREMENT TRIALS A SUCCESS

The Buying Agency (<http://www.tba.gov.uk/>), the government procurement agency operating within the Treasury's Office of Government Commerce (<http://www.ogc.gov.uk/>), is set to expand trials of its electronic procurement catalogue.

Initial trials began in April, with around 30 organisations including central and local government bodies and universities using the catalogues to purchase a range of some 500,000 goods and

services online from 400 different suppliers.

Following the success of these pilots, a further group of organisations will be added over the next month or two. The service will be made available to all government bodies later this year, to meet the government's target of handling 90% of all procurement electronically by 2001. See: <http://www.tba.gov.uk/p22.html>

PLUGGING ASIAN WOMEN INTO THE DIGITAL ECONOMY

A new report on how to overcome the problems faced by women in the Asia-Pacific region in taking part in the digital economy was published this week by 'WomenAsia.com'.

The report, by WomenAsia.com founder Rosemary Brisco, was presented to the World Economic Forum's Asia Pacific summit on the gender digital divide, which ran from 11-13 September in Melbourne, Australia.

It examines issues relating to women in the workforce; women as entrepreneurs and as consumers; and 'the invisible digital divide'. Suggested solutions included better training, corporate sponsorships and government subsidies. See: <http://www.womenasia.com/divide/>

A GUIDE TO GOVERNMENT WEB SITES - SECOND EDITION

'Official UK', a comprehensive directory of government and other public sector web sites featuring reviews of more than 1,000 sites, was published in its second edition this month.

The book, written by E-Government Bulletin editor Dan Jellinek, lists sites by subject area such as Foreign Affairs and Defence or Education and Science, with separate chapters for Scotland, Wales and Northern Ireland. The new edition also features reviews of the web sites of international bodies such as the EU and the UN. An appendix contains links to the main UK political party sites.

The guide costs £25, ISBN no: 0117024465. For more information and to order a copy visit: <http://www.official-uk.co.uk/>

THE BEST LIBRARIES ON THE WEB

EARL, the consortium for public library networking, has launched its 'Best on Web 2000' awards for UK public library web sites. The initiative seeks to reward libraries with sites that are informative, fun and interesting to use.

Anyone can nominate up to three sites for the awards, bearing in mind that the judges will be looking out for the best information content, interactive features, and design and usability of sites. Winners will be announced at the EARL annual conference in November 2000.

Full judging criteria can be found on the awards' web site, as can a list of public library websites to choose your nominations from. Nominations, which can be sent via an online form, must be received by 6 October. See: <http://www.earl.org.uk/bestonweb/2000.html>

E-GOVERNMENT AND LOCAL POLITICS

The implications of e-government for local politics and local government structure will be among topics discussed at an October meeting of the Promoting Electronic Government (PEG) project. PEG is run by a consortium of councils and the consultancy CDW and backed by the Department of the Environment, Transport and the Regions.

Bob Kerslake, Chief Executive of Sheffield City Council, will address the 'Community and e-government' meeting on 24-25 October in Sheffield. Other issues to be covered include partnerships for electronic services. See:
http://www.eipdg.org/sheffield_oct2000.htm

SECTION TWO: EDUCATION - THE ONLINE LEARNING REVOLUTION

The steady rise of Internet-based and other forms of interactive online learning in higher education are set to force both academics and students to radically rethink the way they work and study, according to a leading UK expert.

Diana Laurillard, Professor of Educational Technology at the Open University, told E-Government Bulletin: "The ways academics spend their time will have to change. Currently, university academics spend most of their time lecturing, marking assignments and holding tutorials, and their teaching role is that of a 'craft amateur'. With an increase in online learning, they will have to become more professional in developing high quality online educational resources.

"It will not be adequate to simply put their lecture slides up on the web - that is a bit like dumping students in a library and telling them to get on with it. They will need to develop online resources that are interactive, offering feedback, automated assessments of work, and other forms of support".

The way students employ their time is also undergoing changes, she says. "Increasingly, students are having to work part-time to cover increasing costs and reduced financial support for learning, or with a growing number of mature students, are spending more time with their families.

"If they are working 20 hours a week, they will have to fit their studies around this, so there will be less time for lectures", Laurillard says. "They need the flexibility to be gained from more online learning, although it is not suitable for everything, and it is important to obtain a balance across different learning technology media".

Her assessment of progress to date is not rosy, however. "We're not yet exploiting technology for these purposes nearly enough - there is a long way to go".

Ms Laurillard was among speakers at this week's seventh annual ALT-C conference on integrated learning technology at the University of Science and Technology in Manchester.

Elsewhere at the conference, a new working group spearheaded by the UK Office for Library and Information Networking (UKOLN) was examining the development of national standards for the description of educational resources in digital formats.

The 'Metadata for Education Group' (MEG) was formed to reach a consensus across the educational, public library, museum and data archive community on how to describe learning tools such as CD-ROMs and online courses, and to disseminate best practice.

"At the moment there are a lot of public sector agencies producing educational content online, from the National Grid for Learning to the Environment Agency", says the group's leader, Dr Paul Miller of UKOLN. "The problem is that they are all described in different ways, using systems developed locally, and learners can become confused".

Examples might be descriptions of who a particular course is for; what format it takes; or what UK educational qualifications it is working towards. In some cases different terms may be used to describe the same objects, and in others, the same terms will cover completely different objects.

An increasing number of publishers and other organisations are creating databases of educational resources, and the main problems with descriptions arise when people try to search across these databases, Miller says.

The MEG is developing recommendations for standards, by examining best practice in the UK and internationally. It first met in June, and again this week, when members drew up guidance for public sector bodies on selecting and implementing description standards.

The group will meet again in Edinburgh in November. In the meantime, it is setting up a register of what work is currently being carried out by various public sector bodies in this field. For more information see:

<http://www.ukoln.ac.uk/metadata/education/>

Learning and Technology Minister Michael Wills MP used ALT-C 2000 to launch a new award scheme to reward organisations using new technologies to develop lifelong learning opportunities in their local communities.

The BT Lifelong Learning Awards will offer more than £500,000 per year - divided into awards of up to £75,000 per project - to universities, further education and sixth form colleges, libraries and any community partners for projects promoting access to technology, innovation and teamwork.

See:

<http://www.bt.com/lifelonglearning>

And for further information on ALT-C 2000 see:

<http://www.umist.ac.uk/alt-c2000/>

SECTION THREE: E-GOVERNMENT - SOCIAL INCLUSION

Raw percentage targets for the provision of public services online - as already set for central government and likely to emerge shortly for local government - must be implemented in the context of a range of vital social issues including social inclusion and equal opportunities, according to a new e-government think-tank.

The high-level 'E-government to E-community' group, launched this month by the local authority chief executives' society SOLACE, is the brainchild of James Hehir, chief executive of Ipswich Borough Council and president elect of SOLACE.

An initial 'scoping' paper prepared for the group sets out its aim to focus strongly on how technology will affect local communities, including tackling 'digital divide' issues.

"Government targets for the conduct of business using electronic means . . . need to be supplemented by a series of other themes including social inclusion, the development of citizen centric approaches, and the relationship between e-government and the modernisation agenda, including the drive for Best Value", the paper says. The effects of technology on working patterns and local economies should also be examined, it says.

The think-tank will stress the importance of leadership both from and within local authorities, urging the need for "positive attitudes of engagement rather than defensiveness or fear". Ways in which councils could take a lead include working with local training providers to boost technology skills among their own employees, so helping to create a training culture in the external community, the report says.

Other questions the think-tank will address include:

- * Should local government be actively promoting access to new technologies within the local community?
- * To what extent should councils lead by example? Will they be taken seriously by their communities, and be able to achieve community leadership, if they do not embrace new technology itself ourselves in everything they do?
- * Flexible working can have many benefits, but can equally create problems. Should the local authority play a role in promoting an awareness of the implications of flexible working within the community?
- * How will changing working patterns affect local authority service delivery?
- * How can councils help people in all parts of society, for example people for whom English is a second language cope or young single parents, access technology and digital services?
- * Is there a danger that some sections of the community will become economically disadvantaged?

The think-tank is divided into a core group and a wider consultation group. The core group is comprised of Mr Hehir; David Henshaw, chief executive of Liverpool City Council and current SOLACE president; Clive Grace and Mike Sanders of SOLACE; Gordon Mitchell, chief executive of Bracknell Forest BC; Annie Ralph, chief executive at Braintree District Council; Rob Garnett, chief executive at Breckland Council; Claire Dimitros, head of IT at Essex County Council; Martyn Harwood, director of corporate services at Gloucester City Council; Martin Ferguson and Martin Greenwood of the Society of IT Management (SOCITM); Steve Baker, head of facilities management at Ipswich; and representatives of the group's three sponsors BT, Oracle and Zurich Municipal. A representative of the government's Central IT Unit is due to join the group shortly.

A final report will be produced by the group in February 2001, to include a range of case studies reflecting the challenges faced by different types of council such as urban redevelopment and rural issues. It will also include check-lists for councils and others for present and future action; suggestions for the role of business; and suggested areas where central government action or action from local authorities collectively may be needed to drive progress.

Ipswich, where the think-tank is based, has a strong recent track-record of community technology projects including a recent project in which Internet screens were installed in tea rooms run by Age Concern for use by elderly people.

The city is also positioning itself as a leading UK centre for high-technology companies under the 'IP-City' initiative, after some bright spark in the regeneration department noticed the local 'IP' postcode also stood for 'Internet Protocol'. The initiative forms part of a 'Cambridge-Ipswich High-Tech Corridor' programme, in which the city is looking to partner Cambridge as a major European centre of innovation.

For further information or to contribute to the think-tank's deliberations, Bulletin readers should contact James Hehir or Steve Baker on james.hehir@ipswich.gov.uk or stephen.baker@ipswich.gov.uk

The SOLACE web site is at:
<http://www.solace.org.uk/>

And for more on 'IP-City' see:
<http://www.ip-city.com/>

SECTION FOUR: E-DEMOCRACY - ELECTORAL REFORM

TIME TO MOVE TO A VIRTUAL CONSTITUENCY?

As well as potentially improving the speed and efficiency of the electoral system, electronic voting - including Internet voting - and electronic vote-counting could revolutionise the very fabric of democracy in the UK.

The annihilation of geographic distance by Internet use and the gradual shift towards adoption of proportional voting systems for elections at various levels could combine to create the potential for a move away from geographic constituency politics to the politics of interest groups or communities of interest.

The prospect was raised in a recent issue of E-Government Bulletin (August 2000, Section Four). In his review of the Government Computing Northern Ireland conference, Dr David Newman of Queen's University Belfast wrote: "What if some MPs represented an interest group right across the country, rather than a physical constituency, using the Internet to keep in touch with this dispersed group?"

How would such a system work in practice? Could such a seismic shift in our political landscape really occur?

Currently, the key institution of British politics is the political party. The accountability of MPs is far greater to their party than it is to their constituents, and the pressure on them to obey the party whip is immense. With the growing availability of internet access, it has now become much easier to involve most of the people in the control of government and eliminate the wastage of votes that occurs under the present, first-past-the-post (FPTP) electoral system.

One stated aim of the Jenkins Commission on voting reform - that of maintaining geographical links - need no longer imply single-member constituencies, since it is now as easy to confer with a representative anywhere in the country as with one maintaining an office in the nearest large town. Multi-member constituencies, served by a varied team of elected representatives, could even strengthen community links by giving almost all voters someone that they have helped to elect.

Of the various systems currently under consideration, the Alternative Vote (AV) does extend voter choice to some extent by allowing electors to identify a second preference candidate to whom their vote is transferred if their first preference candidate stands no chance of election. Experience with AV in Australia, however, was that the third largest party, the Democrats, failed to get a single seat, despite getting some 15% of the vote.

The Additional Member System, in which some members are directly elected and some are elected from party lists drawn up by the parties themselves, provides better proportionality. However, this system enhances the power of party organisations to the detriment of the electors.

A better choice, especially now that ballot calculations can be carried out by computer, is for the single transferable vote (STV) system with multi-member constituencies. Electors mark a list of candidates in order of preference, and the counting process involves the transfer of the unused portions of first preference votes to the respective second preference candidates and so on, until no further fractions can be used.

The sizes of the constituencies would vary according to geographical or natural communities, but could typically be of such a size as to elect five, six or seven representatives. The limit depends on the number of candidates, typically 20 to 30, that may conveniently be listed on the ballot paper or screen and from which the voter may select an order of preference.

One problem with STV is how to decide the order in which candidates' names appear so as to avoid unfair advantage to those near the top of the list. With a fully electronic system, however, names could be presented in different random order for each elector, eliminating any bias. The whole process would be much quicker and more reliable when using computers.

The experience with STV in the Republic of Ireland shows that the result is broadly proportional and that governments emerging from the process will generally be stable.

So where does the issue of 'constituencies of interest' fit in with this system of voting? Under STV, it might indeed be possible for a number of 'special interest' candidates to stand for virtual constituencies. Voters could nominate which special-interest constituency they wished to inhabit, removing themselves from their geographical constituency as they did so.

This process would entail a national register of all voters showing their respective constituencies, and allowing ballot forms with the correct lists of candidates to be supplied. For those voting electronically via the internet, this task could be automated and it may be acceptable for special interest constituencies to be limited to those with internet access.

Some way would have to be found to allocate fairly the number of special interest members to be elected. After all, the current ratio is only about 1.5 members per 100,000 electors, so to merit a five member entitlement, you would need more than 300,000 voters to opt for the relevant special interest constituency rather than their geographical location. That might be difficult to achieve.

An alternative solution may be to have special interest members elected to the House of Lords, but

either way it would be important to have preference voting by STV.

Proportional representation and electronic voting are both ideas whose time has come. And in combination, they could lay the groundwork for an exciting new era in democratic representation.

* Article by Owen Dumpleton, a member of the Electoral Reform Society and a former green party Euro candidate.

SECTION ONE: NEWS

NHS TECHNOLOGY PLAN FACES UPHILL STRUGGLE

The new NHS National Plan, which charts the way forward for information technology in the health service, is not powerful enough to overturn the NHS computing mistakes of the past, according to one leading commentator.

Roy Lilley, a former NHS trust chairman and author and broadcaster on health management issues, told E-Government Bulletin: "The NHS has a disastrous history on IT issues and I am not sure much is set to change. The management of information using technology could be the salvation of much of the NHS's problems. The difficulty is the legacy of the Thatcher years - by devolving responsibility to NHS trusts, the service became disaggregated.

"Some trusts made progress on technology, but most did not. Now the new NHS IT agency should select a system for the whole of the NHS and railroad it through. There would be critics, comments about whether or not the system is the right one - but at least it would be a start".

However the IT agency - itself introduced after the failure of the former NHS Information Management Group - was not taking a strong lead, he said. "The agency is doing more harm than good. Civil servants who have never experienced what an IT system can do are too timid to make procurement decisions. It will take the agency until 2005 to agree common standards with industry, never mind get the British Medical Association to sign-up, trusts to agree and comply with EU procurement rules."

The National Plan, launched last month by Tony Blair and funded by £13 billion from the government's comprehensive spending review, proposes an ambitious range of IT initiatives ranging from issuing smart-cards to patients to providing TVs and telephones at every hospital bed.

Other plans include access to electronic personal medical records for patients by 2004; electronic prescribing of medicines by 2004; electronic booking of appointments for hospital treatment by 2005; facilities for telemedicine across the UK by 2005, allowing patients to connect with staff electronically for advice; and smart cards for patients allowing easier access to health records "when the necessary infrastructure has been put in place".

"Not everything can be put right overnight - the decades of neglect make that impossible. But over the next few years the NHS will start to look and feel like a different place", the plan says.

However, Lilley warns it may not be that simple. "The electronic patient record has defeated just about everyone. I was at an Arizona conference on the topic last year and the Americans can't agree on common data input standards, data warehousing facilities or patient confidentiality issues. I have no grounds for hoping the UK is any different."

CALL CENTRES MUST BE BACKED BY SERVICE RESTRUCTURE

A new report on the use of telephone call centres by local councils finds that although they are beginning to be used quite widely, there is a real danger they will underachieve or fail if they are not implemented alongside a much wider programme of reshaping service delivery around a single point of entry.

The report, by the Foundation for Information Technology in Local Government (FITLOG), cites the case of Hertfordshire CC which began its call centre work by identifying that "people contacted the council through a number of channels and a critical element in developing a consistent response was a common technological platform.

"The county set out to design and build a database capable of holding the answers to all of the questions it might be asked and, more importantly, to begin to change the way the authority managed its information", the report says. "The call centre is the first mechanism by which Hertfordshire will provide access for the public to that new database. It will be complemented in due course by a new web site, which will provide transactional capability as well as information content".

The report predicts that interaction with call centres over the Internet will be a major growth area in the future. "As more citizens gain access to the Internet and as more technologies such as digital television are introduced, the breadth of activity handled by call centres will grow. These new contact centres can be expected over time to exploit a variety of emerging technologies, such as voice recognition, to improve their operations.

"Technology integration will also increase . . . commercial web sites are beginning to include a button which can be used to establish a dialogue with a call centre adviser. Similar devices could be developed for information kiosks". Connections would also be made between call centres and back office systems like the automatic digital printing and despatch of a letter or form.

In time, call centres could even play an active role in policy delivery such as social exclusion - perhaps offering freephone access to excluded groups - or customer champion, holding the rest of the council to account for agreed service standards, the report says.

Making contact - developing successful call centres in local government is available from FITLOG, price £45 to non-commercial and £90 to commercial organisations. See:
<http://www.fitlog.com>

LORDS' COMMITTEE URGES ACCELERATION OF INTERNET REGULATION

The House of Lords - of all bodies - showed a fine grasp of the overarching policy issues surrounding regulation of the Internet and e-commerce this month with the publication of a report by its European Union select

committee.

On policy development in the UK for regulation of e-commerce, the committee says: "The government has made a good start and we have no doubt about its intentions and commitment in this area. But we have yet to be persuaded that real change is happening and at the speed which the new technologies demand."

At the EU level, the committee is more complimentary, although it warns that current informal arrangements should be hardened into a formal European fast-track system for Internet policy.

"It is . . . essential that the processes of legislation be speeded up. There should be a faster track. The way in which the Commission and the Parliament worked to adopt the e-commerce framework Directive is a model of how these institutions can react rapidly. However . . . the European Parliament was unhappy at the way in which the Parliamentary process was applied in this instance.

"The improvised procedures which achieved success in the case of the e-commerce Directive will have to give way to a more formal system. We would argue that this requires a serious look at the way in which legislation is processed in and between the institutions of the European Union to see whether or not a fast-track system can be established.

"It is important, too, that member states revise their own systems of transposition into national law so that the impetus gained by fast action in the institutions of the EU is not dissipated at national level".

The report concludes: "The Internet has turned the concept of jurisdiction upside down, and we see a serious need for international conventions to deal with this new phenomenon". For the full report, see the 14th report of the EU committee, in the select committees section of the House of Lords web site:

<http://www.publications.parliament.uk/pa/ld/ldhome.htm>

SECOND US GOVERNMENT PORTAL ANNOUNCED

The Clinton administration has announced plans for a second major cross-government Internet portal, to go live this autumn.

The secure service, 'pay.gov' (<http://www.pay.gov>), will allow US citizens to make a wide variety of electronic payments to the government, from families paying for a camping licence for a national park to corporations paying fines and even certain taxes. Eventually the service will have the potential to handle any of the 80 million transactions the US government now processes each year. See:

<http://www.treas.gov/>

The announcement follows plans announced last month for the launch this autumn of 'FirstGov', a new single online gateway to US government

information on the web. See:
<http://www.firstgov.gov/>

CONFERENCE ROUND-UP: E-GOVERNMENT AND THE DIGITAL DIVIDE

The Electronic Government Forum, hosted by the publishers of the e-government bulletin, takes place in London from 15-16 November. This annual networking forum provides the opportunity to share best practice and explore partnerships with suppliers. The first day is for local authorities and the second for central government departments and agencies. For more information and to register visit: <http://www.electronic-government.com>

Meanwhile Business in the Community, a grouping of UK companies committed to continually improving their positive impact on society, is holding a conference on the digital divide on 28 November in London. The conference will explore the implications of a digital divide for society and business; ethical investment and corporate citizenship; and technology issues for rural areas. Contact Barbara Murphy at comm.unity@bitc.org.uk or see: <http://www.comm.unity.uk.net/>

IS YOUR COUNCIL BETTER CONNECTED?

'MAPIT', the research arm of the Society of Information Technology Management (SOCITM), has begun to plan its third comprehensive survey of council web sites, Better Connected? 2001. Representatives of all councils are invited to email mapit@socitm-ssl.co.uk with brief details of any innovation that your site has seen in the past 12 months.

Please email one-line responses to the following questions, with a web address if relevant: Have you introduced any new interactive application? Have you introduced some other innovation of special interest? Have you made any formal assessment of user needs? Have you learned any specific lessons from assessing usage statistics? And are there any ways other than simple links in which the website is designed to work with neighbours, local agencies and other partners?

As a new extension of its 'Better Connected' project, MAPIT has also launched a local authority web site review service. Under the service a review team tests each site from the perspective of various kinds of user, such as single parents or tourists, and issues recommendations for improvement. In association with the RNIB, it also checks for accessibility to people with visual impairment. The charge is £495 to MAPIT subscriber councils and £950 to non-subscribers - contact Martin Greenwood on 01926 498703 or email: mapit@socitm-ssl.co.uk

NEWS IN BRIEF:

LITERACY LEVELS: The literacy of a country's workforce is a crucial element in ensuring a high proportion of knowledge jobs in its economy, a new report

from the OECD finds. Initial educational attainment is the key to improving literacy, far outweighing adult education, it finds. However, the UK has poor literacy rates among developed nations, with more than 15% of its population possessing only the most rudimentary literacy skills. 'Literacy in the information age' is available priced 200 French Francs from the OECD: <http://www.oecd.org/>

E-PETITION: Downing Street is to accept an electronic petition for the first time, in a move predicted exclusively in last month's E-Government Bulletin. The global environment network WWF has launched the project as part of its Oceans Recovery Campaign, calling for action by the government to regenerate the seas by piloting fishing-free zones and protected areas. The online petition system 'e-petitioner' was designed by the International Teledemocracy Centre at Napier University in Scotland, which already has a formal agreement with the Scottish Parliament to host online petitions. For more see: <http://www.e-petitioner.org/>

E-DEMOCRACY: The Hansard Society for Parliamentary government is stepping up its work on evaluating the use of the Internet and other new technologies to enhance the democratic process. A new report, 'New media and social inclusion', looks at the lessons to be learned from a recent pilot online policy consultation run for victims of domestic violence. Next month the society will run two public consultations for the UK government's planned new Internet portal, UK Online. Further work is planned to analyse the content and quality of online democratic debate, and look at the role of digital TV. See: <http://www.hansardsociety.org.uk/>

The Office of Government Commerce within the Treasury (<http://www.ogc.gov.uk/>) has announced the creation of a new forum between government and the IT industry - led by the Computing Services and Software Association (CSSA) - to try to improve the government's dismal track record on major IT procurement projects. It will examine ways of eliminating "systemic problems" in processes for the placing and delivery of government IT contracts. However in a briefing paper the leading IT journal Computer Weekly said the establishment of a forum was no substitute for action, and what was needed was genuinely independent assessment of government projects. See: <http://www.computerweekly.com/cwarchive/chinook/20000803/ITdisaster.DOC>

[Section One ends]

SECTION TWO: TECHNOLOGY - WIRELESS APPLICATION PROTOCOL (WAP)

HAMPSHIRE MOVES EARLY TO HARNESS WAP

In May this year, Hampshire County Library launched the UK's first WAP-enabled local authority web site. County residents can now access a

complete directory of libraries from wherever they are using a WAP-enabled mobile phone or other WAP device. The service covers all 54 libraries in Hampshire and includes addresses, contact details, opening times and information on access for people with mobility difficulties.

The site is at:

<http://wap.hants.gov.uk/library/>

You cannot access it directly using an ordinary web browser, so if you do not have a WAP device but would like to see what it looks like, you can use the WAP simulator at <http://www.gelon.net/> to view it. You scroll down the screen using the little button below the centre of the screen, and click on the links as you would on an ordinary web page.

WAP stands for Wireless Application Protocol (WAP), an open specification that allows users of mobile, wireless communications devices to access and interact with online information and services. The standard is overseen by the WAP Forum, an industry association with more than 200 members - see: <http://www.wapforum.org/>

Currently, the mobile Internet offers access to predominantly textual information, supplemented by simple single-colour graphics - a far cry from the colourful world of the web. There has also been some controversy surrounding the download speed of WAP information, and whether or not the standard will survive in the long term or be replaced by more powerful systems. However Hampshire Library decided that the technology, though still in its infancy, could already benefit the county's citizens by offering quick, precise, tailored information to those on the move.

Development of the site started in April this year, with help from a local computer games company, IO Productions (<http://www.ioproductions.co.uk/>). The site was developed using the WAP Toolkit from mobile phone company and WAP champion Nokia, available for free download from <http://www.forum.nokia.com/>

WAP pages are written in a programming language called wireless markup language (WML). This is similar in many respects to the language in which ordinary web pages are written, hypertext markup language (HTML). However, WML is not as forgiving as HTML: unlike ordinary web code, if you forget a tag or put a line of code in where it is not expected, your page will not be displayed at all.

There is also a maximum size of page that the phone's browser can process. The library site was designed to work on the Nokia 7110e phone, with no page exceeding 1,397 bytes, a limit which is very quickly reached! But the advantage is that any page that is viewable on the 7110e is viewable by almost all other WAP-enabled mobile phones on the market.

The site is being hosted on the Hampshire County Council web server, which was reconfigured to handle WML documents. This is fairly easily done, and there is plenty of information about server configuration for WAP on the web - see for example:

<http://www.wapdesign.org.uk/server.html>

It is important to think very carefully about the design of a WAP site. Generally people will not be happy to scroll and click through pages and pages of information to find what they require. And it is important to think of where people might be accessing the Internet with their mobile phone - on a train, shopping or out for a walk perhaps. What type of information would people need or like to access when they are mobile?

The library site is just the first step in Hampshire's initiative to build Hantswap (<http://wap.hants.gov.uk/>), a complete WAP directory of council services (again, this page can be viewed with an ordinary web browser using the simulator at <http://www.gelon.net/>).

Sister to the council's award winning web site Hantsweb (<http://www.hants.gov.uk/>), Hantswap is generating very positive feedback from the public. Traffic to the site is being monitored closely to help the council gauge demand for information delivery using this new technology. In June this year the library site received more than 1,400 hits.

Hantswap is still in its infancy, and is currently based purely on a directory of services, but future possibilities are very exciting. Much will depend on the way mobile technologies develop, but future mobile phones will be capable of connecting to the Internet at very fast speeds, and will have colour screens and be capable of downloading music and other data.

We are entering a new phase of the technological revolution . . . accessible now on a mobile phone near you!

[Section Two ends]

SECTION THREE: INTERNATIONAL CASE STUDY - FINNISH ID CARD

CITIZEN SMART CARD UNLOCKS PUBLIC AND PRIVATE SERVICES

In December 1999 Finland became the first country to offer its citizens a digital ID card for secure transactions both online and offline. The solution, based on public key infrastructure (PKI) technology, paved the way for a new generation of electronic services.

The work was undertaken in the same spirit as building railroads and highways was undertaken in the past. The ability to use secure electronic transactions has become a basic infrastructure in Finnish society, for everyone to use and to build services on.

Finland has the highest Internet use rate per capita in the world, and public services on the Internet have also been developed at a brisk pace.

This means citizens can take care of official business and duties at home or work without having to worry about office hours, weekends or the physical location of government bureaux.

When dealing with sensitive business, it is vitally important to know with certainty with whom we are communicating - what is known as 'strong authentication'. Also, documents transferred via the Internet may have to be encrypted, and sometimes a digital signature is required.

The Finnish Population Register Centre (FPRC), a state agency, now offers all citizens the possibility of having an electronic ID card - a plastic smart card complete with a micro chip, similar to a tiny computer. Alongside its traditional use as a photographic ID card and a travel document within Europe, the 'FINEID' card contains a government-branded digital certificate allowing the user to perform secure online transactions, create trustworthy digital signatures and send secure e-mails.

Designed as a national infrastructure with services available to millions of Finns, the requirement was to have a solution that could not only support the high-volume management of digital certificates but also work to common, open standards. This was pivotal in allowing third party organisations to integrate their own online services and make use of the infrastructure.

The FPRC has outsourced all of the elements of the technology infrastructure required for the certification system. ICL Invia acts as the main technology integrator, and iD2 Technologies as the supplier of the PKI technology. The telecom operator Sonera won the helpdesk contract for revocation services and NovaCall won the contract for a user helpdesk. Elisa Communications now manages the database of public keys and the archive or repository of certificates. Smart cards are supplied by Setec.

By using the electronic identification infrastructure, private individuals can make use of a wide range of services provided both by public administration and the private sector, round the clock. Service outlets are being made available to people at public libraries and municipal service centres as well as at particular information kiosks. Moreover, these services can be accessed directly from a computer at home or work via the Internet. Also the use of mobile phones and digital TV as end user terminals is being developed.

For example, an online change of address registration system allows citizens to notify the government of any changes to their address over the Internet, while automatically updating the Finnish Post Office in the same transaction. It also provides the government with a centralized, up-to-date database of citizens' addresses.

The new online, infrastructure is also already being used by private companies to communicate and trade with their customers. FPRC has introduced a trademark or logo for users to recognise compliant software, services, card readers and so on. OKO Bank, for example, has become one of the first organizations to use the ID smart cards and PKI system to enable citizens to

manage their finances over the Internet with the FINEID card.

The new online infrastructure is therefore bringing time and cost savings to the government, corporations and citizens. For more information on FINEID see:

<http://www.vaestorekisterikeskus.fi/prc.htm>

* Article by Vesa Vatka, the Population Register (Finland). The author is speaking at the Information Security Solutions Europe Conference from 27-29 September in Barcelona. See:

<http://www.eema.org/isse>

[Section Three ends]

SECTION FOUR: CONFERENCE REVIEW GOVERNMENT COMPUTING NORTHERN IRELAND

Northern Ireland is a small place, yet around 300 people turned up for this year's Government Computing magazine Northern Ireland conference in Belfast in June to learn about new ways of using computing to help deliver public services.

Many were from government agencies, trying to learn some of the jargon of the Internet and e-commerce that is only just starting to be used widely in the somewhat conservative public and private sectors over here. In contrast, the community and voluntary sectors in Northern Ireland started down the same road over six years ago - they are the exception to statistics showing that Northern Ireland is one of the worst regions of the UK for take-up of the Internet.

Dermott Nesbitt, the junior minister in the Northern Ireland Executive who addressed the conference, is not the most wired up of people, but might nevertheless be the most IT-literate minister in the executive. Then again, how many ministers or permanent secretaries in London could pass the European Computer Driving Licence test?

Nesbitt said the Northern Ireland Executive was aware of the importance of computing and the Internet for delivering government services, particularly for economic development and education. It will shortly be publishing two papers: 'Citizens First', a framework for modernising government to serve citizens, and 'E-government for Northern Ireland', which will look at getting the government itself connected.

What does this mean in practice? We don't know yet, but we can pick up a few clues from the things said and left unsaid by the various conference speakers.

Several public and voluntary sector speakers gave practical examples of what has already been achieved. The Social Security and Employment Agencies in Northern Ireland have already set up pilot one stop shops in which both sets

of staff (and both IT systems) worked together to serve their common clients. Unemployment is now 30% lower in the Dungannon pilot area than in the matched control of Armagh.

The Northern Ireland Association of Citizens Advice Bureaux has been using Lotus Notes information and discussion databases for years to keep their offices up to date across the province. This is now being copied by NACAB in England (using inferior technology). Service to citizens is now becoming important - not just information provision, but personal advice and services.

For many of the speakers who came over from England, the next big thing in e-government will be 'customer' transactions. If e-commerce can sometimes deliver savings to private companies, let's try it in government.

There were three types of talk on transactional services. Some simply repeated a standard sales pitch, with no thought for the audience, such as the technical explanation of smart cards without any mention of their possible application in verifying voter identity in an island with a tradition of "vote early and vote often".

Others seemed to be blind to the fact that citizens are more than just customers. We actually own the government, through our votes and taxes. That's why civil servants are called servants, not masters.

When Rob Watts from Compaq talked about Cabinet Office projects, his vision was of individuals using a smart card to identify themselves to a web portal or call centre. Then up would pop all their records with all parts of government, so that the customer could fill in an application and pay for several related licences at one step, rather than traipsing from office to office. But nowhere in the design is a way for citizens to complain that they shouldn't have to fill in the form at all. He managed to make it sound so centralised it could be an electronic version of the former East German government. This definitely would not sell in nationalist, let alone republican or loyalist, areas of Northern Ireland.

More inspiring was the talk by Charles Lowe of BT, whose group will be developing the 'me.gov' central government portal. Lowe contrasted technologies that develop by small improvements in what exists, such as TV, with 'disruptive' technologies which transform the way we live.

He invited us to think of some of the possible radical changes that portals might lead on to. Regional and local government might collect tax and pass some along to central government. And what if some MPs represented an interest group right across the country, rather than a physical constituency, using the Internet to keep in touch with this dispersed group?

What seems to be absent from consideration of e-government in Northern Ireland, however, is a consideration of the use of technology to support public participation in decision-making. The province has a new assembly, with many new laws being introduced. Most of these require that all affected

authorities and agencies should carry out several stages of public consultation.

For example, some 120 agencies have had to consult on how to do equality impact assessments. How did they do this? They put adverts in the newspapers inviting people to write in for a paper copy, then send back their written comments on paper. People in several hundred community, business and union groups spent over a month doing nothing but replying to these consultation documents. Now civil servants are working through these paper replies and producing reports.

Such ridiculously inefficient processes cry out for transformation through technology. But not one speaker at this conference seems to have noticed.

- >

> [End of contents]

> SECTION ONE: NEWS

> DOWNING STREET FOLLOWS SCOTLAND TO ACCEPT E-PETITIONS

> The government is set to announce a pilot scheme to accept electronic petitions from its citizens, E-Government Bulletin has learned.

> Electronic petitions will break new ground for the UK government, although a trial system is already up and running at the Scottish Parliament in association with the International Teledemocracy Centre at Napier University. It is this same system - dubbed 'e-Petitioner' - that will be used UK-wide.

> The trial - due to be announced by Downing Street on 20 July - is likely to allow people to sign petitions entirely over the Internet, subject to controls including postcode checks to verify addresses and spot checks. The Scottish trials show that fears the system may be open to abuse appear unfounded, and if anything the greater level of background information on the web as opposed to paper petitions lead to a higher quality of debate.

> The scheme is an early success for the Scottish Parliament's aim to create an information age democracy, with the UK Parliament now running to catch up with its newer counterpart.

> * See also section three, this issue.

> NEW STATESMAN AWARD WINNERS

> The London Borough of Hackney has won this year's New Statesman new media award in the government category, for its web site 'Hackney Live' (<http://www.hackney.gov.uk/>). The colourful site was picked for its vibrancy and interactivity that reflected the diversity of its local community. Another London borough, Camden, won a commendation for its site 'Camden Connect' (<http://www.camden.gov.uk>) as did Hampshire County Council for its compendious county-wide 'Hantsnet' project (<http://www.hants.gov.uk/>)

> The winner of the elected representative award was Paul Flynn, MP for

- > Newport West, for an entertaining and hard-hitting site
- > (<http://www.paulflynmp.co.uk/>) Also commended in this category was the
- > Cambridge Labour representative and the first MP to have a web site, Anne
- > Campbell (<http://ds.dial.pipex.com/anne.campbell.mp/>)
- >
- > There was a special mention in this category for Andy White, not an MP and
- > therefore not technically eligible, whose Professional Contractors Group web
- > site (<http://www.ir35update.co.uk/>) alerting independent contractors to the
- > government's IR35 tax proposals was the first ever national, regional and
- > local political and media campaign run entirely through the web.
- >
- > The overall merit award went to the Brookmans Park Newsletter
- > (<http://www.brookmans.com/>), a lively and informative community web project
- > run by Dave Brewer of Brookmans Park in Hertfordshire. The newsletter
- > content is assembled by local individuals and organisations like the local
- > bobby and the local history society. There are also innovations like a
- > historical slide show and a 'have your say' section where local issues are
- > aired and often referred directly to the local authorities or companies
- > involved.
- >
- > For more on the awards see:
- > <http://www.newstatesman.co.uk/nma2000about.htm>

> UN AND OECD TARGET DIGITAL DIVIDE

- >
- > The United Nations and the Organisation for Economic Co-operation and
- > Development are urging richer nations to help the developing world reap the
- > benefits of modern technologies.
- >
- > Information technology was the central theme of the United Nations Economic
- > and Social Council meeting from 5-7 July in New York, where UN
- > Secretary-General Kofi Annan stressed the importance of ensuring that
- > technology-driven globalisation is for the benefit of all. See:
- > <http://www.un.org/esa/coordination/ecosoc/itforum/index.html>
- >
- > And in a statement to be presented to this month's G8 summit in Okinawa,
- > Japan, Mr Annan will call on the world's richest nations to make "a major
- > commitment of resources" to bringing technology to the developing world. IT
- > has the potential to improve health care, education, governance, agriculture
- > and trade in poorer nations, he will say. See:
- > <http://www.g8kyushu-okinawa.go.jp/e/index.html>
- >
- > Japan's Prime Minister Yoshiro Mori has already announced that his country -
- > the G8 host - is considering a comprehensive package of assistance for
- > developing countries including intellectual assistance towards formulation
- > of policy and institution building; training and education; assistance for
- > the development of telecommunications infrastructures; and promotion of the
- > use of IT through development assistance.
- >

> Meanwhile the United Nations Volunteers programme (<http://www.unv.org/>) has
> launched the United Nations Information Technology Service (UNITeS) website
> to mobilise volunteers around the world to help bridge the technological
> divide between developed and developing countries. And the UN Development
> Fund for Women (UNIFEM) (<http://www.undp.org/unifem/>), the International
> Telecommunication Union (ITU) and the UN Development Programme (UNDP) last
> week signed a formal agreement guaranteeing the impact of information and
> communications technologies on women will be included in policy dialogue and
> decision-making. The three agencies will encourage governments and the
> telecommunications industry to recruit, employ and train women on fair and
> equitable access to technology.

>
> Not to be outdone, the OECD Council ministerial meeting on 26-27 June 2000
> also warned against the creation of a digital divide. The organisation has
> begun a major study to identify whether a 'new economy' is taking shape and
> if so, what are the sources of growth and how government policies need to
> adjust. The study is due to be completed in 2001. See:
> <http://www.oecd.org/media/release/nw00-70a.htm>

>

>

> STANDARDS IN EDUCATION

>

> Readers of E-Government Bulletin in the education sector are invited to take
> part in an online debate on standards in education and the involvement of
> the private sector in education, to be held on the web from 25-27 July.

>

> The debate is being hosted by The Stationery Office, the UK's main publisher
> of government and official information, in association with the bulletin's
> publisher Headstar. The use of technology in schools will be an important
> strand of the debate. If you are interested in taking part please email the
> bulletin's editor Dan Jellinek on dan@headstar.com

>

>

> HEALTH DEVELOPMENT AGENCY AND HEALTH PROMOTION ENGLAND

>

> Following our report on the Health Development Agency and Health Promotion
> England, the two bodies which took over the work of the former Health
> Education Authority (HEA) on 1 April this year, both agencies have
> recontacted E-Government Bulletin to update us on their plans.

>

> The HDA says a new temporary web site was launched on 2 June, at:
> <http://www.hda-online.org.uk/>

>

> The agency says that Evidence Base 2000, one of the HDA's major electronic
> projects, started life last year under the management of the HEA, and has
> transferred directly to the HDA. However, it was not possible to start work
> on the HDA site until decisions had been made about the organisation's
> structure and visual identity. A permanent site is under construction and
> will be ready later this year.

>

> Health Promotion England says it is soon to launch a new corporate site, to
> be located at <http://www.hpe.org.uk/>
> Like the HDA, the agency says it has been delayed in setting up a site as it
> awaits decisions from the Department of Health about its structure,
> workplans and identity.

>
> HPE says it has taken over a number of websites which the HEA initially
> developed and it is now in the process of rebranding them. These include the
> drugs information website 'Trashed' (<http://www.trashed.co.uk/>), as well as
> other well established sites with information on alcohol, sexual health and
> immunisation. It has plans to launch several new innovative sites in these
> areas in the next few months.

>
>
> US GOVERNMENT TO LAUNCH NEW WEB PORTAL

>
> US President Bill Clinton used his first Internet webcast last month to
> announce plans for the launch this autumn of 'FirstGov', a new online portal
> to US government information on the web.

>
> Mr Clinton also announced plans to step up transactional public services
> online, such as application for government grants and competition for public
> sector contracts. A competition was launched in association with the
> non-profit Council for Excellence in Government to award up to 50,000 US
> Dollars to students, researchers, private sector workers or government
> employees who present the most creative ideas for new electronic government
> services. See:
> <http://www.firstgov.gov/>

>
>
> THE INTERNET AND DEMOCRATIC PARTICIPATION

>
> The State of Texas is seeking information and case study material from
> readers of this bulletin on live public participation in central or local
> government processes using the Internet, such as webcasting of council
> meetings, or live participation in open meetings online. The state's
> Department of Information Resources is drawing up a legislative study on
> broadcasting open meetings, to include a review of such activities
> worldwide.

>
> If you have relevant information you would like to submit to this study,
> please email Becky Lentz on becky.lentz@dir.state.tx.us

>
>
> JULY ROUND-UP - UK GOVERNMENT ONLINE

>
> The House of Commons Public Accounts Committee has published a report
> critical of the quality of UK government web sites. It said sites were often
> hard to navigate. See:
> <http://www.publications.parliament.uk/pa/cm199900/cmselect/cmpublicacc/331/3310>

> 2.htm

>

> The Department of the Environment, Transport and the Regions has published a
> consultation document on how far local government should emulate the target
> set by the Prime Minister for central government of 100% electronic service
> delivery capability by 2005. The document covers corporate approaches to
> managing information as well as service-specific targets, and response are
> invited by Thursday 10 August 2000. See:

> <http://www.local-regions.detr.gov.uk/consult/iag/index.htm>

>

> Health Secretary Alan Milburn has announced an additional 60 million UK
> pounds of spending to allow GPs to receive diagnostic test results over the
> NHS-wide secure network, NHSNet. It will also be possible for GPs to book
> hospital outpatient consultations while the patient is in their surgery,
> allowing patients to agree dates that suit them. Pilot projects will also be
> set up to allow GPs to send prescriptions electronically to their local
> pharmacy. See the press release section of the Department of Health web site
> for the second quarter 2000:

> <http://www.doh.gov.uk/>

>

> HM Land Registry has launched Land Registry Direct, providing low cost
> access over a secure extranet to 17 million computerised property registers
> and title plans to property, legal and finance professionals - a step
> towards the holy grail for house buyers of electronic conveyancing. The aim
> is to scan in more than 100 million filed images by 2004. See:

> <http://www.landregistrydirect.gov.uk/>

>

> Scottish Ministers have given initial approval to 46 of 104 bids for a share
> of the Scottish Parliament's 25 million UK Pound modernising government
> fund, to support innovative projects which harness new technology and
> promote joined-up working between public sector bodies and partnership with
> the private or voluntary sectors. The 46 shortlisted bidders have until 29
> September to submit more detailed plans. They include West Lothian Council,
> for a web site for 13 local public sector agencies; Aberdeen City Council,
> for smartcard technology allowing residents to pay for services; and the
> Scottish Executive Rural Affairs Department, for an electronic system for
> farmers' grant and subsidy claims.

>

> SECTION TWO: CONFERENCE PREVIEW

> - NET SUCCESS

>

> LIVE TRIALS FOR SUPERFAST CITY NETWORK

>

> A blueprint for a super-fast computer network linking citizens and
> businesses in a regional or local area with a complete range of local public
> and private sector services is to be unveiled in Norwich this week.

>

- > The project is a partnership between the University of East Anglia's Centre
- > for Applied Research in Education (CARE) and the government's Central
- > Computer and Telecommunications Agency, and will be launched at the 'Net
- > Success' conference hosted by CARE on July 19-21.
- >
- > The conference will examine both the technological implications of
- > constructing local broadband networks and the knowledge management issues of
- > how organisations from different sectors can work together to provide
- > information through a single gateway or service. It will also include the
- > live demonstration of a high-speed network.
- >
- > The trial 'City-Plus' Metropolitan Area Network will feature high-speed
- > communications and data connections to schools, GPs and small businesses. It
- > will use xDSL and 100mbit services, operating at speeds of up to 10 times
- > faster than ISDN, which is currently the fastest available to ordinary
- > users. This will enable applications like videoconferencing to be run at
- > costs affordable to individuals and small organisations.
- >
- > Professor John Schostak, director of CARE, says: "The key to all this is the
- > cost, as we are concerned that all citizens should have access to these
- > types of networks, and the message we want to get across is that you can
- > obtain very high speed networking at relatively low cost.
- >
- > "There are two aspects to the creation of a city network: one is the
- > technical side, and the other is the human side - how does one create the
- > kinds of applications and networks that are appropriate for how people
- > actually work and what they need?"
- >
- > Applications to be woven into the Norwich network include education,
- > libraries, health, policing and land management - all areas that have
- > already made moves to use large-scale networking to provide services online.
- >
- > For citizens, local networks would take the guesswork out of finding local
- > services, Schostak says. With information organised into a directory format
- > and everything based locally, you would know that if you want to find a
- > doctor in Norwich you will not, as happened to him recently using a web
- > search engine, be directed to a doctor in Norwich USA.
- >
- > The networks could feature high-speed external connections as well, using
- > satellite technology, he says.
- >
- > The conference is the start of a year-long campaign to get organisations of
- > all kinds interested in setting up city networks across the UK. Schostak
- > says that local network projects need to be consortia-based, alliances
- > between public and private sector bodies. "At the moment the picture is
- > fragmented, with the sectors not working together properly. The difficulty
- > is in getting different types of organisation to hold a dialogue and work
- > towards a network with mutual benefits. There needs to be a core group of
- > bodies that see the network as their main strategy for their region or city"
- > .

>

> He says universities, councils and other public sector bodies are a natural
> starting point. But each region or locality has different needs, for example
> rural areas will have completely different networking needs to cities, so
> each will need a different group of organisations to meet those needs.

>

> Although public sector bodies are likely to lead the creation of local
> high-speed networks, businesses will stand to gain a great deal as well, as
> they will be able to reach their customers more easily, and vice versa. "The
> growth of e-commerce is hindered because internet businesses can't reach
> their customers effectively - the UK has Europe's largest e-commerce market
> but has the smallest market penetration".

>

> Some other cities including Manchester and Bristol have already linked some
> organisations with broadband technology, but Norwich is aiming to be the
> first to introduce a comprehensive city wide network. It is planned to keep
> this networking infrastructure operational at CARE to allow public sector
> service developers to use it for future trials and workshops.

>

> SECTION THREE: TELEDEMOCRACY

>

> SCOTLAND LEADS THE WAY TO ELECTRONIC PETITIONS

>

> Next month sees the first birthday of the International Teledemocracy Centre
> at Napier University in Scotland, a ground-breaking body that in 12 short
> months has positioned itself as a European leader in electronic petitioning
> and online democratic consultation.

>

> The centre was set up in August 1999, soon after the creation of the new
> Scottish Parliament. "It was an exciting time, because when a new Parliament
> is set up it doesn't have any legacy systems to hinder it", says Anne
> Macintosh, the centre's director. "And the standing orders that set up the
> Parliament said it wanted to encourage the use of technology".

>

> The centre was created to promote e-democracy - the use of information and
> communications technology in democracy - in the UK and across Europe. It
> also has a parallel academic role, to examine its own programmes and
> research whether and how technologies can improve participation in
> democracy. "There is no hard evidence yet to say that technology does
> increase participation", Macintosh says, "so the research aspect is
> important".

>

> The 'e-Petitioner' project is one of the centre's key initial programmes. It
> has a formal agreement with the public petitions committee of the Scottish

- > Parliament to act as the sole third party agent for the submission of
- > electronic petitions for a one-year trial period, which began in mid-May
- > this year.
- >
- > Earlier in the year, a small pilot project was run with the World Wildlife
- > Fund in Scotland, compiling a petition calling on the Scottish Parliament to
- > include Marine national parks in the National Parks for Scotland Bill. The
- > petition attracted more than 200 signatures.
- >
- > The first electronic petition raised under the trial proper is now underway,
- > calling on the Parliament to implement in full the 1999 Cubie report on
- > student fees and grants before the start of the academic year in September
- > 2000.
- >
- > Since its creation on 19 May this petition has gathered around 450
- > signatures, mainly from Scotland, but with a significant minority from
- > England and Wales and a handful from Australia, Canada, Finland, Ireland and
- > the US. It has always been the case that people anywhere in the world can
- > sign a UK petition, as long as it is of relevance to them (for example they
- > are coming to study in Scotland, have relatives in Scotland or visit
- > Scotland regularly).
- >
- > After the trial has been running for a few months, the centre will initiate
- > a six-month programme of research into the effectiveness of the e-Petitioner
- > system, from how it works to its democratic implications. A full-time
- > researcher is to be appointed from September 2000 to undertake this work,
- > with funding obtained from the Joseph Rowntree Foundation.
- >
- > The early signs are that electronic petitions work very well, and fears in
- > some quarters about them being open to abuse seem ill-founded. In fact, they
- > may prove to be of a higher quality and more interactive than the standard
- > petition in the street, where someone shoves a clip-board at you in a
- > shopping centre and you make a snap decision to sign it or ignore it based
- > on very little background information.
- >
- > "In a street where you sign a petition you just see the text", says
- > Macintosh. "We make it easier and more comfortable to read at your leisure,
- > and we add all the background to the debate and the rationale for the
- > petition. Then you decide.
- >
- > "There is also actually a place on the petition where you can add comments,
- > even if you decide not to sign it: so both sides of the debate can be
- > recorded, unlike an ordinary petition. We didn't want to simply implement an
- > electronic version of the paper-based system: there are new possibilities
- > with the electronic format".
- >
- > Various quality and confidence checks are implemented on the signatures,
- > like checks against postcode records to verify whether addresses are real,
- > checks for repeat signatures and so on. Spoof names like Bart Simpson are
- > also picked up, although Macintosh says there have been surprisingly few

> pranks like this. After the checks are carried out, confidence scores are
> assigned to each signature, and the Parliament can then decide what scores
> it will accept. The full names and addresses are also provided to the
> Parliament, although only a name and a country are reproduced publicly on
> the centre's web site for reasons of privacy and data protection.

>
> MSPs have also expressed an interest in being provided with information
> about which opinions are typically expressed from which postcodes, to help
> them target campaigns.

>
> Alongside the e-Petitioner project, an e-Consultant project is being
> developed by the centre to support and facilitate best practice in online
> democratic consultation by setting up online debates and evaluating the
> results.

>
> The first consultation exercise is being carried out on behalf of the
> Scottish Executive, to consult 16-18-year-olds in Scotland about policy in a
> wide range of areas including drugs, alcohol and sexual health. There have
> been around 600 submissions to the debate so far, an appreciable amount for
> that type of exercise.

>
> Interest in the consultation exercise was drummed up by the Scottish
> Executive by placing banner advertisements on web sites popular with young
> people, including the Neighbours site at <http://www.neighbours.com> and the
> Trouble site <http://www.trouble.co.uk>

>
> For the future, Macintosh is excited about the possibilities that mobile
> Internet devices like mobile phones will bring to teledemocratic
> participation. Other work planned includes involving small businesses in
> teledemocracy projects to influence business policy, and working with
> schools and local education authorities to ensure full participation by
> children of all ages.

>
> All in all, the centre is off to a flying start, and with new trials lined
> up for the UK Parliament (see news, this issue) is set to cement its
> positions as a European leader in teledemocracy.

>
> For more information see the centre's web site at:
> <http://www.teledemocracy.org/>

>
> And the e-Petitioner sub-site is at:
> <http://www.e-petitioner.org.uk/>

> [Section Three ends]

>
>
> SECTION FOUR:
> INTERNATIONAL CASE STUDY

>
> DANISH GOVERNMENT PIONEERS ONE-STOP BUSINESS REPORTING

>

> A one-stop government Internet service in Denmark, for businesses of all
> sizes to find out about their reporting requirements to public agencies, and
> to submit many forms online, is one of around 100 case studies in a new EU
> survey 'One-stop government in Europe'.

>

> The survey was undertaken as part of Action A14 of the European Union's COST
> research programme, on government and democracy in the information age. It
> examines projects in 11 European states: Austria, Belgium, Denmark, England
> and Wales, Finland, France, Germany, Ireland, Italy, Netherlands and Spain.

>

> The Danish business reporting project (<http://www.indberetning.dk/>) is a
> partnership between the Danish Ministry of Business and Industry, the Labour
> Market Pension Fund, the National Bureau of Statistics, the Directorate of
> Finances, the Directorate of Environment, the Directorate of Energy, the
> Customs and Taxation agency and many more - in all, 37 agencies or
> authorities. Representatives from industry have also been actively involved
> in the process. The idea is that no matter what kind of report, payment or
> application the company has to submit to a public body, it should be able to
> go through the internet portal.

>

> From the home page several routes can be chosen, depending on the type of
> company and the reporting situation. A user can choose a profile suitable
> for the company, and reports required for that type of company will be
> listed. After that the service can be fully customised, with each company
> tailors its own reporting profile. The system then notifies the company
> automatically when deadlines for the various relevant reports are
> approaching.

>

> Finally the system offers assistance based on a particular new situation or
> circumstance for the company. For example, it offers help on legal
> requirements if a company wants to hire new employees; on labour-related
> injuries in the workplace, on what is required if a company wants to set up
> shop in a particular region; on seeking apprentices or trainees, on the
> requirements of converting a farm from traditional to organic methods; and
> so on.

>

> So far, only 18 forms are available to complete online in a fully
> interactive electronic format, but some 200 others are available to download
> and print out to return by post. The site's goal is eventually to make every
> company-related report form available in electronic format, no small task as
> there are currently an estimated 1,000 company forms.

>

> Test work is also being carried out on EDI (Electronic Data Interchange)
> solutions, with the goal of using EDI for any reports that can make use of
> data already within the information systems of companies such as annual
> balance sheets. These solutions will be offered in cases where the amount of
> data is large and the frequency of reporting is high. EDI has not diffused
> throughout companies as quickly as expected so there is not yet a large
> demand for these solutions, although it is expected to rise in the near

> future.

>

> Testing is also being carried out on a system of digital signatures for
> companies, to boost security, using smart cards.

>

> The entire system is run by one and a half full-time employees, assisted by
> some consultants. The annual budget is around 5 million Danish Krone
> (400,000 UK Pounds), and 10 million Krone was spent initially establishing
> the system. Productivity benefits have already begun to emerge in the
> department, and a recent survey found that 70% of the companies said service
> from the department was improved by the system. It is also estimated that
> companies are already saving on average 5.5 minutes every day by using the
> system.

>

> Implementation has not been without its problems, however. The
> re-engineering of data transfers between public authorities, going from
> manual or analogue transfers to digital transfers, is a tremendous task in
> which many different information systems must be oriented towards common
> data-formats and interfaces.

>

> For every one-stop application it is necessary to negotiate new
> relationships within and in between involved agencies and institutions. All
> agencies possess relative autonomy to some extent, and their engagement may
> vary according to the relative benefits they obtain from the common
> projects.

>

> The main battles have occurred when different public agencies have proved
> hesitant to adopt to the common standards that the system tries to impose on
> them, and sought instead to create different individual profiles on their
> own web sites. These conflicts are handled by running pilot projects that
> demonstrate the productivity benefits to all.

>

> The project as a whole is based on the fact that major productivity benefits
> in one-stop government may be harvested in areas where the amount of data
> transfers and their frequency are high. This is certainly the case for the
> report demands imposed on companies.

>

> However overall, the European survey found that only a few countries such as
> the Netherlands, Italy or Finland have embraced an active
> one-stop-government strategy at the national level, and that new management
> methods are needed from governments across Europe to deliver new electronic
> services alongside traditional, physically based services. Crucial barriers
> are lack of consistent funding and political leadership.

>

> * Article by Christian Sørbye Friis and Ole Buch of the University of
> Roskilde, Denmark. 'One-stop government in Europe' is available online, with

> [End of contents]

>

> SECTION ONE: NEWS

>

>

>

> HAMPSHIRE LIBRARIES THE FIRST TO WAP?

>

> Hampshire County Council's library department has developed a WAP (Wireless
> Access Protocol) service which allows users with WAP-enabled mobile phones
> or other portable devices to find the address, contact details and opening
> times of all Hampshire libraries. Small text links allow access to the
> information via an alphabetical index.

>

> WAP-enabled devices can access the service at:

> www.hants.gov.uk/library/wap/

>

> If you do not have a WAP device, you can access a WAP simulator using a
> normal web browser at www.gelon.net - simply key in the above address and
> the simulator will run itself in a new browser window. Further information
> on developing WAP systems including the Nokia WAP Toolkit 1.2 can be found
> at the WAP Developer Forum site at:

> www.forum.nokia.com

>

> According to EARL, The Consortium for Public Library Networking, the
> Hampshire project is the first example of a local authority WAP service - if
> E-Government Bulletin readers are aware of any others, please email us on
> egb@headstar.com

>

> EARL's web site at www.earl.org.uk has also been given a makeover. Its new
> site has been designed to be easy to navigate and to conform with the World
> Wide Web Consortium's accessibility guidelines (see www.w3.org/WAI/).
> Features at the site include the ever-popular free online information
> service, 'Ask a Librarian'.

>

>

> NEW NATIONAL HEALTH SERVICE PORTAL LAUNCHED . . .

>

> The NHS Executive, the body that runs the National Health Service within the
> Department of Health, has launched a prototype for a new online portal to
> NHS web sites including hospital sites - NHS.uk (www.nhs.uk).

>

> Astonishingly, until now no such gateway site existed. There was an internal
> NHS network, NHSNet; an external site for public medical advice - the web
> arm of NHS Direct; and the Department of Health and other bodies also
> produced some public-facing sites in areas of health promotion. But no
> comprehensive public portal existed for NHS sites in people's local areas.

>

> The NHS management body the NHS Confederation used to run such an online
> gateway, but ceased production of the service due to budget cuts. A few
> months ago the NHS Executive formed a project board to step into the breach,
> and a contract has now been awarded to Cable and Wireless for the expansion

> of the prototype.

>

> The service will eventually combine NHS links with a public news service
> about the work of the NHS and background information about what the health
> service is and what it does. Such a service could be useful to help combat
> future NHS scare stories or bad publicity about waiting lists or doctors'
> real or perceived malpractice.

>

> Meanwhile there are still no web sites for the new Health Development Agency
> or Health Promotion England, the two bodies that have taken over the work of
> the former Health Education Authority, England's main provider of health
> promotion material. The HEA's innovative multimedia unit became known for
> online campaigns such as Trashed (www.trashed.co.uk), an educational site
> about the effects of street drugs targeted at young people.

>

> However, although the new bodies have been in place since 1 April, no plans
> were formulated in advance of the changeover to carry forward the web work,
> a surprising oversight. And when E-Government Bulletin contacted Health
> Promotion England, it could provide no timetable for future web work.

> Meanwhile the HEA web site remains up as an archive at:

> www.hea.org.uk

>

>

> . . . AND A NEW PORTAL TOO FOR LOCAL GOVERNMENT

>

> The Local Government Association is to launch a new online portal for local
> government and public sector news and information, 'local-government.net',
> at its annual conference on 27 June. The site, to be available at:

> www.local-government.net

> will replace the current LGAnet web service with a range of content
> 'channels' for each part of the public sector, in association with a number
> of third-party content providers, including your very own E-Government
> Bulletin.

>

> LGAnet already receives around a million hits a month, and the new service
> is intended to boost this figure with a news feed updated daily.

>

>

> LITTLE TO YELL ABOUT

>

> Government and public sector agencies were notable by their absence as the
> final shortlists were announced last week for this year's Yell UK Web Awards
> 2000, the fifth annual awards hosted by the information portal from the
> Yellow Pages Group.

>

> In fact, only the BBC made it through with a nomination for Best Youth Web
> Site - one of 11 awards categories - for its 'Kids site:

> www.bbc.co.uk/kids

>

> In the Non-Profit Making Organisations category, where a public service

> showing might have been expected, the shortlist of three was: The Royal
> National Lifeboats Institution (www.lifeboats.org.uk); Friends of the Earth
> (www.foe.org.uk); and STAND (www.stand.org.uk), a web site that allows you
> to lobby your MP online via a web to fax gateway.

>

> In the previous round of judging, which narrowed the field down to a
> shortlist of 10, there had been two public sector nominees in the form of
> The Science Museum (www.sciencemuseum.org.uk) and The British council
> (www.britishcouncil.org). Others were The Royal Horticultural Society
> (www.rhs.org.uk); school-web.co.uk (www.school-web.co.uk), an educational
> reference source for teachers, students and parents; The UK Home
> Repossession Page (www.home-repo.org); the Multiple Sclerosis Society
> (www.mssociety.org.uk); and the AIDS education and research trust AVERT
> (www.avert.org).

>

> After a further round of judgin, winners will be announced on 11 July. For
> more information see:
> www.yell.com/awards

>

>

> EXCHANGING INFORMATION WITH THE PUBLIC

>

> The EIP Group of around 90 local authorities - the acronym stands for
> Exchanging Information with the Public - is to hold a meeting of its
> development group in London on 20-21 June.

>

> The group was set up to share experiences of single access approaches to
> service delivery. It is facilitated by consultants CDW & Associates as part
> of the £1.7 million Treasury-funded PEG (Promoting Electronic Government)
> project, whose members also include the Local Government Improvement and
> Development Agency (I&DeA) and The Federation of the Electronics Industry.

>

> For more information see the 'Events' section of the EIP web site at:
> www.eipdg.org

>

>

> EUROPEAN COMMISSION PRESENTS E-EUROPE ACTION PLAN

>

> The European Commission has presented its contribution to the eEurope Action
> Plan, due to be agreed by EU leaders at the Feira summit in Portugal on
> 19-20 June. It sets out a strategy to establish a thriving and equitable
> information society in Europe, including access for all parts of society.

>

> The submission includes several suggested targets relating to the provision
> of public information online, including that all essential public data
> including legal, administrative cultural and environmental information is
> placed online by end 2002; the development of a co-ordinated approach for
> public sector information, including at European level, by end 2000; the
> creation of pan-European portals for interactive public services by mid
> 2001; the promotion of the use of open source software in the public sector

- > and international exchange of e-government best practice during 2001; and
- > all basic transactions with the European Commission (such as funding,
- > research contracts, recruitment and procurement) to be online by end 2001.

>

> See:

- > http://europa.eu.int/comm/information_society/eeurope/actionplan/index_en.htm

>

>

> SECTION TWO: CONFERENCE REPORT
> - CITIZENS ONLINE

>

> POT OF MILLIONS SOUGHT TO BRIDGE THE DIGITAL DIVIDE

>

- > Citizens Online (www.citizenonline.org.uk), a charity set up to carry out
- > research into the social and cultural impacts of the Internet and help
- > bridge the 'digital divide', was launched last month with an ambitious plan
- > to raise some 16 million UK pounds in sponsorship between now and 2005.

>

- > John Fisher, Citizens Online's founder and Chief Executive, told a one-day
- > launch conference in London that the charity would undertake high quality
- > research into the nature and extent of the current digital divide in the UK,
- > as well as compiling and managing a database of all research in this field
- > carried out so far.

>

- > It would also seek to act in partnership with other bodies to generate
- > sponsorship and pool resources for projects, Fisher said. Citizens Online
- > has already forged a partnership with comm.unity, the digital divide arm of
- > the charity Business in the Community which gains sponsorship from big
- > business to help regenerate deprived communities (www.comm.unity.uk.net).

>

- > Other projects included in an action plan for the charity's first year
- > include the creation of a national think-tank into the digital divide;
- > funding for 10 new local projects across the UK; and work on a definition of
- > the digital divide to inform all their other initiatives.

>

- > The conference was launched with a powerful first-hand experience of the
- > value of access for all from the young entrepreneur Ben Way. Way is dyslexic
- > and as a result was set for low achievement at school despite his high
- > intelligence - at the age of nine he was told he would never read or write.
- > However, he a few years later he discovered that it was much easier for him
- > to write and spell using a computer keyboard - "I type faster than I wrote,
- > and sometimes I can't read my own writing, but on a computer it is all neat"
- > , he said.

>

- > His achievement levels and confidence soon soared and after gaining 11
- > GCSEs, he set up an e-commerce search company from his bedroom -
- > Waysearch.com - that attracted 25 million pounds worth of venture capital

> and is now a major success.

>

> "Without access to a computer, I would have been stunted in my development",
> he said. "There must now be access for all".

>

> Marian Scott, a consultant for Women Connect (www.womenconnect.org), said it
> was vital to bring gender issues into the mainstream, and help women use the
> Internet without barriers or prejudice.

>

> "Worldwide, women have made some extremely positive uses of the Internet,
> and in some areas lead the way, but still face a struggle in most areas. We
> need a focus on women and gender - men and women may need to be served in
> different ways".

>

> She said women were often invisible as a disadvantaged group because they
> were such a diverse group, including sub-groups of age, social scale and
> race, which made them harder to analyse. "But this does not mean they should
> be passed over. It is not going to be enough to stop when women are 50-50
> users of the Internet: there are also issues of stereotyped, limited and
> sexist content online, and a lack of women at the top of new media
> businesses."

>

> Women-friendly approaches to technology access and training which had been
> taken up by Women Connect included linking learning about technology to
> practice; offering safe and relevant learning spaces; creating learning
> networks; and offering mutual support, Scott said. "Our trainers understood
> the insidious internalised feelings of inadequacy women feel in relating to
> some technologies, and the need for task-related learning."

>

> She said while it was true that not all women need services from women's
> organisations, or could not make headway in the mainstream, many face
> serious difficulties and a gender analysis and mainstream approach across
> all online services was needed.

>

> In tackling the problem of the digital divide, it was important to challenge
> received wisdom on the nature of the problem, and approach it with a degree
> of 'positive scepticism', Professor Steve Woolgar of the 'Virtual Society?'
> research programme told the conference.

>

> Virtual Society? has drawn together new research from more than 20
> universities over the past three years. Woolgar said its research had shown
> that the provision of public Internet access points like cybercafes and
> telecottages do attract a broad cross-section of users. However, they tend
> to augment, and not replace, existing patterns of Internet access from the
> home: in other words, almost all users of Internet cafes already have home
> access, and so they do not act as access points for the unconnected.

>

> Access is a social, not a technical issue, Woolgar said. Cyberspace had its
> own social structures, which were self-organising and tended to reinforce
> class structure already present offline, so middle class people came off

- > best. So mere technical access may even be counter-productive - it needs the
- > right social context to be in place, and to build on existing social
- > arrangements, he said.
- >
- > In conclusion, he said it was important to resist and single definition of
- > the digital divide, but to look at what technology can do, what people want
- > from it, and how they can benefit.
- >
- > Virtual Society? is due to present its final findings at a major conference
- > at the QEII Conference Centre in London on 19 June. For more information see
- > its web site:
- > www.virtualsociety.org.uk
- >
- > [Section Two ends]
- >
- >
- > SECTION THREE: ANALYSIS
- > - MULTI-LINGUAL SERVICES
- >
- > WORKING TO DISMANTLE THE LANGUAGE BARRIER
- >
- > Many public sector organisations, particularly those in areas with diverse
- > ethnic communities, accept that the information and services they provide
- > have to be accessible by people speaking languages other than English. This
- > may mean producing copies of booklets in other languages, or the provision
- > of interpreters. But what about the provision of information on the
- > Internet? What information should be available in what language, and what
- > demand might there be for each?
- >
- > The UK is home to many people who do not speak English as a first language.
- > They range from people who have lived here for long periods of time, to
- > recent arrivals who may be refugees and asylum seekers. Language is a real
- > problem for them in accessing advice, public services, facilities and
- > benefits.
- >
- > While it may be the case that some people don't read the language they
- > speak, in which case text based sources are of little use, it is also the
- > case that some people entering the UK with limited or no English are
- > educated people who could deal with complex information in their own
- > languages.
- >
- > These issues are of particular importance to organisations that dispense
- > advice to the public, including information about benefits. Local
- > authorities which receive large numbers of visitors might also want to
- > produce information in different languages aimed at tourists; and it could
- > also be useful in attracting business investment from overseas. The European
- > Investment Bank recently decided to locate to London because it was the only
- > European capital city in which the 38 languages which the bank requires are
- > spoken.
- >

> As Internet technologies become more powerful and more bandwidth becomes
> available, more possibilities emerge for their use with sophisticated
> language applications. Services such as translated materials, audio and
> video clips could eventually be centralised and then shared across a large
> dispersed area.

>
> Instead of each organisation and public sector body producing their own
> separate translated material, these could be produced in partnership and
> shared across several organisations. Another advantage of the internet is
> that material can be stored centrally in a digital form, saving
> organisations the need to find valuable storage space.

>
> The main forms of storage for translated materials could initially be video
> clips, Adobe 'pdf' files which can preserve the characters and layouts of
> many alphabets and languages, and audio clips.

>
> There is some evidence to suggest that many enquiries to public sector
> organisations are 'stock' or frequently asked questions. It would therefore
> be extremely efficient to produce a databank of material which many
> organisations could create, develop and share. The use of centralised
> technical resources such as video servers would also be a huge cost
> advantage, saving each organisation the trouble and expense of installing
> and maintaining their own.

>
> Such a project should begin with an attempt to gain some idea of what
> internet language work, if any, is already going on across the country.
> Interested and relevant public sector associations could send out a
> questionnaire to their members asking questions such as:

- >
> * What demand is there for online information or services in community
> languages?
> * What sort of information should be provided?
> * In what format should it be provided?
> * Should it be aimed at users, intermediaries or both?
> * Would a centralised database of multilingual information be viable?

>
> As well as local government associations, other organisations which might be
> interested in addressing this issue could include the National Association
> of Citizens Advice Bureaux and the Refugee Council. The London Advice
> Services Alliance (LASA) is also starting a pilot project in Haringey, with
> an internet service in 14 community languages.

>
> It will be important to carry out further online research via the internet
> and e-mail lists to ask people in the field what their experiences are, what
> solutions - if any - they have arrived at, and what sort of demand they
> register for information in multiple languages.

>
> It would then perhaps be possible to more fully develop what questions we
> are trying to address, and what the demand is. It might also highlight with
> different groups the possibility of joint working and a partnership approach

> to this issue.

>

> For other examples of existing good practice, there are a number of sites in

> Australia which are ahead of anything seen in the UK. These include The

> Babel Tree Project to provide translated information on disability and

> disability services, at:

> www.adec.org.au/babeltree/

> and the community language section of New South Wales' Migrant Skills

> initiative at:

> www.migrantskills.org/languages.asp

> Both these sites are well worth seeing for some idea of what can be

> achieved.

>

>

> EMAIL OVERLOAD - A REAL OR IMAGINED THREAT?

>

> The problem of 'email overload' - both real and perceived - is holding back

> many public bodies from proper use of email to communicate with their

> citizens, according to last month's report of the global online debate

> Boosting the Net Economy 2000.

>

> A think-tank spanning more than 40 nations was assembled for the event,

> which was hosted by the publisher of E-Government Bulletin, Headstar, with

> backing from Bull Information Systems (see also our April and May issues).

>

> Jean-Paul Baquiast of Admiroutes, France, said: "In France public sector

> bodies are now able to develop web sites, but they are still unable to use

> email for real-time communication and co-operative work with citizens. This

> is particularly obvious when environment, health or security problems

> require quick answers from responsible bodies.

>

> "In the recent Erika oil pollution crisis on the West coast of France for

> instance, public bodies never answered emails asking questions or proposing

> solutions. The alleged reason of that is that they do not have enough people

> to manage email communication. But my personal feeling is that they still

> generally consider that citizens are troublesome, dangerous, and that the

> less they are associated with administrative business, the better."

>

> However, Bruno Mannoni of the Ministry of Culture and Communication, France,
> said: "It is not as easy as it seems to be. Email has to be answered by the
> civil servant in charge of the matter, which may have legal implications.

>

> In my ministry all email is routed to the person in charge to be answered. A
> very technical question can be difficult to answer, and we must provide a
> clear and correct answer. In a crisis situation, I do not think that e-mail
> is of any help: mass media like TV, radio, newspapers and the web are more
> efficient."

>

> Steven Clift of Democracies Online in the US said: "Email is the fundamental
> tool of the Internet. Elected officials and government agencies need to
> develop or apply tools that make it an effective communication tool.
> Citizens will expect it, and to be competitive with commercial sites,
> government has no choice but to ensure a right of e-mail correspondence with
> citizens to remain legitimate.

>

> "The truth is that e-mail from insiders to government staff is one of the
> most effective tools to influence government, while general email from
> citizens to general addresses is often the least effective."

>

> Other topics relating to electronic government that were covered in the
> wide-ranging debate included the use of technology for the regeneration of
> deprived communities.

>

> Stefano Kluzer of the development agency of the Emilia-Romagna Regional
> Authority in Italy (ERVET) said that there was a lack of understanding by
> governments and other public entities about how technology can be used to
> promote local regeneration and local development in general. He said three
> measures could address this issue:

>

> "First, you need to increase awareness of what new technologies are and what
> they can be used for, among decision-makers at all levels, including within
> local communities where development must be rooted.

>

> "Second, you need well analysed and presented reference cases of actual
> experiences of technology adoption and implementation in local communities.
> I'm always amazed by how difficult it is to find good quality case studies
> showing the positive as well as negative effects, the actual costs, the
> strategies adopted and so on by local authorities, small firms, and the
> like.

>

> "Third, you need to stimulate and facilitate wide [public] participation and
> a social discourse on the changes ahead."

>

> Jean-Paul Baquiast said an increasing number of non-profit organisations are
> now mature enough to share some public responsibilities by delegation,
> especially in the fields of social or environment protection, and the web

- > would make an ideal medium for co-operation, but administrations are still
- > reluctant to co-operate.
- >
- > "Charters protecting both sides would be surely necessary. But, as far as
- > public sector bodies are concerned, the idea that they may use Internet
- > networks and non-profit partners for providing services which they cannot
- > assure alone would have to be encouraged by governments."
- >
- > Finally, a short exchange took place on the radical concept of citizens from
- > one state receiving online services from governments of another.
- >
- > Horace Mitchell of European Telework Online, UK, said that there was no
- > 'natural law' that says a citizen must take her public services from her own
- > government. "It takes a leap of the imagination to perceive that something
- > that is reserved for the state to deliver might be delivered to the same
- > citizens by another state.
- >
- > "Free access to global information may make citizens aware of the
- > differences between what one government delivers for one amount of tax and
- > what another government delivers for another amount of tax. It is a little
- > difficult to work out exactly how citizens will start to make a virtual move
- > to get this service from this government while still taking that service
- > from that government; but then the future has never been entirely obvious
- > until it becomes history."

ICANN and Internet Governance: Leveraging Technical Coordination to Realize Global Public Policy

Hans Klein

School of Public Policy, Georgia Institute of Technology, Atlanta, Georgia, USA

The Internet Corporation for Assigned Names and Numbers (ICANN) was created in 1998 to perform technical coordination of the Internet. ICANN also lays the foundations for governance, creating capabilities for promulgating and enforcing global regulations on Internet use. ICANN leverages the capabilities in the Internet domain name system (DNS) to implement four mechanisms of governance: authority, law, sanctions, and jurisdictions. These governance-related features are embodied in seemingly technical features of ICANN's institutional design. Recognition of ICANN's governance mechanisms allows us to better understand the Internet's emerging regulatory regime.

Keywords domain name system (DNS), global public policy, governance, ICANN, Internet

INTERNET GOVERNANCE

The Internet has often been hailed as a domain of benevolent anarchy, a place where free communication is securely in place. It is a “modern Hydra” capable of circumventing regulation (Froomkin, 1999, p.129) and a “space of no control” (Lessig, 1999, p. 24). As Internet bard John Perry Barlow says, “Governments of the Industrial World, . . . You have no sovereignty where we gather” (cited in Lessig, 1999, p. 218).

Stated less colorfully, the Internet presents challenges to *governance*. By governance I mean the existence of some authority able to make globally applicable rules for In-

ternet usage backed up by sanctions. Internet governance exists in various partial forms (e.g., AOL chat rooms or government regulation of computers within national territory), but overall the Internet does not have a coherent and effective system of authoritative rule making and enforcement. The reasons for this lie both in characteristics of the technology, which make control difficult, and in the global reach of Internet communications, which creates jurisdictional conflict among government regulators.

This “ungovernability” of the Internet, however, is changing. In his book *Code*, Lawrence Lessig (1999) documents various strategies to eliminate user anonymity and thereby facilitate law enforcement. Likewise, in a recent court case over Internet auctions of Nazi memorabilia that was illegal in France, the Yahoo! Corporation was ordered to detect viewer's location and apply local content regulations to them (AFP, 1999). As with other technologies preceding it, as the Internet becomes important to the society around it, attempts are made to integrate it within existing regulatory structures (Hughes, 1983).

The most significant development in the trend to render the Internet governable is the creation of the Internet Corporation for Assigned Names and Numbers (ICANN). Created in 1998, ICANN is a private, nonprofit entity whose official mandate is to perform technical coordination of core Internet resources, most notably domain names (e.g., mycomputer.org). Its site of incorporation lies in California but its authority extends, directly or indirectly, over all users of the Internet.

ICANN has the potential to radically change the nature of the Internet. By putting in place all the mechanisms needed for the creation, promulgation, and enforcement of regulations, ICANN makes effective Internet governance possible for the first time. No longer is the Internet a Hydra that is impossible to control. ICANN's mechanisms for governance can serve any number of possible regulations. The frequency of past attempts to regulate the Internet suggests that the realization of these mechanisms could attract

Received 2 May 2000; accepted 13 August 2001.

Research for this study was performed while the author was a resident at the Center for the Sociology of Innovation at the Ecole des Mines, Paris, with support from a Chateaubriand Fellowship from the French Embassy in the United States.

Address correspondence to Hans Klein, Assistant Professor, School of Public Policy, MC: 0345, Georgia Institute of Technology, Atlanta, GA 30332-0345, USA. E-mail: hans.klein@pubpolicy.gatech.edu

widespread interest in their utilization (Froomkin, 1997). Depending on one's viewpoint, creation of a capability for governance holds the promise or the threat of taming the electronic frontier.

In what follows I offer a detailed analysis of ICANN. My purpose is to render comprehensible the interrelationship between technology, administration, and governance, explaining how a computer network addressing system makes possible a system of governance. To do this I explain what governance is, how the Internet's domain name system (DNS) works, and how the former is realized through the latter.

For policymakers and Internet users, this account can help inform policy. That the Internet has a point of central control and that ICANN makes global public policy possible are not widely admitted. Recognition of these governance capabilities justifies the application of normative criteria of legitimacy, accountability, and equity to the institution and its processes. This study contributes to a growing body of policy literature that analyzes ICANN from the perspective of its historical origins (Mueller, 1999; Klein, 2001a), its legal status (Froomkin, 2000; Klein, 2001c), and its institutional design (Post, 1998).

This account is also relevant to theoretical debates over the relationship between technological systems and their social context. Recent scholarship in the social construction of technology has emphasized the influence of social factors in shaping technological change (Bijker, 1995; Bijker et al., 1987; Klein & Kleinman, 2002). Writers on technology policy have likewise emphasized how designing systems is comparable to writing law, insofar as both activities create social structures that constrain human behavior (Lessig, 1999; Kapor, 1990; Klein, 2000). ICANN offers stark evidence of such social structuring, with the domain name system defining important parameters of governance.

In what follows, I first consider the technological and institutional factors that have inhibited Internet regulation and then continue with a more general discussion of what governance is. Following that I examine the domain name system, both as a technological and administrative hierarchy, and I identify characteristics that allow for governance. There then follows an analysis of the mechanisms of Internet governance as realized in ICANN. Then, as an illustration of how the governance mechanisms work in practice, I examine ICANN's global public policy defining property rights in domain names. I consider the problem of legitimacy in ICANN and speculate about possible future areas of regulation.

The Problem of Internet Governance

Regardless of whether one supports or opposes specific regulations, it is generally recognized that regulation of

the Internet has proven difficult. Copying music, software, and other forms of intellectual property has become simple, and the growth in legal actions against property violators likely represents only a small fraction of incidents of unauthorized copying (Fryer, 1995). Attempts by national governments to control content have foundered on the Internet's global nature and the interjurisdictional conflicts in regulation (Andrews, 1999).

Barriers to regulation arise in part from characteristics of the technology. Internet communications do not pass through a central channel but are instead passed between many independent networks, and even the messages themselves are broken into packets that may follow different itineraries from source to destination (Cerf & Kahn, 1974). With multiple independent parties sending multiple independent packets through multiple independent channels, there is no central communication channel that could serve as a control point for promulgating and enforcing regulations.

Regulation also founders on institutional factors. The Internet challenges established jurisdictions (Johnson & Post, 1997; Perrit, 1997). Public authority resides in the state, whose foundational characteristic is the exercise control over a geographically defined domain (Schroeder, 1998). Yet the "spaceless" nature of the Internet violates the geographical underpinning of public authority (Holitscher, 1999). The mismatch between a network that is global and regulations that are national undermines many attempts at regulation (Froomkin, 1997).

To make conceptual sense of this situation, it is useful to step back from the details and consider governance from a theoretical level. What is governance? What is needed in order to govern? What is needed for governance of the Internet?

In *Democracy and Its Critics* (1989), Robert Dahl defines what governance is and what is needed to achieve it. He identifies a set of "assumptions of a political order" (pp. 106–107) that specify the minimal conditions for a system of governance. I call these *mechanisms of governance*. Paraphrasing Dahl's definition, we can identify four such mechanisms. The first is an *authority*. Governance requires a governor or a sovereign. An entity, be it an individual or a group, must make policy decisions that apply to the members of the polity. A second governance mechanism is *law*. Laws implement policy decisions. They might take the form of a tax, a license, or simply a binding rule. Third, there must be some mechanism for imposing *sanctions*. This allows for punishment of those who violate laws. Finally, governance requires the definition of *jurisdiction*. Jurisdiction defines the space over which the authority makes decisions and within which the laws apply and are enforced by the threat of sanctions. These four mechanisms make governance possible: the governing *authority* can make a policy decision that applies within its

jurisdiction, embodying that decision in *law* and imposing *sanctions* on whomever disobeys. [A similar discussion can be found in the appendix of *Code* (Lessig, 1999).]

The Internet's vaunted ungovernability results from the absence of these four mechanisms. Regulation is difficult because authority, law, sanctions, and jurisdictions are not in place.

ICANN realizes these four mechanisms through its control of the Internet's domain name system (DNS). Although Internet communication has no central control point, Internet addressing, as realized in the DNS, is centralized. DNS provides the control point from which to regulate users. Moreover, the DNS is also an essential resource, so it provides a means of sanctioning users: denial of access to domain names is the equivalent to banishment from the Internet. The DNS also defines jurisdictions on the Internet. The logical organization of the DNS allows authority to be mapped onto distinct zones. Finally, the contractual foundations of the DNS provide opportunities to promulgate regulations. Taken together, these features render ICANN capable of governance.

DNS AND GOVERNANCE—A SIMPLE ACCOUNT

In order to understand ICANN, one must first understand the domain name system. Here I analyze DNS in two passes. I first present the DNS in a simplified form, treating it as a single, nondistributed system. Seen this way, the governance features of the DNS are most easily recognized. In a later section I examine the distributed inner structure of the DNS and present the various mechanisms used to realize coherent administration and policymaking.

DNS: The Control Point of the Internet

I begin with a little-recognized fact: The Internet really consists of two "systems," one for communications (the "TCP/IP" protocols) and one for addressing (the DNS). The communication system is the Internet as we commonly know it. It is extremely decentralized—so much so that it is really not a "system" at all but rather just a set of protocols by which independent computer networks can send data packets to each other. It is this decentralized system that informs most public understanding of the Internet and that underlies claims about ungovernability.

In marked contrast to this, the addressing system—the domain name system (DNS)—is centralized (Albitz and Liu, 1998). Nearly all Internet communications rely on this single system. The DNS can be thought of as the Internet's telephone book and directory assistance service. Before one computer can communicate with another, it must do the equivalent of contacting directory assistance with a name of the party it wishes to call and receiving back the number to dial. This is a necessary prelude to communication.

Internally, the DNS consists of a database and a dynamic lookup service. The database includes pairs of domain names and IP numbers. Domain names are alphanumeric (and hence human-friendly) identifiers of computers on the Internet. IP (Internet Protocol) numbers (or addresses) are machine-friendly numeric identifiers. For example, a given computer's domain name might be *mycomputer.org*, and its corresponding IP number might be *12.34.56.78*. The DNS resolves domain names into IP numbers. In name resolution, the DNS accepts a domain name from a user and returns the corresponding number. The DNS computers performing name resolution are called *name servers*. Only after resolution has occurred can the user-to-user e-mail or web communication begin.¹

This two-step procedure is immediately visible on most web browsers (e.g., Netscape Navigator). Once a user enters a domain name, the browser will indicate that it is interacting with the DNS by posting a message like "Looking up host . . ." As long as a few seconds may pass before resolution is performed, and IP number is returned, and actual communication may begin. Sometimes name resolution fails, as when a misspelled name generates an error message like, "Unable to locate host . . ." and no number is returned. By watching the status messages on a browser's screen, a user can observe the name resolution process.

At the heart of the DNS is the Internet's *name space*. The name space lists (nearly) all computers on the Internet.² At the time of this writing the name space contains tens of millions of entries. When one reads statistics about the growth of the Internet, the numbers usually refer to the size of the name space. It provides a rough approximation of the number of individual users: Since most computers listed in the DNS are gateways into private networks with many users, the number of users is much greater than the number of entries in the name space.

In a manner of speaking, the name space *is* the Internet. In order to exist on the Internet, a computer must be listed in the name space. Without a listing (without a domain name and an IP number) a computer cannot be found by others. Removal of a computer's listing from the name space constitutes a kind of banishment, for a computer disappears from the list of addressable computers. Whatever entity controls the name space database effectively controls the Internet. These points are discussed in detail next.

As currently designed, the name space must obey certain design principles (IAB, 2000; ICANN, 2001). The system's designers claim that the name space must be *unique* and it must be managed by a single entity. There can only be one database that constitutes the definitive listing of computers on the Internet. Copies may exist, but independent name spaces cannot, because they could evolve to have different contents. Were multiple, independent name spaces to exist, a given domain name could resolve to different IP addresses depending on which name space

was used, which would render communication unreliable. This technological imperative of uniqueness underlies the centrality of the DNS, for all communications must use a single, authoritative name space. The Internet's use of a unique name space (with a single administrator) "is a technical necessity, not a policy choice" (IAB, 2000). (Were this design feature not necessary, then numerous possibilities for policy choices would be opened).

Administration

DNS is more than a technical system; it is also an administrative and policy system. Continuing with our simplified view of DNS as a single, nondistributed database, we can examine the DNS in terms of a single administrator and a single policy authority. The *policy authority* entity makes general rules for changes to the name space, such as allowable domain names, cost of registration in the name space, and restrictions on the addition or deletion of names. The *administrator* implements these decisions, adding, deleting, and modifying the database entries to reflect the entry, exit, and changed status of computers. The administrator also ensures the reliable operation of the name server.

The DNS's uniqueness requirement means that the policy authority and the administrator exercise monopoly power. There must be a unique name space, and it must be managed by a unique administrator, who, in turn, must be subject to a unique policy authority. "Both the design and the implementation of the DNS protocol are heavily based on the assumption that there is a single owner or maintainer" (IAB, 2000). Only in this way can the name space be guaranteed to function reliably. Directly or indirectly, this one DNS administrator contracts with every network connected to the Internet. Thus, paralleling the DNS's technical centralization is administrative and policy centralization.

The DNS administrator is also called a *registry*. For a computer to be available on the Internet, the user must approach the administrator and request to be *registered*. The registry registers the computer by adding the user's name-number pair to the name space.

The legal mechanism used to connect the central policy authority with users is the *contract*. The Internet is a network of networks; most computers registered in the name space are gateways to private networks managed by network administrators. Each listing in the DNS is accompanied by a contract between the central DNS administrator and a *network administrator*. The contract specifies rules and conditions for inclusion in the name space, such as the provision of contact information, the payment of an annual fee, acknowledgment of the role of the DNS administrator, and so on. Thus, every network in the Internet has a contract with the single entity overseeing the DNS. These contracts implement policy centralization.

DNS and Internet Governance

In this simplified version of DNS it is easy to recognize the feasibility of implementing governance. Only relatively minor modifications would be needed to realize the four mechanisms of authority, law, sanctions, and jurisdictions.

The DNS defines a central authority for the Internet. The uniqueness requirement of the name space requires a single central authority, and its decisions apply to all servers in the name space. To render the DNS policy authority a true regulatory entity, its domain of decision making would simply have to expand to public issues, such as intellectual property regulation or content control. Since there are few technical barriers to such an expansion, it would be a policy choice. Thus, realizing governance on the Internet would require simply broadening the range of topics regulated by the DNS policy authority.

The DNS also defines the second governance mechanism: law. The law of the Internet is contained in the domain name registration contracts. The provisions of the contracts with network administrators specify the detailed regulations for their actions. To regulate on broader topics, the language in the contracts would simply have to expand.

Third, DNS provided a powerful mechanism for sanctions: domain name denial (i.e., the deletion of a user's name-number listing from the name space). This is the power of banishment: Network administrators who refused to obey the regulations in their contracts could be delisted from the name space and made to disappear. Name registration could be treated as a privilege, revocable if a user violated the rules.

The DNS neatly solves the problem of jurisdiction as well. The jurisdiction of the DNS policy authority extends to every computer on the Internet but no farther. The registration contract is the manifestation of jurisdiction. Every network administrator is contractually bound to the DNS's policy authority.

Thus, the domain name system provided the means to realize mechanisms of governance. Relatively minor changes to DNS could put each mechanism in place. The DNS policy authority would need to merely broaden its regulatory scope and include those broader regulations in contracts with network administrators. Domain name denial provides an adequate mechanism to sanction rule breakers. The jurisdiction of the policy authority would exactly cover the Internet, no less and no more.

In order to fully realize Internet governance, two additional considerations would have to be addressed. The first is practical: Some means would be needed to extend policy authority to the individual user. Since the domain name registration contract is between the central authority and a network administrator, individual users are not immediately subject to regulations. Regulation of individual users could be achieved using a *flow-down contract*. Network

administrators generally require users to sign an agreement when they obtain an account, and this user contract could repeat the provisions from the administrators' contract. In this way a single set of regulations could "flow down" from the central DNS administrator to network administrators and from there to all users. Indirectly, all Internet users could be regulated by the central DNS administrator. Violation of the user contract could lead to loss of Internet access for the user account. Network administrators who failed to enforce flow-down contracts on their users would find themselves subject to domain name denial, that is, banishment from the Internet. While such a user contract remains hypothetical, its feasibility is not. In a later section I survey the types of regulations that have been or could be implemented through such a system.

A second consideration about governance is more normative in nature. Were the DNS policy authority to become a general-purpose regulator, then careful thought would have to be given to its *legitimacy*. As the scope of its policymaking expanded, its authority would have to be grounded on some appropriate principle. This could be realized by placing ultimate policy authority in the hands of governments or in the hands of a newly constituted representational institution. As discussed later, when policy authority was located in ICANN, it adopted a representational mechanisms to ensure legitimacy.

The discussion so far has built on one simplifying assumption: that the Internet name space is a single, centralized database. In the early phases of the Internet's development this was true. In the 1970s the entire namespace was contained in one file called "hosts.txt" (Mockapetris, 1983). By 1983, however, the continued growth of the network had led researchers to redesign the name space, and break up the name space into multiple, interconnected pieces. The name space is less centralized than has been presented here. Decentralization renders governance of the Internet much more complex. I turn now to an analysis of that more complex architecture.

DNS AND GOVERNANCE—THE DISTRIBUTED SYSTEM

In fact, the name space is a *distributed* database. In theory, all name-number pairs could be held in one central database as described in the simplified account just given. However, since thousands of name resolution queries occur each second, a centralized DNS computer might be overwhelmed. Instead, the name space is distributed among multiple computers to share the workload.

The name space exists as a collection of partial, separate databases running on separate computers. Each partial database is called a *zone file* (or *zone*). A zone contains a subset of the total list of name-number pairs. To each zone is associated a *name server* (or *server*—a software pro-

gram for name resolution) and a *host computer* (or *host*—the hardware that hosts the zone file and name server). Thus, the entire name space is a distributed database-and-name-resolution system whose building block is the triad of a zone file, name server program, and host computer.

As in any distributed database, the relationship between the parts is carefully structured. The different zone are linked to each other to form a top-down pyramidal hierarchy or an inverted tree (with its root at the top). At the apex of the hierarchy is a single zone, the *root*. The root zone links to multiple zones just beneath it, and those zones in turn link to multiple zones beneath them, and so on. (This is the same structure as the files on a personal computer). The levels in the hierarchy are clearly identified: The root zone links to "top-level" zones, these link to "second-level" zones, then the "third-level" zones, and so on.

While a given zone may link downward to multiple zones, it can link upward to just one zone. Directly or indirectly, all zones link upwards to the single root zone. The existence of one root in the name space fulfills the uniqueness condition.

Subtrees in this distributed database are called *domains*. A domain consists of a zone and all zones beneath it in the hierarchy. Domain names are often referred to by their level in the tree. Domains beginning at top-level zones are *top-level domains* or TLDs; domains beginning at the next level are *second-level domains*, and so on. The domain of the root is the complete name space. The entire system constitutes the domain name system or DNS. The terms *zone* and *domain* are often used interchangeably, but the former refers to one single file and the latter refers to that single file and all lower files in its subtree.

A domain has a name—which, not surprisingly, is called a *domain name*. Well-known top-level domain names are .com, .org, and .net. The largest domain in the name space, .com links to millions of lower-level domains. An Internet address like mycomputer.com consists of a second-level domain (mycomputer) and a top-level domain (.com). A string of domain names, with the different levels separated by dots, uniquely identifies any computer in the name space.

This distributed hierarchy defines relationships of top-down control. Any zone file can be modified to link (include) or delink (exclude) the zones below it in the name space. This is the power of virtual life and death. When a name server is connected to the root via some series of links, then it exists in the name space. Should a zone file be modified to eliminate a link, the computer or computers below it in the hierarchy will be cut off from the name space. Each server in the hierarchy controls the path to the root for the servers below it.

An example may illuminate this. Suppose I want Internet e-mail services for my company. I already have an

internal company network, and now I want to connect my network to the Internet. To do that, I must link a host computer in my network into the name space, that is, register the host's domain name and IP address in a DNS zone file. Since the name space is a distributed database, there are many zone files to which I could link: A registry in Virginia maintains a zone file called .com, a registry in England maintains a zone file called .uk, my parent company hosts a zone file called .holdingcompany (which is itself linked to the .com zone file). By my registering my host into an available zone file, it becomes part of the name space and exists in the Internet. Likewise, should my entry in the zone file ever be delinked (the domain name canceled), my host would disappear from the Internet. The modification to the zone file that allows me to enter or exit from the Internet is not made by me but by the administrator of the next higher zone file, upon whom I continue to depend for my presence on the Internet.

Administration

In the simplified explanation earlier, DNS administration and policy authority were held by a single pair of organizations. In the distributed DNS, every domain has such an administration-policy pair (which I refer to simply as an "administrator"; in some cases it may be one and the same organization, anyway). These organizations are organized according to the distributed structure of the name space: Total DNS administration is a multiorganization hierarchy, with each administrator exercising control over lower level administrators. At the apex of the hierarchy is the root administrator.

Each administrator exercises monopoly control over its immediate zone file (to ensure uniqueness of its portion of the name space). Moreover, each administrator has authority over the entire domain beneath it. When it registers a lower level host, it delegates some authority to the lower level administrator, who exercises monopoly control over that lower zone file. Authority flows down the hierarchy from the root zone administrator, with responsibility for the entire name space, to the individual host computers at the lowest level zones. Each administrator is subject to the policies of higher level entities. In this way, the policies made at the root can be transmitted down through the levels of the hierarchy to apply, directly or indirectly, to all administrators in the DNS. As a group, the administrators serve as the gatekeepers to the name space and hence to the Internet.

Just as zone files are joined by links, administrators are joined by contracts. The root administrator formalizes its delegation of authority to top-level administrators in a contract. Some provisions of that contract may be required to be included in subsequent contracts. In this way, regulations may flow down the entire hierarchy to the individual

network administrator or possibly even the individual user, as discussed earlier.

As one would expect, the administration of the root zone is particularly important. All other hosts on the Internet access the name space only with a delegation of authority directly or indirectly from the root. Policy authority over the root—the power to add or delete top-level domains—confers direct control over all top-level domains and indirect power over all lower level domains. Authority over the root zone extends to the entire Internet.

In summary, this more accurate account of the DNS reveals another order of magnitude of technical and administrative complexity. Seen as a whole, the DNS is a centralized control point for the Internet. However, because it is a decentralized system, the DNS has an internal structure that relies on hierarchical control and contracts to achieve unified policy capabilities.

Historical Factors in DNS

At this point we can switch from technical analysis to historical analysis. The discussion so far outlined the functioning of the DNS and its structure as a distributed database. This historical analysis outlines evolution of the DNS namespace and its administrative hierarchy.

The Internet began as a research project in the 1970s, and the computer scientists developing it shaped the evolution of its administrative and policy institutions (Hafner & Lyon, 1998). This research community was centered in institutions like the Internet Engineering Task Force (IETF), the Internet Architecture Board (IAB), the University of Southern California's Information Sciences Institute (ISI), and the Internet Society (ISOC) (Leiner et al., 2000).

One person, in particular, played a key role in the DNS development: Dr. Jon Postel, a computer scientist at the University of Southern California. Working under a research contract from the US government, Postel exercised policy authority over the root, a function eventually called the Internet Assigned Number Authority (IANA). In his IANA role, Postel maintained the root zone file, authorized the addition of new top-level domains (TLDs), selected administrators to whom to delegate authority, and performed myriad other tasks. Postel had first assumed this task as a graduate student in the 1970s. As the Internet grew, the significance of Postel's decisions increased accordingly, and by the 1990s his decisions had global implications. Yet policy authority over the root continued to reside in him personally. Since he worked as a government contractor, final authority officially lay with the U.S. government—but for most of the 1980s and 1990s, Postel exercised personal authority over the DNS.

In 1984, in a document known as RFC920, Postel and colleague Joyce Reynolds defined the evolutionary trajectory of the name space (Postel & Reynolds, 1984). RFC920

defined the number of top-level zones and the names they would bear. While the name space would always have just one root zone file, Postel and Reynolds announced in 1984 that the top level would consist of some 250 zone files. RFC920 served as the blueprint for the structure of the namespace and its future growth. This number of zone files had no basis in technical necessity; it could have been smaller or larger.

RFC920 also specified the character strings to identify the zone files. The 250 TLDs would be divided into two naming classes: There would be six “generic” TLDs (gTLDs: .gov, .edu, .com, .org, .mil, and .net), and there would be some 244 “country code” TLDs (ccTLDs; based on the ISO 3166-1 standard list of two-character country codes like .uk for United Kingdom, .fr for France, .jp for Japan, and so on). Again, the particular character strings used in the domain names had no technical significance; they merely had to be unique. However, as chosen, the strings had major policy significance, for their meanings implied that different zones would have different uses. The 250 TLDs defined a name space partly based on function (.com for commercial, .mil for military, etc.) and partly based on geopolitical identifiers (country names). Decided long before the Internet’s global significance emerged, the number of TLDs and the meanings attached to them would have lasting consequences.

While RFC920 defined the DNS structure and naming conventions, its implementation proceeded incrementally over many years. Implementation of the TLDs required selecting an administrator to maintain the zone file and to operate the name server. Furthermore, the implementation of the generic TLDs proceeded very differently than the country code TLDs: The U.S. government selected the former, while IANA selected the latter.

While Postel/IANA possessed policy authority over the root, the administrator of the root was a private company: Network Solutions, Inc. (NSI). NSI took its orders from IANA, but ultimately operated under contract with the US government. NSI both administered and exercised policy authority over .com, .net, and .org.

Growth in .com made NSI both wealthy and powerful. After the U.S. government opened the Internet to commercial use in 1994, registrations in .com exploded. By the late 1990s, .com had grown to over 10 million registrations—more than half of the entire name space. This concentration of growth in the namespace was not an inherent feature of the DNS, but rather occurred as an unforeseen development—a combination of good marketing by NSI and widespread acceptance of the DNS naming convention, which identified .com as the commercial domain. Ultimately, the .com domain contained so much of the total name space that it rivaled the root for its importance for the overall network (Mueller, 1999). Charging an annual fee of \$35 per registered name, NSI collected hundreds of

millions of dollars of revenue from its monopoly of the Internet’s one commercially named domain.

In contrast to NSI, administrators of country code TLDs resembled IANA: They were usually nonprofit organizations, often affiliated with university research centers. Since IANA had defined zone files in terms of country codes and had created just one zone file per country, there was just one administrator in each country. Each of them constituted an implicit national monopoly: the .fr registry was France’s only registry, the .uk registry was the sole UK registry, and so on. Although there was no technical basis for national monopolies, the naming convention in RFC920 implied such a system. Organizationally, the system of national ccTLD monopolies was reminiscent of the system of national telephone companies (PTTs), which operated as national monopolies in many countries.

By October 2000 the full name space consisted of over 30 million name–number pairs (NetNames, 2000). Since IANA had not expanded the number of top-level domains since issuing RFC920, most growth in the name space occurred in second-level domains. Most of that was contained in a single TLD, .com, where NSI had registered over 18 million hosts. NSI’s .org and .net TLDs contained another 5 million hosts. The rest of the name space was mostly distributed in various country code TLDs. Above it all, Jon Postel at IANA oversaw delegations of authority to new administrators.

Thus the DNS as it existed toward the end of the 1990s was considerably more complex than the system described earlier. First, it was decentralized. The change from hosts.txt to the decentralized DNS occurred in 1983 (Mockapetris, 1983). Second, over the years numerous nontechnical developments had shaped the system. Most TLDs bore country code identifiers, which associated them with geopolitical entities (countries). One zone file in the hierarchy, .com, contained nearly the entire name space (thereby somewhat defeating decentralization). In the community of nonprofit DNS administrators, Network Solutions was emerging as a commercial giant. Most importantly, policy authority for the entire DNS lay with one person, Jon Postel. The DNS was complex—and rife with potential conflicts.

Governance

Nonetheless, the DNS could still be used to realize the mechanisms of governance. Although more complex arrangements would be needed than those discussed earlier, a decentralized DNS could still be used to realize authority, law, sanctions, and jurisdictions. In this section I consider in the abstract the manner in which the DNS technology would render governance possible.

Decentralization would not significantly affect the realization of two mechanisms: law and sanctions. Even

with the addition of multiple levels of hierarchy, flow-down contracts could still bring rules down to users. Decentralization would require a longer cascade of flow-down contracts but would not otherwise affect this mechanism. Likewise, domain name denial could still serve as a sanction. With each administrator in the name space, from the root on down, exercising monopoly control over its zone file, each one could delink lower level hosts from the name space. Name registration could still be treated as a privilege, revocable if a registrant violated the rules.

Decentralization would render the other two governance mechanisms considerably more difficult to realize, however. Decentralization fragmented authority and jurisdiction, especially in the country code domains.

Policy authority and jurisdiction would still be unified at the root. IANA could make rules for the entire name space and promulgate them down the hierarchy. However, at the top-level domains (TLDs) it would encounter another authority that might challenge it. The distinction between generic TLDs (gTLDs) and country code TLDs (ccTLDs) would inhibit unity of authority and jurisdiction.

ccTLDs are associated with countries, and most countries already have policy authorities: their national governments. National governments could claim jurisdiction in ccTLDs bearing their country code. Although national governments' domains were lower in the DNS hierarchy than IANA, it would be awkward for IANA to assert authority over them. An Internet governance institution would be in a poor position to challenge a national government's right to make public policy. Even if a national government was unaware of the DNS (as was often the case), the proactive exercise of policy authority by IANA might provoke a national government to act. Thus it would be difficult for the policy authority at the root to exercise policy authority in the ccTLDs.

Making matters more complex, among the ccTLDs there would be a plethora of authorities. Country code TLDs were independent from each other, and each could make its own policies in its domain, potentially resulting in a host of divergent and conflicting policies. Decentralization of the DNS had created hundreds of authorities, each with an implicit claim of jurisdiction over their ccTLD. Thus it would seem that integrated governance of the Internet would be impossible. The engineers' decision to organize the name space according to political lines, as codified in RFC920, had fragmented authority and jurisdiction.

In the gTLDs, in contrast, integrated governance would be possible. IANA could regulate domains like .com, .org, and .net, because these domains had no accountability to authorities outside of the DNS. Any authority they

possessed in the DNS was only by way of a delegation from IANA. Furthermore, although gTLDs were only a small number of the total set of domains, they contained the lion's share of all users. Effective authority in just these domains would still affect most Internet users.

Thus fully integrated governance would not be possible in the DNS—but a workable degree of governance would be. The realization of a single authority and a single jurisdiction in .com, .org, and .net would be straightforward. Moreover, such a jurisdiction would include most users, given the heavy concentration of registrations in the gTLDs. Policy authority at the root could regulate them by flow-down contracts backed by the threat of domain name denial. This would reduce but not overcome the problem of fragmented authority.

To further mitigate the fragmentation of authority, IANA and national governments could seek to coordinate policies. Although there were hundreds of ccTLDs, registrations were unevenly distributed among them. Domains like .uk or .jp contained many more registrations than others like .bg (Bulgaria). Coordination between IANA and just the largest ccTLDs would bring the Internet much closer to integrated governance by bringing most of the outstanding users under the same policies.

One could speculate that additional policy coherence could be achieved by pressuring any recalcitrant ccTLD authorities. Were a small ccTLD to resist enforcing some policy backed by IANA and by large governments, the larger parties could challenge the policy authority of the smaller national governments. IANA could exercise its ability to delink a top-level domain or reassign it to a more compliant administrator. In this way, smaller ccTLDs might be coaxed or bullied into adopting policies agreed on by larger players. Overall policy coherence would be improved.

In closing this section, a final issue must be addressed: the role of the U.S. government. The U.S. government employed Jon Postel and Network Solutions, and it claimed final authority over the root zone file. Although IANA was the highest policy authority in the DNS, IANA itself operated under policy authority of the United States. Were Internet governance mechanisms to be implemented, and were the status of the United States not to change, then the United States would be the final authority over the Internet. This again might cause tensions with other national governments, which would find themselves subordinate to the United States.

In summary, a decentralized DNS would not allow for full realization of mechanisms of governance. Law and sanctions could be easily realized, but authority and jurisdiction would be fragmented. Located in the gTLDs, most users could be regulated by IANA. Bringing the entire name space under IANA's authority, however, would

require negotiation with many autonomous national authorities.

ICANN

Having reviewed the DNS, we can now turn to the Internet Corporation for Assigned Names and Numbers (ICANN). Created in 1998 and still evolving at the time of this writing, ICANN realizes the governance potential in DNS, leveraging Internet addressing to achieve global governance. Not only has it created the capabilities for regulation, it has even employed them: In 1999 ICANN promulgated global public policy that defined intellectual property rights in domain names. In what follows I identify the specific features of ICANN by which it realizes authority, jurisdiction, law, and sanction.

I begin by setting the historical scene. By the late 1990s the DNS had come under severe stress from a variety of sources. The Internet had rapidly outgrown its original institutions, most notably the very personal nature of IANA, whose legitimacy was based on the reputation of one man. Should something have happened to Jon Postel, IANA could have become unstable. Another source of stress arose from entrepreneurs wishing to compete with NSI's monopoly: They began proposing alternate name spaces, new TLDs (e.g., .web), and independent registries (Mueller, 1998). This threatened to fragment the name space. The global nature of IANA was another issue. The United Nations' International Telecommunications Union (ITU) became involved and sought to assume authority over the name space. National governments and the European Commission became interested, too; they perceived a threat to their sovereignty from U.S. control of this new global information infrastructure. Disputes over sovereignty and jurisdiction were heating up. Intense conflicts also began to emerge over domain names that matched trademarks (e.g., coca-cola.com). The United Nations' World Intellectual Property Organization (WIPO) and U.S. interest groups applied intense political pressure to install trademark regulations in domain names (Shaw, 1997). Making this political mix all the more volatile was that these conflicts developed in "Internet time"; every passing month witnessed exponential growth in the size of both the network and the political stakes.

The process by which the research community, trademark interests, communication businesses, and national governments came together to create a new institution to replace IANA is documented elsewhere (Mueller, 1999; Klein, 2001a). Here we are interested in the product of that long and contentious process: ICANN. In the following institutional analysis I dissect a snapshot of ICANN, as it existed around year 2000.

ICANN is best understood as a set of semi-autonomous institutions. That set includes not only ICANN as a corporation but also some external entities like a committee of national governments and the TLD administrators. To distinguish ICANN-the-set-of-institutions and ICANN-the-corporation, I refer to the former as the "ICANN system" and the latter simply as "ICANN."

The four mechanisms of governance are mixed deep in ICANN's administrative system and so can be difficult to identify. In what follows, I analyze ICANN's features in terms of their governance-related functions. First I focus on how ICANN realized mechanisms for authority and jurisdictions, and in the following section I focus on the mechanisms for policy and sanctions.

Authority and Jurisdiction

The new ICANN corporation replaced Jon Postel as the policy authority over the root. ICANN solved the problem of stability: A person was replaced by an institution, so that the IANA could function independently of any one individual. ICANN also partially solved the problem of inter-governmental conflict: ICANN was private, and its bylaws explicitly forbade government officials from serving on the board. Thus although its authority would extend globally, that authority was ostensibly nongovernmental and would not conflict with national governments' sovereignty. Furthermore, with a mission to engage in simple technical coordination of the Internet, ICANN claimed to have no public policy role.

The problem of legitimacy was addressed by the composition of the board of directors. A person, Postel, was replaced by a collection of representatives; legitimacy through expertise and personal reputation was replaced by legitimacy through accountability to stakeholders. ICANN's board represented different functional and geographic constituencies. Of 19 directors, 9 represented technical expert groups, another 9 represented users, and the final director was the organization's top staff person.

ICANN's board, however, was itself subject to a higher authority: the U.S. government. The U.S. Department of Commerce (DOC) retained ultimate control of the root, leaving ICANN policy decisions subject to a potential veto. Despite the much-publicized privatization, the United States never completely ceded its hold over the Internet. As an official "fact sheet" of the DOC stated, "The Department of Commerce has no plans to transfer to any entity its policy authority to direct the authoritative root server" (DOC, 1999). Thus the Internet was internationalized and privatized but only under the watchful oversight of the U.S. government. (Whether the United States will eventually cede full authority to ICANN is not currently known.)

Beneath the root, contracts extended the authority of ICANN and the United States down to the administrators of the gTLDs and the ccTLDs. The generic TLDs proved more willing to sign on, since NSI administered nearly all of them and was under pressure from the United States to participate in ICANN. Following some bargaining over conditions, NSI and ICANN reached agreement in 1999. ICANN thereby achieved policy authority in the most populous domains. The ccTLDs proved more circumspect, and as late as 2001 ICANN was still reporting small progress in this area (ICANN, 2001). Top-down policy authority in these domains failed to be established and remained one of the most difficult issues in the system.

The implicit conflict of authority between ICANN and national governments manifested itself in the Governmental Advisory Committee (GAC). The GAC was an official ICANN advisory committee in which national governments could meet, discuss, and coordinate their actions. Individually, each national government could assert policy authority over the zone file bearing its country code. Together, in GAC, the national governments could coordinate policy.

GAC's first acts were to establish the legitimacy of members' claims to policy authority. First, GAC declared, "The Internet naming system is a public resource in the sense that its functions must be administered in the public or common interest" (GAC, 2000). By defining the DNS as a public good, similar to electromagnetic spectrum, GAC prepared the way for governmental oversight. Then GAC linked that public interest to national governments' authority: "ultimate public policy authority over the relevant [country code domain] rests with the relevant government" (GAC, 2000). This justified the claim by national authorities that ccTLD domains were under their jurisdiction.

Thus ccTLD administrators found themselves under two authorities—and they asserted a third of their own. ICANN claimed that ccTLDs' authority derived from its higher authority over the root; if administrators did not follow ICANN's policies, ICANN could redelegate authority to another party. For their part, national governments claimed that their zone file was a public resource under their authority. A third approach was backed by ccTLD administrators, who cited policy documents that located authority in the "local Internet community" rather than in ICANN or in governments (Postel, 1994). This prescription would render the administrators accountable to Internet users in their home country rather than to their government or ICANN.

GAC members sought to resolve this ambiguity in their favor by requesting from ICANN a veto power over ccTLDs similar to the U.S. veto power over the root. GAC proposed that ICANN's power of redelegation be given to national governments: "when ICANN is notified by the relevant government or public authority that the [administra-

tor] has contravened the terms . . . ICANN should act with the utmost promptness to reassign the delegation" (GAC, 2000). Country code managers would have access to the root only as long as their national government allowed it. ICANN resisted this arrangement, which would have subordinated it to national governments. At the time of this writing the fragmentation of authority over the ccTLDs remained unresolved.

The GAC forum allowed national governments to coordinate on a variety of other policies. GAC began developing a "best practice" document for country managers, so that national authorities could standardize their operations (GAC, 2000). Once common policies were defined, each national government could promulgate and enforce those practices in its own jurisdiction.

Thus the multiplicity of authorities caused jurisdictional fragmentation. ICANN claimed jurisdiction over the entire name space and, hence, over all users. Likewise, the U.S. jurisdiction extended over ICANN and so over the entire name space. At the top level of the name space, however, jurisdictional conflicts merged. The jurisdictions defined by the generic TLDs posed little problem; there ICANN prevailed. In the country code TLDs, however, national governments claimed jurisdiction. This prevented ICANN and the United States from realizing one unified jurisdiction in the name space. Still, the vast majority of Internet users found themselves in ICANN's sole jurisdiction.

Policy and Sanction

Although ICANN regulated users, it did not have direct contact with users. Instead, a four-tiered system was implemented, with ICANN at the top, users at the bottom, and two kinds of organization—registries and *registrars*—in between. At the top ICANN used its authority to make regulations. Beneath it, registries maintained the zone files and operated the servers (as described earlier). Beneath the registries came the registrars, who served as the retail interface to users. They performed customer-oriented tasks of leasing and servicing domain names to users, often bundling these with additional services like Internet service provision. Finally, at the bottom tier were users (or network administrators, who, in turn, contracted with individual users).

Flow-down contracts spanned these levels. ICANN's regulations were embodied in contracts with registries, which included the regulations in their contracts with registrars, who included them in their contracts with network administrators. Policies "flowed down" from ICANN to registries to registrars and ultimately to private networks. The terms of the contract defined the laws of the Internet.

At each level, ICANN backed up contracts with the threat of domain name denial. Registries who disobeyed could have their domain redelegated. Registrars who

disobeyed could lose their access to registries, so they would no longer be able to offer domain names to users. Users who disobeyed could have their domain names removed from the name space or assigned to someone else.

ICANN's Registrar Accreditation Contract (ICANN, 1999a) was the primary mechanism for promulgating law. Any organization that wished to serve as a registrar had to obey the terms of this contract. It included an open-ended requirement: "Registrar shall comply . . . with all ICANN-adopted Policies" (Section II.D.1.b.i).³ As ICANN policies changed and the accreditation agreement evolved (as foreseen in Section II.O, "Right to Substitute Updated Agreement"), so could the conditions imposed on domain name usage. It was this contractual blank check that most clearly gave ICANN the right to exercise broad governance activities. The contract's provisions had to be repeated in lower level contracts between registrars and users, guaranteeing that regulations would flow from ICANN to the registrars and eventually to users. These regulations were enforceable with clear sanctions: "The [domain name] holder shall agree that its registration of the [domain] name shall be subject to suspension, cancellation, or transfer pursuant to any ICANN-adopted policy . . . for the resolution of disputes" (Section II.J.7.i).

Thus the basic governance mechanisms were flow-down contracts backed up by domain-name denial. The accreditation contract stipulated the regulations for the Internet, and the power to revoke domain names provided the sanction for enforcement. Internet users could only enjoy access to the name space if they obeyed ICANN's rules; if they broke the rules, they could see their domain name suspended, canceled, or transferred.

GLOBAL PUBLIC POLICY

The preceding discussion of DNS, governance, and ICANN's institutional design has been largely descriptive and analytical. What is reviewed here is mostly established fact. If one accepts the four-part definition of governance, and if one admits that those mechanisms are indeed present in ICANN, then it is not controversial to state that ICANN has the capability to engage in Internet governance. So far, little has been said about whether ICANN exercises that capability or whether the system of governance is legitimate. In this section I engage some of these more contentious topics.

Global Public Policy

ICANN not only has the capacity to govern, it has also done so. ICANN has made global public policy. In this section I explain what it means to make public policy and how ICANN has done it.

Shortly after ICANN's governance capabilities were implemented, they were put into practice. In August 1999

ICANN promulgated its first major policy: the Uniform Dispute Resolution Policy (UDRP), which mandated a procedure for deciding who has intellectual property rights in a domain name (ICANN, 1999b). The UDRP illustrates how ICANN's governance mechanisms work in practice. The UDRP also constitutes ICANN's first global public policy.

In the late 1990s domain names became valuable, with names like yahoo.com and amazon.com becoming important business assets. As the value of domain names rose, disputes arose over name rights. Some disputes arose when individuals allegedly registered trademarks in anticipation of selling them to their owner; other arose when owners allegedly attempted to wrest control over desirable character strings from other users. Sometimes ownership rights conflicted with rights of fair use or free speech (Kleiman, 1999). The trouble with such conflicts was that existing trademark law was inadequate for many disputes: Trademark law was national, whereas many disputes were international. Legal mechanisms to settle international disputes in domain names were expensive and awkward to employ.

ICANN's UDRP defined procedures for resolving domain name disputes, thereby effectively setting rules of ownership and property. Disputes would be settled through an alternative dispute resolution procedure, in which certified private arbitrators would decide the question of rights based on criteria defined by ICANN. Arbitration decisions could be enforced by removal or transfer of the disputed name. It was a "voluntary" system in that parties who were unsatisfied by the outcome of arbitration could still resort to existing judicial forums for judgment. However, since existing forums were extremely costly, the UDRP would in most cases provide the final decision on property rights. The UDRP had de facto the force of law.

The implementation of the Uniform Dispute Resolution Policy (UDRP) illustrates ICANN's use of all four governance mechanisms. First, the UDRP was developed with input from staff and various parties and ultimately approved by the ICANN Board in an exercise of its authority. Second, the policy was codified into law through the Registrar Accreditation Agreement. ICANN made the UDRP a condition for registrar access to the name space, and registrars had to include the UDRP in their retail contracts with users (it had to "flow down"). Third, the UDRP included sanctions: Users who refused to agree to the policy in advance were denied access to the name space, and users who were found to be in violation of the UDRP could have their names deleted or reassigned (banishment). Finally, the UDRP applied in ICANN's jurisdiction. The policy regulated domain name usage in the .com, .net, and .org domains. In country code domains, where ICANN's authority did not immediately apply, the decision to adopt

the UDRP lay with country code administrators. At the time of this writing, the policy had been adopted in some domains but not in all.

In making the UDRP, ICANN made global public policy. The UDRP regulates something of public value: rules of property. Rules of property, such as trademark, copyright, and intellectual property, are traditionally made by governments. The U.S. Constitution, for instance, specifies rules of intellectual property protection in patents. At the global level, the reason for a lack of regulation is not that property rules are somehow less public, but that there has been no recognized public institution to make such rules. ICANN stepped into this void. By making global rules on property, ICANN made a decisions on public values. Although the UDRP may not have been a policy of enormous import—property rights in domain names is a relatively small area of regulation—it was a significant first step into policymaking.⁴

Legitimacy

If ICANN makes global public policy, then it is appropriately evaluated by such policy criteria as legitimacy, accountability, and equity. Indeed, it is around issues like these that most controversies have erupted (Weinberg, 2000; Froomkin et al., 1999; Klein, 2001c). Here I briefly review some of the issues that have arisen around the ICANN board's legitimacy.

U.S. policy for the creation of ICANN was laid out in the Department of Commerce "White Paper," which defined principles for ICANN. Two principles there were particularly relevant to legitimacy: ICANN should be committed to "private, bottom-up coordination," and it should be committed to "representation... [providing] input from the broad and growing community of Internet users" (DOC, 1998b). Some of these principles became embodied in ICANN's bylaws, especially in the mechanisms for representation on the board (Klein, 2001a).

In a number of instances these principles of legitimacy were not convincingly upheld. I mention three here. ICANN's first board of directors was a nine-person interim board. In a move that generated considerable public outcry (and hearings in the U.S. Congress), the first set of interim directors was appointed with no public participation or consultation. Instead, the selection process was conducted behind closed doors in a process later described even by Jon Postel as "undemocratic and closed" (Daley, 1998). However, it was this board that promulgated the Uniform Dispute Resolution Policy.

The ICANN board was also implemented unevenly. The directors for the nine expert representatives were seated within approximately 1 year of ICANN's creation, and those directors quickly moved to weaken the seats reserved

for Internet user representatives. In a series of board meetings in 1999 and 2000, the appointed and expert directors sought to eliminate, reduce, or delay the implementation of the elected directors (Klein, 2000a). In so doing, they repeatedly revised the corporate bylaws that constrained board actions. As one top government official declared to them at their meeting in July 2000, "the Board is increasingly giving the impression of being extremely cavalier in changes to the by-laws" (Wilkinson, 2000). Shortly thereafter, the board decided to modify the bylaws again to defer the final round of director elections until 2002—fully 4 years after the creation of ICANN.

Finally, ICANN's early board gave evidence of preferring industry professionals to represent Internet users. In the first, partial round of director elections, the board filled most of the nominee slots for user representatives with candidates of its own choosing, selecting individuals from telecommunications giants like France Telecom, Fujitsu, Deutsche Telekom, and Verizon (Klein, 2000b). This tendency to favor the telecommunications supply industry over Internet users attracted the notice at ICANN's July 2000 meeting, of an Australian government official, who stated, "[ICANN] runs the risk of potentially becoming a de facto industry association" (Twomey, 2000). The legitimacy of the board to make decisions affecting all Internet users was again weakened by this tendency for some interest groups to seek (and arguably to achieve) disproportionate influence on the board.

With ICANN making global public policy, its lack of legitimacy was striking. Although the elections of 2000 brought some user representation to ICANN, they fell short of implementing the degree of representation called for in ICANN's original bylaws (Klein, 2001b, 2001c).

Future Policy

Institutions are not static entities; they grow over time and often expand their areas of activity. Such seems likely for ICANN. As an Internet governance entity, what policies might ICANN promulgate in the future? Here I briefly speculate.

Perhaps the most likely area of policy expansion is in intellectual property protection. Such expansion of rights has been actively championed since the beginning of the ICANN process and would be consistent with the initial direction of ICANN's activities (Froomkin, 1999). The UDRP could be expanded to give special registration rights to owners of celebrity names, famous marks, geographical names, and so on. ICANN could become a global regulator in the service of property and e-commerce.

Control over the name space could also be leveraged to promote social justice. ICANN and ccTLD monopolies could raise funds for a universal service fund to

overcome the global digital divide, allowing poorer countries to pay less for Internet access than wealthy countries. In private conversations with this author, some ICANN directors from developing countries have supported such policies.

ICANN's capabilities could also be used for content regulation. Sites violating content regulations could be censored by having their domain names revoked or redirected. Domain name denial was used in this way in the case of *voteauction.com*, which operated a site containing illegal content (an online mechanism for the buying and selling of votes). The registrar for the domain canceled the registration to suppress its content (Perritt, 2001). In theory, ICANN could enforce regulations broadly using similar mechanisms.

ICANN could become a vehicle for taxation, perhaps serving as a means whereby governments collect e-commerce taxes or whereby ICANN funds its own initiatives. With domain names available from one sole source, users would have to either pay the fee or suffer denial of access. Indeed, both U.S. legislators and disgruntled ccTLDs have accused ICANN of levying taxes (McCullagh, 1999; Ward, 2000).

Finally, ICANN could become a vehicle for U.S. national policy. In times of war or terrorism, countries opposing the United States could see their domains removed from the Internet. Individual registrations could be canceled or redirected to reduce the effectiveness of hostile entities. The relationship between ICANN policy and U.S. national policy had already come up when the U.S. Department of Commerce had approved the addition of the .ps domain—for Palestine—to the root zone. Although the United States did not pursue its narrow national interest, the case attracted attention because of the potential for conflict (Cisneros, 2001).

With governance mechanisms in place, the possibility of mission creep—the steady expansion of ICANN's regulatory scope—seems possible. The combination of effective mechanisms for governance and weak mechanisms for legitimacy could allow some parties to make global public policies that favor their interests.

CONCLUSIONS

The simple recognition that ICANN engages in Internet governance is significant. It contradicts established beliefs and it raises concerns about what kind of governance is being established. It forces us to ask what should be done.

ICANN contradicts the popular myth of a benevolent Internet anarchy. As it turns out, the Internet *can* be controlled. The DNS provides a basis for top-down control, and ICANN leverages that to make policy. The implications of this are far-reaching and will only be seen over

time. For this reason, ICANN's future should concern all Internet users.

I close with some observations about the relationship of technology to society. In ICANN we see three ways in which technology shapes society.

First, objective features of the technology shaped the administrative and regulatory system. In particular, the technical characteristics of a distributed database set important policy parameters. The need for a single name space with a unique root created a central control point. Likewise, the need for unique identifiers (so that a name identifies just one host computer) created problems of control and monopoly. With just one .com zone, within which there could be registered just one .coca-cola, a system of monopoly registries was created and the basis for trademark fights was laid.

It may be that these technology design features were not absolutely necessary (although convincing alternatives were not advanced even by ICANN's critics). At minimum, however, history rendered those technical features sufficiently embedded that they became equivalent to "necessary." Any attempt to change ICANN's status as regulator may have to begin by redesigning the underlying technology (particularly the requirement for a unique root under the control of a unique administrator).

A second way that technology shaped society was the role of engineers in making policy. The selection of country codes as domain names was a historical decision with profound policy consequences. This decision was made so early in the Internet development process that the only participants were research engineers. These engineers decided that Internet domains should be associated with geopolitical entities. Had they selected different alphanumeric identifiers—one could imagine colors, sequential numbers, the table of elements—then there would have been no basis for the one-per-country distribution of registries nor the subsequent assertion of national authority over registries. The engineers decided to organize the Internet like national PTTs. Engineers could make such decisions because they controlled the process early in its developmental history.

A third way that technology influences society is that it provides legitimacy for secretive decision-making. When policy decisions are categorized as "technical," then it becomes legitimate for them to be made behind closed doors by elite groups. Policy disappears from the public sight (Lessig, 1999). The groups that gained control of ICANN invoked this veil of technological legitimacy to discount their critics. Despite having no technical training, ICANN's lawyers justified their actions by claiming that they were making neutral choices on the basis of technical expertise (McLaughlin, 2000).

ICANN leverages control of Internet addressing to realize global public policy. In ICANN technology has shaped society, technologists have made profound policy decisions, and interested social groups have exploited technological legitimacy. Most importantly, the regulatory framework for the global information infrastructure of the next century has been created.

NOTES

1. This is a slight oversimplification. In fact, Internet communication is possible by using IP numbers directly, which avoids the need for interaction with the DNS. However, very few communications use IP numbers directly. A note to the reader: In this author's experience, for nearly every statement made about the DNS an exception can be found. The reader should bear this in mind when reading this section, which may contain some oversimplifications in the pursuit of clarity.

2. This sentence overstates the case a bit. Some computers may be listed more than once. Other may be listed not at all and may be reached by using their IP address directly. In the majority of cases, however, a computer on the Internet has one entry in the DNS name space. Furthermore, as discussed later, most computers in the DNS are not user computers but gateways to private networks within which individual user accounts exist.

3. This part of the Registrar Accreditation Agreement is important but not particularly succinct. The full text of Section D.1.b.i is: "D. General Obligations of Registrar. 1. During the Term of this Agreement: b. Registrar shall comply, in such operations, with all ICANN-adopted Policies insofar as they: i. relate to one or more of the following: (A) issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, technical reliability and/or stable operation of the Internet or domain-name system, (B) registrar policies reasonably necessary to implement Consensus Policies relating to the Registry, or (C) resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names)."

4. One question that I do not address here is whether the UDRP is "good" or "bad" public policy. The substance of the regulation is not the issue. UDRP has been praised by some (Cohen, 2000) and condemned by others (Flynn, 2000; Mueller, 2001). What is important here is that fact that ICANN regulates at all.

ICANN and Internet Governance: Leveraging Technical Coordination to Realize Global Public Policy

Hans Klein

School of Public Policy, Georgia Institute of Technology, Atlanta, Georgia, USA

The Internet Corporation for Assigned Names and Numbers (ICANN) was created in 1998 to perform technical coordination of the Internet. ICANN also lays the foundations for governance, creating capabilities for promulgating and enforcing global regu-

ternet usage backed up by sanctions. Internet governance exists in various partial forms (e.g., AOL chat rooms or government regulation of computers within national territory), but overall the Internet does not have a coherent and effective system of authoritative rule making and en-

lations on Internet use. ICANN leverages the capabilities in the Internet domain name system (DNS) to implement four mechanisms of governance: authority, law, sanctions, and jurisdictions. These governance-related features are embodied in seemingly technical features of ICANN's institutional design. Recognition of ICANN's governance mechanisms allows us to better understand the Internet's emerging regulatory regime.

Keywords domain name system (DNS), global public policy, governance, ICANN, Internet

INTERNET GOVERNANCE

The Internet has often been hailed as a domain of benevolent anarchy, a place where free communication is securely in place. It is a “modern Hydra” capable of circumventing regulation (Froomkin, 1999, p. 129) and a “space of no control” (Lessig, 1999, p. 24). As Internet bard John Perry Barlow says, “Governments of the Industrial World,...You have no sovereignty where we gather” (cited in Lessig, 1999, p. 218).

Stated less colorfully, the Internet presents challenges to *governance*. By governance I mean the existence of some authority able to make globally applicable rules for In-

Received 2 May 2000; accepted 13 August 2001.

Research for this study was performed while the author was a resident at the Center for the Sociology of Innovation at the Ecole des Mines, Paris, with support from a Chateaubriand Fellowship from the French Embassy in the United States.

forcement. The reasons for this lie both in characteristics of the technology, which make control difficult, and in the global reach of Internet communications, which creates jurisdictional conflict among government regulators.

This “ungovernability” of the Internet, however, is changing. In his book *Code*, Lawrence Lessig (1999) documents various strategies to eliminate user anonymity and thereby facilitate law enforcement. Likewise, in a recent court case over Internet auctions of Nazi memorabilia that was illegal in France, the Yahoo! Corporation was ordered to detect viewer's location and apply local content regulations to them (AFP, 1999). As with other technologies preceding it, as the Internet becomes important to the society around it, attempts are made to integrate it within existing regulatory structures (Hughes, 1983).

The most significant development in the trend to render the Internet governable is the creation of the Internet Corporation for Assigned Names and Numbers (ICANN). Created in 1998, ICANN is a private, non-profit entity whose official mandate is to perform technical coordination of core Internet resources, most notably domain names (e.g., mycomputer.org). Its site of incorporation lies in California but its authority extends, directly or indirectly, over all users of the Internet.

ICANN has the potential to radically change the nature of the Internet. By putting in place all the mechanisms needed for the creation, promulgation, and enforcement of regulations, ICANN makes effective Internet governance possible for the first time. No longer is the Internet a Hydra that is impossible to control. ICANN's mechanisms for governance can serve any number of possible regulations. The frequency of past attempts to regulate the Internet suggests that the realization of these mechanisms could attract

H. KLEIN

194

Page 2

widespread interest in their utilization (Froomkin, 1997). Depending on one's viewpoint, creation of a capability for governance holds the promise or the threat of taming the electronic frontier.

In what follows I offer a detailed analysis of ICANN. My purpose is to render comprehensible the interrelationship between technology, administration, and governance, explaining how a computer network addressing system makes possible a system of governance. To do this I explain what governance is, how the Internet's domain name system (DNS) works, and how the former is realized through the latter.

For policymakers and Internet users, this account can help inform policy. That the Internet has a point of central control and that ICANN makes global public policy possible are not widely admitted. Recognition of these governance capabilities justifies the application of normative criteria of legitimacy, accountability, and equity to the institution and its processes. This study contributes to a growing body of policy literature that analyzes ICANN from the perspective of its historical origins (Mueller, 1999; Klein, 2001a), its legal status (Froomkin, 2000; Klein, 2001c), and its institutional design (Post, 1998).

This account is also relevant to theoretical debates over the relationship between technological systems and their social context. Recent scholarship in the social construction of technology has emphasized the influence of social factors in shaping technological change (Bijker, 1995; Bijker et al., 1987; Klein & Kleinman, 2002). Writers on

the Internet has proven difficult. Copying music, software, and other forms of intellectual property has become simple, and the growth in legal actions against property violators likely represents only a small fraction of incidents of unauthorized copying (Fryer, 1995). Attempts by national governments to control content have foundered on the Internet's global nature and the interjurisdictional conflicts in regulation (Andrews, 1999).

Barriers to regulation arise in part from characteristics of the technology. Internet communications do not pass through a central channel but are instead passed between many independent networks, and even the messages themselves are broken into packets that may follow different itineraries from source to destination (Cerf & Kahn, 1974). With multiple independent parties sending multiple independent packets through multiple independent channels, there is no central communication channel that could serve as a control point for promulgating and enforcing regulations.

Regulation also founders on institutional factors. The Internet challenges established jurisdictions (Johnson & Post, 1997; Perrit, 1997). Public authority resides in the state, whose foundational characteristic is the exercise of control over a geographically defined domain (Schroeder, 1998). Yet the "spaceless" nature of the Internet violates the geographical underpinning of public authority (Holitscher, 1999). The mismatch between a network that is global and regulations that are national undermines many attempts at regulation (Froomkin, 1997).

technology policy have likewise emphasized how designing systems is comparable to writing law, insofar as both activities create social structures that constrain human behavior (Lessig, 1999; Kapor, 1990; Klein, 2000). ICANN offers stark evidence of such social structuring, with the domain name system defining important parameters of governance.

In what follows, I first consider the technological and institutional factors that have inhibited Internet regulation and then continue with a more general discussion of what governance is. Following that I examine the domain name system, both as a technological and administrative hierarchy, and I identify characteristics that allow for governance. There then follows an analysis of the mechanisms of Internet governance as realized in ICANN. Then, as an illustration of how the governance mechanisms work in practice, I examine ICANN's global public policy defining property rights in domain names. I consider the problem of legitimacy in ICANN and speculate about possible future areas of regulation.

The Problem of Internet Governance

Regardless of whether one supports or opposes specific regulations, it is generally recognized that regulation of

To make conceptual sense of this situation, it is useful to step back from the details and consider governance from a theoretical level. What is governance? What is needed in order to govern? What is needed for governance of the Internet?

In *Democracy and Its Critics* (1989), Robert Dahl defines what governance is and what is needed to achieve it. He identifies a set of “assumptions of a political order” (pp. 106 – 107) that specify the minimal conditions for a system of governance. I call these *mechanisms of governance*. Paraphrasing Dahl's definition, we can identify four such mechanisms. The first is an *authority*. Governance requires a governor or a sovereign. An entity, be it an individual or a group, must make policy decisions that apply to the members of the polity. A second governance mechanism is *law*. Laws implement policy decisions. They might take the form of a tax, a license, or simply a binding rule. Third, there must be some mechanism for imposing *sanctions*. This allows for punishment of those who violate laws. Finally, governance requires the definition of *jurisdiction*. Jurisdiction defines the space over which the authority makes decisions and within which the laws apply and are enforced by the threat of sanctions. These four mechanisms make governance possible: the governing *authority* can make a policy decision that applies within its

jurisdiction, embodying that decision in *law* and imposing *sanctions* on whomever disobeys. [A similar discussion can be found in the appendix of *Code* (Lessig, 1999).]

Internally, the DNS consists of a database and a dynamic lookup service. The database includes pairs of domain names and IP numbers. Domain names are alphanumeric

The Internet's vaunted ungovernability results from the absence of these four mechanisms. Regulation is difficult because authority, law, sanctions, and jurisdictions are not in place.

ICANN realizes these four mechanisms through its control of the Internet's domain name system (DNS). Although Internet communication has no central control point, Internet addressing, as realized in the DNS, is centralized. DNS provides the control point from which to regulate users. Moreover, the DNS is also an essential resource, so it provides a means of sanctioning users: denial of access to domain names is the equivalent to banishment from the Internet. The DNS also defines jurisdictions on the Internet. The logical organization of the DNS allows authority to be mapped onto distinct zones. Finally, the contractual foundations of the DNS provide opportunities to promulgate regulations. Taken together, these features render ICANN capable of governance.

DNS AND GOVERNANCE—A SIMPLE ACCOUNT

In order to understand ICANN, one must first understand the domain name system. Here I analyze DNS in two passes. I first present the DNS in a simplified form, treating it as a single, nondistributed system. Seen this way, the governance features of the DNS are most easily recognized. In a later section I examine the distributed inner structure of the DNS and present the various mechanisms used to realize coherent administration and policymaking.

DNS: The Control Point of the Internet

I begin with a little-recognized fact: The Internet really consists of two "systems," one for communications (the

(and hence human-friendly) identifiers of computers on the Internet. IP (Internet Protocol) numbers (or addresses) are machine-friendly numeric identifiers. For example, a given computer's domain name might be mycomputer.org, and its corresponding IP number might be 12.34.56.78. The DNS resolves domain names into IP numbers. In name resolution, the DNS accepts a domain name from a user and returns the corresponding number. The DNS computers performing name resolution are called *name servers*. Only after resolution has occurred can the user-to-user e-mail or web communication begin.¹

This two-step procedure is immediately visible on most web browsers (e.g., Netscape Navigator). Once a user enters a domain name, the browser will indicate that it is interacting with the DNS by posting a message like "Looking up host..." As long as a few seconds may pass before resolution is performed, and IP number is returned, and actual communication may begin. Sometimes name resolution fails, as when a misspelled name generates an error message like, "Unable to locate host ...," and no number is returned. By watching the status messages on a browser's screen, a user can observe the name resolution process.

At the heart of the DNS is the Internet's *namespace*. The name space lists (nearly) all computers on the Internet. At the time of this writing the name space contains tens of millions of entries. When one reads statistics about the growth of the Internet, the numbers usually refer to the size of the name space. It provides a rough approximation of the number of individual users: Since most computers listed in the DNS are gateways into private networks with many users, the number of users is much greater than the number of entries in the name space.

In a manner of speaking, the name space *is* the Internet.

“TCP/IP” protocols) and one for addressing (the DNS). The communication system is the Internet as we commonly know it. It is extremely decentralized—so much so that it is really not a “system” at all but rather just a set of protocols by which independent computer networks can send data packets to each other. It is this decentralized system that informs most public understanding of the Internet and that underlies claims about ungovernability.

In marked contrast to this, the addressing system—the domain name system (DNS)—is centralized (Albitz and Liu, 1998). Nearly all Internet communications rely on this single system. The DNS can be thought of as the Internet’s telephone book and directory assistance service. Before one computer can communicate with another, it must do the equivalent of contacting directory assistance with a name of the party it wishes to call and receiving back the number to dial. This is a necessary prelude to communication.

was used, which would render communication unreliable. This technological imperative of uniqueness underlies the centrality of the DNS, for all communications must use a single, authoritative name space. The Internet’s use of a unique name space (with a single administrator) “is a technical necessity, not a policy choice” (IAB, 2000). (Were this design feature not necessary, then numerous possibilities for policy choices would be opened).

Administration

In order to exist on the Internet, a computer must be listed in the name space. Without a listing (without a domain name and an IP number) a computer cannot be found by others. Removal of a computer’s listing from the name space constitutes a kind of banishment, for a computer disappears from the list of addressable computers. Whatever entity controls the name space database effectively controls the Internet. These points are discussed in detail next.

As currently designed, the name space must obey certain design principles (IAB, 2000; ICANN, 2001). The system’s designers claim that the name space must be *unique* and it must be managed by a single entity. There can only be one database that constitutes the definitive listing of computers on the Internet. Copies may exist, but independent name spaces cannot, because they could evolve to have different contents. Were multiple, independent name spaces to exist, a given domain name could resolve to different IP addresses depending on which name space

H. KLEIN

DNS and Internet Governance

In this simplified version of DNS it is easy to recognize the feasibility of implementing governance. Only relatively minor modifications would be needed to realize the four mechanisms of authority, law, sanctions, and jurisdictions.

The DNS does not have a central authority for the Internet. The uniqueness requirement of the name space requires a single central authority, and its decisions apply to all servers in the name space. To render the DNS policy authority a true regulatory entity, its domain of decision making would

DNS is more than a technical system; it is also an administrative and policy system. Continuing with our simplified view of DNS as a single, nondistributed database, we can examine the DNS in terms of a single administrator and a single policy authority. The *policy authority* entity makes general rules for changes to the name space, such as allowable domain names, cost of registration in the name space, and restrictions on the addition or deletion of names. The *administrator* implements these decisions, adding, deleting, and modifying the database entries to reflect the entry, exit, and changed status of computers. The administrator also ensures the reliable operation of the name server.

The DNS's uniqueness requirement means that the policy authority and the administrator exercise monopoly power. There must be a unique name space, and it must be managed by a unique administrator, who, in turn, must be subject to a unique policy authority. "Both the design and the implementation of the DNS protocol are heavily based on the assumption that there is a single owner or maintainer" (IAB, 2000). Only in this way can the name space be guaranteed to function reliably. Directly or indirectly, this one DNS administrator contracts with every network connected to the Internet. Thus, paralleling the DNS's technical centralization is administrative and policy centralization.

The DNS administrator is also called a *registry*. For a computer to be available on the Internet, the user must approach the administrator and request to be *registered*. The registry registers the computer by adding the user's name - number pair to the name space.

The legal mechanism used to connect the central policy authority with users is the *contract*. The Internet is a network of networks; most computers registered in the name

simply have to expand to public issues, such as intellectual property regulation or content control. Since there are few technical barriers to such an expansion, it would be a policy choice. Thus, realizing governance on the Internet would require simply broadening the range of topics regulated by the DNS policy authority.

The DNS also defines the second governance mechanism: law. The law of the Internet is contained in the domain name registration contracts. The provisions of the contracts with network administrators specify the detailed regulations for their actions. To regulate on broader topics, the language in the contracts would simply have to expand.

Third, DNS provided a powerful mechanism for sanctions: domain name denial (i.e., the deletion of a user's name - number listing from the name space). This is the power of banishment: Network administrators who refused to obey the regulations in their contracts could be delisted from the name space and made to disappear. Name registration could be treated as a privilege, revocable if a user violated the rules.

The DNS neatly solves the problem of jurisdiction as well. The jurisdiction of the DNS policy authority extends to every computer on the Internet but no farther. The registration contract is the manifestation of jurisdiction. Every network administrator is contractually bound to the DNS's policy authority.

Thus, the domain name system provided the means to realize mechanisms of governance. Relatively minor changes to DNS could put each mechanism in place. The DNS policy authority would need to merely broaden its regulatory scope and include those broader regulations in contracts with network administrators. Domain name denial provides an adequate mechanism to sanction rule

space are gateways to private networks managed by network administrators. Each listing in the DNS is accompanied by a contract between the central DNS administrator and a *network administrator*. The contract specifies rules and conditions for inclusion in the name space, such as the provision of contact information, the payment of an annual fee, acknowledgment of the role of the DNS administrator, and so on. Thus, every network in the Internet has a contract with the single entity overseeing the DNS. These contracts implement policy centralization.

breakers. The jurisdiction of the policy authority would exactly cover the Internet, no less and no more.

In order to fully realize Internet governance, two additional considerations would have to be addressed. The first is practical: Some means would be needed to extend policy authority to the individual user. Since the domain name registration contract is between the central authority and a network administrator, individual users are not immediately subject to regulations. Regulation of individual users could be achieved using a *top-down contract*. Network

administrators generally require users to sign an agreement when they obtain an account, and this user contract could repeat the provisions from the administrators' contract. In this way a single set of regulations could "flow down" from the central DNS administrator to network administrators and from there to all users. Indirectly, all Internet users could be regulated by the central DNS administrator. Violation of the user contract could lead to loss of Internet access for the user account. Network administrators who failed to enforce top-down contracts on their users would find themselves subject to domain name denial, that is, banishment from the Internet. While such a user contract remains hypothetical, its feasibility is not. In a later section I survey the types of regulations that have been or could be implemented through such a system.

A second consideration about governance is more normative in nature. Were the DNS policy authority to become a general-purpose regulator, then careful thought

program for name resolution) and a *host computer* (or *host*—the hardware that hosts the zone file and name server). Thus, the entire name space is a distributed database-and-name-resolution system whose building block is the triad of a zone file, name server program, and host computer.

As in any distributed database, the relationship between the parts is carefully structured. The different zones are linked to each other to form a top-down pyramidal hierarchy or an inverted tree (with its root at the top). At the apex of the hierarchy is a single zone, the *root*. The root zone links to multiple zones just beneath it, and those zones in turn link to multiple zones beneath them, and so on. (This is the same structure as the files on a personal computer). The levels in the hierarchy are clearly identified: The root zone links to "top-level" zones, these link to "second-level" zones, then the "third-level" zones, and so on.

While a given zone may link downward to multiple

would have to be given to its *legitimacy*. As the scope of its policymaking expanded, its authority would have to be grounded on some appropriate principle. This could be realized by placing ultimate policy authority in the hands of governments or in the hands of a newly constituted representational institution. As discussed later, when policy authority was located in ICANN, it adopted a representational mechanism to ensure legitimacy.

The discussion so far has built on one simplifying assumption: that the Internet name space is a single, centralized database. In the early phases of the Internet's development this was true. In the 1970s the entire namespace was contained in one file called "hosts.txt" (Mockapetris, 1983). By 1983, however, the continued growth of the network had led researchers to redesign the name space, and break up the name space into multiple, interconnected pieces. The name space is less centralized than has been presented here. Decentralization renders governance of the Internet much more complex. I turn now to an analysis of that more complex architecture.

DNS AND GOVERNANCE—THE DISTRIBUTED SYSTEM

In fact, the name space is a *distributed* database. In theory, all name–number pairs could be held in one central database as described in the simplified account just given. However, since thousands of name resolution queries occur each second, a centralized DNS computer might be overwhelmed. Instead, the name space is distributed among multiple computers to share the workload.

The name space exists as a collection of partial, separate databases running on separate computers. Each partial database is called a *zone file* (or *zone*). A zone contains a

zones, it can link upward to just one zone. Directly or indirectly, all zones link upwards to the single root zone. The existence of one root in the name space fulfills the uniqueness condition.

Subtrees in this distributed database are called *domains*. A domain consists of a zone and all zones beneath it in the hierarchy. Domain names are often referred to by their level in the tree. Domains beginning at top-level zones are *top-level domains* or TLDs; domains beginning at the next level are *second-level domains*, and so on. The domain of the root is the complete name space. The entire system constitutes the domain name system or DNS. The terms *zone* and *domain* are often used interchangeably, but the former refers to one single file and the latter refers to that single file and all lower files in its subtree.

A domain has a name—which, not surprisingly, is called a *domain name*. Well-known top-level domain names are .com, .org, and .net. The largest domain in the name space, .com links to millions of lower-level domains. An Internet address like mycomputer.com consists of a second-level domain (mycomputer) and a top-level domain (.com). A string of domain names, with the different levels separated by dots, uniquely identifies any computer in the name space.

This distributed hierarchy defines relationships of top-down control. Any zone file can be modified to link (include) or delink (exclude) the zones below it in the name space. This is the power of virtual life and death. When a name server is connected to the root via some series of links, then it exists in the name space. Should a zone file be modified to eliminate a link, the computer or computers below it in the hierarchy will be cut off from the name space. Each server in the hierarchy controls the path to the root for the servers below it.

subset of the total list of name – number pairs. To each zone is associated a *name server* (or *server*—a software pro-

An example may illuminate this. Suppose I want Internet e-mail services for my company. I already have an

H. KLEIN

internal company network, and now I want to connect my network to the Internet. To do that, I must link a host computer in my network into the name space, that is, register the host's domain name and IP address in a DNS zone

le. Since the name space is a distributed database, there are many zone les to which I could link: A registry in Virginia maintains a zone le called .com, a registry in England maintains a zone le called .uk, my parent company hosts a zone le called .holdingcompany (which is itself linked to the .com zone le). By my registering my host into an available zone le, it becomes part of the name space and exists in the Internet. Likewise, should my entry in the zone le ever be delinked (the domain name canceled), my host would disappear from the Internet. The modification to the zone le that allows me to enter or exit from the Internet is not made by me but by the administrator of the next higher zone le, upon whom I continue to depend for my presence on the Internet.

Administration

In the simplified explanation earlier, DNS administration and policy authority were held by a single pair of organizations. In the distributed DNS, every domain has such an administration – policy pair (which I refer to simply as an “administrator”); in some cases it may be one and the same

network administrator or possibly even the individual user, as discussed earlier.

As one would expect, the administration of the root zone is particularly important. All other hosts on the Internet access the name space only with a delegation of authority directly or indirectly from the root. Policy authority over the root—the power to add or delete top-level domains—confers direct control over all top-level domains and indirect power over all lower level domains. Authority over the root zone extends to the entire Internet.

In summary, this more accurate account of the DNS reveals another order of magnitude of technical and administrative complexity. Seen as a whole, the DNS is a centralized control point for the Internet. However, because it is a decentralized system, the DNS has an internal structure that relies on hierarchical control and contracts to achieve unified policy capabilities.

Historical Factors in DNS

At this point we can switch from technical analysis to historical analysis. The discussion so far outlined the functioning of the DNS and its structure as a distributed database. This historical analysis outlines evolution of the DNS namespace and its administrative hierarchy.

The Internet began as a research project in the 1970s,

organization, anyway). These organizations are organized according to the distributed structure of the name space: Total DNS administration is a multiorganization hierarchy, with each administrator exercising control over lower level administrators. At the apex of the hierarchy is the root administrator.

Each administrator exercises monopoly control over its immediate zone (to ensure uniqueness of its portion of the name space). Moreover, each administrator has authority over the entire domain beneath it. When it registers a lower level host, it delegates some authority to the lower level administrator, who exercises monopoly control over that lower zone. Authority flows down the hierarchy from the root zone administrator, with responsibility for the entire name space, to the individual host computers at the lowest level zones. Each administrator is subject to the policies of higher level entities. In this way, the policies made at the root can be transmitted down through the levels of the hierarchy to apply, directly or indirectly, to all administrators in the DNS. As a group, the administrators serve as the gatekeepers to the name space and hence to the Internet.

Just as zones are joined by links, administrators are joined by contracts. The root administrator formalizes its delegation of authority to top-level administrators in a contract. Some provisions of that contract may be required to be included in subsequent contracts. In this way, regulations may flow down the entire hierarchy to the individual

and the computer scientists developing it shaped the evolution of its administrative and policy institutions (Hafner & Lyon, 1998). This research community was centered in institutions like the Internet Engineering Task Force (IETF), the Internet Architecture Board (IAB), the University of Southern California's Information Sciences Institute (ISI), and the Internet Society (ISOC) (Leiner et al., 2000).

One person, in particular, played a key role in the DNS development: Dr. Jon Postel, a computer scientist at the University of Southern California. Working under a research contract from the US government, Postel exercised policy authority over the root, a function eventually called the Internet Assigned Number Authority (IANA). In his IANA role, Postel maintained the root zone, authorized the addition of new top-level domains (TLDs), selected administrators to whom to delegate authority, and performed myriad other tasks. Postel had first assumed this task as a graduate student in the 1970s. As the Internet grew, the significance of Postel's decisions increased accordingly, and by the 1990s his decisions had global implications. Yet policy authority over the root continued to reside in him personally. Since he worked as a government contractor, national authority of course lay with the U.S. government—but for most of the 1980s and 1990s, Postel exercised personal authority over the DNS.

In 1984, in a document known as RFC920, Postel and colleague Joyce Reynolds defined the evolutionary trajectory of the name space (Postel & Reynolds, 1984). RFC920

defined the number of top-level zones and the names they would bear. While the name space would always have just one root zone level, Postel and Reynolds announced in 1984 that the top level would consist of some 250 zone levels. RFC920 served as the blueprint for the structure of the namespace and its future growth. This number of zone levels had no basis in technical necessity; it could have been smaller or larger.

RFC920 also specified the character strings to identify the zone levels. The 250 TLDs would be divided into two naming classes: There would be six “generic” TLDs (gTLDs: .gov, .edu, .com, .org, .mil, and .net), and there would be some 244 “country code” TLDs (ccTLDs; based on the ISO 3166-1 standard list of two-character country codes like .uk for United Kingdom, .fr for France, .jp for Japan, and so on). Again, the particular character strings used in the domain names had no technical significance; they merely had to be unique. However, as chosen, the strings had major policy significance, for their meanings implied that different zones would have different uses. The 250 TLDs defined a name space partly based on function (.com for commercial, .mil for military, etc.) and partly based on geopolitical identifiers (country names). Decided long before the Internet’s global significance emerged, the number of TLDs and the meanings attached to them would have lasting consequences.

While RFC920 defined the DNS structure and naming conventions, its implementation proceeded incrementally over many years. Implementation of the TLDs required selecting an administrator to maintain the zone level and to operate the name server. Furthermore, the implementation of the generic TLDs proceeded very differently than the country code TLDs: The U.S. government selected the former, while IANA selected the latter.

millions of dollars of revenue from its monopoly of the Internet’s one commercially named domain.

In contrast to NSI, administrators of country code TLDs resembled IANA: They were usually non-profit organizations, often affiliated with university research centers. Since IANA had defined zone levels in terms of country codes and had created just one zone level per country, there was just one administrator in each country. Each of them constituted an implicit national monopoly: the .fr registry was France’s only registry, the .uk registry was the sole UK registry, and so on. Although there was no technical basis for national monopolies, the naming convention in RFC920 implied such a system. Organizationally, the system of national ccTLD monopolies was reminiscent of the system of national telephone companies (PTTs), which operated as national monopolies in many countries.

By October 2000 the full name space consisted of over 30 million name – number pairs (NetNames, 2000). Since IANA had not expanded the number of top-level domains since issuing RFC920, most growth in the name space occurred in second-level domains. Most of that was contained in a single TLD, .com, where NSI had registered over 18 million hosts. NSI’s .org and .net TLDs contained another 5 million hosts. The rest of the name space was mostly distributed in various country code TLDs. Above it all, Jon Postel at IANA oversaw delegations of authority to new administrators.

Thus the DNS as it existed toward the end of the 1990s was considerably more complex than the system described earlier. First, it was decentralized. The change from hosts.txt to the decentralized DNS occurred in 1983 (Mockapetris, 1983). Second, over the years numerous nontechnical developments had shaped the system. Most TLDs bore country code identifiers, which associated them

While Postel/IANA possessed policy authority over the root, the administrator of the root was a private company: Network Solutions, Inc. (NSI). NSI took its orders from IANA, but ultimately operated under contract with the US government. NSI both administered and exercised policy authority over .com, .net, and .org.

Growth in .com made NSI both wealthy and powerful. After the U.S. government opened the Internet to commercial use in 1994, registrations in .com exploded. By the late 1990s, .com had grown to over 10 million registrations—more than half of the entire name space. This concentration of growth in the namespace was not an inherent feature of the DNS, but rather occurred as an unforeseen development—a combination of good marketing by NSI and widespread acceptance of the DNS naming convention, which identified .com as the commercial domain. Ultimately, the .com domain contained so much of the total name space that it rivaled the root for its importance for the overall network (Mueller, 1999). Charging an annual fee of \$35 per registered name, NSI collected hundreds of

with geopolitical entities (countries). One zone level in the hierarchy, .com, contained nearly the entire name space (thereby somewhat defeating decentralization). In the community of nonpro t DNS administrators, Network Solutions was emerging as a commercial giant. Most importantly, policy authority for the entire DNS lay with one person, Jon Postel. The DNS was complex—and rife with potential conflicts.

Governance

Nonetheless, the DNS could still be used to realize the mechanisms of governance. Although more complex arrangements would be needed than those discussed earlier, a decentralized DNS could still be used to realize authority, law, sanctions, and jurisdictions. In this section I consider in the abstract the manner in which the DNS technology would render governance possible.

Decentralization would not significantly affect the realization of two mechanisms: law and sanctions. Even

H. KLEIN

with the addition of multiple levels of hierarchy, downward contracts could still bring rules down to users. Decentralization would require a longer cascade of downward contracts but would not otherwise affect this mechanism. Likewise, domain name denial could still serve as a sanction. With each administrator in the name space, from the root on down, exercising monopoly control over its zone level, each one could delink lower level hosts

possessed in the DNS was only by way of a delegation from IANA. Furthermore, although gTLDs were only a small number of the total set of domains, they contained the lion's share of all users. Effective authority in just these domains would still affect most Internet users.

Thus fully integrated governance would not be possible in the DNS—but a workable degree of governance would be. The realization of a single authority and a sin-

from the name space. Name registration could still be treated as a privilege, revocable if a registrant violated the rules.

Decentralization would render the other two governance mechanisms considerably more difficult to realize, however. Decentralization fragmented authority and jurisdiction, especially in the country code domains.

Policy authority and jurisdiction would still be united at the root. IANA could make rules for the entire name space and promulgate them down the hierarchy. However, at the top-level domains (TLDs) it would encounter another authority that might challenge it. The distinction between generic TLDs (gTLDs) and country code TLDs (ccTLDs) would inhibit unity of authority and jurisdiction.

ccTLDs are associated with countries, and most countries already have policy authorities: their national governments. National governments could claim jurisdiction in ccTLDs bearing their country code. Although national governments' domains were lower in the DNS hierarchy than IANA, it would be awkward for IANA to assert authority over them. An Internet governance institution would be in a poor position to challenge a national government's right to make public policy. Even if a national government was unaware of the DNS (as was often the case), the proactive exercise of policy authority by IANA might provoke a national government to act. Thus it would be difficult for the policy authority at the root to exercise policy authority in the ccTLDs.

Making matters more complex, among the ccTLDs there would be a plethora of authorities. Country code TLDs were independent from each other, and each could make its own policies in its domain, potentially result-

ing in multiple jurisdictions in .com, .org, and .net would be straightforward. Moreover, such a jurisdiction would include most users, given the heavy concentration of registrations in the gTLDs. Policy authority at the root could regulate them by top-down contracts backed by the threat of domain name denial. This would reduce but not overcome the problem of fragmented authority.

To further mitigate the fragmentation of authority, IANA and national governments could seek to coordinate policies. Although there were hundreds of ccTLDs, registrations were unevenly distributed among them. Domains like .uk or .jp contained many more registrations than others like .bg (Bulgaria). Coordination between IANA and just the largest ccTLDs would bring the Internet much closer to integrated governance by bringing most of the outstanding users under the same policies.

One could speculate that additional policy coherence could be achieved by pressuring any recalcitrant ccTLD authorities. Were a small ccTLD to resist enforcing some policy backed by IANA and by large governments, the larger parties could challenge the policy authority of the smaller national governments. IANA could exercise its ability to delink a top-level domain or reassign it to a more compliant administrator. In this way, smaller ccTLDs might be coaxed or bullied into adopting policies agreed on by larger players. Overall policy coherence would be improved.

In closing this section, a final issue must be addressed: the role of the U.S. government. The U.S. government employed Jon Postel and Network Solutions, and it claimed national authority over the root zone file. Although IANA was the highest policy authority in the DNS, IANA itself operated under policy authority of the United States. Were

ing in a host of divergent and conflicting policies. Decentralization of the DNS had created hundreds of authorities, each with an implicit claim of jurisdiction over their ccTLD. Thus it would seem that integrated governance of the Internet would be impossible. The engineers' decision to organize the name space according to political lines, as codified in RFC920, had fragmented authority and jurisdiction.

In the gTLDs, in contrast, integrated governance would be possible. IANA could regulate domains like .com, .org, and .net, because these domains had no accountability to authorities outside of the DNS. Any authority they

Internet governance mechanisms to be implemented, and were the status of the United States not to change, then the United States would be the national authority over the Internet. This again might cause tensions with other national governments, which would not want themselves subordinate to the United States.

In summary, a decentralized DNS would not allow for full realization of mechanisms of governance. Law and sanctions could be easily realized, but authority and jurisdiction would be fragmented. Located in the gTLDs, most users could be regulated by IANA. Bringing the entire name space under IANA's authority, however, would

require negotiation with many autonomous national authorities.

ICANN

Having reviewed the DNS, we can now turn to the Internet Corporation for Assigned Names and Numbers (ICANN). Created in 1998 and still evolving at the time of this writing, ICANN realizes the governance potential in DNS, leveraging Internet addressing to achieve global governance. Not only has it created the capabilities for regulation, it has even employed them: In 1999 ICANN promulgated global public policy that defined intellectual property rights in domain names. In what follows I identify the specific features of ICANN by which it realizes authority, jurisdiction, law, and sanction.

ICANN is best understood as a set of semi-autonomous institutions. That set includes not only ICANN as a corporation but also some external entities like a committee of national governments and the TLD administrators. To distinguish ICANN-the-set-of-institutions and ICANN-the-corporation, I refer to the former as the "ICANN system" and the latter simply as "ICANN."

The four mechanisms of governance are mixed deep in ICANN's administrative system and so can be difficult to identify. In what follows, I analyze ICANN's features in terms of their governance-related functions. First I focus on how ICANN realized mechanisms for authority and jurisdictions, and in the following section I focus on the mechanisms for policy and sanctions.

I begin by setting the historical scene. By the late 1990s the DNS had come under severe stress from a variety of sources. The Internet had rapidly outgrown its original institutions, most notably the very personal nature of IANA, whose legitimacy was based on the reputation of one man. Should something have happened to Jon Postel, IANA could have become unstable. Another source of stress arose from entrepreneurs wishing to compete with NSI's monopoly: They began proposing alternate name spaces, new TLDs (e.g., .web), and independent registries (Mueller, 1998). This threatened to fragment the name space. The global nature of IANA was another issue. The United Nations' International Telecommunications Union (ITU) became involved and sought to assume authority over the name space. National governments and the European Commission became interested, too; they perceived a threat to their sovereignty from U.S. control of this new global information infrastructure. Disputes over sovereignty and jurisdiction were heating up. Intense conflicts also began to emerge over domain names that matched trademarks (e.g., coca-cola.com). The United Nations' World Intellectual Property Organization (WIPO) and U.S. interest groups applied intense political pressure to install trademark regulations in domain names (Shaw, 1997). Making this political mix all the more volatile was that these conflicts developed in "Internet time"; every passing month witnessed exponential growth in the size of both the network and the political stakes.

The process by which the research community, trademark interests, communication businesses, and national governments came together to create a new institution to replace IANA is documented elsewhere (Mueller, 1999;

Authority and Jurisdiction

The new ICANN corporation replaced Jon Postel as the policy authority over the root. ICANN solved the problem of stability: A person was replaced by an institution, so that the IANA could function independently of any one individual. ICANN also partially solved the problem of inter-governmental conflict: ICANN was private, and its bylaws explicitly forbade government officials from serving on the board. Thus although its authority would extend globally, that authority was ostensibly nongovernmental and would not conflict with national governments' sovereignty. Furthermore, with a mission to engage in simple technical coordination of the Internet, ICANN claimed to have no public policy role.

The problem of legitimacy was addressed by the composition of the board of directors. A person, Postel, was replaced by a collection of representatives; legitimacy through expertise and personal reputation was replaced by legitimacy through accountability to stakeholders. ICANN's board represented different functional and geographic constituencies. Of 19 directors, 9 represented technical expert groups, another 9 represented users, and the national director was the organization's top staff person.

ICANN's board, however, was itself subject to a higher authority: the U.S. government. The U.S. Department of Commerce (DOC) retained ultimate control of the root, leaving ICANN policy decisions subject to a potential veto. Despite the much-publicized privatization, the United States never completely ceded its hold over the Internet. As an official "fact sheet" of the DOC stated, "The Department of Commerce has no plans to transfer to any entity its policy authority to direct the authoritative root server" (DOC, 1999). Thus the Internet was international-

Klein, 2001a). Here we are interested in the product of that long and contentious process: ICANN. In the following institutional analysis I dissect a snapshot of ICANN, as it existed around year 2000.

ized and privatized but only under the watchful oversight of the U.S. government. (Whether the United States will eventually cede full authority to ICANN is not currently known.)

H. KLEIN

Beneath the root, contracts extended the authority of ICANN and the United States down to the administrators of the gTLDs and the ccTLDs. The generic TLDs proved more willing to sign on, since NSI administered nearly all of them and was under pressure from the United States to participate in ICANN. Following some bargaining over conditions, NSI and ICANN reached agreement in 1999. ICANN thereby achieved policy authority in the most populous domains. The ccTLDs proved more circumspect, and as late as 2001 ICANN was still reporting small progress in this area (ICANN, 2001). Top-down policy authority in these domains failed to be established and remained one of the most difficult issues in the system.

The implicit conflict of authority between ICANN and national governments manifested itself in the Governmental Advisory Committee (GAC). The GAC was an official ICANN advisory committee in which national governments could meet, discuss, and coordinate their actions. Individually, each national government could assert policy authority over the zone bearing its country code. Together, in GAC, the national governments could coordinate policy.

GAC's first acts were to establish the legitimacy of

tor] has contravened the terms...ICANN should act with the utmost promptness to reassign the delegation" (GAC, 2000). Country code managers would have access to the root only as long as their national government allowed it. ICANN resisted this arrangement, which would have subordinated it to national governments. At the time of this writing the fragmentation of authority over the ccTLDs remained unresolved.

The GAC forum allowed national governments to coordinate on a variety of other policies. GAC began developing a "best practice" document for country managers, so that national authorities could standardize their operations (GAC, 2000). Once common policies were defined, each national government could promulgate and enforce those practices in its own jurisdiction.

Thus the multiplicity of authorities caused jurisdictional fragmentation. ICANN claimed jurisdiction over the entire name space and, hence, over all users. Likewise, the U.S. jurisdiction extended over ICANN and so over the entire name space. At the top level of the name space, however, jurisdictional conflicts merged. The jurisdictions defined by the generic TLDs posed little problem; there ICANN prevailed. In the country code TLDs, however, national

members' claims to policy authority. First, GAC declared, "The Internet naming system is a public resource in the sense that its functions must be administered in the public or common interest" (GAC, 2000). By defining the DNS as a public good, similar to electromagnetic spectrum, GAC prepared the way for governmental oversight. Then GAC linked that public interest to national governments' authority: "ultimate public policy authority over the relevant [country-coded domain] rests with the relevant government" (GAC, 2000). This justified the claim by national authorities that ccTLD domains were under their jurisdiction.

Thus ccTLD administrators found themselves under two authorities—and they asserted a third of their own. ICANN claimed that ccTLDs' authority derived from its higher authority over the root; if administrators did not follow ICANN's policies, ICANN could redelegate authority to another party. For their part, national governments claimed that their zone file was a public resource under their authority. A third approach was backed by ccTLD administrators, who cited policy documents that located authority in the "local Internet community" rather than in ICANN or in governments (Postel, 1994). This prescription would render the administrators accountable to Internet users in their home country rather than to their government or ICANN.

GAC members sought to resolve this ambiguity in their favor by requesting from ICANN a veto power over ccTLDs similar to the U.S. veto power over the root. GAC proposed that ICANN's power of redelegation be given to national governments: "when ICANN is notified by the relevant government or public authority that the [administra-

tion in the name space. Still, the vast majority of Internet users found themselves in ICANN's sole jurisdiction.

Policy and Sanction

Although ICANN regulated users, it did not have direct contact with users. Instead, a four-tiered system was implemented, with ICANN at the top, users at the bottom, and two kinds of organization—registries and *registrars*—in between. At the top ICANN used its authority to make regulations. Beneath it, registries maintained the zone files and operated the servers (as described earlier). Beneath the registries came the registrars, who served as the retail interface to users. They performed customer-oriented tasks of leasing and servicing domain names to users, often bundling these with additional services like Internet service provision. Finally, at the bottom tier were users (or network administrators, who, in turn, contracted with individual users).

Flow-down contracts spanned these levels. ICANN's regulations were embodied in contracts with registries, which included the regulations in their contracts with registrars, who included them in their contracts with network administrators. Policies "owed down" from ICANN to registries to registrars and ultimately to private networks. The terms of the contract defined the laws of the Internet.

At each level, ICANN backed up contracts with the threat of domain name denial. Registries who disobeyed could have their domain redelegated. Registrars who

disobeyed could lose their access to registries, so they would no longer be able to offer domain names to users. Users who disobeyed could have their domain names removed from the name space or assigned to someone else.

ICANN's Registrar Accreditation Contract (ICANN, 1999a) was the primary mechanism for promulgating law. Any organization that wished to serve as a registrar had to obey the terms of this contract. It included an open-ended requirement: "Registrar shall comply...with all ICANN-adopted Policies" (Section II.D.1.b.i).³ As ICANN policies changed and the accreditation agreement evolved (as foreseen in Section II.O, "Right to Substitute Updated Agreement"), so could the conditions imposed on domain name usage. It was this contractual blank check that most clearly gave ICANN the right to exercise broad governance activities. The contract's provisions had to be repeated in lower level contracts between registrars and users, guaranteeing that regulations would flow from ICANN to the registrars and eventually to users. These regulations were enforceable with clear sanctions: "The [domain name] holder shall agree that its registration of the [domain] name shall be subject to suspension, cancellation, or transfer pursuant to any ICANN-adopted policy...for the resolution of disputes" (Section II.J.7.i).

Thus the basic governance mechanisms were owed down contracts backed up by domain-name denial. The accreditation contract stipulated the regulations for the Internet, and the power to revoke domain names provided the sanction for enforcement. Internet users could only enjoy access to the name space if they obeyed ICANN's rules; if they broke the rules, they could see their domain name

ICANN promulgated its first major policy: the Uniform Dispute Resolution Policy (UDRP), which mandated a procedure for deciding who has intellectual property rights in a domain name (ICANN, 1999b). The UDRP illustrates how ICANN's governance mechanisms work in practice. The UDRP also constitutes ICANN's first global public policy.

In the late 1990s domain names became valuable, with names like yahoo.com and amazon.com becoming important business assets. As the value of domain names rose, disputes arose over name rights. Some disputes arose when individuals allegedly registered trademarks in anticipation of selling them to their owner; other arose when owners allegedly attempted to wrest control over desirable character strings from other users. Sometimes ownership rights conflicted with rights of fair use or free speech (Kleiman, 1999). The trouble with such conflicts was that existing trademark law was inadequate for many disputes: Trademark law was national, whereas many disputes were international. Legal mechanisms to settle international disputes in domain names were expensive and awkward to employ.

ICANN's UDRP defined procedures for resolving domain name disputes, thereby effectively setting rules of ownership and property. Disputes would be settled through an alternative dispute resolution procedure, in which certified private arbitrators would decide the question of rights based on criteria defined by ICANN. Arbitration decisions could be enforced by removal or transfer of the disputed name. It was a "voluntary" system in that parties who were unsatisfied by the outcome of arbitration

suspended, canceled, or transferred.

GLOBAL PUBLIC POLICY

The preceding discussion of DNS, governance, and ICANN's institutional design has been largely descriptive and analytical. What is reviewed here is mostly established fact. If one accepts the four-part definition of governance, and if one admits that those mechanisms are indeed present in ICANN, then it is not controversial to state that ICANN has the capability to engage in Internet governance. So far, little has been said about whether ICANN exercises that capability or whether the system of governance is legitimate. In this section I engage some of these more contentious topics.

Global Public Policy

ICANN not only has the capacity to govern, it has also done so. ICANN has made global public policy. In this section I explain what it means to make public policy and how ICANN has done it.

Shortly after ICANN's governance capabilities were implemented, they were put into practice. In August 1999

could still resort to existing judicial forums for judgment. However, since existing forums were extremely costly, the UDRP would in most cases provide the final decision on property rights. The UDRP had de facto the force of law.

The implementation of the Uniform Dispute Resolution Policy (UDRP) illustrates ICANN's use of all four governance mechanisms. First, the UDRP was developed within input from staff and various parties and ultimately approved by the ICANN Board in an exercise of its authority. Second, the policy was codified into law through the Registrar Accreditation Agreement. ICANN made the UDRP a condition for registrar access to the name space, and registrars had to include the UDRP in their retail contracts with users (it had to "show down"). Third, the UDRP included sanctions: Users who refused to agree to the policy in advance were denied access to the namespace, and users who were found to be in violation of the UDRP could have their names deleted or reassigned (banishment). Finally, the UDRP applied in ICANN's jurisdiction. The policy regulated domain name usage in the .com, .net, and .org domains. In country code domains, where ICANN's authority did not immediately apply, the decision to adopt

the UDRP lay with country code administrators. At the time of this writing, the policy had been adopted in some domains but not in all.

In making the UDRP, ICANN made global public policy. The UDRP regulates something of public value: rules of property. Rules of property, such as trademark,

for Internet user representatives. In a series of board meetings in 1999 and 2000, the appointed and expert directors sought to eliminate, reduce, or delay the implementation of the elected directors (Klein, 2000a). In so doing, they repeatedly revised the corporate bylaws that constrained board actions. As one top government official declared to

copyright, and intellectual property, are traditionally made by governments. The U.S. Constitution, for instance, specifies rules of intellectual property protection in patents. At the global level, the reason for a lack of regulation is not that property rules are somehow less public, but that there has been no recognized public institution to make such rules. ICANN stepped into this void. By making global rules on property, ICANN made a decision on public values. Although the UDRP may not have been a policy of enormous import—property rights in domain names is a relatively small area of regulation—it was a significant first step into policymaking.⁴

Legitimacy

If ICANN makes global public policy, then it is appropriately evaluated by such policy criteria as legitimacy, accountability, and equity. Indeed, it is around issues like these that most controversies have erupted (Weinberg, 2000; Fromkin et al., 1999; Klein, 2001c). Here I briefly review some of the issues that have arisen around the ICANN board's legitimacy.

U.S. policy for the creation of ICANN was laid out in the Department of Commerce "White Paper," which defined principles for ICANN. Two principles there were particularly relevant to legitimacy: ICANN should be committed to "private, bottom-up coordination," and it should be committed to "representation. . . [providing] input from the broad and growing community of Internet users" (DOC, 1998b). Some of these principles became embodied in ICANN's bylaws, especially in the mechanisms for representation on the board (Klein, 2001a).

In a number of instances these principles of legitimacy

them at their meeting in July 2000, "the Board is increasingly giving the impression of being extremely cavalier in changes to the by-laws" (Wilkinson, 2000). Shortly thereafter, the board decided to modify the bylaws again to defer the next round of director elections until 2002—fully 4 years after the creation of ICANN.

Finally, ICANN's early board gave evidence of preferring industry professionals to represent Internet users. In the first, partial round of director elections, the board filled most of the nominee slots for user representatives with candidates of its own choosing, selecting individuals from telecommunications giants like France Telecom, Fujitsu, Deutsche Telekom, and Verizon (Klein, 2000b). This tendency to favor the telecommunications supply industry over Internet users attracted the notice at ICANN's July 2000 meeting, of an Australian government official, who stated, "[ICANN] runs the risk of potentially becoming a de facto industry association" (Twomey, 2000). The legitimacy of the board to make decisions affecting all Internet users was again weakened by this tendency for some interest groups to seek (and arguably to achieve) disproportionate influence on the board.

With ICANN making global public policy, its lack of legitimacy was striking. Although the elections of 2000 brought some user representation to ICANN, they fell short of implementing the degree of representation called for in ICANN's original bylaws (Klein, 2001b, 2001c).

Future Policy

Institutions are not static entities; they grow over time and often expand their areas of activity. Such seems likely for ICANN. As an Internet governance entity, what policies

were not convincingly upheld. I mention three here. ICANN's first board of directors was a nine-person interim board. In a move that generated considerable public outcry (and hearings in the U.S. Congress), the first set of interim directors was appointed with no public participation or consultation. Instead, the selection process was conducted behind closed doors in a process later described even by Jon Postel as "undemocratic and closed" (Daley, 1998). However, it was this board that promulgated the Uniform Dispute Resolution Policy.

The ICANN board was also implemented unevenly. The directors for the nine expert representatives were seated within approximately 1 year of ICANN's creation, and those directors quickly moved to weaken these seats reserved

might ICANN promulgate in the future? Here I briefly speculate.

Perhaps the most likely area of policy expansion is in intellectual property protection. Such expansion of rights has been actively championed since the beginning of the ICANN process and would be consistent with the initial direction of ICANN's activities (Froomkin, 1999). The UDRP could be expanded to give special registration rights to owners of celebrity names, famous marks, geographical names, and so on. ICANN could become a global regulator in the service of property and e-commerce.

Control over the name space could also be leveraged to promote social justice. ICANN and ccTLD monopolies could raise funds for a universal service fund to

overcome the global digital divide, allowing poorer countries to pay less for Internet access than wealthy countries. In private conversations with this author, some ICANN directors from developing countries have supported such policies.

ICANN's capabilities could also be used for content regulation. Sites violating content regulations could be censored by having their domain names revoked or redirected. Domain name denial was used in this way in the case of **voteauction.com**, which operated a site containing illegal content (an online mechanism for the buying and selling of votes). The registrar for the domain canceled the registration to suppress its content (Perritt, 2001). In

time. For this reason, ICANN's future should concern all Internet users.

I close with some observations about the relationship of technology to society. In ICANN we see three ways in which technology shapes society.

First, objective features of the technology shaped the administrative and regulatory system. In particular, the technical characteristics of a distributed database set important policy parameters. The need for a single name space with a unique root created a central control point. Likewise, the need for unique identifiers (so that a name identifier just one host computer) created problems of control and monopoly. With just one .com zone, within which

theory, ICANN could enforce regulations broadly using similar mechanisms.

ICANN could become a vehicle for taxation, perhaps serving as a means whereby governments collect e-commerce taxes or whereby ICANN funds its own initiatives. With domain names available from one sole source, users would have to either pay the fee or suffer denial of access. Indeed, both U.S. legislators and disgruntled ccTLDs have accused ICANN of levying taxes (McCullagh, 1999; Ward, 2000).

Finally, ICANN could become a vehicle for U.S. national policy. In times of war or terrorism, countries opposing the United States could see their domains removed from the Internet. Individual registrations could be canceled or redirected to reduce the effectiveness of hostile entities. The relationship between ICANN policy and U.S. national policy had already come up when the U.S. Department of Commerce had approved the addition of the .ps domain—for Palestine—to the root zone. Although the United States did not pursue its narrow national interest, the case attracted attention because of the potential for conflict (Cisneros, 2001).

With governance mechanisms in place, the possibility of mission creep—the steady expansion of ICANN’s regulatory scope—seems possible. The combination of effective mechanisms for governance and weak mechanisms for legitimacy could allow some parties to make global public policies that favor their interests.

CONCLUSIONS

The simple recognition that ICANN engages in Internet governance is significant. It contradicts established beliefs and it raises concerns about what kind of governance is

there could be registered just one .coca-cola, a system of monopoly registries was created and the basis for trademark rights was laid.

It may be that these technology design features were not absolutely necessary (although convincing alternatives were not advanced even by ICANN’s critics). At minimum, however, history rendered those technical features sufficiently embedded that they became equivalent to “necessary.” Any attempt to change ICANN’s status as regulator may have to begin by redesigning the underlying technology (particularly the requirement for a unique root under the control of a unique administrator).

A second way that technology shaped society was the role of engineers in making policy. The selection of country codes as domain names was a historical decision with profound policy consequences. This decision was made so early in the Internet development process that the only participants were research engineers. These engineers decided that Internet domains should be associated with geopolitical entities. Had they selected different alphanumeric identifiers—one could imagine colors, sequential numbers, the table of elements—then there would have been no basis for the one-per-country distribution of registries nor the subsequent assertion of national authority over registries. The engineers decided to organize the Internet like national PTTs. Engineers could make such decisions because they controlled the process early in its developmental history.

A third way that technology influences society is that it provides legitimacy for secretive decision-making. When policy decisions are categorized as “technical,” then it becomes legitimate for them to be made behind closed doors by elite groups. Policy disappears from the pub-

being established. It forces us to ask what should be done.

ICANN contradicts the popular myth of a benevolent Internet anarchy. As it turns out, the Internet *can* be controlled. The DNS provides a basis for top-down control, and ICANN leverages that to make policy. The implications of this are far-reaching and will only be seen over

time (Lessig, 1999). The groups that gained control of ICANN invoked this veil of technological legitimacy to discount their critics. Despite having no technical training, ICANN's lawyers justified their actions by claiming that they were making neutral choices on the basis of technical expertise (McLaughlin, 2000).

H. KLEIN

ICANN leverages control of Internet addressing to realize global public policy. In ICANN technology has shaped society, technologists have made profound policy decisions, and interested social groups have exploited technological legitimacy. Most importantly, the regulatory framework for the global information infrastructure of the next century has been created.

NOTES

1. This is a slight oversimplification. In fact, Internet communication is possible by using IP numbers directly, which avoids the need for interaction with the DNS. However, very few communications use IP numbers directly. A note to the reader: In this author's experience, for nearly every statement made about the DNS an exception can be found. The reader should bear this in mind when reading this section, which may contain some oversimplifications in the pursuit of clarity.

2. This sentence overstates the case a bit. Some computers may be listed more than once. Other may be listed not at all and may be reached by using their IP address directly. In the majority of cases, however, a computer on the Internet has one entry in the DNS name

space. Furthermore, as discussed later, most computers in the DNS are not user computers but gateways to private networks within which individual user accounts exist.

3. This part of the Registrar Accreditation Agreement is important but not particularly succinct. The full text of Section D.1.b.i is: "D. General Obligations of Registrar. 1. During the Term of this Agreement: b. Registrar shall comply, in such operations, with all ICANN-adopted Policies insofar as they: i. relate to one or more of the following: (A) issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, technical reliability and/or stable operation of the Internet or domain-name system, (B) registrar policies reasonably necessary to implement Consensus Policies relating to the Registry, or (C) resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names)."

4. One question that I do not address here is whether the UDRP is "good" or "bad" public policy. The substance of the regulation is not the issue. UDRP has been praised by some (Cohen, 2000) and condemned by others (Flynn, 2000; Mueller, 2001). What is important here is that fact that ICANN regulates at all.

8 March 2005 / Edición No. 2/

tech-level**Promoviendo el Contenido**

por Juan Manuel Triana

De alguna manera, cada sitio web es una publicación, de allí que cada uno de estos sitios busque un flujo continuo de personas que lo visiten y lean una porción de su contenido. Es importante, por tanto, entender cómo las personas se comportan respecto a las publicaciones.

· Publicidad a través de Reportes vía E-mail

· Firmas de Correo Electrónico

· Ventanas Menores

· Registro en Máquinas de Búsqueda

· Promoción Offline

Utilizar un sistema de banners puede convertirse en una excelente herramienta para la promoción de historias, secciones y/o eventos importantes al interior de un sitio. Por ejemplo, supongamos que usted tiene una Intranet y busca promover un evento de capacitación.

Un aviso en un banner puede informar y ayudar como recordatorio de estos cursos.

La gente busca principalmente dos elementos en una publicación:

1. Encontrar el contenido de una manera rápida y sencilla. En un periódico bien puede ser la guía de televisión, el horóscopo o los resultados deportivos.

2. Encontrarse con una opinión; una mirada acerca de lo que deberían estar leyendo hoy en día.

Si usted visitó la página web de Noticias Intercom (www.noticias.com) el 18 de octubre, el titular más destacado correspondía a

Un sitio web con cierta tradición y con un número importante de afiliados debe pensar en la posibilidad de crear un reporte por correo electrónico. Siempre hay que recordar que es un medio de promoción de aquello que consideramos importante en nuestro sitio.

Una firma (un logo, un símbolo, un enlace) al final de un correo electrónico es un elemento que se puede explotar y convertir en otra oportunidad de difusión del contenido de la página web.

Cuando una compañía alcanza un número importante de personas trabajando en ella y se envía un número representativo de correos, significa que

"Voteauction.com permite a los estadounidenses subastar su voto". Esto significa que para el staff editorial de dicha página, aquella era la historia del día. Promover el contenido clave es una función central de una homepage. Hay tanto volumen allá fuera y un tiempo tan escaso para leerlo, que el lector que llega a su website espera que usted le presente una guía editorial acerca de lo que deben leer. Existen otras formas de promover el contenido al interior de su website. Estas incluyen:

· Publicidad Interna en Banners

se puede convertir una tarea simple y cotidiana en un vehículo de propaganda. Una sencilla recomendación: una firma de correo electrónica resulta eficaz cuando no sobrepasa las cinco líneas.

En circunstancias excepcionales podemos querer informar a un grupo importante de personas, de la manera más rápida posible acerca de algún acontecimiento especial o extraordinario generalmente acudimos al fax, el teléfono o el correo electrónico.

Sin embargo, un script en su sitio web que haga surgir una pequeña ventana cada vez que se abra una nueva página sin duda ayudará a que aquella información esencial se difunda más rápidamente.

Con respecto al registro en las máquinas de búsqueda, no se limita al simple registro de una URL. Fundamentalmente tiene que ver con la definición aplicada del contenido que se ofrece (las palabras claves) y del proceso de actualización permanente de cómo aparece el sitio en una máquina de búsqueda. Si cambiamos el área de contenido o focalizamos nuestra actividad en otros campos, es importante cambiar la forma en que somos relacionados en estos utilitarios de la red de manera simultánea.

Finalmente, cuando me refiero a promoción offline, no hablo de comprar publicidad en periódicos, en vallas, televisión o radio. Se trata de una estrategia bien ejemplificada en Intranets: muchas de estas redes internas poseen una amplia cantidad de información completamente desconocida por el personal de la compañía, con la difusión en avisos impresos o memorandos ubicados en pasillos, casinos, etc., se puede hacer presente este contenido para ellos.

En la medida en que la sobreoferta de información se hace palpable, en que de forma paralela, se reduce el tiempo para disponer de dicha información, y la atención de los potenciales lectores se reduce, la necesidad de encontrar caminos efectivos de promoción se convierte en un elemento crítico. No es suficiente con generar un contenido de calidad, hay que sacarlo afuera y hacerlo conocer.

Su opinión es importante...

Promoting the Content

by Juan Manuel Triana

Somehow, each Web site is a publication, from which each one of these sites looks for a continuous flow of people who visit it and read a portion of their content. It is important, therefore, to understand how the people behave with respect to publications.

- Publicity through Reports via email
- Companies of Electronic mail
- Smaller Windows
- Registry in Machines search
- Offline Promotion

To use a system of banners can become an excellent tool for the promotion of histories, important sections and/or events to the interior of a site. For example, we suppose that you have an Intranet and looks for to promote a qualification event.

A warning in banner can inform and help like reminder of these courses.

↳ to people mainly looks for two elements in a publication:

1. To find the content of a fast and simple way. In a periodic one or it can be the television guide, horóscopo or the sport results.
2. To be with an opinion; a glance about which they would have to be reading nowadays.

If you visited the page Web of the Intercom News (www.noticias.com) the 18 of October, the most outstanding holder corresponded a

↳ A Web site with certain tradition and an important number of affiliated must think about the possibility of creating a report by electronic mail. It is always necessary to remember that it is promotion means of what we considered important in our site.

A company/signature (a logo, a symbol, a connection) at the end of an electronic mail is an element that can be operated and be turned another opportunity of diffusion of the content of the page Web.

When a company reaches an important number of people working in her and a representative number of post office is sent, it means that

" Voteauction.com allows the Americans to auction its vote ". This means that for the publishing staff of this page, that was the history of día. Promover the key content is a central function of a homepage. There is as much volume there outside and a so little time to read it, that the reader who arrives at his website hopes that you present/display a publishing guide to him about which they must read. Other forms exist to promote the content to the interior of his website. These include:

- Internal publicity in Banners

↳ a simple and daily task can be turned a propaganda vehicle. A simple recommendation: a company/signature of electronic mail is effective when it does not exceed the five lines.

In exceptional circumstances we can want to inform to an important group of people, of the possible fastest way about some special event or extraordinary g eneralmente we went to the fax, the telephone or the electronic mail.

Nevertheless, script in its Web site that makes arise a small window whenever it is opened a new page without a doubt will help to that that essential information spreads more quickly.

With respect to the registry in the machines search, it is not limited the simple registry of a URL Fundamentally has to do with the applied definition of the content that is offered (the key words) and of the process of permanent update of how it appears the site in a machine search. If we changed the content area or we focused our activity in other fields, is important to change the form in that we are related in these utilitarian ones of the network of simultaneous way.

Finally, when I talk about to promotion offline, I do not speak to buy newspaper publicity, in fences, television or radio. One is an exemplified affluent strategy in Intranets: many of these internal networks have an ample amount of information completely unknown by the personnel of the company, with the diffusion in printed warnings or memorandos located in corridors, casinos, etc., present can be done this content for them.

In the measurement in which the sobresupply of information becomes, in which of parallel form, the time is reduced to have this information, and the attention of the reading potentials concrete is reduced, the necessity to find promotion ways effective becomes a critical element. It is not sufficient with generating a quality content, is necessary to remove it outside and to make know it.

Its opinion is important...

Books:

[Today in fiction](#)

(05/25/2001)

["Comic Book Nation" by Bradford W. Wright](#) By

Damien Cave

Before movies and rock 'n' roll, comics invented youth culture. But can they survive? (05/25/2001)

Life:

["Click on and jack off!"](#) By Margot Nightingale

My son discovers porn and I resort to subterfuge. (05/25/2001)

[Manhattan in wartime](#) By Jennifer Foote Sweeney

Donna and Rudy battle over Judi and we read all about it. (05/25/2001)

News:

[Major league aggravation](#) By King Kaufman

I was happy to pay \$9.95 to listen to baseball on the Web. But what I got for my money was a lesson in how little regard the game has for its fans. (05/25/2001)

People:

[It's a brave world after all, it's a brave new world!](#)

By Merle Kessler

They're not just faces on tortillas or reflections on walls. Everywhere, real idols are appearing -- J.Lo! Barbra! Brad & Jennifer! Angelina! Russell! Mariah! (05/25/2001)

[Show me the monkey!](#) By Chris Colin

India's menacing monkey-man has New Delhi in hysterics and the rest of the world in stitches. What's more, the birth of the terrifying beast was inevitable. (05/25/2001)

[His royal Bobness and the truth about polygamy](#)

Readers respond to Bill Wyman's profile of Bob Dylan, and Chris Colin's polygamy satire. (05/25/2001)

[Second-hand stalking](#) By Amy Reiter

Was Kidman's stalker on the rebound from tailing Schiffer? Plus: Spears and Aguilera offered \$2 million to strip, and "Sopranos" rumors dumped in the river! (05/25/2001)

[Politics:](#)

[The White House vandal scandal that wasn't](#)

By Kerry Lauerman and Alicia Montgomery (05/25/2001)

[Olson by a whisker](#) By Alicia Montgomery and Daryl Lindsey

In a surprising reversal of fortune, before relinquishing control of the Senate, Republicans force a vote on the controversial solicitor general -- and win. (05/25/2001)

[Bushed!](#) By Salon staff

Dems take the reins as Bush ducks the blame on Jeffords and the Senate flip. (05/26/2001)

[Salon Audio:](#)

[The recording industry eats its young](#)

Janelle Brown describes Vivendi Universal's surprising purchase of MP3.com and what it means for the future of online music. (05/25/2001)

[Sex:](#)

[The call of the window](#) By David Thomson

Susannah McCorkle had a sinister, sweet voice and apparently a broken heart on that fateful day. (05/25/2001)

[Technology:](#)

[Geek house](#) By Damien Cave

Hardware hackers are using a fast-spreading technology called X-10 to give their homes a cheap and speedy intelligence upgrade. (05/25/2001)

Thursday, May 24, 2001

Arts & Entertainment:

Bob school By Joey Sweeney

On the singer's 60th birthday, a musician remembers the lessons his dad taught him about Bob Dylan, rebellion and following your heart. (05/24/2001)

Blue Glow By Joyce Millman

Two new books detail America's deadly pursuit of Manuel Noriega and Pablo Escobar. (05/24/2001)

Comics:

Tom the Dancing Bug By Ruben Bolling

Fun facts about celebrities! (05/24/2001)

Life:

"Shrek" is not Shrek! By Margot Mifflin

William Steig's subversive misanthropy is jettisoned for winking innuendo in the movie version of his children's book. (05/24/2001)

News:

Death of a drug lord By Douglas Cruickshank

In "Killing Pablo," Mark Bowden details the 16-month game of cat and mouse that finally took down Medellín cartel founder Pablo Escobar -- with the help of the U.S. government. (05/24/2001)

People:

Waxing political By Michael J. Jordan

Madame Tussaud's Wax Museum is host to a feisty little uproar. Yasser Arafat, some say, deserves a good melting. (05/24/2001)

How to make an American blabbermouth By Amy Reiter

Does Brad know? Winona says Jennifer's a "very good kisser"; porn star on Bruce Willis: "We had sex all night long." Plus: Monica wants her dress back! (05/24/2001)

Politics:

Bushed! By Salon staff

Bush and the GOP brace for Senate flip as Dems relent on taxes. (05/24/2001)

Bush's brand-new Day

By Joan Walsh (05/24/2001)

Will Trent Lott pay for losing the Senate? By Bruce Shapiro

Angry GOP moderates say the White House and party right-wingers drove Jim Jeffords out of his own party. (05/24/2001)

Why'd he do it? By Jake Tapper

Sen. Jim Jeffords has had problems with his party for a long time, but President Bush appears to have pushed him over the edge. (05/25/2001)

The joy of no sex By Arianna Huffington

From the too much information department: Rudy Giuliani's lawyer uses the prostate cancer defense to imply that the mayor isn't having sexual relations with that woman, Judi Nathan. (05/24/2001)

Declaration of independence By Anthony York

McCain says there's a lesson to be learned in Jeffords' departure. Freepers tell McCain to drop dead. (05/24/2001)

Former American Spectator publisher: Olson is deceiving the Senate By Ralph J. Lemley

Ronald Burr confirmed to a friend and advisor that Olson was centrally involved in the Arkansas Project -- and led the charge to fire him after Burr demanded an audit. (05/24/2001)

Salon Audio:

The week in dirt Read by Amy Reiter

Bob Dylan's jockstrap on the auction block, Sinéad gets holey and Rebecca Romijn-Stamos does it with booze. Plus: Belinda Carlisle, Daryl Hannah and Tony Soprano. (05/24/2001)

Sex:

Butlers in love By Karen Croft

Mark Stock's most famous series of paintings depicts tuxedoed men in various obsessive poses.

(05/24/2001)

Technology:

Boobs and rubes

By Wagner James Au (05/24/2001)

Prime-time hypocrisy By Eric Boehlert

Barbara Walters helped ruin television news. So how did she get to be a martyr for journalistic credibility? (05/24/2001)

Wednesday, May 23, 2001

Arts & Entertainment:

Skanks for the memories! By Carina Chocano

Blue Glow By Joyce Millman

Salon's TV picks for Monday, May 21, 2001 (05/21/2001)

The dying game By Joyce Millman

A bloody "Sopranos" season ends with an emotionally bruising finale. (05/21/2001)

Books:

"In Cuba I Was a German Shepherd" by Ana

Menéndez By Ruth Henrich

A mesmerizing portrait of Miami's Cuban exiles, haunted by memories of endless blue skies, elegant homes and round-hipped women. (05/21/2001)

"Passage" by Connie Willis By Laura Miller

Scientists who study near-death experiences are pulled into their own research in a brainy, eerie, genre-defying suspense novel. (05/21/2001)

"Empire Falls" by Richard Russo By Maria Russo

In the latest from the author of "Mohawk" and "Nobody's Fool," the residents of a small Maine town survive on simmering feuds, dirty backroom deals and plenty of comic relief. (05/21/2001)

"Carry Me Across the Water" by Ethan Canin By Amy Reiter

In the author's latest novel, a wealthy, aging entrepreneur tries to correct a lifetime's mistakes. (05/21/2001)

"Glue" by Irvine Welsh By Amy Benfer

From the author of "Trainspotting," another high-octane tale of Edinburgh toughs who live for gitting

their hole and leathering laddies. (05/21/2001)

["Sister Noon" by Karen Joy Fowler](#) By Suzy Hansen

A mysterious black woman is running the show in a comic novel of strivers, do-gooders and racial fear in Gilded Age San Francisco. (05/21/2001)

["Endangered Species" by Louis Bayard](#) By Kerry Lauerman

A gay government worker hit with the urge to reproduce braves personal ads, surrogate moms and a showdown with the male biological imperative. (05/21/2001)

["Strange Fire" by Melvin Jules Bukiet](#) By Amy Benfer

An Israeli speechwriter blinded by torturers smells his way through a wise and satisfying novel of international intrigue. (05/21/2001)

["American Son" by Brian Ascalon Roley](#) By Suzy Hansen

In a searing look at the immigrant experience, two half-Filipino brothers navigate a California of small-time thieves, Mexican gangsters and attack dogs trained using Nazi techniques. (05/21/2001)

["My Little Blue Dress" by Bruno Maddox](#) By Maria Russo

The touching memoir of a 100-year-old woman -- forged by a young media commentator at the end of his rope. (05/21/2001)

[What to read: The best of May fiction](#) By Salon's critics

Richard Russo's masterly comic epic of small-town life; a thriller about the science of near-death experiences; randy, E-tarded Edinburgh lads from the author of "Trainspotting"; and more. (05/21/2001)

[Today in fiction](#)

(05/21/2001)

[Comics:](#)

[This Modern World](#) by Tom Tomorrow

Who's going to mind a little arsenic in the water? (05/21/2001)

Arts & Entertainment:

Blue Glow By Joyce Millman

Salon's TV picks for Tuesday, May 22, 2001 (05/22/2001)

Books:

Today in fiction

(05/22/2001)

What's a guy to do? By Garrison Keillor

Snooping on my girlfriend's computer, I found a message in which she described herself as a "fun-loving lesbian." That's news to me! (05/22/2001)

Bestsellers

This week's bestsellers, courtesy of Powells.com. (05/22/2001)

Comics:

[Story Minute](#) By Carol Lay
When scientists run amok. (05/22/2001)

Life:

[Scary cherubs and bloody wall flowers](#) By Stephen Lemons
Artist Becca Midwood, painter of haunting outdoor portraits, is getting a reputation as the "female Basquiat." (05/22/2001)

News:

[The triumph of "multicultural" thugs](#)
By David Horowitz (05/22/2001)

[Is Powell's peace plan a pipe dream?](#) By Ben Barber
With calls for the abandonment of settlement construction and a "total end of violence" at its core, the U.S. road map to Mideast peace may be doomed from Day 1. (05/22/2001)

[The Arkansas Project wasn't journalism](#) By Joe Conason
Ted Olson's defenders say the Clinton-bashing effort was protected by the First Amendment -- and besides, Olson didn't know much about it anyway. They're wrong on both counts. (05/22/2001)

People:

[Bob Dylan](#) By Bill Wyman
At age 60, with a career that spans four decades, he remains one of rock's most eloquent, sexy and unpredictable singers. (05/22/2001)

[Leave the cheese alone](#) By Amy Reiter
Alone and sad, Nicole Kidman reconsiders what's important; Courtney Love has a miscarriage; and Ben Affleck beats his fear of flying -- by flying. (05/22/2001)

Politics:

[Bush's brand-new Day](#) By Joan Walsh
Trying to burnish his "compassionate" image, the president is now quoting Dorothy Day. Who's next -- Mother Jones? (05/22/2001)

[Bushed!](#) By Salon staff
Bush is booed at Yale while Dems stall his tax cut in the Senate. (05/22/2001)

[Jeffords set to switch parties](#) By Anthony York
The Vermont Republican calls a press conference

for Wednesday, and could change the balance of power in the U.S. Senate. (05/22/2001)

Salon Audio:

Don't touch the Channel Master Read by Tony Earley

In his memoir "Somehow Form a Family," Tony Earley recounts the arrival of color television in his family home and with it the invasion of "The Brady Bunch." (05/22/2001)

Sex:

Let's stay together! By Chris Colin

A panicky couple gets stuck during sex and is rushed to the hospital for disengagement. (05/22/2001)

Technology:

Boobs and rubes By Wagner James Au

The soft-porn fixation embarrassingly displayed at computer gaming's biggest convention, E3, is dooming the \$6 billion industry to the nerd-geek ghetto. (05/22/2001)

Monday, May 21, 2001

Arts & Entertainment:

Blue Glow By Joyce Millman

Salon's TV picks for Monday, May 21, 2001 (05/21/2001)

The dying game By Joyce Millman

A bloody "Sopranos" season ends with an emotionally bruising finale. (05/21/2001)

Books:

"In Cuba I Was a German Shepherd" by Ana Menéndez By Ruth Henrich

A mesmerizing portrait of Miami's Cuban exiles, haunted by memories of endless blue skies, elegant homes and round-hipped women. (05/21/2001)

"Passage" by Connie Willis By Laura Miller

Scientists who study near-death experiences are pulled into their own research in a brainy, eerie, genre-defying suspense novel. (05/21/2001)

"Empire Falls" by Richard Russo By Maria Russo

In the latest from the author of "Mohawk" and "Nobody's Fool," the residents of a small Maine

town survive on simmering feuds, dirty backroom deals and plenty of comic relief. (05/21/2001)

["Carry Me Across the Water" by Ethan Canin](#) By Amy Reiter

In the author's latest novel, a wealthy, aging entrepreneur tries to correct a lifetime's mistakes. (05/21/2001)

["Glue" by Irvine Welsh](#) By Amy Benfer

From the author of "Trainspotting," another high-octane tale of Edinburgh toughs who live for gitting their hole and leathering laddies. (05/21/2001)

["Sister Noon" by Karen Joy Fowler](#) By Suzy Hansen

A mysterious black woman is running the show in a comic novel of strivers, do-gooders and racial fear in Gilded Age San Francisco. (05/21/2001)

["Endangered Species" by Louis Bayard](#) By Kerry Lauerman

A gay government worker hit with the urge to reproduce braves personal ads, surrogate moms and a showdown with the male biological imperative. (05/21/2001)

["Strange Fire" by Melvin Jules Bukiet](#) By Amy Benfer

An Israeli speechwriter blinded by torturers smells his way through a wise and satisfying novel of international intrigue. (05/21/2001)

["American Son" by Brian Ascalon Roley](#) By Suzy Hansen

In a searing look at the immigrant experience, two half-Filipino brothers navigate a California of small-time thieves, Mexican gangsters and attack dogs trained using Nazi techniques. (05/21/2001)

["My Little Blue Dress" by Bruno Maddox](#) By Maria Russo

The touching memoir of a 100-year-old woman -- forged by a young media commentator at the end of his rope. (05/21/2001)

[What to read: The best of May fiction](#) By Salon's critics

Richard Russo's masterly comic epic of small-town life; a thriller about the science of near-death experiences; randy, E-tarded Edinburgh lads from the author of "Trainspotting"; and more. (05/21/2001)

[Today in fiction](#)

(05/21/2001)

[Comics:](#)

[This Modern World](#) by Tom Tomorrow
Who's going to mind a little arsenic in the water?
(05/21/2001)

Life:

[Do it yourself](#) By Janelle Brown
Homemaking gets its groove back as youthful
Martha Stewart acolytes knit, purl and make
curtains. (05/21/2001)

[Of pleather goods and wronged blonds](#) By Carina
Chocano
A blond denounces cowhide; another denounces the
denouncing of blonds. (05/21/2001)

News:

[The triumph of "multicultural" thugs](#) By David
Horowitz
The physical assault on Ann Coulter at Cornell
proves that fascism is alive and well on U.S.
campuses. (05/21/2001)

People:

[Scott Carrier](#) By Christopher Kemp
The author of "Running After Antelope" is
determined to win a footrace against the second
fastest animal on earth. (05/21/2001)

Politics:

[Why the Senate should reject Ted Olson](#)
By Gary Kamiya (05/21/2001)

[Bushed!](#) By Salon staff
The Swiss say Bush's "hesitance" caused a blowup
in the Middle East. (05/21/2001)

[Al Sharpton for president?](#) By Anthony York
The online community salivates over the New York
reverend's trial balloon. (05/21/2001)

[Bush's fractured fairy tale](#) By Arianna Huffington
With the president's energy plan, no matter how
much coal we burn, the sky will always be blue.
(05/21/2001)

[The Kennedy compromise](#) By Jake Tapper
Conservatives might be screaming the loudest, but
Democrats made their share of concessions in the
House and Senate education bills. (05/21/2001)

Salon Audio:

Cherry By Mary Karr

Mary Karr recalls an age when children seek out the very trouble their parents hope they will avoid. (05/22/2001)

Sex:

The other Cannes festival By Stephen Walker

The most fabulous party at the Hot d'Or porn awards was rumored to be an orgy or free girls, free booze, free everything. Too bad I got kicked out. (05/21/2001)

Technology:

Rupert in the sky with diamonds By Eric Boehlert

If he seizes America's satellite TV market, über-mogul Rupert Murdoch will rule the airwaves on earth and in heaven. But John McCain may shoot him down. (05/21/2001)

Saturday, May 19, 2001

Arts & Entertainment:

Tony Soprano's female trouble By Bill Wyman

Will David Chase ever free his female characters from their sitcom-bound chains? (05/19/2001)

Books:

Today in fiction

(05/19/2001)

News:

The Colin Powell difference By Ben Barber

For Foreign Service veterans, the new secretary of state's openness is a welcome change from Madeleine Albright's snobbery. (05/19/2001)

Friday, May 18, 2001

Arts & Entertainment:

"Shrek" By Stephanie Zacharek

Computer animation is a technological miracle. So why does it leave us cold? (05/18/2001)

"Moulin Rouge" By Stephanie Zacharek

Baz Luhrmann's messy musical will get you drunk on romance and whimsy. A few days later, you

won't even mind the hangover. (05/18/2001)

["Angel Eyes"](#) By Andrew O'Hehir

The third movie in which a wounded Jennifer Lopez watches late-night TV alone turns into a weepy thriller without many thrills. (05/18/2001)

["The Young Girl and the Monsoon"](#) By Charles

Taylor

Terry Kinney finally gets a starring role in this scattershot little movie about a prickly dad and his demanding teenage daughter. (05/18/2001)

[Blue Glow](#) By Joyce Millman

Salon's TV picks for Weekend, May 18-20, 2001 (05/18/2001)

Books:

[Today in fiction](#)

(05/18/2001)

[Wanted](#) By Fred Branfman

If Henry Kissinger isn't guilty of war crimes, no one is. A Vietnam War whistleblower on Christopher Hitchens' case against the former secretary of state. (05/18/2001)

[Don't look back](#)

By Allen Barra (05/18/2001)

Life:

[An epidemic of bastards](#) By Tracy Trefethen

I follow my forebears, full of love, into a legitimate trend of illegitimacy. (05/18/2001)

News:

[Who goes to the ballgame?](#) By King Kaufman

A look at this year's early attendance figures shows that a strong start in baseball doesn't necessarily get the turnstiles spinning. Except when it does. (05/18/2001)

People:

[Black Caesars on their chrome chariots](#) Photographs

by Martin Dixon

A photographer captures the rides, rituals and rowdiness of New York's African-American motorcycle clubs. (05/18/2001)

[Everybody must get stoned](#) By Ian O'Doherty

Out of my gourd in Zimbabwe, I had the distinct

feeling baboons were trailing me. And then the pelting began. (05/18/2001)

[Everybody's getting naked!](#) By Amy Reiter
Belinda Carlisle strips to make a point; Rebecca Romijn-Stamos does it with booze. Plus: Brad Renfro sent to the sneezer, and a new interactive video shows us ALL of Britney! (05/18/2001)

Politics:

[Committee deadlocked on Olson](#) By Alicia Montgomery
Hatch asks, "Who the hell cares about the Arkansas Project?" as a full Senate vote looms. (05/18/2001)

[Bushed!](#) By Salon staff
Gun toter is nabbed near Bush, Greenpeace targets Cheney and California fumes over the energy plan. (05/18/2001)

[Let them eat coal](#) By Jake Tapper
Democrats charge that the Bush energy plan leaves the poor in the cold. (05/18/2001)

[Why the Senate should reject Ted Olson](#) By Gary Kamiya
His role in the sleazy Arkansas Project is bad enough. The fact that he hasn't told the truth about it is worse. (05/18/2001)

[What White House vandalism?](#) By Anthony York
An audit of the alleged trashing by outgoing Clintonites finds the rumors of destruction were greatly exaggerated. (05/18/2001)

Salon Audio:

[Therapy by e-mail](#)
All that hate mail was getting us down. So we sent a note to Usofyne.com and got back a healthy dose of ass-kissing. (05/18/2001)

Sex:

[It was 4,000-to-1](#) By David Thomson
With the ratio of guys to gals at Pearl Harbor, the film should have dealt a bit more with what must have been going on. (05/18/2001)

Technology:

[No recession for free software](#) By Andrew Leonard
Hackers scorn the theory that the economic downturn could hurt open-source software. (05/18/2001)

[Will culture-jam for food](#) By Katharine

Mieszkowski

The prankster behind the [Voteauction.com](#) satire needs your help to pay off his \$3,800 legal debt. (05/18/2001)

[Battle of the gaming giants](#) By Justin Hall

At opening day of the E3 Electronic Entertainment Expo, Sony, Nintendo and Microsoft eye one another warily. (05/18/2001)

Thursday, May 17, 2001

[Arts & Entertainment:](#)

[Blue Glow](#) By Joyce Millman

Salon's TV picks for Thursday, May 17, 2001 (05/17/2001)

Public Information

These reports cover issues dealing with the public's right of access to information held by government agencies and courts, at the federal, state and local level. The typical laws involved are the California Public Records Act, the federal Freedom of Information Act, and rules on access to records of state courts, adopted by the California Legislature or the California Judicial Council.

>>>> NEW LAW REQUIRES PUBLIC AGENCIES TO SHARE THE E-RECORDS (1/5/01)

As of this week, copies of public record information held by California government in electronic form must be made available to the public if requested in that form, and may be copied in any format used by the agency to generate copies for its own use.

Requesters can even have an agency "create" an e-record to combine data in new ways if they pay programming costs.

AB 2799 by Assemblyman Kevin Shelley (D-San Francisco), signed by Governor Gray Davis last fall, took effect January 1. It has repealed the long-standing California Public Records Act provision giving public agencies discretion over what form computerized public information must be produced in (e.g. electronic or hard copy printouts). The Act previously said nothing else about computer file access other than the general principle that information accessible to the public on paper remains legally accessible when stored electronically.

Under AB 2799, the Act has been amended to provide that:

- * Public information not exempt from disclosure must be made available in the electronic format requested if the public agency holding the information uses that format for making copies for its own or another agency's use.
- * If meeting the request involves only copying, any fee charged by the agency must be limited to the "direct cost of producing a copy."
- * If the request is for a format not used by the agency for its own copying, and therefore would require special work, extra charges and delay are authorized.
- * "The cost of producing a copy of the record, including the cost to construct a record, and the cost of programming and computer services necessary to produce a copy of the record," can be passed on to the requester when "the record is one that is produced only at otherwise regularly scheduled intervals" but is demanded off-schedule, or the formatting sought "would require data compilation, extraction, or programming."
- * An extension of up to 14 days could stretch the deadline for a determination response from the public agency, meaning a maximum total of 24 days, based on "the need to compile data, to write programming language or a computer program, or to construct a computer report to extract data."
- * If the request is for a paper record, the agency may inform the requester that the information is also available in electronic format, but cannot limit access to the electronic version. Nor must it "reconstruct" a record in an electronic format if it "no longer has" the information in that format.
- * A request to release information in the format in which the agency keeps it would not have to be honored if doing so "would jeopardize or compromise the security or integrity of the original record or of any proprietary software in which it is maintained."

The new amendments include two other important provisions unrelated to electronic records. One restores the word "delay," substituted several years ago by the word "obstruct" in a provision prohibiting certain agency conduct that frustrates timely access to records. The new law now forbids both delay and obstruction. Also, the Act for the first time expressly requires that any notice from the agency announcing denial of access be in writing - if the request was made in writing.

COMMENT: How to use the new law, including how to structure an access request, depends more than ever on just what kind of access is desired to what kind of information. Some of the variables:

-- Inspection: If the desire is to simply review computer-stored information, either prior to or instead of asking for a copy, such inspection seems to be accommodated by the new rules, which for example speak distinctly of "making information available" and "providing a copy of an electronic record." The problems may be more practical than legal, i.e. when the text or database display a requester wants to read on a screen is salted with isolated items of confidential information.

-- Copying: Assuming no further work is required and the copies are those a requester could work with, this option should be straightforward, rapid and inexpensive.

-- Special work: AB 2799 resolves what under some jurisdictions' laws has been a quite serious issue, namely whether a public agency in electronically assembling a report to the tailored requirements of a requester is "creating a new record" - an activity not mandated by most access laws. The new amendments, by simply providing that such extra work can be charged for specially, presume that if requested, such work is within the Act's mandate, i.e. even when "the request would require data compilation, extraction, or programming to produce the record," the issue is not whether it must be produced but how much can be charged for the production.

The new law's provisions behooves the requester to check informally with those who are familiar with the agency's information systems to see if the desired report can be assembled, and how readily, and at what expense, rather than blindly dictating a demand for some documentation that cannot possibly be produced.

FRESNO STATE ORDERED TO RELEASE NAMES OF SKYBOX PATRONS (12/22/00)

The names of those leasing luxury skybox suites in a planned on-campus sports arena are matters of public record not protected by their privacy interests, a judge has ruled in a case brought by the Fresno Bee against Fresno State University and an auxiliary organization. Superior Court Judge Franklin P. Jones stayed his release order to allow time for appeal.

The case was brought last March when Fresno State and the CSU Fresno Association, Inc. declined to provide the names of some individuals and entities signing one year leases for skybox suites in the proposed Save Mart Center, to be built on Shaw Avenue as a multipurpose sports and recreation complex.

The defendants took the position that disclosing all names would dissuade future charitable contributions, citing the Section 6255 "catchall" exemption from the California Public Records Act. Also relied on was the exemption for personal privacy.

But Fresno Bee Executive Editor Charlie Waters said the 32 suites, ranging in lease price from \$45,000 to \$63,000 per year, were the subject of "simple business deals in which individuals or companies are paying for prime seating in a new arena."

In his Dec. 19 order, Judge Jones said he had reviewed the blank lease form but had not checked the names or individual lease agreements in chambers. He said the sports complex would operate by a public institution, as a public function. Although private money was anticipated as supporting most construction costs by the time of the 2002 opening, the state had already fronted \$8 million for off-site improvements, and yet leaseholders "will be deriving a significant and valuable benefit over and above what other donors and members of the public will enjoy."

[Back to top](#)

RECORDS CASE SHOWS LAWYER 'GHOST-WRITING' PLANNING DOCUMENTS (12/8/00)

A lawsuit filed under the California Public Records Act will cost Monterey County more than \$400,000 in attorney fees and other expenses after court-ordered release of records showed that a private law firm moving development projects through the planning approval process actually wrote many of the documents passed off as staff reports.

On Tuesday, December 5, County Administrative Officer Sally Reed announced appointment of a well-known local environmental activist as the new planning director, a move apparently prompted in part by the perception that the planning department has been manipulated by pro-development forces.

The background to the records suit is a bitter struggle in 1999 over September Ranch, a proposed 100-home luxury subdivision in Carmel Valley. Over-optimistic claims for adequate water supply and road access were among the key reasons for a superior court order effectively sending the project back to the drawing boards over a year ago. Chief opponent to September Ranch was the local chapter of the Sierra Club, of which new planning director Scott Hennessy is a former chairman. Hennessy is also most recently chairman of the county planning commission.

But meanwhile Patricia Bernardi, a retired schoolteacher living in Carmel Valley who first became politically active over water issues, became suspicious of how the planning department was handling project reviews. She told the Monterey County Herald that she attended a planning commission meeting and saw the staff all thumbs with its own

documentation, being advised by whispers from a project applicant's attorneys.

Bernardi later told the Monterey County Herald, "That was when my radar really blipped." She contacted attorney Michael Stamp, one of the team of lawyers representing the Sierra Club in challenging the September Ranch project. In February, 1999, Stamp requested from the planning department copies of documents prepared by the law firm of Lombardo & Gilles. Attorney Tony Lombardo, typically a very effective practitioner in land use regulation, had been on the applicant's losing side in the September Ranch case.

At that time Superior Court Judge Richard Silver had scolded Lombardo for his firm's preparation of "critical documents" for county planning staff. Stamp's public records request yielded a cartonful of miscellaneous documents - enough to make it clear that quite a few more - in paper and on diskette - were missing.

Stamp filed a public records access action with the superior court to obtain the missing files - and again drew Judge Silver, who eventually noticed that of the documents actually produced, a substantial number concerned the September Ranch application - and not all of them had been included in the administrative record filed in the Sierra Club environmental challenge, which the county had certified as complete.

Judge Silver found that the public records lawsuit "was ultimately filed based on a belief that in fact a substantial number of relevant materials were being withheld or destroyed. The discovery and depositions in this case confirmed that substantial documents and disks had not been produced and/or had been written over or destroyed, some after the lawsuit was filed."

Equally disturbing, "many of the documents (actually produced by Lombardo's law firm) are prepared in county format so that they appear to be prepared by county staff. Some of them even have the county seal on them. There is no reasonable way any member of the public could tell that they were not prepared by county staff."

The judge said that "the appearance of independent judgment is so tainted that public confidence is justifiably lost" when a law firm produces documents that appear to be written by government staffers.

The judge was not banned outright the practice of project applicants' attorneys drafting papers for county planning staff to work on, but all such documents must henceforth bear the author's stamp, and none may bear the county seal.

By December, the county's debts to its own lawyers and investigators and its requirement to pay Stamp's fees, were estimated to total \$415,318, with one county-retained law firm still to submit its fee bill.

[Back to top](#)

TRIAL LAWYERS LAUNCH TWO BILLS RESTRICTING SEALED SETTLEMENTS (12/8/00)

An association of plaintiffs' trial lawyers is sponsoring twin bills, introduced in the Senate and Assembly on December 4, to make it far more difficult for parties in certain consumer-sensitive civil lawsuits to keep settlements and discovery-produced business information confidential. Legislation like this has been eluding enactment for years.

Consumer Attorneys of California is backing SB 11 by Senator Martha Escutia (D-Montebello) and AB 36 by Assemblyman Darrell Steinberg (D-Sacramento).

The bills are the latest in a series of legislative attempts, beginning with that of then Senator Bill Lockyer in 1992 and continuing through SB 1254 of 1999 by then Senator Adam Schiff, to end the common practice of corporate defendants in certain cases in settling with injured plaintiffs-but only under terms that keep under wraps the settlements themselves as well as embarrassing company information acquired by the plaintiffs' lawyers in discovery.

Lockyer's bill was vetoed by Governor Pete Wilson; Schiff's bill was quietly dropped when the author learned that the California Judicial Council would be addressing the issue of sealing court records as part of its rulemaking process in 2000. As it happens, however, the council's rules, adopted this fall and going into effect in January, do not address out-of-court agreements to keep settlements and discovered information confidential.

Recent events have given the issue new urgency, including the Bridgestone/Firestone settlements of defective tire lawsuits, and more locally, the secrecy agreements used by insurance companies to settle claims tracing the the 1994 Northridge earthquake.

It was Senator Escutia who, during the investigation earlier this year into Charles Quackenbush's performance as Insurance Commissioner with respect to Northridge claims, made public a number of confidential insurance department records detailing thousands of potential violations of law by insurance companies.

The new bills explicitly address these episodes as proof that legislation is needed:

"The Legislature finds and declares all of the following:

"(a) Secrecy agreements that prohibit disclosure to the public or public safety agencies of information relating to defective products, financial fraud, unfair insurance claims practices, or environmental hazards are injurious to the health, safety, and economic well-being of all Californians.

"(b) Secrecy agreements can have tragic consequences. A widely known example of

the disastrous consequences of secrecy agreements is the tragedy resulting from dangerous defects in Firestone tires, which have reportedly caused more than 150 deaths and more than 500 injuries worldwide. For many years, Bridgestone/Firestone, Inc. knew about these dangerous defects, but kept the information out of the public eye by secretly settling many lawsuits brought as a result of crashes related to defective tires. During that time, the public continued to drive on Firestone tires, unaware of the mortal danger to their families and themselves. As a result of these hidden, dangerous defects, on August 9, 2000, Bridgestone/Firestone, Inc. and Ford Motor Co. jointly announced that Firestone would recall over 14 million tires. In the absence of a secrecy agreement, information about this dangerous product could have been disclosed publicly, which could have saved lives and avoided injuries. However, the companies demanded secrecy as the price of compensation for victims, resulting in many deaths and injuries that could have been avoided absent demands for secrecy agreements.

"(c) Secrecy agreements can allow companies to shield information that shows a practice of treating consumers unfairly and can permit those companies to continue illegal practices without accountability. The circumstances that allowed secrecy regarding the claims of victims of the Northridge earthquake and the contaminated drinking water connected with the story of Erin Brockovich also highlight the need for openness.

"(d) Secrecy agreements allow companies to shield life-threatening dangers and harmful practices from public view, thereby severely jeopardizing public welfare and safety. It is against the public interest to allow secrecy agreements about defective products, financial fraud, unfair insurance claims practices, or environmental hazards to remain confidential except in very limited circumstances upon careful judicial oversight and review."

The bills' key provisions are as follows:

o In any action based on injury, wrongful death, or financial loss allegedly caused by a defective product, financial fraud, unfair insurance claims practice, or environmental hazard, information about the defective product, financial fraud, unfair insurance claims practice, or environmental hazard contained in settlement agreements and confidentiality agreements not filed with the court, as well as similar information acquired through discovery, "shall be presumed to be public information and may not be kept confidential pursuant to agreement of the parties."

o The only way to keep such information confidential would be by obtaining a court order based on a finding that either:

(1) The information is a trade secret or otherwise privileged under existing law, or

(2) (A) An overriding interest exists that overcomes the right of public access to the information; and

(B) The overriding interest supports keeping the information confidential; and

(C) A substantial probability exists that the overriding interest will be prejudiced if the information is not kept confidential; and

(D) The proposed confidentiality is narrowly tailored; and

(E) No less restrictive means exist to achieve the overriding interest.

o Absent trade secrecy or other privilege, whether or not a court finds the balance of interests generally favoring confidentiality otherwise, any portion of an agreement or contract that restricts a party from disclosing such information to a governmental agency with enforcement authority over the defective product, financial fraud, unfair insurance claims practice, or environmental hazard "is void, contrary to public policy, and may not be enforced."

Attorney General Lockyer supports the legislation, but it faces very strong opposition from manufacturers, some Silicon Valley high-technology companies and venture capitalists, and a new source of resistance, the insurance industry.

NORWIN YOFFIE, FORMER PUBLISHER AND FREEDOM FIGHTER, DIES AT 76 (12/2/00)

Memorial services were held in San Rafael Wednesday, November 29 for Norwin Yoffie, former publisher of the Marin Independent Journal and a dogged champion of open government and aggressive journalism on public issues. The local unit of the Society of Professional Journalists will rename its career achievement award in his memory.

Yoffie expired of complications from chronic kidney failure in Marin General Hospital on November 24, survived by his widow, Sandra, four children, seven grandchildren, his mother, and his sister.

It was Marin General that was the focus of Yoffie's most extraordinary commitment of personal resources to open government advocacy. In the 1980s, after his retirement from 18 years, culminating as publisher, of the Independent Journal, he and Sandra sued the Marin Hospital District under the Brown Act.

The district was among the earliest to take advantage of a state law allowing it to place its hospital under the management of a private corporation. A principal effect of this arrangement was to end most newsworthy activity by the district board and transfer discussions and actions, previously found in public meetings, to closed meetings of the corporate board.

Yoffie tried to get the Independent Journal to take court action to reverse the secrecy, but the new ownership declined. The Yoffies then sued in their own names, arguing that the responsibility to hold open meetings had, under the Brown Act, been transferred to the corporate board along with its acquired decision-making authority - that the hospital district could not shroud its business from the public simply by taking

its operational functions private.

The First District Court of Appeal disagreed, and the corporate meetings stayed closed. But as evidence that the Yoffies' position had strong merit, the Fourth District Court of Appeal dealt with the identical question in a later suit involving Desert Hospital in Palm Springs, and ruled in favor of opening the meetings of that corporate entity. The California Supreme Court was spared the need to address the conflict between the cases since the latter was kept unpublished, leaving it to bind the parties but unavailable as precedent.

But the Yoffies' lasting vindication on principle came in 1994, when as part of major revisions to the Brown Act, the legislature expressly amended the law to provide that future district hospital management transfers would carry the open meeting provisions with them to the corporate board actually running the facilities.

In his retirement years Norwin Yoffie not only continued to lend his wide experience of newspaper management to other publishers as a consultant, but served actively as a member of the Northern California Chapter of the Society of Professional Journalists, as a mainstay of its Freedom of Information Committee. He also contributed his time generously to planning the initial First Amendment Assembly of the California First Amendment Coalition, held in Oakland.

Bruce B. Brugmann, editor and publisher of the San Francisco Bay Guardian and a friend and colleague for many years, told the San Francisco Chronicle that Yoffie was "one of the truly great independent newspaper men of his generation," and a stalwart advocate for freedom of information in particular.

During his eulogy remarks at the funeral, Brugmann announced that the SPJ Chapter would re-title its annual freedom of information career achievement award to memorialize Yoffie by name.

Comment: As a 20-year-old fresh from the University of Missouri School of Journalism, Norwin Yoffie fought in an artillery unit driving the D-Day invasion into France and Germany. He served 30 years in the Army reserve and retired with the rank of lieutenant colonel. He was given military honors, including a rifle detail salute, a bugler's taps and a flag-draped coffin, in final ceremonies at Mt. Tamalpais Cemetery. A family member recalled how once, when staying in a hotel across the street from the American embassy in Mexico City, the Yoffies had seen demonstrators burn an American flag in the street, and Norwin had walked over to the embassy gate and ordered Marine sentries to recover the ashes for respectful burial. His great heart and sense of duty set a high standard for those continuing the effort to preserve open government in the interests of freedom.

CORRECTION: INLAND VALLEY TIMES IS PUBLISHED SIX DAYS A WEEK (11/22/00)

Last week's Flash included a story about the Public Records Act litigation filed by the Three Valleys Water Agency stated that the Inland Valley Times is a weekly publication. The publication is issued as part of the Los Angeles Times six days a week, Monday through Saturday.

[Back to top](#)

WATER AGENCY REACTS TO RECORDS REQUEST BY SUING REQUESTERS (11/17/00)

A Claremont water agency, facing requests from two newspapers and an individual for records concerning its basis for a closed session at which litigation was averted, has opted to punt the issues into court. Named as defendants are the requesters, two of whom are, in effect, members of the board of directors of the California First Amendment Coalition.

The Claremont-based Three Valleys Municipal Water District has filed an action for declaratory relief with the Los Angeles Superior Court, naming as defendants Richard McKee, the weekly Claremont Courier, and the Inland Valley Times, a weekly publication of the Los Angeles Times.

The district's purpose, stated in a letter to a reporter for the Inland Valley Times, is "to guarantee an appropriate balancing of the dual public interests of maintaining personal privacy and ensuring governmental accountability without the appearance of any perceived impropriety by the District, and to further provide an independent forum to make sure that the rights of all interested parties are adequately heard and properly protected."

Translation: Rather than flatly deny access to a claim by a former employee involving the general manager's conduct - one with implications for both individuals - the district wants the court to make the decision on release.

The claim (actually a letter of complaint sent to three board members about a year ago) was made by Mary Anderson, former executive secretary to district general manager Richard Hansen. Its grievance was that Hansen had essentially detached Anderson, an eight-year incumbent in the position, from her former responsibilities and assigned her only trivial work.

In February, using a closed session citing pending litigation as its justification, the board approved by a 4-3 vote a settlement and severance package for Anderson

including a year's salary of more than \$53,000, six months of continuing health coverage, legal fees amounting to \$5,000 and forgiveness of Anderson's debt to the district for continuing education courses.

In return, Anderson resigned and agreed not to discuss the matter publicly on pain of a \$10,000 penalty.

But the board did not disclose the settlement at the time, and continued what would become a 10-month series of repeated closed sessions evaluating Hansen's performance. Within that period the board changed his contract, cutting his salary and eliminating a clause providing him with severance pay if he were dismissed. But on October 18 it voted 7-0 to retain Hansen and released copies of two evaluations of his performance made on August 4 and October 4. At its next meeting, the board will consider hiring a consultant to conduct yet another review of Hansen's performance.

What the board has never disclosed, however, are the "facts and circumstances" justifying its February closed session, i.e. the complaint letter submitted by Anderson or any other specific documentation of a threat of litigation.

This secrecy is unlawful, argues McKee, who was preparing to sue the district under both the Ralph M. Brown Act and the California Public Records Act to force release of the information. But the district beat him to the courthouse.

The Brown Act states that a closed session concerning a perceived threat of litigation against a public agency must be based on such facts and circumstances. Government Code Section 54956.9 provides also, in the words of the attorney general's guide to the Act:

"If a claim or some other written threat of litigation has been received, it is a public record and reference to it 'must be publicly stated on the agenda or announced' prior to the closed session."

The district cites another provision of Section 54956.9 which excuses local bodies from disclosing the facts and circumstances if doing so would alert a potential plaintiff that he or she might have a basis for filing suit. In effect, its argument seems to imply that making Anderson's grievance public might prompt other employees with similar complaints to make them known in a claim triggering litigation.

The Inland Valley Times and the Claremont Courier also sought copies of Anderson's complaint letter. Courier publisher Martin Weinberger, like McKee, sits on CFAC's board of directors, and both the Los Angeles Times and Claremont Courier are CFAC members.

The district's pre-emptive action in court apparently relies on a recent decision of the California Court of Appeal permitting public agencies to sue records requesters for

declaratory judgment. But that case specified that such action is permissible only when the agency has conclusively denied access to the records and was then aggressively threatened with litigation. In short, courts have no jurisdiction to make the initial decision on whether a record is public or not - only to review an agency's conclusion to that effect leading to an unequivocal denial of access.

JUDICIAL COUNCIL ADOPTS NEW RULES ON SEALING OF COURT RECORDS (11/9/00)

The California Judicial Council has approved new rules that should end the practice in state courts of sealing court records on stipulation of the parties. Sealing is "disfavored" and must be done only after a judge concludes that vital interests would otherwise be compromised. Left unaffected is the sealing of discovery product and settlements.

The new rules, approved by the council at its October 27 meeting, are to take effect on January 1. Considered at the request of the state Supreme Court, the new rules follow the court's recent decision in (1999) 20 Cal.4th 1178. That decision held that the right of public access to trials applies to civil as well as criminal proceedings. It also provided guidance on the proper standard for courts to apply in deciding whether to seal documents filed in court as the basis for adjudication.

The new rules state, "Unless confidentiality is required by law, trial court records are presumed to be open." The rules incorporate the standard set out in the NBC case, providing that trial courts may not seal records unless the court expressly finds:

- there exists an overriding interest that overcomes the right of public access to the record;
- the overriding interest supports sealing the record;
- a substantial probability exists that the overriding interest will be prejudiced if the record is not sealed;
- the proposed sealing is narrowly tailored; and
- no less restrictive means exist to achieve the overriding interest.

The rules affect only those instances where a court is asked to seal otherwise public records because of some ad hoc interest in confidentiality. Various statutes already defining certain court records as confidential, such as juvenile and certain family court files, are unaffected.

Likewise not addressed are the phenomena of sealing settlements and related discovery materials-an area of increasing controversy in recent years. The council apparently plans to assign those issues for study and recommendation by an advisory committee. Trial lawyers over the past decade have assailed the practice of large corporate defendants in agreeing to settlements with individual plaintiffs, contingent on their

consent to seal embarrassing material churned up in discovery, seal the settlement and refrain from discussing either. The Firestone tire debacle is the latest in a series of public health and safety crises said to be supported by this practice, which keeps consumers from learning of dangerous defects that might otherwise be highlighted in tort litigation.

Attorney General Bill Lockyer, when in the California Senate, carried legislation in 1991 that would have made these practices more difficult in cases involving products liability, environmental damage or consumer fraud. The bill passed the legislature but was vetoed by Governor Pete Wilson.

In 1998 Senator Adam Schiff (D-Burbank) revived many of the same idea in SB 1254, the "Sunshine in the Courts Act," a bill approved by both houses' judiciary committees but then put aside to await the Judicial Council's consideration of the matter. Schiff has just been elected to Congress.

That bill would have provided, as a matter of public policy, that in any action based on financial fraud, or on personal injury or wrongful death caused by a defective product or environmental hazard, the court could not enter into or enforce any confidentiality agreement, settlement agreement, stipulated agreement, or protective order, except as specified, unless a protective order regarding the information was entered by the court after a noticed motion.

SB 1254 would have also authorized the Attorney General to file a motion with the court to lift a protective order if that office determined that disclosure was required to protect the public health or safety.

(See bill information at http://info.sen.ca.gov/cgi-bin/postquery?bill_number=sb_1254&sess=CUR&house=B&site=sen)

Several local court rules have been used to similar effect. For example, San Diego courts, with some of the strictest barriers to dubious secrecy provisions, unsealed records at the request of the San Diego Union-Tribune that showed how a private school in La Jolla had paid the parents of a black child \$7,500 to drop a claim that the school had discriminated against the child-and keep the matter to themselves.

In August, San Diego Superior Court Judge Richard Strauss ordered the settlement unsealed, finding no showing of a compelling reason for secrecy.

As for the new rules of court, the provisions affecting trial courts state:

Rule 243.1. Sealed records

(a) [Applicability and definition of "record"]

(1) Rules 243.1-243.4 apply to records sealed or proposed to be sealed by court order. These rules do not apply to records that are required to be 23 kept confidential by statute or other rule.

(2) Unless the context indicates otherwise, "record" as used in rules 243.1- 243.4 means all or a portion of any document, paper, exhibit, transcript, or other thing filed or lodged with the court.

(b) [Sealing of records disfavored]

The public has an interest in access to court records. Unless confidentiality is required by statute or rule, court records are presumed to be open. Orders sealing cases or records filed in an action or a proceeding are disfavored.

(c) [Overriding interest necessary to seal records]

The court may seal court records only if the court determines that there is an overriding interest that overcomes the right of public access to court records and that all the requirements of (d) are satisfied. Overriding interests that under appropriate circumstances may support the sealing of records include, without limitation, protecting an individual's right to a fair trial, protecting minor victims of sex crimes from further trauma or embarrassment, ensuring the anonymity of juvenile offenders in juvenile court, protecting the privacy interests of prospective jurors during voir dire, protecting witnesses from embarrassment or intimidation so extreme that it would traumatize them or render them unable to testify, protecting information within the attorney-client privilege, protecting attorney work product, protecting trade secrets, protecting binding contractual obligations not to disclose information, safeguarding national security, and preserving confidential investigative information.

(d) [Specific findings required to seal records]

The court may order that a record be filed under seal only if it specifically finds that:

- (1) An overriding interest supports sealing the record;
- (2) There is a substantial probability that the overriding interest will be prejudiced if the record is not sealed;
- (3) The proposed sealing is narrowly tailored to serve the overriding interest; and
- (4) There is no less restrictive means of achieving the overriding interest.

(e) [Scope of order]

(1) An order sealing the record shall

- (i) be based on a document-by-document review,
- (ii) expressly state the findings that support the order, and
- (iii) direct the sealing of only those documents and pages-or, if reasonably practicable, portions of those documents and pages-that contain the material that needs to be placed under seal. All other portions of each document or page shall be included in the public file.

(2) If the records that a party is requesting be placed under seal are voluminous, the court may appoint a referee, at the expense of that party, to review the records.

Rule 243.2. Procedure for filing records under seal

(a) [Court approval required]

A record shall not be filed under seal without a court order. The court shall not permit a record to be filed under seal based solely upon the agreement or stipulation of the

parties.

(b) [Motion to seal a record]

(1) A party requesting that a record be filed under seal shall file a noticed motion for an order sealing the record. The motion shall be accompanied by a memorandum of points and authorities and a declaration containing facts sufficient to justify the sealing.

(2) The party requesting that a record be filed under seal shall lodge it with the court under (d) when the motion is made, unless good cause exists for not lodging it. Pending the determination of the motion, the lodged record will be conditionally under seal.

(3) If necessary to prevent disclosure, the motion, any opposition, and any supporting documents may be filed in a public redacted version, and a full version may be lodged conditionally under seal.

(4) If the court does not grant the motion to seal, the clerk shall return the lodged record to the submitting party and shall not place it in the case file.

(c) [References to nonpublic material in public records]

(1) A record filed publicly in the court shall not disclose material contained in a record that is sealed, conditionally under seal, or subject to a pending motion to seal.

(2) If it is necessary that a motion to seal or unseal a record disclose confidential material, the motion and any supporting papers shall be prepared in both a redacted version-labeled "redacted"-and a separate full version-labeled "confidential."

(i) In the redacted version, redaction shall be limited to those specific portions whose disclosure would undermine the confidentiality of the material under seal or to be placed under seal.

(ii) The confidential version shall be filed under seal, if the reviewing court has ordered the material to be sealed, or lodged conditionally under seal, if it has not.

(d) [Lodging records requested to be placed under seal]

(1) The party requesting that a record be placed under seal shall put it in a manila envelope or other appropriate container, seal the envelope or container, and lodge it with the court.

(2) The envelope or container lodged with the court shall display prominently the notation, "CONDITIONALLY UNDER SEAL."

(3) The party submitting the lodged record shall affix to the envelope or 10 container a cover sheet that:

(i) Contains all the information required on a caption page under rule 201; and

(ii) States that the enclosed record is subject to a motion to be placed under seal.

(4) Upon receipt of a record lodged under this rule, the clerk shall stamp the affixed cover sheet as "lodged" and shall not file the record unless the court so orders.

(e) [Order]

(1) If the court grants an order sealing a record, the clerk shall substitute on the envelope or container for the notation required by (d)(2) a notation prominently stating, "SEALED BY ORDER OF THE COURT ON (DATE)," and shall replace the cover sheet required by (d)(3) with a file-endorsed copy of the court's order.

(2) The order shall state whether-in addition to records in the envelope or container-the order itself, the register of actions, any other court records, or any other records relating to the case are to be sealed.

(3) Sealed records shall not be open to inspection by any person except those expressly authorized by the court order.

(4) A sealed record shall not be unsealed or destroyed except upon order of the court.

(f) [Custody of sealed records]

Sealed records shall be securely filed and kept separately from the main file in the case.

(g) [Custody of voluminous records]

If the records to be placed under seal are voluminous and are in the possession of a public agency, the court may by written order direct the agency instead of the clerk to maintain custody of the original records in a secure fashion. If the records are requested by a reviewing court, the trial court shall order the public agency to deliver the records to the clerk for transmission to the reviewing court under these rules.

(h) [Motion to unseal records]

A party or member of the public, or the court on its own motion, may move to unseal a record. Notice of the motion to unseal shall be filed and served on the parties. The motion, opposition, reply, and supporting documents may be filed in a public redacted version and a sealed complete version if necessary to comply with (c).

PRESIDENT VETOES 'OFFICIAL SECRETS ACT' PROVISION AS TOO BROAD (11/9/00)

President Bill Clinton's decision last Friday to veto the Intelligence Authorization Act because of its quietly embedded criminal penalty for those who disclose any classified information, irrespective of harm, has not discouraged those who want leaks plugged. There is talk already of a follow-up bill, but this one will have to be discussed publicly.

Clinton said in his veto message that national security concerns must be balanced against the public's need for information about the government. He added:

"This legislation does not achieve the proper balance. For example, there is a serious risk that this legislation would tend to have a chilling effect on those who engage in legitimate activities. A desire to avoid the risk that their good faith choice of words -- their exercise of judgment -- could become the subject of a criminal referral for prosecution might discourage government officials from engaging even in appropriate public discussion, press briefings, or other legitimate official activities.

"Similarly, the legislation may unduly restrain the ability of former government officials to teach, write, or engage in any activity aimed at building public understanding of complex issues. Incurring such risks is unnecessary and inappropriate in a society built on freedom of expression and the consent of the governed and is particularly inadvisable in a context in which the range of classified materials is so extensive. In such circumstances, this criminal provision would, in my view, create an undue chilling effect."

Clinton noted that " this provision was passed without benefit of public hearings -- a particular concern given that it is the public that this law seeks ultimately to protect."

But the Wall Street Journal on Monday reported that the issue will be back in bill form in the next session.

COMMENT SOUGHT ON FEDERAL COURTS' PROPOSED E-RECORDS RULES (11/9/00)

Federal court administrators are asking for comment on how to make case files available to the public in electronic form, including remote dialup. California's Judicial Council addressed this issue several years ago, but when local court officials balked at a proposal to provide maximum access, the council settled for a voluntary, minimal standard instead.

The Court Administration and Case Management Committee of the Judicial Conference of the United States, through its Subcommittee on Privacy and Electronic Access to Case Files, is seeking comment on the attached document outlining policies under consideration to address issues of privacy and security concerns related to the electronic availability of court case files.

Comments will be accepted beginning Monday, November 13 through 5 p.m., January 26, 2001. Electronic submission of comments is "highly encouraged" and can be accomplished via <http://www.privacy.uscourts.gov> or via e-mail at

Privacy_Policy_Comments@ao.uscourts.gov. Comments can also be mailed to The Administrative Office of the United States Courts, Court Administration Policy Staff, Attn:

Privacy Comments, Suite 4-560, One Columbus Circle, NE., Washington, DC 20544.

According to the proposal described by Abel J. Mattos, chief of the court administration policy staff for the Administrative Office of the United States Courts, there are several options under consideration for civil, criminal and bankruptcy case files:

For civil cases the alternatives under study are:

"1. Maintain the presumption that all filed documents that are not sealed are available both at the courthouse and electronically. This approach would rely upon counsel and pro se litigants to protect their interests on a case-by-case basis through motions to seal specific documents or motions to exclude specific documents from electronic availability. It would also rely on judges' discretion to protect privacy and security

interests on a case-by-case basis through orders to seal or to exclude certain information from remote electronic public access.

"2. Define what documents should be included in the 'public file' and, thereby, available to the public either at the courthouse or electronically. This option would treat paper and electronic access equally and assumes that specific sensitive information would be excluded from public review or presumptively sealed. It assumes that the entire public file would be available electronically without restriction and would promote uniformity among district courts as to case file content. The challenge of this alternative is to define what information should be included in the public file and what information does not need to be in the file because it is not necessary to an understanding of the determination of the case or because it implicates privacy and security interests.

"3. Establish 'levels of access' to certain electronic case file information. This contemplates use of software with features to restrict electronic access to certain documents either by the identity of the individual seeking access or the nature of the document to which access is sought, or both. Judges, court staff, parties and counsel would have unlimited remote access to all electronic case files. This approach assumes that the complete electronic case file would be available for public review at the courthouse, just as the entire paper file is available for inspection in person. It is important to recognize that this approach would not limit how case files may be copied or disseminated once obtained at the courthouse.

"4. Seek an amendment to one or more of the Federal Rules of Civil Procedure to account for privacy and security interests."

Access to criminal case files is given only two options:

"1. Do not provide electronic public access to criminal case files. This approach advocates the position that the ECF component of the new CM/ECF system should not be expanded to include criminal case files. Due to the very different nature of criminal case files, there may be much less of a legitimate need to provide electronic access to these files. The files are usually not that extensive and do not present the type of storage problems presented by civil files. Prosecution and defense attorneys are usually located near the courthouse. Those with a true need for the information can still access it at the courthouse. Further, any legitimate need for electronic access to criminal case information is outweighed by safety and security concerns. The electronic availability of criminal files would allow co-defendants to have easy access to information regarding cooperation and other activities of defendants. This information could then be used to intimidate and harass the defendant and the defendant's family. Additionally, the availability of certain preliminary criminal information, such as warrants and indictments, could severely hamper law enforcement and prosecution efforts.

"2. Provide limited electronic public access to criminal case files. This alternative

would allow the general public access to some, but not all, documents routinely contained in criminal files. Access to documents such as plea agreements, unexecuted warrants, certain pre-indictment information and pre-sentence reports would be restricted to parties, counsel, essential court employees, and the judge."

Bankruptcy case files inherently contain more personal or proprietary financial information than the other systems, and the following options are under study:

"1. Seek an amendment to section 107 of the Bankruptcy Code. Section 107 that currently requires public access to all material filed with bankruptcy courts and gives judges limited sealing authority. Recognized issues in this area would be addressed by amending this provision as follows: (1) Specifying that only "parties in interest" may obtain access to certain types of information; and (2) enhancing the 107(b) sealing provisions to clarify that judges may provide protection from disclosures based upon privacy and security concerns.

"2. Require less information on petitions or schedules and statements filed in bankruptcy cases.

"3. Restrict use of Social Security, credit card, and other account numbers to only the last four digits to protect privacy and security interests.

"4. Segregate certain sensitive information from the public file by collecting it on separate forms that will be protected from unlimited public access and made available only to the courts, the U.S. Trustee, and to parties in interest."

Comment: In 1996 a California Judicial Council advisory committee recommended, after a study addressing comparable issues, that public access to case-related information maintained in electronic form be as complete and unqualified as access in the traditional paper medium. But the recommendation was withdrawn from consideration after extensive opposition from judges, court administrators, attorneys and privacy advocates surfaced in a 1997 public comment period. A new advisory committee, this time excluding representatives of the press and other information "consumers," was convened and its far more modest recommendation was adopted by the council, effective in 1999. The result is not a rule of court but a strictly voluntary Standard of Judicial Administration. It states, among other things, that "Cases involving family law, child support, juvenile law, mental health, probate, (or) criminal law...should not be included in electronic records made available through remote access." As for civil cases not excluded by that category, "A court should grant access to an electronic record only when the record is identified by the name or number of a case and only on a case-by-case basis."

TIMES SEEKING ATTORNEY FEES IN CASE ON AUDIT OF FUNDS TRANSFER (11/9/00)

The Los Angeles Times is before the California Court of Appeal seeking reversal of a trial court's denial of attorney's fees in a public records case. The information revealed was in an audit done by the Alameda Corridor Authority after its controller was shown to have used her office computer to transfer \$3 million in agency funds to her own bank account.

A Los Angeles Superior Court judge ordered release of most of the information requested by the Times under the California Public Records Act - but not every last record. Because of that less than complete result, the judge ruled that the newspaper had not "prevailed" as a CPRA plaintiff and thus was not entitled to recover its court costs and attorney fees as is mandated by the statute.

Controller Nancy Schafer was removed from her post at the \$2 billion Alameda Corridor Transportation Authority, a major rail and truck transit construction project linking Los Angeles with the port at San Pedro, in March 1999. The revelation that she had transferred \$3 million into her personal bank account led the Los Angeles County district attorney's office and authority officials to investigate the incident, the latter using an audit.

Schafer managed hundreds of millions of dollars in agency funds and bond proceeds earmarked for the main portions of the project. She said the transfer was an innocent error and told the Times it happened during the first two transfers of proceeds from the corridor authority's sale of \$1 billion in revenue bonds. About \$3 million, she said, needed to be sent from a bond trust account to a corridor authority account, to allow contractors to be paid.

Schafer said that earlier she had uploaded information from a Palm Pilot, supplied by the agency, into her office computer. The uploaded data, she said, happened to include her personal bank account number, appointments and credit card numbers, kept in the Palm device as a matter of convenience. On the day set for the transfer, Schafer said, she called up what she thought were agency accounts on her office computer and mistakenly selected her bank account as the destination for the \$3 million.

When the agency completed its audit, the Times used the CPRA to request it and related information, and was forced to go to court to obtain it. But not every last record itemized in its request was ordered disclosed, and on that basis the judge ruled that it was not entitled to recoup its attorney fees as the "prevailing plaintiff."

WHISTLEBLOWER LAW PROTEST BUILDS AS CLINTON'S CLOCK TICKS

(11/3/00)

Opposition to the anti-"leak" statute -- and support for a veto -- were mounting, as the November 4 deadline for a Presidential decision approached, reports the Project on Government Secrecy of the Federation of American Scientists (FAS). The legislation would make it a felony to disclose any classified information -- irrespective of harm.

An article in today's (Friday, October 3) Washington Post reported:

"Top Clinton aides failed to reach agreement yesterday on a controversial measure that makes it easier to prosecute government officials for leaking classified information, leaving it up to the president to weigh differing recommendations on whether he should sign or veto the legislation. President Clinton, who is in California campaigning for Democrats, is nonetheless expected to make his decision today on the measure."

The California First Amendment Coalition's executive director, Kent Pollock, is one of more than 30 co-signers on a letter to Clinton's chief of staff, John Podesta, urging a veto. The letter can be read at <http://www.ombwatch.org/info/2000/podestaletter.html>.

The Post article by Walter Pincus notes:

"One awkward problem for those who now oppose the measure, said to include Podesta and (National Security Advisor Sandy) Berger, is the administration's previous approval of the measure before it passed Congress. 'Normally we don't veto bills that we have cleared,' one senior White House official said yesterday."

Embarrassment on premature commitments to the secrecy measure is not limited to the White House. Pincus's report says that lawmakers themselves might be faced with prosecution:

"Confusion on what the bill actually means was highlighted by Rep. Nancy Pelosi (D-Calif.), who during floor debate last month questioned whether its provisions would apply to members of Congress and their staffs. According to a 1970 Supreme Court decision, the 'officers and employees' referred to in the measure would not include senators or representatives, but it would cover their staffs. Yesterday, a Justice Department official told reporters that lawmakers would be covered."

The following are excerpts from the FAS summary circulated Thursday, November 2.

Senator Charles Schumer (D-NY) urged his colleagues to support a veto at a press briefing yesterday. "This bill attempts to protect our national security in such broad and vague terms, and without regard for the potential of rampant overclassification of government information, that it will have profound effects on the ability of an informed citizenry to keep our government honest," he said.

See: <http://www.fas.org/sgp/news/2000/11/schumer.html>

The Chicago Tribune editorial board added its voice to the national chorus this morning: "Making this measure law clearly threatens to protect government errors and misdeeds by keeping the public ignorant. It deserves a veto." See: <http://www.chicagotribune.com/news/opinion/article/0,2669,SAV-0011020252,FF.html>

"This is a bizarre moment," writes Lars Erik Nelson in the New York Daily News. "Ten years after the end of the Cold War, we are about to enact Soviet style secrecy laws. What is worse, we are doing it with Soviet style legislation, drafted in secret, with no public hearings."

See:

http://www.nydailynews.com/2000-11-01/News_and_Views/Opinion/a-86679.asp

The CIA should henceforth be known as the C.Y.A. (as in "cover your ass"), writes columnist William Safire in the New York Times. The new law, he writes, is an "assault on free speech under the phony cover of national security."

See: <http://www.nytimes.com/2000/11/02/opinion/02SAFI.html>

Independent-minded former director of central intelligence R. James Woolsey spoke out against the leak statute in an interview with Jonathan Landay of Knight-Ridder News Service. "It seems to me that it sweeps overly broadly," he said.

See: <http://www.fas.org/sgp/news/2000/11/kr110200.html>

Washington Post cartoonist Herblock weighed in with an editorial cartoon on the new secrecy bill.

<http://washingtonpost.com/wp-srv/politics/herblock/herblock.htm>

Comment: The law that would be created by this bill is being widely referred to as an American "Official Secrets Act." Ironically, the British original is under increasing attack, marked by the abrupt collapse Wednesday, November 1 of the Crown's prosecution of a former army officer. The book's journalist author had also been charged originally, but dismissed as a defendant later based on insufficient evidence. The charged offense was the disclosure in a 1998 book of information on computer surveillance systems used in Northern Ireland, but another journalist showed that all the information said to be secret had been in the public domain at the time the book, *The Irish War*, was published. See <http://www.thetimes.co.uk/article/0,,28966,00.html>.

EDITOR-PUBLISHER SUING POLICE DEPARTMENT FOR PUBLIC RECORDS

(11/3/00)

Tim Crews, editor and publisher of the twice-weekly Sacramento Valley Mirror in Glenn County north of Sacramento, is suing the Willows Police Department, asking the court to order it to begin providing all information defined as releasable under the California Public Records Act. The suit attacks the department's withholding of names and addresses.

Crews, a member of the board of directors of the California First Amendment Coalition, has won numerous awards, including a Beacon from CFAC at its recent Assembly, for his staunchness in going to jail earlier this year rather than divulge the names of confidential sources sought in a criminal prosecution.

His lawsuit, expected to be filed today (November 3) in Glenn County Superior Court, seeks an order directing the department to release CPRA-mandated information for a 10-day period in September in particular, and "in the future," and also to modify its public information policy to conform with the statute, including names and addresses of persons involved in incidents and the locations where they occurred.

Crews says that prior to the current city manager, Michael Mistrot, and police chief, Richard Shipley, the Valley Mirror enjoyed "years of excellent - and perfectly legal - press-police cooperation.

"This is a First Amendment issue," Crews told his readers in the current edition. "We cannot print what we cannot know."

The Willows department, instead of providing access to redacted copies of the original reports, writes digests of selected facts for its press log. The Valley Mirror prints detailed summaries of log entries in each edition. Examples of the Willows department's releases from the September 19 summary cited in the suit are:

"0550 Hours: Officer Lee responded to the 100 block of E. Sycamore street to (Harwell Well Service) to a suspicious person. Upon arrival, he made contact with the employees and it was discovered it was just an employee wanting in the business. No further action.

"1218 Hours: Officer Haas was dispatched to the 600 block of N. Butte street to a report of a physical fight. Upon arrival, he contacted the parties involved who wanted to press charges on each other for assault and battery but both refused to sign the arrest form. Both subjects were released. No further action taken.

"1408 Hours: Officer Porter responded to the 700 block of N. Humbolt street to assist Fire Personnel with an unresponsive male subject. Upon arrival, the subject was found to be deceased. Coroner's Office responded to handle.

"1501 Hours: Officer Porter was dispatched to the 1200 block of N. Wood street to

tenant/landlord dispute. Upon arrival, he made contact with the parties involved and the problem was temporarily solved. No further action."

While the CPRA, in Government Code Section 6254, subdivision (f), allows police to withhold most detailed investigative information from the public, certain basic facts are presumed to be public:

"Other provisions of this subdivision notwithstanding, state and local law enforcement agencies shall make public the following information, except to the extent that disclosure of a particular item of information would endanger the safety of a person involved in an investigation or would endanger the successful completion of the investigation or a related investigation:

"(1) The full name and occupation of every individual arrested by the agency, the individual's physical description including date of birth, color of eyes and hair, sex, height and weight, the time and date of arrest, the time and date of booking, the location of the arrest, the factual circumstances surrounding the arrest, the amount of bail set, the time and manner of release or the location where the individual is currently being held, and all charges the individual is being held upon, including any outstanding warrants from other jurisdictions and parole or probation holds.

"(2) the time, substance, and location of all complaints or requests for assistance received by the agency and the time and nature of the response thereto, including, to the extent the information regarding crimes alleged or committed or any other incident investigated is recorded, the time, date, and location of occurrence, the time and date of the report, the name and age of the victim, the factual circumstances surrounding the crime or incident, and a general description of any injuries, property, or weapons involved

The names and addresses the victims of certain crimes such as sexual assault, child or spousal abuse or hate crimes may be withheld.

UCLA LEGAL SCHOLAR: PRIVACY LAWS THREATENING TO FREE SPEECH (11/3/00)

Proposals intended to protect privacy "are not easily defensible" under First Amendment doctrine, says UCLA law professor Eugene Volokh in a paper released by a think tank Tuesday, October 31. Volokh calls "the right to information privacy" created by legislation rather than contract "a right to have the government stop you from speaking about me."

In the paper, "Freedom of Speech and Information Privacy: The Troubling Implications

of a Right to Stop People From Speaking About You," Volokh contends that "Most of the justifications given for information privacy speech restraints are directly applicable to other speech controls. . . . Accepting these arguments "will be a powerful precedent for those other restraints and for still more that might be proposed in the future."

While he concedes the value of contractually agreed codes of information practices instituted voluntarily in the marketplace, Volokh rejects the legitimacy of government-mandated "fair information practices," arguing that "We already have a code of 'fair information practices,' and it is the First Amendment, which generally bars the government from controlling the communication of information."

The full text of the paper is available as a pdf file at <http://www.pff.org/pr/pr103100Volokhpaper.htm>.

Volokh is a professor at UCLA Law School and a frequently-quoted authority on First Amendment, intellectual property and related legal issues. Published in May as an article in the Stanford Law Review, the paper was posted in the Internet Tuesday by the Progress and Freedom Foundation, a Washington, D.C. think tank founded in 1993 to study "the digital revolution and its implications for public policy." See <http://www.pff.org>.

Foundation President Jeff Eisenach said he decided to release the paper because "far too little attention has been paid to the First Amendment consequences of proposals to regulate information. This article is a tour de force that ought to be read by everyone concerned about our basic Constitutional right to free speech."

Eisenach said the paper is being widely distributed as part of a major project examining government proposals to regulate personal information. That project is being led by Senior Fellow Paul Rubin, who testified earlier in October before the Senate Committee on Commerce.

COURT TO UNSEAL FILES ON MERITS OF EXECUTING YOSEMITE KILLER (11/3/00)

A federal trial judge in Fresno has agreed to lift the seal on a prosecution bill of specifics prepared to justify recommending the death penalty for a confessed murderer. Cary Stayner has pleaded guilty to beheading a young woman in Yosemite National Park last year. He still faces state prosecution for the kidnap and murder of three other women.

Release of the government's document, and a defense response to it, will be held up until the defendant, a motel maintenance man, is sentenced on November 30, despite the request of a media lawyer that the material be made available without delay.

San Francisco attorney Neil L. Shapiro, appearing in a hearing on the issue Monday, October 29 before U.S. District Judge Anthony W. Ishii, was unable to persuade him that an immediate release was legally required. Ishii's rationale was that while Stayner has pleaded guilty to killing naturalist Joie Ruth Armstrong, 26, near her cabin in Foresta early in 1999, the defendant could withdraw the plea before the sentencing hearing, and the need for a jury trial could be revived. Stayner made the plea in September in exchange for a sentence of life without parole.

Release of the prosecutor's evidence supporting a capital case, which Ishii has kept under seal from the moment of its filing early in court proceedings, was sought by the Associated Press, McClatchy Newspapers, the Chronicle Publishing Company and the Hearst Newspapers. The media coalition had earlier failed to persuade Judge Ishii to lift the seal and had an appeal pending before the U.S. Ninth Circuit Court of Appeals when Stayner entered his guilty plea.

Lawyers representing Stayner in a separate pending capital case in Mariposa County argued vigorously against release, contending that publication of the literally gory details would make it impossible to draw an unprejudiced jury from the county's small population. Stayner is accused of kidnapping Carole Sund, her daughter Julie and a friend, Silvina Pelosso from their motel room and murdering them later. The case drew national headlines in 1999.

Judge Ishii said he understood the fair trial, but concluded that a federal judge has no authority to withhold court documents once the case is closed, regardless of possible prejudice in a state court proceeding.

Shapiro, asked by Ishii if the court could keep the material under seal in solicitude for the Armstrong family's feelings, answered that while doing so would respond to an understandable empathetic impulse, there was no basis in law for continuing to keep the public unaware of the reasons why the government had recommended the death penalty.

[Back to top](#)

**LAPD CONSENT DECREE'S PROVISIONS MAY MEAN A BIT MORE
SUNSHINE (11/3/00)**

Mayor Richard Riordan has announced his intention to sign a consent decree ending

federal court pursuit of the Los Angeles Police Department for alleged civil rights violations. Among several extraordinary measures, the decree binds LAPD to hold public information meetings and produce detailed reports on its contacts with minorities.

The city council approved the pact Thursday, and a last-minute hitch was avoided when a superior court judge declined to issue a restraining order sought by the Los Angeles Police Protective League, a union representing line officers. The League wanted city approval of the pact stalled until its own concerns were given due consideration.

The League objects not only to exclusion from negotiations, conducted privately between city staff and U.S. Justice Department representatives, but to two of the resulting provisions as well. One is a massive computer tracking system to be constructed to alert police officials to patterns of alleged and confirmed misconduct by individual officers. That, says the League, would invade officers' privacy.

Another is the requirement that officers record and report in considerable detail every traffic stop, noting the time, place, apparent ethnicity of the driver and passengers, any activity required of the occupants or actions taken by the officer, and the results if any, including vehicle searches or arrests. The League argues that this will unreasonably burden patrol officers in carrying out their duties.

For its part, the city says any impact on League members that must be negotiated will be submitted to good faith bargaining.

Under the decree, LAPD will be the largest police department ever subject to judicial monitoring as a result of the Justice Department's power to sue police agencies suspected of engaging in a "pattern or practice" of civil rights violations. The choice of who will be the court-appointed monitor, charged with reporting to the federal court on progress or the lack thereof in implementing the decree, appears to be the most controversial item remaining to be settled. If city and federal negotiators cannot agree on a choice, the federal court may make the appointment from nominees they separately submit.

In terms of public information, understanding and confidence, the sunshine provisions of the decree fall short of identifying individual misbehaving officers to the public, no matter what or how many their confirmed violations of department standards may be. What they require instead is more general outreach by the department and much more disclosure of patterns which might show disproportionate policing attention given to racial or ethnic minorities.

The two key provisions of the decree dealing with public information require that LAPD:

* conduct, during the first year, at least one public meeting per quarter in each of 18

geographic sectors of the city, to explain the consent decree, the department and its operations, how to work successfully with officers, and how to file a complaint if necessary. In the second and succeeding years only one such meeting per sector would be required. The meetings would be publicized in at least one citywide newspaper, and in various other publications with ethnic readerships, in appropriate languages.

* publish, on its website, semiannual reports with aggregate statistics, broken down by each geographic sector and by race and ethnicity of citizens involved, for all arrests, traffic stop data, and uses of force. Also included would be the summary results of audits conducted into the internal disciplinary process, showing type of misconduct and resulting discipline, broken down by the bureau and rank of the officer. Also to be posted are quarterly reports to the court by the compliance monitor, and annual reports by the city on steps taken to implement the decree.

GROUPS IN COURT TO CHALLENGE SHUTDOWN OF VOTE-SWAP SITES (11/3/00)

American Civil Liberties Union affiliates in Los Angeles and San Diego and the National Voting Rights Project are seeking a court order blocking California Secretary of State Bill Jones from taking criminal action against one or more Internet websites allowing Nader and Gore supporters voluntarily to exchange votes for maximum mutual satisfaction.

The suit for a temporary restraining order on behalf of Voteswap 2000 (<http://www.voteswap2000.com>) was filed Thursday, November 2 in U.S. District Court in Los Angeles. It was to have been matched by another brought by a named voter wishing to use such facilities, according to the ACLU.

The idea behind this and several other similar sites, some of which have voluntarily shut down in the face of threatened prosecution, was described by scholar James Raskin in an October 24 article on the Slate website. Raskin, a professor in constitutional law and the political process at American University, described the reciprocal quandaries faced by both Green Party Nader backers who want a Nader vote total to qualify the party for federal funding in 2004, and Democrats backing Gore who see no problem in Green Party gains - except at the feared cost to the election of their own candidate in certain key states where a vote for Nader costs Gore the electoral college votes and thus is indeed "a vote for Bush."

Wrote Raskin:

"But wait! There is a way for Gore voters trapped in Republican states to liberate Nader supporters in the tossup states to vote for Gore without actually abandoning their

support for Nader and a strong Green Party in the future. The key is a variation on a voting device used in the Senate called "pairing," whereby senators on opposite sides of issues match up their votes if they are going to be away from Washington. (This arrangement is so formal that when the *Congressional Record* reports the ayes and nays on a vote, it reflects the pairs by name.)

"The Gore/Nader vote-swapping plan could use a Web site to pair individual Gore Democrats in Republican states with individual Nader supporters in swing states. Democrats from Texas and other states in the definite Bush column could register at the site by name under a brief text stating that, as Gore supporters in a Republican state, they have concluded that their best hope for contributing to a Gore victory is to vote for Nader in the explicit hope that Nader voters in swing states will correspondingly cast their ballots for Gore. Nader supporters in the swing states could add their names to a similar list under a brief text stating that, as Nader supporters in a tossup state, they have decided to vote for Gore but do so in the explicit hope that Gore voters in Republican states will correspondingly cast their ballots for Nader.

"Using sorting software, the Web site could then match individual Gore voters to individual Nader voters. If just 100,000 Gore supporters and 100,000 Nader supporters in the key states registered and kept their words, both a Gore victory and federal funding for the Greens could be accomplished."

(see full article at <http://slate.msn.com/Concept/00-10-24/Concept.asp>, and a followup Slate summary on the legal questions at http://slate.msn.com/netelection/entries/00-11-01_92442.asp)

As it turned out, one Internet site had already launched with just such a brokering service, and as of early last week there were no fewer than nine: the plaintiff in the current litigation plus:

<http://www.voteexchange.org/voteswap001.htm>

<http://www.nadertrader.org>

<http://www.winchell.com/NaderTrader>

<http://voteexchange.com>

<http://www.votexchange2000.com>

<http://nadergore.org>

<http://www.winwincampaign.org> and

<http://www.voteaucton.com>

Secretary of State Bill Jones, however, saw this reciprocity as criminal, specifically a conspiracy to foster the "inducement" of a particular vote by the offering of a particular "valuable consideration" and thus violate the anti-bribery statutes (Elections Code Sections 18500, 18521, 18522 and 18562). He so notified the Austrian owner of Voteauction.com, demanded that the site be shut down (it's the last link above - to a dead server), and moreover notified the official domain name registers to cancel the site's authorization.

In announcing the legal challenge, ACLU attorney Peter Eliasberg said Jones's reading of the Elections Code is either incorrect or, if accurate, unconstitutional.

"Discussing and agreeing to a co-operative voting strategy is absolutely distinct from offering or receiving payment for a vote," he said. "This is not equivalent to handing someone a five-dollar bill -- it is an obviously unenforceable and unverifiable personal pledge to vote in a certain way."

"Jones's interpretation of this law could conceivably qualify any kind of speech as an inducement," he added. "If I promise to commend a person for voting in a way I approve of, is that offering an inducement?"

Eliasberg offered several examples of common activity that Jones's interpretation of the law would make criminal:

o"Two spouses discuss their vote, realize they disagree on every important issue, and agree that, since they're canceling one another out, neither will vote.

* "Two friendly legislators who disagree with one another's positions arrange not to vote on two separate occasions, when one, then the other, is absent, thus canceling out the effect of their absences on the final decisions made.

* "A politician such as Governor George Bush or Vice President Al Gore offers a monetary inducement in the form of a tax cut to a voter.

* "A politician, during tough economic times, promises 'a chicken in every pot' if voters cast their vote for him.

* 'A political columnist urges voters to do exactly what the Web sites in question urge them to do.

In what must sting Jones particularly, in view of his enthusiastic championing on on-line information resources for voters, Eliasberg accused him of seeming "to be afraid of the Internet and the powers of expression and association that it gives to people.

"That power of combining immediate association and direct speech is the reason people have sought to regulate the Internet more strictly than other media."

One of the sites, Nadergore.org, stopped accepting pledges from New York residents after receiving a request from the New York State Board of Elections.

Jim Cody of Los Angeles, co-proprietor of Voteswap 2000, took the site down Monday, October 30 after receiving a letter from Jones threatening him with a potential for three years of felony liability for every violation. "I guess that would be three years

each for 5,000 violations," he said, referring to the registrations on the site to date.

Meanwhile, California Secretary of State Chief Counsel William Wood reportedly said on Wednesday, November 1, on CNN's Burden of Proof, that winwincampaign.org is legal according to California law: "It's a political discussion, and the Secretary of State of California believes that is protected political speech." Before acting on that quotation, interested voters may wish to check its accuracy with Mr. Wood at (916) 653-6488.

Comment: A. J. Langguth, , author of Patriots: The Men Who Started the American Revolution, informs us that while in colonial Virginia on the eve of the Revolution, electoral "candidates were expected to behave like gentlemen and refrain from asking for votes or making campaign promises," but other amenities that might be viewed as inducements were actually customary:

"A man running for office set out near the polls several barrels of rum and neat whiskey, along with applejack and beer. Any candidate who didn't offer a few drinks was considered too stingy or lacking in respect for his neighbors to deserve their votes. Several years earlier, a planter named George Washington had been rejected for failing to provide decent drink and a roast pig. Washington learned from that defeat, and the next time he ran he bought a quart and a half of liquor for each of his 361 supporters and won his seat in the Burgesses."

ALERT: PUSH IS ON TO SLOW, REVISIT PENDING 'OFFICIAL SECRETS ACT' (10/27/00)

CFAC has joined an effort to thwart what is being called the first American "Official Secrets Act" that is on its way to becoming law without any hearings. An undebated section of the 2000-2001 Intelligence Authorization Act would make it a federal crime to disclose classified information, whether or not the disclosure injures national security interests.

CFAC, along with many other organizations, has signed on to a letter by Patrice McDermott of the nonprofit organization OMB Watch (<http://www.ombwatch.org>) urging President Clinton to veto the legislation. McDermott pointed out in a Tuesday, October 24 e-mail alert that "Congress could move back a year the effective date for the law to take effect, through an amendment to this year's spending bills. This would allow the House and Senate Judiciary Committees -- which normally review all changes in criminal law -- to hold hearings on the consequences, before Americans lose freedom of speech through a fait accompli."

The full authorization bill is headed for the White House after the insertion of the disclosure crime provision by voice votes on October 12. McDermott, in a Thursday,

October 26 update, said the bill as a whole faces a veto, but pressure needs to be kept up.

"It is highly likely that the President is going to veto the appropriations bill to which this language is attached. Not because of this Official Secrets language, but for other reasons. If this does transpire, the (White House) will have a seat at the negotiations when the bill goes back to Congress. In the meantime, please do write to the members of the conference committee... The more support there is for a rider delaying implementation, the better the chance of getting it in the negotiated bill."

McDermott's earlier message incorporated background and contact information from Doug Hartnett of the nonprofit Governmental Accountability Project (<http://www.whistleblower.org>), which reads as follows:

Date sent: Tue, 24 Oct 2000 17:08:49 -0400
From: Doug Hartnett <hartnett@whistleblower.org>
Subject: Urgent Action Alert

FREE SPEECH AND WHISTLEBLOWER RIGHTS FACE SEVERE THREAT

I. INTRODUCTION: On October 12 Congress made it a felony crime to disclose classified information, over protests that this hasty move would create an unconstitutional U.S. version of the British Official Secrets Act. By bypassing normal committee jurisdiction, and using unscheduled voice votes, sponsors of H.R. 4392, the Intelligence Authorization Act, succeeded in passing a law that will profoundly affect Congress and the public's right to know about government misconduct.

Despite reassurances that it would not change the meaning of "classified," the fine print in the bill removes all requirements that classified information be clearly marked to indicate its status. Under the new law, information could be classified even if there are no markings or other warning. That revives a discredited concept from the 1980s known as 'classifiable' information, which means virtually anything. It forces whistleblowers to seek advance permission before exposing nearly any evidence of bureaucratic misconduct, or risk criminal liability. The double whammy from this new definition combined with criminal liability creates an Official Secrecy Act far worse than the British version publicly feared.

This action alert explains the twin threats in more detail below. But there is still a chance to stop this from becoming law before the end of this session.

HOW YOU CAN HELP

We still have a chance to turn this legislation back before Congress adjourns, but only if we take IMMEDIATE ACTION. Support among Members is building to place a rider on the Commerce Justice, State and Judiciary appropriations bill to delay the

effective date of the criminal liability provision until 2002.

MESSAGE CONTENT:

Demand that the effective date of Sec. 303 of H.R. 4392, "Prohibition on Unauthorized Disclosure of Classified Information," be delayed until 2002. This will allow proper hearings and consideration of the far reaching impact this provision has on the First Amendment, whistleblower rights, and the Congress's and the public's right to know. Congress should not take such drastic action on a voice vote and without even a hearing to examine the impact it will have!

Reps. Hyde, Conyers and Barr are on record opposing the secrecy provision. Both Conyers and Barr spoke against it on the Floor of the House (see Cong. Rec. pp. H9857-H9859, Oct. 12, 2000) Rep. Hyde is the most likely candidate to offer the rider. Sen. Grassley is a longtime whistleblower champion who is intensely committed to turning back this legislation. (All whistleblowers should contact him!). Grassley is lobbying his colleagues in the Senate.

Rep. Rogers and Senator Gregg, as Chairs of the respective Appropriation Subcommittees, are key to allowing the rider.

ADDITIONAL BACKGROUND AND DETAILS

I. CRIMINALIZING CLASSIFIED LEAKS: "THE OFFICIAL SECRETS ACT"

This issue was the focus of public controversy, making unauthorized disclosure of

classified information a felony with three years imprisonment. Current law already bans classified leaks, and national security threats can be prosecuted. But now an unauthorized disclosure of official secrets will be a crime per se, even if the leak defends national security against corruption or bureaucratic abuse of power shielded by secrecy.

Congressional leaders rammed the bill through in unscheduled voice votes, but a broad range of opponents warned it was an irresponsible threat to constitutional rights, including the New York Times, Washington Post and Washington Times. Conservative Republican Representative Bob Barr wrote, "Most government scandals are revealed through the public disclosure of such information, better known as "whistleblowing." If this provision is signed into law, such disclosures would become virtually non-existent." Liberal Democrat John Conyers said "it will scare the bejesus out of whistleblowers and they will be able to be criminally prosecuted. . . ." Both are on the House Judiciary Committee. That Committee normally considers legislation making any major change in criminal law, but was entirely bypassed. Chairman Henry Hyde and Conyers jointly protested that the bill "has profound First Amendment implications, and goes to the very heart of the ability of the public to remain informed about matters of critical public interest, which often relate to governmental misdeeds."

Representative Conyers illustrated the impact in a floor speech prior to House passage. He listed examples of disclosures that would have been crimes if the bill were law over the last 30 years:

"One, the scope of the government's activities in Vietnam through the Pentagon papers would have resulted in prosecutions. Two, the CIA's complicity in the overthrow of Salvador Allende. Three, the Nixon administration's support of Pakistan in its 1971 war with India. Four, the revelations about spying at U.S. laboratories. Five, China's alleged military involvement with Pakistan and North Korea. Six, basic information about the size of the CIA's budget."

II. THE RETURN OF "CLASSIFIABLE"

Under current law, information does not qualify as classified unless it complies with rules requiring specific designation of its status as secret. Citizens are not required to guess. But H.R. 4392 has a new definition of "classified": citizens can be prosecuted without the information being marked secret. In fact, whistleblowers, journalists or others can go to jail for revealing anything if they have "reason to believe" it is properly classified -- even if it were not. The bill eerily resembles a 1980s concept called "classifiable," meaning liability for anything that should or could have been classified. As the key Administration official boasted, it means "virtually anything." In 1988 the courts threw out this blank check for secrecy as unconstitutionally vague. The return of "classifiable" creates an Official Secrecy Act, because now virtually anything can be an Official Secret.

The bill creates three strikes against the public's right to know, by:

- 1) realistically ending anonymous dissent;
- 2) requiring advance permission to exercise free speech rights; and
- 3) locking in advance warnings that permit wrongdoers to seal cover-ups by destroying evidence or classifying information after the fact because a whistleblower is forced to check the status of unmarked information. The Catch-22 for would-be whistleblowers is either expose themselves through a prior inquiry, or risk criminal liability by guessing about whether information they disclosing is may be unmarked but classified. More than a chilling effect, that will create a Deep Freeze on dissent and turn would-be whistleblowers into silent observers of fraud, waste and abuse.

Examples of vindicated whistleblowers who would be criminals under the Official Secrecy Act include those who disclosed:

- 1) security breaches creating vulnerability to espionage and theft of classified information;
- 2) evidence indispensable to expose human rights abuses like the My Lai massacre and Letelier assassination;
- 3) blank checks for the world's most expensive nuts, bolts, coffee pots and toilet seats;
- 4) falsified records concealing test failures that compromised Star Wars, the Bradley fighting vehicle and aircraft radar detectors;
- 5) Pentagon lies about multi-billion dollar cost overruns on weapons systems;
- 6) safety violations that made nuclear weapons and power plants accidents waiting to happen;
- 7) security breaches leaving nuclear weapons and other defense facilities vulnerable to terrorists;
- 8) false statements concealing leaks of radiation and other toxic substances into the environment;
- 9) massive worker exposure to radiation; and
- 10) systematic corruption in U.S. Justice Department programs training foreign police how to catch government corruption and defend human rights.

Ironically, Congress passed H.R. 4392 the same day it approved for the 13th straight year an appropriations rider known as the "anti-gag statute," which bans Executive Branch spending to implement or enforce gag orders violating congressional laws. That means virtually nothing after the Official Secrecy Act, which is a congressional blank check for gag orders. It is doubtful that legislators knew they were approving fundamentally contradictory policies the same day.

Comment: CFAC almost never expressly urges members to contact elected representatives on pending bills, but if ever a measure, its timing, its lack of deliberation and its consequences merited an exception, this one does. To the above directly involved legislators, you may want to add Senators Boxer (<http://www.senate.gov/~boxer/contact/webform.html>) and Feinstein (<http://www.senate.gov/~feinstein/contact.html>) and your Member of Congress, whose e-mail address can be easily located

by using the lookup feature at <http://www.house.gov/writerep>.

CAMPUS CRIME DATA: REPORTING DEADLINE RUNS, NEW GUIDE AVAILABLE (10/27/00)

Of the 6,700 college and university campuses required for the first time to submit copies of their mandated annual campus crime reports to the federal government, 325 had failed to do so by the October 1 deadline. Meanwhile, the Student Press Law Center in Arlington, Virginia is offering an updated campus crime law guide for student journalists.

The Sacramento Bee reported Thursday, October 26 that the 325 schools missing the deadline will get a letter from the U.S. Department of Education giving them an extra 15 days to comply, and if they do not, they could face fines of up to \$25,000.

Since 1990 the Jeanne Clery Act has required federally-funded (which means virtually all) postsecondary schools to keep, organize and periodically report on- or near-campus incident statistics covering a variety of crimes against the person or property, disclosing them to prospective and actual students, parents and campus employees. For the first time this year copies of the annual summary reports were to have been submitted to the Department of Education by October 1.

For copies of reports from one or more California (or other) schools, see <http://ope.ed.gov/security>.

On Wednesday, October 25 the Student Press Law Center released the third edition of its popular publication, "Covering Campus Crime." The 52-page booklet provides a detailed description of the campus crime information student journalists have a legal right to, including a step-by-step guide for obtaining crime records.

The guide has sections that describe how journalists can obtain access to three different kinds of campus crime information: police or security department logs, campus crime statistics and disciplinary proceedings involving criminal behavior. The booklet incorporates regulations regarding federal crime reporting laws issued by the Department of Education this summer and includes an appendix with citations to statutes and resources related to campus crime reporting.

The publication was supported by a grant from the Sigma Delta Chi Foundation, the educational arm of the Society of Professional Journalists. Copies of the booklet can also be downloaded free from the center's Web site, <http://www.splc.org/resources/ccc/cccindex.html>.

GOVERNOR VETOES BILL ON PUBLIC RECORDS REVIEW BY ATTORNEY GENERAL (10/6/00)

Governor Gray Davis, citing the cost of implementation, has vetoed for the second time legislation that would have permitted citizens to ask the attorney general to review state and local agencies' denial of requests for public records. Instead, Davis said he would direct his consumer affairs chief to investigate how well state agencies are complying with the California Public Records Act.

Davis' veto message, released October 1, reads:

"To Members of the California State Senate:

"I am returning Senate Bill No. 2027 without my signature.

"The bill would create a procedure for a person to request the Attorney General (AG) to review a denial by a public agency of a written request for disclosure of information under the Public Records Act, and would set up the time limits for the AG to complete the review. The bill would establish penalties of up to \$100 per day if a public agency declines to comply with a request for disclosure of information and the court determines that the agency acted in bad faith. The AG would be required to mail a copy of the opinion to the requester and to the denying agency, maintain copies for public inspection, publish the opinions annually in a special volume of AG Opinions, and made the opinions available on the Internet.

"While proponents of this bill contend that a weakness of the Public Records Act is the lack of recourse when state agencies refuse to comply, this bill does not address that issue. Instead the bill sets up a bureaucratic reporting mechanism, involving the preparation, posting and mailing of AG opinions on the merits of a state agency's decision to withhold requested information. The costs to comply with this bill would be borne by the General Fund and would likely be significant. Therefore, I am vetoing this bill.

"I do, however, believe that state agencies should be fully responsive to legitimate public record requests. Accordingly, I am directing my Secretary of State and (sic) Consumer Affairs, Aileen Adams to conduct a review of all state agencies' performance in responding to PRA requests and to make recommendations on appropriate procedures to ensure a timely response."

SB 2027 was the second attempt by Senator Byron Sher (D-Palo Alto) to provide attorney general review as a check against denials of access to public information held by state and local agencies. Currently, such denials are open to challenge only by private lawsuits. A year ago Davis vetoed the first effort, SB 48.

The main difference between that bill and SB 2027 was that the latter expressly exempted state agencies (as opposed to local government units) from attorney general review if their denial of access had been based on the attorney general's advice. All but a handful of state agencies use the attorney general's office for advice and representation in California Public Records Act requests. Last fall Davis said having the attorney general review records request denials would present a conflict of interest, so he vetoed SB 48.

SB 2027 addressed this issue by simply exempting from the review any records denial based on the attorney general's advice. But if the attorney general was never consulted, the agency's denial would have been subject to review by that office.

Otherwise, SB 2027 went to the governor essentially in the same form it has had since its initial introduction as SB 48 last year:

- A person having submitted a written request for inspection or copying under the California Public Records Act would have been entitled to a written form of denial citing the justification for nondisclosure.
- A disappointed requester could have sent the request and denials letters to the attorney general's office for review, with a response due normally in 20 to 40 days.
- The resulting opinion would have had no greater or lesser force than any other attorney general's opinion, and would not have compelled disclosure - or excuse it - on its own authority. But it could have been cited by either the agency or the requester in any subsequent litigation, assuming the agency, using a 10-day grace period in the bill, did not change its mind and release a record in the face of an opinion that it should do so.
- In any event the opinions generated under this procedure would have been printed annually, published in bound volumes and displayed on the Internet for free access.
- The attorney general, in analyzing a denied request for a record whose content was not obvious, could have requested to see the record or asked for additional information on a confidential basis in order to make a more confident assessment. The agency would not have been bound to share the information thus, but its refusal to do so might have worked against its interests if the attorney general found the refusal inadequately justified.
- Apart from attorney general review, a court would have been authorized in appropriate cases brought under the CPRA to not only declare a record public and order its release, but also to assess a monetary penalty against the agency (to be paid to the requester in addition to court costs and attorney fees) of up to \$100 for every day the agency withheld requested records in bad faith.

Comment: The governor cited "significant costs" in vetoing last year's bill as well, but then it was almost an afterthought to the main objection concerning the attorney general's conflicting roles. This year it was the only rationale. The attorney general's estimate of first year costs was \$500,000 - coincidentally identical to the cost estimate the governor did not see as an obstacle to adding a new privacy ombudsman's office to his consumer affairs department as the result of his signing Senator Steve

Peace's SB 129.

"The Governor's veto shows disdain for the public's right to know and incredible ignorance of the problems every-day citizens face when attempting to arm themselves with the information necessary to participate in their government," said CFAC Executive Director Kent Pollock. "Democracy thrives on sunshine and shrinks in the darkness."

[Back to top](#)

LOCAL GOVERNMENT DENYING ACCESS TO CLEARLY PUBLIC RECORDS (9/29/00)

Local government agencies in California routinely disregard the state's Public Records Act, rejecting outright-or stonewalling-requests for indisputably public information more than 75 percent of the time. Citizens seeking key records are forced either to abandon their pursuit of the records or to take the costly step of hiring a lawyer to sue the agencies to compel disclosure.

In a recent survey leading to this conclusion, sheriffs' departments were the worst offenders, denying requests for clearly public records 80 percent of the time. This rejection rate compared to 64 percent for police departments. Cities performed only slightly better, denying 60 percent of the requests for public documents, while school districts denied access almost 33 percent of the time.

This [public records "audit,"](#) designed to assess local government compliance with the California Public Records Act (CPRA), was undertaken by the California First Amendment Coalition (CFAC) and the Society of Professional Journalists (SPJ) and was supported by volunteer students of the journalism departments from five California universities.

Such audits, increasingly conducted in other states by professional journalists and news organizations, involve making formal requests for government documents that are clearly public by law, and then monitoring how government officials respond to those requests. The research issue: Do they comply fully, partially or not at all?

The California audit began last spring and was only recently tabulated. Under the supervision of their journalism professors, several dozen university students asked more than 130 local government agencies in the San Francisco Bay Area and the counties of Los Angeles, Orange and San Bernardino for information whose release to the public is clearly mandated by state law.

The records sought were those that track responses by police to citizens' distress calls, why school boards expel students, how cities pursue health and safety violations by slumlords, and why people die in prisons, jails or simply under arrest.

Police departments were asked for logs of 911 (emergency request for assistance) calls under the authority of Government Code Section 6254, subdivision (f), which allows secrecy for most information about law enforcement investigations, but which also says, in pertinent part:

"Other provisions of this subdivision notwithstanding, state and local law enforcement agencies shall make public the following information, except to the extent that disclosure of a particular item of information would endanger the safety of a person involved in an investigation or would endanger the successful completion of the investigation or a related investigation:

"(2) Subject to the restrictions imposed by Section 841.5 of the Penal Code*, the time, substance, and location of all complaints or requests for assistance received by the agency and the time and nature of the response thereto, including, to the extent the information regarding crimes alleged or committed or any other incident investigated is recorded, the time, date, and location of occurrence, the time and date of the report, the name and age of the victim, the factual circumstances surrounding the crime or incident, and a general description of any injuries, property, or weapons involved.

*This section provides, " no law enforcement officer or employee of a law enforcement agency shall disclose to any arrested person, or to any person who may be a defendant in a criminal action, the address or telephone number of any person who is a victim or witness in the alleged offense."

Despite the fact that logs of 911 calls contain the information specified as public as noted above, departments complied only 35.9 percent of the time - after both an initial oral request and, where necessary, a follow-up written request.

In rejecting the overwhelming majority of the requests, police departments wrongly informed the requesters that 911 dispatch information was confidential under the law, or could only be obtained with a subpoena. One department demanded that the requester sign an affidavit stating that she had never been arrested in that department's jurisdiction.

School districts were asked for records of pupil expulsions under the authority of Education Code Section 48918, which states in subdivision (k):

"The governing board shall maintain a record of each expulsion, including the cause therefor. Records of expulsions shall be a nonprivileged, disclosable public record."

The attorney general has concluded that even the pupil's name must be included in any disclosed expulsion order. (Opinion No. 96-501 [1997])

Nonetheless, school districts complied only 67.4 percent of the time - after both an

initial oral request and, where necessary, a follow-up written request. This rate of compliance was the best shown in the audit, but only after a written request-the initial oral request was denied 71.7 percent of the time.

Cities were asked for copies of notices to landlords of health or safety-related code violations rendering their premises "unfit for human occupation," under the authority of Government Code Section 6254.7, which states in pertinent part:

"(c) All records of notices and orders directed to the owner of any building of violations of housing or building codes, ordinances, statutes, or regulations which constitute violations of standards provided in Section 1941.1 of the Civil Code, and records of subsequent action with respect to those notices and orders, are public records."

Conditions triggering such notices are serious health and safety defects, including leaky walls or roofs, broken windows or doors, faulty plumbing or gas facilities, the lack of hot and cold running water connected to a sewage disposal system, faulty heating or electrical systems, premises rented with "accumulations of debris, filth, rubbish, garbage, rodents and vermin" or without adequate garbage or trash receptacles, or failure to maintain floors, stairways and railings in good repair.

Cities complied with the mandate to disclose such notices only 39.6 percent of the time overall, and rejected the initial oral requests 79.2 percent of the time.

Sheriff's departments were asked for copies of reports to the attorney general concerning the deaths of persons in custody, pursuant to the authority of Government Code Section 12525, which states:

"In any case in which a person dies while in the custody of any law enforcement agency or while in custody in a local or state correctional facility in this state, the law enforcement agency or the agency in charge of the correctional facility shall report in writing to the Attorney General, within 10 days after the death, all facts in the possession of the law enforcement agency or agency in charge of the correctional facility concerning the death. These writings are public records within the meaning of subdivision (d) of Section 6252 of the California Public Records Act (Chapter 3.5 (commencing with Section 6250) of Division 7 of Title 1), are open to public inspection pursuant to Sections 6253, 6256, 6257, and 6258"

Nevertheless, sheriffs' departments shared this information with the requesters only 20 percent of the time: four out of five (in Los Angeles, Orange, San Bernardino and San Mateo Counties) failed to comply on the initial oral request, and the response did not improve after the written request. Only in San Francisco, where state access law is backed by a powerful, citizen-crafted Sunshine Ordinance, was access to the reports granted-on the first oral request.

Audits such as the one done by SPJ and CFAC have been shown to be an effective way to test government compliance with state public records laws. Over the last several years, audits have been done in more than 13 mid-western, southern and eastern states by the media, journalism schools, and coalitions of citizens concerned about government secrecy. (See a summary of most of these audits at <http://www.freedomforum.org/news/2000/03/2000-03-15-23.asp>)

Almost without exception, the audits have found that government officials fail to comply with public information laws in the majority of requests. The surveys also reveal that even if records are released, government agencies often fulfill requests only partially or take inordinate amounts of time to disclose the information sought.

But in almost half these states, the audits have prompted action by state governors and legislatures to improve open records laws and their enforcement. Perhaps the most notable survey was done in Indiana more than two years ago. The nine-month effort, mobilizing the unprecedented collaboration of seven daily newspapers, sent reporters fanning out over every county to test compliance. It was the first statewide audit in the country and found that government officials flagrantly violated the state's open records laws by refusing to turn over obviously public information to citizens.

In response, Indiana Governor Frank O'Bannon created the office of state Public Access Counselor, formed a task force to study problems with state public records laws, and issued warnings to offending agencies. The state legislature also created a blue-ribbon committee to look into ways to improve the state's open records laws.

The access counselor, a kind of ombudsman, has the power to provide written advisory opinions in response to formal complaints. The counselor also responds informally to citizens' questions and complaints about access to public records and even meetings of public agencies. Queries are taken and answered by telephone, e-mail or postal letter. (See the counselor's web site at <http://www.state.in.us/pac>)

Comment: The facts of these preliminary findings speak for themselves. The legislature has made it very plain it wants citizens to be able to find out which landlords are being cited for slum conditions, and how housing health and safety laws are being enforced. It wants citizens to determine, if they wish, how well public safety agencies are responding to calls for help from people who are witnessing or suffering crimes or facing other great hazards. It wants citizens to be able to monitor their schools to determine if students are being expelled for proper cause, and on a fair and non-discriminatory basis. And it wants citizens to be able to learn when, how and why prisoners - or even those simply arrested or taken into custody - lose their lives as well as their freedom.

Government documents providing this information were carefully chosen for this audit as a measure of how well public agencies respect and comply with their duty to stay accountable. If these clear, unqualified mandates are ignored or scorned, unlawful

secrecy is all the more likely where the Public Records Act gives state and local agencies the discretion to keep secrets based on their reading of "the public interest."

Although journalists and those who train them were integral to this audit, the concern is not with how well reporters fare. Newspapers and broadcasters have formidable resources to overcome official secrecy, including the power to draw on inside sources, to write expose stories and issue damning editorials, and to go to court if need be. Average citizens have no such alternatives or leverage. If they are told that government information is none of their business, they almost always have to swallow that answer and public officials know this. There is no prompt and affordable remedy or authoritative review in California for those whose requests go rejected, or even totally unanswered. Public officials know this as well.

This lack of consequences alone probably explains most of this astonishingly high level of rejection. Plainly, the Public Records Act needs serious attention by the legislature and Governor Davis if it is to be a force for informed self-government by voters and taxpayers.

CFAC TO JUDICIAL COUNCIL: SUNSHINE PROVISIONS NEEDS TWEAKING (9/29/00)

The California First Amendment Coalition has told the state's court system governors that a proposal for releasing documents and conducting public meetings concerning trial court funding and its impact on court employees could stand some improvements. CFAC primarily cautions about allowing wide exceptions to the disclosure rule based on judgment calls favoring secrecy.

(The full text of the proposal and its drafters' comments is enclosed with this FLASH as an Adobe Acrobat pdf file and can be found on the California Judicial Council's web site at <http://www.courtinfo.ca.gov/invitationstocomment/spproposals.htm>.)

The judicial council set Friday, September 29 as the final day for comment, and CFAC submitted its views by an e-mail submission on that date, having seen the call for comments only two days earlier.

The proposed rule essentially calls for public release by both the judicial council and local court systems of records showing budgets and actual expenditures for trial court funding, and other information affecting pay and working conditions for court employees. It also for the first time formally mandates opening meetings of the judicial council to public attendance - for those discussions concerning budgets and court funding.

The proposed rule is the result of recently passed legislation, AB 2459 (Wiggins and Hertzberg), which requires the council to "adopt rules to provide for reasonable public access to budget allocation and expenditure information at the state and local level" as well as rules "ensuring that, upon written request, the trial courts provide, in a timely manner, information relating to the administration of the courts, including financial information and other information that affects the wages, hours, and working conditions of trial court employees."

CFAC's letter states:

"The California First Amendment Coalition is pleased to learn of the major thrust of this proposal to bring sunshine to certain fiscal and managerial aspects of California court administration.

"As described in the summary on the Judicial Council's Internet web site:

"The proposal would require trial courts and the Administrative Office of the Courts to maintain for 3 years and make available upon request budget and management information. With regard to council meetings on trial court budgets it provides that notice and copies of written materials shall be given to interested individuals; that the meetings are to be open to the public; that the public may present written materials to the council; and that the public may request the making of an oral presentation to the council'

"We note certain ambiguities, however, which should be clarified in a manner consistent with the legislative mandate triggering this process.

"1. References to the California Public Records Act

The proposed rule indicates that it is not intended to require disclosure of information that would be exempt under the California Public Records Act, and the drafters' comments list a number of CPRA exemptions that accordingly might apply. This approach significantly undermines the force of the rule.

"As you are probably aware, the CPRA permits, in Government Code Section 6255, withholding of information not exempt under any particular statutory exception, simply by demonstrating that given the particular circumstances, the public interest in nondisclosure outweighs the public interest in disclosure. For all practical purposes, this 'wild card' section allows the government to improvise ad hoc rationales for secrecy which are impervious to any challenge short of formal litigation.

"The California Supreme Court, moreover, has used Section 6255 to engraft into the CPRA a common law "deliberative process" privilege whose boundaries have yet to be discovered (see *Times Mirror Co. v. Superior Court*, 53 Cal. 3d 1325 and its progeny), but which has so far been applied to utterly factual material the disclosure of which would allow the public to draw inferences about the drift of executive thought

processes in reaching decisions. The CPRA admits of other broad exemptions (preliminary drafts, records pertaining to pending litigation, etc.) whose application to the information covered by this rule is hard to discern.

"We suggest that a better approach, inviting less confusion and conflict, is to embody within the rule a precise definition of the types of records and information that will be disclosed, without cavil or qualification. While there may be marginal issues of interpretation left, surely a plain list of what the employee groups and the public can expect to be provided without argument would advance the objectives of this rule considerably, and should not be that difficult to produce.

"2. The 'Internal' Exception

The proposed rule expressly exempts from disclosure 'internal memoranda' without defining that term. Our experience with executive branch and local agencies under the CPRA is that this phrasing is too often used casually and conclusorily simply to refer to information which in the view of some official is not appropriate to make 'external,' i.e. to share with the public. The term almost invites creation of a rubber stamp-INTERNAL- for convenient use in instantly classifying documents for secrecy. Again, what this means should be spelled out to avoid needless confusion and conflict.

"3. Enforcement Incentives

As the comment notes, there is no specified remedy. Under the CPRA, a person successful in obtaining a writ of mandate for disclosure is entitled to court costs and attorney's fees. If there were no such provision there would be far fewer enforcement actions, which are already notoriously infrequent. A purported disclosure mandate without at least a discretionary public interest provision for attorney's fees is designed to be ignored.

"4. Meeting Notices

Notice of public discussions by the Judicial Council of trial court funding issues is proposed to be sent to employee organization representatives who request such notice. With little extra cost and effort the notice could be sent to anyone requesting notice, and we believe it should be. While posting on the Council's web site is also required, experience shows that this useful resource is no substitute for the pointed impact of a direct notice, which could easily be accomplished by e-mail."

[Back to top](#)

STORIES ON U.C. CAMPUS CRIME SECRECY SPARKS CONGRESSIONAL INTEREST (9/29/00)

A two-part expose by the Sacramento Bee published recently shows what appears to be widespread failures at University of California campuses, and especially at U.C. Davis, to disclose sexual assault crimes affecting students and others as required by federal law. The university president pledged to check the facts, and a congresswoman said she was looking into hearings.

The series, published on September 24 and 25, reports the results of a Bee investigation into the university's compliance with the federal Clery Act, which mandates that all colleges and universities receiving federal funding - which in practical terms means virtually every institution of higher learning - must summarize and periodically report to students, parents and prospective students on- or near-campus crimes in certain categories, including sexual assaults.

The federal law is named after Jeanne Clery, a Lehigh University student who was raped, beaten and murdered by another student in her dormitory room in 1986. Her parents founded Security on Campus, Inc., a nonprofit organization dedicated to improving safety on campus and informing students and parents of the dangers of underreporting sexual and other violent crimes at colleges and universities.

Underreporting was determined by comparing the universities' reports to the FBI (under a separate legal requirement) and anecdotal information from rape counseling and other non-university sources with the official disclosures made under the Clery Act. Deficiencies were shown to be widespread, and U.C. President Richard Atkinson announced he was ordering the formation of an internal task force to determine whether campuses are complying with Clery Act disclosure requirements.

In addition, Rep. Lynn Woolsey (D-Petaluma) told the Bee she was "looking into holding hearings in the next Congress to determine what roadblocks campuses are facing." Woolsey, who said she was "appalled" at the prospect of underreporting sex crimes on campus, is a member of the House Committee on Education and the Workforce.

Officials at U.C. Davis, which was the focus of the entire second-day story in the series, are challenging what they call distortions in the newspaper's account.

(The full story is on the Bee's web site beginning at http://www.sacbee.com/news/news/local01_20000924.html. For related stories, use the search function with the keyword "Clery". For full information on the Clery Act and campus crime reporting problems nationally, see the Security on Campus web site, <http://www.securityoncampus.org>).

[Back to top](#)

GOVERNOR VETOES RECORDS-ON-INTERNET BILL (9/22/00)

Governor Gray Davis, acting on September 10, vetoed a bill that would have required state agencies to list their official reports and studies on their Internet sites. The governor's rationale was similar to a note about the bill in an earlier FLASH report: It's one thing to put reports on the Web, but given the number of official Web sites, how would one find them?

As noted in the FLASH report of April 21, AB 1759 by Assemblyman Lou Papan (D-

Millbrae) was prompted by last year's disclosure that the Department of Health Services quietly failed to publicize inconvenient poll data.

It was revealed in a report by the Auditor General that the department failed to disclose the fact that a poll it had taken to assess the feelings of bar owners toward the ban on smoking came up with general lack of support. This outcome undercut the official line that bar proprietors were satisfied or even happy with the prohibition, and while the department did not turn down requests for poll results, it apparently never got any requests because no one outside knew a poll had been taken.

Papan's AB 1759 was initially unclear on whether the reports and studies themselves would have to be fully posted. The word used in the bill is "listed," suggesting that a one-line title or thumbnail description might be sufficient. In any event, the bill required the listings to include completed and in-pipeline reports and studies, to be refreshed every 10 days to "list" also completed or updated documents.

The FLASH comment in April stated:

"This bill would represent a watershed advance in the California Public Records Act, which up to now has been an information-upon-specific-request law with no duty on the government's part to alert the public as to what information is available. To make this transition far more useful, however, the bill should require creation of a central Web site to house all state-generated reports and studies, cross-referenced to the originating agency's Web site. Just as it does little good to deem a report accessible to the public if no one knows it exists, it does little good (except for insiders) to require disclosure on each of scores of Web sites if no one knows that they exist."

The governor's veto message states:

"This bill would require all State agencies to post on their Internet sites a list of all of its reports and studies that are subject to disclosure under the Public Records Act (PRA). The bill would require that the list must be continuously updated to include every report within 10 days after its initiation or completion. The legislation is not clear and fails to indicate if the reports and studies to be posted would be those completed on or after date of enactment, or how the public is to access the reports. Consumers would have great difficulty, even those with extensive knowledge of the Internet, finding a list without links or clear instructions to make this effort worthwhile. As written, the bill would only provide information in a highly inefficient and confusing form. A stand-alone list of reports and studies does not seem to meet the stated intent of the Public Record Act."

[Back to top](#)

FEDS' PROPOSED LAPD REFORM INCLUDES ONLINE SUNSHINE ITEM
(9/15/00)

The consent decree proposed by the U.S. Department of Justice's Civil Rights Division as a way to reform the Los Angeles Police Department has an online disclosure requirement to help restore public confidence in that scandal-ridden institution. But the city's negotiators say this Web site information center goes too far and is not acceptable.

Signing on to the decree is the city's only alternative to defending a major civil rights lawsuit alleging serious and repeated violations by LAPD over a period of years, culminating in the Rampart Division corruption incidents, division chief Bill Lann Lee told the city council on Wednesday, September 13.

"We are insisting," Lee said, " that the consent decree hold city officials directly accountable to the public for their progress in making these reforms through regular assessments and reports by an independent monitor."

By late this week nine of the 15 council members were reportedly on the record as willing to sign on to such a decree, while four others were opposed and two undecided. Ten votes would be needed to survive a mayoral veto, and both Mayor Richard Riordan and Police Chief Bernard Parks have been lobbying against the decree.

They want at most a kind of contract, but not one supervised by a court as the decree would be, for at least five years. The council has set another special meeting on Monday, September 18 to reconsider the proposal, on which Lee is pushing for closure on by the end of the month.

Two key elements of the decree are a proposed newly created independent monitor to get detailed information from LAPD and file periodic reports with the supervising federal court, and a sophisticated computer database to track problem officers and units as incidents and even complaint clusters begin to suggest the need for attention.

While most of that information would remain as confidential as it is now, one novel element of the proposal would provide the community with considerably more concentrated information than it now gets. Item 163 of the proposed consent decree states:

"The LAPD shall prepare and publish on its Web site semiannual public reports that include aggregate statistics on LAPD activities and procedures broken down by area and unit and the race/ethnicity of the civilians involved. The reports shall include statistical summaries of uses of force, administrative investigations (including allegations, resolutions, and resulting discipline and positive corrective actions), searches and seizures, traffic and pedestrian stops, and other relevant information regarding LAPD law enforcement activities. Such reports shall include summaries of the results of audits prepared pursuant to the requirements of this decree. The LAPD shall also post a list and brief description of completed audits on its Web site."

The city's negotiators (who have on many other points of the proposed decree signaled

acceptance) reject this proposal, offering instead a requirement only that the department:

"report quarterly on its Web site a brief description of (i) each report of a specified audit completed in that quarter and any significant actions taken as a result of such audits and (ii) any new policies or changes in policies made by the department to address the requirements of this agreement..."

The city negotiators insist that all that should go on a Web site is a summary of the documentation otherwise required under the agreement -- not specially produced syntheses of various reports and data sources, tailored specifically for public information.

Another proposed requirement would be that existing community advisory groups in each are have direct participation in setting up outreach programs, including public meetings. The city's negotiators say this would be a waste of time with little substantive effect, and note that the Justice Department offers to drop this item if LAPD agrees to the Web site reports in the previous item.

Copies of the proposed consent degree and an item-by-item rundown of the city's responses and rationale can be obtained as PDF files at <http://www.lacity.org/lapd-reform>.

Comment: The city's acceptance and implementation of the Web site information center proposal in item 163 would be a significant step forward and should serve, in fact, as a model for other communities, at least those troubled by persistent complaints of inappropriate police treatment of racial and ethnic minorities. The information embraced in such disclosures would not invade protected individual personnel records but would present the kind of pattern picture sought (and in part obtained) the San Francisco Bay Guardian in its protracted public records case involving the Richmond Police Department.

FINAL-DAYS BILL AMENDMENTS SWEETEN OFFICIALS' RETIREMENT PLANS (9/15/00)

Several current or former high-ranking state officials stand to benefit significantly from provisions added to an otherwise obscure "technical" bill approved by both houses of the legislature in the waning hours of the session with essentially no debate and no disclosure on the public record of just whose retirement plans would improve -- or why.

The Sacramento Bee has reported that SB 528 by Senate President pro Tempore John Buirton (D-San Francisco), a bill concerning the Public Employees Retirement System (PERS) would have the following effects:

-- Allow San Francisco Mayor Willie Brown, appointed to the PERS Board by

Governor Gray Davis in February, to send a stand-in to board meetings rather than attend in person. As noted in an earlier Bee report on the appointment, the value in the PERS seat is not its salary (there is none) or the glamor of attending meetings in Sacramento. All travel on behalf of PERS, nationally and internationally, is compensated and affords members close entree to "the world's top money managers." The board also controls billions in investments potentially favorable to investment firms, including those in San Francisco's financial district.

-- Allow Legislative Counsel Bion Gregory nearly \$2,000 more in retirement benefits a month (for a total of \$8,500 monthly) than he would otherwise have been entitled to under early retirement, by giving him credit for an extra four years of age and public service.

-- Allow former Assemblyman Dan Hauser (D-Arcata) to become eligible for retirement benefits normally restricted to those with 15 years' legislative service. Hauser, reportedly strapped for income, served only 14 years before being termed out in 1996.

-- Allow Jane Crawford, an \$87,408 per year appointments advisor on Governor Gray Davis' staff, to count her 14 years of service with a firefighters' union as part of her state service as a basis for retirement benefits. She served the union as political and legislative director and stayed on its payroll while loaned to Davis' campaign for the governorship in 1998, after which she stayed on as part of his transition team and then took the appointments job.

-- Allow former CSU Chancellor Barry Munitz, who headed Davis' transition team in fall 1998, to earn credit for as many years as he remains on "leave of absence" from the university. That's his actual status, although he now serves as president of the J. Paul Getty Trust in Los Angeles, which in its 1998-99 fiscal year paid him more than \$750,000 in compensation, according to records on file in the attorney general's office. The maximum leave of absence time now available for PERS credit is two years.

-- Allow what the Bee estimates to be "more than a dozen" former members of the legislature who work in other government posts to increase their PERS pension benefits sixfold. Currently former lawmakers who are not employed or at least not employed in state jobs are allowed full PERS benefits based on their time served and other factors, but if they take positions in state or local government (other than constitutional offices such as governor or attorney general) their benefits are approximately one sixth of the ordinary entitlement. This bill would provide them with full pension benefits, which would mean, for example, that former state senators and current state executive branch officers Robert Presley, head of the Youth and Adult Correctional Agency; Barry Keene, head of the Department of General Services and David Roberti, member of the California Integrated Waste management Board, could draw both full salaries and full pensions. The same would apply to former state legislators in local government posts.

SB 528 got lowball treatment, labeled in every committee and house analysis as making only "technical and clarifying amendments," and was given unhesitating, bipartisan support. In the final Assembly vote on September 1, 70 voted aye and there were only nine voting no or not voting -- all Republicans. Most of the changes were added in the Assembly on August 30, the day before adjournment, and that final

session has been described as unprecedentedly chaotic, especially in the Assembly. The confusion and rush there were so extreme that several bills generally regarded as of genuine policy significance failed to make the deadline in the final hours' crush, and died in their tracks.

Common Cause Executive Director Jim Knox told the Bee that he found the way SB 528 was handled "represents the legislature at its worst" and said that similar examples of last-minute approvals of perks for cronies "year after year indicates to me that the legislature is not only allowing it to take place, but that it is inviting it to take place."

The bill awaits action on Governor Davis's desk, but The Bee reported that sources indicate the Governor will likely veto the legislation.

Comment: Sunshine is a terrific disinfectant, and legislators who used the last-minute legislative scramble to keep the bill's provisions in the dark should be ashamed. There's no self-evident reason why former legislators should have to forego five sixths of the retirement payments otherwise due them simply because they continue on the public payroll in the executive branch or in local government. On the other hand, should other individuals get rule relaxations tailor-made to their circumstances just because enough people with a vote like them-or at least don't dislike them, and are comfortable with a tradition of reciprocal backscratching? Some of the retirement rule changes in SB 528, in other words, might well be passed with a straight face on their merits. Others would probably not withstand the process of explanation in committee. Bundling all these adjustments in a bill with both patronage and stealth written all over it does no favors to those whose retirement sacrifices could stand the light of open debate. But it does throw chum to those who are all too ready to write elected officials off categorically. And that corrosion rewards cynics everywhere. Those outside government point and say, "What did you expect?" Those inside government shrug and say, "There's no pleasing the public, so if we're going to be blamed anyway, let's get some business done."

COURT: NO BASIS FOR PURGING JUVENILE OFFENSE FROM COURT FILES (9/15/00)

Federal courts have no inherent powers to reverse, erase or otherwise obliterate the record of a juvenile drug conviction as a matter of fairness. While they may take such steps to right a wrong in the sense of an unlawful conviction or a clerical error, they are otherwise limited to the few instances in which specific statutes authorize expungement.

So ruled the U.S. Court of Appeals for the Ninth Circuit in its opinion filed Tuesday, September 12 in U.S. v. Sumner, Case No. 99-10523.

The case involves Thomas Alan Sumner, a Nevada substitute teacher who in the fall of 1999 wanted to seek a teaching certificate but feared that a long-ago event might be cited to preclude that licensing. In 1972 Sumner was arrested in Yosemite National Park when his companions sold illegal drugs to an undercover Forest Service ranger. He pled guilty to the unlawful possession of a controlled substance and, as a minor, was sentenced under the Federal Youth Corrections Act (FYCA), which was repealed in 1984. He was ordered to 90 days of probation and a fine of \$100. He failed to pay by the deadline, a bench warrant was issued, he paid the fine two days overdue, and the warrant was recalled.

In 1999 Sumner went back to the same district court and moved to have his sentence expunged, either under the FYCA's "set aside" provision or under the court's own "inherent" equitable powers, i.e. powers to do the right thing. The court ruled that it had no jurisdiction (authority) under either theory to do what Sumner asked. On appeal, the Ninth Circuit agreed. First, the FYCA allowed a conviction to be set aside only where the court's failure to grant "an early unconditional discharge from probation" was due to an "oversight." Here there was no mistake; Sumner had not sought a discharge from probation in 1972 and none was granted.

Second, in the words of Judge Arthur Alarcon for the court, "Sumner also maintains that federal courts have 'the inherent power, under equitable principles, to order expungement of criminal records.' We disagree. The power of federal courts may not be expanded by a judicial decree." Only in cases of convictions held to be unconstitutional in later federal civil rights actions were federal courts empowered to offer equitable expungement as a remedy.

And ruling as a matter of first impression, the Ninth Circuit considered the third possibility, i.e. where a court was revisiting a case it had originally tried, employing its "ancillary" jurisdiction to reopen the matter. Even there, Judge Alarcon concluded for the court, "In our view, a district court's ancillary jurisdiction is limited to expunging the record of an unlawful arrest or conviction, or to correcting a clerical error."

MARYLAND'S HIGHEST COURT REJECTS BROAD GOVERNOR'S PRIVILEGE (9/15/00)

In contrast to the California Supreme Court's 1991 discovery of a broad "deliberative process privilege" exempting a governor's appointment schedules and travel records from large-scale disclosure, the Court of Appeals of Maryland has rejected application of a broad "executive privilege" for its governor's meeting calendar and phone call records.

In *Office of the Governor v. Washington Post*, the court's 4-3 ruling issued Tuesday, September 12 concluded that the records of Gov. Parris N. Glendening and two of his chief aides are subject to the Maryland Public Information Act as a general proposition,

and that meeting appointment logs and phone records reflecting the official contacts of these officials are not categorically protected by executive privilege.

That term is the more direct and focused label for what the California Supreme Court called the "deliberative process" privilege in its 1991 decision in *Times Mirror v. Superior Court*. The court held that appointment calendars and travel itineraries for a five-year period of Governor George Deukmejian's incumbency were exempt from disclosure under that privilege, essentially because their release to the public would disclose the governor's thought processes and thereby inhibit the effectiveness of executive decision-making.

The Maryland court majority placed the burden on the governor's office to argue its executive privilege claim on an item-by-item basis, with the trial court inspecting the records in chambers as necessary.

The case cites *Times Mirror* at several points, noting that unlike California's very unusual "public interest balancing test," used to shoehorn in the common law privilege, Maryland law has no such "catchall" exemption, and the privilege must apply, if at all, under standards already established in Maryland case law.

Accordingly, records of an advisory or deliberative nature would be presumed covered by the privilege, but strictly factual material such as appointment or phone call logs would not. Nonetheless, in remanding the case back for further consideration by the trial court, the appellate court cited several passages from *Times Mirror* to show how, for example, the release of even factual material might chill the process of executive decision-making.

The Post has not explained why it wanted the records, but in the two years of negotiations to get them it has narrowed the scope of its interest to a six-month period in early 1996. The reach of its original request has also been trimmed by the appellate court, which ruled off limits all calls from the governor's residence and calls from business lines not specifically assigned to the governor and the two specified aides.

After oral argument in the case early in 1999 the court, shy one justice, was deadlocked 3-3. Then Governor Glendening filled the vacancy, oral argument was reheard before the new justice, and his vote created the 4-3 majority. The dissenters believe that the majority is giving insufficient respect to the governor's independence from the legislature, on separation of powers grounds as well as executive privilege concerns.

A PDF file copy of the opinion, labeled as "Governor v. Washington Post," can be obtained at <http://www.courts.state.md.us/cgi-bin/indexlist.pl?court=coa&year=2000&order=bydate&submit+button=Submit>.

**SANTA CLARA SUPERVISORS TO PONDER ON-LINE RESTAURANT
'GRADES' (9/8/00)**

The Santa Clara County Board of Supervisors will soon consider a proposal to put the results of restaurant inspections by the environmental health department on the county's Web site -- along with a new system of letter or number "grades" rating each eatery's compliance with codes and other standards. The local restaurant association supports it.

The proposal by Supervisor Joseph Simitian can be downloaded as a pdf file from http://www.supervisorsimitian.org/whats_hot.htm. It has two components, the first being production of placards, one for each restaurateur, which could be either placed in a prominent location or kept in a drawer. The placard would proclaim the establishment's A-C letter or 1-100 number grade. Alternatively or as Simitian would prefer, as a supplement, diners could go to the county's internet site and view all scores -- as well as the inspection reports behind them.

Simitian says his idea is responsive to increasing public and press concern with food poisoning in general and food handling practices in particular. His staff says the proposal is backed by the Santa Clara Restaurant Association, which would just as soon have the bad apples exposed.

GOVERNOR GETS SIX BILLS ON SUNSHINE, JOURNALIST RIGHTS, PRIVACY (9/1/00)

Governor Gray Davis has on his desk awaiting action six pieces of legislation of special interest to the California First Amendment Coalition. One is on open meetings, two on public records, two on journalists' rights and one on privacy. Half the bills represent a second - or even third - try after a similar previous measure was struck down by a veto.

The bills, whose contents are covered in separate reports, include AB 1857 (Romero), a rewriting of the law governing open meetings of student body organizations of the California State University; AB 2799 (Shelley), on access to electronic public records; SB 2027 (Sher), on attorney general review of records access denials; AB 1860 (Migden), on procedures for subpoenas to journalists and dealing with the resulting shield law issues; AB 2101 (Migden), on press interviews with and mail from prison inmates; and SB 129 (Peace), which would create a new state office dedicated to the protection of personal privacy.

The governor has until midnight September 30 to take action on these measures. He can sign a bill, veto it or let it become law without his signature.

COMMENT:

Your letter to the governor urging action should identify the bill by number and author, and your position (support/opposition) in a prominent heading at the top, e.g. "AB 1234 (Smith): SIGNATURE

URGED." It is best addressed via:

mail: Governor Gray Davis, State Capitol Building, Sacramento, CA
95814
fax: (916) 445-4633
e-mail: graydavis@governor.ca.gov

COMPUTERIZED INFORMATION-SEEKERS WOULD SEE FRIENDLIER LAW (9/1/00)

Governor Gray Davis is being given the third chance to sign legislation bringing the California Public Records Act into the electronic information age, after his and former governor Pete Wilson's vetoes of earlier attempts. AB 2799 by Assemblyman Kevin Shelly (D-San Francisco) requires copying at cost of computerized public records.

The bill would repeal the current California Public Records Act provision giving public agencies discretion as to in what form computerized public information must be produced in (e.g. electronic or hard copy printouts). The Act currently says nothing else about computer file access other than the general principle that information accessible to the public on paper remains legally accessible when stored electronically.

Under AB 2799, the Act would be amended to provide that:

- * Public information not exempt from disclosure must be made available in the electronic format requested if the public agency holding the information uses that format for making copies for its own or another agency's use.
- * If meeting the request involves only copying, any fee charged by the agency must be limited to the "direct cost of producing a copy."
- * If the request is for a format not used by the agency for its own copying, and therefore would require special work, extra charges and delay are authorized.
- * "the cost of producing a copy of the record, including the cost to construct a record, and the cost of programming and computer services necessary to produce a copy of the record," could be passed on to the requester when " the record is one that is produced only at otherwise regularly scheduled intervals" but is demanded off-schedule, or the formatting sought "would require data compilation, extraction, or programming."
- * an extension of up to 14 days could stretch the deadline for a determination response from the public agency, meaning a maximum total of 24 days, based on "the need to compile data, to write programming language or a computer program, or to construct a computer report to extract data."
- * If the request is for a paper record, the agency may inform the requester that the information is also available in electronic format, but cannot limit access to the electronic version. Nor must it "reconstruct" a record in an electronic format if it "no longer has" the information in that format.
- * A request to release information in the format in which the agency keeps it would not have to be honored if doing so "would jeopardize or compromise the security or

integrity of the original record or of any proprietary software in which it is maintained."

AB 2799 has two other important provisions unrelated to electronic records. One would restore the word "delay," substituted several years ago by the word "obstruct" in a provision prohibiting certain agency conduct that frustrates effective access to records. The passage of this bill would mean prohibiting both delay and obstruction. Also, the Act would for the first time expressly require that any notice from the agency announcing denial of access be in writing - if the request had been made in writing.

AB 2799's electronic records thrust presents a third attempt in this area. Two previous bills by Senator Debra Bowen (D-Marina del Rey) were vetoed: AB 179 by Governor Wilson in 1998 because a "reasonableness" test for denying access would, Wilson said, have invited needless litigation, and SB 1065, rejected last year by Governor Davis, who said he had asked Bowen to hold off bringing him a bill until the state had resolved Year 2000 compliance problems.

The legislature clearly views improved electronic access as an overdue imperative. The bill passed the Assembly on a 70-4 vote, and the Senate 33-0.

The bill is sponsored by the California Newspaper Publishers Association and supported by the Orange County Register, the Franchise Tax Board and CFAC. It is opposed by Orange County, which complains of the burden to staff in responding to records requests - editing and copying records for release or writing written justifications for non-release.

But the Register says express language disallowing delay is needed because of such phenomena as UC Irvine's foot-dragging in producing admittedly public records documenting abuses at the university's fertility clinic. When the Register finally got those records, it used them to support a series on the sale of fertilized eggs and won the Pulitzer Prize for its effort.

THOSE DENIED LOCAL AGENCY RECORDS COULD GET SECOND OPINION (9/1/00)

Governor Gray Davis is being asked to sign a bill creating prompt attorney general review, on request, of any local agency's denial of access to public records, and adding court-imposed fines of up to \$100 for every day an agency knowingly and deliberately disregards its disclosure obligation. Davis vetoed a comparable bill last year.

Both measures are the work of Senator Byron Sher (D-Palo Alto). The main difference between last year's SB 48 and the current SB 2027 is that the latter expressly exempts most state agencies (as opposed to local government units) from attorney general

review. All but a handful of state agencies use the attorney general's office for advice in responding to, and court representation in defending against, California Public Records Act requests. Last fall Davis said that given this prior involvement, having the attorney general review records denials would present a conflict of interest in those circumstances, and for that reason vetoed SB 48.

SB 2027 addresses this issue by simply exempting from the review process, on a case by case basis, any records denial based on the attorney general's advice. Thus, for example, the attorney general's advice that a record could be withheld would preclude its rendering a review opinion. But if the attorney general was never consulted, the agency's denial would presumably be subject to review by that office.

Otherwise, SB 2027 goes to the governor essentially in the same form it has had since introduction, and indeed in the form taken by SB 48 last year:

- * A person having submitted a written request for inspection or copying under the California Public Records Act would be entitled to a written form of denial citing the justification for nondisclosure.
- * A disappointed requester could send the request and denials letters to the attorney general's office for review, with a response due normally in 20 to 40 days.
- * The resulting opinion would have no greater or lesser force than any other attorney general's opinion, and would not compel disclosure - or excuse it - on its own authority. But it could be cited by either the agency or the requester in any subsequent litigation, assuming the agency, using a 10-day grace period in the bill, did not change its mind and release a record in the face of an opinion that it should do so.
- * In any event the opinions generated under this procedure would be annually printed and published in bound volumes, and also displayed on the Internet for free access.
- * The attorney general, in analyzing a denied request for a record whose content was not obvious, could request to see the record or ask for additional information on a confidential basis in order to make a more confident assessment. The agency would not be bound to share the information thus, but its refusal to do so might work against its interests in the result, if the attorney general found the refusal inadequately justified.
- * Quite apart from attorney general review, a court would be authorized in appropriate cases brought under the CPRA to not only declare a record public and order its release, but also to assess a monetary penalty against the agency (to be paid to the requester in addition to court costs and attorney fees) of up to \$100 for every day the agency withheld requested records in bad faith.

The bill passed the Senate 31-6 and the Assembly 75-1, compared with SB 48's vote tallies of 35-0 and 78-0 respectively. It is sponsored by the California Newspaper Publishers Association and supported by CFAC and Attorney General Bill Lockyer. Known opposition as of mid-August had been reduced to the San Bernardino County Sheriff's Department, the California Association of Health Facilities, the Mosquito and Vector Control Association and the City of Newark.

PRIVACY PROTECTION BILL TARGETS PRACTICES OF BUSINESSES, STATE (9/1/00)

Senator Steve Peace's occasionally far-ranging expedition into the prospects of total individual control over the use of information about oneself has been reduced, in the form of his SB 129 going to Governor Gray Davis for signature, into a far less controversial measure. The final bill would create a new state privacy protection office with no regulatory power.

Of keenest interest to the California First Amendment Coalition is the fact that SB 129 ended up with no reductions in the information available under the California Public Records Act. While the bill directs state agencies to adopt a privacy policy "in adherence with" the Information Practices Act, that statute (Civil Code Section 1798 et seq.) already provides that any request pursuant to the California Public Records Act is one which trumps its own restrictions on disseminating personal data about individuals Section 1798.24 (a) and (g)).

SB 129 at various earlier stages contained (or was proposed to contain) various provisions making individuals the legally recognized owners of most information about them conveyed in commercial transactions; requiring all organizations to get affirmative written consent for obtaining, using or transferring the information; providing stiff tort remedies for violations of individuals' ownership rights; and even preventing public and private entities from using information gained from surveillance cameras.

Aside from the privacy policy directive for state agencies, all the final version does is to create, within the Department of Consumer Affairs, an Office of Privacy Protection, whose mission would be to:

- * "inform the public of potential options for protecting the privacy of, and avoiding the misuse of, personal information";
- * "make recommendations to organizations for privacy policies and practices that promote and protect the interests of California consumers"; and
- * "promote voluntary and mutually agreed upon nonbinding arbitration and mediation of privacy related disputes where appropriate."* The director of the Department would be given more specific responsibilities, including the following:
 - * "Receive complaints from individuals concerning any persons' obtaining, compiling, maintaining, using, disclosing or disposing of personal information in a manner that may be potentially unlawful or violate a stated privacy policy relating to that individual, and provide advice, information, and referral where available";
 - * "Provide information to consumers on effective ways of handling complaints that involve violations of privacy related laws, including identity theft and identity fraud. Where appropriate local, state, or federal agencies are available to assist consumers
 - * with those complaints, the director shall refer those complaints to those agencies";
 - * "Develop information and educational programs and materials to foster public

understanding and recognition of the purposes of this article";

* "Investigate and assist in the prosecution of identity theft and other privacy related crimes, and, as necessary, coordinate with local, state, and federal law enforcement agencies in the investigation of similar crimes";

* "Assist and coordinate in the training of local, state, and federal law enforcement agencies regarding identity theft and other privacy related crimes, as appropriate"; and

* "Commencing in 2003, ... report to the Legislature on an annual basis, on or before January 31, detailing the activities engaged in by the department under this article."

[Back to top](#)

COURT: AGENCIES CAN SUE FOR DECLARATION AGAINST DISCLOSURE (8/25/00)

A public agency that has denied a California Public Records Act request in timely and explicit fashion may then, if the requester indicates disagreement with the response, take the matter to court seeking a confirming declaratory judgment. So concludes a recent opinion from the Second District, California Court of Appeal in a police records case.

The decision filed August 4 in *Filarsky v. Superior Court (Manhattan Beach)*, Case No. B139108, comes as a significant addendum to an earlier case, *City of Santa Rosa v. Press Democrat*, in which the First District Court of Appeal held that a public agency may not use declaratory judgment to get a court to rule against disclosure.

The Public Records Act itself expressly gives disappointed requesters the right to file an action for declaratory and/or injunctive relief - the former to establish that a records denial was unlawful and the latter to order release. But in both the Santa Rosa and *Filarsky* cases the agency from which the record was requested took the initiative to go to court for a judicial declaration that the record in question was not releasable.

The Second District in its recent opinion distinguished the Santa Rosa holding in two respects. First, in that case the City of Santa Rosa never made its own determination that the records sought by the daily *Press Democrat* newspaper - investigative findings by the police department concerning a high school teacher's alleged sexual intercourse with a minor - were confidential. Nor did the newspaper ever get the chance to tell the city that it disagreed with a decision to withhold, since that decision was never made.

Instead of deciding on its own, in short, the city tossed the question into court for a judicial determination in the first instance.

In the Manhattan Beach case, by contrast, the city expressly - and within the required 10-day period for response - denied the request of attorney Steve Filarsky for documents concerning the hiring of a new police captain, Paul Marshall. Filarsky then continued to press his requests for the records, and the city finally sued him in a declaratory relief action.

The trial court ruled for the city that the records were indeed properly confidential. Filarsky sought relief in the Second District but was turned down. He then got the state supreme court to order the Second District to reconsider the issue in light of the Santa Rosa case. Having done so, the appellate court concluded that that decision did not apply when the agency had issued an express denial of access and the requester persisted in asking for the records.

The court's decision in Filarsky also dealt with the merits of his request, upholding the city's decision on several grounds.

Filarsky, a Manhattan Beach resident, had had some prior experience with Marshall, the city's new police captain. More than a decade earlier he had represented the city of Pismo Beach in its successful effort to fire Marshall for what the Second District opinion refers to as "use of excessive force and inhumane treatment of a ward at a juvenile facility."

When word of the new hire reached him, Filarsky wrote the mayor and city council, informing them of Marshall's firing by Pismo Beach. The city manager told Filarsky that this was no news to the council, which also took into consideration that Marshall had in the interim been hired as an officer by Sacramento and later promoted to lieutenant, with a clean slate.

Filarsky then submitted a public records request for Marshall's job application and resume, the names of the oral board raters who had interviewed him, their rating sheets, the eligibility list for the captaincy, and the city's background investigation into Marshall's experience in Pismo Beach.

The city's denial cited Marshall's privacy interests, the confidentiality of peace officer personnel records and, with respect to the list of all officers eligible for the captaincy, the deliberative process privilege. The Second District found these exemptions of disclosure legitimate, concluding that Penal Code Section 832.7, protecting peace officer personnel records from disclosure outside a tightly controlled discovery process, applied to all the information about Marshall in particular, and the deliberative process privilege applied to the eligibility list naming other applicants for the captaincy because, in the words of Justice Joan D. Klein for the court:

"The sole purpose for the list is to aid the City in the process of selecting a police captain by allowing comparison of the candidates. The list would disclose the identity of at least 28 applicants considered by the City, 18 of which were rejected, and two of which withdrew their candidacy. The list would also disclose the City's rating and evaluation of each eligible candidate. Disclosing the list thus would not only reveal the names and corresponding test scores of those applicants who were not selected, but also the judgment and mental process of the City in its selection process. Such disclosure would compromise the City's decision-making process and its ability to safeguard the names and rating scores of candidates who apply for such positions. The

public interest in disclosure of the unredacted eligibility list is clearly outweighed by the public interest served in not making the list public."

COMMENT: Allowing a public agency to take the initiative in seeking court approval of a decision to deny access can leave a records requester who may have had no intention to sue with some tough choices. Since the agency's declaratory relief lawsuit names the requester as defendant, the first problem is the cost of litigating a defense or, if defense is not affordable, seeing the agency's denial potentially blessed by the court with no opposition.

The second is that even if the requester appears and "succeeds" in defending - even if the court declines to issue a judgment that the records are not public, it is not at all clear that this result alone forces the agency to release the record. Moreover, it is unclear whether the requester, having been forced to defend the right of access to the record and having in some sense succeeded in doing so, is thereby entitled to an award of court costs and attorney's fees.

[Back to top](#)

PROLONGING RECORDS FIGHT COSTS RICHMOND A QUARTER MILLION PLUS (8/25/00)

Ending a seven-year court battle over access to records concerning the conduct of its police officers, the city of Richmond has paid \$231,885 in court-ordered attorneys' fees to the San Francisco Bay Guardian, an amount which appears to set a record for such cases. The fight to avoid paying the newspaper's attorney fees more than doubled them.

In 1993, following up on several reported incidents and court judgments involving racial abuse and excessive force by Richmond officers, the weekly newspaper asked the police department for data summarizing citizen complaints. The city refused, arguing that the records were confidential as peace officer personnel information.

Two years after the Bay Guardian sued under the California Public Records Act, the First District Court of Appeal ordered the city to release some of the material. The opinion, although withheld from publication, was the first to clearly establish the public's right to use the act to gain some information about police discipline.

The city released more than 500 pages of records, which revealed what the Bay Guardian recently called "an alarming pattern of official tolerance of abusive behavior by police, ranging from pepper-spraying handcuffed inmates as punishment to punching suspects in the head." In its report summarizing the data, the newspaper noted that two out of every three officers found guilty of misconduct charges between 1990

and 1997 had seen their charges dismissed.

The Bay Guardian was represented in the records litigation by James Wheaton, founder and lead attorney for the Oakland-based First Amendment Project. He said the two-year fight for the records themselves was "the easy part." The Richmond City Attorney's Office then prolonged the litigation for several more years in hopes of avoiding paying the newspaper's attorney fees. That fight, he said, nearly trebled them.

"We are gratified that the city finally came to its senses, but mortified that it took so long," Wheaton said. "What is most distressing for Richmond's taxpayers is that the city wasn't even fighting about any principles or about the records. It was just about money, and the more they fought, the worse it got."

Richmond assistant city attorney Everett Jenkins told the Bay Guardian that Richmond agreed with the original 1996 ruling (in which it had prevailed) and was therefore not liable for fees. The city appealed a second time, he said, because it believed the fees awarded were excessive.

Last September Richmond received a "Black Hole Award" from the California First Amendment Coalition - given to individuals or groups whose actions show a "blatant disdain for the concepts of open access and sunshine."

Los Angeles-based public-interest lawyer Barbara Blinderman, chair of CFAC's legal review committee, said the Richmond case is one of the most egregious examples of government stonewalling she's seen - and part of a larger trend. "There certainly are an increasing number of governments that realize they can discourage access by an adversarial approach, which is not very good for democracy," she told the Bay Guardian.

Bay Guardian editor and publisher Bruce B. Brugmann cited "three clear messages" sent by the fees' victory.

"First, to any citizen or group or newspaper fighting a stonewalling city in a major public-access case: Keep fighting till you win - and then, if you win, keep fighting till you get your money.

"Second, to any city that stonewalls for eight years like Richmond: Look what happens and see how you have disgraced your electorate.

"Third, to the city attorney in Richmond and all other city officials who supported this classic stonewall: Resign or face impeachment or defeat in the next election."

INSURANCE DEPARTMENT'S WHISTLEBLOWER BACK AT HER DESK

(8/18/00)

Cynthia Ossias, an attorney with the State Department of Insurance on leave and under a cloud for the past two months after leaking confidential documents to a legislative committee investigating the practices of then-Insurance Commissioner Charles Quackenbush, returned to work without prejudice on Monday, August 14.

Ossias, approached by a staff member of a legislative committee with jurisdiction over insurance industry regulation, agreed to provide the committee with market performance reports showing that four major insurance companies could have faced huge fines for their alleged treatment of homeowners' claims stemming from the Northridge earthquake.

Instead of pursuing the fines, Quackenbush settled the liabilities by allowing the firms to contribute much smaller amounts to several designated nonprofit organizations - resulting in political credit to him but no compensation for the policyholders.

Department officials in their legislative testimony left the impression that the companies had not been found to be liable for Insurance Code violations. The reports Ossias gave the committee, and her later confirming testimony, told a different story. But since the reports were legally confidential - unreachable even by committee subpoena without Quackenbush's consent - Ossias's conduct was investigated by the department for potential employment discipline, and for the duration she was placed on administrative leave.

Acting Commissioner Clark Kelso announced Monday that Ossias's job was secure, since the leak was protected from disciplinary action by whistleblower statutes shielding state agency staff members. He said this conclusion represented the view of the California Highway Patrol which, as the legislature's police agency, conducted the investigation into her conduct, as well as his own view and that of the attorney general's office. (See statement at <http://www.insurance.ca.gov/docs/FS-News.htm>)

Kelso said that not only was Ossias's action consistent with the laws "which generally protect employees who bring improper or illegal government conduct to light," but "she is to be commended for her extraordinarily difficult, courageous decision to make a disclosure of information when she thought she might suffer adverse consequences."

Ossias told the San Francisco Recorder that she would not hesitate to reveal department information again in comparable circumstances, but "might do it differently," informing the attorney general or the auditor general instead of the legislature. She hopes that Kelso's commendation for her behavior would discourage any move by the State Bar to discipline her.

She added that despite several offers from private firms received since her difficulties surfaced, she intends to continue working at the department for the time being.

COURT: SECRET SANITIZING OF POLICE FILES UNDERMINES CONVICTION **(8/18/00)**

Santa Ana's extraordinary policy of sanitizing police personnel records sought by parties in civil and criminal discovery before turning them over for court review to determine their relevance has led to the reversal of a criminal conviction and a stern tongue-lashing for the city attorney and police officials by the California Court of Appeal for the Fourth District.

In People v. Mooc, Case No. G023714, filed June 30, the court sent the prosecution of Bau Mooc for battery on a peace officer back to the trial court with instructions to conduct an in camera review of the entire personnel file of Santa Ana police officer Frank Garcia, whom Mooc, an inmate in jail on an immigration hold, was accused of attacking.

In preparation for his original trial, defendant Mooc had made the customary "Pitchess motion" to have the city produce any and all personnel or other records that might show a propensity on Garcia's part for violence or lying. The only other witnesses to the fight were jail inmates, whose credibility the prosecutor would successfully impeach at trial, by methods later determined by the appellate court to be misconduct.

Responding to the Pitchess motion, the city attorney provided the court with some material which the judge examined in chambers and found to lack any evidence undermining Garcia's credibility. Mooc was denied access to the files and was convicted by a jury.

On appeal, Mooc argued improper denial of access to Garcia's personnel records. The Fourth District Court of Appeal issued repeated orders to the city attorney to produce the records for it to inspect independently, and to its dismay got a succession of ambiguous responses, including two brief documents, one of which was simply the police report of the incident. Santa Ana Assistant City Attorney Hugh Halford stated finally in a sworn declaration that the documents provided to the court of appeal were all that he could "recall" being produced for the trial court, and that no records regarding Garcia had been purged or removed from his personnel file.

Then came oral argument in the appeal, in which the court ordered the attendance of all involved city officers, and in the words of Justice David G. Sills for the court:

"...an astounding revelation occurred. We were informed that the Santa Ana Police Department and the City Attorney's Office **REGULARLY, SYSTEMATICALLY AND SECRETLY** censored all personnel files before conveying them to any court for in camera review, removing all worker's compensation claims or other records the agencies deemed superfluous. This revelation directly contradicted Halford's earlier

sworn declaration that 'no records of Officer Frank Garcia have been purged or removed from his personnel file.'" (emphasis in the original)

The Fourth District then demanded to be provided with the entire, unscreened personnel file, and got "an entire evidence box of files, forms, folders and records," wrote Justice Sills, adding: 'not surprisingly, more than one reference was found in the COMPLETE file which a court could deem to be potentially relevant.'" (emphasis in the original)

The court remanded the case back to the trial court, directing a new hearing on Mooc's Pitchess motion, and ordering that any discoverable information leading to admissible evidence helpful to the defense be made available accordingly.

Justice Sills added:

"This mountain of bureaucratic disobedience compels us to voice our disapproval of the actions of both the Santa Ana Police Department and City Attorney' s Office, and the shared responsibility which must be borne by the prosecutor' s office for failing to discover and remedy it. Public confidence in the criminal justice system is eroded when its officials deliberately fail to disclose records ordered disclosed. As Justice Brandeis so eloquently noted three-quarters of a century ago, 'Decency, security, and liberty alike demand that government officials shall be subjected to the same rules of conduct that are commands to the citizen. In a government of laws, existence of the government will be imperiled if it fails to observe the law scrupulously. Our government is the potent, the omnipresent teacher. For good or for ill, it teaches the whole people by its example. . . ' (Olmstead v. United States (1928) 277 U.S. 438, 485, dis. opn. of Brandeis, J.)"

COMMENT: The Pitchess motion is a standard element of any criminal defense in which the past behavior or credibility of a police officer may be a helpful source of contextual evidence: If the arresting or witnessing officer has a documented trail of discipline for brutality or untrustworthiness, for example, a jury may be less deferential to his or her version of what occurred. The motion takes its name from a landmark decision of the California Supreme Court in 1974, concluding that criminal defendants had the right to use discovery to reach relevant material of this kind in police personnel files. But that decision led to some reactive incidents which in turn prompted legislation:

"In the aftermath of Pitchess, there were reportedly incidents of law enforcement shredding records to prevent discovery. Penal Code sections 832.7 and 832.8 and Evidence Code sections 1043, 1045 and 1046 represented the Legislature's attempt to respond to Pitchess and law enforcement's alleged reaction." (City of Fresno v. Superior Court, 205 Cal.App.3d 1459, 1475)

These 1978 provisions, as subsequently interpreted by the courts, make peace officer personnel files exempt from the California Public Records Act and thus accessible only by a party to a criminal or civil case, in a discovery process giving the judge complete control over how much, if any, contents of such files are available to the party making a Pitchess motion. The Legislature's deal with the police was, in effect: " You must preserve citizen complaints for a period long enough to ensure their availability in discovery, but that discovery will be controlled by the court to ensure that only that will be produced which is demanded in the interests of justice when a defendant's or civil litigant's rights are at stake." But when the court itself is provided with only a covertly edited version of this material, represented as being responsive to a wholesale request such as Mooc's, the entire process is fundamentally subverted - hence the exasperation shown in this opinion. When the decision was announced, Santa Ana City Attorney Joseph W. Fletcher told the Orange County Register, "We produce what all departments produce." Perhaps this is simply wishful face-saving. But the only way to be sure is for district attorneys or grand juries in each county to investigate whether the Santa Ana sanitizing is indeed a local procedure as well.

A.G. ASKED FOR OPINION ON RELEASE OF DATA FROM POLITICAL FILINGS (8/18/00)

Should street addresses and phone numbers contained in campaign and other political filing reports be made available to those who buy entire copies of the Secretary of State's database? That's the question to be answered in an attorney general's opinion requested by Secretary of State Bill Jones. Public comments are due by August 28.

Jones plans to begin selling electronic copies of the CAL-ACCESS database, most of which is now available on the Secretary of State's Website (<http://cal-access.ss.ca.gov>). But the 1997 legislation authorizing electronic filing of campaign and lobbying disclosure statements and calling for Internet availability of the data also directs that the street addresses of the filing parties be suppressed in the online version.

The addresses are still accessible to those who want to consult the paper filings, but "in the relatively near future," Jones says in his letter requesting the opinion, those who meet the electronic filing thresholds will no longer be required to file on paper.

In addition, as a matter of discretion, Jones has suppressed phone numbers from the Internet display of CAL-ACCESS, which became operational in January.

His question to Attorney General Bill Lockyer is, when sale of the CAL-ACCESS database in its entirety commences, "what information must be suppressed..., what information should be suppressed..., and whether the Secretary of State may place restrictions on the use of the database as a condition of its sale."

Jones grants that access to the entire database is in the public interest: "Political analysis of spending trends, legal research to support court challenges, and campaign mailing list development are obvious possibilities."

Yet in view of the statutory address restriction on Internet publication, Jones believes that the "prospect of ambiguity and confusion about the availability of campaign and lobbying disclosure information submitted and captured electronically demands that I seek clarification from the Attorney General in this matter."

Views on this matter should be sent to Deputy Attorney General Jonathan R. Davis, 300 South Spring Street, Los Angeles, CA 90013; for further information call Davis at (213) 897-2674.

LEGISLATIVE HALFTIME SUMMARY: PUBLIC INFORMATION (7/14/00)

Sacramento lawmakers recessed last Friday, July 7, for one-month before the race to complete legislation at summer's end. Among bills of interest to friends of open government and freedom of expression, the following is a status report on bills affecting access to public information.

Attorney General's Review of Public Records Access Denials (SB 2027, Sher)

This bill would authorize the attorney general to issue non-binding "second opinions," in a 20-40 day turnaround, to those whose written requests for access to public records had been denied. It would also authorize a court to fine a public agency (and award the fine to the requester) up to \$100 for every day of unlawful and bad faith access denial. The measure is set for hearing in the Assembly Judiciary Committee August 8, after having passed the Assembly Governmental Organization Committee 13-1 on June 26, the Senate Floor 31-6 on May 31, the Senate Appropriations Committee 8-3 on May 25, and the Senate Judiciary Committee 6-0 on March 29.

SB 2027 is a reworking of a 1999 bill by Sher, SB 48, which Governor Gray Davis vetoed last fall. Davis objected primarily to what he called a conflict of interest in which the attorney general's office, which represents most executive branch agencies in defending public records access litigation, might be put in the position of issuing a disapproving opinion concerning a denial by a Davis administration client.

Sher's response in SB 2027 is to provide that the attorney general review provision would not apply to access denials by any state agency normally relying on the attorney general for advice or representation on public records access matters. Thus almost all state agencies, but no local government entities, would be free from the attorney general review provision.

It is not known whether this adjustment will be acceptable to Governor Davis.

(Monitor the bill's language, history and progress at http://info.sen.ca.gov/cgi-bin/postquery?bill_number=sb_2027&sess=CUR&house=B&site=sen)

Access to Public Records in Requested Electronic Format (AB 2799, Shelley)

This bill would for the first time require state and local agencies, upon request, to provide computerized data constituting public record information in any format used by the agency itself, normally at simple copying cost. The bill would allow recuperation of special programming, compiling or extraction costs, however, in charges to the requester.

AB 2799 is in the Senate Appropriations Committee, having passed the Senate Judiciary Committee 5-0 on July 5, the Assembly Floor 70-4 on May 25, the Assembly Appropriations Committee 17-2 on May 17, and the Assembly Governmental Organization Committee 12-2 on May 8.

In that earliest committee, the bill's author Assemblyman Kevin Shelley (D-San Francisco) faced an amputation decision and, to save the electronic records access provisions, deleted a far more controversial element of the bill which would have allowed courts to decide, based on specific circumstances, that the public interest warranted ordering disclosure of records which an agency normally was authorized to keep secret. After lobbying by both public agencies and insurance industry representatives, the Governmental Organization Committee made it clear that such a provision would be the death of the bill.

Shelley gave priority to the electronic records access provisions because the legislature had twice before passed similar bills, only to see them vetoed, first by Governor Pete Wilson and last fall by Governor Gray Davis. Davis' announced reason had mostly to do with concerns over Year 2000 compliance by state computer systems.

As currently amended the bill allows reprogramming cost recovery via special charges, as noted, and also excuses release in electronic form "if its release would jeopardize or compromise the security or integrity of the original record or of any proprietary software in which it is maintained."

(Monitor the bill's language, history and progress at: http://info.sen.ca.gov/cgi-bin/postquery?bill_number=ab_2799&sess=CUR&house=B&site=sen)

Privacy, Access to, and Uses of Personally Identifiable Information (SB 129, Peace)

This bill is the vehicle for its author's ambition to convert facts about one's life into one's legally recognized property for all purposes, with serious but so far uncharted consequences for both business in the information economy and for freedom of information and expression as heretofore understood.

This "If It's about Me, I Own and Control It" presumption is comforting to victims of identity theft, distortions of their credit records, or unknown and unconsented uses of medical or biological information about them. The difference in the Peace approach is that, impatient with nuanced, gradualist approaches to these and other particular threats, the author wants a comprehensive and simple solution.

Recent events suggest that he apparently believes he has found it, by commoditizing biographical data as "property," at least those provided by a person as part of a business transaction, and giving him or her the right to special notice and a veto over every subsequent use or even transmission of the information.

That is the essence of a proposal assembled by an ad hoc research group of legislative staff attorneys whom Peace had testify at the latest hearing of what amounts to a "permanent floating" conference committee on his SB 129.

That bill originated as the action vehicle for the conclusions of a special legislative advisory committee which chewed over such issues for the better part of two years and wound with a phone-book size record of miscellaneous papers, but no report or recommendations as such. SB 129 has gone through several versions since its introduction in early 1999, but by and large has been allowed to slide through the process into a conference committee, with author's promises to come up with something concrete at that late stage.

The bill has thus been "in conference" since last September, and its content since then has been limited to the creation of a new tort, the "unlawful disclosure of personal information" (the latter term of which has yet to be defined), and of a new official, the Privacy Ombudsman, in the office of the secretary of state, with various "nonbinding" roles and unclearly charted jurisdictions (e.g. the implied but not expressly granted authority to find certain information practices "unlawful.")

The conference committee's most recent hearing in late June unveiled a modification of the ombudsman concept, drafted by Peace's staff, and the work of attorneys from the staffs of the Assembly and Senate Judiciary Committees, creating an even more exotic "hybrid" tort than the one found in the bill currently.

Instead of a mere ombudsman working for the secretary of state, however, the plan now would be to create a Personal Information and Privacy Protection Agency within the Department of Consumer Affairs. Legislative findings and declarations would

establish the policy that no "organization" - governmental, journalistic, commercial or nonprofit - may disclose or use information about an individual for any purpose other than the one for which it was expressly provided, without the subject's consent.

The judiciary committee staff proposed "hybrid" tort which would allow a person to sue for either "nominal" damages of \$1,000, or actual damages exceeding that amount, if any, plus attorney's fees and costs, for any disclosure or unrelated use committed "for any marketing or commercial purpose" without the subject's prior written consent.

The "personal information" thus converted to property status would mean "any individually identifiable information gathered in connection with a transaction with the person."

At the most recent hearing the author caught other committee members and staff off guard by suggesting an entirely new element that could be added to the bill, namely outlawing many if not most uses by government and private entities of monitoring video cameras not only in private spaces such as clothing store dressing rooms, but in completely public areas such as street corners, where they are increasingly used to document the running of red lights. One committee member otherwise sympathetic to Peace's data privacy concerns seemed to regard the inclusion of camera surveillance as needlessly controversial and complex new content in a bill already freighted with substantive adventure.

COMMENT: The lengths to which Peace and his staff advisors are prepared to go is suggested in the following comments distributed at the recent hearing, in which the problem was addressed of how to strip private companies of the property rights they already own in the personal information in their vast databases, without having to pay them for it. The solution: Just define information as not being property.

"Possible Problems: Some individuals, such as Professor Cate (Beth Cate, University of Indiana), argue the Takings Clause would raise serious constitutional problems for any legislation designed to give individuals control over their personal information.

"Possible Solutions: To this criticism, others respond that legislatures could simply pass laws declaring that no property interest accrues from the collection of personal data. Thus, privacy regulations would withstand constitutional challenge, as the Takings Clause only applies when property is implicated."

The communicative aspects of the First Amendment apply only when speech, press or petition is implicated. Can the legislature define the transmission of information about individuals as something other than communication enjoying constitutional protection?

(Monitor the bill's language, history and progress at http://info.sen.ca.gov/cgi-bin/postquery?bill_number=sb_129&sess=CUR&house=B&site=sen)

CFAC TO GOVERNOR'S NEW PRESS SECRETARY: "SHOW US THE MONEY!" (7/7/00)

The California First Amendment Coalition has sent a public records request to Governor Gray Davis' new press secretary, Steven Maviglio, asking for a copy of his employment contract and that of his deputy, also recently appointed. At the time the appointments were announced last week, the salaries to be paid these new officials were withheld.

CFAC's June 29 letter states:

Dear Mr. Maviglio,

In today's Sacramento Bee report of your appointment and that of Roger Salazar as your deputy, it is stated:

"The governor's office declined to disclose the salaries of the new appointees."

The California Public Records Act requires disclosure of such information. In Government Code Section 6254.8 it states:

'Every employment contract between a state or local agency and any public official or public employee is a public record which is not subject to the provisions of Sections 6254 and 6255.'

that is, not exempt from disclosure under any provision of the Act.

It may be that there was some miscommunication rather than an intent to withhold the information contrary to this provision.

In any event, please promptly send to the address below, or inform me as to where we should come to collect, copies of those documents memorializing the contracts of employment for you and Mr. Salazar, including any job description and an itemization of all elements of compensation.

We will be happy to pay copying costs.

The Bee has since reported speculation that one reason Maviglio (previously communications director for New Jersey Congressman Rush Holt) looked attractive to Davis is that he is a former three-term member of the legislature in New Hampshire, a state worth having inside expertise about for anyone who considers himself presidential timber.

In any event, Maviglio was caught last year in an Oops many of us can relate to. According to the Boston Globe, the episode began when Cher Castillo, a new member of a Florida congressman's staff, wanted to share a diet pill tip with five friends, but inadvertently sent it to all congressional offices.

Maviglio, whose boss was a co-sponsor of a bill to regulate unsolicited commercial e-mail (the "Can Spam Act" - see <http://congress.nw.dc.us/cgi-bin/webreturn.pl?link=www.house.gov/rholt/&dir=c-span>) wrote a sharp rejoinder deploring the intrusiveness of spamming - and sent it as "reply all" to what he thought was a list of about 40 addresses. Instead it arrived in some 10,000 official mailboxes on Capitol Hill.

For those patiently waiting for the relevance of this anecdote, here's the rest of the story as related by Globe columnist Patti Hartigan (Cyberlinks, 10/8/99):

"As for the original spammer, Castillo is not supposed to talk about the incident. Reached at her office, she sheepishly admitted that she did, in fact, send the errant e-mail. Was it an accident? Yes. Was she reprimanded? Yes. Can she elaborate? Well, no.

"I'm not allowed to answer any questions from the press," she explains.

"Her title?

"I'm the press secretary."

SENATOR SEEKS YOUR IDEAS ON THE 'PERFECT FOIA ENVIRONMENT' (6/30/00)

How could the federal Freedom of Information Act (FOIA) be improved? What would the ideal public information disclosure law be like? Senator Patrick Leahy (D-VT) would like to get your ideas on this topic soon, and might reflect them in some legislation he is apparently planning to introduce. But you need to get the word back to him before long.

Rachel Boehm, the San Francisco attorney (with Steinhart & Falconer) who serves as Freedom of Information chair for the Northern California Chapter of Society of Professional Journalists, has forwarded to CFAC the following message from Ian Marquand, SPJ's national "Sunshine Chair":

"An opportunity has arisen to help Sen. Patrick Leahy of Vermont craft a 'wish list' for the federal FOIA. In essence, we need to express, as briefly as possible, what the 'perfect FOIA environment' would be.

"Examples might be:

- * Instant access (or no delays beyond 24 hours) to information sought.
- * Anonymity of access
- * Integration of text and video information
- * Complete linkage between related documents
- * A universal search tool common to all federal websites and departments
- * Multiple search tools available
- * A universal, user-friendly, file format

"Exactly what this will translate to isn't known yet, although Sen. Leahy is one of the original co-sponsors of E-FOIA. This may be the opportunity to get in on the ground floor of the next wave of federal access law.

"We've been told to be bold, to think of future possibilities and, above all, to be brief.

"We have until mid-July to submit our vision to Sen. Leahy. If you have thoughts, please send them to me ASAP."

Boehm says Marquand can be reached at ian@kpax.com.

COURT: RIVERSIDE MUST GET COP'S WORK COMP SETTLEMENT UNSEALED (6/23/00)

The city of Riverside unlawfully engineered the sealing of a settlement in a workers' compensation case involving a former police officer, a judge has ruled, ordering the city to get the seal lifted and the settlement turned over to a daily newspaper. As in Claremont recently, city officials made it appear the secrecy agreement had been forced on them.

The case involves Rene Rodriguez, one of several Riverside officers who showed up on the scene shortly after the fatal shooting of Tyisha Miller by four fellow officers on December 28, 1998. She was shot at night after being found sleeping or unconscious in a parked car with a pistol in her lap.

Controversy over the exact circumstances leading the officers to open fire, including possible racial prejudice, has resulted in a corrosive polarization in the city between supporters of the victim and of the police, and has led to a federal civil rights investigation, a major civil rights lawsuit by the surviving family, an intensive investigation by a local blue-ribbon panel into police training and handling of citizen

complaints, and calls for a permanent citizen review board.

Rodriguez aggravated suspicions of racism by reporting that some officers had made "racially insensitive" remarks after the shooting, and on that basis, after a corroborating internal investigation, one officer was fired and another administratively disciplined.

Rodriguez later alleged more specifically that certain colleagues exchanged "high five" congratulations after the shooting, used obscenities to describe the teenaged victim, called her family members "animals" and joked about the color of the bullets used. These allegations were made in a discrimination claim against the department, lodged with the state Department of Fair Employment and Housing (DFEH).

That claim, filed late last summer, complained of an overall "hostile work environment" stemming from reactions to his first disclosures. Rodriguez had at that point been on unpaid leave for five months, contending that he feared for his safety.

Last winter the daily Press-Enterprise learned by chance that Rodriguez was no longer on the city payroll and that the details of his separation were documented in a settlement of a workers' compensation case. The city manager and city attorney told the newspaper that they would be inclined to release the specifics but were barred from doing so by the settlement order of the Workers' Compensation Appeals Board (WCAB) judge.

The newspaper sued, and the city released some information about the settlement, but not all. The litigation revealed that it was the city that had taken the initiative to persuade Rodriguez to agree to seek a sealing order, a maneuver reminiscent of the city of Claremont's disingenuous claim last year that it had been forced to accept a federal magistrate's order sealing a settlement in another police conduct-related case.

The city also argued the information was confidential as part of a peace officer's personnel file and as protected by the California Public Records Act's "catchall" exemption in Government Code Section 6255, both of which arguments were rebutted by Press-Enterprise counsel James Manning of the Riverside firm of Reid & Hellyer.

Superior Court Judge Dallas Scott Holmes on May 31 signed an order directing the city to:

- * apply to the WCAB to dissolve its sealing order;
- * provide Manning and Rodriguez's lawyer with "all documents submitted" to that tribunal; and
- * stand by to pay the Press-Enterprise's attorney fees and costs, to be decided later.

Holmes' order also specifies that the city "may not voluntarily disable itself from compliance with" the Public Records Act by seeking orders sealing its settlements, which under the Act are public once final.

Manning says that the newspaper has since learned that the settlement in the workers' compensation forum also contained terms under which Rodriguez withdrew his racial discrimination claims to the DFEH and - in a proceeding never disclosed to the public - also to the DFEH's federal counterpart, the Equal Employment Opportunity Commission.

COMMENT: For the second time in the span of a few months, a city has been caught with a Pinocchio nose - not only ignoring its obligation to make settlements public by taking the lead in persuading its party adversary and some otherwise ignorant magistrate that secrecy is desirable, but then claiming publicly that it would love to be more forthcoming, but its hands were tied by court order.

[Back to top](#)

E-RECORDS ACCESS BILL ADDING COST FACTOR FOR EXTRA PROCESSING (6/16/00)

Assemblyman Kevin Shelley's AB 2799, which would give the public the right to get copies of nonconfidential state and local government records in electronic form, is undergoing amendments to allow extra charges or in some cases unusual delay to reflect extraordinary work to meet the demands of a particular request.

The bill is awaiting a hearing date in the Senate Judiciary Committee after passing the Assembly, 70-4, on May 25. The amendments now being put in print by the Legislative Counsel's Office are intended to address some public agencies' concerns that some records requests, particularly for database information, may involve processing considerably beyond simple "copying," in terms of both time and cost to the agency. Another concern is that some databases are, for security reasons, designed not to allow copying.

One of the proposed amendments would add a new basis for extending the response time to as much as an additional 14 days, which is now permitted in the case of voluminous records to be processed, those stored in a remote archive or those for which several other agencies must approve release. Added to these bases for time extension would be "The need to compile data or to write a computer program to extract data."

The other pending amendment language is set off <<thus>> below; the entire section would be added to the California Public Records Act in the Government Code:

"6253.2. (a) Unless otherwise prohibited by law, any agency that has information that constitutes an identifiable public record <<not exempt from disclosure pursuant to this chapter>> that is in an electronic format shall make that information available in an electronic format when requested by any person and, when applicable, shall comply with the

following:

(1) The agency shall make the information available in any electronic format in which it holds the information.

(2) Each agency shall provide a copy of an electronic record in the format requested if the requested format is one that has been used by the agency to create copies for its own use or for provision to other agencies. Direct costs of duplication shall <<be limited to the direct cost of making a copy of a record in an electronic format.

(b) Notwithstanding subdivision (a)(2), the requestor shall bear the cost of producing the <<copy of the >> record, including the cost to construct a record or the cost of programming and other computer services necessary to produce the <<copy of the >> record when:

(i) In order to comply with the provisions in subdivision (a), the public agency would be required to produce a copy of an electronic record and the record is one that is only produced at otherwise regularly scheduled intervals; or

(ii) The request would require data compilation, extraction, or programming to produce the record.

(c) Nothing in this section shall be construed to require the public agency to reconstruct a report record in an electronic format if the agency no longer has the report itself available in an electronic format.>>

(d) Nothing in this section shall be construed to permit an agency to make information available only in an electronic format.

<<(e) Nothing in this section shall be construed to require the public agency to release an electronic record in the electronic form in which it is held by the agency if its release would jeopardize or compromise the security of the record, or of any proprietary software in which it is maintained.>>

A. Nothing in this section shall be construed to permit public access to records held by the Department of Motor Vehicles to which access is otherwise restricted by statute. "

L'AFFAIRE QUACKENBUSH: ENABLED BY WEAK PUBLIC RECORDS LAW (6/16/00)

Embattled Insurance Commissioner Chuck Quackenbush, accused of substituting his own political interests for timely and fair insurance payouts to earthquake victims, might never have been re-elected but for a weak public records law. Recent action by insurance industry lobbyists, moreover, saw to it that the law will stay weak.

Assemblyman Kevin Shelley's AB 2799 lost its most controversial content in April when lobbyists for both public agencies and the insurance industry forced Shelley to

drop his proposed "reverse balancing test." The bill now addresses primarily the issue of access to electronic records (see story above).

The California Public Records Act (CPRA) provides that even if a document is not covered by any express exemption from disclosure - and is therefore presumed to be accessible to the public - an agency may take the position that based on unusual facts and circumstances, the public interest in keeping the information (at least temporarily) secret outweighs the public interest in disclosure.

Shelley's short-lived "reverse" approach would have left this rule in place but added its reciprocal, affecting several categories of records concerning which agencies are given discretion whether to release or not. Shelley's rule would have allowed a judge to order release of a record withheld under one of those discretionary exemptions, based on a finding that, given particular facts, the public interest in disclosure outweighed the public interest in secrecy.

The killing of that provision occurred in the Assembly Committee on Governmental Organization, a "juice bill" processor often preoccupied with squeezing gambling and liquor legislation for what it is worth - normally benign to indifferent on "sunshine" issues but also unaccustomed to alienating lobbyists for powerful business interests.

The committee's signal to Shelley to remove (or else) public interest balancing as a threat to the secrecy of insurance regulation is prologue to an ironic episode this past week in the Capitol, where Insurance Commissioner Chuck Quackenbush is under politically terminal attack. He is charged with having allowed insurers, in lieu of exposure to potential billions of dollars in fines payable in connection with their treatment of customers suffering earthquake losses, to contribute millions to several friendly nonprofit groups to create "educational" advertising or otherwise patronize special constituencies in ways identified with and flattering to the commissioner.

One of several forums for calling those responsible to account is the Senate Insurance Committee's Subcommittee on Bad Faith Liabilities and Consumer Protection. On Monday, June 12 the subcommittee's chairwoman, Sen. Martha Escutia (D-Commerce) released copies of "market conduct" examinations conducted by the department on four big carriers who were allowed to avoid fines by contributing to the nonprofit.

The examination reports charge that Allstate, Farmers, State Farm and 20th Century did not adequately inspect damaged properties of their insureds, offered them insufficient settlements and even misled them about benefits. The reports reflect checks on more than 2,400 earthquake claims and how they were handled, and among the four firms alleged almost 3,200 violations of state law.

These reports are exempt from disclosure under the California Public Records Act, by Government Code Section 6254 (d), but the exemption is permissive or discretionary; disclosure is not flatly prohibited. Thus the secrecy for the market conduct examination

reports might have been overridden, in a given court challenge, by a judge's use of the "reverse" public interest balancing test in Shelley's bill.

How this might have happened is illustrated by last week's release of the reports, apparently leaked to the committee from some source inside the department. A spokesman for the department called Escutia's release "outrageous, illegal behavior," and his sentiment was echoed by a spokesman for the Personal Insurance Federation of California, who accused the senator of "placing herself above the law." The federation lined up with public agencies in April to force Shelley to drop the public interest balancing test.

Escutia, according to the Sacramento Bee "brushed aside objections to releasing the documents, saying the public's need to know the contents outweighed the importance of confidentiality."

Another connection between L'affaire Quackenbush and CPRA reform is that it was a failed attempt by a legislative watchdog unit two years ago to document early suspicions about the Insurance Commissioner that led the investigators to conclude that the CPRA was toothless. The department cited its very broad exemptions from the act in repeated letters rebuffing information requests from the Joint Legislative Task Force on Government Oversight.

As stated in the report it finally wrote, called "KEEP OUT: The Failure of the California Public Records Act":

"In November 1997, the Task Force undertook a review of the general policies and practices of the California Department of Insurance. Since his election to office in 1994, current Commissioner Chuck Quackenbush has come under continuous fire by consumer organizations and his own staff for instituting policies viewed as friendly to the insurance industry at a very high cost to consumers and ratepayers. Task Force staff began research on some of the criticized programs and policies with the intent of determining whether or not these criticisms were warranted...

"From November 1997 to January 1998, staff made several document requests pursuant to the provisions of the CPRA...for such public documents as copies of audits by the Department of Finance and California State Auditor, the minutes of meetings of advisory boards made up entirely of insurance agency representatives, copies of consumer satisfaction survey questions, etc.

"The Department did not respond to any of the requests in the timeframe required by law and, on January 16, provided a broad list of exemptions under which they denied all requests. However, none of the exemptions cited were tied to a specific request and none of the exemptions could be applied to any of the requested documents. Not one piece of requested information was provided to the Task Force."

To address various problems noted in the "KEEP OUT" report, Sen. Byron Sher (D-Palo Alto) introduced a bill to allow those denied public records access to get a second opinion from the Attorney General, and to allow judges to fine agencies which

withhold records unlawfully and in bad faith. Gov. Davis vetoed that bill (SB 48), and its successor is now SB 2027, awaiting assignment to an Assembly Committee after having passed the Senate by a 31-6 margin on May 31.

But meanwhile the Department of Insurance stonewall was effective in blunting the task force's inquiry. That entity published no report, and Chuck Quackenbush was re-elected, with record-breaking contributions to his campaign coffers from the insurance industry.

COST-RELATED CHANGES SOUGHT FOR ELECTRONIC DATA ACCESS BILL (6/9/00)

Assemblyman Kevin Shelley's AB 2799, which would give requesters the right to receive government data in any electronic format used to maintain the information, may be amended soon in a subtle but significant manner. The upshot may be to end technical arguments about "creating a new record" and instead focus on cost and timing issues.

In its present form, the bill assumes that an electronic record either does or does not contain public information, and does not address the question of whether technical or procedural barriers inherent in the agency's information resources or practices may need to be dealt with. But after a recent meeting with several primarily local government associations, led by the California State Association of Counties, there seemed to be a consensus that instead of letting these considerations be a flat barrier to access, the legislation should allow for extra time, extra charges or both in order to allow for extracting never-before-released information.

The draft amendment being circulated by John McKibben of the executive offices of Los Angeles County has the following elements:

Time Extension: The California Public Records Act now allows an extension of up to 14 days (in addition to the initial 10-day period) for an agency to make release determinations if the records request is voluminous, if the records are stored remotely or if other agencies must be consulted to determine possible exemptions. The CSAC proposal would justify the extra 14 days also to deal with the "need to compile data or to write programming language to extract data."

Processing Costs: Whenever something above and beyond a simple "duplication" analogous to paper copying would be required to fulfill an electronic records request, the associated extra cost could be charged to the requester:

"The requestor shall bear the cost of producing the record, including the cost to construct a record or the cost of programming and other computer services necessary to produce the record when:

In order to comply with the provisions in subdivision (a), the public agency would be required to produce a copy of an electronic record and the record is one that only is produced at otherwise regularly scheduled intervals; or

The request would require data compilation, extraction, or programming to produce the record."

Inherent Obstacles: Some government databases, for example some used by law enforcement agencies, do not permit copying, and in other cases information is carried in programs that can be run only via programs controlled by license. In such situations the following language would apply:

"Nothing in this section shall be construed to require the public agency to release an electronic record in the electronic form in which it is held by the agency if its release would jeopardize or compromise the security of the record, of any proprietary software in which it is maintained."

SHELLEY'S BILL ON ELECTRONIC RECORDS PASSES FISCAL COMMITTEE (5/19/00)

A bill intended to make public information stored in digital form accessible to the public in any computer format used by the custodian agency advanced toward the Assembly floor May 17 with its 17-2 passage out of the Assembly Appropriations Committee. The bill would also ban "delay" in providing access and require denials to be put in writing.

Voting Yes on passage of AB 2799 were committee members Migden, Campbell, Alquist, Aroner, Ashburn, Cedillo, Corbett, Davis, Kuehl, Maldonado, Papan, Romero, Shelley, Thomson, Wesson, Wiggins and Zettel. Voting No were Ackerman and Brewer, and absent, abstaining or not voting were Runner and Wright.

A.G.: POLICE PERSONNEL FILES CAN BE TRASHED AFTER FIVE YEARS (5/19/00)

California law enforcement agencies can destroy their internal affairs investigative files five years after being completed, and most peace officer personnel files five years after the subject is no longer on the agency's payroll, according to a recent opinion from the office of Attorney General Bill Lockyer. But destruction must not be in "bad faith."

In the May 2 opinion (No. 99-1111) written to answer questions by Ventura County District Attorney Michael Bradbury, Deputy Attorney General Gregory L. Gonot noted that a challenging party (such as a criminal defendant seeking such information to support his or her case) would have the burden to show "bad faith" on the part of a department in destroying such records after the statutory five-year period - so long as the destruction had been done as part of a routine and generally applied administrative

process.

State law requires preservation of such records for a minimum of five years. But so long as destruction is a routine procedure thereafter, in other words, the fact that it deprives the defendant of useful information will not be treated as a denial of due process.

COURT: ROUTINE COP STOP NO BASIS FOR INVESTIGATIVE EXEMPTION (5/12/00)

When police stop a motorist out of misplaced suspicion triggered by an informant's tip and release the driver and passengers after a brief confrontation, any records relating to the stop or what led to it are not exempt from disclosure as investigative documents. But if the driver files a citizen's complaint, the paperwork then generated is a different story.

So concluded the California Court of Appeal for the Second District in its opinion filed May 2 in Haynie v. Superior Court, case no. B137707. Elgin Haynie had the misfortune of driving a van with three passengers shortly after Los Angeles County Sheriff's deputies on patrol heard a citizen's description of a similar vehicle in the neighborhood, into which several men with guns had just entered. One deputy later said he saw Haynie and his passengers behaving furtively, and pulled the van over.

The passengers were female, there were no weapons and the stop was obviously mistaken, but in the meantime Haynie became "argumentative," and was briefly handcuffed. He was then uncuffed and the officers left without further official attention, only to return shortly thereafter and find Haynie "attempting to inflict injury on his wrists by striking the pavement." The officers called for a supervisor and a paramedic and some photos were taken to establish that no serious injury had occurred.

That all occurred on July 1, 1999. Eleven days later Haynie's lawyer contacted the department, identified the deputies in the incident, and sought a variety of paper records and tape recordings documenting the informant's tip, patrol car radio traffic, statements made at the stop and even Haynie's later statements to the departmental investigator following up on his citizen's complaint.

The department denied the requests, characterizing the information sought as exempt as investigative records of a law enforcement agency, as relating to citizen complaints against a peace officer, or both. When Haynie sued, the county shifted its grounds to a combination of law enforcement investigation and pending litigation exemptions, dropping its reliance on the peace officer personnel file exemption. The trial court essentially upheld the court's position.

On appeal, the Second District agreed that the investigative exemption would apply to any records generated by Haynie's complaint after the incident, including a tape recording made of his debriefing by a sheriff's investigator.

But since there was no "concrete prospect of enforcement" involved in the van stop, any records pertaining to that incident before Haynie made his complaint would be available and not protected as part of an investigative file. Nor would the pending litigation exception apply, since no records created at the time of the stop were in anticipation of a lawsuit.

Finally, the court held that Haynie was entitled to the attorney's fees he sought because he had established that the stop-related records were public - even though, as the county suggested, there might be no surviving records concerning the stop itself.

PAPAN BILLS ON COURT OPINIONS, NET REPORTS MEET SEPARATE FATES (4/28/00)

Assemblyman Lou Papan's AB 2404, which calls for all opinions of the state's appellate courts not contained in the official reports to be made available through private publishers, failed its first committee test this week. But his AB 1759 got out of committee as amended; it would require state agencies to list their studies and reports on the Internet.

The court opinions bill failed passage 9-3 in the Assembly Judiciary Committee on Tuesday, April 25. It was backed by those who felt the public and the legal profession should know what appellate courts have actually held in all their cases, even though opinions not officially published would have had only persuasive - not mandatory - weight as precedent.

Chief Justice Ronald George, for whose court the power to depublish lower court opinions is a major tool for controlling the direction of case law without having to explain why, strongly opposes the idea.

Papan's AB 1759, however, passed the Assembly Committee on Information Technology 5-0 on Wednesday, April 26, but was amended to remove a central ambiguity. As presented to the committee, the bill was not clear on whether it would require state agencies actually to publish their studies and reports on their Internet sites (if they had any), or simply to list them as completed and available. This week's

amendments made it clear that the latter is the case.

SHELLEY DUMPS 'REVERSE BALANCING TEST' TO SAVE E-ACCESS BILL (4/28/00)

Hitting an effective stone wall of opposition from public agencies and private associations of insurance companies, Assemblyman Kevin Shelley dropped a provision of his AB 2799 that would have allowed courts to override certain exemptions from the California Public Records Act if and when the public interest in disclosure was weighty enough.

Such instances, although rare (applicable only in cases where the agency controlling the record had the discretion to release it, but declined), would have represented a counterbalance to current law. The Act now provides that even when a record would normally be public because no explicit exemption from disclosure applied, an agency may still deny access if it decides that the public interest in non-disclosure outweighs the interest in disclosure.

By the time of the Monday, April 24, hearing in the Assembly Committee of Governmental Organization, it became clear to Shelley that the opposition's lobbying efforts had been lethally effective. An easy majority of the committee, which despite its name typically concentrates its attention on contribution-sensitive vice regulation (liquor, gambling, horseracing), was susceptible to the chorus of public and private lobbyists, predicting dire consequences if courts were allowed to use public interest balancing to open records as well as to shut them.

Shelley's readiness to jettison the "reverse balancing test" stemmed from his concern to preserve momentum on the bill's other major provision - the third legislative attempt to provide ready access to computerized public records in whatever format used by the agency itself.

None of the opposition lobbyists showed problems with this aspect of AB 2799 (two bills to the same effect passed the legislature without much controversy in recent years, only to be vetoed by Governors Wilson and then Davis). But nonetheless, Shelley could not round up enough support in the hearing or during the rest of the day to get the bill out of committee. It will likely be back in the committee on May 8, probably for a vote only.

DATA CLAMP: INDUSTRY'S WORST CASE CHEMICAL ACCIDENT SCENARIOS (4/28/00)

The federal government, wanting to keep sunshine policy from helping shady characters, says you have a right to know whether your home and community are in the affected plume of a "worst case" catastrophic chemical release. But because the public can't be trusted not to harbor terrorists, you shouldn't get this information easily or anonymously.

That's the thrust of regulations proposed yesterday (April 27) by the federal Environmental Protection Agency (EPA) and the Department of Justice, to be set for hearing in Washington, D.C. on May 9 and open for written public comment until June 8.

1990 amendments to the Clean Air Act require the EPA to collect risk management plans from plants using listed hazardous chemicals. Included in the plans are "offsite consequence analyses" showing how the neighborhood might be affected by a leak, spill or other accidental and toxic release. At one point the plan was to put all of these reports on the Internet for maximum public attention, but that idea was quashed by the fear that terrorists might use the information to plan bombing or other attacks calculated to affect a specific zone.

Now EPA and Justice, according to an alert from the nonprofit organization OMB Watch, propose that key portions of the offsite analyses be confined to paper and kept in federal and local reading rooms, at sites not yet described, where inspection would be by driver license identification-backed sign-ins only.

Confined to this mode of access would be information showing, for each offsite analysis, what chemical is involved, the assumed release rate and duration, the distance to the zone of vulnerability and within that zone the population, public facilities such as schools, shopping centers and parks, and maps and other graphical information. Viewers would be allowed to take notes but not make copies, and a log would be kept of exactly who had seen the analyses of exactly which industrial facility.

OMB Watch says that the reading rooms would probably not be in libraries, since the American Library Association last year took the position to oppose controls on public access to such analyses.

Further information is available at <http://www.ombwatch.org/info/rmprulesum.html> or by contacting Rick Blum, blumr@ombwatch.org.

[Back to top](#)

MEASURE WOULD REQUIRE "LISTING" OF STATE AGENCY REPORTS ON NET (4/21/00)

A bill to require every state agency with a Web site to "list" on it all its reports or studies is set for hearing Monday, April 24 in the Assembly Committee on Information Technology. AB 1759 by Assemblyman Lou Papan (D-Millbrae) is prompted by last year's disclosure that the Department of Health Services quietly failed to publicize inconvenient poll data.

It was revealed in a report by the Auditor General that the department failed to disclose the fact that a poll it had taken to assess the feelings of bar owners toward the ban on smoking came up with general lack of support. This outcome undercut the official line that bar proprietors were satisfied or even happy with the prohibition, and while the department did not turn down requests for poll results, it apparently never got any requests because no one outside knew a poll had been taken.

Papan's AB 1759 is so far unclear on whether the reports and studies themselves would have to be fully posted. The word used in the bill is "listed," suggesting that a one-line title or thumbnail description might be sufficient. In any event, the bill requires the listings to include not only completed but in-pipeline reports and studies, to be refreshed every 10 days to "list" also completed or updated documents.

A pre-hearing amendment by the author clarifies that the bill would apply to reports and studies prepared by contract consultants as well as agency staff.

Comment: This bill would represent a watershed advance in the California Public Records Act, which up to now has been an information-upon-specific-request law with no duty on the government's part to alert the public as to what information is available. To make this transition far more useful, however, the bill should require creation of a central Web site to house all state-generated reports and studies, cross-referenced to the originating agency's Web site. Just as it does little good to deem a report accessible to the public if no one knows it exists, it does little good (except for insiders) to require disclosure on each of scores of Web sites if no one knows that they exist.

BILLS WOULD BROADEN, RESTRICT ACCESS TO HATE CRIME INFORMATION (4/21/00)

Two bills, both having passed their first committee hurdles in Sacramento, would affect public access to information about hate crimes. One would require convicted hate crime felons released from prison to register locally, like sex offenders, in a confidential file. The other would add school hate crimes and incidents to publicly accessible summary reports.

AB 1809 by Assemblyman George Runner (R-Lancaster), a bill to establish a statewide hate crimes database in the Department of Justice, passed the Assembly Public Safety Committee on a 7-0 vote on March 14.

"The lack of a specific hate crimes database makes it difficult for law enforcement to identify potential hate crime offenders or to coordinate statewide efforts against violent hate crimes," Runner said. "A hate crimes database would assist them in combating this type of violent activity."

Runner's measure would require those convicted of serious hate crimes -- or property crimes against religious organizations inflicting more than \$5,000 in damage -- to register as hate crime offenders, upon conviction or release, for ten years. The database would, however, be open only to law enforcement officials.

The Los Angeles County Sheriff's Department, sponsor of the bill, says current hate crime statistics can be unreliable because the methods of reporting crimes often vary from agency to agency and the data have not been collected long enough to indicate any strong trends.

A hate crimes database, it believes, will provide an automated and standardized method of gathering and retrieving hate crime information on a statewide basis to be used as a tool by law enforcement officials to track and reduce "hate activity."

The bill is opposed by the American Civil Liberties Union and the California Public Defenders Association. Despite the committee's unanimous passage vote, the analysis of the bill noted that registries of this sort are traditionally used to keep tabs on felons convicted of crimes with high recidivism rates (e.g. sex and drug offenses, arson). "The Committee has not received any information to confirm whether individuals who commit hate crimes tend to re-offend at high rates..."

The bill has reached the Assembly Appropriations Committee, and there been placed on the suspense file to await further information on available funding. The same is true for Assemblyman Antonio Villaraigosa's AB 1785, which passed the Public Safety Committee 7-0 on March 2.

This bill would add hate crimes and "hate-motivated incidents" to the list of offenses occurring on campus which schools must now report to district and county superintendents, and the latter must report in aggregate form to the State Department of Education, which must then provide statewide summary reports to government and other groups as well as the legislature. All district, county and statewide aggregate reports are now public records and would remain so under AB 1785.

"Hate crimes," for purposes of the Villaraigosa bill, would include any "act or attempted act against the person or property of another individual or institution which in any way manifest (sic) evidence of hostility toward the victim because of his or her actual or perceived race, religion, disability, gender, nationality, or sexual orientation."

A "hate motivated incident" is much more likely to be a speech act, since it includes

using "bigoted insults, taunts or slurs, distributing or posting hate group literature or posters, defacing, removing or destroying posted materials or announcements, posting or circulating demeaning jokes or leaflets."

This bill is co-sponsored by the California School Employees Association (school workers other than teachers, administrators or counselors) and the Anti-Defamation League. The latter, says the bill's analysis, states that for more than 15 years it has been training school officials how to handle and prevent hate crimes, but "the most common complaint at these sessions is fear of being singled out as a problem school by the district if a hate crime is reported." Mandating all schools to report the information should help solve that problem, the ADL believes.

Comment: Is the "hate motivated incident" category biting off more offensiveness than any school can be expected consistently to process? "Retard," "faggot," and the N-word are as casually employed -- often with no serious or literal reference to their target -- among adolescents as other unpleasant names. Is each one to generate a report even if not motivated by discriminatory intent? On the other hand, what about slurs, sneers and other abuses such as those which, as in Columbine High School and elsewhere, occasionally have spectacularly destructive consequences even though not targeted at race, religion, sex or the other targets of traditional bigotry, but instead at a behaviorally defined out-group?

[Back to top](#)

REVIVED CONTROVERSY IN COURT, CAPITOL ON UNPUBLISHED CASE LAW (4/21/00)

Anyone walking the stacks among official case reports in any law library might be surprised to learn that the California appellate courts now publish only about seven percent of their opinions. The rest are either deemed not for publication by the issuing courts or later "depublished" by the California Supreme Court. Some say that practice must change.

One is Lou Papan (D-Millbrae), a veteran member of the State Assembly, whose AB 1759 will go to its first hearing Tuesday (April 25) in the Assembly Judiciary Committee. His measure would not expand the scope of official reports and would leave with the courts the discretion they have under the state constitution to decide what cases to publish as mandatory precedent.

But the bill would state, however:

"All final opinions of the Supreme Court, of the courts of appeal, and of the appellate divisions of the superior courts shall be made available for private publication, in full; and shall constitute precedent under the doctrine of stare decisis the same as opinions published in the official reports."

One reporter for the Daily Journal Corporation has speculated that what the bill may eventually provide is for publication on the Internet -- to avoid the pulp-waste arguments of opponents -- and for designating the unpublished works as citable, but not mandatory, precedent -- something like the published case law of another state's court.

The person most identified for the publish-it-all movement, which has its periodic crests and has reached one recently, is Emeryville attorney Michael Schmier, who ran for state attorney general in the last election on the following single plank:

"The California Supreme Court has caused a major defect undermining our legal system. I want it fixed now. Appellate court rulings are no longer published for all to see. Secret rulings do not serve as future guidelines, even in the same court. They enable judges to ignore the law, knowing this injustice is hidden. Corruption and arrogance fester at every level because precedent is destroyed. Feedback to the public, necessary to prevent abuses, is prevented. I will ensure that this and other justice flaws are fixed, not buried. The foundation of law and order is order under law."

Schmier is not alone in his critique, which has its scholarly supporters (see <http://www.schmierforag.com/lawrev.html>). But his chief adversary on this issue may be California Chief Justice Ronald George, who is particularly impatient with the notion that the courts have something to hide.

"The phony business is the issue of secrecy," he told the Daily Journal. "It's unfortunate (the opinions) are denominated published or unpublished, but they're still there in written form."

Schmier, arguing that discretionary publication of appellate opinions ran afoul of the state constitution, sued for an injunction but lost, with the trial court's denial upheld by the Court of Appeal for the First District in a (published) opinion by Justice Zerne P. Haning in *Schmier v. California Supreme Court*, Case No. A085177 (2/28/2000).

Justice Haning's exasperation with Schmier's basic premise was evident:

"Appellant either misunderstands or ignores the realities of the intermediate appellate process. If appellant's view prevailed, the Court of Appeal would be required to publish all *Wende* opinions. As every criminal lawyer knows, a *Wende* case is one in which appellate counsel in a criminal appeal advises the court that no arguable appellate issues can be found, thereby invoking the obligation of the Court of Appeal to conduct an independent review of the record. A typical *Wende* opinion merely recites that the court's independent review has revealed no arguable issues.

"We have appeals from criminal defendants who enter into plea bargains in which they agree, for example, to accept the midterm as their sentence, and then appeal contending the court abused its discretion by sending them to prison. We also have appeals in criminal cases which challenge the constitutionality of the reasonable doubt instruction, in spite of the fact that every appellate court which has ruled thereon has found it to pass constitutional muster....

"We have appeals in family law cases where the trial court has divided the community assets equally, as it is required to do; but one of the parties nevertheless appeals for reasons having nothing to do with the law or the facts, conceding the equal division, but contending he or she failed to receive one of the assets that party wanted. We have appeals from parties seeking relief based on matters outside the appellate record, which we cannot review. We have appeals from nonlawyers appearing in propria persona, filing incomprehensible briefs with no understanding of the rules of appellate review, urging us to reweigh the evidence and reject, for example, the testimony of the six witnesses who said the traffic signal was red rather than green when appellant drove through it and struck the pedestrian in the crosswalk.

"Our typical opinions in such cases add nothing to the body of stare decisis, and if published would merely clutter overcrowded library shelves and databases with information utterly useless to anyone other than the actual litigants therein and complicate the search for meaningful precedent. Appellant fails to explain how or why such opinions contribute to the corpus juris."

Comment: While, as Justice Haning's litany of dubious appeals demonstrates, the range of substantive and cite-worthy cases any private publisher might be interested in could be a small fraction of the universe, Papan's bill and Schmier's complaint have a point. While the rules for deciding what does and does not merit publication are clear and objective enough, most lawyers know that what ends up in the official reports can be often fairly arbitrary. In CFAC's experience, for example, two appellate districts reached opposite decisions as to the application of the Brown Act to corporations created to manage hospital district facilities. One opinion, holding that such corporations are subject to the Act, was not published. The other to the contrary was. This practice saves the supreme court from the pressure to resolve conflicting intermediate appellate case law, but does that virtue alone justify it? Two other Brown Act cases from the Second and Fourth Districts have more recently been kept unpublished, both of which would have advanced the definition of that statute. Given the infrequency with which the Brown Act is ever litigated to the court of appeal and the motivator of making new case law which is precisely so often predominant in public interest litigation (money certainly isn't), the present system is not rational in effect and results in far less guidance to the public and the courts than could and should be the case.

[Back to top](#)

DATA FIRM AGAIN IN COURT FOR ACCESS TO ADDRESSES OF ARRESTEES (4/21/00)

United Reporting Publishing Corp., which last year lost its bid in the U.S. Supreme Court to establish a constitutional right of access to addresses of those arrested, is back at the U.S. Ninth Circuit Court of Appeals with a renewed try. This time the company

shifts the emphasis of its argued rights to commercial speech grounds -- and its journalistic role.

In its decision last summer the high court refused to find unconstitutional on its face a provision of the California Public Records Act which affects access to arrest information held by police agencies.

That statute, Government Code Section 6254(f)(3), requires those seeking the home addresses of crime victims or persons arrested to declare under penalty of perjury that the information is sought for a journalistic, scholarly, political, governmental or private investigator's purpose and will not be used, directly or indirectly, to sell a product or service to one or more individuals.

United Reporting, part of whose business it is to sell arrestees' names and addresses in particular to attorneys, alcoholism counselors and others with a service to provide to them, failed to convince the court that the law is unconstitutional on its face as a restriction of pure speech.

But the justices did not address alternate theories for attacking the statute, such as its intrusion into protected commercial speech or its unconstitutional impact on United Reporting as applied by the police. Nor did it consider whether the law might run afoul of California's own constitutional protection for speech.

These are the grounds on which the company now takes the case up again on remand from the supreme court. In its brief filed with the Ninth Circuit, United Reporting contends that that court's earlier decision on commercial speech grounds was correct.

That is, even granted the lower caliber of First Amendment protection for communications which carry no ideas or esthetic content but simply "propose a commercial transaction," this law accomplishes the ostensible objective of protecting privacy only in such a partial way as to be irrational.

It allows journalists, scholars, politicians, public officials and private detectives to do what they want in publicizing arrested people's identities and home addresses, but "protects" those in legal trouble only from a certain species of junk mail: offers of direct help from those who can provide it.

Nor has the Los Angeles Police Department ever presented evidence, the company notes, either that arrestees complained of receiving solicitations triggered by commercial access to their addresses, or that a simple opt-out system would not suffice to protect those with privacy anxieties.

Another ground for challenge argued is that the company maintains a Web site on which the data are displayed for anyone to see -- as "news." But even while it would qualify for the data as a journalistic enterprise, it dares not swear that others will not use it for the forbidden purposes, and this barrier disables its access for even the permitted purposes.

Finally, United Reporting asks the court to find that California's own constitutional protection for speech -- held in several cases to be more ample than the First Amendment -- renders the statute invalid.

Meanwhile, the company continues to seek financial support to wage the battle on two fronts: an estimated \$70,000 war chest for litigation and a separate \$25,000 fund for seeking a legislative remedy should it become necessary.

[Back to top](#)

CITY SAYS IT'S HEADED TO SUPREME COURT TO AVOID ATTORNEY'S FEES (4/14/00)

The City of Richmond, battling a public records quest by the San Francisco Bay Guardian for the past seven years, spent the first three losing its attempt to keep all police records away from the newspaper, and the last four losing its attempt to duck paying the paper's attorney fees. It now vows to fight the fees to the last taxpayer dollar.

It has announced, that is, that having lost on the fee issue repeatedly in the California First Appellate District, it will now seek review from the California Supreme Court.

The issue is not the city's duty to pay any fees at all claimed by attorneys with the Oakland-based First Amendment Project, who represented the Bay Guardian. That was the city's original position, but the court of appeal has made it clear that in being entitled to some records, the newspaper had sufficiently "prevailed" as a plaintiff.

The issue now is whether an attorney fee bonus, in effect, should be added to the claimed hourly fees, in order to reflect the complexity of the case and how hard the city resisted yielding any information.

This "lodestar" approach allows a multiplier add-on to encourage law firms to develop the special background needed to wage complex public records cases for citizens and media effectively. In this instance the court of appeal, in the most recent of three times it has addressed this case, approved a trial court calculus giving the First Amendment lawyers 1.5 times their claimed fees, for a lodestar total of \$167,864. That amount, they predict, will swell closer to \$200,000 when their latest fees spent to protect their earlier fees are turned in.

The Bay Guardian in 1993 sued Richmond to get records bearing on excessive force and racially-based abuse complaints against the police department. It did not get nearly all of what it sought -- the First District ruled that most of the information was confidential under the Penal Code protection for peace officer personnel files. But the court left some leeway concerning certain information, and in a settlement the city provided copies of 500 pages.

Then the project attorneys claimed their fees, and the city has been fighting to avoid them ever since: initially on the basis that the newspaper never "prevailed" and more recently on the lodestar multiplier.

[Back to top](#)

UKIAH BUSINESSMAN WINS BACKDOWN FROM COUNTY ON ACCESS FORM (4/14/00)

When a Ukiah building contractor wanted to see records that might show why a consultant's 180-day assignment to design road development standards was still apparently unfinished two years after the contract award, the county said he'd have to swear in writing he would not sue. He refused and got a lawyer instead, and it worked.

Lee Howard, a CFAC Associate member and a leader in keeping the Mendocino County business community aware of its public information rights, was told by the county department of transportation that records on the road development standards contract would be available to him only if he certified in writing that he would not use the information in litigation against the county.

Howard contacted attorney Neil Shapiro of the San Francisco law firm of Landels, Ripley and Diamond, who sent County Counsel H. Peter Klein a tough letter. "Mr. Howard is not obligated to make any such certification, the County's refusal to grant him access to the records he requested is without legal justification, and unless access is made available to him forthwith, the County can expect litigation," Shapiro wrote.

A day after getting the letter, Klein memoed the transportation director, informing her that the new records request form was "too restrictive in requiring a requester's certification," and acknowledging that the California Public Records Act's pending litigation exemption, which supposedly was the basis for insisting on the promise not to use the records in a lawsuit, is "limited to documents specifically prepared for...or where the dominant purpose behind preparation of the document was (to be) used in litigation." He directed that Howard be given access without certification as soon as possible.

PASADENA PARENT WINS DATA BASIS FOR "SIMILAR SCHOOLS" RATINGS (4/14/00)

When State Superintendent of Public Instruction Delaine Eastin acknowledged that the "similar schools" sector of the recently published statewide school performance

rankings would need a little work, Pasadena school watchdog Rene Amy wanted to know why. He asked for the underlying data, was told "No," filed suit, and now has been given the data.

Two weeks before the April 21 date set for a court hearing in Amy's California Public Records Act suit against Eastin and the State Department of Education, late last week Deputy General Counsel Michael Hersher said the information on which schools were assigned to "similar" socioeconomic ranking groups would be forthcoming after all. But because no actual list of names had ever been scanned by human eyes in the department, Amy would have to analyze and derive that information himself -- all 7,000 schools worth. This he plans to do, and put the results on the Internet, he says.

Amy, an Associate member of CFAC who not long ago lost a runoff election for a seat on the Pasadena Unified School District Board, more recently won a federal court lawsuit against the district, ending race- and gender-based school admissions policies. As for Eastin, Amy remarks on the irony that it was he who two years ago organized the only public debate in the Los Angeles area between her and her challenger for the top schools post, Gloria Matta Tuchman.

Amy decided to sue for the "similar schools data" when questions were raised, as he says, as to "just what makes these schools 'similar?'" How the clusters of supposedly comparable schools, used as a more real-world measure of status than the brute top-to-bottom decile rankings on the Academic Performance Index, were derived was an item of curiosity not only to Amy, but to at least two newspapers whose own public records requests were similarly turned down: the Contra Costa Times in Walnut Creek and the North County Times in San Diego County.

The Eastin and the department took the position that releasing the data basis for the flawed information, which the state was in the process of correcting for release April 27, would cause the public harm, and that on that account the public interest in non-disclosure outweighed the public interest in disclosure.

But in his announcement to Amy's attorney, Kevin Snyder, Deputy General Counsel Hersher said, "We never actually produced the 100-school lists (in each of the 68 "similar school" clusters) in hard copy or in a computerized report that could be read or printed as a list. OPE (the department's Office of Policy and Evaluation) was planning to develop software (to produce school-identifying lists). But when the error factor cropped up, it became a moot issue."

On publication of the original API, many parents and others questioned the rationale for grouping certain schools with others as "similar" in some relevant manner. The department soon admitted its analysis was flawed and called on districts to re-submit their socioeconomic data.

Attorney Snyder, based in Springfield, Missouri, represented Amy in the federal court

suit on discriminatory school admissions. He took this case without charge to Amy, but will be seeking attorney's fees from the state.

SHELLEY BILL'S "REVERSE BALANCING TEST" SPARKS FLAT OPPOSITION (4/14/00)

Turning the tables on public agencies' ability to find an overriding public interest in keeping a normally public record secret has brought flat opposition from many of those agencies, as well as some private sector interests. Accordingly, Assembly Member Kevin Shelley's AB 2799 was not heard as scheduled on April 10, but is re-set for April 24.

The bill would require public agencies to provide copies of computerized records in whatever format was both used by the agency and specified by the requester. It would also reaffirm that agencies may not use provisions in the California Public Records Act solely to delay disclosure.

But its clearly most controversial provision is its proposed reverse or reciprocal public interest balancing. Currently public agencies may cite the overriding public interest as a basis for not releasing a record even though its information is not covered in any specific exemption from disclosure.

AB 2799, rather than repealing that provision, would add a reciprocal rule authorizing a court to order disclosure of a record ordinarily up to the agency's discretion to release or not, if the public interest would be better served by disclosure.

A court could decide, for example, that under given circumstances the public interest in knowing the information would be high enough, and the injury to any public or private interest unlikely enough, that a pre-decisional draft, a document exchanged between the government and some entity it was suing, a public executive's performance evaluation or the record of a long-closed criminal investigation should be available for public scrutiny.

But late last week, only days before its scheduled April 10 hearing in the Assembly Governmental Organization Committee, the bill began drawing fire from two distinct but complementary interest groups.

Local public agencies, represented by the League of California Cities, the California State Association of Counties, the California Association of Sanitation Agencies, the California State Sheriffs' Association and Gary Penrod, Sheriff of San Bernardino County, displayed general dismay at the notion that an agency's discretion to withhold a record might be second-guessed by a court in given circumstances.

But a second tier of opposition, represented by the Personal Insurance Federation of California and the Association of California Insurance Companies, was worried not about government files per se but rather the private commercial -- proprietary -- information submitted to the government for regulatory purposes, in this case especially by life and other insurers.

At a meeting yesterday, April 13 in the offices of the California Newspaper Publishers Association, lobbyists for these and other opponents gathered to assure CNPA and Shelley's staff that they would accept no compromise on the balancing test provision. Most took the position that public agencies do not have discretionary exemptions -- that all exemptions from the public records law are in fact flat prohibitions against disclosure.

SHER BILL ON ATTORNEY GENERAL REVIEW GOES ON "SUSPENSE" FILE (4/14/00)

The Senate Appropriations Committee sent Senator Byron Sher's SB 2027 to its "suspense" file Monday, April 10 because of its estimated cost. The measure, which would authorize the attorney general's office to review decisions by local and some state agencies denying access to government records, will probably be voted on late in May.

The committee's suspense file is where bills likely to cost the state more than \$150,000 get parked until the state's revenue picture becomes clearer, particularly regarding new programs. This bill's nearly identical predecessor, SB 48, went on the suspense file at about the same time in 1999 before being approved by the committee.

SB 48 was vetoed because of Governor Gray Davis' objection to what he called a conflict of interest. The attorney general's office advises most executive branch agencies on the law and represents them in litigation, including suits brought under the California Public Records Act.

Having the same office issuing public opinions potentially disagreeing with a state agency's withholding of a public record would be an undesirable situation, even if, as SB 48 provided, the attorneys reviewing the denials would be insulated from those providing the advice and representation.

Sher's' approach in SB 2027 is therefore to provide that the attorney general review process would not be available for any state agency advised or represented by the attorney general -- which means most of them. But local agency denials would all be reviewed.

The bill would also, like SB 48, permit a judge to penalize a public agency found to have not only incorrectly but willfully withheld or delayed access to a public record. The fine of up to \$100 for every day of such bad faith conduct would be awarded to the requester, in addition to court costs and attorney fees.

[Back to top](#)

TWO KEY PUBLIC RECORDS ACT BILLS FACE COMMITTEE ACTION MONDAY (4/7/00)

Two measures that would make significant improvements in the effectiveness of the California Public Records Act will be up for hearing in separate Capitol committees on Monday, April 10. One would allow courts to order release of some normally closed records, and the other would allow attorney general review of records access denials.

The first bill, AB 2799 by Assemblyman Kevin Shelley (D-San Francisco), is to get its first policy hearing in the Assembly Committee on Governmental Organization. The measure would authorize courts to order release of records governed by a discretionary exemption - where the public agency possessing them has a choice to release the material but opts to withhold it.

Just as a current provision of the California Public Records Act allows an agency to deny access to normally public files on the basis that under the circumstances the public interest in secrecy outweighs the public interest in disclosure, a court could decide that normally exempt files should be opened in the public interest. This rule would not affect records whose disclosure is flatly prohibited.

The public interest balancing provision might mean, for example, that a city council's scoring sheets used to evaluate the performance of a city manager could be ordered released, where surrounding circumstances - say an extraordinary pay increase out of line with comparable compensation standards - raised significant public concern. Or law enforcement investigative files concerning a closed case might be deemed of overriding public concern if other circumstances raised questions of a miscarriage of justice or prosecutorial mishandling.

The bill would also require agencies to provide access to electronic data in the form designated by the requester, if the agency maintains or uses the data in that form. Current law, adopted in 1968, allows the agency to decide in which form it will release computerized information. On the same day, SB 2027 by Sen. Byron Sher (D-Palo Alto) goes to the Senate Appropriations Committee, after having been passed by the Senate Judiciary Committee 6-0 in late March.

SB 2027, a retooled version of the senator's vetoed SB 48 of last year, would create attorney general review of public agencies' denial of public records, and would also allow courts to penalize public agencies which had withheld records in bad faith by a fine of up to \$100 for each day of such misconduct.

Gov. Gray Davis vetoed SB 48 because he did not want the attorney general, whose lawyers normally advise and represent state executive branch agencies in public records disputes, in the position of possibly ruling against such agencies' denials. The new Sher bill attempts to satisfy that objection by exempting from attorney general review any agency normally represented by that office.

Under this legislation the attorney general's review opinions, due in 20 to 40 days after being requested, would not be binding on agencies but would provide both sides with guidance on the soundness of the denial.

MAYOR WILLIE BROWN BACKS OFF RECORDS DESTRUCTION PRACTICES (4/7/00)

In a response to both journalistic pressure and threatened litigation by the San Francisco Bay Guardian, supported by the California First Amendment Coalition, Mayor Willie Brown's administration has agreed to abandon its practice of destroying appointment calendars in as little as 15 days after creation - but instead save them for two years.

In conducting research for its annual Freedom of Information issue in March, the Bay Guardian discovered that the mayor was destroying his appointment calendars after 15 days, and Department of Public Works Director Mark Primeau was destroying his after 30 days.

The paper called for the destruction to stop and threatened legal action, citing San Francisco's Sunshine Ordinance, in a letter from its attorney, Thomas R. Burke of Davis Wright Tremaine.

Proposition G, approved by San Francisco's voters in November to expand the city's Sunshine Ordinance, requires that appointment calendars be maintained as "public records." State law requires that public records be maintained for at least two years.

Burke received word on April 4 from Deputy City Attorney Jackie Minor that Mayor Brown and each of the department heads in San Francisco will retain their appointment calendars for a minimum of two years.

San Franciscans have had a Sunshine Ordinance since 1993, but passage of Proposition G, on a 58 to 42 percent vote margin, extended that law to open up official meetings and records more than in any other community in California, and probably more than in any other community in the nation, according to Terry Francke, general counsel for CFAC and co-drafter of the proposition.

COMMENT: This is the first known time that a mayor's appointment calendar has been made public since *Times Mirror v. Superior Court*, a decision of the California Supreme Court of 1990, when the Los Angeles Times unsuccessfully sought access to Governor George Deukmejian's appointment calendars. The different result in San Francisco stems from Proposition G, which in reaction to the Times case specifically requires that officials' appointment calendars be considered public records and prevents the city from invoking the deliberative process privilege - the underlying legal rationale for such secrecy - in any context.

A.G. REVIEW OF RECORDS DENIALS ROCKETES THROUGH FIRST HEARING (3/31/00)

A bill that would have the attorney general reviewing denials of access to public records, and that also would allow judges to punish bad-faith denials with a fine, went out of its first committee hearing on Tuesday, March 28 on a 6-0 vote with no testimony requested. The measure is a retooling of last year's SB 48, vetoed by Governor Gray Davis.

Author Byron Sher (D-Palo Alto) explained to the committee that the new SB 2027 attempted to accommodate the governor's objection concerning conflict of interest - that the original bill might have resulted in the attorney general reviewing denial of a record by a state agency normally represented by the attorney general.

The approach taken in SB 2027, Senator Sher noted, was that a state agency which relied on the attorney general for advice or defense in public records access matters would not have its decisions subject to review by that office.

There were no opposition witnesses, and without asking for supportive testimony, the committee moved and voted the bill out. The six Aye votes were Senators John Burton (D-San Francisco), Martha Escutia (D-Montebello), Jack O'Connell (D-San Luis Obispo), Sher, Cathie Wright (R-Simi Valley), and Committee Chair Adam Schiff (D-Burbank).

Recorded as absent, abstaining or not voting were Senators Ray Haynes (R-Riverside), Bill Morrow (R-Oceanside) and Steve Peace (D-El Cajon). The bill now moves to the Senate Appropriations Committee, with no hearing date set.

COURT: INTERNET POSTING OF DOCTORS' ADDRESS OF RECORD ALLOWED (3/24/00)

The California Medical Board's requirement that licensed doctors provide the board with a mailing "address of record" for official purposes, and the board's practice of posting those addresses on the Internet, does not invade the doctors' privacy or other rights, because the Board allows the option of listing a post office box instead of a street address.

So ruled the California Court of Appeal for the First District in its opinion filed February 18 in *Lorig v. Medical Board of California*, Case No. A086261.

The "address of record" is used for official board mailings to the doctor, as well as to inform the public as to how he or she can be reached. Until recently, for example, it was provided to those inquiring by phone to the board's Sacramento office - former patients and others with a need to contact the physician but lacking a current address.

In July of 1997 the board announced it would begin listing the same information on its Internet web site, to allow round-the-clock access. Doctors were given until September if they wished to supply an alternate address of record for this purpose. They had the choice of listing the street address of their workplace or home, or a post office box, in which case their street addresses would be kept confidential.

Drs. Milton Lorig and Michael Burton, licensed by the board to practice in California and also apparently state or local agency employees, filed suit challenging the Internet posting. They argued that the practice violated the California Public Records Act, under which state employees' home addresses are confidential and information of a private nature generally is also exempt from disclosure. They also cited the Information Practices Act, which bars state agencies from releasing personal information about individuals without their consent.

But the trial court denied their motion for summary judgment, and instead granted summary judgment to the defendant board, concluding that the required address of

record was an item of public information, such that disclosure violated no one's rights.

The court of appeal agreed, noting that the board did not compel submission of a street address if a doctor preferred using a post office box. It noted, in the words of Justice Sepulveda, that making the contact information public serves several "compelling" public purposes:

"It enables patients to locate medical records maintained by their former physicians. It establishes a certain and reliable location for effecting service of process on the licensee... It also helps to more accurately identify a particular physician (e.g., where two or more physicians share the same name) about whom a prospective or former patient may wish to inquire (e.g., to locate medical records, or to find out about a record of discipline or malpractice judgments for a given physician)."

On the other hand, the estimated cost of \$40 for an annual box rental was a modest outlay, the court believed, imposed only on those who preferred not to list a street address.

"When appellants' complaint is thus boiled down to its essence, it becomes clear that they are simply objecting to an economic burden (and a certain amount of personal inconvenience) that will result from the Board's policy with respect to posting licensees' address information on its Web site. In that regard, the Board has effectively forestalled the use of a home address for that purpose, and required each physician to maintain either a business address or a post office box for that purpose. However, this approach is neither unlawful nor arbitrary but, rather, a reasonable accommodation of the physicians' legitimate concerns about privacy and personal safety, the public interest in access to 'information relating to the conduct of the public' s business' ... and the Board's obligations with respect to disclosure of public information and the regulation of the practice of medicine."

[Back to top](#)

FIRST HEARING TUESDAY ON SHER'S NEW BILL ON DENIAL REVIEW BY A. G. (3/24/00)

Senator Byron Sher's SB 2027, a second attempt at getting authority for the attorney general to review denials of access to information under the California Public Records Act, goes to its first hearing Tuesday, March 28 in the Senate Judiciary Committee. The new measure attempts to overcome Governor Gray Davis's concerns with conflict of interest.

As used by the governor in his veto message on Sher's 1999 bill, SB 48, conflict of interest refers to the prospect of having a state agency - even the governor's office - that is normally represented by the attorney general suddenly viewed as in violation of the California Public Records Act as a result of the attorney general's denial review process.

SB 48 was intended to give those denied access to records by state and local agencies a measure of relief via a non-binding "second opinion" from the attorney general. It also would have authorized courts to award requesters a monetary penalty to be paid by agencies that deliberately stalled or denied access to records they should have known were open to the public.

But the governor did not want the attorney general reviewing denials of access by most state agencies, which now use the attorney general for advice and defense if they deny access to records. SB 48 tried to overcome that problem by simply declaring that there would be no conflict, since the lawyers involved in the review process would never be in the position of advising an agency on compliance. That was not good enough for the governor, who vetoed SB 48 last fall.

The approach in SB 2027, introduced on February 25, is to provide that attorney general review of records access denials will apply only to those state agencies that rely on their own counsel and not the attorney general for advice on whether to release a record.

For example, state agencies that have their own legal counsel include the University of California, California State University, Department of Transportation, Division of Labor Standards Enforcement of the Department of Industrial Relations, Workers'

Compensation Appeals Board, Public Utilities Commission, State Compensation Insurance Fund, Inheritance Tax Department of the Secretary of State, State Lands Commission, Alcoholic Beverage Control Appeals Board and State Department of Education.

The bill's provision on this point states:

"Representation of a state agency by the Attorney General involving advice that a request for inspection or copies of public records be denied, in whole or in part, may provide a basis for that agency to claim an attorney-client relationship that would preclude the Attorney General from providing an opinion under this section. "

FEDERAL JUDGES APPROVE INTERNET POSTING OF THEIR FINANCIAL DATA (3/17/00)

Administrators of the federal court system this week abandoned their announced disposition to bar access to statements of judges' financial interests to anyone planning to post them on the Internet. The about face, yielding to the request of APBnews.com, was clearly influenced by a message from the Chief Justice of the United States.

The announcement Tuesday, March 14 culminated a three-month impasse between APB and senior judges sitting on the Financial Disclosure Committee of the Administrative Office of the U.S. Courts, which led the online company to sue on First Amendment grounds. APB says it will stay in court to challenge other practices, such as forcing news organizations to pay for public documents.

Meanwhile APB employees are preparing to scan onto their Web site (<http://www.APBnews.com>) more than 12,500 pages of financial disclosure records for every active and semiretired federal judge.

Chief Judge Ralph Winter Jr. of the 2nd Circuit Court of Appeals in New York said the judges on the Judicial Conference voted 16-8 to release of the reports, which require a listing of gifts, free travel, investments and loans for each officeholder and immediate family members, but not residential addresses, Social Security numbers, account numbers or names of family members.

Federal law makes the information a public record unless a temporary access cutoff is justified by security concerns.

In his memo, Justice Rehnquist told the Financial Disclosure Committee it did not have the authority to block APB's request for documents.

"There are a large number of judges who feel strongly about security issues raised by financial disclosure," he wrote. "But I also note that although Judicial Conference Committees fulfill a number of roles for the conference, they generally are not rule-making or policy-making bodies."

While acknowledging that the public records statute allows for judges to edit information from disclosure forms because of security risks, Rehnquist noted that it was not an excuse to withhold the reports entirely.

"It is to be expected that closer public scrutiny will be applied when judges decide issues affecting judges," he said. "We have already seen evidence of this in editorial commentary, and I suspect it will increase. Moreover, the fact that officials from the Executive and Legislative branches must also file disclosure reports makes the committee's position more difficult to defend."

POLITICAL WATCHDOG UNIT'S NEW DIRECTOR HAS NEWS BACKGROUND

(3/17/00)

California's Fair Political Practices Commission (FPPC), which tracks campaign contributions and spending and monitors lobbying expenditure and public officials' conflicts of interest, has named Wayne Strumpfer its new executive director, replacing veteran Robert Tribe, according to a March 7 report on the online legal news site law.com.

The site reports that "Strumpfer, 36, is a former radio news reporter and television production engineer who has been a prosecutor in the state attorney general's criminal law division since 1995, specializing in public-official corruption cases." The latter have involved police chiefs, judges, state office holders and other elected officials.

FPPC Chairwoman Karen Getman, in announcing the shift, "stressed Strumpfer's role in moving the FPPC in new directions she has sketched out for the agency: speedier prosecution of violations of the Political Reform Act and greater efforts to educate the public and politicians about the FPPC's mandate," noted law.com.

A deputy district attorney for Sacramento County from 1992-1995, Strumpfer worked at a Santa Rosa radio station and a Sacramento television station before graduating from McGeorge School of Law in 1992. He will assume his FPPC duties later this month.

[Back to top](#)

BILL WOULD TURN TABLES ON PUBLIC RECORDS "CATCHALL" EXEMPTION (3/10/00)

Legislation introduced February 28 by Assemblyman Kevin Shelley (D-San Francisco) would add an equalizer to the California Public Records Act's rule that now allows withholding of otherwise public records based on the net public interest. Under AB 2799, a court could cite the public interest to order release of ordinarily exempt records.

Government Code Section 6255 now provides that even if a given record is not exempt

from disclosure under any particular section in the public records law or elsewhere, a government agency may justify refusing to release it on the basis that "on the facts of the particular case the public interest served by not making the record public clearly outweighs the public interest served by disclosure of the record."

This provision, often referred to as a "catchall" or the public records law's "balancing test," is also not uncommonly used by public agencies as a wild card, either as the only rule advanced for not disclosing a record or as an add-on to other exemptions cited as justification for withholding.

While appellate courts have generally been careful not to let agencies use Section 6255 as a facile escape from disclosure, the reality is that once an agency lays that card down, a requester has no option but to sue in order to see if it will trump. In some cases the agency will simply cite the section without even stating what it believes to be the public interest in nondisclosure.

AB 2799 would leave that provision in place but add to it a counterweight, permitting ad hoc suspension of secrecy in the public interest:

"Notwithstanding any provision of this chapter, an agency, or the superior court in any action brought (to enforce disclosure under the Public Records Act), may disclose or order to be disclosed any record made exempt by express provisions of this chapter if, on the facts of the particular case, the public interest served by disclosing the record clearly outweighs the public interest served by not disclosing the record."

As stated, this provision would not allow disclosure of records whose disclosure is prohibited by statutes outside the Public Records Act, such as income tax return information, medical history, pupil achievement or discipline records, or peace officer personnel files.

But it might allow a court, for example, to decide that the public interest in disclosure outweighed the discretionary confidentiality of police investigative records, where neither privacy nor criminal justice interests would be threatened, or of "records

pertaining to pending litigation" while the case was still pending, if it was clear that the information was already known to (or originated with) the party opposing the government agency.

AB 2799 would also restore language to the act expressly disapproving efforts to "delay" release of public information. That word was deleted in amendments effective two years ago, substituted for by the word "obstruct," which would remain in place under the bill. The California Newspaper Publishers Association, sponsor of the measure, has concluded that the effect of removing "delay" has been, in too many cases, the argument that delay is no longer considered objectionable.

But the bill's other major provision is to incorporate entirely the text of Sen. Debra Bowen's SB 1065, vetoed last fall by Gov. Gray Davis. That measure would have required public agencies to make available electronic public records in whatever format they themselves used, if so requested. Davis said he vetoed the measure because Bowen (D-Redondo Beach) had failed to take his suggestion to delay the bill's effective date until state computer systems were proven to be Y2K compliant.

Shelley, Assembly majority leader, was author of the San Francisco Sunshine Ordinance while serving on the board of supervisors in 1995. Last year he successfully carried a bill to restore a court's power to declare that a state agency had violated the open meeting law, after the state supreme court ruled that such declaratory judgments could not be issued regarding past violations.

That bill, AB 1234, also requires that beginning no later than July 1 of 2001, state agencies must post meeting agendas and notices on the Internet.

[Back to top](#)

NET ACCESS "HAVE-NOTS" THE SUBJECT OF NEW BOWEN LEGISLATION
(3/10/00)

Sen. Debra Bowen has introduced a bill expressing the intent of the legislature "to enact legislation to require that computer terminals installed in state offices be

available to the public for Internet access." Her staff indicates SB 1757 is a spot bill awaiting more or different specifics on solutions to the needs of the state's "information have-nots."

An entire public/private sector movement has arisen in recent years to address various aspects of the "digital divide" between families who have home computers and Internet connections and those who do not, because of poverty, geographical isolation or both (see, for example, the joint project of the Benton Foundation and the Urban League shown at <http://www.digitaldividenetwork.org>).

A parallel concern is the gap between those getting the training, education and incentives to enter computer- or Internet-related jobs and those who are not.

A study published two years ago found a racial divide as well, in that among families with incomes of less than \$40,000 per year, whites were twice as likely as blacks to own a home computer.

[Back to top](#)

BILL WOULD MAKE COPS' PERSONNEL FILES UNAVAILABLE IN LAWSUITS (3/10/00)

Legislation sponsored by the Peace Officers Research Association of California (PORAC) would eliminate discovery in civil lawsuits of citizen complaints and other information from the personnel files of police and other peace officers. The bill, by Assemblyman Dennis Cardoza, also further restricts discovery of such material by or for criminal defendants.

Currently, peace officer personnel files, including but not limited to citizen complaints and internal affairs inquiries, are confidential pursuant to Penal Code Section 832.7, which states that their contents "shall not be disclosed in any criminal or civil proceeding except by discovery pursuant to Sections 1043 and 1046 of the Evidence Code."

Evidence Code Section 1043 sets forth the special procedures required for obtaining such information in discovery in "any case." The Merced Democrat's AB 2559 would make the procedures available only in discovery by a criminal defendant or defense attorney -by omission, leaving no authorized procedure for discovery in a civil case.

Also under the bill, when information from an officer's file was sought by a prosecutor in order to fulfill the state's duty to disclose to defendants information that would tend to clear them, the employing law enforcement agency would need to cooperate in disclosing only administratively "sustained" (confirmed) allegations of unlawful conduct by the peace officer on duty. Moreover, it would not permit disclosure of complaints sustained only on the basis of the officer's admission under coercion - which could mean any threat, from firing to a verbal reprimand.

[Back to top](#)

PASADENA ACTIVIST SUING TO GET DATA USED IN SCHOOL RANKINGS (3/3/00)

Rene Amy, a Pasadena parent, information access fighter and recent unsuccessful candidate for the school board, filed suit March 2 to force State Superintendent Delaine Eastin to release data showing how "similar school" clusters were set up for the Academic Performance Index. The API ranks schools in 10 groupings, from best to worst.

Amy's lawsuit, contending that the data are public under the California Public Records Act, pursues information also sought by at least two daily newspapers, but to no avail. The Contra Costa Times in Walnut Creek and the North County Times in Oceanside both sought the information from Eastin's office, but were rebuffed by identical letters contending that the information is exempt from disclosure.

Key to Eastin's position is Government Code Section 6255, which allows withholding of information if the public has a greater interest in non-disclosure than in disclosure. That applies here, say Eastin's attorneys, because "the harm of further publication of erroneous data outweighs the public benefit in seeing how the errors were made. "

Amy notes that Eastin and the Department of Education have conceded that the "similar schools" component of the API released January 25, supposedly as a more meaningful comparison between schools with similar advantages or disadvantages, is "replete with errors."

"Many schools," Amy says, "including Pasadena, have tried to buoy dismal showings in their overall rankings with relatively high scores (among) 'similar schools'... Just what makes schools 'similar?' Clearly the public has the right to know."

Amy, among other things an Associate member of the California First Amendment Coalition, is the Pasadena Unified School District's most energetic watchdog. He won two court battles with the district in the past year, including a federal case concluded only recently which eliminated race- and sex-based admissions to schools, and a suit to enforce the right of parents or others under the Education Code to have an issue of their choosing placed on the agenda of a school board meeting.

[Back to top](#)

SHER HAS NEW BILL TO PROVIDE A.G. REVIEW OF RECORDS DENIALS (3/3/00)

Senator Byron Sher (D-Palo Alto) has introduced a slightly retooled version of last session's vetoed SB 48, which would involve the attorney general's office in reviewing and opining on public agencies' denial of access to public records. The new bill, SB 2027, attempts to overcome Governor Gray Davis's concerns with conflict of interest.

As applied here, that phrase refers to the prospect of having a state agency -- even the governor's office -- that is normally represented by the attorney general suddenly viewed as in violation of the California Public Records Act as a result of the attorney general's denial review process.

SB 48 tried to overcome that problem by simply declaring that there would be no conflict, since the lawyers involved in the review process would never be in the position of advising an agency on compliance. That was not good enough for the governor, who vetoed the bill last fall.

The approach in SB 2027, introduced on February 25, is to provide in effect that attorney general review of records access denials will apply only to those state agencies (the University of California, for example) that rely on their own counsel and not the attorney general for advice on whether to release a record.

The bill's provision on this point states:

"Representation of a state agency by the Attorney General involving advice that a request for inspection or copies of public records be denied, in whole or in part, may provide a basis for that agency to claim an attorney-client relationship that would preclude the Attorney General from providing an opinion under this section. "

Whether that language satisfies the governor's concern remains to be seen. Other than the shift in language to address this issue, the bill is a clone of the final version of SB 48, which passed both houses with essentially unanimous bipartisan support last year.

[Back to top](#)

THAT HIDDEN 15 MINUTES: EXECUTION WITNESSING CASE GOES TO TRIAL (2/25/00)

Current and former wardens of San Quentin prison told a federal judge recently that the 15 to 20 minutes it now takes to get a condemned inmate into the death chamber and hooked up to the lethal injection shunt risks that members of the officiating "death team" will be recognized by witnesses, identified publicly, and exposed to retaliation.

That testimony marked the first day of trial in California First Amendment Coalition v. Calderon, in which the Northern California Chapter of the Society of Professional Journalists is a co-plaintiff. Attorneys affiliated with the ACLU of Northern California are providing legal representation.

The key issue to be settled in U.S. District Judge Vaughn Walker's court is whether the draping of the death chamber during the active process of the execution -- with official witnesses left to see only the inert inmate strapped to the gurney and receiving the deadly chemicals -- is or is not an "exaggerated response" to prison security concerns.

The problem developed after the state began using lethal injection for capital punishment in 1996, and witnesses discovered they had no clue as to the final gestures, words or demeanor of the condemned person, but were left instead to view a static corpse in the making. Unless the process is fully shown, argue the plaintiffs, the safeguard of independent execution witnesses is meaningless and concerns as to possible cruel and unusual punishment issues are left unanswered.

Former Warden Arthur Calderon testified in the non-jury trial that the concealment policy was never intended to influence the media, but only to preserve security. Protecting the volunteer death team's anonymity by having members wear surgical masks and gowns would not be suitable, he said, because if the prisoner struggled the masks could be ripped off. The condemned is now ushered into the death chamber bracketed between four correctional officers, with his hands shackled to his waist.

But Calderon also conceded that there had never been a struggle at the last moment, that no one had identified members of the death team during the gas chamber era, and that even during the one full exposure that witnesses got in a May 1996 execution -- while an order by Judge Walker kept the entire process visible -- there had been no security problems.

Appearing as witnesses for the plaintiffs on Wednesday were Jason Beaubien, a former reporter for KQED-FM in San Francisco who saw one execution with the concealment procedure and another without it, and Dr. Lonny Jay Shavelson, an emergency room doctor testifying on the use of surgical masks and garb.

Shavelson actually modeled the garb in court, and Beaubien testified that he could see little of the identifying detail that he had seen during the second execution when the procedures were open and the guards were exposed.

Judge Walker directed the parties' attorneys to file post-trial briefs and appear for final argument on March 6. He is aware that the next scheduled execution is set for March 15.

CITIZEN'S COURT WIN WILL OPEN CLAREMONT'S SEALED SETTLEMENT (2/25/00)

The city manager of Claremont this morning (February 25) finally instructed the city's joint powers insurance agency (JPIA) to release to Richard McKee -- and thereby the public -- the full terms of a 1998 settlement in a civil lawsuit alleging excessive force by a police officer. McKee, a citizen activist, was represented by an attorney member of CFAC.

The weekly Claremont Courier originally queried the city last year as to how much was paid to make the litigation by another local activist, Eli Mellor, go away. The city said any such disclosure was barred by an order of the federal magistrate presiding in the pretrial phase of the case. The matter was handled for the city by its JPIA, whose attorneys said the gag had been forced on the parties over the city's objections. The city council took up the question of whether it should ask that the settlement be opened, but decided against doing so.

The Courier eventually used city disbursement records as a basis for estimating the dollar amount of the settlement, but McKee then made his own demand. One of the first generation of winners of CFAC's Beacon Award for extraordinary commitment in taking on a Brown Act lawsuit in 1995, representing himself, McKee is a chemistry professor at Pasadena City College. Since then, in another Brown Act case, he got a court to declare that meetings of a college committee assigned to review eligibility for sabbatical leave must be open and public.

McKee reported his progress in the Claremont settlement case to the CFAC board of directors last fall. That group agreed to pay the travel and other non-fee expenses of an experienced public records attorney to help McKee; Judy Alexander, a member of CFAC's legal review committee, agreed to take the case.

Los Angeles Superior Court Judge David P. Yaffe two weeks ago ruled for McKee, noting that under the California Public Records Act and the Brown Act, records of settlements entered into by state and local government agencies become public once they are final. Yaffe saw nothing in the minuted order of Federal Magistrate Robert Block which would prevent either of the parties from disclosing the record. The order -- which the city and its JPIA treated as a total ban -- simply meant that settlement documents in the court's own file would not be made public without the parties' consent.

Yaffe ordered disclosure but stayed the ruling for 10 days, allowing the city to query Block as to what his meaning had been. Earlier this week the city, McKee and Judge Yaffe got letters from Block which said in part:

"The parties' agreement regarding confidentiality was an agreement between them and not the subject of any court order. Thus, the court merely was respecting the parties' agreement regarding confidentiality when it ordered that part of the record sealed. The court never ordered the parties not to discuss the terms of the settlement (publicly or otherwise), and never ordered the parties not to disclose the terms of the settlement in response to a duly served subpoena or court order."

Despite this letter, city representatives simply increased the tap dancing tempo. The Claremont Our Times edition of the Los Angeles Times was told that attorneys for the city would listen to the tape of the court hearing to be sure that Block had not in fact ordered the parties mute, because their recollection differed from his and they were concerned with being held in contempt by Block, or sued by plaintiff Mellor. But Mellor's attorney, according to Our Times, said that the confidentiality agreement was the city's idea all along, and offered to waive it in a letter sent to the city last summer.

Un-American Activities Files: Here's What The Order Made Public (1/28/00)

Because CFAC is sometimes asked what information was made public by the November 1999 court order which it obtained to open legislative hearing files on "Un-American Activities," a list of the content, taken from Secretary of State Bill Jones' web site (http://www.ss.ca.gov/archives/level3_suac.html), is available in a special edition of FLASH, also being sent today.

Summary of Public Hearing Transcripts, 1941-1958. The following transcripts of public hearings of the Joint and Senate Fact-Finding Committee on Un-American Activities are on file in Boxes 29-34 of the committee records. The public hearings were conducted at various locations in California between 1941 and 1958. The committee records are stored in the California State Archives. Photocopies of hearing transcripts are available at a cost of \$0.25/page; contact the State Archives for additional information. Skipped volume numbers usually signify transcripts of closed executive sessions.

Box 29, Volume 1: Secretary of Communist Party for Los Angeles County and others questioned about formation and goals of party in California, Young Communist League, Trotskyites, Communist Party membership in labor unions. July 28, 29, 30, 31 and Aug. 1, 1941. State Building, Los Angeles. (335 pages including exhibits)

Box 29, Volume 3: Union members quizzed about Communist Party activities; testimony on Communist efforts to penetrate Young Democrats; issue of whether American Civil Liberties Union, Anti-Defamation League are Communist organizations. Oct. 14, 15, 16, 17, 1941. State Building, Los Angeles. (265 pages)

Box 29, Volume 3a: Brief testimony about conversations at Deutsche Haus in Los Angeles, activities of German American Bund, National Patriots, America First Committee, Friends of New Germany. Oct. 16, 1941. State Building, Los Angeles. (42 pages)

Box 29, Volume 4: Committee questions 36 witnesses about activities of the America First Committee, Friends of the New Germany, German American Bund, anti-Semitism, propaganda films, Lindbergh rally at Hollywood Bowl. Oct. 14, 15, 16, 17, 1941. State Building, Los Angeles. (358 pages)

Box. 29, Volume 5: Series of hearings on the brutal 1936 murder of Chief Engineer George Albert of the steamship Point Lobos while docked in Alameda. Three merchant seaman, union activists, were convicted and sentenced 20 years in prison. Hearings concern their early release from prison, possible corruption on the Board of Paroles and alleged Communist pressure on Gov. Olson to pardon them. Dec. 1, 2, 3,4,5, 1941. Civic Auditorium, San Francisco. (390 pages)

Box 29, Volume 6: Testimony from acting Attorney General Earl Warren about his prosecution, as Alameda County district attorney, of convicted Point Lobos seamen Earl King, Earnest Ramsey and Frank Connor. Warren claims they were paroled early because they are "politically powerful Communist radicals." Description of Gov. Olson's visit with prisoners at San Quentin. Dec. 1, 2, 3, 4, 5, 1941. Civic Auditorium, San Francisco. (291 pages)

Box 29, Volume 7: Testimony about possible subversive influence in winning pardons for convicted murderers King, Connor and Ramsey; activities of Italian Fascist sympathizers in San Francisco; America First, No Foreign Wars Coalition; Young Communist League. Dec. 1, 2, 3, 4, 5, 6, 1941 and Dec. 11, 1942. Civic Auditorium, San Francisco and San Quentin prison. (207 pages)

Box 29, Volume 8: Testimony concerning Communist involvement in the American League Against War and Fascism; activities of the German-American Bund. Feb. 19 and 20, 1942. County Administration Building, San Diego. (365 pages including exhibits)

Box 29, Volume 9: Thirty-three witnesses called to testify about National Copperheads, Lindbergh, anti-Semitism, Nazi sympathizers; split loyalties of first generation Japanese-Americans; Japan's Okabo plan for expansion of Japanese world power; sabotage at Pearl Harbor, Manila and China; possible internment of Japanese

"colonies" on the West Coast. Feb. 23 and 24, 1942. State Building, Los Angeles. (355 pages)

Box 29, Volume 10: Twenty-two witnesses questioned about such subjects as possible involvement of the Japanese American Citizens League in subversive activities prior to Pearl Harbor; content of Japanese language newspapers in Los Angeles; funds collected in California for the Japanese war effort. March 24 and 26, 1942. State building, Los Angeles. (318 pages)

Box 29, Volume 10a: Witnesses questioned about activities of Mankind United, a suspected Fascist organization. May 12, 1942. Los Angeles. (109 pages)

Box 29, Volume 11: Nine witnesses, including self-described metaphysician, testify about fundraising activities of Mankind United; distribution of derogatory books about England; possession of device to paralyze traffic; ability of leader to reproduce himself. May 22 and 23, 1942. City Council Chambers, Fresno. (189 pages)

Box 29, Volume 12: Witnesses questioned about Italian Fascism in San Francisco; propaganda and sabotage; collection of 10,000 gold wedding bands in San Francisco to finance war in Ethiopia; Fascist salute given by mayor of San Francisco; Italian language schools. May 25, 1942. St. Francis Hotel, San Francisco. (120 pages including exhibits)

Box 29, Volume 13: Twenty-two witnesses, including Mayor Angelo Rossi of San Francisco; Paul Bibily, French vice-consul; and Harry Bridges, Longshoremen's Union leader, testify on such subjects as Italian Fascism in San Francisco; Legion of the Mothers of America, Ku Klux Klan, America First; German storm troopers manning German cargo ships; Longshoremen's refusal to load scrap metal collected by San Francisco scavenger wagons onto German ships. May 26 and 27, St. Francis Hotel, San Francisco. (270 pages)

Box 29, Volume 14: Testimony about Sinarquistas, pro-Nazi group accused of inciting

Mexican-American youth of Los Angeles against U.S. government over social injustice issues. Dec. 16, 1942. State Building, Los Angeles. (121 pages)

Box 29, Volume 15: Committee investigates construction of strategic installations for the Army and Navy at Pearl Harbor, Wake Island, Midway and Guam by German contractor Hans Wilhelm Rohl of Rohl-Connally Corp. March 1, 1943. (248 pages including exhibits)

Box 29, Volume 16: Continued discussion of Rohl-Connally Corp.; justification for internment of Japanese-American citizens. Feb. 27 and March 1, 1943. (47 pages)

Box 30, Volume 20: Witnesses questioned about involvement with Mankind United organization. March 20, 1944. State Building, Los Angeles. (143 pages including exhibits)

Box 30, Volume 21: Additional testimony about Mankind United. March 22, 1944, District Court of Appeal, Fresno. (61 pages)

Box 30, Volume 22: Three witnesses questioned about Christ Church of the Golden Rule and Mankind United. March 24, 1944, State Building, San Francisco. (230 pages)

Box 30, Volume 23: Thirteen witnesses, including union organizers, teachers, authors and Hollywood screen writers, questioned about their associations with Communist organizations. Oct. 12-13, 1944, State Building, Los Angeles. (259 pages including exhibits)

Box 30, Volume 24: Two witnesses, including union leader, questioned about Communist organizations. Oct. 27, 1944, State Building, Los Angeles. (130 pages)

Box 30, Volume 27: Several witnesses questioned about Communist activities in various Navy yards, defense industries in Alameda County. Sept. 25-26, 1946, Alameda County Courthouse, Oakland. (266 pages)

Box 30, Volume 28: Testimony of 39 witnesses regarding their activities, and beliefs, on behalf of the Communist Party and the Ku Klux Klan. Oct. 7-10, 1946, State Building, Los Angeles. (718 pages)

Box 30, Volume 29: Ten witnesses questioned about Communist Party activities in Contra Costa County. Oct. 31, 1946, Alameda County Courthouse, Oakland. (158 pages)

Box 30, Volume 30: Thirteen witnesses questioned about sex education in Chico public schools. Feb. 26, 1947, Veterans Memorial Building, Chico. (173 pages)

Box 30, Volume 31: Hearing on subversive activities in Fairfax community affairs. Oct. 23, 1947, Fairfax. (141 pages)

Box 30, Volume 32: Testimony on alleged Communist activity in the National Union of Marine Cooks and Stewards. Nov. 3-6, 1947, Courthouse, Oakland. (198 pages)

Box 31, Volume 33: Witnesses questioned about Communist organizations and activities in the San Francisco Bay Area. Includes questions about J. Robert Oppenheimer and atomic research. Nov. 3-6, 1947, Courthouse, Oakland. (183 pages)

Box 31, Volume 34: Hearing on unauthorized "bugging" of the committee's conference room in the Los Angeles State Building by a private detective hired by Communists. State Building, Los Angeles, Dec. 1, 1947. (141 pages)

Box 31, Volume 35: Statements taken relating to a farm labor strike at the DiGiorgio Farms in Kern County. January 16, 1948. Bakersfield. (71 pages)

Box 31, Volume 36: Election of temporary officers of the Southern California Citizen's Advisory Committee. February 15, 1948. Los Angeles. (108 pages)

Box 31, Volume 37: Hearing to read into the record histories of suspected Communist-front organizations. Feb. 16, 1948, State building, Los Angeles. (267 pages)

Box 31, Volume 38: Hearing to investigate suspected Communist-front organizations. Feb. 17, 1948, State Building, Los Angeles. (223 pages)

Box 31, Volume 39: Witnesses questioned about suspected Communist-front organizations. Feb. 18, 1948, State Building, Los Angeles. (203 pages)

Box 31, Volume 40: Continuation of investigation into suspected Communist-front organizations Feb. 19, 1948, State Building, Los Angeles. (189 pages)

Box 31, Volume 41: Documentary material read into record regarding Hollywood Writers Mobilization organization. Feb. 20, 1948, State Building, Los Angeles. (83 pages)

Box 31, Volume 42: Organizational meeting of the Northern California Citizen's Advisory Committee. April 10, 1948. San Francisco. (79 pages)

Box 31, Volume 44: Witnesses and exhibits presented relating to accused Communists and Communist-front organizations. State Building, Los Angeles, May 3, 1948. (343 pages)

Box 31, Volume 45: Hearing on alleged Communist infiltration of organized labor. State Capitol, Sacramento, Aug. 9, 1948. (94 pages)

Box 31, Volume 46: Conclusions presented from Citizens' Advisory committee. State Building, Los Angeles, Aug. 30, 1948. (61 pages)

Box 31, Volume 47: Hearing to recommend legislation to eliminate Un-American activities in California. (62 pages)

Box 31, Volume 48: Hearing to investigate California Labor School. State Building, Los Angeles, Sept. 7, 1948.(284 pages)

Box 31, Volume 49: Committee questions suspected Communists. San Diego, Sept. 8, 1948. (172 pages)

Box 31, Volume 50: Committee examines San Diego area citizens suspected of Communist activities. Chamber of Commerce Building, San Diego, Sept. 9, 1948. (150 pages)

Box 31, Volume 51: A continuation of Committee hearings to examine San Diego area citizens suspected of Communist activities. Chamber of Commerce Building, San Diego, Sept. 10, 1948. (178 pages)

Box 31, Volume 52: Discussion of nature and activities of the Labor Youth League. State Building, Los Angeles, Jan. 4, 1950. (83 pages)

Box 31, Volume 53: Testimony about activities of prominent members of Communist Party in San Francisco Bay Area During World War II. Courthouse, Oakland, May 8-10, 1950. (299 pages)

Box 31, Volume 54: Hearing on charges that a member of the Assembly was a Communist. Los Angeles, Sept. 12, 1950. (180 pages)

Box 31, Volume 55: Hearing into the death of UCLA student Everett Hudson. State Building, Los Angeles, Dec. 15, 1950. (210 pages)

Box 32, Volume 56: Fifteen witnesses questioned about alleged Communist front organizations in San Francisco and the East Bay. City Hall, San Francisco, Sept. 11-12, 1951. (252 pages)

Box 32, Volume 57: Officials of the City Housing Authority of Los Angeles questioned about Communist influence in the authority. Sept. 26, 1952, Aliso Village, Los Angeles. (52 pages)

Box 32, Volume 60: Thirty-five witnesses questioned about their membership in the Communist Party and other organizations. Jan. 5-9, 1954, State Building, Los Angeles. (551 pages)

Box 32, Volume 61: Witnesses questioned about Communist activities at Contra Costa County Junior College. May 8, 1954, Contra Costa County Junior College, Martinez. (52 pages)

Box 32, Volume 62: Writers, screen writers, producers and others involved in the motion picture industry deny Communist affiliations. July 26, 1954, State Building, Los Angeles. (84 pages)

Box 32, Volume 62A: Witnesses from the motion picture industry testify to correct information published in prior committee reports about their Communist affiliations. July 27, 1954, State Building, Los Angeles. (51 pages)

Box 32, Volume 62B: Testimony about subversive activities in the Westminster area. July 28, 1954, State Building, Los Angeles. (91 pages)

Box 32, Volume 63A: Hearing requested by Los Angeles Medical Society to investigate subversive activities among medical professionals. Dec. 6, 1954, State Building, Los Angeles. (88 pages)

Box 32, Volume 63B: Additional testimony by medical professionals about subversive infiltration. Dec. 7, 1954, State Building, Los Angeles. (68 pges)

Box 32, Volume 63C: Additional hearing concerning physicians and Communism in the medical community. Witnesses invoke Fifth Amendment. Dec. 8, 1954. State Building, Los Angeles. (117 pages)

Box 32, Volume 63D: Physicians questioned about involvement in subversive or Communist organizations. Dec. 9, 1954. State Building, Los Angeles. (117 pages)

Box 32, Volume 63E: Former Communist Party members testify about party meetings, individuals present, publications and party members. Dec. 10, 1954, State Building, Los Angeles. (168 pages)

Box 32, Volume 63F: Testimony of undercover agent about Communist Party activities. Dec. 11, 1954, State Building, Los Angeles. (59 pages)

Box 32, Volume 64: Five teachers questioned about Communist organizations and individuals. Aug. 6, 1956, State Building, Los Angeles. (80 pages)

Box 32, Volume 64A: Three witnesses invoke Fifth Amendment rights about Communist-front organizations. Aug. 6, 1956, State Building, Los Angeles. (26 pages)

Box 32, Volume 64B: Communist Party member employed by Southern California Gas Company testifies. Aug. 7, 1956, State building, Los Angeles. (65 pages)

Box 32, Volume 64C: Teacher questioned about Arts, Sciences and Professions Council. Aug 7, 1956, State Building, Los Angeles. (15 pages)

Box 32, Volume 65: Testimony on the death of Sheldon Abrams, a graduate student at UCLA, and the infiltration of higher education by Communists and other subversives. Dec. 10, 1956, State Building, Los Angeles. (96 pages)

Box 32, Volume 65A: Testimony on subversive activity in Los Angeles schools. Dec. 11, 1956, State Building, Los Angeles. (111 pages)

Box 32, Volume 66: Testimony on the Arts, Sciences, and Professions Council. June 9 and 10, 1958. State Building, Los Angeles. (163 pages)

COURT: CONGRESS CAN ORDER STATES NOT TO RELEASE INFORMATION
1/14/00

The federalist principle that Congress cannot force states to adopt or execute federal

regulatory programs does not mean that it can't prohibit states from doing certain acts -- including releasing data from their own files. Thus the Driver's Privacy Protection Act (DPPA), barring release of DMV personal identifiers to most requesters, is constitutional.

So ruled the U.S. Supreme Court in a unanimous decision issued January 12 in *Reno v. Condon*, Case No. 98-1464.

South Carolina, whose law permits anyone identifying himself and providing an address to obtain the name and address of any registered vehicle owner or driver, and use the data for most purposes, challenged the constitutionality of the DPPA and won at the trial and appellate levels.

It argued that the federal law, authored by Senator Barbara Boxer (D-California), violates the Tenth Amendment, as interpreted by the high court in two recent cases in terms of federalism, i.e. Congressional respect for the sovereignty of the states' own legislative and executive processes. In these cases the Supreme Court held that Congress may neither tell a state what laws to pass in order to effectuate federal policy nor go around state legislatures and directly order state officials to implement federal programs.

The latter point was established in a 1997 case, *Printz v. U.S.*, in which the court held unconstitutional provisions of the Brady Act which mandated that state and local law enforcement officials conduct background checks on gun purchasers.

But these scenarios do not apply to the DPPA, concluded Chief Justice William Rehnquist in his opinion for the court. That statute does not mandate -- it prohibits. What it prohibits is that any state DMV office, without express "opt-in" consent of the person concerned, release names and addresses of private individuals to most requesters for most purposes. The same prohibition applies to private data holders who have received their information from a state DMV source.

While complying with this or other federal laws may impose substantial burdens,

Rehnquist said, this effect is different from the "commandeering" barred by the Tenth Amendment, where lawmakers or enforcement officers are drummed into the process of carrying out a federal program's impact on the people.

COMMENT: The specifics of this case are of little CONCERN in California, where access to driver names and addresses has been barred by state law for several years, tracing to the murder of actress Rebecca Shaeffer, stalked to her home by a mentally unbalanced fan. Ironically, the killer got the address data using a query made by a private investigator, and private investigators are allowed access to data under the DPPA, at least for certain purposes. But the larger significance of Condon is that informational secrecy can now be federalized. The high court's recent observation in *United Reporting* is that nothing in the federal constitution -- certainly not the First Amendment -- prevents states from ending public access to their files altogether. Condon now says that nothing in the constitution prevents Congress from subtracting whatever it pleases from state public records access laws. The only safeguard against both is likely to be an amendment to the California Constitution providing the public with some floor under their "sunshine" rights.

Stories:2000

Public Information

These reports cover issues dealing with the public's right of access to information held by government agencies and courts, at the federal, state and local level. The typical laws involved are the California Public Records Act, the federal Freedom of Information Act, and rules on access to records of state courts, adopted by the California Legislature or the California Judicial Council.

[COURT: CONGRESS CAN ORDER STATES NOT TO RELEASE INFORMATION 1/14/00](#)

>>>> NEW LAW REQUIRES PUBLIC AGENCIES TO SHARE THE E-RECORDS (1/5/01)

As of this week, copies of public record information held by California government in electronic form must be made available to the public if requested in that form, and may be copied in any format used by the agency to generate copies for its own use.

Requesters can even have an agency "create" an e-record to combine data in new ways if they pay programming costs.

AB 2799 by Assemblyman Kevin Shelley (D-San Francisco), signed by Governor Gray Davis last fall, took effect January 1. It has repealed the long-standing California Public Records Act provision giving public agencies discretion over what form computerized public information must be produced in (e.g. electronic or hard copy printouts). The Act previously said nothing else about computer file access other than the general principle that information accessible to the public on paper remains legally accessible when stored electronically.

Under AB 2799, the Act has been amended to provide that:

* Public information not exempt from disclosure must be made available in the electronic format requested if the public agency holding the information uses that format for making copies for its own or another agency's use.

* If meeting the request involves only copying, any fee charged by the agency must be limited to the "direct cost of producing a copy."

* If the request is for a format not used by the agency for its own copying, and

therefore would require special work, extra charges and delay are authorized.

* "The cost of producing a copy of the record, including the cost to construct a record, and the cost of programming and computer services necessary to produce a copy of the record," can be passed on to the requester when "the record is one that is produced only at otherwise regularly scheduled intervals" but is demanded off-schedule, or the formatting sought "would require data compilation, extraction, or programming."

* An extension of up to 14 days could stretch the deadline for a determination response from the public agency, meaning a maximum total of 24 days, based on "the need to compile data, to write programming language or a computer program, or to construct a computer report to extract data."

* If the request is for a paper record, the agency may inform the requester that the information is also available in electronic format, but cannot limit access to the electronic version. Nor must it "reconstruct" a record in an electronic format if it "no longer has" the information in that format.

* A request to release information in the format in which the agency keeps it would not have to be honored if doing so "would jeopardize or compromise the security or integrity of the original record or of any proprietary software in which it is maintained."

The new amendments include two other important provisions unrelated to electronic records. One restores the word "delay," substituted several years ago by the word "obstruct" in a provision prohibiting certain agency conduct that frustrates timely access to records. The new law now forbids both delay and obstruction. Also, the Act for the first time expressly requires that any notice from the agency announcing denial of access be in writing - if the request was made in writing.

COMMENT: How to use the new law, including how to structure an access request, depends more than ever on just what kind of access is desired to what kind of information. Some of the variables:

-- Inspection: If the desire is to simply review computer-stored information, either prior to or instead of asking for a copy, such inspection seems to be accommodated by the new rules, which for example speak distinctly of "making information available" and "providing a copy of an electronic record." The problems may be more practical than legal, i.e. when the text or database display a requester wants to read on a screen is salted with isolated items of confidential information.

-- Copying: Assuming no further work is required and the copies are those a requester could work with, this option should be straightforward, rapid and inexpensive.

-- Special work: AB 2799 resolves what under some jurisdictions' laws has been a quite serious issue, namely whether a public agency in electronically assembling a report to the tailored requirements of a requester is "creating a new record" - an activity not mandated by most access laws. The new amendments, by simply providing that such extra work can be charged for specially, presume that if requested, such work is within the Act's mandate, i.e. even when "the request would require data compilation, extraction, or programming to produce the record," the issue is not whether it must be produced but how much can be charged for the production.

The new law's provisions behooves the requester to check informally with those who

are familiar with the agency's information systems to see if the desired report can be assembled, and how readily, and at what expense, rather than blindly dictating a demand for some documentation that cannot possibly be produced.

FRESNO STATE ORDERED TO RELEASE NAMES OF SKYBOX PATRONS (12/22/00)

The names of those leasing luxury skybox suites in a planned on-campus sports arena are matters of public record not protected by their privacy interests, a judge has ruled in a case brought by the Fresno Bee against Fresno State University and an auxiliary organization. Superior Court Judge Franklin P. Jones stayed his release order to allow time for appeal.

The case was brought last March when Fresno State and the CSU Fresno Association, Inc. declined to provide the names of some individuals and entities signing one year leases for skybox suites in the proposed Save Mart Center, to be built on Shaw Avenue as a multipurpose sports and recreation complex.

The defendants took the position that disclosing all names would dissuade future charitable contributions, citing the Section 6255 "catchall" exemption from the California Public Records Act. Also relied on was the exemption for personal privacy.

But Fresno Bee Executive Editor Charlie Waters said the 32 suites, ranging in lease price from \$45,000 to \$63,000 per year, were the subject of "simple business deals in which individuals or companies are paying for prime seating in a new arena."

In his Dec. 19 order, Judge Jones said he had reviewed the blank lease form but had not checked the names or individual lease agreements in chambers. He said the sports complex would operate by a public institution, as a public function. Although private money was anticipated as supporting most construction costs by the time of the 2002 opening, the state had already fronted \$8 million for off-site improvements, and yet leaseholders "will be deriving a significant and valuable benefit over and above what other donors and members of the public will enjoy."

RECORDS CASE SHOWS LAWYER 'GHOST-WRITING' PLANNING DOCUMENTS (12/8/00)

A lawsuit filed under the California Public Records Act will cost Monterey County more than \$400,000 in attorney fees and other expenses after court-ordered release of records showed that a private law firm moving development projects through the planning approval process actually wrote many of the documents passed off as staff reports.

On Tuesday, December 5, County Administrative Officer Sally Reed announced appointment of a well-known local environmental activist as the new planning director, a move apparently prompted in part by the perception that the planning department has been manipulated by pro-development forces.

The background to the records suit is a bitter struggle in 1999 over September Ranch, a proposed 100-home luxury subdivision in Carmel Valley. Over-optimistic claims for adequate water supply and road access were among the key reasons for a superior court order effectively sending the project back to the drawing boards over a year ago. Chief opponent to September Ranch was the local chapter of the Sierra Club, of which new planning director Scott Hennessy is a former chairman. Hennessy is also most recently chairman of the county planning commission.

But meanwhile Patricia Bernardi, a retired schoolteacher living in Carmel Valley who first became politically active over water issues, became suspicious of how the planning department was handling project reviews. She told the Monterey County Herald that she attended a planning commission meeting and saw the staff all thumbs with its own documentation, being advised by whispers from a project applicant's attorneys.

Bernardi later told the Monterey County Herald, "That was when my radar really blipped." She contacted attorney Michael Stamp, one of the team of lawyers representing the Sierra Club in challenging the September Ranch project. In February, 1999, Stamp requested from the planning department copies of documents prepared by the law firm of Lombardo & Gilles. Attorney Tony Lombardo, typically a very effective practitioner in land use regulation, had been on the applicant's losing side in the September Ranch case.

At that time Superior Court Judge Richard Silver had scolded Lombardo for his firm's preparation of "critical documents" for county planning staff. Stamp's public records request yielded a cartonful of miscellaneous documents - enough to make it clear that quite a few more - in paper and on diskette - were missing.

Stamp filed a public records access action with the superior court to obtain the missing files - and again drew Judge Silver, who eventually noticed that of the documents actually produced, a substantial number concerned the September Ranch application - and not all of them had been included in the administrative record filed in the Sierra Club environmental challenge, which the county had certified as complete.

Judge Silver found that the public records lawsuit "was ultimately filed based on a belief that in fact a substantial number of relevant materials were being withheld or destroyed. The discovery and depositions in this case confirmed that substantial documents and disks had not been produced and/or had been written over or destroyed, some after the lawsuit was filed."

Equally disturbing, "many of the documents (actually produced by Lombardo's law

firm) are prepared in county format so that they appear to be prepared by county staff. Some of them even have the county seal on them. There is no reasonable way any member of the public could tell that they were not prepared by county staff."

The judge said that "the appearance of independent judgment is so tainted that public confidence is justifiably lost" when a law firm produces documents that appear to be written by government staffers.

The judge was not banned outright the practice of project applicants' attorneys drafting papers for county planning staff to work on, but all such documents must henceforth bear the author's stamp, and none may bear the county seal.

By December, the county's debts to its own lawyers and investigators and its requirement to pay Stamp's fees, were estimated to total \$415,318, with one county-retained law firm still to submit its fee bill.

TRIAL LAWYERS LAUNCH TWO BILLS RESTRICTING SEALED SETTLEMENTS (12/8/00)

An association of plaintiffs' trial lawyers is sponsoring twin bills, introduced in the Senate and Assembly on December 4, to make it far more difficult for parties in certain consumer-sensitive civil lawsuits to keep settlements and discovery-produced business information confidential. Legislation like this has been eluding enactment for years.

Consumer Attorneys of California is backing SB 11 by Senator Martha Escutia (D-Montebello) and AB 36 by Assemblyman Darrell Steinberg (D-Sacramento).

The bills are the latest in a series of legislative attempts, beginning with that of then Senator Bill Lockyer in 1992 and continuing through SB 1254 of 1999 by then Senator Adam Schiff, to end the common practice of corporate defendants in certain cases in settling with injured plaintiffs-but only under terms that keep under wraps the settlements themselves as well as embarrassing company information acquired by the plaintiffs' lawyers in discovery.

Lockyer's bill was vetoed by Governor Pete Wilson; Schiff's bill was quietly dropped when the author learned that the California Judicial Council would be addressing the issue of sealing court records as part of its rulemaking process in 2000. As it happens, however, the council's rules, adopted this fall and going into effect in January, do not address out-of-court agreements to keep settlements and discovered information confidential.

Recent events have given the issue new urgency, including the Bridgestone/Firestone settlements of defective tire lawsuits, and more locally, the secrecy agreements used by insurance companies to settle claims tracing the the 1994 Northridge earthquake.

It was Senator Escutia who, during the investigation earlier this year into Charles Quackenbush's performance as Insurance Commissioner with respect to Northridge claims, made public a number of confidential insurance department records detailing thousands of potential violations of law by insurance companies.

The new bills explicitly address these episodes as proof that legislation is needed:

"The Legislature finds and declares all of the following:

"(a) Secrecy agreements that prohibit disclosure to the public or public safety agencies of information relating to defective products, financial fraud, unfair insurance claims practices, or environmental hazards are injurious to the health, safety, and economic well-being of all Californians.

"(b) Secrecy agreements can have tragic consequences. A widely known example of the disastrous consequences of secrecy agreements is the tragedy resulting from dangerous defects in Firestone tires, which have reportedly caused more than 150 deaths and more than 500 injuries worldwide. For many years, Bridgestone/Firestone, Inc. knew about these dangerous defects, but kept the information out of the public eye by secretly settling many lawsuits brought as a result of crashes related to defective tires. During that time, the public continued to drive on Firestone tires, unaware of the mortal danger to their families and themselves. As a result of these hidden, dangerous defects, on August 9, 2000, Bridgestone/Firestone, Inc. and Ford Motor Co. jointly announced that Firestone would recall over 14 million tires. In the absence of a secrecy agreement, information about this dangerous product could have been disclosed publicly, which could have saved lives and avoided injuries. However, the companies demanded secrecy as the price of compensation for victims, resulting in many deaths and injuries that could have been avoided absent demands for secrecy agreements.

"(c) Secrecy agreements can allow companies to shield information that shows a practice of treating consumers unfairly and can permit those companies to continue illegal practices without accountability. The circumstances that allowed secrecy regarding the claims of victims of the Northridge earthquake and the contaminated drinking water connected with the story of Erin Brockovich also highlight the need for openness.

"(d) Secrecy agreements allow companies to shield life-threatening dangers and harmful practices from public view, thereby severely jeopardizing public welfare and safety. It is against the public interest to allow secrecy agreements about defective products, financial fraud, unfair insurance claims practices, or environmental hazards to remain confidential except in very limited circumstances upon careful judicial oversight and review."

The bills' key provisions are as follows:

o In any action based on injury, wrongful death, or financial loss allegedly caused by a defective product, financial fraud, unfair insurance claims practice, or environmental hazard, information about the defective product, financial fraud, unfair insurance claims practice, or environmental hazard contained in settlement agreements and confidentiality agreements not filed with the court, as well as similar information acquired through discovery, "shall be presumed to be public information and may not be kept confidential pursuant to agreement of the parties."

o The only way to keep such information confidential would be by obtaining a court order based on a finding that either:

(1) The information is a trade secret or otherwise privileged under existing law, or

(2) (A) An overriding interest exists that overcomes the right of public access to the information; and

(B) The overriding interest supports keeping the information confidential; and

(C) A substantial probability exists that the overriding interest will be prejudiced if the information is not kept confidential; and

(D) The proposed confidentiality is narrowly tailored; and

(E) No less restrictive means exist to achieve the overriding interest.

o Absent trade secrecy or other privilege, whether or not a court finds the balance of interests generally favoring confidentiality otherwise, any portion of an agreement or contract that restricts a party from disclosing such information to a governmental agency with enforcement authority over the defective product, financial fraud, unfair insurance claims practice, or environmental hazard "is void, contrary to public policy, and may not be enforced."

Attorney General Lockyer supports the legislation, but it faces very strong opposition from manufacturers, some Silicon Valley high-technology companies and venture capitalists, and a new source of resistance, the insurance industry.

NORWIN YOFFIE, FORMER PUBLISHER AND FREEDOM FIGHTER, DIES AT 76 (12/2/00)

Memorial services were held in San Rafael Wednesday, November 29 for Norwin Yoffie, former publisher of the Marin Independent Journal and a dogged champion of open government and aggressive journalism on public issues. The local unit of the Society of Professional Journalists will rename its career achievement award in his memory.

Yoffie expired of complications from chronic kidney failure in Marin General Hospital on November 24, survived by his widow, Sandra, four children, seven grandchildren,

his mother, and his sister.

It was Marin General that was the focus of Yoffie's most extraordinary commitment of personal resources to open government advocacy. In the 1980s, after his retirement from 18 years, culminating as publisher, of the Independent Journal, he and Sandra sued the Marin Hospital District under the Brown Act.

The district was among the earliest to take advantage of a state law allowing it to place its hospital under the management of a private corporation. A principal effect of this arrangement was to end most newsworthy activity by the district board and transfer discussions and actions, previously found in public meetings, to closed meetings of the corporate board.

Yoffie tried to get the Independent Journal to take court action to reverse the secrecy, but the new ownership declined. The Yoffies then sued in their own names, arguing that the responsibility to hold open meetings had, under the Brown Act, been transferred to the corporate board along with its acquired decision-making authority - that the hospital district could not shroud its business from the public simply by taking its operational functions private.

The First District Court of Appeal disagreed, and the corporate meetings stayed closed. But as evidence that the Yoffies' position had strong merit, the Fourth District Court of Appeal dealt with the identical question in a later suit involving Desert Hospital in Palm Springs, and ruled in favor of opening the meetings of that corporate entity. The California Supreme Court was spared the need to address the conflict between the cases since the latter was kept unpublished, leaving it to bind the parties but unavailable as precedent.

But the Yoffies' lasting vindication on principle came in 1994, when as part of major revisions to the Brown Act, the legislature expressly amended the law to provide that future district hospital management transfers would carry the open meeting provisions with them to the corporate board actually running the facilities.

In his retirement years Norwin Yoffie not only continued to lend his wide experience of newspaper management to other publishers as a consultant, but served actively as a member of the Northern California Chapter of the Society of Professional Journalists, as a mainstay of its Freedom of Information Committee. He also contributed his time generously to planning the initial First Amendment Assembly of the California First Amendment Coalition, held in Oakland.

Bruce B. Brugmann, editor and publisher of the San Francisco Bay Guardian and a friend and colleague for many years, told the San Francisco Chronicle that Yoffie was "one of the truly great independent newspaper men of his generation," and a stalwart advocate for freedom of information in particular.

During his eulogy remarks at the funeral, Brugmann announced that the SPJ Chapter would re-title its annual freedom of information career achievement award to memorialize Yoffie by name.

Comment: As a 20-year-old fresh from the University of Missouri School of Journalism, Norwin Yoffie fought in an artillery unit driving the D-Day invasion into France and Germany. He served 30 years in the Army reserve and retired with the rank of lieutenant colonel. He was given military honors, including a rifle detail salute, a bugler's taps and a flag-draped coffin, in final ceremonies at Mt. Tamalpais Cemetery. A family member recalled how once, when staying in a hotel across the street from the American embassy in Mexico City, the Yoffies had seen demonstrators burn an American flag in the street, and Norwin had walked over to the embassy gate and ordered Marine sentries to recover the ashes for respectful burial. His great heart and sense of duty set a high standard for those continuing the effort to preserve open government in the interests of freedom.

CORRECTION: INLAND VALLEY TIMES IS PUBLISHED SIX DAYS A WEEK
(11/22/00)

Last week's Flash included a story about the Public Records Act litigation filed by the Three Valleys Water Agency stated that the Inland Valley Times is a weekly publication. The publication is issued as part of the Los Angeles Times six days a week, Monday through Saturday.

[Back to top](#)

WATER AGENCY REACTS TO RECORDS REQUEST BY SUING REQUESTERS
(11/17/00)

A Claremont water agency, facing requests from two newspapers and an individual for records concerning its basis for a closed session at which litigation was averted, has opted to punt the issues into court. Named as defendants are the requesters, two of whom are, in effect, members of the board of directors of the California First Amendment Coalition.

The Claremont-based Three Valleys Municipal Water District has filed an action for declaratory relief with the Los Angeles Superior Court, naming as defendants Richard McKee, the weekly Claremont Courier, and the Inland Valley Times, a weekly publication of the Los Angeles Times.

The district's purpose, stated in a letter to a reporter for the Inland Valley Times, is "to

guarantee an appropriate balancing of the dual public interests of maintaining personal privacy and ensuring governmental accountability without the appearance of any perceived impropriety by the District, and to further provide an independent forum to make sure that the rights of all interested parties are adequately heard and properly protected."

Translation: Rather than flatly deny access to a claim by a former employee involving the general manager's conduct - one with implications for both individuals - the district wants the court to make the decision on release.

The claim (actually a letter of complaint sent to three board members about a year ago) was made by Mary Anderson, former executive secretary to district general manager Richard Hansen. Its grievance was that Hansen had essentially detached Anderson, an eight-year incumbent in the position, from her former responsibilities and assigned her only trivial work.

In February, using a closed session citing pending litigation as its justification, the board approved by a 4-3 vote a settlement and severance package for Anderson including a year's salary of more than \$53,000, six months of continuing health coverage, legal fees amounting to \$5,000 and forgiveness of Anderson's debt to the district for continuing education courses.

In return, Anderson resigned and agreed not to discuss the matter publicly on pain of a \$10,000 penalty.

But the board did not disclose the settlement at the time, and continued what would become a 10-month series of repeated closed sessions evaluating Hansen's performance. Within that period the board changed his contract, cutting his salary and eliminating a clause providing him with severance pay if he were dismissed. But on October 18 it voted 7-0 to retain Hansen and released copies of two evaluations of his performance made on August 4 and October 4. At its next meeting, the board will consider hiring a consultant to conduct yet another review of Hansen's performance.

What the board has never disclosed, however, are the "facts and circumstances" justifying its February closed session, i.e. the complaint letter submitted by Anderson or any other specific documentation of a threat of litigation.

This secrecy is unlawful, argues McKee, who was preparing to sue the district under both the Ralph M. Brown Act and the California Public Records Act to force release of the information. But the district beat him to the courthouse.

The Brown Act states that a closed session concerning a perceived threat of litigation against a public agency must be based on such facts and circumstances. Government Code Section 54956.9 provides also, in the words of the attorney general's guide to the Act:

"If a claim or some other written threat of litigation has been received, it is a public record and reference to it 'must be publicly stated on the agenda or announced' prior to the closed session."

The district cites another provision of Section 54956.9 which excuses local bodies from disclosing the facts and circumstances if doing so would alert a potential plaintiff that he or she might have a basis for filing suit. In effect, its argument seems to imply that making Anderson's grievance public might prompt other employees with similar complaints to make them known in a claim triggering litigation.

The Inland Valley Times and the Claremont Courier also sought copies of Anderson's complaint letter. Courier publisher Martin Weinberger, like McKee, sits on CFAC's board of directors, and both the Los Angeles Times and Claremont Courier are CFAC members.

The district's pre-emptive action in court apparently relies on a recent decision of the California Court of Appeal permitting public agencies to sue records requesters for declaratory judgment. But that case specified that such action is permissible only when the agency has conclusively denied access to the records and was then aggressively threatened with litigation. In short, courts have no jurisdiction to make the initial decision on whether a record is public or not - only to review an agency's conclusion to that effect leading to an unequivocal denial of access.

[Back to top](#)

JUDICIAL COUNCIL ADOPTS NEW RULES ON SEALING OF COURT RECORDS (11/9/00)

The California Judicial Council has approved new rules that should end the practice in state courts of sealing court records on stipulation of the parties. Sealing is "disfavored" and must be done only after a judge concludes that vital interests would otherwise be compromised. Left unaffected is the sealing of discovery product and settlements.

The new rules, approved by the council at its October 27 meeting, are to take effect on January 1. Considered at the request of the state Supreme Court, the new rules follow the court's recent decision in (1999) 20 Cal.4th 1178. That decision held that the right of public access to trials applies to civil as well as criminal proceedings. It also provided guidance on the proper standard for courts to apply in deciding whether to seal documents filed in court as the basis for adjudication.

The new rules state, "Unless confidentiality is required by law, trial court records are presumed to be open." The rules incorporate the standard set out in the NBC case, providing that trial courts may not seal records unless the court expressly finds:

- there exists an overriding interest that overcomes the right of public access to the record;
- the overriding interest supports sealing the record;
- a substantial probability exists that the overriding interest will be prejudiced if the record is not sealed;
- the proposed sealing is narrowly tailored; and
- no less restrictive means exist to achieve the overriding interest.

The rules affect only those instances where a court is asked to seal otherwise public records because of some ad hoc interest in confidentiality. Various statutes already defining certain court records as confidential, such as juvenile and certain family court files, are unaffected.

Likewise not addressed are the phenomena of sealing settlements and related discovery materials-an area of increasing controversy in recent years. The council apparently plans to assign those issues for study and recommendation by an advisory committee. Trial lawyers over the past decade have assailed the practice of large corporate defendants in agreeing to settlements with individual plaintiffs, contingent on their consent to seal embarrassing material churned up in discovery, seal the settlement and refrain from discussing either. The Firestone tire debacle is the latest in a series of public health and safety crises said to be supported by this practice, which keeps consumers from learning of dangerous defects that might otherwise be highlighted in tort litigation.

Attorney General Bill Lockyer, when in the California Senate, carried legislation in 1991 that would have made these practices more difficult in cases involving products liability, environmental damage or consumer fraud. The bill passed the legislature but was vetoed by Governor Pete Wilson.

In 1998 Senator Adam Schiff (D-Burbank) revived many of the same idea in SB 1254, the "Sunshine in the Courts Act," a bill approved by both houses' judiciary committees but then put aside to await the Judicial Council's consideration of the matter. Schiff has just been elected to Congress.

That bill would have provided, as a matter of public policy, that in any action based on financial fraud, or on personal injury or wrongful death caused by a defective product or environmental hazard, the court could not enter into or enforce any confidentiality agreement, settlement agreement, stipulated agreement, or protective order, except as specified, unless a protective order regarding the information was entered by the court after a noticed motion.

SB 1254 would have also authorized the Attorney General to file a motion with the court to lift a protective order if that office determined that disclosure was required to protect the public health or safety.

(See bill information at <http://info.sen.ca.gov/cgi-bin/postquery?>

bill_number=sb_1254&sess=CUR&house=B&site=sen)

Several local court rules have been used to similar effect. For example, San Diego courts, with some of the strictest barriers to dubious secrecy provisions, unsealed records at the request of the San Diego Union-Tribune that showed how a private school in La Jolla had paid the parents of a black child \$7,500 to drop a claim that the school had discriminated against the child-and keep the matter to themselves.

In August, San Diego Superior Court Judge Richard Strauss ordered the settlement unsealed, finding no showing of a compelling reason for secrecy.

As for the new rules of court, the provisions affecting trial courts state:

Rule 243.1. Sealed records

(a) [Applicability and definition of "record"]

(1) Rules 243.1-243.4 apply to records sealed or proposed to be sealed by court order. These rules do not apply to records that are required to be 23 kept confidential by statute or other rule.

(2) Unless the context indicates otherwise, "record" as used in rules 243.1- 243.4 means all or a portion of any document, paper, exhibit, transcript, or other thing filed or lodged with the court.

(b) [Sealing of records disfavored]

The public has an interest in access to court records. Unless confidentiality is required by statute or rule, court records are presumed to be open. Orders sealing cases or records filed in an action or a proceeding are disfavored.

(c) [Overriding interest necessary to seal records]

The court may seal court records only if the court determines that there is an overriding interest that overcomes the right of public access to court records and that all the requirements of (d) are satisfied. Overriding interests that under appropriate circumstances may support the sealing of records include, without limitation, protecting an individual's right to a fair trial, protecting minor victims of sex crimes from further trauma or embarrassment, ensuring the anonymity of juvenile offenders in juvenile court, protecting the privacy interests of prospective jurors during voir dire, protecting witnesses from embarrassment or intimidation so extreme that it would traumatize them or render them unable to testify, protecting information within the attorney-client privilege, protecting attorney work product, protecting trade secrets, protecting binding contractual obligations not to disclose information, safeguarding national security, and preserving confidential investigative information.

(d) [Specific findings required to seal records]

The court may order that a record be filed under seal only if it specifically finds that:

(1) An overriding interest supports sealing the record;

(2) There is a substantial probability that the overriding interest will be prejudiced if

the record is not sealed;

(3) The proposed sealing is narrowly tailored to serve the overriding interest; and

(4) There is no less restrictive means of achieving the overriding interest.

(e) [Scope of order]

(1) An order sealing the record shall

(i) be based on a document-by-document review,

(ii) expressly state the findings that support the order, and

(iii) direct the sealing of only those documents and pages-or, if reasonably practicable, portions of those documents and pages-that contain the material that needs to be placed under seal. All other portions of each document or page shall be included in the public file.

(2) If the records that a party is requesting be placed under seal are voluminous, the court may appoint a referee, at the expense of that party, to review the records.

Rule 243.2. Procedure for filing records under seal

(a) [Court approval required]

A record shall not be filed under seal without a court order. The court shall not permit a record to be filed under seal based solely upon the agreement or stipulation of the parties.

(b) [Motion to seal a record]

(1) A party requesting that a record be filed under seal shall file a noticed motion for an order sealing the record. The motion shall be accompanied by a memorandum of points and authorities and a declaration containing facts sufficient to justify the sealing.

(2) The party requesting that a record be filed under seal shall lodge it with the court under (d) when the motion is made, unless good cause exists for not lodging it. Pending the determination of the motion, the lodged record will be conditionally under seal.

(3) If necessary to prevent disclosure, the motion, any opposition, and any supporting documents may be filed in a public redacted version, and a full version may be lodged conditionally under seal.

(4) If the court does not grant the motion to seal, the clerk shall return the lodged record to the submitting party and shall not place it in the case file.

(c) [References to nonpublic material in public records]

(1) A record filed publicly in the court shall not disclose material contained in a record that is sealed, conditionally under seal, or subject to a pending motion to seal.

(2) If it is necessary that a motion to seal or unseal a record disclose confidential material, the motion and any supporting papers shall be prepared in both a redacted version-labeled "redacted"-and a separate full version-labeled "confidential."

(i) In the redacted version, redaction shall be limited to those specific portions whose disclosure would undermine the confidentiality of the material under seal or to be placed under seal.

(ii) The confidential version shall be filed under seal, if the reviewing court has ordered the material to be sealed, or lodged conditionally under seal, if it has not.

(d) [Lodging records requested to be placed under seal]

(1) The party requesting that a record be placed under seal shall put it in a manila envelope or other appropriate container, seal the envelope or container, and lodge it

with the court.

(2) The envelope or container lodged with the court shall display prominently the notation, "CONDITIONALLY UNDER SEAL."

(3) The party submitting the lodged record shall affix to the envelope or 10 container a cover sheet that:

(i) Contains all the information required on a caption page under rule 201; and

(ii) States that the enclosed record is subject to a motion to be placed under seal.

(4) Upon receipt of a record lodged under this rule, the clerk shall stamp the affixed cover sheet as "lodged" and shall not file the record unless the court so orders.

(e) [Order]

(1) If the court grants an order sealing a record, the clerk shall substitute on the envelope or container for the notation required by (d)(2) a notation prominently stating, "SEALED BY ORDER OF THE COURT ON (DATE)," and shall replace the cover sheet required by (d)(3) with a file-endorsed copy of the court's order.

(2) The order shall state whether-in addition to records in the envelope or container-the order itself, the register of actions, any other court records, or any other records relating to the case are to be sealed.

(3) Sealed records shall not be open to inspection by any person except those expressly authorized by the court order.

(4) A sealed record shall not be unsealed or destroyed except upon order of the court.

(f) [Custody of sealed records]

Sealed records shall be securely filed and kept separately from the main file in the case.

(g) [Custody of voluminous records]

If the records to be placed under seal are voluminous and are in the possession of a public agency, the court may by written order direct the agency instead of the clerk to maintain custody of the original records in a secure fashion. If the records are requested by a reviewing court, the trial court shall order the public agency to deliver the records to the clerk for transmission to the reviewing court under these rules.

(h) [Motion to unseal records]

A party or member of the public, or the court on its own motion, may move to unseal a record. Notice of the motion to unseal shall be filed and served on the parties. The motion, opposition, reply, and supporting documents may be filed in a public redacted version and a sealed complete version if necessary to comply with (c).

PRESIDENT VETOES 'OFFICIAL SECRETS ACT' PROVISION AS TOO BROAD (11/9/00)

President Bill Clinton's decision last Friday to veto the Intelligence Authorization Act because of its quietly embedded criminal penalty for those who disclose any classified information, irrespective of harm, has not discouraged those who want leaks plugged. There is talk already of a follow-up bill, but this one will have to be discussed publicly.

Clinton said in his veto message that national security concerns must be balanced against the public's need for information about the government. He added:

"This legislation does not achieve the proper balance. For example, there is a serious risk that this legislation would tend to have a chilling effect on those who engage in legitimate activities. A desire to avoid the risk that their good faith choice of words -- their exercise of judgment -- could become the subject of a criminal referral for prosecution might discourage government officials from engaging even in appropriate public discussion, press briefings, or other legitimate official activities.

"Similarly, the legislation may unduly restrain the ability of former government officials to teach, write, or engage in any activity aimed at building public understanding of complex issues. Incurring such risks is unnecessary and inappropriate in a society built on freedom of expression and the consent of the governed and is particularly inadvisable in a context in which the range of classified materials is so extensive. In such circumstances, this criminal provision would, in my view, create an undue chilling effect."

Clinton noted that " this provision was passed without benefit of public hearings -- a particular concern given that it is the public that this law seeks ultimately to protect."

But the Wall Street Journal on Monday reported that the issue will be back in bill form in the next session.

COMMENT SOUGHT ON FEDERAL COURTS' PROPOSED E-RECORDS RULES (11/9/00)

Federal court administrators are asking for comment on how to make case files available to the public in electronic form, including remote dialup. California's Judicial Council addressed this issue several years ago, but when local court officials balked at a proposal to provide maximum access, the council settled for a voluntary, minimal standard instead.

The Court Administration and Case Management Committee of the Judicial Conference of the United States, through its Subcommittee on Privacy and Electronic Access to Case Files, is seeking comment on the attached document outlining policies under consideration to address issues of privacy and security concerns related to the electronic availability of court case files.

Comments will be accepted beginning Monday, November 13 through 5 p.m., January 26, 2001. Electronic submission of comments is "highly encouraged" and can be

accomplished via <http://www.privacy.uscourts.gov> or via e-mail at Privacy_Policy_Comments@ao.uscourts.gov. Comments can also be mailed to The Administrative Office of the United States Courts, Court Administration Policy Staff, Attn: Privacy Comments, Suite 4-560, One Columbus Circle, NE., Washington, DC 20544.

According to the proposal described by Abel J. Mattos, chief of the court administration policy staff for the Administrative Office of the United States Courts, there are several options under consideration for civil, criminal and bankruptcy case files:

For civil cases the alternatives under study are:

"1. Maintain the presumption that all filed documents that are not sealed are available both at the courthouse and electronically. This approach would rely upon counsel and pro se litigants to protect their interests on a case-by-case basis through motions to seal specific documents or motions to exclude specific documents from electronic availability. It would also rely on judges' discretion to protect privacy and security interests on a case-by-case basis through orders to seal or to exclude certain information from remote electronic public access.

"2. Define what documents should be included in the 'public file' and, thereby, available to the public either at the courthouse or electronically. This option would treat paper and electronic access equally and assumes that specific sensitive information would be excluded from public review or presumptively sealed. It assumes that the entire public file would be available electronically without restriction and would promote uniformity among district courts as to case file content. The challenge of this alternative is to define what information should be included in the public file and what information does not need to be in the file because it is not necessary to an understanding of the determination of the case or because it implicates privacy and security interests.

"3. Establish 'levels of access' to certain electronic case file information. This contemplates use of software with features to restrict electronic access to certain documents either by the identity of the individual seeking access or the nature of the document to which access is sought, or both. Judges, court staff, parties and counsel would have unlimited remote access to all electronic case files. This approach assumes that the complete electronic case file would be available for public review at the courthouse, just as the entire paper file is available for inspection in person. It is important to recognize that this approach would not limit how case files may be copied or disseminated once obtained at the courthouse.

"4. Seek an amendment to one or more of the Federal Rules of Civil Procedure to account for privacy and security interests."

Access to criminal case files is given only two options:

"1. Do not provide electronic public access to criminal case files. This approach advocates the position that the ECF component of the new CM/ECF system should not be expanded to include criminal case files. Due to the very different nature of criminal case files, there may be much less of a legitimate need to provide electronic access to these files. The files are usually not that extensive and do not present the type of storage problems presented by civil files. Prosecution and defense attorneys are usually located near the courthouse. Those with a true need for the information can still access it at the courthouse. Further, any legitimate need for electronic access to criminal case information is outweighed by safety and security concerns. The electronic availability of criminal files would allow co-defendants to have easy access to information regarding cooperation and other activities of defendants. This information could then be used to intimidate and harass the defendant and the defendant's family. Additionally, the availability of certain preliminary criminal information, such as warrants and indictments, could severely hamper law enforcement and prosecution efforts.

"2. Provide limited electronic public access to criminal case files. This alternative would allow the general public access to some, but not all, documents routinely contained in criminal files. Access to documents such as plea agreements, unexecuted warrants, certain pre-indictment information and pre-sentence reports would be restricted to parties, counsel, essential court employees, and the judge."

Bankruptcy case files inherently contain more personal or proprietary financial information than the other systems, and the following options are under study:

"1. Seek an amendment to section 107 of the Bankruptcy Code. Section 107 that currently requires public access to all material filed with bankruptcy courts and gives judges limited sealing authority. Recognized issues in this area would be addressed by amending this provision as follows: (1) Specifying that only "parties in interest" may obtain access to certain types of information; and (2) enhancing the 107(b) sealing provisions to clarify that judges may provide protection from disclosures based upon privacy and security concerns.

"2. Require less information on petitions or schedules and statements filed in bankruptcy cases.

"3. Restrict use of Social Security, credit card, and other account numbers to only the last four digits to protect privacy and security interests.

"4. Segregate certain sensitive information from the public file by collecting it on separate forms that will be protected from unlimited public access and made available only to the courts, the U.S. Trustee, and to parties in interest."

Comment: In 1996 a California Judicial Council advisory committee recommended,

after a study addressing comparable issues, that public access to case-related information maintained in electronic form be as complete and unqualified as access in the traditional paper medium. But the recommendation was withdrawn from consideration after extensive opposition from judges, court administrators, attorneys and privacy advocates surfaced in a 1997 public comment period. A new advisory committee, this time excluding representatives of the press and other information "consumers," was convened and its far more modest recommendation was adopted by the council, effective in 1999. The result is not a rule of court but a strictly voluntary Standard of Judicial Administration. It states, among other things, that "Cases involving family law, child support, juvenile law, mental health, probate, (or) criminal law...should not be included in electronic records made available through remote access." As for civil cases not excluded by that category, "A court should grant access to an electronic record only when the record is identified by the name or number of a case and only on a case-by-case basis."

TIMES SEEKING ATTORNEY FEES IN CASE ON AUDIT OF FUNDS TRANSFER (11/9/00)

The Los Angeles Times is before the California Court of Appeal seeking reversal of a trial court's denial of attorney's fees in a public records case. The information revealed was in an audit done by the Alameda Corridor Authority after its controller was shown to have used her office computer to transfer \$3 million in agency funds to her own bank account.

A Los Angeles Superior Court judge ordered release of most of the information requested by the Times under the California Public Records Act - but not every last record. Because of that less than complete result, the judge ruled that the newspaper had not "prevailed" as a CPRA plaintiff and thus was not entitled to recover its court costs and attorney fees as is mandated by the statute.

Controller Nancy Schafer was removed from her post at the \$2 billion Alameda Corridor Transportation Authority, a major rail and truck transit construction project linking Los Angeles with the port at San Pedro, in March 1999. The revelation that she had transferred \$3 million into her personal bank account led the Los Angeles County district attorney's office and authority officials to investigate the incident, the latter using an audit.

Schafer managed hundreds of millions of dollars in agency funds and bond proceeds earmarked for the main portions of the project. She said the transfer was an innocent error and told the Times it happened during the first two transfers of proceeds from the corridor authority's sale of \$1 billion in revenue bonds. About \$3 million, she said,

needed to be sent from a bond trust account to a corridor authority account, to allow contractors to be paid.

Schafer said that earlier she had uploaded information from a Palm Pilot, supplied by the agency, into her office computer. The uploaded data, she said, happened to include her personal bank account number, appointments and credit card numbers, kept in the Palm device as a matter of convenience. On the day set for the transfer, Schafer said, she called up what she thought were agency accounts on her office computer and mistakenly selected her bank account as the destination for the \$3 million.

When the agency completed its audit, the Times used the CPRA to request it and related information, and was forced to go to court to obtain it. But not every last record itemized in its request was ordered disclosed, and on that basis the judge ruled that it was not entitled to recoup its attorney fees as the "prevailing plaintiff."

WHISTLEBLOWER LAW PROTEST BUILDS AS CLINTON'S CLOCK TICKS (11/3/00)

Opposition to the anti-"leak" statute -- and support for a veto -- were mounting, as the November 4 deadline for a Presidential decision approached, reports the Project on Government Secrecy of the Federation of American Scientists (FAS). The legislation would make it a felony to disclose any classified information -- irrespective of harm.

An article in today's (Friday, October 3) Washington Post reported:

"Top Clinton aides failed to reach agreement yesterday on a controversial measure that makes it easier to prosecute government officials for leaking classified information, leaving it up to the president to weigh differing recommendations on whether he should sign or veto the legislation. President Clinton, who is in California campaigning for Democrats, is nonetheless expected to make his decision today on the measure."

The California First Amendment Coalition's executive director, Kent Pollock, is one of more than 30 co-signers on a letter to Clinton's chief of staff, John Podesta, urging a veto. The letter can be read at <http://www.ombwatch.org/info/2000/podestaletter.html>.

The Post article by Walter Pincus notes:

"One awkward problem for those who now oppose the measure, said to include Podesta and (National Security Advisor Sandy) Berger, is the administration's previous approval of the measure before it passed Congress. 'Normally we don't veto bills that we have cleared,' one senior White House official said yesterday."

Embarrassment on premature commitments to the secrecy measure is not limited to the White House. Pincus's report says that lawmakers themselves might be faced with

prosecution:

"Confusion on what the bill actually means was highlighted by Rep. Nancy Pelosi (D-Calif.), who during floor debate last month questioned whether its provisions would apply to members of Congress and their staffs. According to a 1970 Supreme Court decision, the 'officers and employees' referred to in the measure would not include senators or representatives, but it would cover their staffs. Yesterday, a Justice Department official told reporters that lawmakers would be covered."

The following are excerpts from the FAS summary circulated Thursday, November 2.

Senator Charles Schumer (D-NY) urged his colleagues to support a veto at a press briefing yesterday. "This bill attempts to protect our national security in such broad and vague terms, and without regard for the potential of rampant overclassification of government information, that it will have profound effects on the ability of an informed citizenry to keep our government honest," he said.

See: <http://www.fas.org/sgp/news/2000/11/schumer.html>

The Chicago Tribune editorial board added its voice to the national chorus this morning: "Making this measure law clearly threatens to protect government errors and misdeeds by keeping the public ignorant. It deserves a veto." See: <http://www.chicagotribune.com/news/opinion/article/0,2669,SAV-0011020252,FF.html>

"This is a bizarre moment," writes Lars Erik Nelson in the New York Daily News. "Ten years after the end of the Cold War, we are about to enact Soviet style secrecy laws. What is worse, we are doing it with Soviet style legislation, drafted in secret, with no public hearings."

See:

http://www.nydailynews.com/2000-11-01/News_and_Views/Opinion/a-86679.asp

The CIA should henceforth be known as the C.Y.A. (as in "cover your ass"), writes columnist William Safire in the New York Times. The new law, he writes, is an "assault on free speech under the phony cover of national security."

See: <http://www.nytimes.com/2000/11/02/opinion/02SAFI.html>

Independent-minded former director of central intelligence R. James Woolsey spoke out against the leak statute in an interview with Jonathan Landay of Knight-Ridder News Service. "It seems to me that it sweeps overly broadly," he said.

See: <http://www.fas.org/sgp/news/2000/11/kr110200.html>

Washington Post cartoonist Herblock weighed in with an editorial cartoon on the new secrecy bill.

<http://washingtonpost.com/wp-srv/politics/herblock/herblock.htm>

Comment: The law that would be created by this bill is being widely referred to as an American "Official Secrets Act." Ironically, the British original is under increasing attack, marked by the abrupt collapse Wednesday, November 1 of the Crown's prosecution of a former army officer. The book's journalist author had also been charged originally, but dismissed as a defendant later based on insufficient evidence. The charged offense was the disclosure in a 1998 book of information on computer surveillance systems used in Northern Ireland, but another journalist showed that all the information said to be secret had been in the public domain at the time the book, *The Irish War*, was published. See <http://www.thetimes.co.uk/article/0,,28966,00.html>.

EDITOR-PUBLISHER SUING POLICE DEPARTMENT FOR PUBLIC RECORDS (11/3/00)

Tim Crews, editor and publisher of the twice-weekly Sacramento Valley Mirror in Glenn County north of Sacramento, is suing the Willows Police Department, asking the court to order it to begin providing all information defined as releasable under the California Public Records Act. The suit attacks the department's withholding of names and addresses.

Crews, a member of the board of directors of the California First Amendment Coalition, has won numerous awards, including a Beacon from CFAC at its recent Assembly, for his staunchness in going to jail earlier this year rather than divulge the names of confidential sources sought in a criminal prosecution.

His lawsuit, expected to be filed today (November 3) in Glenn County Superior Court, seeks an order directing the department to release CPRA-mandated information for a 10-day period in September in particular, and "in the future," and also to modify its public information policy to conform with the statute, including names and addresses of persons involved in incidents and the locations where they occurred.

Crews says that prior to the current city manager, Michael Mistrot, and police chief, Richard Shipley, the Valley Mirror enjoyed "years of excellent - and perfectly legal - press-police cooperation.

"This is a First Amendment issue," Crews told his readers in the current edition. "We cannot print what we cannot know."

The Willows department, instead of providing access to redacted copies of the original reports, writes digests of selected facts for its press log. The Valley Mirror prints

detailed summaries of log entries in each edition. Examples of the Willows department's releases from the September 19 summary cited in the suit are:

"0550 Hours: Officer Lee responded to the 100 block of E. Sycamore street to (Harwell Well Service) to a suspicious person. Upon arrival, he made contact with the employees and it was discovered it was just an employee wanting in the business. No further action.

"1218 Hours: Officer Haas was dispatched to the 600 block of N. Butte street to a report of a physical fight. Upon arrival, he contacted the parties involved who wanted to press charges on each other for assault and battery but both refused to sign the arrest form. Both subjects were released. No further action taken.

"1408 Hours: Officer Porter responded to the 700 block of N. Humbolt street to assist Fire Personnel with an unresponsive male subject. Upon arrival, the subject was found to be deceased. Coroner's Office responded to handle.

"1501 Hours: Officer Porter was dispatched to the 1200 block of N. Wood street to tenant/landlord dispute. Upon arrival, he made contact with the parties involved and the problem was temporarily solved. No further action."

While the CPRA, in Government Code Section 6254, subdivision (f), allows police to withhold most detailed investigative information from the public, certain basic facts are presumed to be public:

"Other provisions of this subdivision notwithstanding, state and local law enforcement agencies shall make public the following information, except to the extent that disclosure of a particular item of information would endanger the safety of a person involved in an investigation or would endanger the successful completion of the investigation or a related investigation:

"(1) The full name and occupation of every individual arrested by the agency, the individual's physical description including date of birth, color of eyes and hair, sex, height and weight, the time and date of arrest, the time and date of booking, the location of the arrest, the factual circumstances surrounding the arrest, the amount of bail set, the time and manner of release or the location where the individual is currently being held, and all charges the individual is being held upon, including any outstanding warrants from other jurisdictions and parole or probation holds.

"(2) the time, substance, and location of all complaints or requests for assistance received by the agency and the time and nature of the response thereto, including, to the extent the information regarding crimes alleged or committed or any other incident investigated is recorded, the time, date, and location of occurrence, the time and date of the report, the name and age of the victim, the factual circumstances surrounding the crime or incident, and a general description of any injuries, property, or weapons

involved

The names and addresses the victims of certain crimes such as sexual assault, child or spousal abuse or hate crimes may be withheld.

UCLA LEGAL SCHOLAR: PRIVACY LAWS THREATENING TO FREE SPEECH (11/3/00)

Proposals intended to protect privacy "are not easily defensible" under First Amendment doctrine, says UCLA law professor Eugene Volokh in a paper released by a think tank Tuesday, October 31. Volokh calls "the right to information privacy" created by legislation rather than contract "a right to have the government stop you from speaking about me."

In the paper, "Freedom of Speech and Information Privacy: The Troubling Implications of a Right to Stop People From Speaking About You," Volokh contends that "Most of the justifications given for information privacy speech restraints are directly applicable to other speech controls. . . . Accepting these arguments "will be a powerful precedent for those other restraints and for still more that might be proposed in the future."

While he concedes the value of contractually agreed codes of information practices instituted voluntarily in the marketplace, Volokh rejects the legitimacy of government-mandated "fair information practices," arguing that "We already have a code of 'fair information practices,' and it is the First Amendment, which generally bars the government from controlling the communication of information."

The full text of the paper is available as a pdf file at <http://www.pff.org/pr/pr103100Volokhpaper.htm>.

Volokh is a professor at UCLA Law School and a frequently-quoted authority on First Amendment, intellectual property and related legal issues. Published in May as an article in the Stanford Law Review, the paper was posted in the Internet Tuesday by the Progress and Freedom Foundation, a Washington, D.C. think tank founded in 1993 to study "the digital revolution and its implications for public policy." See <http://www.pff.org>.

Foundation President Jeff Eisenach said he decided to release the paper because "far too little attention has been paid to the First Amendment consequences of proposals to regulate information. This article is a tour de force that ought to be read by everyone concerned about our basic Constitutional right to free speech."

Eisenach said the paper is being widely distributed as part of a major project examining government proposals to regulate personal information. That project is being led by Senior Fellow Paul Rubin, who testified earlier in October before the Senate Committee on Commerce.

COURT TO UNSEAL FILES ON MERITS OF EXECUTING YOSEMITE KILLER (11/3/00)

A federal trial judge in Fresno has agreed to lift the seal on a prosecution bill of specifics prepared to justify recommending the death penalty for a confessed murderer. Cary Stayner has pleaded guilty to beheading a young woman in Yosemite National Park last year. He still faces state prosecution for the kidnap and murder of three other women.

Release of the government's document, and a defense response to it, will be held up until the defendant, a motel maintenance man, is sentenced on November 30, despite the request of a media lawyer that the material be made available without delay.

San Francisco attorney Neil L. Shapiro, appearing in a hearing on the issue Monday, October 29 before U.S. District Judge Anthony W. Ishii, was unable to persuade him that an immediate release was legally required. Ishii's rationale was that while Stayner has pleaded guilty to killing naturalist Joie Ruth Armstrong, 26, near her cabin in Foresta early in 1999, the defendant could withdraw the plea before the sentencing hearing, and the need for a jury trial could be revived. Stayner made the plea in September in exchange for a sentence of life without parole.

Release of the prosecutor's evidence supporting a capital case, which Ishii has kept under seal from the moment of its filing early in court proceedings, was sought by the Associated Press, McClatchy Newspapers, the Chronicle Publishing Company and the Hearst Newspapers. The media coalition had earlier failed to persuade Judge Ishii to lift the seal and had an appeal pending before the U.S. Ninth Circuit Court of Appeals when Stayner entered his guilty plea.

Lawyers representing Stayner in a separate pending capital case in Mariposa County argued vigorously against release, contending that publication of the literally gory details would make it impossible to draw an unprejudiced jury from the county's small population. Stayner is accused of kidnapping Carole Sund, her daughter Julie and a friend, Silvina Pelosso from their motel room and murdering them later. The case drew national headlines in 1999.

Judge Ishii said he understood the fair trial, but concluded that a federal judge has no authority to withhold court documents once the case is closed, regardless of possible prejudice in a state court proceeding.

Shapiro, asked by Ishii if the court could keep the material under seal in solicitude for the Armstrong family's feelings, answered that while doing so would respond to an understandable empathetic impulse, there was no basis in law for continuing to keep the public unaware of the reasons why the government had recommended the death penalty.

[Back to top](#)

LAPD CONSENT DECREE'S PROVISIONS MAY MEAN A BIT MORE SUNSHINE (11/3/00)

Mayor Richard Riordan has announced his intention to sign a consent decree ending federal court pursuit of the Los Angeles Police Department for alleged civil rights violations. Among several extraordinary measures, the decree binds LAPD to hold public information meetings and produce detailed reports on its contacts with minorities.

The city council approved the pact Thursday, and a last-minute hitch was avoided when a superior court judge declined to issue a restraining order sought by the Los Angeles Police Protective League, a union representing line officers. The League wanted city approval of the pact stalled until its own concerns were given due consideration.

The League objects not only to exclusion from negotiations, conducted privately between city staff and U.S. Justice Department representatives, but to two of the resulting provisions as well. One is a massive computer tracking system to be constructed to alert police officials to patterns of alleged and confirmed misconduct by individual officers. That, says the League, would invade officers' privacy.

Another is the requirement that officers record and report in considerable detail every traffic stop, noting the time, place, apparent ethnicity of the driver and passengers, any activity required of the occupants or actions taken by the officer, and the results if any, including vehicle searches or arrests. The League argues that this will unreasonably burden patrol officers in carrying out their duties.

For its part, the city says any impact on League members that must be negotiated will be submitted to good faith bargaining.

Under the decree, LAPD will be the largest police department ever subject to judicial monitoring as a result of the Justice Department's power to sue police agencies suspected of engaging in a "pattern or practice" of civil rights violations. The choice of who will be the court-appointed monitor, charged with reporting to the federal court on progress or the lack thereof in implementing the decree, appears to be the most controversial item remaining to be settled. If city and federal negotiators cannot agree on a choice, the federal court may make the appointment from nominees they separately submit.

In terms of public information, understanding and confidence, the sunshine provisions of the decree fall short of identifying individual misbehaving officers to the public, no matter what or how many their confirmed violations of department standards may be. What they require instead is more general outreach by the department and much more disclosure of patterns which might show disproportionate policing attention given to racial or ethnic minorities.

The two key provisions of the decree dealing with public information require that LAPD:

- * conduct, during the first year, at least one public meeting per quarter in each of 18 geographic sectors of the city, to explain the consent decree, the department and its operations, how to work successfully with officers, and how to file a complaint if necessary. In the second and succeeding years only one such meeting per sector would be required. The meetings would be publicized in at least one citywide newspaper, and in various other publications with ethnic readerships, in appropriate languages.

- * publish, on its website, semiannual reports with aggregate statistics, broken down by each geographic sector and by race and ethnicity of citizens involved, for all arrests, traffic stop data, and uses of force. Also included would be the summary results of audits conducted into the internal disciplinary process, showing type of misconduct and resulting discipline, broken down by the bureau and rank of the officer. Also to be posted are quarterly reports to the court by the compliance monitor, and annual reports by the city on steps taken to implement the decree.

GROUPS IN COURT TO CHALLENGE SHUTDOWN OF VOTE-SWAP SITES (11/3/00)

American Civil Liberties Union affiliates in Los Angeles and San Diego and the National Voting Rights Project are seeking a court order blocking California Secretary of State Bill Jones from taking criminal action against one or more Internet websites allowing Nader and Gore supporters voluntarily to exchange votes for maximum mutual satisfaction.

The suit for a temporary restraining order on behalf of Voteswap 2000 (<http://www.voteswap2000.com>) was filed Thursday, November 2 in U.S. District Court in Los Angeles. It was to have been matched by another brought by a named voter wishing to use such facilities, according to the ACLU.

The idea behind this and several other similar sites, some of which have voluntarily shut down in the face of threatened prosecution, was described by scholar James Raskin in an October 24 article on the Slate website. Raskin, a professor in constitutional law and the political process at American University, described the reciprocal quandaries faced by both Green Party Nader backers who want a Nader vote total to qualify the party for federal funding in 2004, and Democrats backing Gore who see no problem in Green Party gains - except at the feared cost to the election of their own candidate in certain key states where a vote for Nader costs Gore the electoral college votes and thus is indeed "a vote for Bush."

Wrote Raskin:

"But wait! There is a way for Gore voters trapped in Republican states to liberate Nader supporters in the tossup states to vote for Gore without actually abandoning their support for Nader and a strong Green Party in the future. The key is a variation on a voting device used in the Senate called "pairing," whereby senators on opposite sides of issues match up their votes if they are going to be away from Washington. (This arrangement is so formal that when the *Congressional Record* reports the ayes and nays on a vote, it reflects the pairs by name.)

"The Gore/Nader vote-swapping plan could use a Web site to pair individual Gore Democrats in Republican states with individual Nader supporters in swing states. Democrats from Texas and other states in the definite Bush column could register at the site by name under a brief text stating that, as Gore supporters in a Republican state, they have concluded that their best hope for contributing to a Gore victory is to vote for Nader in the explicit hope that Nader voters in swing states will correspondingly cast their ballots for Gore. Nader supporters in the swing states could add their names to a similar list under a brief text stating that, as Nader supporters in a tossup state, they have decided to vote for Gore but do so in the explicit hope that Gore voters in Republican states will correspondingly cast their ballots for Nader.

"Using sorting software, the Web site could then match individual Gore voters to individual Nader voters. If just 100,000 Gore supporters and 100,000 Nader supporters in the key states registered and kept their words, both a Gore victory and federal funding for the Greens could be accomplished."

(see full article at <http://slate.msn.com/Concept/00-10-24/Concept.asp>, and a followup Slate summary on the legal questions at http://slate.msn.com/netelection/entries/00-11-01_92442.asp)

As it turned out, one Internet site had already launched with just such a brokering

service, and as of early last week there were no fewer than nine: the plaintiff in the current litigation plus:

<http://www.voteexchange.org/voteswap001.htm>

<http://www.nadertrader.org>

<http://www.winchell.com/NaderTrader>

<http://voteexchange.com>

<http://www.votexchange2000.com>

<http://nadergore.org>

<http://www.winwincampaign.org> and

<http://www.voteaucton.com>

Secretary of State Bill Jones, however, saw this reciprocity as criminal, specifically a conspiracy to foster the "inducement" of a particular vote by the offering of a particular "valuable consideration" and thus violate the anti-bribery statutes (Elections Code Sections 18500, 18521, 18522 and 18562). He so notified the Austrian owner of **Voteauction**.com, demanded that the site be shut down (it's the last link above - to a dead server), and moreover notified the official domain name registers to cancel the site's authorization.

In announcing the legal challenge, ACLU attorney Peter Eliasberg said Jones's reading of the Elections Code is either incorrect or, if accurate, unconstitutional.

"Discussing and agreeing to a co-operative voting strategy is absolutely distinct from offering or receiving payment for a vote," he said. "This is not equivalent to handing someone a five-dollar bill -- it is an obviously unenforceable and unverifiable personal pledge to vote in a certain way."

"Jones's interpretation of this law could conceivably qualify any kind of speech as an inducement," he added. "If I promise to commend a person for voting in a way I approve of, is that offering an inducement?"

Eliasberg offered several examples of common activity that Jones's interpretation of the law would make criminal:

o "Two spouses discuss their vote, realize they disagree on every important issue, and agree that, since they're canceling one another out, neither will vote.

* "Two friendly legislators who disagree with one another's positions arrange not to vote on two separate occasions, when one, then the other, is absent, thus canceling out the effect of their absences on the final decisions made.

* "A politician such as Governor George Bush or Vice President Al Gore offers a monetary inducement in the form of a tax cut to a voter.

* "A politician, during tough economic times, promises 'a chicken in every pot' if voters cast their vote for him.

* 'A political columnist urges voters to do exactly what the Web sites in question urge them to do.

In what must sting Jones particularly, in view of his enthusiastic championing on on-line information resources for voters, Eliasberg accused him of seeming "to be afraid of the Internet and the powers of expression and association that it gives to people.

"That power of combining immediate association and direct speech is the reason people have sought to regulate the Internet more strictly than other media."

One of the sites, Nadergore.org, stopped accepting pledges from New York residents after receiving a request from the New York State Board of Elections.

Jim Cody of Los Angeles, co-proprietor of Voteswap 2000, took the site down Monday, October 30 after receiving a letter from Jones threatening him with a potential for three years of felony liability for every violation. "I guess that would be three years each for 5,000 violations," he said, referring to the registrations on the site to date.

Meanwhile, California Secretary of State Chief Counsel William Wood reportedly said on Wednesday, November 1, on CNN's Burden of Proof, that winwincampaign.org is legal according to California law: "It's a political discussion, and the Secretary of State of California believes that is protected political speech." Before acting on that quotation, interested voters may wish to check its accuracy with Mr. Wood at (916) 653-6488.

Comment: A. J. Langguth, , author of Patriots: The Men Who Started the American Revolution, informs us that while in colonial Virginia on the eve of the Revolution, electoral "candidates were expected to behave like gentlemen and refrain from asking for votes or making campaign promises," but other amenities that might be viewed as inducements were actually customary:

"A man running for office set out near the polls several barrels of rum and neat whiskey, along with applejack and beer. Any candidate who didn't offer a few drinks was considered too stingy or lacking in respect for his neighbors to deserve their votes. Several years earlier, a planter named George Washington had been rejected for failing to provide decent drink and a roast pig. Washington learned from that defeat, and the next time he ran he bought a quart and a half of liquor for each of his 361 supporters and won his seat in the Burgesses."

ALERT: PUSH IS ON TO SLOW, REVISIT PENDING 'OFFICIAL SECRETS ACT' (10/27/00)

CFAC has joined an effort to thwart what is being called the first American "Official Secrets Act" that is on its way to becoming law without any hearings. An undebated section of the 2000-2001 Intelligence Authorization Act would make it a federal crime to disclose classified information, whether or not the disclosure injures national security interests.

CFAC, along with many other organizations, has signed on to a letter by Patrice McDermott of the nonprofit organization OMB Watch (<http://www.ombwatch.org>) urging President Clinton to veto the legislation. McDermott pointed out in a Tuesday, October 24 e-mail alert that "Congress could move back a year the effective date for the law to take effect, through an amendment to this year's spending bills. This would allow the House and Senate Judiciary Committees -- which normally review all changes in criminal law -- to hold hearings on the consequences, before Americans lose freedom of speech through a fait accompli."

The full authorization bill is headed for the White House after the insertion of the disclosure crime provision by voice votes on October 12. McDermott, in a Thursday, October 26 update, said the bill as a whole faces a veto, but pressure needs to be kept up.

"It is highly likely that the President is going to veto the appropriations bill to which this language is attached. Not because of this Official Secrets language, but for other reasons. If this does transpire, the (White House) will have a seat at the negotiations when the bill goes back to Congress. In the meantime, please do write to the members of the conference committee... The more support there is for a rider delaying implementation, the better the chance of getting it in the negotiated bill."

McDermott's earlier message incorporated background and contact information from Doug Hartnett of the nonprofit Governmental Accountability Project (<http://www.whistleblower.org>), which reads as follows:

Date sent: Tue, 24 Oct 2000 17:08:49 -0400
From: Doug Hartnett <hartnett@whistleblower.org>
Subject: Urgent Action Alert

FREE SPEECH AND WHISTLEBLOWER RIGHTS FACE SEVERE THREAT

I. INTRODUCTION: On October 12 Congress made it a felony crime to disclose classified information, over protests that this hasty move would create an unconstitutional U.S. version of the British Official Secrets Act. By bypassing normal committee jurisdiction, and using unscheduled voice votes, sponsors of H.R. 4392, the Intelligence Authorization Act, succeeded in passing a law that will profoundly affect

Congress and the public's right to know about government misconduct.

Despite reassurances that it would not change the meaning of "classified," the fine print in the bill removes all requirements that classified information be clearly marked to indicate its status. Under the new law, information could be classified even if there are no markings or other warning. That revives a discredited concept from the 1980s known as 'classifiable' information, which means virtually anything. It forces whistleblowers to seek advance permission before exposing nearly any evidence of bureaucratic misconduct, or risk criminal liability. The double whammy from this new definition combined with criminal liability creates an Official Secrecy Act far worse than the British version publicly feared.

This action alert explains the twin threats in more detail below. But there is still a chance to stop this from becoming law before the end of this session.

HOW YOU CAN HELP

We still have a chance to turn this legislation back before Congress adjourns, but only if we take IMMEDIATE ACTION. Support among Members is building to place a rider on the Commerce Justice, State and Judiciary appropriations bill to delay the effective date of the criminal liability provision until 2002.

MESSAGE CONTENT:

Demand that the effective date of Sec. 303 of H.R. 4392, "Prohibition on Unauthorized Disclosure of Classified Information," be delayed until 2002. This will allow proper hearings and consideration of the far reaching impact this provision has on the First Amendment, whistleblower rights, and the Congress's and the public's right to know. Congress should not take such drastic action on a voice vote and without even a hearing to examine the impact it will have!

Reps. Hyde, Conyers and Barr are on record opposing the secrecy provision. Both Conyers and Barr spoke against it on the Floor of the House (see Cong. Rec. pp. H9857-H9859, Oct. 12, 2000) Rep. Hyde is the most likely candidate to offer the rider. Sen. Grassley is a longtime whistleblower champion who is intensely committed to turning back this legislation. (All whistleblowers should contact him!). Grassley is lobbying his colleagues in the Senate.

Rep. Rogers and Senator Gregg, as Chairs of the respective Appropriation Subcommittees, are key to allowing the rider.

ADDITIONAL BACKGROUND AND DETAILS

I. CRIMINALIZING CLASSIFIED LEAKS: "THE OFFICIAL SECRETS ACT"

This issue was the focus of public controversy, making unauthorized disclosure of classified information a felony with three years imprisonment. Current law already bans classified leaks, and national security threats can be prosecuted. But now an unauthorized disclosure of official secrets will be a crime per se, even if the leak defends national security against corruption or bureaucratic abuse of power shielded by secrecy.

Congressional leaders rammed the bill through in unscheduled voice votes, but a broad range of opponents warned it was an irresponsible threat to constitutional rights, including the New York Times, Washington Post and Washington Times. Conservative Republican Representative Bob Barr wrote, "Most government scandals are revealed through the public disclosure of such information, better known as "whistleblowing." If this provision is signed into law, such disclosures would become virtually non-existent." Liberal Democrat John Conyers said "it will scare the bejesus out of whistleblowers and they will be able to be criminally prosecuted. . . ." Both are on the House Judiciary Committee. That Committee normally considers legislation making any major change in criminal law, but was entirely bypassed. Chairman Henry Hyde and Conyers jointly protested that the bill "has profound First Amendment implications, and goes to the very heart of the ability of the public to remain informed about matters of critical public interest, which often relate to governmental misdeeds."

Representative Conyers illustrated the impact in a floor speech prior to House passage. He listed examples of disclosures that would have been crimes if the bill were law over the last 30 years:

"One, the scope of the government's activities in Vietnam through the Pentagon papers would have resulted in prosecutions. Two, the CIA's complicity in the overthrow of Salvador Allende. Three, the Nixon administration's support of Pakistan in its 1971 war

with India. Four, the revelations about spying at U.S. laboratories. Five, China's alleged military involvement with Pakistan and North Korea. Six, basic information about the size of the CIA's budget."

II. THE RETURN OF "CLASSIFIABLE"

Under current law, information does not qualify as classified unless it complies with rules requiring specific designation of its status as secret. Citizens are not required to guess. But H.R. 4392 has a new definition of "classified": citizens can be prosecuted without the information being marked secret. In fact, whistleblowers, journalists or others can go to jail for revealing anything if they have "reason to believe" it is properly classified -- even if it were not. The bill eerily resembles a 1980s concept called "classifiable," meaning liability for anything that should or could have been classified. As the key Administration official boasted, it means "virtually anything." In 1988 the courts threw out this blank check for secrecy as unconstitutionally vague. The return of "classifiable" creates an Official Secrecy Act, because now virtually anything can be an Official Secret.

The bill creates three strikes against the public's right to know, by:

- 1) realistically ending anonymous dissent;
- 2) requiring advance permission to exercise free speech rights; and
- 3) locking in advance warnings that permit wrongdoers to seal cover-ups by destroying evidence or classifying information after the fact because a whistleblower is forced to check the status of unmarked information. The Catch-22 for would-be whistleblowers is either expose themselves through a prior inquiry, or risk criminal liability by guessing about whether information they disclosing is may be unmarked but classified. More than a chilling effect, that will create a Deep Freeze on dissent and turn would-be whistleblowers into silent observers of fraud, waste and abuse.

Examples of vindicated whistleblowers who would be criminals under the Official Secrecy Act include those who disclosed:

- 1) security breaches creating vulnerability to espionage and theft of classified information;
- 2) evidence indispensable to expose human rights abuses like the My Lai massacre and Letelier assassination;
- 3) blank checks for the world's most expensive nuts, bolts, coffee pots and toilet seats;
- 4) falsified records concealing test failures that compromised Star Wars, the Bradley fighting vehicle and aircraft radar detectors;
- 5) Pentagon lies about multi-billion dollar cost overruns on weapons systems;
- 6) safety violations that made nuclear weapons and power plants accidents waiting to happen;
- 7) security breaches leaving nuclear weapons and other defense facilities vulnerable to terrorists;
- 8) false statements concealing leaks of radiation and other toxic substances into the environment;
- 9) massive worker exposure to radiation; and
- 10) systematic corruption in U.S. Justice Department programs training foreign police

how to catch government corruption and defend human rights.

Ironically, Congress passed H.R. 4392 the same day it approved for the 13th straight year an appropriations rider known as the "anti-gag statute," which bans Executive Branch spending to implement or enforce gag orders violating congressional laws. That means virtually nothing after the Official Secrecy Act, which is a congressional blank check for gag orders. It is doubtful that legislators knew they were approving fundamentally contradictory policies the same day.

Comment: CFAC almost never expressly urges members to contact elected representatives on pending bills, but if ever a measure, its timing, its lack of deliberation and its consequences merited an exception, this one does. To the above directly involved legislators, you may want to add Senators Boxer (<http://www.senate.gov/~boxer/contact/webform.html>) and Feinstein (<http://www.senate.gov/~feinstein/contact.html>) and your Member of Congress, whose e-mail address can be easily located by using the lookup feature at <http://www.house.gov/writerep>.

CAMPUS CRIME DATA: REPORTING DEADLINE RUNS, NEW GUIDE AVAILABLE (10/27/00)

Of the 6,700 college and university campuses required for the first time to submit copies of their mandated annual campus crime reports to the federal government, 325 had failed to do so by the October 1 deadline. Meanwhile, the Student Press Law Center in Arlington, Virginia is offering an updated campus crime law guide for student journalists.

The Sacramento Bee reported Thursday, October 26 that the 325 schools missing the deadline will get a letter from the U.S. Department of Education giving them an extra 15 days to comply, and if they do not, they could face fines of up to \$25,000.

Since 1990 the Jeanne Clery Act has required federally-funded (which means virtually all) postsecondary schools to keep, organize and periodically report on- or near-campus incident statistics covering a variety of crimes against the person or property, disclosing them to prospective and actual students, parents and campus employees. For the first time this year copies of the annual summary reports were to have been submitted to the Department of Education by October 1.

For copies of reports from one or more California (or other) schools, see <http://ope.ed.gov/security>.

On Wednesday, October 25 the Student Press Law Center released the third edition of its popular publication, "Covering Campus Crime." The 52-page booklet provides a detailed description of the campus crime information student journalists have a legal right to, including a step-by-step guide for obtaining crime records.

The guide has sections that describe how journalists can obtain access to three different kinds of campus crime information: police or security department logs, campus crime statistics and disciplinary proceedings involving criminal behavior. The booklet incorporates regulations regarding federal crime reporting laws issued by the Department of Education this summer and includes an appendix with citations to statutes and resources related to campus crime reporting.

The publication was supported by a grant from the Sigma Delta Chi Foundation, the educational arm of the Society of Professional Journalists. Copies of the booklet can also be downloaded free from the center's Web site, <http://www.splc.org/resources/ccc/cccindex.html>.

GOVERNOR VETOES BILL ON PUBLIC RECORDS REVIEW BY ATTORNEY GENERAL (10/6/00)

Governor Gray Davis, citing the cost of implementation, has vetoed for the second time legislation that would have permitted citizens to ask the attorney general to review state and local agencies' denial of requests for public records. Instead, Davis said he would direct his consumer affairs chief to investigate how well state agencies are complying with the California Public Records Act.

Davis' veto message, released October 1, reads:

"To Members of the California State Senate:

"I am returning Senate Bill No. 2027 without my signature.

"The bill would create a procedure for a person to request the Attorney General (AG) to review a denial by a public agency of a written request for disclosure of information under the Public Records Act, and would set up the time limits for the AG to complete the review. The bill would establish penalties of up to \$100 per day if a public agency declines to comply with a request for disclosure of information and the court determines that the agency acted in bad faith. The AG would be required to mail a copy of the opinion to the requester and to the denying agency, maintain copies for public inspection, publish the opinions annually in a special volume of AG Opinions, and made the opinions available on the Internet.

"While proponents of this bill contend that a weakness of the Public Records Act is the

lack of recourse when state agencies refuse to comply, this bill does not address that issue. Instead the bill sets up a bureaucratic reporting mechanism, involving the preparation, posting and mailing of AG opinions on the merits of a state agency's decision to withhold requested information. The costs to comply with this bill would be borne by the General Fund and would likely be significant. Therefore, I am vetoing this bill.

"I do, however, believe that state agencies should be fully responsive to legitimate public record requests. Accordingly, I am directing my Secretary of State and (sic) Consumer Affairs, Aileen Adams to conduct a review of all state agencies' performance in responding to PRA requests and to make recommendations on appropriate procedures to ensure a timely response."

SB 2027 was the second attempt by Senator Byron Sher (D-Palo Alto) to provide attorney general review as a check against denials of access to public information held by state and local agencies. Currently, such denials are open to challenge only by private lawsuits. A year ago Davis vetoed the first effort, SB 48.

The main difference between that bill and SB 2027 was that the latter expressly exempted state agencies (as opposed to local government units) from attorney general review if their denial of access had been based on the attorney general's advice. All but a handful of state agencies use the attorney general's office for advice and representation in California Public Records Act requests. Last fall Davis said having the attorney general review records request denials would present a conflict of interest, so he vetoed SB 48.

SB 2027 addressed this issue by simply exempting from the review any records denial based on the attorney general's advice. But if the attorney general was never consulted, the agency's denial would have been subject to review by that office.

Otherwise, SB 2027 went to the governor essentially in the same form it has had since its initial introduction as SB 48 last year:

- A person having submitted a written request for inspection or copying under the California Public Records Act would have been entitled to a written form of denial citing the justification for nondisclosure.
- A disappointed requester could have sent the request and denials letters to the attorney general's office for review, with a response due normally in 20 to 40 days.
- The resulting opinion would have had no greater or lesser force than any other attorney general's opinion, and would not have compelled disclosure - or excuse it - on its own authority. But it could have been cited by either the agency or the requester in any subsequent litigation, assuming the agency, using a 10-day grace period in the bill, did not change its mind and release a record in the face of an opinion that it should do so.
- In any event the opinions generated under this procedure would have been printed annually, published in bound volumes and displayed on the Internet for free access.

-- The attorney general, in analyzing a denied request for a record whose content was not obvious, could have requested to see the record or asked for additional information on a confidential basis in order to make a more confident assessment. The agency would not have been bound to share the information thus, but its refusal to do so might have worked against its interests if the attorney general found the refusal inadequately justified.

-- Apart from attorney general review, a court would have been authorized in appropriate cases brought under the CPRA to not only declare a record public and order its release, but also to assess a monetary penalty against the agency (to be paid to the requester in addition to court costs and attorney fees) of up to \$100 for every day the agency withheld requested records in bad faith.

Comment: The governor cited "significant costs" in vetoing last year's bill as well, but then it was almost an afterthought to the main objection concerning the attorney general's conflicting roles. This year it was the only rationale. The attorney general's estimate of first year costs was \$500,000 - coincidentally identical to the cost estimate the governor did not see as an obstacle to adding a new privacy ombudsman's office to his consumer affairs department as the result of his signing Senator Steve Peace's SB 129.

"The Governor's veto shows disdain for the public's right to know and incredible ignorance of the problems every-day citizens face when attempting to arm themselves with the information necessary to participate in their government," said CFAC Executive Director Kent Pollock. "Democracy thrives on sunshine and shrinks in the darkness."

[Back to top](#)

LOCAL GOVERNMENT DENYING ACCESS TO CLEARLY PUBLIC RECORDS (9/29/00)

Local government agencies in California routinely disregard the state's Public Records Act, rejecting outright-or stonewalling-requests for indisputably public information more than 75 percent of the time. Citizens seeking key records are forced either to abandon their pursuit of the records or to take the costly step of hiring a lawyer to sue the agencies to compel disclosure.

In a recent survey leading to this conclusion, sheriffs' departments were the worst offenders, denying requests for clearly public records 80 percent of the time. This rejection rate compared to 64 percent for police departments. Cities performed only slightly better, denying 60 percent of the requests for public documents, while school districts denied access almost 33 percent of the time.

This [public records "audit,"](#) designed to assess local government compliance with the California Public Records Act (CPRA), was undertaken by the California First

Amendment Coalition (CFAC) and the Society of Professional Journalists (SPJ) and was supported by volunteer students of the journalism departments from five California universities.

Such audits, increasingly conducted in other states by professional journalists and news organizations, involve making formal requests for government documents that are clearly public by law, and then monitoring how government officials respond to those requests. The research issue: Do they comply fully, partially or not at all?

The California audit began last spring and was only recently tabulated. Under the supervision of their journalism professors, several dozen university students asked more than 130 local government agencies in the San Francisco Bay Area and the counties of Los Angeles, Orange and San Bernardino for information whose release to the public is clearly mandated by state law.

The records sought were those that track responses by police to citizens' distress calls, why school boards expel students, how cities pursue health and safety violations by slumlords, and why people die in prisons, jails or simply under arrest.

Police departments were asked for logs of 911 (emergency request for assistance) calls under the authority of Government Code Section 6254, subdivision (f), which allows secrecy for most information about law enforcement investigations, but which also says, in pertinent part:

"Other provisions of this subdivision notwithstanding, state and local law enforcement agencies shall make public the following information, except to the extent that disclosure of a particular item of information would endanger the safety of a person involved in an investigation or would endanger the successful completion of the investigation or a related investigation:

"(2) Subject to the restrictions imposed by Section 841.5 of the Penal Code*, the time, substance, and location of all complaints or requests for assistance received by the agency and the time and nature of the response thereto, including, to the extent the information regarding crimes alleged or committed or any other incident investigated is recorded, the time, date, and location of occurrence, the time and date of the report, the name and age of the victim, the factual circumstances surrounding the crime or incident, and a general description of any injuries, property, or weapons involved.

*This section provides, " no law enforcement officer or employee of a law enforcement agency shall disclose to any arrested person, or to any person who may be a defendant in a criminal action, the address or telephone number of any person who is a victim or witness in the alleged offense."

Despite the fact that logs of 911 calls contain the information specified as public as noted above, departments complied only 35.9 percent of the time - after both an initial

oral request and, where necessary, a follow-up written request.

In rejecting the overwhelming majority of the requests, police departments wrongly informed the requesters that 911 dispatch information was confidential under the law, or could only be obtained with a subpoena. One department demanded that the requester sign an affidavit stating that she had never been arrested in that department's jurisdiction.

School districts were asked for records of pupil expulsions under the authority of Education Code Section 48918, which states in subdivision (k):

"The governing board shall maintain a record of each expulsion, including the cause therefor. Records of expulsions shall be a nonprivileged, disclosable public record."

The attorney general has concluded that even the pupil's name must be included in any disclosed expulsion order. (Opinion No. 96-501 [1997])

Nonetheless, school districts complied only 67.4 percent of the time - after both an initial oral request and, where necessary, a follow-up written request. This rate of compliance was the best shown in the audit, but only after a written request-the initial oral request was denied 71.7 percent of the time.

Cities were asked for copies of notices to landlords of health or safety-related code violations rendering their premises "unfit for human occupation," under the authority of Government Code Section 6254.7, which states in pertinent part:

"(c) All records of notices and orders directed to the owner of any building of violations of housing or building codes, ordinances, statutes, or regulations which constitute violations of standards provided in Section 1941.1 of the Civil Code, and records of subsequent action with respect to those notices and orders, are public records."

Conditions triggering such notices are serious health and safety defects, including leaky walls or roofs, broken windows or doors, faulty plumbing or gas facilities, the lack of hot and cold running water connected to a sewage disposal system, faulty heating or electrical systems, premises rented with "accumulations of debris, filth, rubbish, garbage, rodents and vermin" or without adequate garbage or trash receptacles, or failure to maintain floors, stairways and railings in good repair.

Cities complied with the mandate to disclose such notices only 39.6 percent of the time overall, and rejected the initial oral requests 79.2 percent of the time.

Sheriff's departments were asked for copies of reports to the attorney general concerning the deaths of persons in custody, pursuant to the authority of Government Code Section 12525, which states:

"In any case in which a person dies while in the custody of any law enforcement agency or while in custody in a local or state correctional facility in this state, the law enforcement agency or the agency in charge of the correctional facility shall report in writing to the Attorney General, within 10 days after the death, all facts in the possession of the law enforcement agency or agency in charge of the correctional facility concerning the death. These writings are public records within the meaning of subdivision (d) of Section 6252 of the California Public Records Act (Chapter 3.5 (commencing with Section 6250) of Division 7 of Title 1), are open to public inspection pursuant to Sections 6253, 6256, 6257, and 6258"

Nevertheless, sheriffs' departments shared this information with the requesters only 20 percent of the time: four out of five (in Los Angeles, Orange, San Bernardino and San Mateo Counties) failed to comply on the initial oral request, and the response did not improve after the written request. Only in San Francisco, where state access law is backed by a powerful, citizen-crafted Sunshine Ordinance, was access to the reports granted-on the first oral request.

Audits such as the one done by SPJ and CFAC have been shown to be an effective way to test government compliance with state public records laws. Over the last several years, audits have been done in more than 13 mid-western, southern and eastern states by the media, journalism schools, and coalitions of citizens concerned about government secrecy. (See a summary of most of these audits at <http://www.freedomforum.org/news/2000/03/2000-03-15-23.asp>)

Almost without exception, the audits have found that government officials fail to comply with public information laws in the majority of requests. The surveys also reveal that even if records are released, government agencies often fulfill requests only partially or take inordinate amounts of time to disclose the information sought.

But in almost half these states, the audits have prompted action by state governors and legislatures to improve open records laws and their enforcement. Perhaps the most notable survey was done in Indiana more than two years ago. The nine-month effort, mobilizing the unprecedented collaboration of seven daily newspapers, sent reporters fanning out over every county to test compliance. It was the first statewide audit in the country and found that government officials flagrantly violated the state's open records laws by refusing to turn over obviously public information to citizens.

In response, Indiana Governor Frank O'Bannon created the office of state Public Access Counselor, formed a task force to study problems with state public records laws, and issued warnings to offending agencies. The state legislature also created a blue-ribbon committee to look into ways to improve the state's open records laws.

The access counselor, a kind of ombudsman, has the power to provide written advisory opinions in response to formal complaints. The counselor also responds informally to

citizens' questions and complaints about access to public records and even meetings of public agencies. Queries are taken and answered by telephone, e-mail or postal letter. (See the counselor's web site at <http://www.state.in.us/pac>)

Comment: The facts of these preliminary findings speak for themselves. The legislature has made it very plain it wants citizens to be able to find out which landlords are being cited for slum conditions, and how housing health and safety laws are being enforced. It wants citizens to determine, if they wish, how well public safety agencies are responding to calls for help from people who are witnessing or suffering crimes or facing other great hazards. It wants citizens to be able to monitor their schools to determine if students are being expelled for proper cause, and on a fair and non-discriminatory basis. And it wants citizens to be able to learn when, how and why prisoners - or even those simply arrested or taken into custody - lose their lives as well as their freedom.

Government documents providing this information were carefully chosen for this audit as a measure of how well public agencies respect and comply with their duty to stay accountable. If these clear, unqualified mandates are ignored or scorned, unlawful secrecy is all the more likely where the Public Records Act gives state and local agencies the discretion to keep secrets based on their reading of "the public interest."

Although journalists and those who train them were integral to this audit, the concern is not with how well reporters fare. Newspapers and broadcasters have formidable resources to overcome official secrecy, including the power to draw on inside sources, to write expose stories and issue damning editorials, and to go to court if need be. Average citizens have no such alternatives or leverage. If they are told that government information is none of their business, they almost always have to swallow that answer and public officials know this. There is no prompt and affordable remedy or authoritative review in California for those whose requests go rejected, or even totally unanswered. Public officials know this as well.

This lack of consequences alone probably explains most of this astonishingly high level of rejection. Plainly, the Public Records Act needs serious attention by the legislature and Governor Davis if it is to be a force for informed self-government by voters and taxpayers.

[Back to top](#)

CFAC TO JUDICIAL COUNCIL: SUNSHINE PROVISIONS NEEDS TWEAKING (9/29/00)

The California First Amendment Coalition has told the state's court system governors that a proposal for releasing documents and conducting public meetings concerning trial court funding and its impact on court employees could stand some improvements.

CFAC primarily cautions about allowing wide exceptions to the disclosure rule based on judgment calls favoring secrecy.

(The full text of the proposal and its drafters' comments is enclosed with this FLASH as an Adobe Acrobat pdf file and can be found on the California Judicial Council's web site at <http://www.courtinfo.ca.gov/invitationstocomment/spproposals.htm>.)

The judicial council set Friday, September 29 as the final day for comment, and CFAC submitted its views by an e-mail submission on that date, having seen the call for comments only two days earlier.

The proposed rule essentially calls for public release by both the judicial council and local court systems of records showing budgets and actual expenditures for trial court funding, and other information affecting pay and working conditions for court employees. It also for the first time formally mandates opening meetings of the judicial council to public attendance - for those discussions concerning budgets and court funding.

The proposed rule is the result of recently passed legislation, AB 2459 (Wiggins and Hertzberg), which requires the council to "adopt rules to provide for reasonable public access to budget allocation and expenditure information at the state and local level" as well as rules "ensuring that, upon written request, the trial courts provide, in a timely manner, information relating to the administration of the courts, including financial information and other information that affects the wages, hours, and working conditions of trial court employees."

CFAC's letter states:

"The California First Amendment Coalition is pleased to learn of the major thrust of this proposal to bring sunshine to certain fiscal and managerial aspects of California court administration.

"As described in the summary on the Judicial Council's Internet web site:

"The proposal would require trial courts and the Administrative Office of the Courts to maintain for 3 years and make available upon request budget and management information. With regard to council meetings on trial court budgets it provides that notice and copies of written materials shall be given to interested individuals; that the meetings are to be open to the public; that the public may present written materials to the council; and that the public may request the making of an oral presentation to the council'

"We note certain ambiguities, however, which should be clarified in a manner consistent with the legislative mandate triggering this process.

"1. References to the California Public Records Act

The proposed rule indicates that it is not intended to require disclosure of information that would be exempt under the California Public Records Act, and the drafters' comments list a number of CPRA exemptions that accordingly might apply. This approach significantly undermines the force of the rule.

"As you are probably aware, the CPRA permits, in Government Code Section 6255, withholding of information not exempt under any particular statutory exception, simply by demonstrating that given the particular circumstances, the public interest in nondisclosure outweighs the public interest in disclosure. For all practical purposes, this 'wild card' section allows the government to improvise ad hoc rationales for secrecy which are impervious to any challenge short of formal litigation.

"The California Supreme Court, moreover, has used Section 6255 to engraft into the CPRA a common law "deliberative process" privilege whose boundaries have yet to be discovered (see *Times Mirror Co. v. Superior Court*, 53 Cal. 3d 1325 and its progeny), but which has so far been applied to utterly factual material the disclosure of which would allow the public to draw inferences about the drift of executive thought processes in reaching decisions. The CPRA admits of other broad exemptions (preliminary drafts, records pertaining to pending litigation, etc.) whose application to the information covered by this rule is hard to discern.

"We suggest that a better approach, inviting less confusion and conflict, is to embody within the rule a precise definition of the types of records and information that will be disclosed, without cavil or qualification. While there may be marginal issues of interpretation left, surely a plain list of what the employee groups and the public can expect to be provided without argument would advance the objectives of this rule considerably, and should not be that difficult to produce.

"2. The 'Internal' Exception

The proposed rule expressly exempts from disclosure 'internal memoranda' without defining that term. Our experience with executive branch and local agencies under the CPRA is that this phrasing is too often used casually and conclusorily simply to refer to information which in the view of some official is not appropriate to make 'external,' i.e. to share with the public. The term almost invites creation of a rubber stamp-INTERNAL- for convenient use in instantly classifying documents for secrecy. Again, what this means should be spelled out to avoid needless confusion and conflict.

"3. Enforcement Incentives

As the comment notes, there is no specified remedy. Under the CPRA, a person successful in obtaining a writ of mandate for disclosure is entitled to court costs and attorney's fees. If there were no such provision there would be far fewer enforcement actions, which are already notoriously infrequent. A purported disclosure mandate without at least a discretionary public interest provision for attorney's fees is designed to be ignored.

"4. Meeting Notices

Notice of public discussions by the Judicial Council of trial court funding issues is proposed to be sent to employee organization representatives who request such notice. With little extra cost and effort the notice could be sent to anyone requesting notice, and we believe it should be. While posting on the Council's web site is also required, experience shows that this useful resource is no substitute for the pointed impact of a direct notice, which could easily be accomplished by e-mail."

STORIES ON U.C. CAMPUS CRIME SECRECY SPARKS CONGRESSIONAL INTEREST (9/29/00)

A two-part expose by the Sacramento Bee published recently shows what appears to be widespread failures at University of California campuses, and especially at U.C. Davis, to disclose sexual assault crimes affecting students and others as required by federal law. The university president pledged to check the facts, and a congresswoman said she was looking into hearings.

The series, published on September 24 and 25, reports the results of a Bee investigation into the university's compliance with the federal Clery Act, which mandates that all colleges and universities receiving federal funding - which in practical terms means virtually every institution of higher learning - must summarize and periodically report to students, parents and prospective students on- or near-campus crimes in certain categories, including sexual assaults.

The federal law is named after Jeanne Clery, a Lehigh University student who was raped, beaten and murdered by another student in her dormitory room in 1986. Her parents founded Security on Campus, Inc., a nonprofit organization dedicated to improving safety on campus and informing students and parents of the dangers of underreporting sexual and other violent crimes at colleges and universities.

Underreporting was determined by comparing the universities' reports to the FBI (under a separate legal requirement) and anecdotal information from rape counseling and other non-university sources with the official disclosures made under the Clery Act. Deficiencies were shown to be widespread, and U.C. President Richard Atkinson announced he was ordering the formation of an internal task force to determine whether campuses are complying with Clery Act disclosure requirements.

In addition, Rep. Lynn Woolsey (D-Petaluma) told the Bee she was "looking into holding hearings in the next Congress to determine what roadblocks campuses are facing." Woolsey, who said she was "appalled" at the prospect of underreporting sex crimes on campus, is a member of the House Committee on Education and the Workforce.

Officials at U.C. Davis, which was the focus of the entire second-day story in the

series, are challenging what they call distortions in the newspaper's account.

(The full story is on the Bee's web site beginning at http://www.sacbee.com/news/news/local01_20000924.html. For related stories, use the search function with the keyword "Clery". For full information on the Clery Act and campus crime reporting problems nationally, see the Security on Campus web site, <http://www.securityoncampus.org>).

GOVERNOR VETOES RECORDS-ON-INTERNET BILL (9/22/00)

Governor Gray Davis, acting on September 10, vetoed a bill that would have required state agencies to list their official reports and studies on their Internet sites. The governor's rationale was similar to a note about the bill in an earlier FLASH report: It's one thing to put reports on the Web, but given the number of official Web sites, how would one find them?

As noted in the FLASH report of April 21, AB 1759 by Assemblyman Lou Papan (D-Millbrae) was prompted by last year's disclosure that the Department of Health Services quietly failed to publicize inconvenient poll data.

It was revealed in a report by the Auditor General that the department failed to disclose the fact that a poll it had taken to assess the feelings of bar owners toward the ban on smoking came up with general lack of support. This outcome undercut the official line that bar proprietors were satisfied or even happy with the prohibition, and while the department did not turn down requests for poll results, it apparently never got any requests because no one outside knew a poll had been taken.

Papan's AB 1759 was initially unclear on whether the reports and studies themselves would have to be fully posted. The word used in the bill is "listed," suggesting that a one-line title or thumbnail description might be sufficient. In any event, the bill required the listings to include completed and in-pipeline reports and studies, to be refreshed every 10 days to "list" also completed or updated documents.

The FLASH comment in April stated:

"This bill would represent a watershed advance in the California Public Records Act, which up to now has been an information-upon-specific-request law with no duty on the government's part to alert the public as to what information is available. To make this transition far more useful, however, the bill should require creation of a central Web site to house all state-generated reports and studies, cross-referenced to the originating agency's Web site. Just as it does little good to deem a report accessible to the public if no one knows it exists, it does little good (except for insiders) to require disclosure on each of scores of Web sites if no one knows that they exist."

The governor's veto message states:

"This bill would require all State agencies to post on their Internet sites a list of all of its reports and studies that are subject to disclosure under the Public Records Act (PRA). The bill would require that the list must be continuously updated to include every report within 10 days after its initiation or completion. The legislation is not clear and fails to indicate if the reports and studies to be posted would be those completed on or after date of enactment, or how the public is to access the reports. Consumers would have great difficulty, even those with extensive knowledge of the Internet, finding a list without links or clear instructions to make this effort worthwhile. As written, the bill would only provide information in a highly inefficient and confusing form. A stand-alone list of reports and studies does not seem to meet the stated intent of the Public Record Act."

[Back to top](#)

FEDS' PROPOSED LAPD REFORM INCLUDES ONLINE SUNSHINE ITEM (9/15/00)

The consent decree proposed by the U.S. Department of Justice's Civil Rights Division as a way to reform the Los Angeles Police Department has an online disclosure requirement to help restore public confidence in that scandal-ridden institution. But the city's negotiators say this Web site information center goes too far and is not acceptable.

Signing on to the decree is the city's only alternative to defending a major civil rights lawsuit alleging serious and repeated violations by LAPD over a period of years, culminating in the Rampart Division corruption incidents, division chief Bill Lann Lee told the city council on Wednesday, September 13.

"We are insisting," Lee said, " that the consent decree hold city officials directly accountable to the public for their progress in making these reforms through regular assessments and reports by an independent monitor."

By late this week nine of the 15 council members were reportedly on the record as willing to sign on to such a decree, while four others were opposed and two undecided. Ten votes would be needed to survive a mayoral veto, and both Mayor Richard Riordan and Police Chief Bernard Parks have been lobbying against the decree.

They want at most a kind of contract, but not one supervised by a court as the decree would be, for at least five years. The council has set another special meeting on Monday, September 18 to reconsider the proposal, on which Lee is pushing for closure on by the end of the month.

Two key elements of the decree are a proposed newly created independent monitor to get detailed information from LAPD and file periodic reports with the supervising federal court, and a sophisticated computer database to track problem officers and units

as incidents and even complaint clusters begin to suggest the need for attention.

While most of that information would remain as confidential as it is now, one novel element of the proposal would provide the community with considerably more concentrated information than it now gets. Item 163 of the proposed consent decree states:

"The LAPD shall prepare and publish on its Web site semiannual public reports that include aggregate statistics on LAPD activities and procedures broken down by area and unit and the race/ethnicity of the civilians involved. The reports shall include statistical summaries of uses of force, administrative investigations (including allegations, resolutions, and resulting discipline and positive corrective actions), searches and seizures, traffic and pedestrian stops, and other relevant information regarding LAPD law enforcement activities. Such reports shall include summaries of the results of audits prepared pursuant to the requirements of this decree. The LAPD shall also post a list and brief description of completed audits on its Web site."

The city's negotiators (who have on many other points of the proposed decree signaled acceptance) reject this proposal, offering instead a requirement only that the department:

"report quarterly on its Web site a brief description of (i) each report of a specified audit completed in that quarter and any significant actions taken as a result of such audits and (ii) any new policies or changes in policies made by the department to address the requirements of this agreement..."

The city negotiators insist that all that should go on a Web site is a summary of the documentation otherwise required under the agreement -- not specially produced syntheses of various reports and data sources, tailored specifically for public information.

Another proposed requirement would be that existing community advisory groups in each are have direct participation in setting up outreach programs, including public meetings. The city's negotiators say this would be a waste of time with little substantive effect, and note that the Justice Department offers to drop this item if LAPD agrees to the Web site reports in the previous item.

Copies of the proposed consent degree and an item-by-item rundown of the city's responses and rationale can be obtained as PDF files at <http://www.lacity.org/lapd-reform>.

Comment: The city's acceptance and implementation of the Web site information center proposal in item 163 would be a significant step forward and should serve, in fact, as a model for other communities, at least those troubled by persistent complaints of inappropriate police treatment of racial and ethnic minorities. The information

embraced in such disclosures would not invade protected individual personnel records but would present the kind of pattern picture sought (and in part obtained) the San Francisco Bay Guardian in its protracted public records case involving the Richmond Police Department.

FINAL-DAYS BILL AMENDMENTS SWEETEN OFFICIALS' RETIREMENT PLANS (9/15/00)

Several current or former high-ranking state officials stand to benefit significantly from provisions added to an otherwise obscure "technical" bill approved by both houses of the legislature in the waning hours of the session with essentially no debate and no disclosure on the public record of just whose retirement plans would improve -- or why.

The Sacramento Bee has reported that SB 528 by Senate President pro Tempore John Buirton (D-San Francisco), a bill concerning the Public Employees Retirement System (PERS) would have the following effects:

- Allow San Francisco Mayor Willie Brown, appointed to the PERS Board by Governor Gray Davis in February, to send a stand-in to board meetings rather than attend in person. As noted in an earlier Bee report on the appointment, the value in the PERS seat is not its salary (there is none) or the glamor of attending meetings in Sacramento. All travel on behalf of PERS, nationally and internationally, is compensated and affords members close entree to "the world's top money managers." The board also controls billions in investments potentially favorable to investment firms, including those in San Francisco's financial district.
- Allow Legislative Counsel Bion Gregory nearly \$2,000 more in retirement benefits a month (for a total of \$8,500 monthly) than he would otherwise have been entitled to under early retirement, by giving him credit for an extra four years of age and public service.
- Allow former Assemblyman Dan Hauser (D-Arcata) to become eligible for retirement benefits normally restricted to those with 15 years' legislative service. Hauser, reportedly strapped for income, served only 14 years before being termed out in 1996.
- Allow Jane Crawford, an \$87,408 per year appointments advisor on Governor Gray Davis' staff, to count her 14 years of service with a firefighters' union as part of her state service as a basis for retirement benefits. She served the union as political and legislative director and stayed on its payroll while loaned to Davis' campaign for the governorship in 1998, after which she stayed on as part of his transition team and then took the appointments job.
- Allow former CSU Chancellor Barry Munitz, who headed Davis' transition team in fall 1998, to earn credit for as many years as he remains on "leave of absence" from the university. That's his actual status, although he now serves as president of the J. Paul Getty Trust in Los Angeles, which in its 1998-99 fiscal year paid him more than \$750,000 in compensation, according to records on file in the attorney general's office. The maximum leave of absence time now available for PERS credit is two years.
- Allow what the Bee estimates to be "more than a dozen" former members of the

legislature who work in other government posts to increase their PERS pension benefits sixfold. Currently former lawmakers who are not employed or at least not employed in state jobs are allowed full PERS benefits based on their time served and other factors, but if they take positions in state or local government (other than constitutional offices such as governor or attorney general) their benefits are approximately one sixth of the ordinary entitlement. This bill would provide them with full pension benefits, which would mean, for example, that former state senators and current state executive branch officers Robert Presley, head of the Youth and Adult Correctional Agency; Barry Keene, head of the Department of General Services and David Roberti, member of the California Integrated Waste management Board, could draw both full salaries and full pensions. The same would apply to former state legislators in local government posts.

SB 528 got lowball treatment, labeled in every committee and house analysis as making only "technical and clarifying amendments," and was given unhesitating, bipartisan support. In the final Assembly vote on September 1, 70 voted aye and there were only nine voting no or not voting -- all Republicans. Most of the changes were added in the Assembly on August 30, the day before adjournment, and that final session has been described as unprecedentedly chaotic, especially in the Assembly. The confusion and rush there were so extreme that several bills generally regarded as of genuine policy significance failed to make the deadline in the final hours' crush, and died in their tracks.

Common Cause Executive Director Jim Knox told the Bee that he found the way SB 528 was handled "represents the legislature at its worst" and said that similar examples of last-minute approvals of perks for cronies "year after year indicates to me that the legislature is not only allowing it to take place, but that it is inviting it to take place."

The bill awaits action on Governor Davis's desk, but The Bee reported that sources indicate the Governor will likely veto the legislation.

Comment: Sunshine is a terrific disinfectant, and legislators who used the last-minute legislative scramble to keep the bill's provisions in the dark should be ashamed. There's no self-evident reason why former legislators should have to forego five sixths of the retirement payments otherwise due them simply because they continue on the public payroll in the executive branch or in local government. On the other hand, should other individuals get rule relaxations tailor-made to their circumstances just because enough people with a vote like them-or at least don't dislike them, and are comfortable with a tradition of reciprocal backscratching? Some of the retirement rule changes in SB 528, in other words, might well be passed with a straight face on their merits. Others would probably not withstand the process of explanation in committee. Bundling all these adjustments in a bill with both patronage and stealth written all over it does no favors to those whose retirement sacrifices could stand the light of open debate. But it does

throw chum to those who are all too ready to write elected officials off categorically. And that corrosion rewards cynics everywhere. Those outside government point and say, "What did you expect?" Those inside government shrug and say, "There's no pleasing the public, so if we're going to be blamed anyway, let's get some business done."

COURT: NO BASIS FOR PURGING JUVENILE OFFENSE FROM COURT FILES (9/15/00)

Federal courts have no inherent powers to reverse, erase or otherwise obliterate the record of a juvenile drug conviction as a matter of fairness. While they may take such steps to right a wrong in the sense of an unlawful conviction or a clerical error, they are otherwise limited to the few instances in which specific statutes authorize expungement.

So ruled the U.S. Court of Appeals for the Ninth Circuit in its opinion filed Tuesday, September 12 in U.S. v. Sumner, Case No. 99-10523.

The case involves Thomas Alan Sumner, a Nevada substitute teacher who in the fall of 1999 wanted to seek a teaching certificate but feared that a long-ago event might be cited to preclude that licensing. In 1972 Sumner was arrested in Yosemite National Park when his companions sold illegal drugs to an undercover Forest Service ranger. He pled guilty to the unlawful possession of a controlled substance and, as a minor, was sentenced under the Federal Youth Corrections Act (FYCA), which was repealed in 1984. He was ordered to 90 days of probation and a fine of \$100. He failed to pay by the deadline, a bench warrant was issued, he paid the fine two days overdue, and the warrant was recalled.

In 1999 Sumner went back to the same district court and moved to have his sentence expunged, either under the FYCA's "set aside" provision or under the court's own "inherent" equitable powers, i.e. powers to do the right thing. The court ruled that it had no jurisdiction (authority) under either theory to do what Sumner asked. On appeal, the Ninth Circuit agreed. First, the FYCA allowed a conviction to be set aside only where the court's failure to grant "an early unconditional discharge from probation" was due to an "oversight." Here there was no mistake; Sumner had not sought a discharge from probation in 1972 and none was granted.

Second, in the words of Judge Arthur Alarcon for the court, "Sumner also maintains that federal courts have 'the inherent power, under equitable principles, to order expungement of criminal records.' We disagree. The power of federal courts may not be expanded by a judicial decree." Only in cases of convictions held to be unconstitutional in later federal civil rights actions were federal courts empowered to offer equitable expungement as a remedy.

And ruling as a matter of first impression, the Ninth Circuit considered the third

possibility, i.e. where a court was revisiting a case it had originally tried, employing its "ancillary" jurisdiction to reopen the matter. Even there, Judge Alarcon concluded for the court, "In our view, a district court's ancillary jurisdiction is limited to expunging the record of an unlawful arrest or conviction, or to correcting a clerical error."

[Back to top](#)

MARYLAND'S HIGHEST COURT REJECTS BROAD GOVERNOR'S PRIVILEGE (9/15/00)

In contrast to the California Supreme Court's 1991 discovery of a broad "deliberative process privilege" exempting a governor's appointment schedules and travel records from large-scale disclosure, the Court of Appeals of Maryland has rejected application of a broad "executive privilege" for its governor's meeting calendar and phone call records.

In *Office of the Governor v. Washington Post*, the court's 4-3 ruling issued Tuesday, September 12 concluded that the records of Gov. Parris N. Glendening and two of his chief aides are subject to the Maryland Public Information Act as a general proposition, and that meeting appointment logs and phone records reflecting the official contacts of these officials are not categorically protected by executive privilege.

That term is the more direct and focused label for what the California Supreme Court called the "deliberative process" privilege in its 1991 decision in *Times Mirror v. Superior Court*. The court held that appointment calendars and travel itineraries for a five-year period of Governor George Deukmejian's incumbency were exempt from disclosure under that privilege, essentially because their release to the public would disclose the governor's thought processes and thereby inhibit the effectiveness of executive decision-making.

The Maryland court majority placed the burden on the governor's office to argue its executive privilege claim on an item-by-item basis, with the trial court inspecting the records in chambers as necessary.

The case cites *Times Mirror* at several points, noting that unlike California's very unusual "public interest balancing test," used to shoehorn in the common law privilege, Maryland law has no such "catchall" exemption, and the privilege must apply, if at all, under standards already established in Maryland case law.

Accordingly, records of an advisory or deliberative nature would be presumed covered by the privilege, but strictly factual material such as appointment or phone call logs would not. Nonetheless, in remanding the case back for further consideration by the trial court, the appellate court cited several passages from *Times Mirror* to show how, for example, the release of even factual material might chill the process of executive decision-making.

The Post has not explained why it wanted the records, but in the two years of negotiations to get them it has narrowed the scope of its interest to a six-month period in early 1996. The reach of its original request has also been trimmed by the appellate court, which ruled off limits all calls from the governor's residence and calls from business lines not specifically assigned to the governor and the two specified aides.

After oral argument in the case early in 1999 the court, shy one justice, was deadlocked 3-3. Then Governor Glendening filled the vacancy, oral argument was reheard before the new justice, and his vote created the 4-3 majority. The dissenters believe that the majority is giving insufficient respect to the governor's independence from the legislature, on separation of powers grounds as well as executive privilege concerns.

A PDF file copy of the opinion, labeled as "Governor v. Washington Post," can be obtained at <http://www.courts.state.md.us/cgi-bin/indexlist.pl?court=coa&year=2000&order=bydate&submit+button=Submit>.

SANTA CLARA SUPERVISORS TO PONDER ON-LINE RESTAURANT 'GRADES' (9/8/00)

The Santa Clara County Board of Supervisors will soon consider a proposal to put the results of restaurant inspections by the environmental health department on the county's Web site -- along with a new system of letter or number "grades" rating each eatery's compliance with codes and other standards. The local restaurant association supports it.

The proposal by Supervisor Joseph Simitian can be downloaded as a pdf file from http://www.supervisorsimitian.org/whats_hot.htm. It has two components, the first being production of placards, one for each restaurateur, which could be either placed in a prominent location or kept in a drawer. The placard would proclaim the establishment's A-C letter or 1-100 number grade. Alternatively or as Simitian would prefer, as a supplement, diners could go to the county's internet site and view all scores -- as well as the inspection reports behind them.

Simitian says his idea is responsive to increasing public and press concern with food poisoning in general and food handling practices in particular. His staff says the proposal is backed by the Santa Clara Restaurant Association, which would just as soon have the bad apples exposed.

GOVERNOR GETS SIX BILLS ON SUNSHINE, JOURNALIST RIGHTS, PRIVACY (9/1/00)

Governor Gray Davis has on his desk awaiting action six pieces of legislation of special interest to the California First Amendment Coalition. One is on open meetings, two on public records, two on journalists' rights and one on privacy. Half the bills represent a second - or even third - try after a similar previous measure was struck

down by a veto.

The bills, whose contents are covered in separate reports, include AB 1857 (Romero), a rewriting of the law governing open meetings of student body organizations of the California State University; AB 2799 (Shelley), on access to electronic public records; SB 2027 (Sher), on attorney general review of records access denials; AB 1860 (Migden), on procedures for subpoenas to journalists and dealing with the resulting shield law issues; AB 2101 (Migden), on press interviews with and mail from prison inmates; and SB 129 (Peace), which would create a new state office dedicated to the protection of personal privacy.

The governor has until midnight September 30 to take action on these measures. He can sign a bill, veto it or let it become law without his signature.

COMMENT:

Your letter to the governor urging action should identify the bill by number and author, and your position (support/opposition) in a prominent heading at the top, e.g. "AB 1234 (Smith): SIGNATURE URGED." It is best addressed via:

mail: Governor Gray Davis, State Capitol Building, Sacramento, CA
95814

fax: (916) 445-4633

e-mail: graydavis@governor.ca.gov

[Back to top](#)

**COMPUTERIZED INFORMATION-SEEKERS WOULD SEE FRIENDLIER LAW
(9/1/00)**

Governor Gray Davis is being given the third chance to sign legislation bringing the California Public Records Act into the electronic information age, after his and former governor Pete Wilson's vetoes of earlier attempts. AB 2799 by Assemblyman Kevin Shelly (D-San Francisco) requires copying at cost of computerized public records.

The bill would repeal the current California Public Records Act provision giving public agencies discretion as to in what form computerized public information must be produced in (e.g. electronic or hard copy printouts). The Act currently says nothing else about computer file access other than the general principle that information accessible to the public on paper remains legally accessible when stored electronically.

Under AB 2799, the Act would be amended to provide that:

* Public information not exempt from disclosure must be made available in the electronic format requested if the public agency holding the information uses that format for making copies for its own or another agency's use.

* If meeting the request involves only copying, any fee charged by the agency must be

limited to the "direct cost of producing a copy."

* If the request is for a format not used by the agency for its own copying, and therefore would require special work, extra charges and delay are authorized.

* "the cost of producing a copy of the record, including the cost to construct a record, and the cost of programming and computer services necessary to produce a copy of the record," could be passed on to the requester when " the record is one that is produced only at otherwise regularly scheduled intervals" but is demanded off-schedule, or the formatting sought "would require data compilation, extraction, or programming."

* an extension of up to 14 days could stretch the deadline for a determination response from the public agency, meaning a maximum total of 24 days, based on "the need to compile data, to write programming language or a computer program, or to construct a computer report to extract data."

* If the request is for a paper record, the agency may inform the requester that the information is also available in electronic format, but cannot limit access to the electronic version. Nor must it "reconstruct" a record in an electronic format if it "no longer has" the information in that format.

* A request to release information in the format in which the agency keeps it would not have to be honored if doing so "would jeopardize or compromise the security or integrity of the original record or of any proprietary software in which it is maintained."

AB 2799 has two other important provisions unrelated to electronic records. One would restore the word "delay," substituted several years ago by the word "obstruct" in a provision prohibiting certain agency conduct that frustrates effective access to records. The passage of this bill would mean prohibiting both delay and obstruction. Also, the Act would for the first time expressly require that any notice from the agency announcing denial of access be in writing - if the request had been made in writing.

AB 2799's electronic records thrust presents a third attempt in this area. Two previous bills by Senator Debra Bowen (D-Marina del Rey) were vetoed: AB 179 by Governor Wilson in 1998 because a "reasonableness" test for denying access would, Wilson said, have invited needless litigation, and SB 1065, rejected last year by Governor Davis, who said he had asked Bowen to hold off bringing him a bill until the state had resolved Year 2000 compliance problems.

The legislature clearly views improved electronic access as an overdue imperative. The bill passed the Assembly on a 70-4 vote, and the Senate 33-0.

The bill is sponsored by the California Newspaper Publishers Association and supported by the Orange County Register, the Franchise Tax Board and CFAC. It is opposed by Orange County, which complains of the burden to staff in responding to records requests - editing and copying records for release or writing written justifications for non-release.

But the Register says express language disallowing delay is needed because of such phenomena as UC Irvine's foot-dragging in producing admittedly public records

documenting abuses at the university's fertility clinic. When the Register finally got those records, it used them to support a series on the sale of fertilized eggs and won the Pulitzer Prize for its effort.

[Back to top](#)

THOSE DENIED LOCAL AGENCY RECORDS COULD GET SECOND OPINION (9/1/00)

Governor Gray Davis is being asked to sign a bill creating prompt attorney general review, on request, of any local agency's denial of access to public records, and adding court-imposed fines of up to \$100 for every day an agency knowingly and deliberately disregards its disclosure obligation. Davis vetoed a comparable bill last year.

Both measures are the work of Senator Byron Sher (D-Palo Alto). The main difference between last year's SB 48 and the current SB 2027 is that the latter expressly exempts most state agencies (as opposed to local government units) from attorney general review. All but a handful of state agencies use the attorney general's office for advice in responding to, and court representation in defending against, California Public Records Act requests. Last fall Davis said that given this prior involvement, having the attorney general review records denials would present a conflict of interest in those circumstances, and for that reason vetoed SB 48.

SB 2027 addresses this issue by simply exempting from the review process, on a case by case basis, any records denial based on the attorney general's advice. Thus, for example, the attorney general's advice that a record could be withheld would preclude its rendering a review opinion. But if the attorney general was never consulted, the agency's denial would presumably be subject to review by that office.

Otherwise, SB 2027 goes to the governor essentially in the same form it has had since introduction, and indeed in the form taken by SB 48 last year:

- * A person having submitted a written request for inspection or copying under the California Public Records Act would be entitled to a written form of denial citing the justification for nondisclosure.
- * A disappointed requester could send the request and denials letters to the attorney general's office for review, with a response due normally in 20 to 40 days.
- * The resulting opinion would have no greater or lesser force than any other attorney general's opinion, and would not compel disclosure - or excuse it - on its own authority. But it could be cited by either the agency or the requester in any subsequent litigation, assuming the agency, using a 10-day grace period in the bill, did not change its mind and release a record in the face of an opinion that it should do so.
- * In any event the opinions generated under this procedure would be annually printed and published in bound volumes, and also displayed on the Internet for free access.
- * The attorney general, in analyzing a denied request for a record whose content was

not obvious, could request to see the record or ask for additional information on a confidential basis in order to make a more confident assessment. The agency would not be bound to share the information thus, but its refusal to do so might work against its interests in the result, if the attorney general found the refusal inadequately justified.

* Quite apart from attorney general review, a court would be authorized in appropriate cases brought under the CPRA to not only declare a record public and order its release, but also to assess a monetary penalty against the agency (to be paid to the requester in addition to court costs and attorney fees) of up to \$100 for every day the agency withheld requested records in bad faith.

The bill passed the Senate 31-6 and the Assembly 75-1, compared with SB 48's vote tallies of 35-0 and 78-0 respectively. It is sponsored by the California Newspaper Publishers Association and supported by CFAC and Attorney General Bill Lockyer. Known opposition as of mid-August had been reduced to the San Bernardino County Sheriff's Department, the California Association of Health Facilities, the Mosquito and Vector Control Association and the City of Newark.

PRIVACY PROTECTION BILL TARGETS PRACTICES OF BUSINESSES, STATE (9/1/00)

Senator Steve Peace's occasionally far-ranging expedition into the prospects of total individual control over the use of information about oneself has been reduced, in the form of his SB 129 going to Governor Gray Davis for signature, into a far less controversial measure. The final bill would create a new state privacy protection office with no regulatory power.

Of keenest interest to the California First Amendment Coalition is the fact that SB 129 ended up with no reductions in the information available under the California Public Records Act. While the bill directs state agencies to adopt a privacy policy "in adherence with" the Information Practices Act, that statute (Civil Code Section 1798 et seq.) already provides that any request pursuant to the California Public Records Act is one which trumps its own restrictions on disseminating personal data about individuals Section 1798.24 (a) and (g)).

SB 129 at various earlier stages contained (or was proposed to contain) various provisions making individuals the legally recognized owners of most information about them conveyed in commercial transactions; requiring all organizations to get affirmative written consent for obtaining, using or transferring the information; providing stiff tort remedies for violations of individuals' ownership rights; and even preventing public and private entities from using information gained from surveillance cameras.

Aside from the privacy policy directive for state agencies, all the final version does is to create, within the Department of Consumer Affairs, an Office of Privacy Protection, whose mission would be to:

- * "inform the public of potential options for protecting the privacy of, and avoiding the misuse of, personal information";
- * "make recommendations to organizations for privacy policies and practices that promote and protect the interests of California consumers"; and
- * "promote voluntary and mutually agreed upon nonbinding arbitration and mediation of privacy related disputes where appropriate."* The director of the Department would be given more specific responsibilities, including the following:
 - * "Receive complaints from individuals concerning any persons' obtaining, compiling, maintaining, using, disclosing or disposing of personal information in a manner that may be potentially unlawful or violate a stated privacy policy relating to that individual, and provide advice, information, and referral where available";
 - * "Provide information to consumers on effective ways of handling complaints that involve violations of privacy related laws, including identity theft and identity fraud. Where appropriate local, state, or federal agencies are available to assist consumers
 - * with those complaints, the director shall refer those complaints to those agencies";
 - * "Develop information and educational programs and materials to foster public understanding and recognition of the purposes of this article";
 - * "Investigate and assist in the prosecution of identity theft and other privacy related crimes, and, as necessary, coordinate with local, state, and federal law enforcement agencies in the investigation of similar crimes";
 - * "Assist and coordinate in the training of local, state, and federal law enforcement agencies regarding identity theft and other privacy related crimes, as appropriate"; and
 - * "Commencing in 2003, ... report to the Legislature on an annual basis, on or before January 31, detailing the activities engaged in by the department under this article."

COURT: AGENCIES CAN SUE FOR DECLARATION AGAINST DISCLOSURE (8/25/00)

A public agency that has denied a California Public Records Act request in timely and explicit fashion may then, if the requester indicates disagreement with the response, take the matter to court seeking a confirming declaratory judgment. So concludes a recent opinion from the Second District, California Court of Appeal in a police records case.

The decision filed August 4 in *Filarsky v. Superior Court (Manhattan Beach)*, Case No. B139108, comes as a significant addendum to an earlier case, *City of Santa Rosa v. Press Democrat*, in which the First District Court of Appeal held that a public agency may not use declaratory judgment to get a court to rule against disclosure.

The Public Records Act itself expressly gives disappointed requesters the right to file an action for declaratory and/or injunctive relief - the former to establish that a records

denial was unlawful and the latter to order release. But in both the Santa Rosa and Filarsky cases the agency from which the record was requested took the initiative to go to court for a judicial declaration that the record in question was not releasable.

The Second District in its recent opinion distinguished the Santa Rosa holding in two respects. First, in that case the City of Santa Rosa never made its own determination that the records sought by the daily Press Democrat newspaper - investigative findings by the police department concerning a high school teacher's alleged sexual intercourse with a minor - were confidential. Nor did the newspaper ever get the chance to tell the city that it disagreed with a decision to withhold, since that decision was never made.

Instead of deciding on its own, in short, the city tossed the question into court for a judicial determination in the first instance.

In the Manhattan Beach case, by contrast, the city expressly - and within the required 10-day period for response - denied the request of attorney Steve Filarsky for documents concerning the hiring of a new police captain, Paul Marshall. Filarsky then continued to press his requests for the records, and the city finally sued him in a declaratory relief action.

The trial court ruled for the city that the records were indeed properly confidential. Filarsky sought relief in the Second District but was turned down. He then got the state supreme court to order the Second District to reconsider the issue in light of the Santa Rosa case. Having done so, the appellate court concluded that that decision did not apply when the agency had issued an express denial of access and the requester persisted in asking for the records.

The court's decision in Filarsky also dealt with the merits of his request, upholding the city's decision on several grounds.

Filarsky, a Manhattan Beach resident, had had some prior experience with Marshall, the city's new police captain. More than a decade earlier he had represented the city of Pismo Beach in its successful effort to fire Marshall for what the Second District opinion refers to as "use of excessive force and inhumane treatment of a ward at a juvenile facility."

When word of the new hire reached him, Filarsky wrote the mayor and city council, informing them of Marshall's firing by Pismo Beach. The city manager told Filarsky that this was no news to the council, which also took into consideration that Marshall had in the interim been hired as an officer by Sacramento and later promoted to lieutenant, with a clean slate.

Filarsky then submitted a public records request for Marshall's job application and resume, the names of the oral board raters who had interviewed him, their rating sheets, the eligibility list for the captaincy, and the city's background investigation into

Marshall's experience in Pismo Beach.

The city's denial cited Marshall's privacy interests, the confidentiality of peace officer personnel records and, with respect to the list of all officers eligible for the captaincy, the deliberative process privilege. The Second District found these exemptions of disclosure legitimate, concluding that Penal Code Section 832.7, protecting peace officer personnel records from disclosure outside a tightly controlled discovery process, applied to all the information about Marshall in particular, and the deliberative process privilege applied to the eligibility list naming other applicants for the captaincy because, in the words of Justice Joan D. Klein for the court:

"The sole purpose for the list is to aid the City in the process of selecting a police captain by allowing comparison of the candidates. The list would disclose the identity of at least 28 applicants considered by the City, 18 of which were rejected, and two of which withdrew their candidacy. The list would also disclose the City's rating and evaluation of each eligible candidate. Disclosing the list thus would not only reveal the names and corresponding test scores of those applicants who were not selected, but also the judgment and mental process of the City in its selection process. Such disclosure would compromise the City's decision-making process and its ability to safeguard the names and rating scores of candidates who apply for such positions. The public interest in disclosure of the unredacted eligibility list is clearly outweighed by the public interest served in not making the list public."

COMMENT: Allowing a public agency to take the initiative in seeking court approval of a decision to deny access can leave a records requester who may have had no intention to sue with some tough choices. Since the agency's declaratory relief lawsuit names the requester as defendant, the first problem is the cost of litigating a defense or, if defense is not affordable, seeing the agency's denial potentially blessed by the court with no opposition.

The second is that even if the requester appears and "succeeds" in defending - even if the court declines to issue a judgment that the records are not public, it is not at all clear that this result alone forces the agency to release the record. Moreover, it is unclear whether the requester, having been forced to defend the right of access to the record and having in some sense succeeded in doing so, is thereby entitled to an award of court costs and attorney's fees.

PROLONGING RECORDS FIGHT COSTS RICHMOND A QUARTER MILLION PLUS (8/25/00)

Ending a seven-year court battle over access to records concerning the conduct of its police officers, the city of Richmond has paid \$231,885 in court-ordered attorneys' fees to the San Francisco Bay Guardian, an amount which appears to set a record for such cases. The fight to avoid paying the newspaper's attorney fees more than doubled them.

In 1993, following up on several reported incidents and court judgments involving racial abuse and excessive force by Richmond officers, the weekly newspaper asked the police department for data summarizing citizen complaints. The city refused, arguing that the records were confidential as peace officer personnel information.

Two years after the Bay Guardian sued under the California Public Records Act, the First District Court of Appeal ordered the city to release some of the material. The opinion, although withheld from publication, was the first to clearly establish the public's right to use the act to gain some information about police discipline.

The city released more than 500 pages of records, which revealed what the Bay Guardian recently called "an alarming pattern of official tolerance of abusive behavior by police, ranging from pepper-spraying handcuffed inmates as punishment to punching suspects in the head." In its report summarizing the data, the newspaper noted that two out of every three officers found guilty of misconduct charges between 1990 and 1997 had seen their charges dismissed.

The Bay Guardian was represented in the records litigation by James Wheaton, founder and lead attorney for the Oakland-based First Amendment Project. He said the two-year fight for the records themselves was "the easy part." The Richmond City Attorney's Office then prolonged the litigation for several more years in hopes of avoiding paying the newspaper's attorney fees. That fight, he said, nearly trebled them.

"We are gratified that the city finally came to its senses, but mortified that it took so long," Wheaton said. "What is most distressing for Richmond's taxpayers is that the city wasn't even fighting about any principles or about the records. It was just about money, and the more they fought, the worse it got."

Richmond assistant city attorney Everett Jenkins told the Bay Guardian that Richmond agreed with the original 1996 ruling (in which it had prevailed) and was therefore not liable for fees. The city appealed a second time, he said, because it believed the fees awarded were excessive.

Last September Richmond received a "Black Hole Award" from the California First Amendment Coalition - given to individuals or groups whose actions show a "blatant disdain for the concepts of open access and sunshine."

Los Angeles-based public-interest lawyer Barbara Blinderman, chair of CFAC's legal review committee, said the Richmond case is one of the most egregious examples of government stonewalling she's seen - and part of a larger trend. "There certainly are an

increasing number of governments that realize they can discourage access by an adversarial approach, which is not very good for democracy," she told the Bay Guardian.

Bay Guardian editor and publisher Bruce B. Brugmann cited "three clear messages" sent by the fees' victory.

"First, to any citizen or group or newspaper fighting a stonewalling city in a major public-access case: Keep fighting till you win - and then, if you win, keep fighting till you get your money.

"Second, to any city that stonewalls for eight years like Richmond: Look what happens and see how you have disgraced your electorate.

"Third, to the city attorney in Richmond and all other city officials who supported this classic stonewall: Resign or face impeachment or defeat in the next election."

INSURANCE DEPARTMENT'S WHISTLEBLOWER BACK AT HER DESK (8/18/00)

Cynthia Ossias, an attorney with the State Department of Insurance on leave and under a cloud for the past two months after leaking confidential documents to a legislative committee investigating the practices of then-Insurance Commissioner Charles Quackenbush, returned to work without prejudice on Monday, August 14.

Ossias, approached by a staff member of a legislative committee with jurisdiction over insurance industry regulation, agreed to provide the committee with market performance reports showing that four major insurance companies could have faced huge fines for their alleged treatment of homeowners' claims stemming from the Northridge earthquake.

Instead of pursuing the fines, Quackenbush settled the liabilities by allowing the firms to contribute much smaller amounts to several designated nonprofit organizations - resulting in political credit to him but no compensation for the policyholders.

Department officials in their legislative testimony left the impression that the companies had not been found to be liable for Insurance Code violations. The reports Ossias gave the committee, and her later confirming testimony, told a different story. But since the reports were legally confidential - unreachable even by committee subpoena without Quackenbush's consent - Ossias's conduct was investigated by the department for potential employment discipline, and for the duration she was placed on administrative leave.

Acting Commissioner Clark Kelso announced Monday that Ossias's job was secure, since the leak was protected from disciplinary action by whistleblower statutes shielding state agency staff members. He said this conclusion represented the view of the California Highway Patrol which, as the legislature's police agency, conducted the investigation into her conduct, as well as his own view and that of the attorney general's office. (See statement at <http://www.insurance.ca.gov/docs/FS-News.htm>)

Kelso said that not only was Ossias's action consistent with the laws "which generally protect employees who bring improper or illegal government conduct to light," but "she is to be commended for her extraordinarily difficult, courageous decision to make a disclosure of information when she thought she might suffer adverse consequences."

Ossias told the San Francisco Recorder that she would not hesitate to reveal department information again in comparable circumstances, but "might do it differently," informing the attorney general or the auditor general instead of the legislature. She hopes that Kelso's commendation for her behavior would discourage any move by the State Bar to discipline her.

She added that despite several offers from private firms received since her difficulties surfaced, she intends to continue working at the department for the time being.

COURT: SECRET SANITIZING OF POLICE FILES UNDERMINES CONVICTION (8/18/00)

Santa Ana's extraordinary policy of sanitizing police personnel records sought by parties in civil and criminal discovery before turning them over for court review to determine their relevance has led to the reversal of a criminal conviction and a stern tongue-lashing for the city attorney and police officials by the California Court of Appeal for the Fourth District.

In People v. Mooc, Case No. G023714, filed June 30, the court sent the prosecution of Bau Mooc for battery on a peace officer back to the trial court with instructions to conduct an in camera review of the entire personnel file of Santa Ana police officer Frank Garcia, whom Mooc, an inmate in jail on an immigration hold, was accused of attacking.

In preparation for his original trial, defendant Mooc had made the customary "Pitchess motion" to have the city produce any and all personnel or other records that might show a propensity on Garcia's part for violence or lying. The only other witnesses to the fight were jail inmates, whose credibility the prosecutor would successfully impeach at trial, by methods later determined by the appellate court to be misconduct.

Responding to the Pitchess motion, the city attorney provided the court with some material which the judge examined in chambers and found to lack any evidence

undermining Garcia's credibility. Mooc was denied access to the files and was convicted by a jury.

On appeal, Mooc argued improper denial of access to Garcia's personnel records. The Fourth District Court of Appeal issued repeated orders to the city attorney to produce the records for it to inspect independently, and to its dismay got a succession of ambiguous responses, including two brief documents, one of which was simply the police report of the incident. Santa Ana Assistant City Attorney Hugh Halford stated finally in a sworn declaration that the documents provided to the court of appeal were all that he could "recall" being produced for the trial court, and that no records regarding Garcia had been purged or removed from his personnel file.

Then came oral argument in the appeal, in which the court ordered the attendance of all involved city officers, and in the words of Justice David G. Sills for the court:

"...an astounding revelation occurred. We were informed that the Santa Ana Police Department and the City Attorney's Office **REGULARLY, SYSTEMATICALLY AND SECRETLY** censored all personnel files before conveying them to any court for in camera review, removing all worker's compensation claims or other records the agencies deemed superfluous. This revelation directly contradicted Halford's earlier sworn declaration that 'no records of Officer Frank Garcia have been purged or removed from his personnel file.'" (emphasis in the original)

The Fourth District then demanded to be provided with the entire, unscreened personnel file, and got "an entire evidence box of files, forms, folders and records," wrote Justice Sills, adding: 'not surprisingly, more than one reference was found in the **COMPLETE** file which a court could deem to be potentially relevant.'" (emphasis in the original)

The court remanded the case back to the trial court, directing a new hearing on Mooc's Pitchess motion, and ordering that any discoverable information leading to admissible evidence helpful to the defense be made available accordingly.

Justice Sills added:

"This mountain of bureaucratic disobedience compels us to voice our disapproval of the actions of both the Santa Ana Police Department and City Attorney's Office, and the shared responsibility which must be borne by the prosecutor's office for failing to discover and remedy it. Public confidence in the criminal justice system is eroded when its officials deliberately fail to disclose records ordered disclosed. As Justice Brandeis so eloquently noted three-quarters of a century ago, 'Decency, security, and liberty alike demand that government officials shall be subjected to the same rules of conduct that are commands to the citizen. In a government of laws, existence of the government will be imperiled if it fails to observe the law scrupulously. Our government is the potent, the omnipresent teacher. For good or for ill, it teaches the whole people by its

example. . . ' (Olmstead v. United States (1928) 277 U.S. 438, 485, dis. opn. of Brandeis, J.)"

COMMENT: The Pitchess motion is a standard element of any criminal defense in which the past behavior or credibility of a police officer may be a helpful source of contextual evidence: If the arresting or witnessing officer has a documented trail of discipline for brutality or untrustworthiness, for example, a jury may be less deferential to his or her version of what occurred. The motion takes its name from a landmark decision of the California Supreme Court in 1974, concluding that criminal defendants had the right to use discovery to reach relevant material of this kind in police personnel files. But that decision led to some reactive incidents which in turn prompted legislation:

"In the aftermath of Pitchess, there were reportedly incidents of law enforcement shredding records to prevent discovery. Penal Code sections 832.7 and 832.8 and Evidence Code sections 1043, 1045 and 1046 represented the Legislature's attempt to respond to Pitchess and law enforcement's alleged reaction." (City of Fresno v. Superior Court, 205 Cal.App.3d 1459, 1475)

These 1978 provisions, as subsequently interpreted by the courts, make peace officer personnel files exempt from the California Public Records Act and thus accessible only by a party to a criminal or civil case, in a discovery process giving the judge complete control over how much, if any, contents of such files are available to the party making a Pitchess motion. The Legislature's deal with the police was, in effect: " You must preserve citizen complaints for a period long enough to ensure their availability in discovery, but that discovery will be controlled by the court to ensure that only that will be produced which is demanded in the interests of justice when a defendant's or civil litigant's rights are at stake." But when the court itself is provided with only a covertly edited version of this material, represented as being responsive to a wholesale request such as Mooc's, the entire process is fundamentally subverted - hence the exasperation shown in this opinion. When the decision was announced, Santa Ana City Attorney Joseph W. Fletcher told the Orange County Register, "We produce what all departments produce." Perhaps this is simply wishful face-saving. But the only way to be sure is for district attorneys or grand juries in each county to investigate whether the Santa Ana sanitizing is indeed a local procedure as well.

A.G. ASKED FOR OPINION ON RELEASE OF DATA FROM POLITICAL FILINGS (8/18/00)

Should street addresses and phone numbers contained in campaign and other political filing reports be made available to those who buy entire copies of the Secretary of State's database? That's the question to be answered in an attorney general's opinion requested by Secretary of State Bill Jones. Public comments are due by August 28.

Jones plans to begin selling electronic copies of the CAL-ACCESS database, most of which is now available on the Secretary of State's Website (<http://cal-access.ss.ca.gov>). But the 1997 legislation authorizing electronic filing of campaign and lobbying disclosure statements and calling for Internet availability of the data also directs that the street addresses of the filing parties be suppressed in the online version.

The addresses are still accessible to those who want to consult the paper filings, but "in the relatively near future," Jones says in his letter requesting the opinion, those who meet the electronic filing thresholds will no longer be required to file on paper.

In addition, as a matter of discretion, Jones has suppressed phone numbers from the Internet display of CAL-ACCESS, which became operational in January.

His question to Attorney General Bill Lockyer is, when sale of the CAL-ACCESS database in its entirety commences, "what information must be suppressed..., what information should be suppressed..., and whether the Secretary of State may place restrictions on the use of the database as a condition of its sale."

Jones grants that access to the entire database is in the public interest: "Political analysis of spending trends, legal research to support court challenges, and campaign mailing list development are obvious possibilities."

Yet in view of the statutory address restriction on Internet publication, Jones believes that the "prospect of ambiguity and confusion about the availability of campaign and lobbying disclosure information submitted and captured electronically demands that I seek clarification from the Attorney General in this matter."

Views on this matter should be sent to Deputy Attorney General Jonathan R. Davis, 300 South Spring Street, Los Angeles, CA 90013; for further information call Davis at (213) 897-2674.

LEGISLATIVE HALFTIME SUMMARY: PUBLIC INFORMATION (7/14/00)

Sacramento lawmakers recessed last Friday, July 7, for one-month before the race to complete legislation at summer's end. Among bills of interest to friends of open government and freedom of expression, the following is a status report on bills affecting access to public information.

Attorney General's Review of Public Records Access Denials (SB 2027, Sher)

This bill would authorize the attorney general to issue non-binding "second opinions," in a 20-40 day turnaround, to those whose written requests for access to public records had been denied. It would also authorize a court to fine a public agency (and award the fine to the requester) up to \$100 for every day of unlawful and bad faith access denial. The measure is set for hearing in the Assembly Judiciary Committee August 8, after having passed the Assembly Governmental Organization Committee 13-1 on June 26, the Senate Floor 31-6 on May 31, the Senate Appropriations Committee 8-3 on May 25, and the Senate Judiciary Committee 6-0 on March 29.

SB 2027 is a reworking of a 1999 bill by Sher, SB 48, which Governor Gray Davis vetoed last fall. Davis objected primarily to what he called a conflict of interest in which the attorney general's office, which represents most executive branch agencies in defending public records access litigation, might be put in the position of issuing a disapproving opinion concerning a denial by a Davis administration client.

Sher's response in SB 2027 is to provide that the attorney general review provision would not apply to access denials by any state agency normally relying on the attorney general for advice or representation on public records access matters. Thus almost all state agencies, but no local government entities, would be free from the attorney general review provision.

It is not known whether this adjustment will be acceptable to Governor Davis.

(Monitor the bill's language, history and progress at http://info.sen.ca.gov/cgi-bin/postquery?bill_number=sb_2027&sess=CUR&house=B&site=sen)

Access to Public Records in Requested Electronic Format (AB 2799, Shelley)

This bill would for the first time require state and local agencies, upon request, to provide computerized data constituting public record information in any format used by the agency itself, normally at simple copying cost. The bill would allow recuperation of special programming, compiling or extraction costs, however, in charges to the requester.

AB 2799 is in the Senate Appropriations Committee, having passed the Senate Judiciary Committee 5-0 on July 5, the Assembly Floor 70-4 on May 25, the Assembly Appropriations Committee 17-2 on May 17, and the Assembly Governmental Organization Committee 12-2 on May 8.

In that earliest committee, the bill's author Assemblyman Kevin Shelley (D-San Francisco) faced an amputation decision and, to save the electronic records access provisions, deleted a far more controversial element of the bill which would have allowed courts to decide, based on specific circumstances, that the public interest

warranted ordering disclosure of records which an agency normally was authorized to keep secret. After lobbying by both public agencies and insurance industry representatives, the Governmental Organization Committee made it clear that such a provision would be the death of the bill.

Shelley gave priority to the electronic records access provisions because the legislature had twice before passed similar bills, only to see them vetoed, first by Governor Pete Wilson and last fall by Governor Gray Davis. Davis' announced reason had mostly to do with concerns over Year 2000 compliance by state computer systems.

As currently amended the bill allows reprogramming cost recovery via special charges, as noted, and also excuses release in electronic form "if its release would jeopardize or compromise the security or integrity of the original record or of any proprietary software in which it is maintained."

(Monitor the bill's language, history and progress at: http://info.sen.ca.gov/cgi-bin/postquery?bill_number=ab_2799&sess=CUR&house=B&site=sen)

Privacy, Access to, and Uses of Personally Identifiable Information (SB 129, Peace)

This bill is the vehicle for its author's ambition to convert facts about one's life into one's legally recognized property for all purposes, with serious but so far uncharted consequences for both business in the information economy and for freedom of information and expression as heretofore understood.

This "If It's about Me, I Own and Control It" presumption is comforting to victims of identity theft, distortions of their credit records, or unknown and unconsented uses of medical or biological information about them. The difference in the Peace approach is that, impatient with nuanced, gradualist approaches to these and other particular threats, the author wants a comprehensive and simple solution.

Recent events suggest that he apparently believes he has found it, by commoditizing biographical data as "property," at least those provided by a person as part of a business transaction, and giving him or her the right to special notice and a veto over every subsequent use or even transmission of the information.

That is the essence of a proposal assembled by an ad hoc research group of legislative staff attorneys whom Peace had testify at the latest hearing of what amounts to a "permanent floating" conference committee on his SB 129.

That bill originated as the action vehicle for the conclusions of a special legislative advisory committee which chewed over such issues for the better part of two years and wound with a phone-book size record of miscellaneous papers, but no report or

recommendations as such. SB 129 has gone through several versions since its introduction in early 1999, but by and large has been allowed to slide through the process into a conference committee, with author's promises to come up with something concrete at that late stage.

The bill has thus been "in conference" since last September, and its content since then has been limited to the creation of a new tort, the "unlawful disclosure of personal information" (the latter term of which has yet to be defined), and of a new official, the Privacy Ombudsman, in the office of the secretary of state, with various "nonbinding" roles and unclearly charted jurisdictions (e.g. the implied but not expressly granted authority to find certain information practices "unlawful.")

The conference committee's most recent hearing in late June unveiled a modification of the ombudsman concept, drafted by Peace's staff, and the work of attorneys from the staffs of the Assembly and Senate Judiciary Committees, creating an even more exotic "hybrid" tort than the one found in the bill currently.

Instead of a mere ombudsman working for the secretary of state, however, the plan now would be to create a Personal Information and Privacy Protection Agency within the Department of Consumer Affairs. Legislative findings and declarations would establish the policy that no "organization" - governmental, journalistic, commercial or nonprofit - may disclose or use information about an individual for any purpose other than the one for which it was expressly provided, without the subject's consent.

The judiciary committee staff proposed "hybrid" tort which would allow a person to sue for either "nominal" damages of \$1,000, or actual damages exceeding that amount, if any, plus attorney's fees and costs, for any disclosure or unrelated use committed "for any marketing or commercial purpose" without the subject's prior written consent.

The "personal information" thus converted to property status would mean "any individually identifiable information gathered in connection with a transaction with the person."

At the most recent hearing the author caught other committee members and staff off guard by suggesting an entirely new element that could be added to the bill, namely outlawing many if not most uses by government and private entities of monitoring video cameras not only in private spaces such as clothing store dressing rooms, but in completely public areas such as street corners, where they are increasingly used to document the running of red lights. One committee member otherwise sympathetic to Peace's data privacy concerns seemed to regard the inclusion of camera surveillance as needlessly controversial and complex new content in a bill already freighted with substantive adventure.

COMMENT: The lengths to which Peace and his staff advisors are prepared to go is suggested in the following comments distributed at the

recent hearing, in which the problem was addressed of how to strip private companies of the property rights they already own in the personal information in their vast databases, without having to pay them for it. The solution: Just define information as not being property.

"Possible Problems: Some individuals, such as Professor Cate (Beth Cate, University of Indiana), argue the Takings Clause would raise serious constitutional problems for any legislation designed to give individuals control over their personal information.

"Possible Solutions: To this criticism, others respond that legislatures could simply pass laws declaring that no property interest accrues from the collection of personal data. Thus, privacy regulations would withstand constitutional challenge, as the Takings Clause only applies when property is implicated."

The communicative aspects of the First Amendment apply only when speech, press or petition is implicated. Can the legislature define the transmission of information about individuals as something other than communication enjoying constitutional protection?

(Monitor the bill's language, history and progress at http://info.sen.ca.gov/cgi-bin/postquery?bill_number=sb_129&sess=CUR&house=B&site=sen)

CFAC TO GOVERNOR'S NEW PRESS SECRETARY: "SHOW US THE MONEY!" (7/7/00)

The California First Amendment Coalition has sent a public records request to Governor Gray Davis' new press secretary, Steven Maviglio, asking for a copy of his employment contract and that of his deputy, also recently appointed. At the time the appointments were announced last week, the salaries to be paid these new officials were withheld.

CFAC's June 29 letter states:

Dear Mr. Maviglio,

In today's Sacramento Bee report of your appointment and that of Roger Salazar as your deputy, it is stated:

"The governor's office declined to disclose the salaries of the new appointees."

The California Public Records Act requires disclosure of such information. In Government Code Section 6254.8 it states:

'Every employment contract between a state or local agency and any public official or public employee is a public record which is not subject to the provisions of Sections 6254 and 6255.'

that is, not exempt from disclosure under any provision of the Act.

It may be that there was some miscommunication rather than an intent to withhold the information contrary to this provision.

In any event, please promptly send to the address below, or inform me as to where we should come to collect, copies of those documents memorializing the contracts of employment for you and Mr. Salazar, including any job description and an itemization of all elements of compensation.

We will be happy to pay copying costs.

The Bee has since reported speculation that one reason Maviglio (previously communications director for New Jersey Congressman Rush Holt) looked attractive to Davis is that he is a former three-term member of the legislature in New Hampshire , a state worth having inside expertise about for anyone who considers himself presidential timber.

In any event, Maviglio was caught last year in an Oops many of us can relate to. According to the Boston Globe, the episode began when Cher Castillo, a new member of a Florida congressman's staff, wanted to share a diet pill tip with five friends, but inadvertently sent it to all congressional offices.

Maviglio, whose boss was a co-sponsor of a bill to regulate unsolicited commercial e-mail (the "Can Spam Act" - see <http://congress.nw.dc.us/cgi-bin/webreturn.pl?link=www.house.gov/rholt/&dir=c-span>) wrote a sharp rejoinder deploring the intrusiveness of spamming - and sent it as "reply all" to what he thought was a list of about 40 addresses. Instead it arrived in some 10,000 official mailboxes on Capitol Hill.

For those patiently waiting for the relevance of this anecdote, here's the rest of the story as related by Globe columnist Patti Hartigan (Cyberlinks, 10/8/99):

"As for the original spammer, Castillo is not supposed to talk about the incident. Reached at her office, she sheepishly admitted that she did, in fact, send the errant e-mail. Was it an accident? Yes. Was she reprimanded? Yes. Can she elaborate? Well, no.

"I'm not allowed to answer any questions from the press,' she explains.

"Her title?

"I'm the press secretary."

SENATOR SEEKS YOUR IDEAS ON THE 'PERFECT FOIA ENVIRONMENT' (6/30/00)

How could the federal Freedom of Information Act (FOIA) be improved? What would the ideal public information disclosure law be like? Senator Patrick Leahy (D-VT) would like to get your ideas on this topic soon, and might reflect them in some legislation he is apparently planning to introduce. But you need to get the word back to him before long.

Rachel Boehm, the San Francisco attorney (with Steinhart & Falconer) who serves as Freedom of Information chair for the Northern California Chapter of Society of Professional Journalists, has forwarded to CFAC the following message from Ian Marquand, SPJ's national "Sunshine Chair":

"An opportunity has arisen to help Sen. Patrick Leahy of Vermont craft a 'wish list' for the federal FOIA. In essence, we need to express, as briefly as possible, what the 'perfect FOIA environment' would be.

"Examples might be:

- * Instant access (or no delays beyond 24 hours) to information sought.
- * Anonymity of access
- * Integration of text and video information
- * Complete linkage between related documents
- * A universal search tool common to all federal websites and departments
- * Multiple search tools available
- * A universal, user-friendly, file format

"Exactly what this will translate to isn't known yet, although Sen. Leahy is one of the original co-sponsors of E-FOIA. This may be the opportunity to get in on the ground floor of the next wave of federal access law.

"We've been told to be bold, to think of future possibilities and, above all, to be brief.

"We have until mid-July to submit our vision to Sen. Leahy. If you have thoughts, please send them to me ASAP."

Boehm says Marquand can be reached at ian@kpax.com.

COURT: RIVERSIDE MUST GET COP'S WORK COMP SETTLEMENT UNSEALED (6/23/00)

The city of Riverside unlawfully engineered the sealing of a settlement in a workers' compensation case involving a former police officer, a judge has ruled, ordering the city to get the seal lifted and the settlement turned over to a daily newspaper. As in Claremont recently, city officials made it appear the secrecy agreement had been forced on them.

The case involves Rene Rodriguez, one of several Riverside officers who showed up on the scene shortly after the fatal shooting of Tyisha Miller by four fellow officers on December 28, 1998. She was shot at night after being found sleeping or unconscious in a parked car with a pistol in her lap.

Controversy over the exact circumstances leading the officers to open fire, including possible racial prejudice, has resulted in a corrosive polarization in the city between supporters of the victim and of the police, and has led to a federal civil rights investigation, a major civil rights lawsuit by the surviving family, an intensive investigation by a local blue-ribbon panel into police training and handling of citizen complaints, and calls for a permanent citizen review board.

Rodriguez aggravated suspicions of racism by reporting that some officers had made "racially insensitive" remarks after the shooting, and on that basis, after a corroborating internal investigation, one officer was fired and another administratively disciplined.

Rodriguez later alleged more specifically that certain colleagues exchanged "high five" congratulations after the shooting, used obscenities to describe the teenaged victim, called her family members "animals" and joked about the color of the bullets used. These allegations were made in a discrimination claim against the department, lodged with the state Department of Fair Employment and Housing (DFEH).

That claim, filed late last summer, complained of an overall "hostile work environment" stemming from reactions to his first disclosures. Rodriguez had at that point been on unpaid leave for five months, contending that he feared for his safety.

Last winter the daily Press-Enterprise learned by chance that Rodriguez was no longer on the city payroll and that the details of his separation were documented in a settlement of a workers' compensation case. The city manager and city attorney told the newspaper that they would be inclined to release the specifics but were barred from doing so by the settlement order of the Workers' Compensation Appeals Board (WCAB) judge.

The newspaper sued, and the city released some information about the settlement, but not all. The litigation revealed that it was the city that had taken the initiative to

persuade Rodriguez to agree to seek a sealing order, a maneuver reminiscent of the city of Claremont's disingenuous claim last year that it had been forced to accept a federal magistrate's order sealing a settlement in another police conduct-related case.

The city also argued the information was confidential as part of a peace officer's personnel file and as protected by the California Public Records Act's "catchall" exemption in Government Code Section 6255, both of which arguments were rebutted by Press-Enterprise counsel James Manning of the Riverside firm of Reid & Hellyer.

Superior Court Judge Dallas Scott Holmes on May 31 signed an order directing the city to:

- * apply to the WCAB to dissolve its sealing order;
- * provide Manning and Rodriguez's lawyer with "all documents submitted" to that tribunal; and
- * stand by to pay the Press-Enterprise's attorney fees and costs, to be decided later.

Holmes' order also specifies that the city "may not voluntarily disable itself from compliance with" the Public Records Act by seeking orders sealing its settlements, which under the Act are public once final.

Manning says that the newspaper has since learned that the settlement in the workers' compensation forum also contained terms under which Rodriguez withdrew his racial discrimination claims to the DFEH and - in a proceeding never disclosed to the public - also to the DFEH's federal counterpart, the Equal Employment Opportunity Commission.

COMMENT: For the second time in the span of a few months, a city has been caught with a Pinocchio nose - not only ignoring its obligation to make settlements public by taking the lead in persuading its party adversary and some otherwise ignorant magistrate that secrecy is desirable, but then claiming publicly that it would love to be more forthcoming, but its hands were tied by court order.

[Back to top](#)

E-RECORDS ACCESS BILL ADDING COST FACTOR FOR EXTRA PROCESSING (6/16/00)

Assemblyman Kevin Shelley's AB 2799, which would give the public the right to get copies of nonconfidential state and local government records in electronic form, is undergoing amendments to allow extra charges or in some cases unusual delay to reflect extraordinary work to meet the demands of a particular request.

The bill is awaiting a hearing date in the Senate Judiciary Committee after passing the Assembly, 70-4, on May 25. The amendments now being put in print by the Legislative Counsel's Office are intended to address some public agencies' concerns that some

records requests, particularly for database information, may involve processing considerably beyond simple "copying," in terms of both time and cost to the agency. Another concern is that some databases are, for security reasons, designed not to allow copying.

One of the proposed amendments would add a new basis for extending the response time to as much as an additional 14 days, which is now permitted in the case of voluminous records to be processed, those stored in a remote archive or those for which several other agencies must approve release. Added to these bases for time extension would be "The need to compile data or to write a computer program to extract data."

The other pending amendment language is set off <<thus>> below; the entire section would be added to the California Public Records Act in the Government Code:

"6253.2. (a) Unless otherwise prohibited by law, any agency that has information that constitutes an identifiable public record <<not exempt from disclosure pursuant to this chapter>> that is in an electronic format shall make that information available in an electronic format when requested by any person and, when applicable, shall comply with the following:

(1) The agency shall make the information available in any electronic format in which it holds the information.

(2) Each agency shall provide a copy of an electronic record in the format requested if the requested format is one that has been used by the agency to create copies for its own use or for provision to other agencies. Direct costs of duplication shall <<be limited to the direct cost of making a copy of a record in an electronic format.

(b) Notwithstanding subdivision (a)(2), the requestor shall bear the cost of producing the <<copy of the >> record, including the cost to construct a record or the cost of programming and other computer services necessary to produce the <<copy of the >> record when:

(i) In order to comply with the provisions in subdivision (a), the public agency would be required to produce a copy of an electronic record and the record is one that is only produced at otherwise regularly scheduled intervals; or

(ii) The request would require data compilation, extraction, or programming to produce the record.

(c) Nothing in this section shall be construed to require the public agency to reconstruct a report record in an electronic format if the agency no longer has the report itself available in an electronic format.>>

(d) Nothing in this section shall be construed to permit an agency to make information available only in an electronic format.

<<(e) Nothing in this section shall be construed to require the public agency to release an electronic record in the electronic form in which it is held by the agency if its release would jeopardize or compromise the

security of the record, or of any proprietary software in which it is maintained.>>

A. Nothing in this section shall be construed to permit public access to records held by the Department of Motor Vehicles to which access is otherwise restricted by statute. "

L'AFFAIRE QUACKENBUSH: ENABLED BY WEAK PUBLIC RECORDS LAW (6/16/00)

Embattled Insurance Commissioner Chuck Quackenbush, accused of substituting his own political interests for timely and fair insurance payouts to earthquake victims, might never have been re-elected but for a weak public records law. Recent action by insurance industry lobbyists, moreover, saw to it that the law will stay weak.

Assemblyman Kevin Shelley's AB 2799 lost its most controversial content in April when lobbyists for both public agencies and the insurance industry forced Shelley to drop his proposed "reverse balancing test." The bill now addresses primarily the issue of access to electronic records (see story above).

The California Public Records Act (CPRA) provides that even if a document is not covered by any express exemption from disclosure - and is therefore presumed to be accessible to the public - an agency may take the position that based on unusual facts and circumstances, the public interest in keeping the information (at least temporarily) secret outweighs the public interest in disclosure.

Shelley's short-lived "reverse" approach would have left this rule in place but added its reciprocal, affecting several categories of records concerning which agencies are given discretion whether to release or not. Shelley's rule would have allowed a judge to order release of a record withheld under one of those discretionary exemptions, based on a finding that, given particular facts, the public interest in disclosure outweighed the public interest in secrecy.

The killing of that provision occurred in the Assembly Committee on Governmental Organization, a "juice bill" processor often preoccupied with squeezing gambling and liquor legislation for what it is worth - normally benign to indifferent on "sunshine" issues but also unaccustomed to alienating lobbyists for powerful business interests.

The committee's signal to Shelley to remove (or else) public interest balancing as a threat to the secrecy of insurance regulation is prologue to an ironic episode this past week in the Capitol, where Insurance Commissioner Chuck Quackenbush is under politically terminal attack. He is charged with having allowed insurers, in lieu of exposure to potential billions of dollars in fines payable in connection with their

treatment of customers suffering earthquake losses, to contribute millions to several friendly nonprofit groups to create "educational" advertising or otherwise patronize special constituencies in ways identified with and flattering to the commissioner.

One of several forums for calling those responsible to account is the Senate Insurance Committee's Subcommittee on Bad Faith Liabilities and Consumer Protection. On Monday, June 12 the subcommittee's chairwoman, Sen. Martha Escutia (D-Commerce) released copies of "market conduct" examinations conducted by the department on four big carriers who were allowed to avoid fines by contributing to the nonprofit.

The examination reports charge that Allstate, Farmers, State Farm and 20th Century did not adequately inspect damaged properties of their insureds, offered them insufficient settlements and even misled them about benefits. The reports reflect checks on more than 2,400 earthquake claims and how they were handled, and among the four firms alleged almost 3,200 violations of state law.

These reports are exempt from disclosure under the California Public Records Act, by Government Code Section 6254 (d), but the exemption is permissive or discretionary; disclosure is not flatly prohibited. Thus the secrecy for the market conduct examination reports might have been overridden, in a given court challenge, by a judge's use of the "reverse" public interest balancing test in Shelley's bill.

How this might have happened is illustrated by last week's release of the reports, apparently leaked to the committee from some source inside the department. A spokesman for the department called Escutia's release "outrageous, illegal behavior," and his sentiment was echoed by a spokesman for the Personal Insurance Federation of California, who accused the senator of "placing herself above the law." The federation lined up with public agencies in April to force Shelley to drop the public interest balancing test.

Escutia, according to the Sacramento Bee "brushed aside objections to releasing the documents, saying the public's need to know the contents outweighed the importance of confidentiality."

Another connection between L'affaire Quackenbush and CPRA reform is that it was a failed attempt by a legislative watchdog unit two years ago to document early suspicions about the Insurance Commissioner that led the investigators to conclude that the CPRA was toothless. The department cited its very broad exemptions from the act in repeated letters rebuffing information requests from the Joint Legislative Task Force on Government Oversight.

As stated in the report it finally wrote, called "KEEP OUT: The Failure of the California Public Records Act":

"In November 1997, the Task Force undertook a review of the general policies and practices of the California Department of Insurance. Since his election to office in

1994, current Commissioner Chuck Quackenbush has come under continuous fire by consumer organizations and his own staff for instituting policies viewed as friendly to the insurance industry at a very high cost to consumers and ratepayers. Task Force staff began research on some of the criticized programs and policies with the intent of determining whether or not these criticisms were warranted...

"From November 1997 to January 1998, staff made several document requests pursuant to the provisions of the CPRA...for such public documents as copies of audits by the Department of Finance and California State Auditor, the minutes of meetings of advisory boards made up entirely of insurance agency representatives, copies of consumer satisfaction survey questions, etc.

"The Department did not respond to any of the requests in the timeframe required by law and, on January 16, provided a broad list of exemptions under which they denied all requests. However, none of the exemptions cited were tied to a specific request and none of the exemptions could be applied to any of the requested documents. Not one piece of requested information was provided to the Task Force."

To address various problems noted in the "KEEP OUT" report, Sen. Byron Sher (D-Palo Alto) introduced a bill to allow those denied public records access to get a second opinion from the Attorney General, and to allow judges to fine agencies which withhold records unlawfully and in bad faith. Gov. Davis vetoed that bill (SB 48), and its successor is now SB 2027, awaiting assignment to an Assembly Committee after having passed the Senate by a 31-6 margin on May 31.

But meanwhile the Department of Insurance stonewall was effective in blunting the task force's inquiry. That entity published no report, and Chuck Quackenbush was re-elected, with record-breaking contributions to his campaign coffers from the insurance industry.

COST-RELATED CHANGES SOUGHT FOR ELECTRONIC DATA ACCESS BILL (6/9/00)

Assemblyman Kevin Shelley's AB 2799, which would give requesters the right to receive government data in any electronic format used to maintain the information, may be amended soon in a subtle but significant manner. The upshot may be to end technical arguments about "creating a new record" and instead focus on cost and timing issues.

In its present form, the bill assumes that an electronic record either does or does not contain public information, and does not address the question of whether technical or procedural barriers inherent in the agency's information resources or practices may need to be dealt with. But after a recent meeting with several primarily local government associations, led by the California State Association of Counties, there seemed to be a consensus that instead of letting these considerations be a flat barrier to access, the legislation should allow for extra time, extra charges or both in order to

allow for extracting never-before-released information.

The draft amendment being circulated by John McKibben of the executive offices of Los Angeles County has the following elements:

Time Extension: The California Public Records Act now allows an extension of up to 14 days (in addition to the initial 10-day period) for an agency to make release determinations if the records request is voluminous, if the records are stored remotely or if other agencies must be consulted to determine possible exemptions. The CSAC proposal would justify the extra 14 days also to deal with the "need to compile data or to write programming language to extract data."

Processing Costs: Whenever something above and beyond a simple "duplication" analogous to paper copying would be required to fulfill an electronic records request, the associated extra cost could be charged to the requester:

"The requestor shall bear the cost of producing the record, including the cost to construct a record or the cost of programming and other computer services necessary to produce the record when:

In order to comply with the provisions in subdivision (a), the public agency would be required to produce a copy of an electronic record and the record is one that only is produced at otherwise regularly scheduled intervals; or

The request would require data compilation, extraction, or programming to produce the record."

Inherent Obstacles: Some government databases, for example some used by law enforcement agencies, do not permit copying, and in other cases information is carried in programs that can be run only via programs controlled by license. In such situations the following language would apply:

"Nothing in this section shall be construed to require the public agency to release an electronic record in the electronic form in which it is held by the agency if its release would jeopardize or compromise the security of the record, of any proprietary software in which it is maintained."

SHELLEY'S BILL ON ELECTRONIC RECORDS PASSES FISCAL COMMITTEE (5/19/00)

A bill intended to make public information stored in digital form accessible to the public in any computer format used by the custodian agency advanced toward the Assembly floor May 17 with its 17-2 passage out of the Assembly Appropriations Committee. The bill would also ban "delay" in providing access and require denials to be put in writing.

Voting Yes on passage of AB 2799 were committee members Migden, Campbell, Alquist, Aroner, Ashburn, Cedillo, Corbett, Davis, Kuehl, Maldonado, Papan, Romero, Shelley, Thomson, Wesson, Wiggins and Zettel. Voting No were Ackerman and

Brewer, and absent, abstaining or not voting were Runner and Wright.

A.G.: POLICE PERSONNEL FILES CAN BE TRASHED AFTER FIVE YEARS

(5/19/00)

California law enforcement agencies can destroy their internal affairs investigative files five years after being completed, and most peace officer personnel files five years after the subject is no longer on the agency's payroll, according to a recent opinion from the office of Attorney General Bill Lockyer. But destruction must not be in "bad faith."

In the May 2 opinion (No. 99-1111) written to answer questions by Ventura County District Attorney Michael Bradbury, Deputy Attorney General Gregory L. Gonot noted that a challenging party (such as a criminal defendant seeking such information to support his or her case) would have the burden to show "bad faith" on the part of a department in destroying such records after the statutory five-year period - so long as the destruction had been done as part of a routine and generally applied administrative process.

State law requires preservation of such records for a minimum of five years. But so long as destruction is a routine procedure thereafter, in other words, the fact that it deprives the defendant of useful information will not be treated as a denial of due process.

[Back to top](#)

COURT: ROUTINE COP STOP NO BASIS FOR INVESTIGATIVE EXEMPTION

(5/12/00)

When police stop a motorist out of misplaced suspicion triggered by an informant's tip and release the driver and passengers after a brief confrontation, any records relating to the stop or what led to it are not exempt from disclosure as investigative documents. But if the driver files a citizen's complaint, the paperwork then generated is a different story.

So concluded the California Court of Appeal for the Second District in its opinion filed May 2 in Haynie v. Superior Court, case no. B137707. Elgin Haynie had the misfortune of driving a van with three passengers shortly after Los Angeles County Sheriff's deputies on patrol heard a citizen's description of a similar vehicle in the neighborhood, into which several men with guns had just entered. One deputy later said he saw Haynie and his passengers behaving furtively, and pulled the van over.

The passengers were female, there were no weapons and the stop was obviously mistaken, but in the meantime Haynie became "argumentative," and was briefly handcuffed. He was then uncuffed and the officers left without further official attention, only to return shortly thereafter and find Haynie "attempting to inflict injury on his wrists by striking the pavement." The officers called for a supervisor and a paramedic and some photos were taken to establish that no serious injury had occurred.

That all occurred on July 1, 1999. Eleven days later Haynie's lawyer contacted the department, identified the deputies in the incident, and sought a variety of paper records and tape recordings documenting the informant's tip, patrol car radio traffic, statements made at the stop and even Haynie's later statements to the departmental investigator following up on his citizen's complaint.

The department denied the requests, characterizing the information sought as exempt as investigative records of a law enforcement agency, as relating to citizen complaints against a peace officer, or both. When Haynie sued, the county shifted its grounds to a combination of law enforcement investigation and pending litigation exemptions, dropping its reliance on the peace officer personnel file exemption. The trial court essentially upheld the court's position.

On appeal, the Second District agreed that the investigative exemption would apply to any records generated by Haynie's complaint after the incident, including a tape recording made of his debriefing by a sheriff's investigator.

But since there was no "concrete prospect of enforcement" involved in the van stop, any records pertaining to that incident before Haynie made his complaint would be available and not protected as part of an investigative file. Nor would the pending litigation exception apply, since no records created at the time of the stop were in anticipation of a lawsuit.

Finally, the court held that Haynie was entitled to the attorney's fees he sought because he had established that the stop-related records were public - even though, as the county suggested, there might be no surviving records concerning the stop itself.

PAPAN BILLS ON COURT OPINIONS, NET REPORTS MEET SEPARATE FATES (4/28/00)

Assemblyman Lou Papan's AB 2404, which calls for all opinions of the state's appellate courts not contained in the official reports to be made available through

private publishers, failed its first committee test this week. But his AB 1759 got out of committee as amended; it would require state agencies to list their studies and reports on the Internet.

The court opinions bill failed passage 9-3 in the Assembly Judiciary Committee on Tuesday, April 25. It was backed by those who felt the public and the legal profession should know what appellate courts have actually held in all their cases, even though opinions not officially published would have had only persuasive - not mandatory - weight as precedent.

Chief Justice Ronald George, for whose court the power to depublish lower court opinions is a major tool for controlling the direction of case law without having to explain why, strongly opposes the idea.

Papan's AB 1759, however, passed the Assembly Committee on Information Technology 5-0 on Wednesday, April 26, but was amended to remove a central ambiguity. As presented to the committee, the bill was not clear on whether it would require state agencies actually to publish their studies and reports on their Internet sites (if they had any), or simply to list them as completed and available. This week's amendments made it clear that the latter is the case.

[Back to top](#)

SHELLEY DUMPS 'REVERSE BALANCING TEST' TO SAVE E-ACCESS BILL (4/28/00)

Hitting an effective stone wall of opposition from public agencies and private associations of insurance companies, Assemblyman Kevin Shelley dropped a provision of his AB 2799 that would have allowed courts to override certain exemptions from the California Public Records Act if and when the public interest in disclosure was weighty enough.

Such instances, although rare (applicable only in cases where the agency controlling the record had the discretion to release it, but declined), would have represented a counterbalance to current law. The Act now provides that even when a record would normally be public because no explicit exemption from disclosure applied, an agency may still deny access if it decides that the public interest in non-disclosure outweighs the interest in disclosure.

By the time of the Monday, April 24, hearing in the Assembly Committee of Governmental Organization, it became clear to Shelley that the opposition's lobbying efforts had been lethally effective. An easy majority of the committee, which despite its name typically concentrates its attention on contribution-sensitive vice regulation (liquor, gambling, horseracing), was susceptible to the chorus of public and private

lobbyists, predicting dire consequences if courts were allowed to use public interest balancing to open records as well as to shut them.

Shelley's readiness to jettison the "reverse balancing test" stemmed from his concern to preserve momentum on the bill's other major provision - the third legislative attempt to provide ready access to computerized public records in whatever format used by the agency itself.

None of the opposition lobbyists showed problems with this aspect of AB 2799 (two bills to the same effect passed the legislature without much controversy in recent years, only to be vetoed by Governors Wilson and then Davis). But nonetheless, Shelley could not round up enough support in the hearing or during the rest of the day to get the bill out of committee. It will likely be back in the committee on May 8, probably for a vote only.

[Back to top](#)

DATA CLAMP: INDUSTRY'S WORST CASE CHEMICAL ACCIDENT SCENARIOS (4/28/00)

The federal government, wanting to keep sunshine policy from helping shady characters, says you have a right to know whether your home and community are in the affected plume of a "worst case" catastrophic chemical release. But because the public can't be trusted not to harbor terrorists, you shouldn't get this information easily or anonymously.

That's the thrust of regulations proposed yesterday (April 27) by the federal Environmental Protection Agency (EPA) and the Department of Justice, to be set for hearing in Washington, D.C. on May 9 and open for written public comment until June 8.

1990 amendments to the Clean Air Act require the EPA to collect risk management plans from plants using listed hazardous chemicals. Included in the plans are "offsite consequence analyses" showing how the neighborhood might be affected by a leak, spill or other accidental and toxic release. At one point the plan was to put all of these reports on the Internet for maximum public attention, but that idea was quashed by the fear that terrorists might use the information to plan bombing or other attacks calculated to affect a specific zone.

Now EPA and Justice, according to an alert from the nonprofit organization OMB Watch, propose that key portions of the offsite analyses be confined to paper and kept in federal and local reading rooms, at sites not yet described, where inspection would be by driver license identification-backed sign-ins only.

Confined to this mode of access would be information showing, for each offsite analysis, what chemical is involved, the assumed release rate and duration, the distance to the zone of vulnerability and within that zone the population, public facilities such as schools, shopping centers and parks, and maps and other graphical information. Viewers would be allowed to take notes but not make copies, and a log would be kept of exactly who had seen the analyses of exactly which industrial facility.

OMB Watch says that the reading rooms would probably not be in libraries, since the American Library Association last year took the position to oppose controls on public access to such analyses.

Further information is available at <http://www.ombwatch.org/info/rmprulesum.html> or by contacting Rick Blum, blumr@ombwatch.org.

[Back to top](#)

MEASURE WOULD REQUIRE "LISTING" OF STATE AGENCY REPORTS ON NET (4/21/00)

A bill to require every state agency with a Web site to "list" on it all its reports or studies is set for hearing Monday, April 24 in the Assembly Committee on Information Technology. AB 1759 by Assemblyman Lou Papan (D-Millbrae) is prompted by last year's disclosure that the Department of Health Services quietly failed to publicize inconvenient poll data.

It was revealed in a report by the Auditor General that the department failed to disclose the fact that a poll it had taken to assess the feelings of bar owners toward the ban on smoking came up with general lack of support. This outcome undercut the official line that bar proprietors were satisfied or even happy with the prohibition, and while the department did not turn down requests for poll results, it apparently never got any requests because no one outside knew a poll had been taken.

Papan's AB 1759 is so far unclear on whether the reports and studies themselves would have to be fully posted. The word used in the bill is "listed," suggesting that a one-line title or thumbnail description might be sufficient. In any event, the bill requires the listings to include not only completed but in-pipeline reports and studies, to be refreshed every 10 days to "list" also completed or updated documents.

A pre-hearing amendment by the author clarifies that the bill would apply to reports and studies prepared by contract consultants as well as agency staff.

Comment: This bill would represent a watershed advance in the California Public Records Act, which up to now has been an information-upon-specific-request law with

no duty on the government's part to alert the public as to what information is available. To make this transition far more useful, however, the bill should require creation of a central Web site to house all state-generated reports and studies, cross-referenced to the originating agency's Web site. Just as it does little good to deem a report accessible to the public if no one knows it exists, it does little good (except for insiders) to require disclosure on each of scores of Web sites if no one knows that they exist.

[Back to top](#)

BILLS WOULD BROADEN, RESTRICT ACCESS TO HATE CRIME INFORMATION (4/21/00)

Two bills, both having passed their first committee hurdles in Sacramento, would affect public access to information about hate crimes. One would require convicted hate crime felons released from prison to register locally, like sex offenders, in a confidential file. The other would add school hate crimes and incidents to publicly accessible summary reports.

AB 1809 by Assemblyman George Runner (R-Lancaster), a bill to establish a statewide hate crimes database in the Department of Justice, passed the Assembly Public Safety Committee on a 7-0 vote on March 14.

"The lack of a specific hate crimes database makes it difficult for law enforcement to identify potential hate crime offenders or to coordinate statewide efforts against violent hate crimes," Runner said. "A hate crimes database would assist them in combating this type of violent activity."

Runner's measure would require those convicted of serious hate crimes -- or property crimes against religious organizations inflicting more than \$5,000 in damage -- to register as hate crime offenders, upon conviction or release, for ten years. The database would, however, be open only to law enforcement officials.

The Los Angeles County Sheriff's Department, sponsor of the bill, says current hate crime statistics can be unreliable because the methods of reporting crimes often vary from agency to agency and the data have not been collected long enough to indicate any strong trends.

A hate crimes database, it believes, will provide an automated and standardized method of gathering and retrieving hate crime information on a statewide basis to be used as a tool by law enforcement officials to track and reduce "hate activity."

The bill is opposed by the American Civil Liberties Union and the California Public Defenders Association. Despite the committee's unanimous passage vote, the analysis of the bill noted that registries of this sort are traditionally used to keep tabs on felons convicted of crimes with high recidivism rates (e.g. sex and drug offenses, arson). "The Committee has not received any information to confirm whether individuals who

commit hate crimes tend to re-offend at high rates..."

The bill has reached the Assembly Appropriations Committee, and there been placed on the suspense file to await further information on available funding. The same is true for Assemblyman Antonio Villaraigosa's AB 1785, which passed the Public Safety Committee 7-0 on March 2.

This bill would add hate crimes and "hate-motivated incidents" to the list of offenses occurring on campus which schools must now report to district and county superintendents, and the latter must report in aggregate form to the State Department of Education, which must then provide statewide summary reports to government and other groups as well as the legislature. All district, county and statewide aggregate reports are now public records and would remain so under AB 1785.

"Hate crimes," for purposes of the Villaraigosa bill, would include any "act or attempted act against the person or property of another individual or institution which in any way manifest (sic) evidence of hostility toward the victim because of his or her actual or perceived race, religion, disability, gender, nationality, or sexual orientation."

A "hate motivated incident" is much more likely to be a speech act, since it includes using "bigoted insults, taunts or slurs, distributing or posting hate group literature or posters, defacing, removing or destroying posted materials or announcements, posting or circulating demeaning jokes or leaflets."

This bill is co-sponsored by the California School Employees Association (school workers other than teachers, administrators or counselors) and the Anti-Defamation League. The latter, says the bill's analysis, states that for more than 15 years it has been training school officials how to handle and prevent hate crimes, but "the most common complaint at these sessions is fear of being singled out as a problem school by the district if a hate crime is reported." Mandating all schools to report the information should help solve that problem, the ADL believes.

Comment: Is the "hate motivated incident" category biting off more offensiveness than any school can be expected consistently to process? "Retard," "faggot," and the N-word are as casually employed -- often with no serious or literal reference to their target -- among adolescents as other unpleasant names. Is each one to generate a report even if not motivated by discriminatory intent? On the other hand, what about slurs, sneers and other abuses such as those which, as in Columbine High School and elsewhere, occasionally have spectacularly destructive consequences even though not targeted at race, religion, sex or the other targets of traditional bigotry, but instead at a behaviorally defined out-group?

REVIVED CONTROVERSY IN COURT, CAPITOL ON UNPUBLISHED CASE

LAW (4/21/00)

Anyone walking the stacks among official case reports in any law library might be surprised to learn that the California appellate courts now publish only about seven percent of their opinions. The rest are either deemed not for publication by the issuing courts or later "depublished" by the California Supreme Court. Some say that practice must change.

One is Lou Papan (D-Millbrae), a veteran member of the State Assembly, whose AB 1759 will go to its first hearing Tuesday (April 25) in the Assembly Judiciary Committee. His measure would not expand the scope of official reports and would leave with the courts the discretion they have under the state constitution to decide what cases to publish as mandatory precedent.

But the bill would state, however:

"All final opinions of the Supreme Court, of the courts of appeal, and of the appellate divisions of the superior courts shall be made available for private publication, in full; and shall constitute precedent under the doctrine of stare decisis the same as opinions published in the official reports."

One reporter for the Daily Journal Corporation has speculated that what the bill may eventually provide is for publication on the Internet -- to avoid the pulp-waste arguments of opponents -- and for designating the unpublished works as citable, but not mandatory, precedent -- something like the published case law of another state's court.

The person most identified for the publish-it-all movement, which has its periodic crests and has reached one recently, is Emeryville attorney Michael Schmier, who ran for state attorney general in the last election on the following single plank:

"The California Supreme Court has caused a major defect undermining our legal system. I want it fixed now. Appellate court rulings are no longer published for all to see. Secret rulings do not serve as future guidelines, even in the same court. They enable judges to ignore the law, knowing this injustice is hidden. Corruption and arrogance fester at every level because precedent is destroyed. Feedback to the public, necessary to prevent abuses, is prevented. I will ensure that this and other justice flaws are fixed, not buried. The foundation of law and order is order under law."

Schmier is not alone in his critique, which has its scholarly supporters (see <http://www.schmierforag.com/lawrev.html>). But his chief adversary on this issue may be California Chief Justice Ronald George, who is particularly impatient with the notion that the courts have something to hide.

"The phony business is the issue of secrecy," he told the Daily Journal. "It's unfortunate (the opinions) are denominated published or unpublished, but they're still there in written form."

Schmier, arguing that discretionary publication of appellate opinions ran afoul of the

state constitution, sued for an injunction but lost, with the trial court's denial upheld by the Court of Appeal for the First District in a (published) opinion by Justice Zerne P. Haning in *Schmier v. California Supreme Court*, Case No. A085177 (2/28/2000).

Justice Haning's exasperation with Schmier's basic premise was evident:

"Appellant either misunderstands or ignores the realities of the intermediate appellate process. If appellant's view prevailed, the Court of Appeal would be required to publish all *Wende* opinions. As every criminal lawyer knows, a *Wende* case is one in which appellate counsel in a criminal appeal advises the court that no arguable appellate issues can be found, thereby invoking the obligation of the Court of Appeal to conduct an independent review of the record. A typical *Wende* opinion merely recites that the court's independent review has revealed no arguable issues.

"We have appeals from criminal defendants who enter into plea bargains in which they agree, for example, to accept the midterm as their sentence, and then appeal contending the court abused its discretion by sending them to prison. We also have appeals in criminal cases which challenge the constitutionality of the reasonable doubt instruction, in spite of the fact that every appellate court which has ruled thereon has found it to pass constitutional muster....

"We have appeals in family law cases where the trial court has divided the community assets equally, as it is required to do; but one of the parties nevertheless appeals for reasons having nothing to do with the law or the facts, conceding the equal division, but contending he or she failed to receive one of the assets that party wanted. We have appeals from parties seeking relief based on matters outside the appellate record, which we cannot review. We have appeals from nonlawyers appearing in *propria persona*, filing incomprehensible briefs with no understanding of the rules of appellate review, urging us to reweigh the evidence and reject, for example, the testimony of the six witnesses who said the traffic signal was red rather than green when appellant drove through it and struck the pedestrian in the crosswalk.

"Our typical opinions in such cases add nothing to the body of *stare decisis*, and if published would merely clutter overcrowded library shelves and databases with information utterly useless to anyone other than the actual litigants therein and complicate the search for meaningful precedent. Appellant fails to explain how or why such opinions contribute to the *corpus juris*."

Comment: While, as Justice Haning's litany of dubious appeals demonstrates, the range of substantive and cite-worthy cases any private publisher might be interested in could be a small fraction of the universe, Papan's bill and Schmier's complaint have a point. While the rules for deciding what does and does not merit publication are clear and objective enough, most lawyers know that what ends up in the official reports can be often fairly arbitrary. In CFAC's experience, for example, two appellate districts reached opposite decisions as to the application of the Brown Act to corporations created to manage hospital district facilities. One opinion, holding that such corporations are subject to the Act, was not published. The other to the contrary was.

This practice saves the supreme court from the pressure to resolve conflicting intermediate appellate case law, but does that virtue alone justify it? Two other Brown Act cases from the Second and Fourth Districts have more recently been kept unpublished, both of which would have advanced the definition of that statute. Given the infrequency with which the Brown Act is ever litigated to the court of appeal and the motivator of making new case law which is precisely so often predominant in public interest litigation (money certainly isn't), the present system is not rational in effect and results in far less guidance to the public and the courts than could and should be the case.

DATA FIRM AGAIN IN COURT FOR ACCESS TO ADDRESSES OF ARRESTEES (4/21/00)

United Reporting Publishing Corp., which last year lost its bid in the U.S. Supreme Court to establish a constitutional right of access to addresses of those arrested, is back at the U.S. Ninth Circuit Court of Appeals with a renewed try. This time the company shifts the emphasis of its argued rights to commercial speech grounds -- and its journalistic role.

In its decision last summer the high court refused to find unconstitutional on its face a provision of the California Public Records Act which affects access to arrest information held by police agencies.

That statute, Government Code Section 6254(f)(3), requires those seeking the home addresses of crime victims or persons arrested to declare under penalty of perjury that the information is sought for a journalistic, scholarly, political, governmental or private investigator's purpose and will not be used, directly or indirectly, to sell a product or service to one or more individuals.

United Reporting, part of whose business it is to sell arrestees' names and addresses in particular to attorneys, alcoholism counselors and others with a service to provide to them, failed to convince the court that the law is unconstitutional on its face as a restriction of pure speech.

But the justices did not address alternate theories for attacking the statute, such as its intrusion into protected commercial speech or its unconstitutional impact on United Reporting as applied by the police. Nor did it consider whether the law might run afoul of California's own constitutional protection for speech.

These are the grounds on which the company now takes the case up again on remand from the supreme court. In its brief filed with the Ninth Circuit, United Reporting contends that that court's earlier decision on commercial speech grounds was correct.

That is, even granted the lower caliber of First Amendment protection for

communications which carry no ideas or esthetic content but simply "propose a commercial transaction," this law accomplishes the ostensible objective of protecting privacy only in such a partial way as to be irrational.

It allows journalists, scholars, politicians, public officials and private detectives to do what they want in publicizing arrested people's identities and home addresses, but "protects" those in legal trouble only from a certain species of junk mail: offers of direct help from those who can provide it.

Nor has the Los Angeles Police Department ever presented evidence, the company notes, either that arrestees complained of receiving solicitations triggered by commercial access to their addresses, or that a simple opt-out system would not suffice to protect those with privacy anxieties.

Another ground for challenge argued is that the company maintains a Web site on which the data are displayed for anyone to see -- as "news." But even while it would qualify for the data as a journalistic enterprise, it dares not swear that others will not use it for the forbidden purposes, and this barrier disables its access for even the permitted purposes.

Finally, United Reporting asks the court to find that California's own constitutional protection for speech -- held in several cases to be more ample than the First Amendment -- renders the statute invalid.

Meanwhile, the company continues to seek financial support to wage the battle on two fronts: an estimated \$70,000 war chest for litigation and a separate \$25,000 fund for seeking a legislative remedy should it become necessary.

CITY SAYS IT'S HEADED TO SUPREME COURT TO AVOID ATTORNEY'S FEES (4/14/00)

The City of Richmond, battling a public records quest by the San Francisco Bay Guardian for the past seven years, spent the first three losing its attempt to keep all police records away from the newspaper, and the last four losing its attempt to duck paying the paper's attorney fees. It now vows to fight the fees to the last taxpayer dollar.

It has announced, that is, that having lost on the fee issue repeatedly in the California First Appellate District, it will now seek review from the California Supreme Court.

The issue is not the city's duty to pay any fees at all claimed by attorneys with the Oakland-based First Amendment Project, who represented the Bay Guardian. That was the city's original position, but the court of appeal has made it clear that in being entitled to some records, the newspaper had sufficiently "prevailed" as a plaintiff.

The issue now is whether an attorney fee bonus, in effect, should be added to the claimed hourly fees, in order to reflect the complexity of the case and how hard the city resisted yielding any information.

This "lodestar" approach allows a multiplier add-on to encourage law firms to develop the special background needed to wage complex public records cases for citizens and media effectively. In this instance the court of appeal, in the most recent of three times it has addressed this case, approved a trial court calculus giving the First Amendment lawyers 1.5 times their claimed fees, for a lodestar total of \$167,864. That amount, they predict, will swell closer to \$200,000 when their latest fees spent to protect their earlier fees are turned in.

The Bay Guardian in 1993 sued Richmond to get records bearing on excessive force and racially-based abuse complaints against the police department. It did not get nearly all of what it sought -- the First District ruled that most of the information was confidential under the Penal Code protection for peace officer personnel files. But the court left some leeway concerning certain information, and in a settlement the city provided copies of 500 pages.

Then the project attorneys claimed their fees, and the city has been fighting to avoid them ever since: initially on the basis that the newspaper never "prevailed" and more recently on the lodestar multiplier.

UKIAH BUSINESSMAN WINS BACKDOWN FROM COUNTY ON ACCESS FORM (4/14/00)

When a Ukiah building contractor wanted to see records that might show why a consultant's 180-day assignment to design road development standards was still apparently unfinished two years after the contract award, the county said he'd have to swear in writing he would not sue. He refused and got a lawyer instead, and it worked.

Lee Howard, a CFAC Associate member and a leader in keeping the Mendocino County business community aware of its public information rights, was told by the county department of transportation that records on the road development standards contract would be available to him only if he certified in writing that he would not use the information in litigation against the county.

Howard contacted attorney Neil Shapiro of the San Francisco law firm of Landels, Ripley and Diamond, who sent County Counsel H. Peter Klein a tough letter. "Mr. Howard is not obligated to make any such certification, the County's refusal to grant him access to the records he requested is without legal justification, and unless access

is made available to him forthwith, the County can expect litigation," Shapiro wrote.

A day after getting the letter, Klein memoed the transportation director, informing her that the new records request form was "too restrictive in requiring a requester's certification," and acknowledging that the California Public Records Act's pending litigation exemption, which supposedly was the basis for insisting on the promise not to use the records in a lawsuit, is "limited to documents specifically prepared for...or where the dominant purpose behind preparation of the document was (to be) used in litigation." He directed that Howard be given access without certification as soon as possible.

PASADENA PARENT WINS DATA BASIS FOR "SIMILAR SCHOOLS" RATINGS (4/14/00)

When State Superintendent of Public Instruction Delaine Eastin acknowledged that the "similar schools" sector of the recently published statewide school performance rankings would need a little work, Pasadena school watchdog Rene Amy wanted to know why. He asked for the underlying data, was told "No," filed suit, and now has been given the data.

Two weeks before the April 21 date set for a court hearing in Amy's California Public Records Act suit against Eastin and the State Department of Education, late last week Deputy General Counsel Michael Hersher said the information on which schools were assigned to "similar" socioeconomic ranking groups would be forthcoming after all. But because no actual list of names had ever been scanned by human eyes in the department, Amy would have to analyze and derive that information himself -- all 7,000 schools worth. This he plans to do, and put the results on the Internet, he says.

Amy, an Associate member of CFAC who not long ago lost a runoff election for a seat on the Pasadena Unified School District Board, more recently won a federal court lawsuit against the district, ending race- and gender-based school admissions policies. As for Eastin, Amy remarks on the irony that it was he who two years ago organized the only public debate in the Los Angeles area between her and her challenger for the top schools post, Gloria Matta Tuchman.

Amy decided to sue for the "similar schools data" when questions were raised, as he says, as to "just what makes these schools 'similar?'" How the clusters of supposedly comparable schools, used as a more real-world measure of status than the brute top-to-bottom decile rankings on the Academic Performance Index, were derived was an item of curiosity not only to Amy, but to at least two newspapers whose own public records requests were similarly turned down: the Contra Costa Times in Walnut Creek and the North County Times in San Diego County.

The Eastin and the department took the position that releasing the data basis for the flawed information, which the state was in the process of correcting for release April 27, would cause the public harm, and that on that account the public interest in non-disclosure outweighed the public interest in disclosure.

But in his announcement to Amy's attorney, Kevin Snyder, Deputy General Counsel Hersher said, "We never actually produced the 100-school lists (in each of the 68 "similar school" clusters) in hard copy or in a computerized report that could be read or printed as a list. OPE (the department's Office of Policy and Evaluation) was planning to develop software (to produce school-identifying lists). But when the error factor cropped up, it became a moot issue."

On publication of the original API, many parents and others questioned the rationale for grouping certain schools with others as "similar" in some relevant manner. The department soon admitted its analysis was flawed and called on districts to re-submit their socioeconomic data.

Attorney Snyder, based in Springfield, Missouri, represented Amy in the federal court suit on discriminatory school admissions. He took this case without charge to Amy, but will be seeking attorney's fees from the state.

SHELLEY BILL'S "REVERSE BALANCING TEST" SPARKS FLAT OPPOSITION (4/14/00)

Turning the tables on public agencies' ability to find an overriding public interest in keeping a normally public record secret has brought flat opposition from many of those agencies, as well as some private sector interests. Accordingly, Assembly Member Kevin Shelley's AB 2799 was not heard as scheduled on April 10, but is re-set for April 24.

The bill would require public agencies to provide copies of computerized records in whatever format was both used by the agency and specified by the requester. It would also reaffirm that agencies may not use provisions in the California Public Records Act solely to delay disclosure.

But its clearly most controversial provision is its proposed reverse or reciprocal public interest balancing. Currently public agencies may cite the overriding public interest as a basis for not releasing a record even though its information is not covered in any specific exemption from disclosure.

AB 2799, rather than repealing that provision, would add a reciprocal rule authorizing

a court to order disclosure of a record ordinarily up to the agency's discretion to release or not, if the public interest would be better served by disclosure.

A court could decide, for example, that under given circumstances the public interest in knowing the information would be high enough, and the injury to any public or private interest unlikely enough, that a pre-decisional draft, a document exchanged between the government and some entity it was suing, a public executive's performance evaluation or the record of a long-closed criminal investigation should be available for public scrutiny.

But late last week, only days before its scheduled April 10 hearing in the Assembly Governmental Organization Committee, the bill began drawing fire from two distinct but complementary interest groups.

Local public agencies, represented by the League of California Cities, the California State Association of Counties, the California Association of Sanitation Agencies, the California State Sheriffs' Association and Gary Penrod, Sheriff of San Bernardino County, displayed general dismay at the notion that an agency's discretion to withhold a record might be second-guessed by a court in given circumstances.

But a second tier of opposition, represented by the Personal Insurance Federation of California and the Association of California Insurance Companies, was worried not about government files per se but rather the private commercial -- proprietary -- information submitted to the government for regulatory purposes, in this case especially by life and other insurers.

At a meeting yesterday, April 13 in the offices of the California Newspaper Publishers Association, lobbyists for these and other opponents gathered to assure CNPA and Shelley's staff that they would accept no compromise on the balancing test provision. Most took the position that public agencies do not have discretionary exemptions -- that all exemptions from the public records law are in fact flat prohibitions against disclosure.

[Back to top](#)

SHER BILL ON ATTORNEY GENERAL REVIEW GOES ON "SUSPENSE" FILE (4/14/00)

The Senate Appropriations Committee sent Senator Byron Sher's SB 2027 to its "suspense" file Monday, April 10 because of its estimated cost. The measure, which would authorize the attorney general's office to review decisions by local and some state agencies denying access to government records, will probably be voted on late in May.

The committee's suspense file is where bills likely to cost the state more than \$150,000 get parked until the state's revenue picture becomes clearer, particularly regarding new programs. This bill's nearly identical predecessor, SB 48, went on the suspense file at about the same time in 1999 before being approved by the committee.

SB 48 was vetoed because of Governor Gray Davis' objection to what he called a conflict of interest. The attorney general's office advises most executive branch agencies on the law and represents them in litigation, including suits brought under the California Public Records Act.

Having the same office issuing public opinions potentially disagreeing with a state agency's withholding of a public record would be an undesirable situation, even if, as SB 48 provided, the attorneys reviewing the denials would be insulated from those providing the advice and representation.

Sher's' approach in SB 2027 is therefore to provide that the attorney general review process would not be available for any state agency advised or represented by the attorney general -- which means most of them. But local agency denials would all be reviewed.

The bill would also, like SB 48, permit a judge to penalize a public agency found to have not only incorrectly but willfully withheld or delayed access to a public record. The fine of up to \$100 for every day of such bad faith conduct would be awarded to the requester, in addition to court costs and attorney fees.

[Back to top](#)

TWO KEY PUBLIC RECORDS ACT BILLS FACE COMMITTEE ACTION MONDAY (4/7/00)

Two measures that would make significant improvements in the effectiveness of the California Public Records Act will be up for hearing in separate Capitol committees on Monday, April 10. One would allow courts to order release of some normally closed records, and the other would allow attorney general review of records access denials.

The first bill, AB 2799 by Assemblyman Kevin Shelley (D-San Francisco), is to get its first policy hearing in the Assembly Committee on Governmental Organization. The measure would authorize courts to order release of records governed by a discretionary exemption - where the public agency possessing them has a choice to release the material but opts to withhold it.

Just as a current provision of the California Public Records Act allows an agency to deny access to normally public files on the basis that under the circumstances the public interest in secrecy outweighs the public interest in disclosure, a court could decide that normally exempt files should be opened in the public interest. This rule would not affect records whose disclosure is flatly prohibited.

The public interest balancing provision might mean, for example, that a city council's scoring sheets used to evaluate the performance of a city manager could be ordered released, where surrounding circumstances - say an extraordinary pay increase out of line with comparable compensation standards - raised significant public concern. Or law enforcement investigative files concerning a closed case might be deemed of overriding public concern if other circumstances raised questions of a miscarriage of justice or prosecutorial mishandling.

The bill would also require agencies to provide access to electronic data in the form designated by the requester, if the agency maintains or uses the data in that form. Current law, adopted in 1968, allows the agency to decide in which form it will release computerized information. On the same day, SB 2027 by Sen. Byron Sher (D-Palo Alto) goes to the Senate Appropriations Committee, after having been passed by the Senate Judiciary Committee 6-0 in late March.

SB 2027, a retooled version of the senator's vetoed SB 48 of last year, would create attorney general review of public agencies' denial of public records, and would also allow courts to penalize public agencies which had withheld records in bad faith by a fine of up to \$100 for each day of such misconduct.

Gov. Gray Davis vetoed SB 48 because he did not want the attorney general, whose lawyers normally advise and represent state executive branch agencies in public records disputes, in the position of possibly ruling against such agencies' denials. The new Sher bill attempts to satisfy that objection by exempting from attorney general review any agency normally represented by that office.

Under this legislation the attorney general's review opinions, due in 20 to 40 days after

being requested, would not be binding on agencies but would provide both sides with guidance on the soundness of the denial.

MAYOR WILLIE BROWN BACKS OFF RECORDS DESTRUCTION PRACTICES (4/7/00)

In a response to both journalistic pressure and threatened litigation by the San Francisco Bay Guardian, supported by the California First Amendment Coalition, Mayor Willie Brown's administration has agreed to abandon its practice of destroying appointment calendars in as little as 15 days after creation - but instead save them for two years.

In conducting research for its annual Freedom of Information issue in March, the Bay Guardian discovered that the mayor was destroying his appointment calendars after 15 days, and Department of Public Works Director Mark Primeau was destroying his after 30 days.

The paper called for the destruction to stop and threatened legal action, citing San Francisco's Sunshine Ordinance, in a letter from its attorney, Thomas R. Burke of Davis Wright Tremaine.

Proposition G, approved by San Francisco's voters in November to expand the city's Sunshine Ordinance, requires that appointment calendars be maintained as "public records." State law requires that public records be maintained for at least two years.

Burke received word on April 4 from Deputy City Attorney Jackie Minor that Mayor Brown and each of the department heads in San Francisco will retain their appointment calendars for a minimum of two years.

San Franciscans have had a Sunshine Ordinance since 1993, but passage of Proposition

G, on a 58 to 42 percent vote margin, extended that law to open up official meetings and records more than in any other community in California, and probably more than in any other community in the nation, according to Terry Francke, general counsel for CFAC and co-drafter of the proposition.

COMMENT: This is the first known time that a mayor's appointment calendar has been made public since *Times Mirror v. Superior Court*, a decision of the California Supreme Court of 1990, when the Los Angeles Times unsuccessfully sought access to Governor George Deukmejian's appointment calendars. The different result in San Francisco stems from Proposition G, which in reaction to the Times case specifically requires that officials' appointment calendars be considered public records and prevents the city from invoking the deliberative process privilege - the underlying legal rationale for such secrecy - in any context.

[Back to top](#)

A.G. REVIEW OF RECORDS DENIALS ROCKETES THROUGH FIRST HEARING (3/31/00)

A bill that would have the attorney general reviewing denials of access to public records, and that also would allow judges to punish bad-faith denials with a fine, went out of its first committee hearing on Tuesday, March 28 on a 6-0 vote with no testimony requested. The measure is a retooling of last year's SB 48, vetoed by Governor Gray Davis.

Author Byron Sher (D-Palo Alto) explained to the committee that the new SB 2027 attempted to accommodate the governor's objection concerning conflict of interest - that the original bill might have resulted in the attorney general reviewing denial of a record by a state agency normally represented by the attorney general.

The approach taken in SB 2027, Senator Sher noted, was that a state agency which relied on the attorney general for advice or defense in public records access matters would not have its decisions subject to review by that office.

There were no opposition witnesses, and without asking for supportive testimony, the committee moved and voted the bill out. The six Aye votes were Senators John Burton (D-San Francisco), Martha Escutia (D-Montebello), Jack O'Connell (D-San Luis Obispo), Sher, Cathie Wright (R-Simi Valley), and Committee Chair Adam Schiff (D-Burbank).

Recorded as absent, abstaining or not voting were Senators Ray Haynes (R-Riverside), Bill Morrow (R-Oceanside) and Steve Peace (D-El Cajon). The bill now moves to the Senate Appropriations Committee, with no hearing date set.

[Back to top](#)

COURT: INTERNET POSTING OF DOCTORS' ADDRESS OF RECORD ALLOWED (3/24/00)

The California Medical Board's requirement that licensed doctors provide the board with a mailing "address of record" for official purposes, and the board's practice of posting those addresses on the Internet, does not invade the doctors' privacy or other rights, because the Board allows the option of listing a post office box instead of a street address.

So ruled the California Court of Appeal for the First District in its opinion filed February 18 in Lorig v. Medical Board of California, Case No. A086261.

The "address of record" is used for official board mailings to the doctor, as well as to inform the public as to how he or she can be reached. Until recently, for example, it was provided to those inquiring by phone to the board's Sacramento office - former patients and others with a need to contact the physician but lacking a current address.

In July of 1997 the board announced it would begin listing the same information on its

Internet web site, to allow round-the-clock access. Doctors were given until September if they wished to supply an alternate address of record for this purpose. They had the choice of listing the street address of their workplace or home, or a post office box, in which case their street addresses would be kept confidential.

Drs. Milton Lorig and Michael Burton, licensed by the board to practice in California and also apparently state or local agency employees, filed suit challenging the Internet posting. They argued that the practice violated the California Public Records Act, under which state employees' home addresses are confidential and information of a private nature generally is also exempt from disclosure. They also cited the Information Practices Act, which bars state agencies from releasing personal information about individuals without their consent.

But the trial court denied their motion for summary judgment, and instead granted summary judgment to the defendant board, concluding that the required address of record was an item of public information, such that disclosure violated no one's rights.

The court of appeal agreed, noting that the board did not compel submission of a street address if a doctor preferred using a post office box. It noted, in the words of Justice Sepulveda, that making the contact information public serves several "compelling" public purposes:

"It enables patients to locate medical records maintained by their former physicians. It establishes a certain and reliable location for effecting service of process on the licensee... It also helps to more accurately identify a particular physician (e.g., where two or more physicians share the same name) about whom a prospective or former patient may wish to inquire (e.g., to locate medical records, or to find out about a record of discipline or malpractice judgments for a given physician)."

On the other hand, the estimated cost of \$40 for an annual box rental was a modest outlay, the court believed, imposed only on those who preferred not to list a street address.

"When appellants' complaint is thus boiled down to its essence, it becomes clear that they are simply objecting to an economic burden (and a certain amount of personal inconvenience) that will result from the Board's policy with respect to posting licensees' address information on its Web site. In that regard, the Board has effectively forestalled the use of a home address for that purpose, and required each physician to maintain either a business address or a post office box for that purpose. However, this approach is neither unlawful nor arbitrary but, rather, a reasonable accommodation of the physicians' legitimate concerns about privacy and personal safety, the public interest in access to 'information relating to the conduct of the public' s business' ... and the Board's obligations with respect to disclosure of public information and the regulation of the practice of medicine."

[Back to top](#)

FIRST HEARING TUESDAY ON SHER'S NEW BILL ON DENIAL REVIEW BY A. G. (3/24/00)

Senator Byron Sher's SB 2027, a second attempt at getting authority for the attorney general to review denials of access to information under the California Public Records Act, goes to its first hearing Tuesday, March 28 in the Senate Judiciary Committee. The new measure attempts to overcome Governor Gray Davis's concerns with conflict of interest.

As used by the governor in his veto message on Sher's 1999 bill, SB 48, conflict of interest refers to the prospect of having a state agency - even the governor's office - that is normally represented by the attorney general suddenly viewed as in violation of the California Public Records Act as a result of the attorney general's denial review process.

SB 48 was intended to give those denied access to records by state and local agencies a measure of relief via a non-binding "second opinion" from the attorney general. It also would have authorized courts to award requesters a monetary penalty to be paid by agencies that deliberately stalled or denied access to records they should have known were open to the public.

But the governor did not want the attorney general reviewing denials of access by most state agencies, which now use the attorney general for advice and defense if they deny access to records. SB 48 tried to overcome that problem by simply declaring that there would be no conflict, since the lawyers involved in the review process would never be in the position of advising an agency on compliance. That was not good enough for the governor, who vetoed SB 48 last fall.

The approach in SB 2027, introduced on February 25, is to provide that attorney general review of records access denials will apply only to those state agencies that rely on their own counsel and not the attorney general for advice on whether to release a record.

For example, state agencies that have their own legal counsel include the University of California, California State University, Department of Transportation, Division of Labor Standards Enforcement of the Department of Industrial Relations, Workers' Compensation Appeals Board, Public Utilities Commission, State Compensation Insurance Fund, Inheritance Tax Department of the Secretary of State, State Lands Commission, Alcoholic Beverage Control Appeals Board and State Department of Education.

The bill's provision on this point states:

"Representation of a state agency by the Attorney General involving advice that a request for inspection or copies of public records be denied, in whole or in part, may provide a basis for that agency to claim an attorney-client relationship that would preclude the Attorney General from providing an opinion under this section. "

FEDERAL JUDGES APPROVE INTERNET POSTING OF THEIR FINANCIAL DATA (3/17/00)

Administrators of the federal court system this week abandoned their announced disposition to bar access to statements of judges' financial interests to anyone planning

to post them on the Internet. The about face, yielding to the request of APBnews.com, was clearly influenced by a message from the Chief Justice of the United States.

The announcement Tuesday, March 14 culminated a three-month impasse between APB and senior judges sitting on the Financial Disclosure Committee of the Administrative Office of the U.S. Courts, which led the online company to sue on First Amendment grounds. APB says it will stay in court to challenge other practices, such as forcing news organizations to pay for public documents.

Meanwhile APB employees are preparing to scan onto their Web site (<http://www.APBnews.com>) more than 12,500 pages of financial disclosure records for every active and semiretired federal judge.

Chief Judge Ralph Winter Jr. of the 2nd Circuit Court of Appeals in New York said the judges on the Judicial Conference voted 16-8 to release of the reports, which require a listing of gifts, free travel, investments and loans for each officeholder and immediate family members, but not residential addresses, Social Security numbers, account numbers or names of family members.

Federal law makes the information a public record unless a temporary access cutoff is justified by security concerns.

In his memo, Justice Rehnquist told the Financial Disclosure Committee it did not have the authority to block APB's request for documents.

"There are a large number of judges who feel strongly about security issues raised by financial disclosure," he wrote. "But I also note that although Judicial Conference Committees fulfill a number of roles for the conference, they generally are not rule-making or policy-making bodies."

While acknowledging that the public records statute allows for judges to edit information from disclosure forms because of security risks, Rehnquist noted that it was not an excuse to withhold the reports entirely.

"It is to be expected that closer public scrutiny will be applied when judges decide issues affecting judges," he said. "We have already seen evidence of this in editorial commentary, and I suspect it will increase. Moreover, the fact that officials from the Executive and Legislative branches must also file disclosure reports makes the committee's position more difficult to defend."

POLITICAL WATCHDOG UNIT'S NEW DIRECTOR HAS NEWS BACKGROUND (3/17/00)

California's Fair Political Practices Commission (FPPC), which tracks campaign contributions and spending and monitors lobbying expenditure and public officials' conflicts of interest, has named Wayne Strumpfer its new executive director, replacing veteran Robert Tribe, according to a March 7 report on the online legal news site law.com.

The site reports that "Strumpfer, 36, is a former radio news reporter and television production engineer who has been a prosecutor in the state attorney general's criminal law division since 1995, specializing in public-official corruption cases." The latter have involved police chiefs, judges, state office holders and other elected officials.

FPPC Chairwoman Karen Getman, in announcing the shift, "stressed Strumpfer's role in moving the FPPC in new directions she has sketched out for the agency: speedier prosecution of violations of the Political Reform Act and greater efforts to educate the public and politicians about the FPPC's mandate," noted law.com.

A deputy district attorney for Sacramento County from 1992-1995, Strumpfer worked

at a Santa Rosa radio station and a Sacramento television station before graduating from McGeorge School of Law in 1992. He will assume his FPPC duties later this month.

BILL WOULD TURN TABLES ON PUBLIC RECORDS "CATCHALL" EXEMPTION (3/10/00)

Legislation introduced February 28 by Assemblyman Kevin Shelley (D-San Francisco) would add an equalizer to the California Public Records Act's rule that now allows withholding of otherwise public records based on the net public interest. Under AB 2799, a court could cite the public interest to order release of ordinarily exempt records.

Government Code Section 6255 now provides that even if a given record is not exempt from disclosure under any particular section in the public records law or elsewhere, a government agency may justify refusing to release it on the basis that "on the facts of the particular case the public interest served by not making the record public clearly outweighs the public interest served by disclosure of the record."

This provision, often referred to as a "catchall" or the public records law's "balancing test," is also not uncommonly used by public agencies as a wild card, either as the only rule advanced for not disclosing a record or as an add-on to other exemptions cited as justification for withholding.

While appellate courts have generally been careful not to let agencies use Section 6255 as a facile escape from disclosure, the reality is that once an agency lays that card down, a requester has no option but to sue in order to see if it will trump. In some cases the agency will simply cite the section without even stating what it believes to be the public interest in nondisclosure.

AB 2799 would leave that provision in place but add to it a counterweight, permitting ad hoc suspension of secrecy in the public interest:

"Notwithstanding any provision of this chapter, an agency, or the superior court in any action brought (to enforce disclosure under the Public Records Act), may disclose or order to be disclosed any record made exempt by express provisions of this chapter if, on the facts of the particular case, the public interest served by disclosing the record clearly outweighs the public interest served by not disclosing the record."

As stated, this provision would not allow disclosure of records whose disclosure is prohibited by statutes outside the Public Records Act, such as income tax return information, medical history, pupil achievement or discipline records, or peace officer personnel files.

But it might allow a court, for example, to decide that the public interest in disclosure outweighed the discretionary confidentiality of police investigative records, where neither privacy nor criminal justice interests would be threatened, or of "records pertaining to pending litigation" while the case was still pending, if it was clear that the information was already known to (or originated with) the party opposing the government agency.

AB 2799 would also restore language to the act expressly disapproving efforts to "delay" release of public information. That word was deleted in amendments effective two years ago, substituted for by the word "obstruct," which would remain in place under the bill. The California Newspaper Publishers Association, sponsor of the measure, has concluded that the effect of removing "delay" has been, in too many cases, the argument that delay is no longer considered objectionable.

But the bill's other major provision is to incorporate entirely the text of Sen. Debra Bowen's SB 1065, vetoed last fall by Gov. Gray Davis. That measure would have required public agencies to make available electronic public records in whatever format they themselves used, if so requested. Davis said he vetoed the measure because Bowen (D-Redondo Beach) had failed to take his suggestion to delay the bill's effective date until state computer systems were proven to be Y2K compliant.

Shelley, Assembly majority leader, was author of the San Francisco Sunshine

Ordinance while serving on the board of supervisors in 1995. Last year he successfully carried a bill to restore a court's power to declare that a state agency had violated the open meeting law, after the state supreme court ruled that such declaratory judgments could not be issued regarding past violations.

That bill, AB 1234, also requires that beginning no later than July 1 of 2001, state agencies must post meeting agendas and notices on the Internet.

NET ACCESS "HAVE-NOTS" THE SUBJECT OF NEW BOWEN LEGISLATION (3/10/00)

Sen. Debra Bowen has introduced a bill expressing the intent of the legislature "to enact legislation to require that computer terminals installed in state offices be available to the public for Internet access." Her staff indicates SB 1757 is a spot bill awaiting more or different specifics on solutions to the needs of the state's "information have-nots."

An entire public/private sector movement has arisen in recent years to address various aspects of the "digital divide" between families who have home computers and Internet connections and those who do not, because of poverty, geographical isolation or both (see, for example, the joint project of the Benton Foundation and the Urban League shown at <http://www.digitaldividenetwork.org>).

A parallel concern is the gap between those getting the training, education and incentives to enter computer- or Internet-related jobs and those who are not.

A study published two years ago found a racial divide as well, in that among families with incomes of less than \$40,000 per year, whites were twice as likely as blacks to own a home computer.

BILL WOULD MAKE COPS' PERSONNEL FILES UNAVAILABLE IN LAWSUITS (3/10/00)

Legislation sponsored by the Peace Officers Research Association of California (PORAC) would eliminate discovery in civil lawsuits of citizen complaints and other information from the personnel files of police and other peace officers. The bill, by Assemblyman Dennis Cardoza, also further restricts discovery of such material by or for criminal defendants.

Currently, peace officer personnel files, including but not limited to citizen complaints and internal affairs inquiries, are confidential pursuant to Penal Code Section 832.7, which states that their contents "shall not be disclosed in any criminal or civil proceeding except by discovery pursuant to Sections 1043 and 1046 of the Evidence Code."

Evidence Code Section 1043 sets forth the special procedures required for obtaining such information in discovery in "any case." The Merced Democrat's AB 2559 would make the procedures available only in discovery by a criminal defendant or defense attorney -by omission, leaving no authorized procedure for discovery in a civil case.

Also under the bill, when information from an officer's file was sought by a prosecutor in order to fulfill the state's duty to disclose to defendants information that would tend to clear them, the employing law enforcement agency would need to cooperate in disclosing only administratively "sustained" (confirmed) allegations of unlawful conduct by the peace officer on duty. Moreover, it would not permit disclosure of complaints sustained only on the basis of the officer's admission under coercion - which could mean any threat, from firing to a verbal reprimand.

PASADENA ACTIVIST SUING TO GET DATA USED IN SCHOOL RANKINGS (3/3/00)

Rene Amy, a Pasadena parent, information access fighter and recent unsuccessful

candidate for the school board, filed suit March 2 to force State Superintendent Delaine Eastin to release data showing how "similar school" clusters were set up for the Academic Performance Index. The API ranks schools in 10 groupings, from best to worst.

Amy's lawsuit, contending that the data are public under the California Public Records Act, pursues information also sought by at least two daily newspapers, but to no avail. The Contra Costa Times in Walnut Creek and the North County Times in Oceanside both sought the information from Eastin's office, but were rebuffed by identical letters contending that the information is exempt from disclosure.

Key to Eastin's position is Government Code Section 6255, which allows withholding of information if the public has a greater interest in non-disclosure than in disclosure. That applies here, say Eastin's attorneys, because "the harm of further publication of erroneous data outweighs the public benefit in seeing how the errors were made. "

Amy notes that Eastin and the Department of Education have conceded that the "similar schools" component of the API released January 25, supposedly as a more meaningful comparison between schools with similar advantages or disadvantages, is "replete with errors."

"Many schools," Amy says, "including Pasadena, have tried to buoy dismal showings in their overall rankings with relatively high scores (among) 'similar schools'... Just what makes schools 'similar?'" Clearly the public has the right to know."

Amy, among other things an Associate member of the California First Amendment Coalition, is the Pasadena Unified School District's most energetic watchdog. He won two court battles with the district in the past year, including a federal case concluded only recently which eliminated race- and sex-based admissions to schools, and a suit to enforce the right of parents or others under the Education Code to have an issue of their choosing placed on the agenda of a school board meeting.

SHER HAS NEW BILL TO PROVIDE A.G. REVIEW OF RECORDS DENIALS (3/3/00)

Senator Byron Sher (D-Palo Alto) has introduced a slightly retooled version of last session's vetoed SB 48, which would involve the attorney general's office in reviewing and opining on public agencies' denial of access to public records. The new bill, SB 2027, attempts to overcome Governor Gray Davis's concerns with conflict of interest.

As applied here, that phrase refers to the prospect of having a state agency -- even the governor's office -- that is normally represented by the attorney general suddenly viewed as in violation of the California Public Records Act as a result of the attorney general's denial review process.

SB 48 tried to overcome that problem by simply declaring that there would be no conflict, since the lawyers involved in the review process would never be in the position of advising an agency on compliance. That was not good enough for the governor, who vetoed the bill last fall.

The approach in SB 2027, introduced on February 25, is to provide in effect that attorney general review of records access denials will apply only to those state agencies (the University of California, for example) that rely on their own counsel and not the attorney general for advice on whether to release a record.

The bill's provision on this point states:

"Representation of a state agency by the Attorney General involving advice that a request for inspection or copies of public records be denied, in whole or in part, may provide a basis for that agency to claim an attorney-client relationship that would preclude the Attorney General from providing an opinion under this section. "

Whether that language satisfies the governor's concern remains to be seen. Other than the shift in language to address this issue, the bill is a clone of the final version of SB 48, which passed both houses with essentially unanimous bipartisan support last year.

THAT HIDDEN 15 MINUTES: EXECUTION WITNESSING CASE GOES TO TRIAL (2/25/00)

Current and former wardens of San Quentin prison told a federal judge recently that the 15 to 20 minutes it now takes to get a condemned inmate into the death chamber and hooked up to the lethal injection shunt risks that members of the officiating "death team" will be recognized by witnesses, identified publicly, and exposed to retaliation.

That testimony marked the first day of trial in California First Amendment Coalition v. Calderon, in which the Northern California Chapter of the Society of Professional Journalists is a co-plaintiff. Attorneys affiliated with the ACLU of Northern California are providing legal representation.

The key issue to be settled in U.S. District Judge Vaughn Walker's court is whether the draping of the death chamber during the active process of the execution -- with official witnesses left to see only the inert inmate strapped to the gurney and receiving the deadly chemicals -- is or is not an "exaggerated response" to prison security concerns.

The problem developed after the state began using lethal injection for capital punishment in 1996, and witnesses discovered they had no clue as to the final gestures, words or demeanor of the condemned person, but were left instead to view a static corpse in the making. Unless the process is fully shown, argue the plaintiffs, the safeguard of independent execution witnesses is meaningless and concerns as to possible cruel and unusual punishment issues are left unanswered.

Former Warden Arthur Calderon testified in the non-jury trial that the concealment

policy was never intended to influence the media, but only to preserve security. Protecting the volunteer death team's anonymity by having members wear surgical masks and gowns would not be suitable, he said, because if the prisoner struggled the masks could be ripped off. The condemned is now ushered into the death chamber bracketed between four correctional officers, with his hands shackled to his waist.

But Calderon also conceded that there had never been a struggle at the last moment, that no one had identified members of the death team during the gas chamber era, and that even during the one full exposure that witnesses got in a May 1996 execution -- while an order by Judge Walker kept the entire process visible -- there had been no security problems.

Appearing as witnesses for the plaintiffs on Wednesday were Jason Beaubien, a former reporter for KQED-FM in San Francisco who saw one execution with the concealment procedure and another without it, and Dr. Lonny Jay Shavelson, an emergency room doctor testifying on the use of surgical masks and garb.

Shavelson actually modeled the garb in court, and Beaubien testified that he could see little of the identifying detail that he had seen during the second execution when the procedures were open and the guards were exposed.

Judge Walker directed the parties' attorneys to file post-trial briefs and appear for final argument on March 6. He is aware that the next scheduled execution is set for March 15.

CITIZEN'S COURT WIN WILL OPEN CLAREMONT'S SEALED SETTLEMENT (2/25/00)

The city manager of Claremont this morning (February 25) finally instructed the city's joint powers insurance agency (JPIA) to release to Richard McKee -- and thereby the public -- the full terms of a 1998 settlement in a civil lawsuit alleging excessive force by a police officer. McKee, a citizen activist, was represented by an attorney member

of CFAC.

The weekly Claremont Courier originally queried the city last year as to how much was paid to make the litigation by another local activist, Eli Mellor, go away. The city said any such disclosure was barred by an order of the federal magistrate presiding in the pretrial phase of the case. The matter was handled for the city by its JPIA, whose attorneys said the gag had been forced on the parties over the city's objections. The city council took up the question of whether it should ask that the settlement be opened, but decided against doing so.

The Courier eventually used city disbursement records as a basis for estimating the dollar amount of the settlement, but McKee then made his own demand. One of the first generation of winners of CFAC's Beacon Award for extraordinary commitment in taking on a Brown Act lawsuit in 1995, representing himself, McKee is a chemistry professor at Pasadena City College. Since then, in another Brown Act case, he got a court to declare that meetings of a college committee assigned to review eligibility for sabbatical leave must be open and public.

McKee reported his progress in the Claremont settlement case to the CFAC board of directors last fall. That group agreed to pay the travel and other non-fee expenses of an experienced public records attorney to help McKee; Judy Alexander, a member of CFAC's legal review committee, agreed to take the case.

Los Angeles Superior Court Judge David P. Yaffe two weeks ago ruled for McKee, noting that under the California Public Records Act and the Brown Act, records of settlements entered into by state and local government agencies become public once they are final. Yaffe saw nothing in the minuted order of Federal Magistrate Robert Block which would prevent either of the parties from disclosing the record. The order -- which the city and its JPIA treated as a total ban -- simply meant that settlement documents in the court's own file would not be made public without the parties' consent.

Yaffe ordered disclosure but stayed the ruling for 10 days, allowing the city to query Block as to what his meaning had been. Earlier this week the city, McKee and Judge Yaffe got letters from Block which said in part:

"The parties' agreement regarding confidentiality was an agreement between them and not the subject of any court order. Thus, the court merely was respecting the parties' agreement regarding confidentiality when it ordered that part of the record sealed. The court never ordered the parties not to discuss the terms of the settlement (publicly or otherwise), and never ordered the parties not to disclose the terms of the settlement in response to a duly served subpoena or court order."

Despite this letter, city representatives simply increased the tap dancing tempo. The Claremont Our Times edition of the Los Angeles Times was told that attorneys for the city would listen to the tape of the court hearing to be sure that Block had not in fact ordered the parties mute, because their recollection differed from his and they were concerned with being held in contempt by Block, or sued by plaintiff Mellor. But Mellor's attorney, according to Our Times, said that the confidentiality agreement was the city's idea all along, and offered to waive it in a letter sent to the city last summer.

Un-American Activities Files: Here's What The Order Made Public (1/28/00)

Because CFAC is sometimes asked what information was made public by the November 1999 court order which it obtained to open legislative hearing files on "Un-American Activities," a list of the content, taken from Secretary of State Bill Jones' web site (http://www.ss.ca.gov/archives/level3_suac.html), is available in a special edition of FLASH, also being sent today.

Summary of Public Hearing Transcripts, 1941-1958. The following transcripts of public hearings of the Joint and Senate Fact-Finding Committee on Un-American Activities are on file in Boxes 29-34 of the committee records. The public hearings were conducted at various locations in California between 1941 and 1958. The committee records are stored in the California State Archives. Photocopies of hearing transcripts are available at a cost of \$0.25/page; contact the State Archives for additional information. Skipped volume numbers usually signify transcripts of closed executive sessions.

Box 29, Volume 1: Secretary of Communist Party for Los Angeles County and others questioned about formation and goals of party in California, Young Communist League, Trotskyites, Communist Party membership in labor unions. July 28, 29, 30, 31 and Aug. 1, 1941. State Building, Los Angeles. (335 pages including exhibits)

Box 29, Volume 3: Union members quizzed about Communist Party activities; testimony on Communist efforts to penetrate Young Democrats; issue of whether American Civil Liberties Union, Anti-Defamation League are Communist organizations. Oct. 14, 15, 16, 17, 1941. State Building, Los Angeles. (265 pages)

Box 29, Volume 3a: Brief testimony about conversations at Deutsche Haus in Los Angeles, activities of German American Bund, National Patriots, America First Committee, Friends of New Germany. Oct. 16, 1941. State Building, Los Angeles. (42 pages)

Box 29, Volume 4: Committee questions 36 witnesses about activities of the America First Committee, Friends of the New Germany, German American Bund, anti-Semitism, propaganda films, Lindbergh rally at Hollywood Bowl. Oct. 14, 15, 16, 17, 1941. State Building, Los Angeles. (358 pages)

Box. 29, Volume 5: Series of hearings on the brutal 1936 murder of Chief Engineer George Albert of the steamship Point Lobos while docked in Alameda. Three merchant seaman, union activists, were convicted and sentenced 20 years in prison. Hearings concern their early release from prison, possible corruption on the Board of Paroles and alleged Communist pressure on Gov. Olson to pardon them. Dec. 1, 2, 3,4,5, 1941. Civic Auditorium, San Francisco. (390 pages)

Box 29, Volume 6: Testimony from acting Attorney General Earl Warren about his prosecution, as Alameda County district attorney, of convicted Point Lobos seamen Earl King, Earnest Ramsey and Frank Connor. Warren claims they were paroled early because they are "politically powerful Communist radicals." Description of Gov. Olson's visit with prisoners at San Quentin. Dec. 1, 2, 3, 4, 5, 1941. Civic Auditorium, San Francisco. (291 pages)

Box 29, Volume 7: Testimony about possible subversive influence in winning pardons for convicted murderers King, Connor and Ramsey; activities of Italian Fascist sympathizers in San Francisco; America First, No Foreign Wars Coalition; Young Communist League. Dec. 1, 2, 3, 4, 5, 6, 1941 and Dec. 11, 1942. Civic Auditorium, San Francisco and San Quentin prison. (207 pages)

Box 29, Volume 8: Testimony concerning Communist involvement in the American League Against War and Fascism; activities of the German-American Bund. Feb. 19 and 20, 1942. County Administration Building, San Diego. (365 pages including exhibits)

Box 29, Volume 9: Thirty-three witnesses called to testify about National Copperheads, Lindbergh, anti-Semitism, Nazi sympathizers; split loyalties of first generation Japanese-Americans; Japan's Okabo plan for expansion of Japanese world power; sabotage at Pearl Harbor, Manila and China; possible internment of Japanese "colonies" on the West Coast. Feb. 23 and 24, 1942. State Building, Los Angeles. (355 pages)

Box 29, Volume 10: Twenty-two witnesses questioned about such subjects as possible involvement of the Japanese American Citizens League in subversive activities prior to Pearl Harbor; content of Japanese language newspapers in Los Angeles; funds collected in California for the Japanese war effort. March 24 and 26, 1942. State building, Los Angeles. (318 pages)

Box 29, Volume 10a: Witnesses questioned about activities of Mankind United, a suspected Fascist organization. May 12, 1942. Los Angeles. (109 pages)

Box 29, Volume 11: Nine witnesses, including self-described metaphysician, testify about fundraising activities of Mankind United; distribution of derogatory books about England; possession of device to paralyze traffic; ability of leader to reproduce himself. May 22 and 23, 1942. City Council Chambers, Fresno. (189 pages)

Box 29, Volume 12: Witnesses questioned about Italian Fascism in San Francisco; propaganda and sabotage; collection of 10,000 gold wedding bands in San Francisco to finance war in Ethiopia; Fascist salute given by mayor of San Francisco; Italian language schools. May 25, 1942. St. Francis Hotel, San Francisco. (120 pages including exhibits)

Box 29, Volume 13: Twenty-two witnesses, including Mayor Angelo Rossi of San Francisco; Paul Bibily, French vice-consul; and Harry Bridges, Longshoremen's Union leader, testify on such subjects as Italian Fascism in San Francisco; Legion of the Mothers of America, Ku Klux Klan, America First; German storm troopers manning German cargo ships; Longshoremen's refusal to load scrap metal collected by San Francisco scavenger wagons onto German ships. May 26 and 27, St. Francis Hotel, San Francisco. (270 pages)

Box 29, Volume 14: Testimony about Sinarquistas, pro-Nazi group accused of inciting Mexican-American youth of Los Angeles against U.S. government over social injustice issues. Dec. 16, 1942. State Building, Los Angeles. (121 pages)

Box 29, Volume 15: Committee investigates construction of strategic installations for the Army and Navy at Pearl Harbor, Wake Island, Midway and Guam by German contractor Hans Wilhelm Rohl of Rohl-Connally Corp. March 1, 1943. (248 pages including exhibits)

Box 29, Volume 16: Continued discussion of Rohl-Connally Corp.; justification for internment of Japanese-American citizens. Feb. 27 and March 1, 1943. (47 pages)

Box 30, Volume 20: Witnesses questioned about involvement with Mankind United organization. March 20, 1944. State Building, Los Angeles. (143 pages including exhibits)

Box 30, Volume 21: Additional testimony about Mankind United. March 22, 1944, District Court of Appeal, Fresno. (61 pages)

Box 30, Volume 22: Three witnesses questioned about Christ Church of the Golden Rule and Mankind United. March 24, 1944, State Building, San Francisco. (230 pages)

Box 30, Volume 23: Thirteen witnesses, including union organizers, teachers, authors and Hollywood screen writers, questioned about their associations with Communist organizations. Oct. 12-13, 1944, State Building, Los Angeles. (259 pages including exhibits)

Box 30, Volume 24: Two witnesses, including union leader, questioned about Communist organizations. Oct. 27, 1944, State Building, Los Angeles. (130 pages)

Box 30, Volume 27: Several witnesses questioned about Communist activities in various Navy yards, defense industries in Alameda County. Sept. 25-26, 1946, Alameda County Courthouse, Oakland. (266 pages)

Box 30, Volume 28: Testimony of 39 witnesses regarding their activities, and beliefs, on behalf of the Communist Party and the Ku Klux Klan. Oct. 7-10, 1946, State Building, Los Angeles. (718 pages)

Box 30, Volume 29: Ten witnesses questioned about Communist Party activities in Contra Costa County. Oct. 31, 1946, Alameda County Courthouse, Oakland. (158 pages)

Box 30, Volume 30: Thirteen witnesses questioned about sex education in Chico public schools. Feb. 26, 1947, Veterans Memorial Building, Chico. (173 pages)

COURT: CONGRESS CAN ORDER STATES NOT TO RELEASE INFORMATION 1/14/00

The federalist principle that Congress cannot force states to adopt or execute federal regulatory programs does not mean that it can't prohibit states from doing certain acts -- including releasing data from their own files. Thus the Driver's Privacy Protection Act (DPPA), barring release of DMV personal identifiers to most requesters, is constitutional.

So ruled the U.S. Supreme Court in a unanimous decision issued January 12 in *Reno v. Condon*, Case No. 98-1464.

South Carolina, whose law permits anyone identifying himself and providing an address to obtain the name and address of any registered vehicle owner or driver, and use the data for most purposes, challenged the constitutionality of the DPPA and won at the trial and appellate levels.

It argued that the federal law, authored by Senator Barbara Boxer (D-California), violates the Tenth Amendment, as interpreted by the high court in two recent cases in terms of federalism, i.e. Congressional respect for the sovereignty of the states' own

legislative and executive processes. In these cases the Supreme Court held that Congress may neither tell a state what laws to pass in order to effectuate federal policy nor go around state legislatures and directly order state officials to implement federal programs.

The latter point was established in a 1997 case, *Printz v. U.S.*, in which the court held unconstitutional provisions of the Brady Act which mandated that state and local law enforcement officials conduct background checks on gun purchasers.

But these scenarios do not apply to the DPPA, concluded Chief Justice William Rehnquist in his opinion for the court. That statute does not mandate -- it prohibits. What it prohibits is that any state DMV office, without express "opt-in" consent of the person concerned, release names and addresses of private individuals to most requesters for most purposes. The same prohibition applies to private data holders who have received their information from a state DMV source.

While complying with this or other federal laws may impose substantial burdens, Rehnquist said, this effect is different from the "commandeering" barred by the Tenth Amendment, where lawmakers or enforcement officers are drummed into the process of carrying out a federal program's impact on the people.

COMMENT: The specifics of this case are of little CONCERN in California, where access to driver names and addresses has been barred by state law for several years, tracing to the murder of actress Rebecca Shaeffer, stalked to her home by a mentally unbalanced fan. Ironically, the killer got the address data using a query made by a private investigator, and private investigators are allowed access to data under the DPPA, at least for certain purposes. But the larger significance of *Condon* is that informational secrecy can now be federalized. The high court's recent observation in *United Reporting* is that nothing in the federal constitution -- certainly not the First Amendment -- prevents states from ending public access to their files altogether. *Condon* now says that nothing in the constitution prevents Congress from subtracting whatever it pleases from state public records access laws. The only safeguard against both is likely to be an amendment to the California Constitution providing the public with some floor under their "sunshine" rights.

Graphic Design Culpability and Responsibility

Introduction

Any progressive cultural critique must address the implicit relationships between the means of mass communication and the political, economic and social constructs which drive them. Though these connections are often difficult to make, for a wide variety of reasons, not least among them that they are often intentionally obscured, there is no denying that our communications environment at large is becoming saturated, supported and directed by advertising and marketing interests. It is estimated that the average American adult is exposed to over ten thousand advertisements per day. The growth of global advertising spending outpaces the growth of the world economy by thirty-three percent.¹ As the public sphere recedes under this commercial pressure, the danger of our means of communication becoming completely relegated to the status of a commodity is becoming readily apparent. The implications of this trend are dramatic and severe: the more we are appealed to as consumers, the less we are appealed to as citizens, or, as social historian Stuart Ewen states, “advertising has become the primary mode of public address.”² Yet advertising is rarely publicly controlled, and as much as marketers may wish us to believe the opposite, rarely does it serve public interest. It is by its very nature a medium of manipulation and persuasion, of opinion-making and consolidation, and as such its place within a democratic society is, at the very best, questionable.

Though there has been a wealth of public criticism on the ethics of advertising, these critiques have had only a remedial effect on the industry since the consumer movements of the 1930s. Within the predominantly academic spheres of political science, cultural studies and philosophy, there is abundant critical discourse on the broader subject of the image culture which advertising feeds. Progressive political movements have also begun to challenge the ubiquity of commercial imagery and its relationship to the construction of an economic hegemony. Though the breadth of these criticisms will not be addressed at this point, it is important to note that what is often only addressed abstractly (if at all) is the very system of representation that gives these images form. Graphic design is implicitly involved as a mediator at every point within the communication processes of contemporary society; it is the language through which we understand our environment and as such it bears an enormous social role and responsibility.

This notion of social responsibility has played a central role in design education. The modernist movement, characterised by the Bauhaus, “sought to contribute to the development of a society in which creativity would be fostered, and in which human needs would motivate the forces of production.”³ Similarly, the late Tibor Kalman nostalgically yet aptly summarises:

"In its enthusiastic youth, design was invested with vision. Awestruck by futurism, swept by currents of modernity, design, it was claimed, could communicate new ideas about society, light the way to new and democratic ways of seeing."⁴

These lofty ideals have essentially gone unrealised. With the consolidation of our current advanced capitalist economic system, graphic design has for the most part become entrenched as a tool of marketing. Yet advertising has always been a patron of the graphic arts. Though the “elitist prejudices” of many designers have defiantly attempted to separate the two, their histories are deeply intertwined. Steven Heller clearly demonstrates this in his article *Advertising: Mother of Graphic Design*:

"As the modern movements sought to redefine the place of art and the role of the artist in society, advertising was seen not only as a medium ripe for reform, but also as a platform on which the graphic symbols of reform could be paraded along with the product being sold."⁵

Though the advertising platform has far from yielded the utopian fruits of modernist ideology, the intimate relationship suggested by Heller’s article is of crucial importance. The exponential growth of the advertising industry has brought to life and even celebrity the profession of graphic design. Ignoring the role of advertising in design theory and criticism implies that consumerism and marketing have no bearing on the ‘art’ of graphic design.⁶ This theoretical separation is both misleading and dangerous. Any criticism of advertising must intrinsically be levelled against graphic design as well. Within the design community, it can be said that this criticism formally began with Ken Garland’s *First Things First* manifesto, published in 1964. The manifesto challenged graphic designers to move away from the increasingly lucrative field of advertising, and argued that its messages had become ‘sheer noise’ that contributed ‘little or nothing to our national prosperity.’ Garland believed that there were projects far more deserving and in need of designers’ skills and proposed “a reversal of priorities in favour of the more useful and lasting forms of communication.”⁷ Issued during a time when graphic design was coming into its own as a genuine professional activity, when consumer culture was rapidly gaining momentum, the manifesto was both poignantly received and critically dismissed. Much of this criticism lay in its supposed naivety, yet clearly Garland’s foresight into the direction of graphic design’s development was entirely accurate. His naivety lay in his belief that a ‘saturation point’ in advertising had, or indeed could, ever be reached.

In 1999 the manifesto was re-issued with a definitively more urgent tone in the midst of a growing socio-political movement against corporate globalisation. The new manifesto, which was initially published in the major design related journals *Adbusters*, the *AIGA Journal*, *Eye*, *Emigre*, *Items* and *Form*, demonstrated that the dominance of commercial culture over design was still at the forefront of many graphic designers’ thoughts as well. As the debate around *First Things First* 2000 continues, there is a growing recognition that graphic design plays a key role in the larger social conflicts that are becoming characterised by clouds of tear gas and black-clad protesters. However, it is undoubtedly presumptuous to say that this recognition is universal or that the nature and positioning

of graphic design's role in these conflicts is even close to agreed upon by its practitioners. The updated manifesto received an onslaught of criticism very much in line with its predecessor. It was again dismissed for its naivety, elitism, simplicity and hypocrisy.

Nonetheless, the manifesto has, at an incredibly crucial time, sparked a wealth of critical debate within the field of graphic design. As design critic Rick Poynor notes:

"In fifteen years as a design writer, I have never observed anything in the design press to compare with the scale, intensity and duration of international reaction to First Things First."⁸

Poynor, who has played a leading role in design writing, provides an in-depth response both to the manifesto itself and its detractors' critiques in his article First Things Next. In challenging the multitude of critiques, from the supposed hypocrisy of its signatories (who have all worked in the commercial sphere) to the assumption that design is and should be a neutral, value-free process, Poynor reveals that although many designers understood the manifesto enough to make them feel uneasy about the social positioning of their profession, they fundamentally missed its point. The key argument of First Things First is that there is an "increasingly desperate need to preserve a space for other forms of thinking, other shades of feeling and other ways of being in the world"⁹. Addressing this need requires a radical shift in thinking on design, and it is perhaps this radicalism that has unnerved the design community so much. Poynor concludes that:

"Determining the 'new kind of meaning' is a huge collective project beyond the scope of a brief manifesto and a creative task in which all those who can imagine other possibilities are free to participate."¹⁰

However, this poetic conclusion seems merely to echo the conclusion of Poynor's First Things First article, published two years earlier in Adbusters magazine:

"Even now, at this late hour in a culture of rampant commodification... it is possible for visual communicators to discover alternative ways of operating in design."¹¹

In the face of such complex issues, Poynor's optimism is encouraging, yet remains rather vague and insubstantial. Just as many detractors of First Things First were critical of its call for 'a new kind of meaning,' Poynor's response of "a huge collective project" does little to provide any further constructive direction. In the final article of his compilation Obey The Giant, entitled Future Imperfect, Poynor concludes:

"Designers who allow space for the peculiar, the wayward, the imperfect and, sometimes, the just plain 'wrong' - set in motion a process and create the conditions for the viewer to have truly unexpected encounters with design that are one of its keenest, most human pleasures and a large part of its point."¹²

Though insightful, this hardly seems a fitting statement to end on for a compilation that sets out to address critically and challenge implicitly "The Giant" of commercial design. This is not meant to dismiss Poynor's undeniably valuable contributions to design criticism, however it is representative of the profession's reluctance to engage genuinely with the socio-political issues that surround it. It

should not be denied that many notable designers have taken critical positions on these issues, yet the general ambivalence within practice is disheartening. If graphic designers actually want to move design into a more progressive social positioning they must confront this fear of radical change. The proposition is this: graphic design can and must work to establish itself in a more fundamental manner outside of the commercial sphere, thereby creating greater opportunities to act as an important medium for social reflection, commentary and dialogue. This requires an engagement with a multiplicity of issues. Addressing the structural factors that influence design production is obviously of utmost concern. Understanding who actually benefits from a work and how that work is received within the public sphere must lead to a more selective choice of clients. Of equal importance is a re-evaluation of its formal language. Due to how directly graphic design has been driven by marketing culture, its visual language has been largely reduced to one of stylisation and the creation of desire. An understanding of the complexity of the communications process drawn from a multi-disciplinary analysis of cultural discourse needs to be synthesised into design thinking. In order to enact the necessary radical changes within the profession, these issues must be addressed simultaneously. This essay will attempt to take up this challenge by engaging in a broad-ranging critique of commercial communications culture with the specific goal of identifying and analysing dominant themes that support and direct the creation and dissemination of messages into the public sphere. In *All Consuming Images*, Stuart Ewen proposes that the only requirements for an image's appropriation into the style-market are its disembodiment or separation from its source, its capacity to be economically reproduced and its ability to be marketed and sold.¹³ These requirements will be taken as a point of departure, and explored and expanded upon within a broader thematic framework in order to determine the contextual processes by which experience is transformed into commodity.

The first theme to be identified is that of separation. As graphic design is a practice primarily engaged in the act of selection and representation, the theme of separation is an implicit starting point. Any form of representation intrinsically separates meaning from its context. The vast amount of critical theory surrounding this aspect of representation has only begun to be introduced in graphic design writing. Closely related to the theme of separation is the theme of reductionism. A component of modernist theory, the simplification of form presents an ideal model for communications. However, seen from a contemporary critical vantage point, its communicative limitations become apparent. Additionally, reductionist strategies allow for the exact repeatability of sign systems and the development of a truly hegemonic mass media with all its inherent effects. The final stage of commodification occurs with the theme of idealisation and the creation of desire. Desire is what drives the image economy and its effects are all encompassing. It is at this point that any argument of efficient communication ends and the dictates of the market economy on a message become resolutely clear. The influences of these themes dominate both the external and internal relationships of a work of graphic design. Understanding these themes and the development of strategies to challenge them is the goal of this essay.

1. Design Culpability and Responsibility

Separation

Critical theories of language and literature have come to play an increasingly prominent role in design theory. Primers in semiotic theory are now commonplace in design education and the writings of authors such as Roland Barthes and Ferdinand de Saussure have found their way into design reading lists. However, within this context, Barthes' generous contribution to cultural theory is generally understood through a purely formalist lens; its application is derived from the poetics of his criticism and detached from its original Marxist analysis. In such a way, graphic designers speak of being visual communicators within an image culture, without understanding the critical debates around the subject matter. In his seminal work, *Mythologies*, Barthes presents the concept of Myth through numerous texts investigating the meaning of various manifestations of mass culture. Essentially, Barthes' Myth can be understood as a mode of signification based on the appropriation and transformation of existing signs. His analysis of it is in no way politically neutral, and through a thorough semiological critique, he demonstrates Myth's nature of distorting and impoverishing meaning, in normalising and actively de-politicising speech.¹⁴

The language of Myth is very much inclusive of and parallel to the 'language' of graphic design. Barthes' insights into the nature of appropriation, representation, communication and understanding are crucial to the theoretical grounding of graphic design practice. Yet, as designer Jeffery Keedy states, "It was the poetic aspect of Roland Barthes which attracted me, not the Marxist analysis."¹⁵ By separating Barthes' work from the political context in which it was derived, designers have in fact mythologised it in turn, further contributing to what Barthes determinedly sought to challenge. Another seminal text dealing with representation and more specifically its relationship to capital, cultural imperialism and the mediation of social relations is Guy Debord's *Society of the Spectacle*. Though the theoretical, aphoristic and highly critical nature of Debord's text may prevent its appropriation into graphic design theory as it exists now, his concept of The Spectacle,

complementary to Barthes' Myth, is invaluable to an informed understanding of the context within which graphic design exists. Additionally, The Society of the Spectacle acted as a revolutionary handbook for the student and labour insurrections of May 1968 in Paris, which had repercussions throughout the world. The ability to engage with theory, bringing it into practice, is an example of the praxis-based approach that graphic design will have to take in order to reposition its role.

"In societies where modern conditions of production prevail all of life presents itself as an immense accumulation of spectacles. Everything that was directly lived has moved away into a representation." 16

The opening thesis from Debord's text introduces the fundamental nature of the image culture that is so often casually spoken of. It describes a cultural phenomenon that has forsaken genuine experience for vicarious representation through images. Furthermore, these images, detached from reality, have taken on an autonomous nature that no longer even represents reality, but replaces it within its artifice.

It is important to recognise that, as Debord states, "the spectacle is not a collection of images, but a social relation among people, mediated by images." 17 Through the initial act of separating images and ideas from their contextual relationships, graphic design creates the condition for their autonomous social movement. When directed through the logic of the market, these images and ideas collectively achieve ubiquity within the social sphere. This ubiquity in turn provides the condition for the domination of the Spectacle over all aspects of social life. The separated nature at the root of the spectacle is reflected in its multiplicity of effects: the growing sense of social and self-alienation, the resulting political apathy, the systemic control of production and consumption and the organisation of time and space. Within all of its complexity, the spectacle is essentially "the autocratic reign of the market economy which had acceded to an irresponsible sovereignty, and the totality of new techniques of government which accompanied this reign." 18

Taken in its entirety, Debord's stinging critique of capitalism, even with its emphasis on the power of image, can seem to lose its direct relevance to graphic design. What it does provoke however, is a recognition of the mediated environment that graphic design participates in constructing and is constructed within. Visual culture cannot be referred to casually; it must be investigated critically. The dramatic separation between the beautifully rendered surfaces presented through the mass media and the crumbling surfaces of social reality reveals the urgency with which graphic designers need to address the critique of the spectacle. In order to understand the practical development of the spectacle and its relationship to separation, an historical analysis is necessary. As a Marxist critique, the discourse on the spectacle represents the manifestation of social relationships under an advanced capitalist society and thus finds its roots in the industrialisation of society and its systems of mass production. Much of Debord's text relates to a person's alienation from their production and the resulting externalisation of the economy:

"The spectacle within society corresponds to a concrete manufacture of alienation. Economic expansion is mainly the expansion of this specific industrial production." 19

Another key component of Debord's text is the principle of commodity fetishism, "the domination of society by intangible as well as tangible things," 20 whereby the perceived value of an object has superseded its reality and its exchange value replaces its use value.

By drawing the relationship between these factors, the creation of the markets upon which mass production is dependent becomes the locus from which to begin the historical analysis of the spectacle. Along with the many radical social changes that occurred during this period, the change in popular representations of style is of primary interest. Stuart Ewen, who provides an exemplary and exhaustive critique of 'style' in *All Consuming Images*, writes:

"The impact of industrialism on the character and scale of the style market was prodigious. Industries previously characterised by the artisanal handcrafts, and by relative scarcity of output, were now able to turn out enormous quantities of goods. Elegantly worked surfaces, once the product of slow and deliberate skill, were now the product of high-speed, less-skilled, factory processes."²¹

The elaborate ornamentation of goods, previously exclusively available to the elite, became accessible to the growing middle class. The standardisation of the production process not only allowed for elaborate ornamentation to be easily and universally applied, but also required it in order to differentiate products that were essentially the same. With the technological developments and refinement of chromolithography and photography, the advertising and packaging of everyday goods became lavishly decorated with alluring images. "Superficially ornate goods were linked to broadly disseminated images, creating an interwoven fabric of mass-produced style."²²

The expanding markets that were developed by the rise of corporate capitalism at the end of the 19th century and the growing desire by industry to organise and control those markets can be identified as the birthplace of modern advertising. Prior to the 1880s, the great bulk of products were sold without extensive advertising, which was reserved for fringe products and novelties.²³ The fundamental changes in the economic organisation of industry necessitated the application of advertising to everyday goods in order to stimulate and maintain the newly developed mass markets.

The growing accessibility to this style-driven market is often seen as a democratisation of elite culture. On a symbolic level, this may well be true, but the growing choice of consumer goods and their affiliated images was simply that, the choice between which products to consume. The elite in power, the owners of the means of production, remained in power largely due to the economic contributions of a populace longing to be satiated by the illusionary trappings of that power.

In addition to the ornamental imagery adorning products and their advertisements, the mass market of goods gave rise to a plethora of new marketing techniques. The development of modern advertising's 'psychological' component can be traced back to a necessity created by the rise of large enterprise and the emergence of national and international distribution markets. By the 1920s control over those markets was becoming increasingly specialised and, encouraged by the new sciences of motivational psychology, extended to the salesperson at the end of the distribution chain. Vast amounts of business literature, such as Dale Carnegie's *How to Win Friends and Influence People*, were directed at technically refining the process of 'human relations'.²⁴ Control over and appropriately framed presentation of emotions was of key importance. Through the objectification, standardisation, and commercial application of human emotions, a dramatic separation in the notion of selfhood begins to take effect. "Personal characteristics, drawn from the reservoir of human experience, were becoming the techniques of false personality."²⁵ More dramatically, however, the sheer scale of distribution markets dictated that, as salespeople could not be consistently directed by centralised control, products themselves began to acquire the characteristics of these disembodied emotions. The

separation of people from their emotions was refocused towards the products they consumed. As we near Debord's Spectacle, "the more [a person's] life is now his [sic] product, the more he [sic] is separated from his [sic] life."²⁶ Significantly, the rapid expansion of advertising did not go uncontested. The 1930s saw increasing resistance from a variety of consumer movements that were critical of the advertising industry's use of emotional appeal, false testimonials, scientific jargon and sexual imagery to sell products. The shift from actual product information to emotive and manipulative statements and images was seen as an outright attack on consumers' rights.²⁷ The Tugwell bill, named after the Assistant Secretary of Agriculture Rexford G. Tugwell, a reputed defender of consumers' rights, was introduced into Senate in 1933 and called for an end to the 'false advertising' of any food, drug, or cosmetic. The advertising industry reacted vehemently to this bill and used the full weight of its new economic and political positioning to contest it. This crisis for the advertising industry brought to life a closely associated field, that of public relations. The goal of public relations was to move public opinion to a more favourable direction towards the industry and to lobby lawmakers and regulators, a model that is used to this day. Through the development of business-backed consumer groups, sponsorship of education, manipulation of dependent media industries and the creation of political and business partnerships, the public relations industry managed to provoke the rewriting of the Tugwell Bill into the Wheeler-Lea amendment in 1938, which was a considerably more lenient bill. Whereas the original bill defined the use of ambiguity and inference as 'false advertising,' the amendment redefined falsehood explicitly and put the burden of proof on the government. The ironic yet significant effect of this policy was an immediate shift from the use of verbal claims in an advertisement, which could be easily proved false, to the use of all manners of suggestive imagery. ²⁸ A bill that initially set out to curb the manipulative nature of advertising had in fact opened the door for its consolidation through the realm of the autonomous image. In part as a result of this key legislation, the domination of image over reality has come to pass and contemporary graphic design, for the most part ignorant of its controversial history, plays no small part in determining the social consequences of this dominion. Criticism of ambiguity and inference in advertising today is routinely dismissed. Yet, when exploited to the extreme, the fundamental problem of the separation of image from product reveals itself.

Within contemporary design history, Oliviero Toscani's 'social marketing' campaigns for the clothing company Benetton have received an enormous amount of coverage, both critical and celebratory, for pushing the boundaries of the role of images in advertising. The beautifully shot and composed photographs of a new born baby girl, a dying AIDS patient and his mourning family, a dead soldier's blood-stained clothes, and portraits of inmates on death row have nothing to do with the clothing being sold or the company selling them. This separation is further expressed formally in the advertisements with the careful compositional use of surrounding white space and full-bleed cropping to disassociate any notion of their original context. The carefully placed brand mark is the only remaining association made available for the viewer. Toscani makes no qualms about this decontextualisation and in fact advocates it as a way of engaging with the public. Seeing the controversy that his campaigns have sparked, it is hard to dismiss his supposed consciousness-raising intentions outright. However at the root of the controversy are not the issues presented in the advertisements, but the appropriateness of their presentation in a commercial medium to begin with. Whatever Toscani's intentions, the outcome is that "social criticism is appropriated in the struggle for brand identification."²⁹

It has been argued that given the 'success' of the Benetton campaign, it may serve as a model to

elevate the role of advertising, as a provider for important and accessible social communication³⁰. Though the ideological impetus for this line of argument may seem noble, the reality of it is far less promising. Editorial compromises due to advertising interests are already commonplace. Further blurring the line between the two will “make culture itself appear to exist at their [brands] behest.”³¹ Moreover, the impact of Benetton’s model can already be observed. Benetton’s ‘success’ was not in promoting social causes but in strategically and whole-heartedly disassociating a brand from its product. This strategy has now become the norm, allowing advertisers to appropriate any subject matter for its purposes, including its own criticism.

Diesel, an Italian fashion company, has also taken this ironic approach to advertising since its inception in 1978. Juxtaposing typical sexual imagery with absurd thematic concepts (such as their ‘For Successful Living’ campaign) they have carved a global niche for their brand. The campaigns were cynical and stylish, but rarely reached the level of ‘depth’ of the Benetton campaigns. Yet in 1998, Diesel launched a series of ads which should have drawn intense criticism had it not been for Toscani’s ‘ice-breaking’ strategies. Supposedly set in North Korea, the series depicted drab scenes of poverty (read communist) juxtaposed by the inclusion of a stereotypical piece of western advertising depicting young, beautiful Diesel models selling a fake brand entitled ‘Lucky.’ A commentary is made, but it is not ‘we are concerned about the detrimental effects of the globalised economy,’ but rather ‘we don’t care about those effects and neither should you.’ Diesel continues to expand its markets, and the evolution of its marketing strategy continues to emphasise this message of absurd detachment. Its most recent ‘Happy Valley’ campaign directly integrates the criticism of advertising and over consumption into a grotesque series of advertisements each themed around the commodification of a particular emotion. The hypocrisy of such an approach is no longer even relevant, yet the ridicule of vital social issues and their integration into the commodity structure is a frightening characteristic of advertising’s assault on the public sphere.

Along similar lines, Sprite has supposedly been making fun of traditional advertising approaches since 1994, when its ‘Obey Your Thirst’ campaign began. Purporting to deconstruct the linking of product consumption with happiness and success, recent television spots depict a stereotypical advertising narrative which is interrupted by the drinking of Sprite, causing ‘reality’ to subvert the narrative through humour. The spots conclude with a high impact display of their logo and tagline: ‘Image Is Nothing. Thirst Is Everything. Obey Your Thirst.’ Though less satirical (and perhaps less offensive) than the Diesel campaigns, the Sprite campaign’s hypocrisy is exponentially increased when the scope of the analysis extends to the company’s ownership. Sprite is wholly owned and operated by the company where ‘Image Is Everything,’ the most powerful brand in the world, Coca-Cola.

Coca-Cola’s ubiquitous cultural monopoly over the world is unquestionable; ‘Coke’ is the second most recognised word in the world following ‘okay,’ the Coca-Cola company is the creator of Santa Claus and can be seen as the indisputable reflection of American popular culture. Coca-Cola has a long history of ground breaking marketing strategies. It was the first company to use women systematically in their advertising, produce consistent point-of purchase promotional ephemera and aggressively develop sponsoring partnerships. Coca-Cola has played a definitive role in not only representing but also shaping American culture. Moreover, its advertising has always exploited an ambiguous emotional appeal, easily universalised to foreign markets.³² This is exemplified by the much-acclaimed 1971 ‘I Want to Buy the World a Coke’ television ad with the emphatic chorus ‘I’d

like to teach the world to sing in perfect harmony'. Coke's early adoption of a global marketing strategy has successfully positioned it as one of the few truly global brands.

The realities of Coca-Cola's global reach are far less ideal than the picture painted by their advertising. In developing nations, Coca-Cola's branding dominates the physical landscape. In Tanzania, schools, hospitals, and even orphanages are sponsored by Coca-Cola, which pays a small amount (approximately fifteen US dollars a year) to brand signage with Coca-Cola advertising. Road and street signs are uniformly branded as well. The saturation of Coke's advertising is conjoined with the presence of their product. During a time of drought and famine in Northern Kenya in 1999, though staples such as food and water were unavailable, stores were consistently stocked with Coke. As Don Knauss, President of Coca-Cola in Southern Africa, states: "Our competition is alternative sources of liquid refreshment, including water... [and] other non-essential items competing for consumer spending..."³³ The simple message of this ubiquitous presence is that Coca-Cola is equated with all that is good; education, health, wealth and happiness. Not having been socialised to deal with these types of messages, the population of Tanzania is taught to accept these associations. In 2001, one million people died in Africa due to malaria. The price of a can of Coke is equivalent to the price of the malaria pill. When asked what to take when ill, many in Tanzania will commonly advise the use of Coca-Cola, 'because it cures all illness'.³⁴ Malaria pills cannot compete with the brand image of Coca-Cola. This is but one example of the false education that the strategy of separating a brand from its context perpetuates. It is also but one example of how, quite disturbingly, people are dying by design.

2. CRITICAL ENGAGEMENT

Graphic Design Culpability and Responsibility

Reductionism

The history of separation cannot be fully understood without addressing its complementary principle of reductionism. Without the ability to simplify, condense and repeat the images created through separation, their control, manipulation and dissemination would be impossible. Of all the cultural movements appropriated into commercial culture during the twentieth century, the Eastern European modernist movement of the twenties has undoubtedly played the largest role in shaping its form. Founded in radical socialist ideologies, characterised by the revolutionary work of members of the Russian avant-garde, such as El Lissitzky and Aleksandr Rodchenko, the modernist aesthetic of bold, dynamic typography, photo-montage and abstract symbolic devices arranged within a rational grid represented a universal, utopian and emancipatory engagement. The revolutionary and progressive symbolism of the new industrial technologies formed the basis of a design philosophy centred on clarity, conciseness and precision. Ironically, these values also held great weight within the expanding corporate commercial sphere and, among other factors, provided a touchstone between art and commerce. Another key factor was the belief held by many artists that participation within the commercial sphere would provide the opportunity to democratise art and communicate modernist values.³⁵ This approach saw artists simultaneously advocating anti-capitalist politics while designing for commerce. Nevertheless, the revolutionary ideological grounding of modernism remained strong, and during the 1920s "the choice between commerce and social revolution... was the significant intellectual dilemma facing many modernist graphic designers."³⁶

While many designers struggled to reconcile this contradiction, the commercial viability of its visual impact was undeniable and its expanding exposure through the mass media reified the modernist 'project' as a modernist 'style,' simultaneously consolidating its formal aesthetic while diluting its ideology. In Germany, which had become the meeting-ground for many important modernist theorists and practitioners, the rise to power of the Nazis in 1933 had a dramatic effect on the development of modernist culture. Vilified by the Nazis for promoting internationalist and socialist ideals, the Nazi regime caused an exodus of modern designers to Western Europe and North

America. While Europe became engulfed by war, in America, where modernist languages of design had already been assimilated by the mid 1930s, émigré European designers received a warm welcome. Distanced from the political turmoil of central Europe, many designers took to working for commercial enterprises and soon became integrated into corporate culture. The value of modernism, both as a philosophy of rational organisation and an aesthetic cultural movement, became a useful tool in the internal communications and external promotions of corporations:

American industry [...] turned to designers to promote a strong corporate image to various audiences, including their own employees, shareholders and the public. [...] Design was increasingly used in systematic fashion to unite large conglomerates and to promote a coherent and vigorous public image.³⁷

The growing focus on corporate identity and the culture of branding was an important development for graphic design in America, elevating it to the status of a respected profession, complete with its own literature, research processes and awards ceremonies. Though the concept of corporate identity and the use of symbols and logos had existed for quite some time, the injection of modernist principles into these areas of marketing changed them into the dominant modes of commercial communication. To understand the significance of this change it is of interest to examine the development and adoption by commerce of the reduced forms of modernist iconography. An ideal example of the modernist project of achieving universalism through the scientific reduction of form was the development of Otto Neurath's Isotype (International System of Typographic Picture Education) during the 1920s and 30s. A Viennese philosopher and social scientist, Neurath designed a collection of uniform graphic symbols to represent people, places, objects and actions. Intended primarily for use in educational materials, these symbols provided a visual perceptual system for the presentation of social statistics. Through principles of reduction and consistency, Neurath's symbol-signs brought together "the mechanical empiricism of photography with the rational structures of mathematics and geometry" ³⁸ in an attempt to create an objective and universal system of communication.

Neurath's work has since been reified into the public sphere through the application of the U.S. Department of Transportation's standard symbol set, designed under the guidance of the American Institute of Graphic Arts in 1974. The D.O.T. system has been applied internationally to such a degree that it has achieved a consistency of understanding that extends beyond the boundaries of verbal language. The high universal application of these symbols is a testament to the effectiveness of Neurath's approach and the power of pictographic communication. Perhaps more telling still is the appropriation of this type of communication by the commercial sphere in the form of corporate logotypes and brand marks. The ubiquitous presence of these reduced signs within a commercially saturated communications environment has dramatic effects on the process of understanding. As Ellen Lupton and Abbott Miller state in their article *Critical Way Finding*:

"This diaphanous veil of commercial imagery is punctuated with a pattern of hieroglyphics, signs that are neither image nor text but occupy a middle ground between them. Such signs, whether generated in the name of private commerce or public information, are attempts to anchor or regulate the ongoing barrage of pictures and products. Like digital rocks in an analog stream, hieroglyphics guide the flow of communication by directing the interpretation of events, the consumption of goods, or the navigation of public spaces."³⁹

Though these reduced signs, or hieroglyphics, have in some sense achieved the modernist project of internationalisation, the supposed objectivity and neutrality of their character masks numerous problems. The simplified geometric forms of these signs, which contributes heavily to their semblance of objectivity, encapsulate and represent vast amounts of cultural meaning. And though conventionalised, these meanings are in no way objective or neutral.

Within the D.O.T. system, the male and female figures are used to represent lavatories for men and lavatories for women. The female figure is distinguished by the fin-like extensions of a party dress, a loaded cultural convention. Furthermore in every other sign save one, the male symbol is used to represent people in general. The only other sign in which we see the female symbol (more accurately, the women's lavatory symbol) is the sign for ticket sales, where the 'woman' serves the 'man.' In this way the D.O.T. system clearly represents more than objective information, it represents cultural customs, value systems, and structures of power.⁴⁰

The ability of these simple symbolic marks to represent the vastness of human experience while maintaining the appearance of objectivity, and hence authority, through highly economical means, is at the root of their stylistic appropriation by the commercial sphere. Through advertising, powerful associations are created between a wide range of intangible values and emotions and a corporation's logo, which is then replicated ad infinitum. Through their mass exposure, these logos become conventionalised signifiers of a complex range of values and emotions.

The grafting of these signs onto experience is reinforced by the reciprocal approach of using seemingly complex, realistic imagery to represent conventionalised and generic ideas and emotions. Water droplets on cans and bottles of beverages represent the notion of refreshment, smooth, polished surfaces are equated with beauty, health, and progress, SUVs tearing through the wilderness with freedom, fast food with family. These conceptual associations become further reduced and applied formally by graphic designers, where fast moving lines and angular abstract shapes symbolise technology, jagged typography represents counter-culture, Helvetica represents truth.

Coupled with the hieroglyphic language of logos, a complex yet reductive and codified system of representation is promoted through advertising and reinforced within numerous manifestations of popular culture. However, beyond their role in consolidating this system of representation, logos play an essential role in communicating brand ownership. Logos provide the visual reference point connecting a brand to its property. Thus, an analysis of ownership structures becomes essential to the contextual understanding of strategies of reduction.

By examining the primary sources of production and distribution of these reductive forms of communication, a parallel can be drawn between the formal execution of this language and the structural reduction occurring through the wave of media mergers over the last two decades. The liberalisation and deregulation of communication policies coupled with the rampant growth of commercial advertising has created an oligopolistic media market dominated by a handful of global corporations. This consolidation is not only reflective of the dramatic concentration of wealth and power characteristic of the global economy, but obviously plays a dominant role in reinforcing it. Criticism of these media monopolies is commonplace, focussing primarily on the homogenisation of cultural material and the destruction of diversity that this entails. However, undoubtedly a valuable and necessary critique, this approach falls short when critical analysis of the media environment

reveals that there remains quite a diversity of information and entertainment, and that maintaining and encouraging this diversity is of primary concern to many media owners.⁴¹

What becomes revealing is the type of diversity that is created and allowed for. Though corporate media is surprisingly inclusive in representing social problems such as racism and discrimination, “the focus tends to be on the individual, not the structural; the specific manifestations of suffering, not the broad social conditions underlying them.”⁴² Reducing and concentrating social issues to representations of individual experience inevitably compromises social understanding while simultaneously creating strong emotive connections with the audience. A similar approach is used in the creation of ‘niche’ markets, which act as the representatives of media diversity.

With the consolidation of the current media giants, there has been a shift from the focus on producing mass cultural forms that appeal to the majority to the development of more fragmented ‘niche’ products.⁴³ Media companies seek out the issues and ideas that are not dealt with by their mainstream coverage and subsequently promote them within specific markets. These products have clearly-defined cultural boundaries that through their specificity generate greater audience interest and investment.

This intensity of interest allows niche products to “be marketed to consumers and sponsoring advertisers at a premium price.”⁴⁴ Additionally, through control of both mass and niche markets, products can then be strategically moved between the two, carrying the intensity of a niche product into the mainstream (an ideal example being the popularity of Hip-hop music) or creating a niche market for a once mainstream product (such as Star Trek). What becomes apparent is that the interest of media companies is not so much “to homogenise popular culture than to organise and exploit diverse forms of creativity toward profitable ends.”⁴⁵ The relevance of these issues to graphic design returns to the forefront when we examine the structures of control that are utilised to organise the diverse and chaotic media environment. Intellectual property laws, a central topic of design discourse, are what bind media brands and products together through “elaborate architectures of copyrighted texts, trademarks, and licensing agreements.”⁴⁶ Based in romantic notions of sanctified authorship, intellectual property laws have since developed into complex systems of regulation and ownership. The lengthening of copyrights and the extension of intellectual property laws into areas that were previously regarded as public domain (the most dramatic example being human genetic material) reflect a dramatic shift from the previously held assumption “that things in the public domain should stay that way unless a compelling case could be made for privatisation, [to the assumption] that things should be privatised unless a compelling case can be made not to.”⁴⁷ This becomes representative of the extreme reduction of cultural ideas to the point of returning to intangibility, yet an intangibility that is owned as property and traded as a commodity.

Graphic designers, acting as mediators within an often appropriative sphere, are asked to work within the limits defined by these property laws. As corporate ownership extends to images and ideas that were once publicly available, the reservoir from which graphic designers draw is increasingly constricted and codified. Beyond the economic control provided by intellectual property laws, corporations are increasingly using these laws to silence criticism or even commentary that reference their ‘property’ (such as logos or slogans). Graphic designers who wish to engage in social commentary, a function that is so well suited to their craft, are constantly in danger of the repercussions of violating these laws. The process of reduction controls and directs cultural

production within the public sphere contributing to its privatisation. Through complex structures, cultural representations are simplified and tied to commercial ownership. As democratic dialogue is constrained, the very notion of free speech is called into question.

CRITICAL ENGAGEMENT

3. Graphic Design Culpability and Responsibility

Idealisation

The processes of separation and reductionism that have been explored thus far create the necessary conditions for the commodification of the communications environment by creating a value system based in detached and reduced signification. Idealisation, understood simply as the attribution of unwarranted positive characteristics to a product, message or concept – from the stylisation of surfaces to the projection of false promises – exploits these conditions, gives currency to this system and directs its movement. Whereas the creation of desirable objects, imbuing them with aesthetic and spiritual value, can be said to be an integral part of human nature, the manufacture of desire for its own sake is a phenomenon that requires greater analysis.

The roots of this phenomenon can be located at the beginning of the 1900s, with the development of mass markets and the techniques of psychological advertising described earlier. "By the early 1900s the most successful advertising agents were trying not only to attract attention but aggressively shape consumers' desires."⁴⁸ In order to create desire, above and beyond what was achieved through the stylisation of goods and the application of emotional characteristics to products and packaging, advertisers, directly informed by the realm of psychology, played upon what Jackson Lears has termed the 'therapeutic ethos.' Lears describes this ethos as:

"[a] reaction against the rationalization of culture – the growing effort to exert systematic control, over man's external environment and ultimately over his inner life as well. [...] Many began to sense that their familiar sense of autonomy was being undermined, and that they had been cut off from intense physical, emotional, or spiritual experience. The therapeutic ethos promised to heal the wounds inflicted by rationalization, to release the cramped energies of a fretful bourgeoisie."49

Advertisers reacted to this sense of detachment, providing a symbolic universe filled with promises of physical beauty and emotional fulfilment that proved to be extremely profitable. However, this universe was in actuality rather limited in scope, grounded in the generic concept of self-betterment. The growing sense of urban malaise allowed advertisers to create a standardised platform from which to sell all manners of products. This uniform approach of appealing to a generic psychological dissatisfaction allowed for the expansion and unification of markets by ignoring the specificity of individual consumers, their ethnic background, geographical location and most importantly, their actual needs. The presence of idealised advertising imagery and messages created an environment where the dissatisfaction felt by many was transformed into needs felt by all. This played an incredibly important role in the burgeoning American economy:

Psychological standardisation – that is, simply to use a way of life as the basis of unification [...] determines the extent of the American market. Mass production requires mass consumption, but there cannot be mass consumption without widespread identical views as to what the necessities of life are.50

Though 'life style' advertising was effective in controlling economic markets, it was the advent of the First World War that provided the catalyst for its development into a new and totalising form of psychological propaganda:

"... it was in the war itself, when now not a market but a nation had to be controlled and organized, yet in democratic conditions [...] that new kinds of persuasion were developed and applied. [...] Alongside the traditional appeals to patriotism lay [a] kind of entry into basic personal relationships and anxieties."51

Advertisers began to develop complex techniques of persuasion in order to sell their products, rooted in the creation of what has become known as 'the American Dream': a mythic construct built upon idealised notions of family, freedom, progress and success. Though its economic role was invaluable, its effectiveness in mobilising a diverse populace during the war is what consolidated its position within American society.

One example of this new role for the umbrella industry of American public relations and marketing can be found in the 'Mohawk Valley Formula'. In a reaction to growing labour strikes in the late 1930s, public relations industries developed this 'scientific method of strikebreaking,' which consisted of mobilising a community against strikers and union activists rather than engaging police in direct violence against them, which was the 'method' used previously.52

The 'Mohawk Valley Formula' basically consisted of entering a community and flooding it with propaganda that presented an idealised picture of the world, of hard working people and their possessions, of harmonious familial life, and of a singularly unified community. Once the community

became accustomed to this constructed environment, the strikers were positioned as dangerous threats to its harmonious ways of life, and made into scapegoats for why people's actual lives did not live up to the construction.⁵³

Though the techniques have become more sophisticated, the myth diversified, and the channels of delivery vastly expanded, the formula remains the same. Advertising today, more so than ever, serves to indoctrinate people with value systems that are both economically and politically profitable to elite structures. This is not to suggest that all commercial media are engaged in a mass conspiracy, but that by acting under a "guided market system"⁵⁴ they create an environment that achieves these ends:

"... one out of six dollars in the whole economy is spent on marketing. It's an extremely inefficient use of funds. Marketing doesn't produce anything, any public good. But marketing is a form of manipulation and deceit. It's an effort to create artificial wants, to control the way people look and think about things. A lot of that marketing is straight propaganda, advertising. Most of it is tax-free... which means the way our system works, you pay for the privilege of being propagandized, of having all this stuff dumped on you."⁵⁵

The societal consequences of this are extreme. In America, this kind of marketing propaganda generally operates at a continuous, yet low level of intensity, socialising the public to accept and in turn idealise a certain way of life. This way of life obviously allows for an ample amount of diversity (as examined earlier) yet the structural foundations, concepts such as freedom and self-betterment, remain the same. When necessary however, this propaganda can quickly build upon the value system created and become a direct form of propaganda, mobilising the populace to action, or inaction as the case may be.

The attacks of September 11th provide an ideal example. An onslaught of advertising and public relations campaigns launched shortly after the attack unilaterally supported war and helped to earn George W. Bush, a president marginally elected under great controversy, an approval rating of 92 percent.⁵⁶ Filled with American flags and heroic imagery, this propaganda called for patriotic consumption and unwavering support for a war-mongering government. Though it would be presumptuous to give disproportionate credit to the campaigns themselves, commercial media played an important role in consolidating public opinion. A population bred upon the concept of freedom has been led to accept this concept as the justification for a continual state of war, of 'good' against 'evil'.

This form of blatant propaganda requires little critical scrutiny in order to be understood; it is designed with specific purposes, under specific conditions and uses conventionalised strategies to achieve its goals. However, the creation of the conditioned responses these strategies play upon is a far more complex system of sociological propaganda, with far more subtle expressions. This subtlety has much to do with the naturalisation of the 'Mohawk Valley' approach through advertising and is reflective of its effectiveness. As Ellen Lupton and Abbott Miller describe:

Advertising's impact emanates from its representations of the "everyday," its reiteration of stereotypes and relations of power. Much consumer advertising portrays the apparent naturalness of social conditions, not exceptionally or bombastically, but in the course of its daily business. These images are all the more forceful because of their incidental and offhanded nature.⁵⁷

Though Lupton and Miller are referring specifically to advertising, the nature of sociological propaganda is such that it extends to the majority of cultural products. Graphic design has largely internalised the assumption of idealisation as part of its role, the 'value-added' of making products desirable. Yet inherently, this creation of desire plays into the system of creating and consolidating values and behaviours, which are in turn reintegrated into the designer's toolbox. This cyclical and cumulative process of idealisation leads inevitably to the marginalisation of genuine social experience and communication. As a form of systemic social control, this is frightening, yet on an individual level, the psychological conditioning it necessitates may be more frightening still. As Jacques Ellul argues:

"A person subjected to propaganda does not remain intact or undamaged: not only will his opinions and attitudes be modified, but also his impulses and his mental and emotional structures. Propaganda's effect is more than external; it produces profound changes."⁵⁸

An environment saturated with idealised images inevitably creates artificial needs in people that cannot be materially satisfied. Though this is a common critique, often trivialised for its generality and simplicity, its reiteration is imperative. As the dislocation grows between the ideal and the real, dissatisfaction translates into a myriad of forms, from loneliness, apathy and alienation to the serious psychological disorders that are growing at an epidemic rate. Though, quantifiable psychological studies examining the relationship between mass media and psychological illnesses are only beginning to surface, dramatic rises in the prevalence rates of severe depression, especially amongst youth, are well documented.⁵⁹ Along with the rising rates of depression, a host of other 'illnesses' have been pathologised; anxiety disorders, eating disorders, ADHD, etc., along with the drugs to 'cure' them. In the US, suicide is now the third leading cause of death among people 15 to 24 years of age.⁶⁰ A general sense of despair and alienation is growing amongst youth in the west, and, notably, they are the primary target market for the majority of commercial media.

A prime example of this targeting is the development of the Channel One network, a commercially produced television news program that is broadcast in tens of thousands of American schools. In exchange for the 'donation' of equipment necessary to receive their broadcasts, schools open educational institutions to commercial inundation. Coupled with the abundance of magazines, television shows, and commercially sponsored events that are specifically aimed at teenagers, Channel One has colonised one of the last remaining commercially free spaces. Teenagers bear the brunt of the onslaught of idealised images. At a formative stage of development, they are indoctrinated to desire and to be desirable. The creation of desire lies at the heart of consumer culture, the detrimental effects of which are becoming increasingly severe. The diverse psychological, environmental, political and social problems that our society faces are intricately tied to the development of an unsustainable way of life. Yet not only are these problems masked by the idealised representations of this way of life, its advancement is the most vocal solution being proposed by the officially sanctioned mass media. George W. Bush's rallying cry to shop in the wake of September 11th provides a recent example. The absurdity and irony of these tactics reveals what designer Andrew Howard stated in 1997: "the nature of the problem is not just consumption but the ordering of our consciousness to become consumers in the first place."⁶¹ Driven by economic and political motivations, the mediated environment is laying waste to humanist concerns, cultivating a society of individuals who are rapidly being stripped of the means to fight back.

"To the extent that necessity is socially dreamed, the dream becomes necessary. The spectacle is the nightmare of imprisoned modern society which ultimately expresses nothing more than its desire to sleep. The spectacle is the guardian of sleep." 62

CRITICAL ENGAGEMENT

4. Graphic Design Culpability and Responsibility

Hope

The purpose of the preceding thematic critiques has been to demonstrate the economic and political context within which the majority of graphic design operates. The critiques present a small component of a much broader critique of monopoly capitalism, corporate globalisation and its growing hegemony. Whereas it would be arrogant, not to mention impossible, to propose a dogmatic solution to the complexity of issues involved, especially through the lens of graphic design, it would be equally recessive and defeatist to not propose solutions at all.

Graphic design is a vast field, and the themes of separation, reductionism and idealisation, though integral to an understanding of context, are by no means the definitive boundaries by which the medium is set. This essay has been organised to focus on them because they offer tangible points from which graphic designers can directly act. Through an understanding of the mechanisms underlying these themes and their detrimental impact, designers can make active and responsible choices to avoid exploiting their representations in language. Furthermore, a strategy favouring the inversion of these themes can provide a working model for more honest and informative forms of communication. By making genuine attempts at grounding imagery in the context of its production and reception, diversifying codes of representation, providing alternative viewpoints and refusing idealised stereotypes and manipulative emotive techniques, designers can and have directly challenged the commodification process. The necessary complement to this strategy of inversion is the development of a public discourse around the societal effects of separation, reductionism and idealisation. Designers need to take the initiative in revealing and problematising these issues within practice. These propositions should not be understood as reformist principles calling for a return to vernacular design nor as an attack on fundamental principles of 'good' design and aesthetic values. What is being proposed is a critical engagement in the construction of meaningful communication by directing design language away from the commodity structure. This kind of engagement in language is reciprocal to the development of a broader social responsibility from designers, which takes form in a wide variety of approaches, fundamentally grounded in the recognition of graphic design as a social and political practice.

Liz McQuiston's *Suffragettes to She-Devils* presents a wealth of examples of socially engaged graphic design. The book catalogues an extensive amount of visual material drawn from the feminist movements of the twentieth century. Acting, in their own right as "agents and carriers of the ongoing call for change"⁶³ the diverse forms of graphic expression helped to disseminate information, establish communications networks, promote issue-oriented education and deliver stinging social critiques. Graphic design played an important role as a tool of empowerment, giving voice to women and articulating their concerns.

The vast stylistic variety of the material represented in McQuiston's book is not only demonstrative of the diverse issues and contexts from which it is derived but provides an interesting insight into graphic design's place in social struggles. In contrast to the emancipatory and utopic vision of the modernist movement, the images of the women's movement in no way prescribed to a unifying aesthetic dogma. Obviously, these movements are fundamentally different and stylistic comparisons would not provide constructive insights. However, when seen in conjunction with other social and counter-cultural movements that became symbolic of a certain stylistic representation (for example the DIY style of the 'punk' movement or the urban aggressiveness of hip-hop), what can be noted is that the women's movement's lack of stylistic unity, though not an intentional strategy, in fact adds a level of resistance against its co-option, commodification and resulting dissolution. What unifies the

works presented in Suffragettes to She-Devils is a passionate commitment to the issues and a political engagement from the artists far beyond the level of rhetoric.

This level of engagement to social issues is rare amongst professional designers. Indeed a concerted effort to distance oneself from what might be called biased perspectives, under the guise of neutrality and objectivity, is often seen as the invaluable asset of professionals. Hence, emphasising design's growing economic function while ignoring its social and political ramifications is common within the promotion and practice of graphic design. Katherine McCoy states:

"Commerce is where we are investing time, budgets, skills, and creativity. This is a decisive vote for economics over other potential concerns, including social, cultural, spiritual, and political needs. This is a political statement in itself, both in education and practice."⁶⁴

Jan van Toorn emphatically reiterates the effects of subsuming graphic design's social role to institutional private interests:

"Not questioning social responsibilities implies that you surrender to that sector of society that, because it possesses all our means of survival, manoeuvres design in the role of entrepreneurial aesthetics. Design, often regarded as autonomous activity, thereby functions more and more as an aesthetic legitimisation of the dominant ideology."⁶⁵

The strategy to advocate a design autonomy as apolitical and dissociated from social concerns can be traced to a multiplicity of social, cultural and political factors that tend to place the economy above all other concerns, effectively engaging in the depoliticisation of the citizenry at large. Specifically within the field of graphic design, Katherine McCoy places an emphasis on educational factors, and the role of modern formalist training employed by many design schools:

"The Basel graphic translation projects, so effective in training a keen formal sense, unfortunately use a process of abstractional analysis, thereby stripping imagery of its encoding symbolism. Divorcing design form from content or context is a lesson in passivity, implying that graphic form is something separate and unrelated to subjective values or even ideas."⁶⁶

As a design educator, McCoy proposes a simple, clear-sighted appeal to engage students, from the very beginning of their education, with content-based projects of personal and political significance: "The responsibility for developing content is a crucial one; it counteracts the passive design role in which one unquestioningly accepts client-dictated copy."⁶⁷ In shifting the focus of design education from formal concerns to genuine and tangible communicative challenges, educators empower students to develop their own voices as well as the critical faculties to recognise voices that are not often heard. This progressive approach begins to move design beyond the realm of representation into the role of actual communication. The efficacy of education and the academy as a site of resistance should not be understated. In 1997, the Jan van Eyck Academie in Maastricht, The Netherlands, hosted the design beyond Design conference. This international gathering centred on critical, alternative and dissident design practices. A statement by bell hooks, which was used as the motto for the conference, underscored the marginal nature of these

practices:

"I was not speaking of marginality one wishes to lose, to give up, or surrender as part of moving into the center but rather as a site one stays in, clings to even, because it nourishes one's capacity to resist. It offers the possibilities of radical perspectives from which to see and create, to imagine alternatives, new worlds."⁶⁸

Els Kuijpers, one of the organisers of design beyond Design, relates this statement to the role of the academy:

...it is logical that education can be so effective in working towards an emancipatory programme because it is where the dominant culture is both confirmed and called into question. This means that education is one of the sites of the conditions for critical action and transformation. That is to say, the academy as a potential source of counter-images.⁶⁹

The conference, which brought together academics, intellectuals and design practitioners along with an exhibition of their work, acted as just such a site, and became a pivotal event in the contemporary history of critical design practice. The works presented covered a breadth of specific projects and issues, and was unified by an attempt to investigate "the discrepancy between the socio-economic and symbolic reality of the world-wide information and consumption culture and the prospects for the democratisation of the media."⁷⁰ Supported by strategic theoretical dialogue and discussion, the designers presented striking examples of alternative design practices. Though a large diversity of work was presented, there was a consistent challenging of dominant design ideologies, as well as an inherent action against the thematic principles of separation, reductionism and idealisation.

Much of the success of the design beyond Design conference lay in its inclusion of participants who create strong links between social responsiveness in design and active practice.

The work in the public sphere of Sheila Levrant de Bretteville focuses on a dialogue-based understanding of context, and commemorates histories of the people that have lived in the communities she works in. Specifically, her work aims to make "the plurality of voices of people in those neighbour-hoods visible, allowing us to listen."⁷¹ This approach counters the separation of a work from its historical and geographic context, transforming the physical environment into a document of its past, too often effaced by gentrification and other economic prejudices.

Another project of interest is the design studio 2x4's Museum of the Ordinary, which defines a section of the urban environment of Manhattan as a museum, consequently labelling and intervening on objects and public spaces within it. Using devices typical of a museum, 'ordinary' objects are framed and isolated while labels provide information of their social and economic histories and values. In doing so, the museum deconstructs the naturalisation of the constructed environment and critiques the idealised notions of design practice.

Another important design beyond Design participant was Gérard Paris-Clavel, one of the founders of the Ne pas plier activist design collective. Ne pas plier creates graphics to support popular social struggles, giving voice to marginalised people. Their work moves graphic design into the streets, reclaiming social space and connecting directly to individuals and groups who actively use it. In his conference lecture, Paris-Clavel eloquently describes the group's objective, "that the signs of poverty

not be joined by a poverty of signs, and that the exclusion of language not be replaced by languages of exclusion.”⁷²

All these projects associated with design beyond Design, reinforce bell hooks’ statement that it is in the margins of design culture, rather than in the mainstream, where activist efforts are still most effective. They present powerful and necessary alternative visions of what design can be. Moreover, while remaining at a critical distance, they can and do strategically influence the centre. The renewing of the First Things First manifesto, with its broad reach, would not have been possible, nor relevant, without the contributions made at this pivotal conference.

At the recent Declarations of [inter]dependence and the im[media]cy of design symposium, which took place in Montreal in October 2001, the initiatives made at the design beyond Design conference were further extended into practice. Student-oriented, the symposium proper was preceded by intensive four-day collaborative workshops where a wide variety of both image and object-based design work was produced and disseminated into the public sphere, as well as being presented within a gallery setting.

Ironically, the symposium, which focussed on politically and socially engaged design practice, took place in the aftermath of September 11th amidst the surge of war mongering American propaganda. The work produced by the Design Is Not Enough workshop, led by Tony Credland, Sandy Kaltenborn and Brian Holmes, reacted to this critical moment by producing work to counter the propaganda being issued by the mass media. Oriented towards creating public dialogue, disseminating information and critiquing the media, the facilitators and students created a body of work based firmly in the context of its reception and the interaction between designer and audience.

This dialogic process was also explored by the We Interrupt The Programme workshop. A project initiated by Ian Noble and Russel Bestley at the design beyond Design conference, We Interrupt The Programme focused on deconstructing the language of graphic design in order to challenge assumed communication hierarchies and open the construction of meaning to a more democratic process. Breaking down the design process to the juxtaposition of individual words and images which were generated autonomously by the students, a matrix of narratives was created that was reflective of the collaborative group yet open-ended enough to allow for negotiated interpretations by the audience. Working through an experimental approach, not centred on the determination of specific meaning, a more organic approach to communication design was explored.

"Though the message can never be an open, democratic construct between sender and receiver, we can attempt to expose the nature of the process at work by allowing the reader a free hand in the act of construction itself."⁷³

Inherently, this revealing process seeks to satisfy two goals. Firstly, it empowers the reader by placing them into a collaborative position in the generation of meaning. And secondly, it brings attention, albeit obliquely, to the strategies of persuasion employed in graphic design, challenging the viewer to be more critical of the mediated environment at large.

The development of critical and dialogic approaches to visual language at the Declarations conference was coupled with an engagement in socio-political concerns. Though this has not resulted

in any explicit utopic solutions, what the conference has succeeded in achieving is invaluable, and that is the creation of dialogue itself. At the root of the argument is the fact that if design is about communication, it must be inherently about the creation of dialogue. Dialogue as exchange, dialogue as education, dialogue as resistance. In Jacques Ellul's treatise on propaganda, he systematically demonstrates its all-encompassing power and its apocalyptic destructive effects. Yet hidden in the introductory definition of propaganda's characteristics, Ellul makes a bold and empowering statement: "Propaganda ceases where simple dialogue begins."⁷⁴

The creation of spaces for dialogue is an essential component of the progressive struggle. The Internet has provided an ideal medium for the delivery of alternative information, creating spaces of autonomous dialogue. Though it is being rapidly colonised by commercial interests, its viability as a platform for activists is unprecedented. Perhaps the best example of this is the Indymedia⁷⁵ web site. Established in 1999 for the purpose of providing grassroots coverage of the World Trade Organisation (WTO) protests in Seattle, the site has since become a global portal for independently produced media. Constructed around open-source open-publishing software, the site allows for anyone to participate by posting articles, images, sound and video footage. The success of the initial site has spawned over eighty affiliated media centres worldwide presenting alternative, non-corporate media, connecting local struggles and initiatives to a global audience.

The Internet is populated with an abundance of web sites that share the radically democratic spirit of Indymedia which provide critical, alternative, and dissenting perspectives, information and content.⁷⁶ One such site, the Guerrilla News Network⁷⁷ showcases short video documentaries that expose global issues too often ignored by the mass media. The videos combine high impact imagery with innovative video-scratching techniques and informative commentary set to powerful musical soundtracks. The site describes them as "music videos for people who think."⁷⁸ These videos are exemplary of design's role in communicating vital alternative information in an engaging fashion.

Graphic design, which is now understood as including design for the web, has an important role to play, not only in how users will interact with the medium, but in contributing to its viability as a source of independent production. A vibrant design community exists on the web, consisting of designers seeking to push the boundaries of the medium's communicative potential.⁷⁹ Experimental design sites abound alongside personal sites showcasing graphic design's expressive nature. Bridging the gap between these sites and those with a progressive agenda would be a tremendous step towards furthering the Internet as a tool for social change.

The @TMark web site⁸⁰ provides a strong example of the conjoining of creative practice, technological sophistication and dissenting politics. The site plays on the corporate investment model to list, support and document anti-corporate projects. From the creation of satirical web sites such as gwobush.com, **voteauction**.com and gatt.org which specifically mimics the World Trade Organisation's official web site, to subversive 'public relations' email campaigns, @TMark has successfully caused interventions to the corporate agenda. Most notably, their Toywar campaign prevented the corporate buyout of a Swiss art collective's website, etoy.com, by the Internet toy distribution company Etoys. The campaign helped to bring Etoys stock value down from 67 dollars in November 1999 to just under 20 dollars by January 2000, when the suit from Etoys was dropped.⁸¹

Though operating from a very different direction, the Saturation Engine project⁸² is equally

illustrative of the combining of creativity, technology and dissenting politics. The engine reclaims the imagery from the media fallout after September 11th and recontextualises it into an audio-visual barrage. The condensed, repeated and conflicting images not only reveal their propagandistic nature but “create[s] a situation where new meanings can be constructed from the imagery that surrounds us constantly.”⁸³

Both these sites aim to challenge existing structures of media and corporate power. They exploit the potential of the Internet as a space of dialogue and dissemination to encourage critical thought and action. Evidently, the generation and sustenance of dialogue as a critical strategy needs to be complemented by direct action strategies within the public sphere. The reassertion of its public character is of primary importance. ‘Culture jamming’, a term coined by the band Negativland, has become a popular strategy employed by media activists. Understood under the term ‘détournement’ by the situationists, it was seen as a key strategic concept, “an insurrectional style by which a past form is used to show its own inherent untruth— an untruth masked by ideology.”⁸⁴ Culture jamming can be used to describe a broad range of subversive activity, from the work of graffiti artists to the radical ‘refacement’ of billboards by the Billboard Liberation Front⁸⁵ to pirate radio broadcasts. In essence, it is an attempt to challenge the authority of the mass media through creative acts of resistance within the public sphere.

Adbusters magazine, the ‘journal of the mental environment,’ has appropriated culture jamming as the rallying cry for their manifesto, seeing it as a social movement with the revolutionary aim of “toppl[ing] existing power structures and forg[ing] a major rethinking of the way we live in the 21st century.”⁸⁶ This type of sloganism, typical of the more recent issues of Adbusters, along with the slickness of its design has drawn the magazine regular criticism. The apparent contradiction between its anti-advertising objectives and its image-based editorial strategies, not to mention its aggressive self-promotional techniques, raises questions regarding its integrity and accountability. Though this criticism is understandable and necessary, Adbusters’ approach has placed the magazine in a unique and important position. Found alongside popular publications, often co-existing with major design journals, Adbusters maintains a highly critical and radical perspective, both in form and content. The magazine’s image-based approach and strategic use of design elements provide powerful examples of graphic design’s ability to subvert dominant messages and raise challenging questions. Jan van Toorn, though not speaking specifically about Adbusters, provides insight into the magazine’s approach, differentiating between the role of the visual and that of the image:

"The problem of design today is that it is more fascinated by the visual, as a realistic imitation or decoration, and not by the image as a subjective narrative and interpretive element. As a result of its internal dialogue, however, the image is more than a perception. It is a necessary construction on the brink of fiction, that reveals the dialectic of representation and presentation."⁸⁷

Adbusters, though at times guilty of crossing the line between the visual and the image, plays an active and important role in the contemporary development of the image as a critical tool. Criticism, albeit warranted, should not be used to efface the culture jamming that it engages in, and, more significantly that it inspires in others.

Yet the effectiveness of culture jamming as a direct action strategy is limited if it does not move beyond a critique of the media to address directly the structural factors and inequalities underlying its power. Direct action in graphic design implies the support of direct action in people’s struggles. It

cannot exist as an autonomous critique, as the members of Ne pas plier describe:

"...an image is not an inert object to be contemplated, nor is it a political tool in itself. Only when inserted into action or struggle does it produce political effects; only when carried by individuals or groups does it come alive, generating meaning in return."⁸⁸

During the protests against the Free Trade Agreement of the Americas (FTAA) meeting in Québec City in April 2001, Ne pas plier along with a network of other designers and artists organised an 'exhibition', "conceived as a temporary agit-prop centre in support of the movement,"⁸⁹ where a wide diversity of graphic material; stickers, posters and banners, was given out free for use by demonstrators. Exemplary as an indicator of the nature of the works, was the 'mask' project designed by the Cactus Network in collaboration with students and teachers at Concordia University. Over 4,000 bandanas - printed with a laughing face on one side, and a gagged face behind cyclone fencing on the other – were given out providing both symbolic strength and physical protection from the excessive amounts of tear gas (5,148 canisters) used by the police.

The protests in Quebec City generated an abundance of visual material, both simple and sophisticated, that symbolises the importance of graphic design in social struggle. From a placard scrawled with the message 'Canada is not for sale but our PM is' to the intricate anti-FTAA poster designed by the Beehive design collective, graphic material aids in the construction of a meaningful narrative and provides a visual memory of the events. This poster, and others designed by the Beehive, are excellent examples of political critique explored through the language of graphic design. The collective's characteristic illustrative style uses a complex fractal-like approach to depict diverse and specific political conflicts that are interwoven into a larger narrative image. By revealing simultaneously the multiplicity of issues involved and their relationship to larger issues, such as the FTAA, their posters present beautiful and comprehensive political critiques.

Ne pas plier, the Cactus Network and the Beehive Collective are but three of the countless organisations and individuals that had chosen to use their graphical talents to protest the FTAA agreement in Quebec City. The city was awash in colourful and emphatic political expressions, countering the clouds of tear gas and black suited police. This diversity of expression within political struggles returns these discussions to the strengths and successes of the graphic support material of the feminist movements, and optimistically, of the concrete progress made by the movements themselves.

The examples that have been presented explore a wide range of possibilities for socially engaged design practice. They revolve around the complementary strengths of education, dialogue and direct action as instigators of social change. Supported by a thorough understanding of the thematic incursions of separation, reductionism and idealisation on design practice and language, they will lead, I hope, to the generation of a more fundamental concept of design responsibility. This responsibility cannot be based solely in the continued development of critical thinking and writing on design, but must take place in the creation of a practice composed of designers who think, listen and most importantly, act. Graphic design has played the part of social pacifier for far too long. Taking action is an essential component of taking responsibility. It means getting out of the cocoon and into real situations of social co-operation and confrontation.⁹⁰ It means believing, supporting, and participating in movements for radical change. At heart, it is about democracy. As Jan van Toorn

states:

"In the light of the economic and social relations of power in the world, it is not realistic, I believe, to hope for the direct participation in the media by those who have no voice. That accounts for the incredible importance that practical intellectuals as designers should attach to an emancipatory view of their role as contribution to the real democratisation of the media as public spaces."⁹¹

If we wish to continue to believe that we live in a democratic society, then we, as citizens, must engage in a more direct control over the makeup of our social environment. The environment cannot be left to regulation by an idealised market system. The belief in an unsustainable economic model has led to countless atrocities; rampant environmental destruction, an exponentially growing divide between the rich and the poor, endless war. If we understand that the means of communication set the basic parameters for the functioning of society, then designers are complicit in the perpetuation of these problems. Yet this understanding also places the designer in a privileged position for the furthering of a socially progressive agenda. As the adverse effects of rampant commercial culture grow, it is continually challenged by popular resistance. It is design's urgent role to not only give voice to this resistance, but to work towards the construction of a genuinely sustainable and democratic communications environment.

LEGAL TECHNOLOGY NEWS.COM

Friday 10 November 2000 - Issue #052

HOLWAY GIVES UK COMPUTING INDUSTRY THE THUMBS DOWN

At a recent seminar organised by London law firm Berwin Leighton, independent computer services analyst Richard Holway warned that UKs IT sector could expect another two years of weak growth and falling profits, with many suppliers suffering the kind of losses not seen since the early 1990s. Holway suggested most companies will be lucky if they enjoy growth rates of 10 percent and suggests it will be the year 2002 before the market starts to recover. He also predicted that most B2B and B2C internet businesses would fail and the only winners in the e-commerce arena would be bricks and mortar companies when they get their act together". Holway blames the recession on the "Y2K microclimate" which saw many customers bring forward their IT investment plans to tackle the millennium bug but have since frozen all new development work and expenditure.

TWO MORE ONLINE LEGAL SERVICE INITIATIVES

London law firm Richards Butler has launched RB-AssetsOnline, a new internet based virtual dealroom facility for handling the management of property and commercial property market transactions online. Clients and property managers will be able to retrieve and view all documents relating to property online, as well as access to continuous transaction reporting around the clock. The firm says that while property is currently regarded as a secure asset, when viewed in terms of its liquidity the time delay involved in transactions, has tended to be one of its greatest drawbacks. Along with offering 24/7 access, Richards Butler believe the new service will effectively help improve the liquidity of property assets.

And, Herbert Smith has announced it has entered into a "strategic arrangement" with one of its clients - the Crosby Group - to provide the legal content for a new B2B commercial deals and exchange site GrowAsia.com that focuses on the South East Asian market.

JUST ASK! JUST MISSES OUT

The Lord Chancellor's Department's JustAsk! legal advice web portal for the general public was the runner up in two categories in this week's Computer Weekly e-business awards however congratulations to Companies House which won the E-Government Award for the best use of e-business in the public sector.

FREELANCE CASE TO GO TO THE SUPREME COURT

The US Supreme Court has announced that it will hear an appeal in the continuing dispute between a group of New York freelance journalists and a number of leading publishers, including the New York Times and Reed Elsevier's Lexis-Nexis division, over whether the journalists should have been notified or compensated when their work was republished on CD-Rom and online database services. The publishers were keen to take their case to the Supreme Court after the US Appeals Court for the Second Circuit, in New York, ruled in New York Times -v- Tasini, in September 1999, the the 1976 Copyright Act prevents companies from republishing the author's work without permission or payment. In fact since then most publishers have introduced new contracts to ensure they acquire both the print and digital rights to work supplied by freelancers.

FRENCH EXPERTS SAY YAHOO! COULD BLOCK ACCESS

The three internet experts appointed by a Paris judge to advise on whether it would be possible for Yahoo! to prevent French web surfers from accessing web sites hosting auctions of Nazi era memorabilia - it is illegal under French law to sell or display objects that promote racism - have said it would be possible to block access to about 70 percent of French surfers because they use easily identifiable French ISPs. The court is expected to rule later this year on what action it require Yahoo! to take.

ONLINE PROTESTS FLOURISH

In the UK a number of businesses that have been threatened with legal action for having a similar web address to the low cost airlines-to-car hire and internet services company EasyGroup have launched a web-based protest site at www.EasyProtest.com. EasyGroup says it has only taken action against companies that have registered domain names in bad faith or engaged in passing off activities. Meanwhile judges in Illinois and Massachusetts have issued court orders to shut down the www.VoteAuction.com site on the basis that it contravenes the US Constitution to allow individuals to sell their votes to the highest bidder. The Austrian owners of the site said that is should have been "obvious even to the legal folk" that the site was all a piece of satire designed to highlight the huge amounts of money spent on campaigning in the build-up to this week's US presidential elections.

NO PILL ON THE WEB IN AUSTRALIA

A Federal court in Australia has granted a temporary injunction banning Australian birth control campaigner David Zero Population Growth Hughes from selling contraceptive pills via his www.crowded.org web site to members of the public following a complaint from the Australian Competition and Consumer Commission.

Legal Technology News n. 52

LEGAL TECHNOLOGY NEWS.COM
Friday 10 November 2000 - Issue #052

HOLWAY GIVES UK COMPUTING INDUSTRY THE THUMBS DOWN

At a recent seminar organised by London law firm Berwin Leighton, independent computer services analyst Richard Holway warned that UKs IT sector could expect another two years of weak growth and falling profits, with many suppliers suffering the kind of losses not seen since the early 1990s. Holway suggested most companies will be lucky if they enjoy growth rates of 10 percent and suggests it will be the year 2002 before the market starts to recover. He also predicted that most B2B and B2C internet businesses would fail and the only winners in the e-commerce arena would be bricks and mortar companies when they get their act together". Holway blames the recession on the "Y2K microclimate" which saw many customers bring forward their IT investment plans to tackle the millennium bug but have since frozen all new development work and expenditure.

TWO MORE ONLINE LEGAL SERVICE INITIATIVES

London law firm Richards Butler has launched RB-AssetsOnline, a new internet based virtual dealroom facility for handling the management of property and commercial property market transactions online. Clients and property managers will be able to retrieve and view all documents relating to property online, as well as access to continuous transaction reporting around the clock. The firm says that while property is currently regarded as a secure asset, when viewed in terms of its liquidity the time delay involved in transactions, has tended to be one of its greatest drawbacks. Along with offering 24/7 access, Richards Butler believe the new service will effectively help improve the liquidity of property assets.

And, Herbert Smith has announced it has entered into a "strategic arrangement" with one of its clients - the Crosby Group - to provide the legal content for a new B2B commercial deals and exchange site GrowAsia.com that focuses on the South East Asian market.

JUST ASK! JUST MISSES OUT

The Lord Chancellor's Department's JustAsk! legal advice web portal for the general public was the runner up in two categories in this week's Computer Weekly e-business awards however congratulations to Companies House which won the E-Government Award for the best use of e-business in the public sector.

FREELANCE CASE TO GO TO THE SUPREME COURT

The US Supreme Court has announced that it will hear an appeal in the continuing dispute between a group of New York freelance journalists and a number of leading publishers, including the New York Times and Reed Elsevier's Lexis-Nexis division, over whether the journalists should have been notified or compensated when their work was republished on CD-Rom and online database services. The publishers were keen to take their case to the Supreme Court after the US Appeals Court for the Second Circuit, in New York, ruled in New York Times -v- Tasini, in September 1999, the the 1976 Copyright Act prevents companies from republishing the author's work without permission or payment. In fact since then most publishers have introduced new contracts to ensure they acquire both the print and digital rights to work supplied by freelancers.

FRENCH EXPERTS SAY YAHOO! COULD BLOCK ACCESS

The three internet experts appointed by a Paris judge to advise on whether it would be possible for

Yahoo! to prevent French web surfers from accessing web sites hosting auctions of Nazi era memorabilia - it is illegal under French law to sell or display objects that promote racism - have said it would be possible to block access to about 70 percent of French surfers because they use easily identifiable French ISPs. The court is expected to rule later this year on what action it require Yahoo! to take.

*„Das 20. Jahrhundert stand im Zeichen der Technologie.
Das 21. Jahrhundert wird im Zeichen der Menschen stehen,
die mit Technologie umgehen müssen.“*

Klaus C. Hofer
(HOFER / ZIMMERMANN²2000 : 5)

1. Einleitung

Durch die Entwicklung des Internet und spätestens seit Entstehung des World Wide Web (WWW) in den 90er Jahren des 20. Jahrhunderts ist die digitale Revolution nicht mehr aufzuhalten. Millionen von Usern kommunizieren heute täglich über das weltweite Datennetz, und noch in diesem Jahrzehnt wird die Milliardengrenze überschritten werden (vgl. TAPSCOTT 1999 : 13). Das Internet hat damit bereits jetzt schon eine Größenordnung erreicht, die zu weitreichenden Veränderungen und Auswirkungen in Wirtschaft, Politik, Unterhaltung und Gesellschaft führen. Die Industriegesellschaft, deren ökonomisches Fundament materieller Natur ist und einst die Agrargesellschaft ersetzte, wird nun selbst von der Wissensgesellschaft, deren Fundament auf Bits und Bytes beruht und deren maßgeblicher Produktionsfaktor Wissen ist, abgelöst (vgl. BÜHL 1997 : 49). Wissen bekommt damit eine zentrale Bedeutung, weil es der Auslöser dieser gesellschaftlichen Veränderungen ist. Dass wir uns in dieser gesellschaftlichen Übergangsphase befinden, wird dadurch deutlich, dass sowohl geistes- als auch naturwissenschaftliches Wissen immer mehr an Bedeutung und Einfluss auf das tägliche Leben gewinnt. Der Soziologe Nico Stehr spricht sogar davon, dass die Abhängigkeit von Wissensberufen immer stärker wird, denn schon heute kämen die wichtigsten politischen, sozialen und ökonomischen Handlungskomplexe nicht mehr ohne eine wissenschaftliche Legitimation aus (vgl. BÜHL 1997 : 48). Die Zahl der zur Zeit auf der Welt arbeitenden Wissenschaftler ist so groß wie die Anzahl der Wissenschaftler der letzten 2000 Jahre zusammengenommen. Daraus resultiert, dass täglich 20.000 wissenschaftliche Publikationen erscheinen und sich das weltweit verfügbare Wissen alle fünf bis sieben Jahre verdoppelt (vgl. SCHIPANSKI 2001).

Diese Informationsflut ruft die Illusion eines Wissensparadieses hervor, kann aber auch schnell zur Wissensdürre werden (vgl. SCHIPANSKI 2001), da es sich bei Informationen noch lange nicht um Wissen handelt. Informationen stellen eine

Teilmenge von Wissen dar, die aktuell in Handlungssituationen benötigt wird und demnach von Kontext und Nutzen abhängig ist (vgl. KUHLEN 1999 : 410; KÜBLER 2001 : 159). Wissen bezeichnet damit etwas Übergeordnetes und Handlungsorientiertes und entsteht erst durch die Verarbeitung von Information und gewinnt somit an eigentlichem Wert. So heißt es auch im Anhang des Schlussberichtes der ENQUETE-KOMMISSION DES DEUTSCHEN BUNDESTAGES:

„Information erhält ihre menschliche Dimension und damit ihre gesellschaftliche Bedeutung erst dann, wenn sie von Menschen aufgenommen wird, wenn die Information zu Wissen wird. Wissen macht handlungsfähig. Zuverlässige Informationen sind die Voraussetzung dafür. Aber erst die bedeutungsgerechte Beurteilung erweckt sie zum Leben“ (1998 : 114).

Hier wird die Forderung deutlich, dass Informationen bewertet werden müssen, um sie in nutzbares Wissen, den Produktionsfaktor der Wissensgesellschaft, zu verwandeln. Deshalb verlangt diese Gesellschaftsform Bildung, die eine Förderung der Medienkompetenz beinhaltet, d.h. es muss ein verantwortungsbewusster und kritischer Umgang mit den elektronischen Medien erlernt werden, da wir unser Wissen „über unsere Gesellschaft, ja über die Welt, in der wir leben, ... durch die Massenmedien“ (LUHMANN ²1996 : 9) vermittelt bekommen. Aber was bedeutet dies nun genau, bezogen auf das Massenmedium Internet¹?

Mit der oben erwähnten Zunahme der Anschlüsse an das Internet wächst natürlich auch die für den einzelnen Nutzer potentiell verfügbare Datenmenge. Schätzungen gehen heutzutage von über 2,5 Milliarden Webseiten weltweit aus. Die Internet Firma Bright Planet schätzt in ihrem White Paper „The Deep Web: Surfacing Hidden Value“ die Zahl der Webseiten noch wesentlich höher ein. Unter Hinzunahme der Seiten aus Intranets, Internet gestützten Datenbanken und dynamisch generierten Seiten wird die Zahl auf über 550 Milliarden vermutet. Täglich kommen ungefähr 7,3 Millionen neue Seiten im Internet hinzu. (Vgl. MURRAY / MOORE 2000 : 2; BERGMAN 2001 : 1) Die Bandbreite der angebotenen Informationen im Internet ist entsprechend weit gestreut. Kaum eine Universität, Organisation, Institution, Behörde oder ein Unternehmen kann es sich heute leisten, keine Sach- oder Selbstdarstellung auf einer

¹ Im September 2001 nutzten 42,9% (27,3 Mio.) der Deutschen das Internet (vgl. SCHMITT-WALTER 2001) und überschritten damit inzwischen die im Konzept der kritischen Masse genannte 10% Marke deutlich. Da der Anteil der Gesellschaft diesen Punkt überstiegen hat, kann demzufolge das Internet als Massenmedium in der BRD angesehen werden (vgl. SCHWEIGER 1999 : 89).

eigenen Homepage anzubieten. Aber auch unzählige Privatpersonen bieten Websites zu den verschiedensten Themen an. Hinzu kommen noch etliche Datenbanken und Tausende von Newsgroups und Foren.

Dieses Bild schlägt sich auch in der Wissenschaft nieder. Über eine Million wissenschaftliche Artikel aus allen Fachbereichen sind zur Zeit online abrufbar (vgl. LAWRENCE 2001 : 521). Fachzeitschriften, die exklusiv im Internet erscheinen, spielen eine immer wichtigere Rolle, da die Informationen über das Netz schneller gefunden werden und zudem oft auch preiswerter sind. Hieraus folgt, dass online frei erhältliche Artikel inzwischen öfter zitiert werden als Artikel aus Printzeitschriften. (Vgl. DÖRING 1999 : 28; LAWRENCE 2001 : 521).

Das Netz ermöglicht einen schnellen Zugriff auf riesige Datenmengen, aber die dadurch gewonnenen Informationen müssen mit Vorsicht betrachtet werden und scheinen ohne zusätzliche Recherche mit herkömmlichen Hilfsmitteln nicht verwendbar zu sein (vgl. SONNLEITNER / STADTHAUS / WEICHERT 1999 : 252). Gründe hierfür sind die Fülle an Fehl- und Desinformationen und Seiten mit propagandistischen, satirischen oder parodistischen Inhalten, die neben den vielen seriösen Quellen angeboten werden. Es bedarf also ganz offensichtlich eines Vor- und Erfahrungswissens für den Umgang mit Online-Informationen, da im Internet die Informationsbeschaffung unmittelbar mit der Bewertung aufgrund der Vielfalt, Heterogenität und Glaubwürdigkeit der Quellen verbunden ist.

Damit wird die oben schon erwähnte Forderung nach Medienkompetenz für Internetquellen nochmals verdeutlicht. Es geht also nicht nur darum, technische Fähigkeiten und Fertigkeiten bei der Bedienung eines Computers zu erlangen, sondern vielmehr mit den angebotenen Informationen und der Informationsflut umgehen zu können. Paul GILSTER definiert Medienkompetenz² auch als „... *the ability to understand information – more important – to evaluate and integrate information in multiple formats that the computer deliver*“ (zitiert nach POOL 1997).

Vier zentrale Punkte sind bei der Online-Recherche und dem Umgang mit Internetquellen besonders wichtig, um das Informationspotential wirklich anzunutzen:

² Paul Gilster spricht hier wörtlich von „*digital literacy*“, dies ist aber in seiner Bedeutung durchaus mit dem deutschen Wort „Medienkompetenz“ in Bezug auf das Internet gleichzusetzen.

1. Das Erkennen der chaotischen und dezentralen Struktur des Internet, da sie nicht auf inhaltlichen, sondern auf technischen Ordnungsprinzipien beruht.³ Es ist ein „Spielplatz der Entropie“ (DYSON 1999 : 172). Das Netz ist nicht für eine benutzerfreundliche Informationssuche entwickelt worden (vgl. MEIER ²1999b : 165 f.).

2. Die Wahl der Suchhilfe (Suchmaschine, Katalog, Portal, virtuelle Bibliothek etc.), der genaue Umgang mit dieser und die Entwicklung entsprechender Suchstrategien, um Daten effektiv und schnell zu finden und nicht in den Weiten des Netzes verlorenzugehen: „Lost in Cyberspace“ (BRAKE 1997 : 12).

3. Die Selektion der Informationen aus der Fülle der oft unzähligen Treffer und das Erkennen der Heterogenität der Informationen und Informationsanbieter:

„Im ‚Medium‘ World Wide Web präsentieren die unterschiedlichsten Anbieter aus unterschiedlichsten Motiven nach unterschiedlichsten Kriterien unterschiedlichste Inhalte für unterschiedlichste Zielgruppen.“ (RÖSSLER / OGNIANOVA 1999 : 110)

4. Die abschließende Einschätzung und Bewertung der gefundenen Quellen anhand von Evaluationskriterien. Die Evaluation stellt den zentralen Punkt beim Umgang mit Online-Quellen dar, denn erst danach kann der User die Quelle für seine Zwecke verwenden.

Der letzte Punkt, die Evaluation von Internetquellen, steht im Mittelpunkt dieser Arbeit. Der Begriff der Evaluation wird hierbei im wörtlichen Sinne verwendet: Bewertung und Beurteilung eines Sachverhaltes aufgrund festgelegter Kriterien und Wertmaßstäbe. (Vgl. REINHOLD ³1997 : 161; KROMREY ⁸1998 : 97)

Es wird erläutert, welche Aspekte bei der Bewertung von Internetquellen eine wichtige Rolle spielen und ebenso als Richtlinien bei der praktischen Umsetzung dienen. Das Ziel hierbei ist es, durch die Evaluation die Datenflut zu differenzieren und zu bewerten, so dass das Risiko von Fehl- oder Desinformationen minimiert und der zu ziehende Nutzen aus einer Quelle maximiert wird.

³ Die Visualisierung dieser dezentralen Struktur zeigt Martin Dodge sehr anschaulich auf seiner Seite „The Geography of Cyberspace Directory“ (www.geog.ucl.ac.uk/casa/martin/topology_maps.html) [Stand: 20.11.2001].

Da es viele verschiedene Arten der Informationsquellen und Themen im Netz gibt, werden hier aufgrund des Umfangs nur wissenschaftliche Webseiten berücksichtigt. Dies bedeutet, dass die hier diskutierten Aspekte der Evaluation sich auf Webseiten mit einem geistes- oder naturwissenschaftlichen Hintergrund beziehen, denn bei der Vermittlung von Wissen ist die Glaubwürdigkeit, Exaktheit und Objektivität der Quelle von elementarer Bedeutung. Somit werden kommerzielle Web-Angebote ohne wissenschaftlichen Bezug, Portale, Suchmaschinen, Datenbanken, FAQs, Newsgroups, Mailinglisten und FTP-Archive nicht berücksichtigt, da sich hier die Evaluationskriterien bzw. die Schwerpunkte der Evaluation wiederum ändern würden. (Vgl. COOKE 1999 : 85; ALEXANDER / TATE 1999 : 3)

Nachdem in der Einleitung auf die Bedeutung von Medienkompetenz im Umgang mit dem Internet hingewiesen wird, werden im zweiten Kapitel dieser Arbeit die Grundlagen des Mediums World Wide Web erklärt. Darin wird zuerst eine kurze historische Einführung über die Entstehung und Entwicklung des Internet und des WWW gegeben. Es folgt eine Übersicht über die sechs hauptsächlichen Informationsanbieter im Netz: Universitäten, Organisationen, Medienarchive, Datenbanken, Unternehmen und Privatpersonen. Abschließend werden kurz die grundsätzlichen Unterschiede zwischen Webseiten und Printmedien vorgestellt.

Das dritte Kapitel weist auf die Probleme mit Informationsquellen im Internet hin. Allein aufgrund des schnellen Wachstums des Netzes ergeben sich schon eine Reihe von Problemen. So stellt die Größe an sich und die dadurch bestehende Komplexität eine Schwierigkeit dar. Hierdurch entsteht wiederum das Problem der Selektion von Informationsquellen, das bisher auch nicht durch Suchmaschinen und Kataloge behoben werden konnte, da diese selbst für diese Lage mitverantwortlich sind. Ein weiteres Problem stellt die laufende Veränderung im Netz dar. Online-Quellen sind einer ständigen Modifikation ausgesetzt, so dass Informationen im WWW instabil und flüchtig sind. Das größte Problem insbesondere in Bezug auf die Wissensvermittlung via Internet ist die mangelnde Glaubwürdigkeit von Online-Quellen, da es neben seriösen Anbietern auch ebenso viele unsinnige und falsche Informationsangebote im Netz gibt. Hiermit wird verdeutlicht, warum eine Evaluation von Quellen im Internet vonnöten ist.

Das vierte Kapitel gibt zunächst einem Überblick über bereits bestehende Evaluationsdienste im Netz und ihre Vorgehensweise. Zu diesen Diensten gehören die privaten und redaktionellen Awards, Review-Dienste und die themen-basierten Portale, auch virtuelle Bibliotheken genannt. Danach werden die individuellen Kriterien der Evaluation näher erläutert. Die Hauptaspekte sind Glaubwürdigkeit, Genauigkeit, Abdeckung, Ausgewogenheit, Quellennachweise, Benutzerfreundlichkeit und eine abschließende Bewertung der Quelle.

Das Resümee fasst schließlich die wichtigsten Ergebnisse der Arbeit noch einmal zusammen.

2. Das Medium World Wide Web

In den sechziger Jahren wurde von einer Abteilung des US-Verteidigungsministeriums das ARPA-Net (Advanced Research Project Agency) entwickelt. Zwei Ideen standen dabei im Vordergrund. Erstens sollten Forschungseinrichtungen, die über eine große räumliche Distanz voneinander getrennt waren, miteinander verbunden werden, da zu dieser Zeit Computer und damit Rechenleistung extrem teuer waren und eine Aufteilung der Kapazitäten auf verschiedene Institute eine kostengünstige und praktikable Lösung darstellte. Zweitens sollte gleichzeitig eine dezentrale Kommunikationsplattform entstehen, die auch bei Ausfall einzelner Teile, wie z.B. im Falle eines Krieges, weiterhin funktionsfähig bleiben sollte.

Diese Idee wurde erstmals 1969 erfolgreich getestet, als die Rechner der kalifornischen Universitäten Berkeley, Santa Barbara und dem Stanford Research Institute miteinander vernetzt wurden. In den siebziger Jahren wurden die weiteren technischen Grundlagen durch die Entwicklung des TCP/IP Protokolls⁴, der E-Mail und des BBS (Bulletin Board System)⁵ gelegt. Das Netz weitete sich immer mehr auf staatliche, wissenschaftliche und universitäre Bereiche aus. In den achtziger Jahren entwickelte sich dann eine Struktur von eigenen Netzen und Unternetzen, die die heutige Grundlage des Internet bilden. Hierdurch entstand auch der Name, der den Namen „ARPA-Net“ ablösen sollte: „Internet“, eine Abkürzung für „interconnected networks“.⁶ (Vgl. LEINER et al. 2000)

Der endgültige Durchbruch des Internet hin zum Massenmedium erfolgte Anfang der 90er Jahre mit der Geburtsstunde des „*multimedialen Zweig[s, T.A.] des Internet*“ (HAFNER/LYON ²2000 : 305), dem World Wide Web, auch WWW oder W3 genannt.⁷ Das umständlich zu bedienende und rein textbasierte Internet erschloss sich plötzlich für den User ganz einfach durch ein paar Mausklicks und eine grafische Benutzeroberfläche, die neben einfachen Texten nun auch Bilder, Töne und

⁴ TCP/IP steht für „Transmission Control Protocol/Internet Protocol“ und ist der Oberbegriff für eine ganze Reihe von Übertragungsprotokollen auf denen die Datenübermittlung im Internet beruht.

⁵ Das Bulletin Board System ist eine Art elektronisches schwarzes Brett. Hier können User Mitteilungen hinterlegen und von anderen abgelegte Nachrichten lesen.

⁶ Die Entstehungs- und Entwicklungsgeschichte des ARPA-Net, beginnend in den 60er bis in die 90er Jahre hinein, wird sehr detailliert bei HAFNER/LYON ²2000 beschrieben.

⁷ Entwickelt wurde das WWW von dem englischen Informatiker Timothy Berners-Lee am Kernforschungszentrum CERN (www.cern.ch) [Stand: 20.11.2001]. Daraufhin schuf Marc Andreessen mit „Mosaic“, dem späteren „Netscape Navigator“, den ersten Browser für die Öffentlichkeit.

Animationen darstellen konnte. Hinzu kam, dass sich alle bisherigen Internetdienste, wie E-Mail, FTP (File Transfer Protocol), Usenet, Telnet oder WAIS (Wide Area Information Service), zu einem einzigen Dienst verbanden. Diese Entwicklung führte zu einem wahren Internet-Boom, der bis heute anhält. (Vgl. WILKE 1999b : 753; HAFNER/LYON ²2000 : 305 f. ; ZIMMER 2000 : 189 f.)

2.1 Quellen im Internet

Bei dieser Masse an angebotenen Informationen muss man sich darüber klar werden, wer Informationen bereitstellt und welche Arten von Daten man im Internet überhaupt findet. MEIER (²1999b : 177) unterteilt die Informationsanbieter in sechs wesentliche Bereiche:

- **Universitäten und Forschungseinrichtungen** waren die ersten, die das Internet zum Austausch von Informationen und Wissen nutzten. Wissenschaftler aller Fachbereiche, insbesondere der Naturwissenschaften, gebrauchen das WWW als Plattform, um Forschungsergebnisse zu publizieren und darüber zu diskutieren. (Vgl. ebd. : 178 f.)
- **Unternehmen** nutzen das Internet als Marketing- und Vertriebsinstrument. Es dient dem Vertrieb von Waren, aber auch der Selbstdarstellung. Das Informationsmaterial wird in Form einfacher Werbung bis hin zu Pressemitteilungen angeboten. (Vgl. ebd. : 179 f.)
- **Organisationen und staatliche Stellen**, zu denen u.a. politische Parteien und Non-Profit-Organisationen gehören, bieten häufig sehr umfassende Informationen über das Internet an, da die Verbreitung auf diesem Wege kostengünstiger ist als das Versenden von Broschüren und Faltblättern. Die Art der Information reicht von Gesetzestexten über Statistiken bis hin zu Reden und Stellungnahmen. (Vgl. ebd. : 180 f.)

- **Medienarchive** umfassen sämtliche im Internet publizierten Zeitungen und Zeitschriften. Bei diesen Online-Archiven handelt es sich zumeist um Ableger von Printmedien, die teils kostenfrei, teils kostenpflichtig sind und zumeist bis Anfang/Mitte der 90er Jahre zurückgehen. Das Magazin „Focus“ (www.focus.de) ist beispielsweise seit dem 18.1.1993 und die Wochenzeitung „Die Zeit“ (www.zeit.de) seit dem 8.3.1995 online. Zudem erscheint inzwischen eine große Anzahl von reinen Online-Zeitschriften, die ausschließlich im WWW zu finden sind, so z.B. „First Monday“ (www.firstmonday.org) oder „Telepolis“ (www.telepolis.de). Für alle diese Archive gilt, dass es keine thematischen Beschränkungen gibt. (Vgl. ebd. : 182 f.)
- Nicht nur die Medien geben ihre **Archive und Datenbanken** frei, sondern auch Firmen und Organisationen stellen ihre Datenbestände in das Internet. Die Bandbreite reicht hier vom Verzeichnis lieferbarer Bücher (www.buchhandel.de) über das „CIA World Factbook“ (www.odci.gov/cia/publications/factbook/) bis hin zu kommerziellen wirtschaftlichen, juristischen und wissenschaftlichen Datenbanken, wie z.B. die Wirtschaftsdatenbank „Genios“ (www.genios.de) der Verlagsgruppe „Handelsblatt GmbH“, die allerdings oft nur gegen eine hohe Gebühr benutzt werden können. (Vgl. ebd. : 184 f.)
- **Privatpersonen** mit ihren Homepages bieten inzwischen einen nicht überschaubaren Pool von Informationen, Erfahrungen und Meinungen zu den verschiedensten Themen an. Nicht nur die thematische Bandbreite ist sehr hoch, sondern auch die qualitative, da man im WWW alles, von privaten Urlaubsfotos bis hin zu wissenschaftlichen Aufsätzen, finden kann. (Vgl. ebd. : 186 f.)

2.2 Unterschiede zwischen Webseiten und Printmedien

Da sich diese Arbeit mit dem Medium World Wide Web beschäftigt, sollen hier kurz die wesentlichen Unterschiede zu den Printmedien, dem herkömmlichen Träger wissenschaftlicher Informationen, erläutert werden. Diese Unterschiede liegen in der

Hypertext-Technik, in multimedialen und interaktiven Elementen und der erhöhten Aktualität und der Verfügbarkeit

Das Wesen von Webseiten unterscheidet sich damit grundsätzlich in ihrem Nutzungs- und Wirkungspotential von herkömmlichen Medien, wobei die Gründe hierfür hauptsächlich in den technischen Möglichkeiten liegen (vgl. ZIPFEL 1998 : 26 f.; NIELSEN 1999a). Dieses Potential wird mit der fortschreitenden technischen Entwicklung noch weiter zunehmen, aber zur Zeit werden in der Praxis diese Möglichkeiten nur in einem geringen Maße ausgenutzt (vgl. NEUBERGER 2000 : 314 und 318; ZÜRN 2000 : 324).

2.2.1 Hypertext

Printdesign ist zweidimensional und folgt somit einer strengen Logik. Es wird, dies gilt zumindest für unseren westlichen Kulturkreis, von links nach rechts und von vorne nach hinten gelesen. Die einzige Art der Navigation besteht im Umblättern der Seite. Im Gegensatz dazu sind Webseiten durch die Hypertext-Technologie n-dimensional (vgl. NIELSEN 1999a).⁸ Die Leserichtung bleibt erhalten, aber die Erzählstruktur und die Navigation ändert sich grundsätzlich (s. Abb. 1) .

Durch diese nicht lineare Struktur und die Verknüpfungsmöglichkeiten ändert sich die Erzählweise, da Themenkomplexe unterteilt, zerlegt und neu angeordnet werden können. Hinzu kommt die Möglichkeit, zusätzlich andere Medienformen, wie Video und Audio, in diese Struktur einzufügen. Hierdurch lassen sich Sachverhalte sehr komplex und detailreich erläutern, so dass eine hohe Informationsdichte erzeugt werden kann, da Websites keinen Platzbeschränkungen wie gedruckte Zeitungen und Zeitschriften unterliegen.

⁸ Die Idee des „Hypertextes“ stammt von Vannevar Bush aus dem Jahre 1945, der in der Theorie die „Memex“ (Memory Extender) Maschine entwarf, die verschiedenste Text- und Bildquellen miteinander verknüpfen sollte (vgl. BUSH 1945). Der eigentliche Begriff „Hypertext“ wurde von Ted Nelson in den 60er Jahren geprägt. Er entwickelte die Idee, Texte durch Links zu verbinden, und arbeitete in den 70er Jahre an der konzeptionellen Umsetzung der Idee. (Vgl. ZIMMER 2000 : 306 f.)

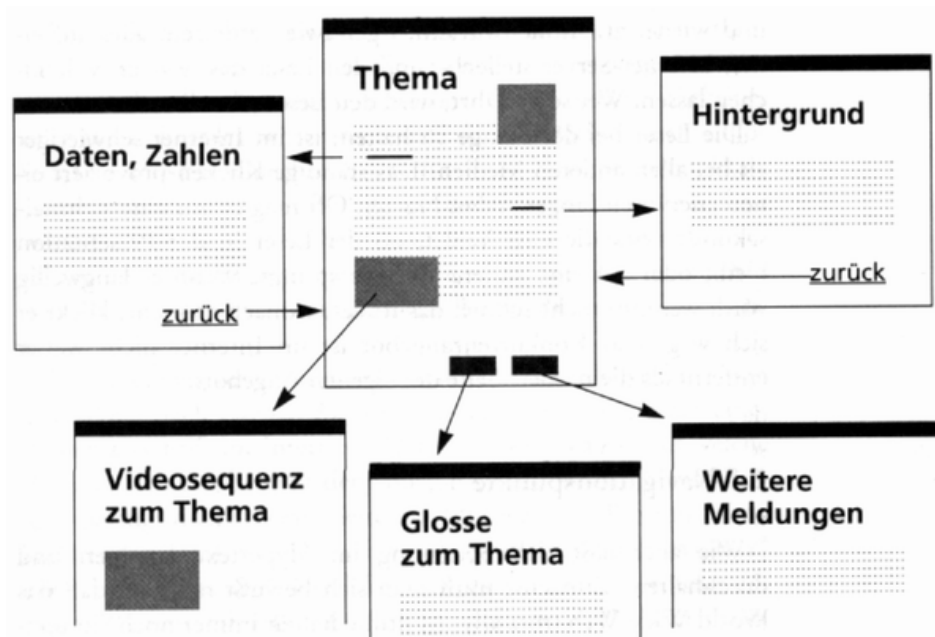

Abb. 1 : Hypertext-Prinzip (MEIER ²1999 : 29)

2.2.2 Multimedia und Interaktivität

Webseiten sind im Gegensatz zu Printseiten nicht statisch, es können multimediale und interaktive Elemente mit in das Design einfließen. Die multimedialen Möglichkeiten reichen von Audio und Videoaufnahmen bis hin zur Darstellung von räumlichen-virtuellen Welten, die man als künstlicher Avatar durchstreifen kann. Diese Mittel erlauben dem Autor der Website eine synästhetische Präsentation seiner Informationen. (Vgl. NICKL 1996 : 391 ff.; ZIPFEL 1998 : 27; PÖPPEL 2000 : 39)

Durch interaktive Inhalte ist es möglich, dass Informationen in beide Kommunikationsrichtungen fließen können (vgl. McKELVEY 1999 : 6) und somit kann der User Inhalte direkt und aktiv mit beeinflussen.

„The Internet’s communication forms can be understood as a continuum. Each point in the traditional model of communication process can, in fact, vary from one to a few to many on the Internet.” (MORRIS/ORGAN zitiert nach ZIPFEL 1998 : 27)

Webseiten, ergänzt durch E-Mail Adressen, Chatrooms, Messageboards, Newsgroups etc., werden somit zu vollständigen Kommunikationsplattformen. Die Grenzen

zwischen Massen-, Gruppen- und Individualkommunikation lösen sich im Internet auf (vgl. DÖRING 1999 : 88).

2.2.3 Aktualität und Verfügbarkeit

Das World Wide Web stellt ein völlig neues Veröffentlichungs- und Vertriebssystem dar, weil es ermöglicht, Informationen in Echtzeit zu publizieren und abzurufen. Insbesondere Online-Zeitungen treten durch diese hohe Aktualität und Aktualisierbarkeit eher in Konkurrenz zu elektronischen Medien, wie Fernsehen und Radio, als zu Zeitungen und Zeitschriften. (Vgl. NEUBERGER 1997 : 657; McKELVEY 1999 : 6)

Die allgemeine Verfügbarkeit ist bei beiden Medientypen sehr hoch. Allerdings ist das Verbreitungsgebiet von Tageszeitungen lokal begrenzt. Webseiten hingegen sind grenzenlos und ermöglichen somit einem globalen Publikum den Zugriff auf ihre Informationen. Die Nutzung wird allerdings stärker als bei Printmedien durch die eigenen Kapazitätsgrenzen determiniert, die sich im Know-how oder in den technischen Mitteln widerspiegeln. (Vgl. ZIPFEL 1998 : 27; McKELVEY 1999 : 6)

3. Probleme mit Informationsquellen im Internet

Das Internet ist, wie schon in den vorhergegangenen Kapiteln erwähnt, das jüngste und am schnellsten wachsende Massenmedium unserer Zeit. Allein in Deutschland hat sich die Anzahl der Nutzer seit 1997 vervierfacht (vgl. BMBF 2001 : 99).

Der Direktor des Media Labs am Massachusetts Institute of Technology (MIT), Nicholas Negroponte, lobt diese Entwicklung mit den Worten:

„Das Internet ist nicht nur im Sinne eines überall vorhandenen, globalen Netzwerkes interessant, sondern auch als etwas, das sich ohne einen eindeutigen verantwortlichen Designer entwickelt hat und dabei (wie der Vogelschwarm) seine Form beibehält. Es gibt keinen Big Brother, und alle Teile fügen sich bislang auf bewundernswerte Weise zusammen.“ (NEGROPONTE 1997 : 221 f.)

Aber die Entwicklung des Netzes wird auch kritischer gesehen, so z.B. auch vom Bibliothekar Michael Gorman:

„The net is like a huge vandalized library. Someone has destroyed the catalog and removed the front matter, indexes, etc., from hundreds of thousands of books and torn and scattered remains ... ‘Surfing’ is the process of sifting through this disorganized mess in the hope of coming across some useful fragments of text and images that can be related to other fragments. The net is even worse than a vandalized library because thousands of additional unorganized fragments are added daily by the myriad cranks, sages, and persons with time on their hands who launch their unfiltered messages into cyberspace.“ (zitiert nach RETTIG 1995)

Diese beiden Zitate verdeutlichen, dass das Netz mit seiner riesigen Informationsmenge sowohl positive als auch negative Aspekte in Bezug auf herkömmliche Medien beinhaltet. Die Vorteile sind u.a. ein von Ort und Zeit unabhängiger schneller und einfacher Zugriff speziell auf aktuelle Informationen, wie z.B. politische und wirtschaftliche Nachrichten des Tages (vgl. ZIPFEL 1998 : 26; HARRIS INTERACTIVE 2001). Die Nachteile liegen insbesondere in der Komplexität des Netzes und der Glaubwürdigkeit der Informationen. Diese Problematik soll in diesem Kapitel näher erläutert werden.

3.1 Komplexität und Größe des Internet

Mit der Erfindung des World Wide Web zu Beginn der 90er Jahre nahm das Wachstum des Internet stetig zu, es war durch ein exponentielles Wachstum geprägt. Besonders die zahlenmäßig starke Zunahme von Internet-basierten Datenbanken und des wachsenden Bereiches des E-Commerces Mitte der 90er Jahre förderte diese Entwicklung, die dann bis Ende des letzten Jahrhunderts anhielt (s. Abb. 2). Heute verdoppelt sich die Anzahl der weltweiten Internet-Hosts⁹ ungefähr alle 18 Monate (vgl. BMBF 2001 : 96).

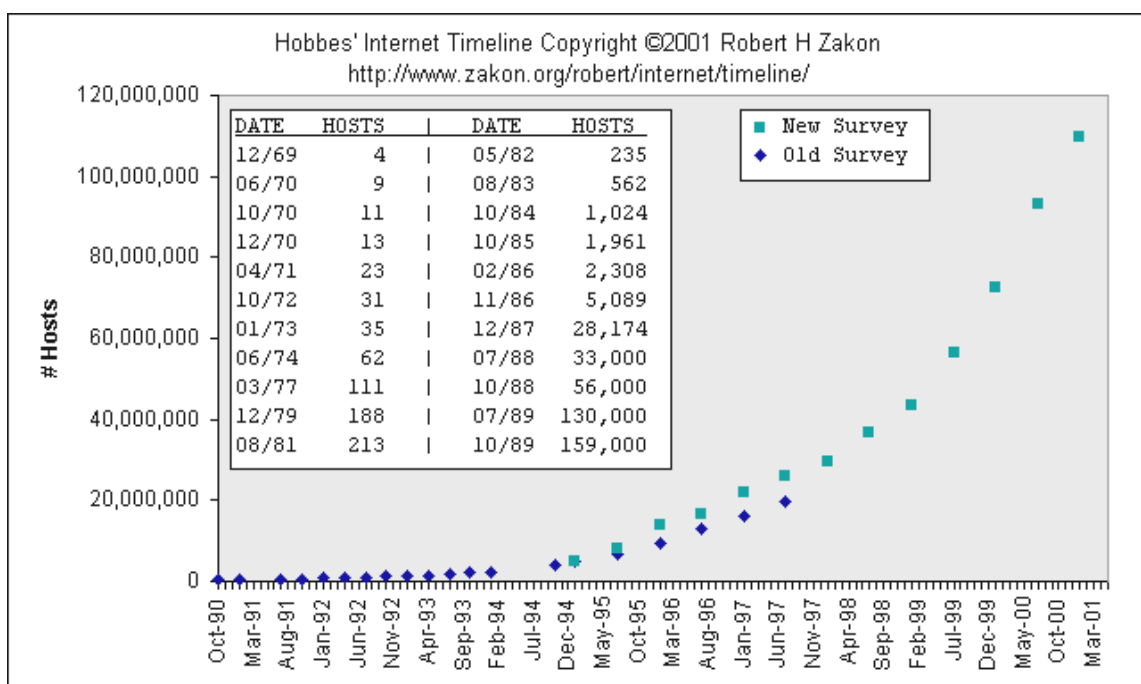

Abb. 2: Entwicklung der Internet Hosts : Dezember 1969 bis März 2001 (ZAKON 2001)

Die Struktur des WWW lässt sich nach neuesten Untersuchungen grob in zwei Bereiche unterteilen (vgl. BERGMAN 2001 : 1 f.): Zum einen in das oberflächliche Web (engl. „Surface Web“), das heute ca. 2,5 Milliarden Webseiten beinhaltet und der Teil ist, der von den bekannten Suchmaschinen bzw. Katalogen, wie z.B. „Lycos“ (www.lycos.de), „AltaVista“ (www.altavista.de), „HotBot“ (www.hotbot.com) oder „Yahoo“ (www.yahoo.de), erschlossen wird. Die Datenmenge dieses Teils des Web

⁹ „Host“ bezeichnet Großrechner und Server, die es Arbeitsstationen (Workstations) ermöglichen auf das Internet zu zugreifen.

umfasst 25 bis 50 Terabyte¹⁰ Daten (Texte, Bilder, Videos etc.) bzw. 10 bis 20 Terabyte an reinem Text (vgl. BERGMAN 2001 : 1). Der andere Bereich ist das tiefe Web (engl. „*Deep Web*“), das z.T. auch als unsichtbares Web (engl. „*Invisible Web*“) bezeichnet wird, da dieses für konventionelle Suchmaschinen und damit für die meisten User nicht sichtbar ist. Es besitzt ein viel größeres Informationspotential als das Surface Web, da hier auch Webseiten aus Datenbanken, Intranets und dynamisch generierten Systemen auftauchen. Im tiefen Web ca. 550 Milliarden Webseiten gesammelt, was einer Datenmenge von 7500 Terabytes entspricht. Nicht nur die Quantität ist wesentlich größer, sondern auch die Qualität ist höher, da zu diesem Teil des Internet insbesondere viele wissenschaftliche und staatliche Datenbanken gehören, so z.B. das „National Climatic Data Center“ (NOAA)¹¹, die „National Aeronautics and Space Administration“ (NASA)¹² und das Angebot der US-amerikanischen Finanzbehörde¹³. Eine genaue Aufstellung der zur Zeit größten öffentlichen und nicht-öffentlichen „Deep Websites“ ist bei BERGMAN (2001 : 6 f.) zu finden.

Die beiden einzigen kostenlosen Suchmaschinen zur Zeit, die Teile dieses Deep Web durchsuchen können, sind „Google“ (www.google.de) und „Direct Hit“ (www.directhit.com). Die Spezialsuchmaschinen „Bulls Eye Pro“ (www.intelliseek.com/prod/bullseye/pro.htm) und „Lexibot“ (www.lexibot.com) durchsuchen das tiefe Netz gegen eine monatliche Gebühr. (Vgl. SMITH 2001 : 17)

¹⁰ 1024 Bytes = 1 Kilobyte (KB); 1000 KB = 1 Megabyte (MB); 1000 MB = 1 Gigabyte (GB); 1000 GB = 1 Terabyte (TB)

¹¹ Ein öffentlicher Teil dieser Datenbank für Satellitenbilder ist unter <http://www.ncdc.noaa.gov/ol/satellite/satelliteresources.html> [Stand: 17.07.2001] zu finden. Geschätzte Größe 366.000 Gigabyte (vgl. BERGMAN 2001 : 6).

¹² Der Zugang zum EOS Data Gateway der NASA befindet sich unter: <http://redhook.gsfc.nasa.gov/~imswww/hidden/imswelcome/> [Stand: 17.07.2001]. Geschätzte Größe 219.000 Gigabyte (ebd.).

¹³ Die oberste staatliche US Finanzbehörde ist unter <http://factfinder.census.gov> [Stand: 17.01.2001] im Netz vertreten. Geschätzte Größe 610 Gigabyte (ebd.).

3.2 Problem der Selektion

Die oben genannten Zahlen verdeutlichen das Problem der Größe und Komplexität des Internet. Eine daraus resultierende Schwierigkeit ist das der Selektion von Informationen. Deshalb sind Suchmaschinen „*die wichtigsten Türen im Cyberspace*“ (RÖTZER 1998), da sie Orientierung im Netz bieten. Die Wichtigkeit von Suchdiensten für die Online-Gemeinde beweisen auch die Zugriffszahlen auf diese Webseiten. Allein vier Suchdienste werden im Oktober 2000 unter den Top 10 der weltweit meistbesuchtesten Seiten im Netz verzeichnet (vgl. MEDIA METRIX 2000):

- Platz 2 „Yahoo“ (87,5 Mio. Unique Visitors¹⁴)
- Platz 4 „Lycos“ (50,1 Mio. Unique Visitors)
- Platz 5 „Excite“ (38,1 Mio. Unique Visitors)
- Platz 10 „AltaVista“ (19,7 Mio. Unique Visitors)

Aber auch Suchmaschinen bieten keine hundertprozentige Orientierung, im Gegenteil, es tauchen wiederum neue Fragen auf. Bei dieser maschinellen Selektion bleibt der Prozess, den die Suchmaschine bei einer Anfrage durchläuft, nicht transparent, so dass man weder weiß, welche Teile des Netzes durchforstet worden sind noch wie es zu diesem Ergebnis bzw. zu dieser Rangliste gekommen ist. Florian RÖTZER (1998) spricht deshalb auch von der Suchmaschine als „*Black Box*“, da die genauen Funktionsmechanismen im dunkeln bleiben.

Um diese Problemfelder zu verdeutlichen, muss man sich als erstes über die Technik und Funktionsweise von Suchdiensten klar werden.

3.2.1 Funktion von Suchdiensten

Hartmut WINKLER (1997) unterscheidet drei Typen von Suchmaschinen.¹⁵ Da der technische Fortschritt auch vor Suchmaschinen nicht haltgemacht hat, muss man diese Klassifizierung um einen Typus erweitern, so dass man heute von vier verschiedenen

¹⁴ Unique Visitors = Anzahl Besucher : Die hochgerechnete Anzahl der Besucher (basierend auf der IP-Adresse), die ein Angebot in einem bestimmten Zeitraum (meistens 30 Tage) mindestens einmal besucht haben. Wichtig dabei ist, dass mehrmalige Besuche einer Person nur einfach gezählt werden.

¹⁵ Die Überlegungen von Hartmut WINKLER basieren auf dem Text von STEINBERG (1996).

Arten von Suchmaschinen im WWW sprechen kann. Meta-Suchmaschinen, wie z.B. „MetaGer“ (www.metager.de), werden hier nicht berücksichtigt, da sie nur auf bestehende Suchmaschinen zurückgreifen und keine eigenen Datenbanken oder Suchalgorithmen besitzen.

3.2.2 Typ 1 (Der Katalog)

Der erste Typ von Suchdiensten ist der Katalog, dessen erfolgreichster Vertreter der von Jerry Yang und David Filo im Jahr 1994 entwickelte Web-Katalog „Yahoo“ ist. Hier werden Schlagworte in ein vordefiniertes, hierarchisches System eingeordnet. Dieser Prozess wird von menschlichen Redakteuren durchgeführt. Sie bewerten und katalogisieren die Webseiten per Hand, was zum Teil auch für die Suche nach neuen Webseiten gilt. Hier werden die Redakteure allerdings zusätzlich von einer Suchsoftware unterstützt.

Der Faktor Mensch stellt das größte Problem bei diesem Suchdienst dar, da der Prozeß des Katalogisierens nur sehr langsam vonstatten geht und damit schnell auf quantitative Grenzen stößt. „Yahoo“ hat weniger als 1% des gesamten Netzes katalogisiert (vgl. WINKLER 1997).

STEINBERG (1996) vergleicht deshalb Jerry Yang auch mit Charlie Chaplin in dem Filmklassiker „Moderne Zeiten“, der einem endlosen und immer schneller werdenden Strom neuer Arbeit entgegensieht, der nicht zu bewältigen ist.

Die Stärke dieses Typus liegt in der Kategorisierung, da der grobe Bezug zu bestimmten Inhalten schnell hergestellt werden kann. Als Beispiel sei hier die „Blue Ribbon Kampagne“¹⁶ genannt. Diese fällt bei „Yahoo.de“ unter die Kategorie „Gesellschaft und Soziales ⇒ Grundrechte ⇒ Zensur ⇒ Internet“. Die Einordnung macht sofort deutlich, dass die Website „Zensur im Internet“ zum Thema hat, und hilft somit dem User bei der Auswahl der Online-Quellen.

¹⁶ Zu finden unter http://members.aol.com/iqmm/blue_ribbon/index.html [Stand: 11.08.2001].

3.2.3 Typ 2 (Suchmaschine der 1. Generation)

Zum zweiten Typ gehören die Suchmaschinen der ersten Stunde des World Wide Web. Diese führen eine Volltextsuche des gesamten Internet durch und erstellen einen sogenannten "inverted index", d.h. sie erstellen eine Tabelle mit allen auf der Webseite gefundenen Wörtern, auf die die einzelne Suchanfrage dann zugreift. Die Suchmaschinen „AltaVista“ und „Lycos“ arbeiten nach diesem System. Der Vorteil dieser Methode ist, dass die Suchsoftware, sogenannte Web-Crawler, z.T. auch als Spinnen, Spiders oder Index-Roboter bezeichnet, selbständig das Netz durchforstet und es katalogisiert und damit kein menschlicher Redakteur vonnöten ist. „AltaVista“ indiziert auf diese Weise täglich 2,5 Millionen Dokumente und ist damit deutlich schneller als der Katalog „Yahoo“ (vgl. WINKLER 1997).

Der Nachteil liegt bei dieser Methode besonders in der Quantität der Suchergebnisse, bei denen es nicht ungewöhnlich ist, wenn man Tausende von Hits für ein Suchwort bekommt. Hinzu kommt, dass die Ordnung der Ergebnislisten unklar bleibt.

3.2.4 Typ 3 (Suchmaschine der 1. Generation mit Clusteranalyse)

Der dritte Typus führt zwar auch eine Volltextsuche des WWW durch, arbeitet aber zusätzlich mit einem semantischen Modell, das die gefundenen Wörter in Clustern zusammenfasst, so dass Stichworte automatisch zu Kategorien zusammengeführt werden. Dies geschieht durch die Auswertung von Synonymen und der Analyse des Kontextes, mit der Annahme, dass Wörter, die gemeinsam auf einer Webseite auftreten, auch eine inhaltliche Beziehung zueinander haben (vgl. REIMANN 1999 : 24). Somit braucht das gesuchte Wort nicht zwangsläufig auf der Seite zu erscheinen, um in der Ergebnisliste aufzutauchen. Dieses System hat eine qualitative Steigerung der Rankinglisten zur Folge.

„Excite“ und „Northern Light“ seien hier als Beispiele für diesen Typ genannt. Nichtsdestotrotz sind die Vor- und Nachteile ähnliche wie die des zweiten Typs.

3.2.5 Typ 4 (Suchmaschine der 2. Generation)

Der vierte Typ stellt die zweite (aktuelle) Generation von Suchmaschinen dar (vgl. LEMM 1999 : 106). Diese versuchen insbesondere das Problem der qualitativ schlechten Ergebnislisten zu lösen, indem sie auf die Erfahrungen der menschlichen Surfer zurückgreifen.

„Direct Hit“ bezieht Informationen von herkömmlichen Suchmaschinen und wertet automatisch aus, welche Seiten wie oft und wie lange von Usern besucht worden sind. Daraus wird dann eine Ergebnisliste mit Webseiten generiert. Die Frage von Gary Cullis, dem Erfinder von „Direct Hit“, fasst den Sinn dieser Funktionsweise zusammen: *„Wer könnte besser beurteilen, ob ein Link etwas taugt, als die Nutzer selbst, die ja genau wissen, was sie suchen?“* (zitiert nach LEMM 1999 : 106). Jeder User wird damit zum Redakteur und die Schlussfolgerung dieses fragwürdigen Konzeptes lautet also, dass die beliebtesten Seiten auch automatisch die besten sind.¹⁷

Die Suchmaschine „Google“ arbeitet mit der sogenannten PageRank-Technologie¹⁸, die die Link-Struktur des WWW als Organisations- und Bewertungskriterium nutzt. Die Leitfrage des Suchdienstes, ob eine Seite sinnvoll ist, wird durch die Anzahl der Links, die zu einer Seite führen, und deren Ursprung beantwortet. D.h. eine Seite ist wichtig, wenn zum einen viele Links zu ihr führen und zum anderen bekannte Institutionen auf sie verlinken. „Google“ unterscheidet dabei, ob der Link z.B. auf einer privaten Homepage oder auf der Seite einer Universität steht.

MEDIA METRIX (2001) führt „Google“ mit 15.2 Millionen Unique Visits im Monat auf Platz 15 der in den USA beliebtesten Seiten im Netz. Dieser Erfolg zeigt, dass diese Methodik ein Schritt in die richtige Richtung ist, was die Suche nach einfachen, populären Stichworten angeht, da hier die große Stärke der Popularitätsbewertung liegt (LEWANDOWSKI 2001 : 384). Das Auftauchen von Nachahmern in diesem Jahr, wie „WiseNut“ (www.wisenut.com) oder „Teoma“ (www.teoma.com), bestätigt den Erfolg dieses Systems ebenfalls.

¹⁷ Näheres zur Technik im White Paper von „Direct Hit“ unter http://www.directhit.com/about/products/technology_whitepaper.html [Stand: 15.08.2001].

¹⁸ Die Dissertation „The Anatomy of a Large-Scale Hypertextual Web Search Engine“ der „Google“-Erfinder Sergey Brin und Lawrence Page schildert Entstehung und Funktionsweise der Suchmaschine. Eine leicht gekürzte Fassung dieser Dissertation ist unter <http://www7.scu.edu.au/programme/fullpapers/1921/com1921.htm> [Stand: 17.07.2001] abgelegt. Die Seite http://www.google.de/intl/de/why_use.html [Stand: 17.07.2001] gibt einen kurzen deutschsprachigen Abriss über die Methodik der PageRank-Technologie.

3.3 Probleme durch Suchmaschinen

Wie oben schon angedeutet, bleiben bei der Arbeit mit Suchmaschinen einige Fragen offen. Die für die Selektion besonders kritischen Punkte sind zum einen die Abdeckung des WWW durch Suchmaschinen und zum anderen sowohl die Generierung als auch die Darstellung der Ergebnisse.

3.3.1 Abdeckung des WWW durch Suchmaschinen

Trotz automatischer Indexierung durch Web-Crawler ist es unmöglich, die gesamte Datenmenge des Internet zu erfassen, da das Wachstum des Netzes zu schnell voranschreitet. Auch wenn von Seiten verschiedener Firmen und Institutionen versucht wird, „*dem Problem der Quantität mit brutaler Rechenleistung zu begegnen*“ (LEPSKY 1998 : 336), indem beispielweise rund 7000 Linux - PCs an fünf Standorten, an West- und Ostküste der USA verteilt, für „Google“ arbeiten, so scheint die komplette Katalogisierung des Internet ein Ding der Unmöglichkeit zu sein. Louis Monier, Chief Technical Officer bei „Alta Vista Software“, meint dazu: „*Nobody can afford enough hardware to index the whole Web and serve it back to the entire planet*“ (zitiert nach BRAKE 1997 : 12).

Die sechs bekanntesten, öffentlichen Suchmaschinen („AltaVista“, „Excite“, „HotBot“, „Infoseek“, „Lycos“ und „Northern Light“) erfassen zusammen nur etwa 60% des Web (vgl. LAWRENCE / GILES 1999 : 107). Die Suchmaschine mit dem größten Index ist zur Zeit „Google“ mit knapp 1,4 Mrd. Seiten, gefolgt mit großem Abstand von „FAST“ und „AltaVista“ (s. Abb. 3). Geht man von einer Größe des oberflächlichen Netzes von ca. 2,5 Mrd. Webseiten aus, erfasst selbst „Google“ nur knapp mehr als die Hälfte aller Seiten.

Abb. 3: Anzahl der von Suchmaschinen erfassten Webseiten in Millionen. Stand: August 2001 (SULLIVAN 2001)

Aber nicht nur das immense Wachstum des Netzes ist Schuld an der geringen Erfassung der Datenmenge, die Gründe liegen auch bei der Software der Suchmaschinen. Wie folgende Beispiele zeigen, können Webcrawler längst nicht alle Arten von Informationen im WWW in die Datenbanken aufnehmen.

- **Kostenpflichtige Datenbanken oder Datenbankgateways** mit dynamisch-generierten Seiten können von Crawlern nicht eingelesen werden, obwohl gerade diese von großem Interesse sind, da es sich hierbei oft um wissenschaftliche Datenbanken handelt, die hochqualifiziertes Wissen beinhalten. Die Ausnahme bildet momentan die Suchmaschine „Northern Light“. Sie bietet zusätzlich als Funktion die erweiterte Suche in den sogenannten „special collection documents“ an. Hierbei handelt es sich um eine Sammlung von kostenpflichtigen Dokumenten, die momentan gut 700 wissenschaftliche Zeitschriften¹⁹ umfasst.
- **Nicht öffentliche und geschützte Dokumente**, die viele Server beinhalten sind für unerlaubte Zugriffe durch Passwörter, Registrierung oder Firewalls gesichert. Eine

¹⁹ Eine genaue Auflistung aller 700 Zeitschriften ist unter http://www.northernlight.com/docs/specoll_help_overview.html [Stand: 20.11.2001] zu finden.

Suchanfrage durch einen Crawler wäre so ein Zugriff und wird deshalb von den jeweiligen Servern abgewiesen. (Vgl. LEWANDOWSKI 2001 : 381)

- **Video-, Bild- oder Toninformationen** können bisher nur anhand des Dateinamens oder des „ALT“-Tags²⁰ im HTML-Code erkannt werden, da nur reine Textinformationen durchsucht werden. Doch es gibt intensive Bemühungen, dieses zu ändern. Das Programm „WebSEEK“ (www.ctr.columbia.edu/webseek/) der New Yorker Columbia-Universität verbindet Schlüsselwort- und Bildanalyse und ist somit imstande, Formen und Farben zu erkennen und zu unterscheiden. (Vgl. LYNCH 1998 : 27)
- Auch die meisten **nicht HTML-kompatiblen Textformate** bleiben bei einer Volltextsuche durch einen Webcrawler außen vor. Allein die Suchmaschine „Google“ durchsucht auch Dateien des von der Firma Adobe (www.adobe.com) entwickelten „Portable Document Formats“ (PDF), welches im Internet sehr weit verbreitet ist.
- Bei **neu erstellten und geänderten HTML-Dateien** dauert es zum Teil sehr lange, bis diese von einem Webcrawler indiziert werden. Neue Seiten, auf die keine Links verweisen, weil der Server z.B. noch neu ist, oder Webseiten die bei Suchmaschinen nicht direkt angemeldet worden sind, können von Suchmaschinen auch nicht gefunden werden. Geänderte Dokumente werden erst im nächsten Aktualisierungszyklus der jeweiligen Suchmaschine erkannt. Dieser Zyklus kann bis zu mehreren Wochen dauern. (Vgl. BABIAK 1999 : 107, FRIES et al. 2001 : 49)
- Seiten mit **Framesets, Java oder Javascript** können Crawlern Probleme bereiten. Das Problem bei Frames liegt darin, dass mehrere Inhalte unter einer URL verfügbar sind, was eine Zuordnung zwischen Suchbegriff und Treffer-URL fast unmöglich macht. Java und Javascripts erschweren das Erfassen dadurch, dass sie für Menüs und Verweise verwendet werden, die aber von Suchmaschinen nicht

²⁰ Der „ALT“-Tag gibt dem Bild einen alternativen Text, falls das Bild im Internet-Browser nicht angezeigt werden sollte. Beispiel: ``

erkannt werden, da es sich um eine Programmiersprache und nicht um reinen Text handelt. (Vgl. BABIAK 1999 : 108 f.)

3.3.2 Ergebnisse und Ergebnislisten

Das andere große Problem stellt das eigentlich Suchergebnis dar. Suchmaschinen produzieren bei einer einfachen Suche mit einem Schlagwort oft eine sehr große Anzahl an Treffern. Sie werden auch oft „Hits“ oder „Matches“ genannt. Diese Suchergebnisse bestehen also häufig mehr durch Quantität als durch Qualität, Tabelle 1 veranschaulicht dies. Die einfache Suche mit den Wörtern „Evaluation“ und „Website“ ergibt bei fast allen Suchmaschinen Treffer, deren Zahl in die Millionenhöhe steigt. Selbst bei einer eingeschränkten Suche mit zwei Wörtern („Evaluation UND Website“) geht das Ergebnis in die Tausende. Doch User überprüfen selten mehr als die ersten zehn bis 20 Treffer einer Ergebnisliste, der Rest der Links muss somit als verloren angesehen werden. (Vgl. RÖTZER 1998; LEWANDOWSKI 2001 : 381)

Hierbei wird auch der Unterschied zum Katalog deutlich, den Jerry Yang mit den treffenden Worten beschreibt: „*The difference between a catalog and an index is that a catalog provides context*“ (zitiert nach STEINBERG 1996).

Schlagwort	Hits / Suchmaschine			
	Altavista (www.altavista.de)	Lycos (www.lycos.de)	Excite (www.excite.com)	Google (www.google.de)
Evaluation	3.402.820	5.962.116	493.400	9.580.000
Website	21.643.970	22.693.752	7.389.131	30.600.000
Evaluation UND Website	34.148	443.148	4.820	791.000

Tab. 1 : Beispiel für die Anzahl der Hits bei verschiedenen Suchmaschinen²¹

²¹ Die Suche wurde am 14.08.2001 durchgeführt. Da es sich bei „Yahoo“ um einen Katalog handelt, ist dieser nicht in die Suche mit einbezogen worden.

Gleichzeitig zeigt dieses Beispiel, wie unterschiedlich die Ergebnisse der einzelnen Suchmaschinen sind und beweist den oben genannten heterogenen Abdeckungsgrad des Netzes durch die einzelnen Dienste.

Die Funktionsweise der Suchmaschinen hilft zwar beim Verständnis von Suchergebnissen, weil aber technische Details und insbesondere die Methode des Rankingverfahrens der Ergebnisliste nicht bekanntgegeben werden, bleibt sie doch eine „Black Box“. Die Gründe dafür liegen im wirtschaftlichen Bereich, da die Suchalgorithmen letztendlich das Kapital der Firmen, die die Suchmaschinen betreiben, darstellen.

Wie schon erwähnt, ist die Reihenfolge der Auflistung der Suchergebnisse nicht unproblematisch. RÖTZER (1999b) weist eine direkte Manipulation der Ergebnisse zurück, deutet aber auf die Probleme der sehr unterschiedlichen Selektionskriterien der einzelnen Suchmaschinen hin. SCHULZKI-HADDOUTI (2001) geht weiter und sagt: *„Werbetreibende missbrauchen diesen Suchmechanismus und verfälschen die Ergebnisse der Suchmaschinen.“* Probleme bereitet somit die Vermarktung und der Verkauf von Ergebnissen. Die Suchmaschine „GoTo“ (www.goto.com) war der Vorreiter mit der 1997 entwickelten „Pay-for-Performance“ - Technologie, mit der Ergebnisse direkt vermarktet werden. Hierbei werden die Suchergebnisse nach der Höhe des gezahlten Geldbetrages angezeigt. Heute vermarkten alle größeren Suchmaschinen ihre Ergebnisse, zuletzt führte „Yahoo“ die „Sponsored Sites“ ein. Nur „Excite“ verwaltet zur Zeit noch keine bezahlten Listen (vgl. SCHULZKI-HADDOUTI 2001).

Aber auch die Popularitätsbewertung, wie sie „Google“ und „Direct Hit“ durchführen, beinhaltet Gefahren. Beide Suchmaschinen arbeiten mit der Idee, dass die Popularität einer Seite gleichbedeutend ist mit der inhaltlichen Güte. Ob dies wirklich so ist, sei hier in Frage gestellt, da diese Methode einen „Trendverstärker“ (RÖTZER 1999b) darstellt, der die Konzentrationsprozesse um bekannte Seiten im Netz nur noch verstärkt und kleine, unbekannte Sites benachteiligt.

Verlierer hierbei sind Anbieter, Institutionen oder Firmen, die nur wenig Geld fürs Ranking bzw. für Werbung zur Förderung der Popularität aufbringen können und somit in eine Abwärtsspirale geraten.

3.4 Instabilität von Online-Quellen

McKELVEY schreibt in seinem Buch „Hypergraphics“, dass „Websites ... evolutionäre Dokumente“ (1999 : 65) sind. Mit dieser Aussage wird ein weiteres Problem deutlich, nämlich die Instabilität von Online-Quellen. Das Internet ist einer ständigen Modifikation unterworfen. Neue Sites entstehen oder verschwinden, neue Dokumente werden ins Netz gestellt, alte werden aktualisiert oder gelöscht. Webseiten besitzen ein durchschnittliches Alter zwischen 44 und 70 Tagen (vgl. ZIMMER 2000 : 184; GROTE 2000 : 116; RÖTZER 2000), und 89 % aller Seiten im Web sind jünger als ein Jahr (s. Tab. 2).

Alter der Webseiten	< 1 Jahr	1 – 2 Jahre	2 – 3 Jahre	3 – 4 Jahre	4 - 5 Jahre	5 - 6 Jahre	> 6 Jahre
Prozent der Webseiten	89 %	6,5 %	2,5 %	1,1 %	0,4 %	0,1 %	0,1 %

Tab. 2 : Das Alter von Internet-Seiten (N.N. 2001 : 166)

Diese hohe Fluktuation im Netz lässt sich durch Veränderungen der Technik (Hard- und Software) und dem Wandel des Zeitgeistes erklären:

Heutzutage ist es sehr einfach, eine Webseite in kürzester Zeit zu verändern. Dank moderner HTML-Editoren, wie z.B. Microsofts „Frontpage“ oder Macromedias „Dreamweaver“, ist es möglich, ohne jede HTML- oder Programmierkenntnisse eine Seite zu erstellen oder in jeglicher Weise zu verändern, egal ob es sich um das Aussehen, die Form oder die Schriftarten handelt. Grafiken können gelöscht, hinzugefügt oder ausgetauscht werden, dasselbe gilt für Links. Der Charakter einer Seite ist in einem ständigen Fluss (vgl. ROBERTS 1999).

Hinzu kommt, dass Websites, genau wie z.B. auch die Mode, schnelllebigen Trends unterworfen sind. Webdesigner David SIEGEL (1997 : 26 f.) spricht von drei Generationen von Websites seit deren Entstehung Anfang der 90er Jahre. Aber auch die dritte Generation ist laut Klaus HOFER und Hansjörg ZIMMERMANN (2000 : 16) schon wieder passé. Was heute im Netz „in“ ist, kann morgen schon wieder „out“ sein. Ständig werden Awards für das Design von Webseiten vergeben, aber „beständig ist allein der Wandel“ (HOFER / ZIMMERMANN 2000 : 16).

Websites der ersten Generation waren einfache Textseiten mit sehr wenigen Grafiken. Die Seiten waren gut lesbar auf monochromen Bildschirmen und bauten sich auch bei einem langsamen Modem schnell auf. Die zweite Generation, ab ca. 1995, war dank der Weiterentwicklung des HTML-Standards als auch neuer Versionen der Browsersoftware wesentlich bunter und verspielter. Es wurden mehr Grafiken und vielfarbige Hintergründe eingefügt. Oft blieb bei soviel Design die Lesbarkeit auf der Strecke. Die Sites der dritten Generation sollten für den User „eine ganzheitliche Erfahrung, vom Eintritt bis zum Ausgang“ (SIEGEL 1997 : 29) werden. Das Design wurde durch Metaphern und Modelle der Konsumentenpsychologie erweitert. Die aktuelle Generation von Websites ist auf bestimmte Nutzergruppen zugeschnitten. Es werden spezielle technische Features, wie z.B. Macromedias Flash, eingesetzt und auch keine Rücksicht mehr auf Browserkompatibilität genommen, da es zu viele Plattformen neben dem PC gibt, wie z.B. Palmtops oder WAP-Handys. Seiten sollen heute unterhalten und gleichzeitig Themen multimedial transportieren (vgl. HOFER / ZIMMERMANN ²2000 : 120).

Dieser Wandel wurde durch die Einführung neuer Techniken möglich, die den HTML Standard ständig erweitern, wie z.B. XML (Extensible Markup Language) zur Erstellung dynamischer Webseiten, SMIL (Synchronized Multimedia Integration Language), um Audio- und Videosequenzen in Webseiten einzufügen oder VRML (Virtual Reality Modeling Language), mit der es möglich ist, dreidimensionale Räume und Landschaften in einem Browser darzustellen. Aber auch Programmiersprachen wie Java, Javascript, ActiveX oder Flash erweitern die Möglichkeiten der Darstellung von Inhalten ständig.

Hinzu kommt die schnelle technische Weiterentwicklung der Hardware. Durch die Entwicklung immer schnellerer Computer, von Netzwerken und umfangreicheren Speichermedien erweitern sich automatisch die Möglichkeiten im Netz: Webseiten werden durch Chatrooms interaktiv, User treffen sich als Avatare in virtuellen Welten, Audio- und Videostreaming bringen Konzerte und Filme in digitaler Qualität in jedes Wohnzimmer. Es kommt zu einer Konvergenz der Medien.

Durch all diese Faktoren ist die Schnellebigkeit des Netzes zu erklären. Firmen, Organisationen und auch Privatleute wollen bzw. müssen immer up-to-date bleiben, da der wirtschaftliche Erfolg ausbleibt, wenn die Webseite nicht interessant für den Surfer gestaltet ist.

Aufgrund dieser ständigen Veränderung gibt es Bestrebungen, das World Wide Web zu archivieren, wobei dies ein hoffnungsloser Wettlauf mit dem Wachstum des WWW und dem Verschwinden von Sites ist (vgl. RIEDER 1997 : 112 f.). Als „Deja.com“, Betreiber der umfassendsten Sammlung von alten Usenet-Diskussionen, seine Server aus Kostengründen vom Netz nahm, schrieb das Online-Magazin „Salon“ (www.salon.com) : „Wir verbrennen keine Bücher mehr, wir stöpseln nur die Server aus“ (zitiert nach DRÖSSER 2000). Mit einem Knopfdruck verschwanden Tausende von Beiträgen zu verschiedensten Themen, die sich über fünf Jahre lang im Netz gesammelt hatten.

Um diesen „drohenden Gedächtnisverlust“ (DRÖSSER 2000) des Netzes aufzuhalten, legt das „Internet Archive“ (www.archive.org) mit Hilfe der Software „Alexa“ (www.alexa.com) ständig Images des Netzes an, so dass Momentaufnahmen des WWW entstehen. Zur Zeit (Stand: März 2001) sind über 100 Terabyte an Daten bzw. elf Milliarden Webseiten gespeichert, und jede Woche kommen ca. 150 Millionen Seiten neu hinzu. Aber auch dieses Verfahren birgt einige Probleme, weil viele Fragen unbeantwortet bleiben. Da nur Teile des Netzes archiviert werden, sowohl aus technischen als auch aus Kostengründen, stellt sich die Frage, welche Seiten wichtig oder unwichtig sind. Wer bestimmt über die Auswahl der zu archivierenden Seiten? Welche Seiten sind so interessant, dass sie der Nachwelt erhalten bleiben sollten? Welche sollen dem Vergessen preisgegeben werden? Auch die Copyright-Frage bleibt offen, nämlich ob man ohne Wissen des Autors überhaupt private Websites archivieren darf. So bleibt dies zweifellos ein interessanter Versuch, das Netz der Nachwelt zu erhalten, aber mehr eben auch nicht.²²

Das Problem der Archivierung bzw. der mangelnden Dokumentationsform spielt insbesondere bei wissenschaftlichen Inhalten im Netz eine Rolle. Im Gegensatz zu Büchern, die materiell gebunden sind, gibt es im Netz keine Auflagen, sondern immer nur das aktuelle Update einer Webseite, das jederzeit überschrieben und erneuert werden kann.

Diese immer weiter fortschreitende Digitalisierung führt dazu, dass das Buch als Leitmedium der Gegenwart durch den Computer abgelöst wird. BOLZ (1995)

²² Seit Oktober 2001 kann das „Internet Archive“ über eine kostenlose und freizugängliche Schnittstelle, die „Way Back Machine“ (web.archive.org/), durchsucht werden.

bezeichnet diesen Prozess, in Anlehnung an Marshall McLuhan, als Ende der Gutenberg-Galaxis.

Das WWW ist immer aktuell, es existiert somit nur die Gegenwart. DEBATIN vertritt die Ansicht, dass Printmedien eine „zeitlich kodierte Selbstreferentialität im Hinblick auf den Wissens- und Erkenntnisstand“ (1998) erzeugen. Im Gegensatz dazu haben Dokumente im Internet eine „ahistorische und palimpsestische Struktur“ (ebd.). Es ist nie sicher, welche Version man vor sich hat, ob sie kopiert worden ist, und wer der tatsächliche Autor ist. Auch RIEDER vertritt diesen Standpunkt, wenn er sagt, dass „Webseiten ... kein Gedächtnis [haben, T.A.]: Durch ihre permanente, spurlose Erneuerung verlieren sie ihre eigene Geschichte“ (1997 : 112). Informationen sind auf Knopfdruck erhältlich, aber genauso schnell verflüchtigt sich diese Information auch wieder im Netz. Der Wissensspeicher des WWW ist vergänglich.

3.5 Glaubwürdigkeit von Onlinequellen

Das Informationsangebot im Internet ist unüberschaubar. Tausende von Fachzeitschriften sind inzwischen als Volltext abrufbar, Universitäten publizieren neueste Forschungsergebnisse auf ihren Seiten. Das MIT stellt neuerdings sogar sämtliche Vorlesungen und Seminare unter dem Titel „MIT Open Courseware“ (web.mit.edu/ocw/) online, gibt damit dem „Open Source“-Gedanken eine völlig neue Dimension und stellt sich gleichzeitig gegen die ständig wachsende Kommerzialisierung des Netzes.²³

Aber es gibt ebenso viele unsinnige und falsche Informationsangebote im Netz. Eine Untersuchung medizinischer Webseiten ergab, dass über die Hälfte aller untersuchten Seiten von Institutionen oder Privatpersonen dubiose und voreingenommene Inhalte verbreiten (vgl. OBST 1997).

Daran sieht man, dass Authentizität und Glaubwürdigkeit von Online-Informationen das größte Problem darstellen. Dieser Umstand liegt vor allem an einem der größten Vorteile im Netz, der hier aber auch gleichzeitig zum Problem wird, nämlich dass jeder Nutzer die Freiheit hat, zu jedem Thema etwas zu publizieren, egal ob er

²³ Über 80% der Inhalte im Internet sind kommerziell ausgerichtet, die Tendenz ist steigend. Nicht einmal 10% aller Webseiten haben natur- oder geisteswissenschaftliche Themen zum Inhalt. (Vgl. LAWRENCE / GILES 1999 : 107)

dementsprechend qualifiziert ist oder nicht. Oder wie es der Münsteraner Bibliothekar Dr. Oliver OBST ausdrückt: „*Jeder Idiot kann etwas auf dem Internet veröffentlichen – und jeder Idiot tut es auch.*“ (OBST 1997)

Daher ist es oft schwer zu erkennen, wie glaubwürdig Daten oder Informationen wirklich sind. Artikel in Zeitschriften, Magazinen, Lexika oder Bücher durchlaufen einen für den Leser unsichtbaren Prozess der Kontrolle. Editoren als Experten lesen und bewerten Artikel oder Bücher und geben diese erst nach genauer Prüfung zur Veröffentlichung frei. Große wissenschaftliche Journale, wie z.B. „The Lancet“ oder das „The New England Journal of Medicine“, haben Ablehnungsquoten von bis zu 90% (vgl. OBST 2000; ROBERTS 1999).

Das Peer-Review Verfahren und andere Methoden sorgen als Qualitätsfilter dafür, dass nur nach dem gegenwärtigen Stand der Wissenschaft korrekte Informationen publiziert werden. Dieser entscheidende Filtermechanismus fehlt so gut wie im Internet, somit liegt es beim Nutzer, die Gefahren eigenständig zu erkennen.

Die Qualität von Online-Information wird zumeist negativ eingeschätzt, insbesondere wird dem Medium ein Glaubwürdigkeitsdefizit zugesprochen, da die Information nicht mehr an das geschriebene bzw. gedruckte Wort gekoppelt ist, wie es bei Büchern oder Zeitschriften der Fall ist. Hinzu kommt, dass dem Internet eine Tendenz der Vermischung von Realität und Virtualität zugeschrieben wird, was insbesondere an den zahlreichen Verschwörungstheorien, die im Netz kursieren, deutlich wird (vgl. DEBATIN 1998).

Der Journalist David SHENK betitelte sein Buch „*Datenmüll und Infosmog*“ (1998), MEIER spricht von „*Informationsmüllhalde*“ (MEIER ²1999b : 163), die Tageszeitung „Frankfurter Rundschau“ nennt das Netz ein „*Gerüchtemedium, die Gerüchteküche par excellence*“ (zitiert nach SCHWEIGER 1999 : 97) und die „New York Times“ schrieb, einer Website zu trauen „*is like following a helpful stranger in Morocco who offers to take you to the best drug store*“ (zitiert nach NIELSEN 1999b). Empirische Untersuchungen weisen sehr unterschiedliche Ergebnisse bezüglich der Glaubwürdigkeit des Internet auf. Neueren Umfragen zufolge bezeichnen immerhin 50% der Befragten das Medium „Internet“ als glaubwürdig. Hiermit rangiert es in der Rangliste vor „Zeitschriften“ (46%), aber weit hinter „Zeitungen“ (74%), „Fernsehen“ (82%) und „Radio“ (87%). In einer anderen Umfrage, in der allerdings nach dem Medium mit der höchsten Glaubwürdigkeit gefragt wurde, sprachen nur 1% der Personen dem „Internet“ diese zu (vgl. RÖSSLER / WIRTH 1999b : 8). Martin

GOLDMANN weist allerdings zu recht darauf hin, dass man kein Internet braucht, um sich von den Medien belügen zu lassen: „*Fernsehen, Zeitschriften sowie Radio bieten genauso kanalisierte, vorgekaute Nachrichten und Halbwahrheiten*“ (1999 : 22). Allerdings sind Informationen im Internet anders geartet als in herkömmlichen Medien, da es im Internet zu einer Verschmelzung verschiedener Medientypen (Video, Audio etc.) kommt. Es gibt zwar auch bei Printmedien eine große Bandbreite von Formaten, von der Regenbogenpresse bis hin zum streng wissenschaftlichen Magazin, aber im Internet ist sie erheblich größer, da sie stärker von Promotion und Werbung durchsetzt ist, was das Differenzieren wesentlich erschwert. Diese Bandbreite entsteht durch die schon erwähnte Möglichkeit, dass jeder Mensch mit einem Zugang zum Internet ein Massenpublikum mit seiner Botschaft erreichen kann. (Vgl. ROBERTS 1999; RÖSSLER / OGNIANOVA 1999 : 111; SCHWEIGER 1999 : 96; TILLMAN 2000)

Die Gefahr liegt nicht nur in Fehlinformationen, d.h. dass eine Angabe wirklich falsch ist, sondern die viel größere Gefahr birgt die Grauzone, die im Netz existiert. Dieser Bereich enthält Seiten, die einen radikalen Standpunkt vertreten, stark übertreiben, polemisieren oder parodieren, letztere werden meist als „Hoax“²⁴ bezeichnet.

Diese Seiten können durchaus auch einen positiven Effekt haben. Zum einen können sie einen alternativen Standpunkt im Gegensatz zur gängigen öffentlichen Meinung vertreten, zum anderen schulen solche Seiten den kritischen Blick und das Hinterfragen von Informationen. Sie zeigen, dass jede Art von Information eine subjektive Tendenz hat, die es nötig macht, sie zu evaluieren. (Vgl. PIPER 2000; MINKEL 2000 : 33)

Diese Grauzone von Webseiten lässt sich in verschiedene Kategorien unterteilen, wobei viele Webseiten durchaus in mehrere dieser Kategorien fallen können:

- Parodien und Satire
- Fiktive Inhalte
- Gezielte Desinformation
- Fälschungen
- Propaganda
- Gehackte Seiten

²⁴ „Hoax“ bedeutet übersetzt Schwindel, Falschmeldung oder Ente. Dieser Begriff hat sich im Netz als allgemeine Bezeichnung für falsche Warnungen per E-Mail und gefälschte Webseiten eingebürgert. Hierzu siehe auch TU Berlin (www.tu-berlin.de/www/software/hoax.html) oder Universität Hamburg (minerva.sozialwiss.uni-hamburg.de/majordomo/hoax.html) [beide Stand 31.07.2001].

GREER et al. (1999b) und PIPER (2000) führen auch „Werbung“ in dieser Kategorisierung, aber aufgrund der rein kommerziellen Inhalte von Werbung werde ich in dieser Arbeit nicht näher darauf eingehen.

3.5.1 Parodien und Satire

Sehr häufig im Netz anzutreffen ist die Kategorie der Parodie (engl. „*parody*“ oder „*spoof*“), wobei insbesondere die politische Satire oder Parodien auf Computerfirmen, speziell Microsoft, sehr beliebt sind.

Parodien sind nie ernstgemeint und meist als solche schnell zu erkennen. Wobei PIPER (2000) und MINKEL (2000 : 33) zu Recht darauf hinweisen, dass bei gut gemachten Parodien leichtgläubige Menschen und Kinder trotzdem darauf hereinfallen können. Problematisch ist es oft auch, wenn Suchmaschinen Unterseiten einer Website finden und als Suchergebnis präsentieren, so dass man nicht den direkten Bezug zur Hauptseite erkennt, die deutlich macht, dass es sich hierbei um Satire handelt. So ist es schon des öfteren vorgekommen, dass Meldungen des Satire-Internetmagazins „The Onion“ (www.onion.com) in seriösen Arbeiten und Nachrichten zitiert wurden (vgl. PIPER 2000).

Bei Parodien wird zumeist der Domain-Name mit einer anderen Top-Level-Domain (z.B. .org oder .net) übernommen oder der Name wird leicht verfälscht, z.B. aus der Adresse der Weltbank „worldbank.org“ wird „whirledbank.org“, aus „microsoft.com“ wird „microshaft.com“ oder aus „altavista.com“ wird „hastalavista.com“.

- **Whitehouse.gov / .com / .org / .net**

Das Weiße Haus stellt im Netz ein beliebtes Objekt für Parodien dar. Hier wird auch die oben angesprochene Übernahme von Namen mit anderer Top-Level-Domain (TLD) deutlich. Die Originalseite besitzt die US-staatliche Top-Level-Domain .gov (whitehouse.gov) (s. Abb. 4 a).

Parodien dieser Seite sind u.a. zu finden unter:

- Whitehouse.org²⁵, die die Originalseite am rechten Rand mit Werbung verschiedener Energiekonzerne verziert, die den Wahlkampf des jetzigen US-Präsidenten George W. Bush unterstützten (s. Abb. 4 b).
- Whitehouse.net, die mit der Parodie auf politische Geschehnisse in den USA anspielt.²⁶ Die Abbildung zeigt einen fingierten Hackerangriff durch Chinesen nach dem Absturz eines amerikanischen Spionageflugzeuges in China (s. Abb. 4 c).
- Whitehouse.com, die hier nur der Vollständigkeit halber genannt wird, da es sich hier um keine Parodie handelt, sondern um die Seite eines Pornographie-Anbieters (s. Abb. 4 d). Dies aber zeigt, wie wichtig es ist, auf die TLD der jeweiligen Internet-Adresse zu achten.

Abb. 4: Die Index-Seite von a.) www.whitehouse.gov, b.) www.whitehouse.org [beide Stand: 29.08.2001], c.) www.whitehouse.net und d.) www.whitehouse.com [beide Stand: 10.11.2001]

²⁵ Die Seite ist seit dem 11.09.2001 aufgrund des terroristischen Anschlages auf das World Trade Center und des Pentagons aus dem Netz genommen und durch eine Kondolenz-Seite ersetzt worden.

²⁶ Die Entstehung und Historie der Seite ist unter <http://www.whitehouse.net/protest.html> [Stand: 28.09.2001] nachzulesen.

- Clones-R-Us

Auch naturwissenschaftliche Parodien sind im Netz vertreten. Das Angebot reicht von einfachen Artikeln über absichtlich falsche Studien, wie z.B. „Feline Reactions to Bearded Men“ (www.improb.com/airchives/classical/cat/cat.html), bis hin zur kompletten, vielschichtigen Site, wie z.B. die von „Dream Technologies International“ (www.d-b.net/dti/) mit Clones-R-Us (s. Abb. 5).

Auf dieser Seite bietet die Firma „Dreamtech“ das Klonen von Menschen an. Die Seite erläutert das Klonen anschaulich, gestützt auf Kommentaren imaginärer Wissenschaftler, bietet diverse Statistiken an und lässt begeisterte Kunden zu Wort kommen. Die Linksammlung beinhaltet Verweise zu bekannten, real existierenden Universitäten und anderen ernstgemeinten wissenschaftlichen Seiten zum Thema Klonen im Netz. Dass es sich um eine Parodie handelt, erkennt man u.a. an den Punkten „Price List“ und „Order Form“ in der Navigationsleiste. Hier kann man erfahren, was ein Klon von sich selbst oder einer bekannten Persönlichkeit kostet. Ein Klon des Models Cindy Crawford gibt es für 79.999.- US-\$, im Gegensatz dazu kostet ein Klon des ehemaligen US-Präsidenten John F. Kennedy nur 499.- US-\$. Über ein Bestellformular auf der Webseite kann man gleich seinen gewünschten Klon anfordern. Unter „About Us“ wird klargestellt, dass es sich um eine Parodie handelt und die Seite nur zum Nachdenken über das Klonen von Menschen anregen will. Dieser Diskurs lässt sich im „Guestbook“ nachlesen.

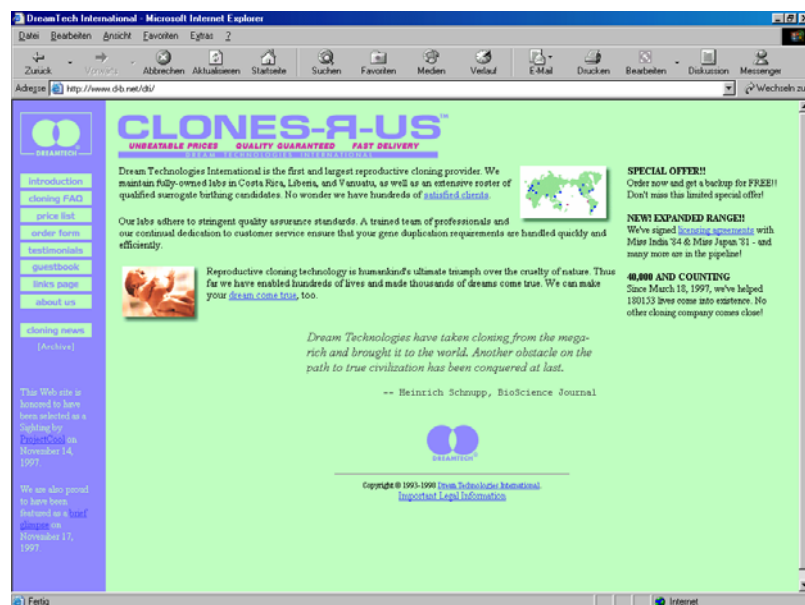

Abb. 5: Index-Seite von „Dream Technologies International“ (www.d-b.net/dti/) [Stand: 10.11.2001]

3.5.2 Fiktive Inhalte

Parodien beinhalten immer einen Bezug zur Realität. Es existieren aber auch Seiten mit rein fiktivem Inhalt, der jedoch als Realität dargestellt wird. Hier lassen sich zwei Arten unterscheiden. Zum einen die Seiten, die nur der reinen Unterhaltung dienen, wie z.B. die Seite des Mikrostaates „Molossia“ (www.molossia.org). Ebenso die Seiten über die beiden im US-Bundestaat Minnesota gelegenen Städte „Mankato“ (www.lme.mankato.msus.edu/mankato/mankato.html) und „New Hartford“ (lme.mnsu.edu/newhartford/newhtfd.html), die nur im Internet und auf keiner Landkarte existieren. Beliebt sind auch Seiten über fiktive Tiere, wie z.B. das „Mountain Walrus“ (www.end.com/~jynx/walrus/) oder den „Pacific Northwest Tree Octopus“ (zapatopi.net/treeoctopus.html).

Aber es gibt auch durchaus fiktive Seiten mit einem ernstgemeinten wissenschaftlichen Hintergrund, allerdings ist dies eher selten der Fall. Die Webseite des fiktiven Landes „Ruritania“ (homepages.udayton.edu/~ahern/rurindx.htm) informiert über die geographische Lage des Landes und über historische und demographische Daten. Das Land „Ruritania“ hat über 4 Millionen Bewohner und liegt in Skandinavien zwischen Norwegen und Schweden. Das Ganze ist ein Projekt des Fachbereiches Politik der Universität Dayton / USA und dient als Anschauungsobjekt und Simulation eines Staates im universitären Lehrbetrieb.

3.5.3 Gezielte Desinformation

Die bisher genannten Kategorien (Parodien und fiktive Inhalte) sind zwar auch eine Art von Desinformation, aber diese Inhalte sind zumeist offensichtlich nicht ernstgemeint, so dass daraus keine schwerwiegenden Konsequenzen erfolgen. Die gezielte Verbreitung von Falschmeldungen im Internet dagegen, die dann Einzug in die übrige Medienwelt erhalten, wird inzwischen als „Media-Hack“ bezeichnet. Diese neue Generation von Hackern will nach eigenem Bekunden durch die Lügen im Netz eine gesellschaftliche Diskussion anstoßen. Um Erfolg zu haben, Menschen die Geschichte also glauben und weitererzählen, muss *„die Geschichte ... wahr sein können“* sagt die Netzkünstlerin und Hackerin Lizlvx (MIKA 2000). So geschehen z.B. mit der Webseite

„Voteauction.com“, die während des letzten Präsidentschaftswahlkampfes in den USA anbot, Wählerstimmen gegen Geld zu kaufen. Obwohl es nie zu einem Handel mit Stimmen kam, wurde die Seite verklagt und auf richterlichen Beschluss hin abgeschaltet. Die Macher wollten mit ihrer Aktion den Leuten verdeutlichen, wieviel ihre Stimme in einem Wahlkampf, der über 3 Milliarden US-\$ kostete, eigentlich wert ist. (Vgl. MIKA 2000; KREMPL 2000; MEDOSCH 2001)

Schwerwiegender wird der Fall meist bei falschen medizinischen oder finanziellen Informationsangeboten, die im Extremfall zum Tode oder Ruin führen können.

▪ **Medizinische Desinformation**

Informationen über Krankheiten und deren Heilung gehören im Internet zu den gefragtesten Themen (vgl. OBST 1997; AMBRE et al. 1997 : 1-1). Neben seriösen medizinischen Datenbanken, wie z.B. die „MedLine“²⁷, existieren auch unzählige unseriöse und ethisch bedenkliche Quellen im Netz. Da verspricht William Donald Kelley, der sich selbst als „Medical Missionary“ bezeichnet, auf seiner Webseite: *„There is no cure for the common cold. But there is a very simple CURE for cancer.“* (www.ioa.com/~dragonfly/news/kelley.html). Gestützt wird diese These von dubiosen medizinischen Erkenntnissen und Verschwörungstheorien.

Betty Martini erklärte in einer Mail, die an über 450 Newsgroups ging, dass Süßstoff der Auslöser für Multiple Sklerose und Hauttuberkulose ist (www.nancymarkle.com/betty/betty.html) und schaffte damit den Sprung auf diverse Titelblätter. Die Behauptung wurde inzwischen von Experten widerlegt, aber nichtsdestotrotz glauben viele Betroffene heute noch immer daran. (Vgl. PIPER 2000; KELLEY 1999)

Das „Institute for Investigative Medicine“, dem u.a. die Nobelpreisträgerin für Chemie Kary Mullis angehört, schreibt auf der „AIDS Myth Site“ (www.virusmyth.com/aids/index.htm), dass AIDS weder durch den HIV-Virus ausgelöst noch sexuell übertragen wird, sondern dass die Infizierten an den Nebenwirkungen der Medikamente sterben. Diese Aussagen werden sehr umfangreich

²⁷ Der Zugang zum öffentlichen Teil der „Medline“, der „PubMed“, ist über <http://www.ncbi.nlm.nih.gov/entrez/query.fcgi?db=PubMed> [Stand:30.09.2001] zu erreichen.

und mit Hilfe international anerkannter Wissenschaftler näher erläutert, so dass man sich fragen muss, ob dies wirklich nur dubiose und falsche Erkenntnisse sind, oder ob es sich vielleicht doch um eine unpopuläre, aber innerhalb des wissenschaftlichen Diskurses vertretbare Sichtweise handelt. Die Macher selbst beklagen sich darüber, dass ihr Standpunkt durch Zensur unterdrückt wird (vgl. PIPER 2000).

Organisationen wie „Quackwatch“ (www.quackwatch.com) und das „Center for Disease Control and Prevention (CDC)“ (www.cdc.gov/hoax_rumors.htm) geben einen Überblick über Quacksalber und warnen vor deren dubiosen Methoden im Internet.

▪ **Wirtschaftliche Desinformation**

Das Interesse an Aktien von Kleinanlegern ist durch das Internet und den dadurch entstandenen Boom des neuen Marktes stark gefördert worden. Jederzeit kann man ohne Probleme die aktuellen weltweiten Börsenkurse abrufen und sich mit den neuesten Wirtschaftsinformationen versorgen. Aber genau hier liegt das Problem. Am 3. November 2000 kursierte im Internet die Meldung, dass der Chef des Softwareunternehmens „Oracle“, Larry Ellison, gestorben und der gesamte Vorstand der Firma zurückgetreten sei. Diese Meldung führte zu massiven Kurseinbrüchen, die Aktie verlor um 29% ihres Wertes. Diese Falschmeldung war der Mitauslöser dafür, dass die Anleger innerhalb eines halben Tages 50 Milliarden US-Dollar verloren (vgl. MÜLLER 2000).

Ende August 2000 verschickte ein amerikanischer Student eine Mail an den Presse-Distributor „Internet Wire“ (www.internetwire.com). Die Mail hatte den Anschein, als sei sie von der Firma „Emulex“ (www.emulex.com) versandt worden, die darin mitteilte, dass die Geschäftsberichte neu geschrieben werden müssten und von der amerikanischen Börsenaufsicht zur Zeit überprüft würden. Die katastrophale Fehlinformation wurde umgehend von Börsendiensten aufgenommen und verbreitet, mit der Folge, dass der Aktienkurs der Firma „Emulex“ binnen Minuten um 60% fiel.

Während ein Großteil der Aktionäre bei diesem Kurseinbruch viel Geld verlor, profitierte der Student durch diese Talfahrt, da er sogenannte Leerverkäufe²⁸ („short sales“) getätigt hatte und somit in kurzer Zeit 240.000 US-\$ Gewinn machte (vgl. REDAKTION INTERN.DE 2000; KREMPL 2000).

3.5.4 Fälschungen

Gefälschte Webseiten (engl. „*counterfeit*“) bergen mit die größte Gefahr im Netz, denn diese versuchen, andere Seiten durch geschickte Adaptierung von journalistisch relevanten Regeln und Formaten nachzuahmen, so dass sie mit den ernstgemeinten Originalseiten verwechselt werden können. Inhaltlich wird das Thema seriös dargestellt, dass im Gegensatz zur Originalseite nicht objektiv, sondern subjektiv und voreingenommen berichtet. Sie dienen meist der gezielten Verbreitung von Fehlinformationen und Propaganda. PIPER (2000) vergleicht diesen Typus von Website auch mit dem Trojanischen Pferd, da sie nicht das darstellt, was sie in Wirklichkeit ist.

Bei einem solchem Hoax wird zumeist eine thematisch eindeutige WWW-Adresse genommen, so dass der User diese schneller findet und für eine offizielle Seite hält, so bei dem unten aufgeführten Beispiel der Website über Martin Luther King, Jr., deren Adresse www.martinlutherking.org ist.

Ein anderes Beispiel ist die Fälschung der Seite der Welthandelsorganisation (WTO), die nach dem Allgemeinen Zoll- und Handelsabkommen (GATT) benannt ist: www.gatt.org. Die offizielle Seite ist unter www.wto.org zu finden. (Vgl. PIPER 2000)

Zudem wird oft das Grunddesign der Site übernommen, wie z.B. Seitenaufteilung, Farbgebung, Form der Buttons oder der Navigationszeile, so dass es schon optisch leicht zu Verwechslungen kommen kann und der User damit nicht erkennt, dass es sich um eine Fälschung handelt.

²⁸ *Definition:* „Leerverkauf (Blankoverkauf): Bei Termingeschäften der Verkauf von Wertpapieren, Devisen oder Waren, die der Verkäufer noch nicht besitzt, sondern erst später erwirbt, in der Erwartung, sich bis zum Erfüllungstermin zu niedrigeren Kursen bzw. Preisen eindecken zu können, als es bei Abschluß des Termingeschäfts möglich ist.“ (SCHREIBER 2000 : 290)

- www.martinlutherking.org

Als Beispiel für eine solche Fälschung sei hier die Seite „Martin Luther King, Jr. – An Historical Examination“ (www.martinlutherking.org) genannt (s. Abb. 6).

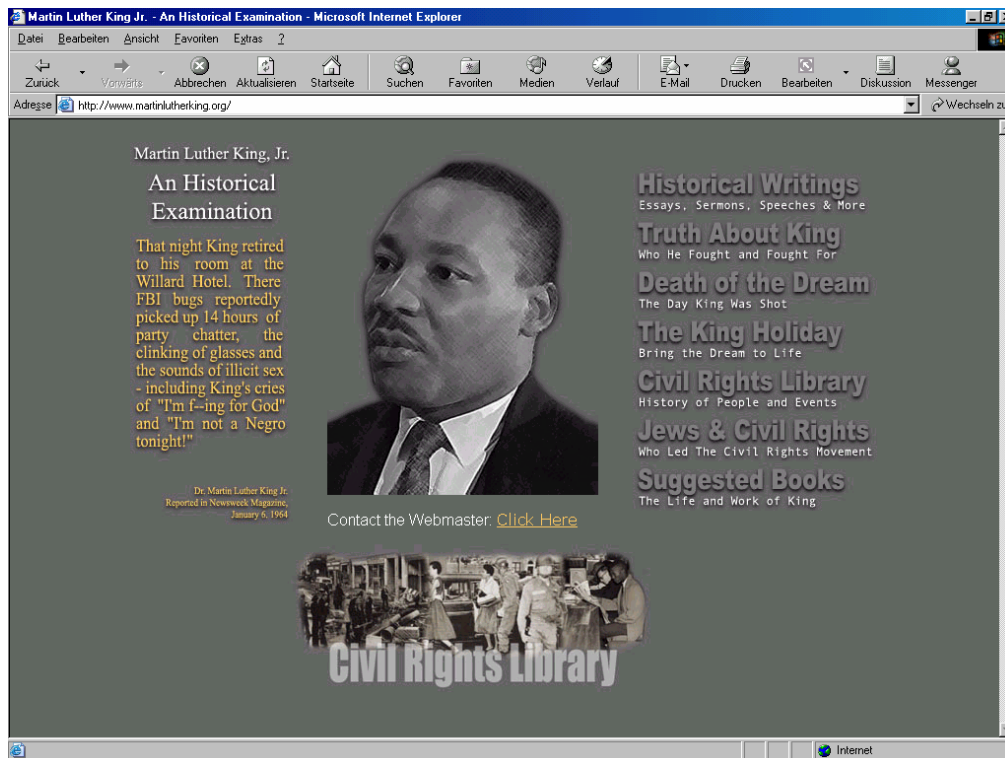

Abb. 6: Fälschung: Index-Seite „Martin Luther King, Jr. – An Historical Examination“ (www.martinlutherking.org) [Stand: 10.11.2001]

Diese Site berichtet über das Leben und Werk des amerikanischen Bürgerrechtlers und scheint oberflächlich somit eine „offizielle“ Martin Luther King Webseite zu sein. Dieser Eindruck wird durch die WWW-Adresse verstärkt. Auch die eindeutige Navigationsstruktur u.a. mit Hinweisen zu seinen Schriften („Historical Writings“) und anderen Bürgerrechtsbewegungen („Jews & Civil Rights“) sowie das klare und übersichtliche Design weisen auf eine professionell erstellte Seite hin. Hinweise für einen Hoax erkennt man erst bei näherer Betrachtung der Inhalte. Schon auf der Titelseite steht ein zweifelhaftes Zitat aus der amerikanischen Zeitschrift „Newsweek“: „... - including King's cries of *'I'm f...ing for God' and 'I'm not a Negro tonight!'*.“ Gewissheit für den zweifelhaften Inhalt dieser Seite bekommt man beim Anklicken des Links „Contact the Webmaster“, der eine E-Mail Adresse der rechtsradikalen Organisation „Stormfront“ öffnet. Auch die darunterliegenden Seiten verbreiten rechtsradikales Gedankengut.

Eine objektive Seite über den Bürgerrechtler ist unter <http://www.thekingcenter.com/> zu finden. Das Design gleicht sich nicht nur bei der Farbgebung mit den verschiedenen Grautönen und der gelben Schrift, auch die Anordnung der verschiedenen Elemente ist sehr ähnlich: das zentrale Porträt in schwarzweiß, das Martin Luther King Zitat auf der linken Seite und die seitliche Navigationsleiste rechts, die eine ähnliche Unterteilung aufweist (s. Abb. 7).

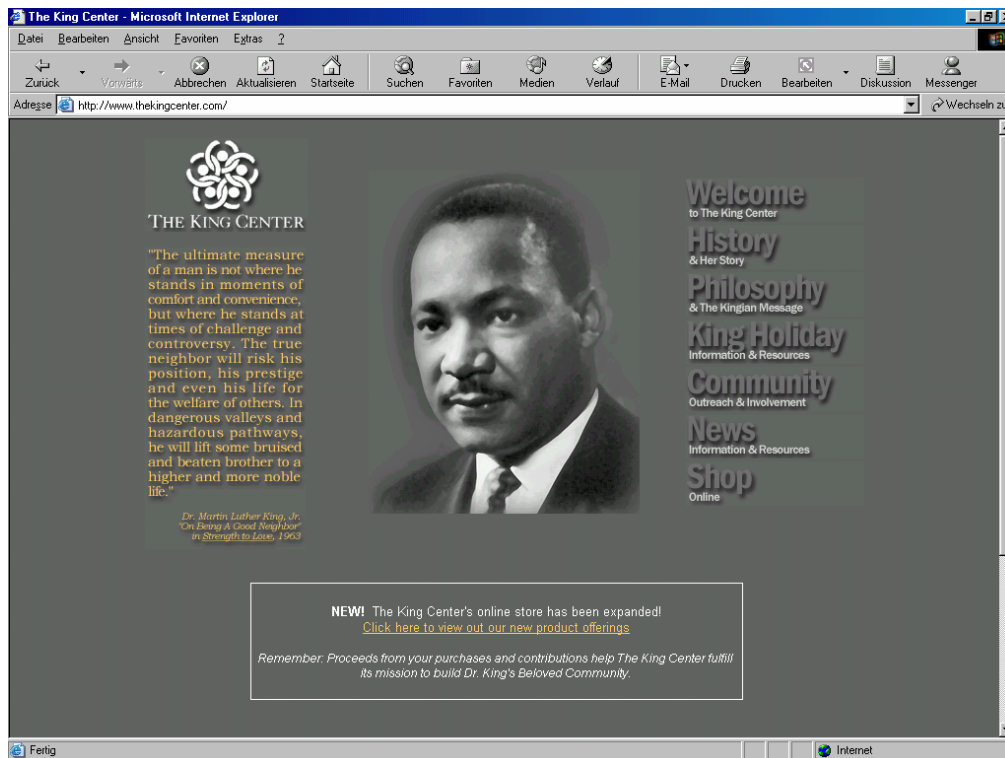

Abb. 7: Original: Index-Seite „The King Center“ (www.thekingcenter.com) [Stand: 10.11.2001]

3.5.5 Propaganda

Ein weiteres Problem im Netz ist das der Propaganda. Diese gilt als systematischer Manipulationsversuch, d.h. es wird versucht, durch die Verbreitung von Informationen, Fakten, Gerüchten, Halbwahrheiten und Lügen die öffentliche Meinung zielgerichtet zu manipulieren. Dieses Mittel wird im Netz oft von verfassungsfeindlichen Parteien und Organisationen benutzt. Sie kommunizieren über das Internet, um somit rechtlichen Problemen leicht ausweichen zu können.

Dieses sehr umfassende Problem soll es hier nur kurz exemplarisch dargestellt werden. Weiterführende Informationen zu diesem Thema sind auf den Seiten der „Gesellschaft

Sozialwissenschaftlicher Infrastruktureinrichtungen“ (GESIS) (www.social-science-geis.de/Information/Themen/Fokus/) oder auf der Seite „Wissenschaft plus Politik“ (staff-www.uni-marburg.de/~rillingr/root1.html) zu finden.

Ein Beispiel für gezielte politische Propaganda im WWW stellt die Seite des „Institute for Historical Review“ (www.ihr.org) dar. Auf deren Anfangsseite steht, dass die Site wissenschaftliche Informationen und nachdenkliche Kommentare zu neuzeitlichen politischen Ereignissen bietet, so z.B. zum 2. Weltkrieg, dem Holocaust und dem Konzentrationslager Auschwitz, und dabei weder ideologisch noch politisch noch konfessionell in der Berichterstattung ist. Das Gegenteil ist jedoch der Fall. Genau wie es für eine solche Seite typisch ist (vgl. GREER et al. 1999b), werden der Holocaust verneint und die Auschwitz-Lüge propagiert. Die weiterführenden Links führen zu Seiten, die auch diesen Standpunkt vertreten, so z.B. zur rechtsradikalen „Zündelsite“ (www.zundelsite.org) oder zur Stiftung „Vrij Historisch Onderzoek“ (vho.org), die Personen juristisch unterstützt, die nicht an die Existenz von Gaskammern glauben und aufgrund dessen angeklagt sind.

3.5.6 Gehackte Webseiten

Der typische Hack einer Website ist eindeutig zu erkennen. Hacker hinterlassen auf der entsprechenden Seite meist einen Hinweis, dass sie die Seite gehackt haben, zumeist gefolgt von politischen Statements und einer grafischen Entstellung der Seite, was dann als „defacement“ (Entstellung) bezeichnet wird. Dieser Typus ist nur sehr kurzlebig und deshalb auch nur selten anzutreffen, da er schnell entdeckt wird und sofort durch die reguläre Seite wieder ersetzt wird (vgl. PIPER 2000).

Aufgrund dieser Kurzlebigkeit archivieren einige Hackergruppen diese Seiten. Solche Archive sind z.B. bei „Attrition“ (www.attrition.org/mirror/attrition/) oder „Onething“ (www.onething.com/archive/) zu finden.

Viel schwieriger zu erkennen sind sogenannte News-Hacks. Dabei manipulieren Hacker Nachrichten in News-Angeboten im Web. Diese Art des Hacks taucht zur Zeit immer häufiger auf, weil er sehr einfach durchzuführen ist. Zum Eindringen in solche

Web Content Management Systeme ist neben dem Wissen nicht mehr als ein üblicher Internet-Browser nötig. (vgl. POULSEN 2001; REDAKTION INTERN.DE 2001)

Im August 2001 drang der 20-jährige Adrian Lamo bei „Yahoo.com“ ein, änderte bestehende Nachrichten und veröffentlichte selbst neue. Diese Änderungen waren so minimal, dass sie tagelang nicht auffielen. Erst als der Hacker selbst die Firma „Security Focus“ darüber informierte, fielen die Änderungen auf und „Yahoo.com“ schloss die Sicherheitslücke. Lamo war selbst erstaunt und schockiert, wie einfach das Eindringen in das System war und welche Macht man durch die Manipulation von Nachrichten haben kann. Er sagte:

„At that point I had more potential readership than the Washington Post. ... It could have caused a lot of people who were interested in the days events a lot of unwarranted grief if false and misleading information had been put up.“ (zitiert nach POULSEN 2001)

Diese Gefahr ist nicht zu unterschätzen, da Nachrichtenseiten zu den beliebtesten Angeboten im Netz zählen. Nach den Terroranschlägen auf New York und Washington am 11. September 2001 zählten Nachrichtenagenturen über 15 Millionen Zugriffe, und bei „Yahoo.com“ verdoppelten sich die Zugriffszahlen des gesamten Monats innerhalb von Stunden (vgl. POULSEN 2001; SIEGLE 2001 : 101). Knapp drei Wochen später ergab eine Umfrage in den USA, dass das Internet inzwischen hinter dem Fernsehen zur zweitwichtigsten Informationsquelle für Berichte über die Terroranschläge geworden war (vgl. HARRIS INTERACTIVE 2001).

Dass dieses Thema ein sehr wichtiges im Internet war, belegt die Statistik der Suchmaschine „Google.com“. Die neun der zehn häufigsten Suchbegriffe im September 2001 standen alle im Zusammenhang mit den Terroranschlägen, nur der Computerwurm „Nimda“ schaffte es auch in die Liste: 1. „Nostradamus“, 2. „CNN“, 3. „World Trade Center“, 4. „Osama Bin Laden“, 5. „Taliban“, 6. „Afghanistan“, 7. „Nimda“, 8. „American Flag“, 9. „BBC“ und 10. „FBI“ (www.google.com/press/zeitgeist/zeitgeist-sept.html).²⁹

Die Frage, die sich hier stellt: Was hätten in diesem Falle Falschmeldungen im WWW über Attentäter und Opfer für einen Schaden anrichten können? Allein schon harmlose

²⁹ Mehr über die Rolle von „Google“ während der Ereignisse in New York bei Richard W. Wiggins „The Effects of September 11 on the Leading Search Engine“ (www.firstmonday.dk/issues/issue6_10/wiggins/index.html) [Stand: 16.10.2001]. Unter <http://www.google.com/press/zeitgeist/9-11-search.html> [Stand 16.10.2001] bietet „Google“ exakte Statistiken zu Zugriffszahlen am 11. September 2001.

Urban Legends, wie eine falsche Nostradamus Prophezeiung oder die unzähligen gefälschten Fotos, sorgten weltweit für Diskussionen (vgl. SIEGLE 2001 : 102).³⁰

³⁰ Urbane Legenden, Falschmeldungen und manipulierte Fotos zu dem Terroranschlag auf das World Trade Center in New York sind auf der Site „Rumors of War“ (www.snopes2.com/rumors/rumors.htm) und „Terrorist Attack Hoax Watch“ (www.csicop.org/hoaxwatch/) [beide Stand: 04.10.2001] zu finden.

4. Aspekte der Evaluation von Webseiten

Das vorhergehende Kapitel hat deutlich gemacht, dass die Informationsfülle des Internet ihren Preis hat, da die Quellen einer hohen inhaltlichen wie gestalterischen Fluktuation unterliegen, schwer auffindbar, leicht zu manipulieren und zu fälschen sind und meist die Quantität der Qualität überwiegt.

Daraus ergibt sich ein sehr zweigeteiltes Bild des Rechercheinstruments „Internet“. Diese Aussage wird durch eine Umfrage, die von Martin SONNLEITNER, Marcus STADTHAUS und Stephan WEICHERT durchgeführt wurde, deutlicher. Sie befragten Redakteure verschiedener deutscher Tages- und Wochenzeitungen nach Vor- und Nachteilen der Online-Recherche. Positiv wurde besonders die „Zeitersparnis“ und die „Ergiebigkeit“ bewertet, da über das Netz ein schneller Zugriff auf ein breites Spektrum von Informationen möglich ist. Im Gegensatz dazu wurde insbesondere die „Oberflächlichkeit“ und die „Unglaubwürdigkeit“ von Online-Quellen moniert. (Vgl. SONNLEITNER/STADTHAUS/WEICHERT 1999 : 252 f.)

Eine Studie von Wolfgang SCHWEIGER ergab ähnliche Ergebnisse. Hier werden dem WWW gegenüber dem Fernsehen und der Tageszeitung Attribute wie „unseriös“, „schlecht recherchiert“, „unkritisch“ und „unglaubwürdig“ zugesprochen (1999 : 102). Dem Netz wird als einziger Pluspunkt ein dynamischeres, „frecheres“ Image verglichen mit anderen Medien zugestanden, was dadurch erklärt wird, dass jeder seine Meinung in Form einer Website publizieren kann, und darin liegt *„offensichtlich auch in der Wahrnehmung des Publikums eine Stärke des Mediums“* (ebd. : 103).

Das wachsende Interesse an Online-Quellen, ausgelöst durch das starke Wachstum des World Wide Web, führte dazu, dass ab Mitte der 90er Jahre Angehörige von Universitäten und Bibliotheken sich verstärkt mit der Entwicklung von theoretischen und praktischen Methoden der Evaluation von Webseiten beschäftigten. Da Online-Informationen in vielfältiger Form vorliegen (Webseiten, Newsgroup-Artikel etc.), und es keine generellen Bestimmungen zur Formatierung von Webseiten gibt, konnte und kann auch heute noch keine Software den Evaluationsprozess übernehmen und muss somit manuell vom Menschen vorgenommen werden (vgl. ANAGNOSTELIS / COX 1996).

Es bildeten sich zwei Arten von Evaluationsansätzen für Onlinequellen heraus (vgl. CIOLEK 1996):

1. Die Bewertung von Online-Quellen durch Editoren und Redaktionen, die diese zu Linksammlungen und kommentierten Katalogen zusammenführten, um somit die qualitativ hochwertigen Angebote vom Rest des Netzes zu trennen.
2. Die individuelle Bewertung anhand der von Universitäten und Bibliotheken entwickelten Kriterienkataloge oder Checklisten, deren Hauptaugenmerk auf Wahrnehmung, Analyse und Vergleich von gefundenen Webseiten liegt.

4.1 Evaluationsdienste im Netz: Awards, Review-Dienste und Portale

Suchmaschinen und Kataloge sollen dem Surfer helfen, Informationen zu finden, aber diese Suche führt zu diversen Problemen. Hierzu gehören, wie schon in Kapitel 3 erläutert, das Auffinden von qualitativ hochwertigen Quellen und die Glaubwürdigkeit von Webseiten. Deshalb existieren im Internet unzählige Dienste, die Webseiten bewerten, wobei man hier zwei grundsätzliche Systeme unterscheiden muss:

Zum einen gibt es Awards und Zertifikate, d.h. Organisationen, Zeitschriften oder Privatpersonen rezensieren Webangebote und zeichnen diese dann aus. Diese Art des Qualitätssiegels ist aber mit Skepsis zu betrachten, da nur selten Evaluationskriterien offengelegt werden und es nur wenige wirklich seriöse Anbieter gibt. (Vgl. BRAUN 2001 : 117)

Zum anderen existieren seit Mitte der 90er Jahre im WWW Review-Dienste und themen-basierte Portale (engl. „*subject-based gateways*“), die von Universitäten, Bibliotheken, aber auch von kommerziellen Anbietern verwaltet werden. Ihr Ziel ist es, dem User mit Hilfe von Experten zusammengestellte Linksammlungen gezielt und effektiv qualitativ hochwertige Informationen zu präsentieren. Im Gegensatz zu Katalogen, wie z.B. „Yahoo.com“ oder „Web.de“, unterliegen diese Dienste genauen Evaluationskriterien, die sie auch öffentlich bekanntmachen. (Vgl. COOKE / McNAB / ANAGNOSTELIS 1996; COOKE 1999 : 27 f.)

Aufgrund des enormen Aufwandes einer Evaluation lässt sich ableiten: Je genauer die Evaluation vom jeweiligen Anbieter durchgeführt wird, desto kleiner wird die Anzahl der angebotenen Quellen, aber auch desto qualitativ besser die Auswahl der Links (s. Abb. 8).

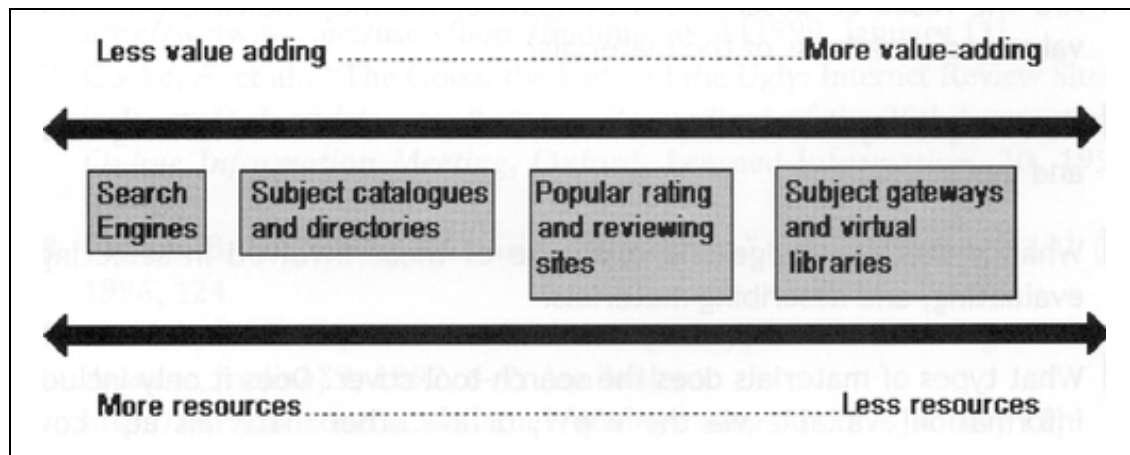

Abb. 8: Vor- und Nachteile verschiedener Suchdienste & Kataloge (COOKE 1999 : 49)

4.1.1 Awards & Zertifikate

Die Datenbank „Awards.de“ führte im Oktober dieses Jahres über 3000 bekannte Awards auf, wobei die eigentliche Ziffer der im Netz kursierenden Auszeichnungen bei über 10.000 liegen mag (vgl. BRAUN 2001 : 116). Das Problem ist, dass diese Awards (s. Abb. 9) zumeist von Privatpersonen vergeben werden, die einfach für sie interessante Webseiten auszeichnen, ohne hierbei auf einen ernsthaften Kriterienkatalog zurückzugreifen und somit in den meisten Fällen kein Qualitätssiegel darstellen. Verliehen werden diese Awards aufgrund ihrer mangelnden Reputation nur an private Homepages.

Abb. 9: Auswahl typischer Awards privater Homepages

Bei Awards von Zeitschriften sieht die Situation schon anders aus. Der „Weka Computerzeitschriften Verlag“ rezensiert Webangebote und zeichnet die besten deutschsprachigen Websites mit dem „Webtip“ (www.webtip.de) aus (s. Abb. 10). Die Rezensenten hierbei sind Experten. Allerdings werden nur zwei Kriterien bewertet, nämlich Inhalt und Design, wobei die Gewichtung der Kriterien bei einzelnen Kategorien unterschiedlich angewandt wird. Durch die Bewertung der Seiten durch Experten hebt sich ein solches Online-Angebot zwar deutlich von den anderen Awards ab, aber durch den sehr kleinen Kriterienkatalog bietet auch eine solche Seite nur einen geringen Qualitätsstandard.

Abb. 10: Webtip- Logo

Ein wirklicher Qualitätsstandard kann nur durch eine strenge Evaluierung von Experten gesichert werden. Dies ist z.B. bei dem Zertifikat „HON - Code of Conduct“ der Fall. Dieser Code wurde 1996 von der „Health on the Net Foundation (HON)“ (www.hon.ch) entwickelt, zu deren Mitgliedern u.a. die Weltgesundheitsorganisation (WHO), das Kernforschungszentrum CERN (Conseil Européen pour la Recherche Nucléaire) und die Europäische Union gehören. Das Ziel dieser Stiftung war und ist es, neue Technologien in der Medizin zu fördern. Mit dem „HON - Code of Conduct“ werden medizinische Quellen ausgezeichnet, die sehr strenge Richtlinien erfüllen. So dürfen u.a. *„alle medizinischen und gesundheitsbezogenen Ratschläge, die auf dieser Website erteilt werden, nur von medizinisch/gesundheitswissenschaftlich geschulten und qualifizierten Fachleuten gegeben“* (HEALTH ON THE NET FOUNDATION 1997) werden. Die Erfüllung der Richtlinien wird von der HON streng überwacht. Somit kann der User sicher sein, dass Webseiten mit dem HON-Logo (s. Abb. 11) glaubhafte und wissenschaftliche Informationen beinhalten.

Abb. 11: Logo des „HON – Code of Conduct“ (2-fach vergrößert)

4.1.2 Review-Dienste

Die meisten Suchmaschinen und Kataloge bieten inzwischen eine Art Review-Dienst an, in dem bestimmte Quellen hervorgehoben werden. So gibt es z.B. bei „Web.de“ die Kategorie „Cool Spot“, in die laut „Web.de“ (surftipps.web.de/cool/) besonders gute Webseiten aufgenommen werden. Aber der Name macht schon ein Problem deutlich, denn hier werden „coole“ Seiten aufgeführt. Doch was bedeutet „cool“? Damit wird weder etwas über die Qualität des Inhalts der einzelnen Seite ausgesagt, noch werden Auswahlkriterien, geschweige denn Evaluationskriterien aufgeführt, so dass man bei solchen Kategorisierungen kaum von einem wirklichen Review-Dienst sprechen kann. (Vgl. RETTIG 1996; ANAGNOSTELIS / COOKE / McNAB 1997; SMITH 1997)

Anders ist es bei dem wohl bekanntesten Review-Dienst im Internet, „Argus Clearinghouse (ACH)“ (www.clearinghouse.net). Dieses Projekt der Universität Michigan / USA entstand im Jahre 1993 mit dem Ziel, jedem Internet User einen Zugang zu nützlichen und wertvollen Internetquellen zu ermöglichen. Dazu werden die Quellen von Universitätsangehörigen gesichtet, beschrieben und evaluiert und anschließend bewertet in den thematisch sortierten Katalog aufgenommen. Beurteilt werden fünf Kategorien: Inhalt, Qualität, Design, Struktur und Meta-Informationen, wie z.B. Autor und Aktualität der Seite (vgl. ARGUS ASSOCIATES 2000; TILLMAN 2000). Positiv bewertete Seiten dürfen das „Seal of Approval“ (s. Abb. 4.5) auf ihrer Eingangsseite einblenden.

Abb. 12: Auszeichnung von Argus Clearinghouse (www.clearinghouse.net)

4.1.3 Themen-basierte Portale

Themen-basierte Portale werden zumeist von Bibliothekaren oder Experten erstellt, die zum Ziel haben, Benutzer mit qualitativ sehr hochwertigen Internet-Quellen zu versorgen. Diese Portale werden oft auch als „virtuelle Bibliotheken“ bezeichnet. (Vgl. ANAGNOSTELIS / COOKE / McNAB 1997; SMITH 1997; COOKE 1999 : 34)

Im Jahre 1993 wurde in England das Projekt „Electronic Library Programme (eLib)“ gestartet und stellt heute das größte seiner Art dar. Zu diesem Projekt gehören inzwischen eine Vielzahl von Informationsportalen, die verschiedene natur- und geisteswissenschaftliche Bereiche abdecken:

- ADAM : The Art, Design, Architecture and Media Information Gateway (www.adam.ac.uk)
- Biz/ed : The Business and Economics Gateway (www.bized.ac.uk)
- EEVL : The Edinburgh Engineering Virtual Library (www.eevl.ac.uk)
- OMNI : Organizing Medical Networked Information (omni.ac.uk)
- RUDI : Resources for Urban Design Information (rudi.herts.ac.uk)
- SOSIG : The Social Science Information Gateway (sosig.ac.uk)

Jedes dieser Portale bietet Zugriff auf Ressourcen im Internet, die von Bibliothekaren nach strengen Richtlinien ausgewählt und evaluiert worden sind. Zu jedem Eintrag werden entsprechende Informationen und Zusammenfassungen der Quelle angeboten. (Vgl. COOKE 1999 : 35)

Der Vorteil solcher virtueller Bibliotheken liegt eindeutig in der sehr guten Auswahl der Quellen, die eine hohe Informationsqualität sicherstellt. Auch werden hier die Evaluationskriterien genau definiert und dokumentiert, so dass der Evaluationsvorgang nachvollziehbar ist.³¹ Im Gegensatz zu Suchmaschinen und Katalogen bieten virtuelle Bibliotheken nicht nur einen Überblick über Quellen im World Wide Web, sondern auch Newsgroups, Mailinglisten und FTP-Server werden mit ins Angebot aufgenommen. Aber aus der strengen Auswahl an Informationen ergibt sich auch ein Nachteil, der in der Limitierung der Quellen liegt. (Vgl. COOKE 1999 : 40 f.)

³¹ Die genauen Evaluationskriterien von „SOSIG“ z.B. sind unter <http://www.sosig.ac.uk/desire/-ecrit.html> [Stand:22.10.2001] zu finden.

4.2 Individuelle Evaluationsmethoden

Da Review-Dienste und Portale jedoch nur wenige Seiten im WWW abdecken und zudem dem schnellen Wachstum des Netzes nicht folgen können, sind individuelle Evaluationsmethoden gefragt.

In ersten theoretischen Überlegungen versuchten CIOLEK (1997, ursprünglich 1994), CAYWOOD (1995), TILLMAN (2000, ursprünglich 1995), GRASSIAN (1996) und SMITH (1997) essentielle Merkmale von Webseiten und deren Inhalte zu erfassen und somit Indikatoren für Qualitätsmerkmale zu erstellen. Diese sollen als Orientierungs- und Faustregeln für die Evaluation gelten.

Die folgende Auflistung stellt nur die Hauptmerkmale der Methoden vor. Jeder dieser Punkte ist meist noch in verschiedene Unterpunkte unterteilt.

- CIOLEK bewertet die Einzigartigkeit der Quelle, dazu Inhalt, Auffindbarkeit im Netz, Zugang, Struktur, Formatierung und Pflege der Seite (1997).
- CAYWOOD bewertet in sehr knapper Form hauptsächlich drei Punkte: Zugang, Design und Inhalt (1995).
- TILLMAN bewertet die Bandbreite der angebotenen Informationen, die Leichtigkeit der Identifizierung von Meta-Daten (Autor, Aktualität etc.), die Stabilität von Online-Quellen und die Benutzerfreundlichkeit (2000).
- GRASSIAN bewertet Inhalt, Quelle, Aktualität und Struktur (1996).
- SMITH bewertet vier Aspekte sehr ausführlich: inhaltliche, rhetorisch-kommunikative, multimedial-interaktive Aspekte und die Kostendimension (1997).

Seitdem wurden die Evaluationsmethoden ständig weiterentwickelt. Stellvertretend seien hier AMBRE et al. (1997), SCHROCK (1998), COOKE (1999), ALEXANDER / TATE (1999), HARRIS (2000), KIRK (2001) und das EU-Projekt „DESIRE“ (www.desire.org), aus dem der „Internet Detective“ (PLACE / HIOM / PEEREBOOM

1999) entstanden ist, genannt. Bei diesen Methoden wurden zumeist die Basismerkmale der vorhergegangenen Methoden übernommen und lediglich weiter verfeinert oder neu zusammengefasst, so dass auch hierbei kein allgemeingültiger Kanon von Kriterien entstanden ist. Aber alle diese Methoden haben einen gemeinsamen Kern, wobei sich die Kriterien der Evaluation von netzexternen Dokumenten (z.B. Zeitschriften, Bücher, Datenbanken, CD-ROMs etc.) in der Regel nicht sonderlich von denen der Webseiten unterscheiden.

Folgende Kernkriterien sind allgemein gültig (vgl. RETTIG 1996; DEBATIN 1998):

- Glaubwürdigkeit
- Zuverlässigkeit
- Objektivität
- Richtigkeit
- Genauigkeit
- Aktualität
- Nachweisbarkeit
- Benutzerfreundlichkeit
- Zugänglichkeit

Der größte Unterschied bei der Evaluation von netzexternen Dateien und Webseiten besteht in der Zeitdimension und der Multimedialität.

Die Zeit spielt aufgrund der Aktualität und einfachen Veränderbarkeit von Webseiten eine große Rolle. Hinzu kommen die Elemente des Hypertextes, die durch die Verlinkung zu anderen Seiten oder Textteilen den Text aus einer chronologischen Reihenfolge herausheben, wie es beispielsweise bei einem Buch der Fall wäre. Die Multimedialität zeigt sich durch die Möglichkeit, interaktive und audio-visuelle Elemente, wie z.B. Videos oder Audiodateien, einzufügen (vgl. DEBATIN 1998; TILLMAN 2000).

4.3 Evaluationskriterien

Zur Evaluation von Information ist, wie schon erwähnt, ein genau definierter Kriterienkatalog vonnöten. Hierzu gehören aber nicht nur die unten aufgeführten Aspekte Glaubwürdigkeit, Genauigkeit, Abdeckung, Ausgewogenheit, Nachweisbarkeit und die Benutzerfreundlichkeit, sondern auch einige allgemeine grundsätzliche Aspekte. Diese müssen vor Beginn der eigentlichen Evaluation kontrolliert werden. Zuerst muss festgestellt werden, um welchen Typus von Online-Quelle es sich handelt: um die Homepage einer Organisation oder einer Privatperson oder ist es eine thematisch-orientierte Seite? Andere Quellen, wie FTP Archive, Newsgroup-Artikel, FAQs oder Datenbanken werden in dieser Arbeit nicht berücksichtigt.³²

Die Identifizierung der Art der Quelle ist deshalb wichtig, weil der Typus einen Einfluss auf den Schwerpunkt der verschiedenen Evaluationskriterien besitzt. Die Frage z.B. nach der Glaubwürdigkeit ist bei einer privaten Homepage viel höher einzuschätzen als bei der Website einer Universität, die schon aufgrund der Institution eine hohe Glaubwürdigkeit und Reputation besitzt. Ein anderes Beispiel ist die Aktualität, die bei Seiten aus dem IT- oder Nachrichtensektor eine größere Rolle spielt als bei historischen Webseiten. (Vgl. COOKE 1999 : 85; HARRIS 2000 : 60; GREER et al. 1999c)

Der hier aufgestellte Kriterienkatalog zur Evaluation von Webseiten orientiert sich hauptsächlich an den Überlegungen von Robert HARRIS (2000), Alison COOKE (1999), Janet ALEXANDER & Marsha Ann TATE (1999) und John AMBRE et al. (1997).

Die wichtigsten Aspekte der Evaluation mit ihren jeweiligen Unterpunkten sind:

1. Glaubwürdigkeit
 - a. Allgemeine Plausibilität der Quelle
 - b. Kompetenz des Autors
 - c. Hinweis auf Institution / Organisation

³² Mehr zur Evaluation dieser Typen der Online-Quellen bei COOKE (1999 : 85).

- d. Hinweis auf Review-Verfahren
 - e. Internet - Domain
2. Genauigkeit und Abdeckung
 - a. Aktualität
 - b. Genauigkeit der Quelle
 - c. Abdeckung des Themas
 - d. Absicht und Zielgruppe
 3. Ausgewogenheit
 - a. Objektivität
 - b. Folgerichtigkeit
 4. Quellennachweise
 - a. Kontaktmöglichkeit
 - b. Quellenverzeichnis
 - c. Bestätigung durch Dritte
 5. Benutzerfreundlichkeit
 - a. Struktur und Navigation
 - b. Zugang
 - c. Ausnutzung interaktiver und multimedialer Möglichkeiten

Am Schluss steht dann die Einschätzung der Gesamtqualität, die aber erst nach einem Vergleich mit anderen Quellen geschehen kann, um diese in Relation zu setzen (vgl. COOKE 1999 : 80 f.; MEIER ²1999b : 188).

Wichtig dabei zu beachten ist, dass es zum Teil keine deutliche Abgrenzung gibt und manche Faktoren bei mehreren Kriterien eine Rolle spielen. So sind z.B. Review-Verfahren nicht nur für die Glaubwürdigkeit bedeutsam, sondern auch für die Genauigkeit der Quelle.

Bei der Evaluation ist zu bedenken, dass die vom Evaluator gemachte Einschätzung immer subjektiv ist (DEBATIN 1998). HARRIS (2000 : 60) bezeichnet die Evaluation auch als Kunst und macht deutlich, dass es keinen perfekten einzelnen Indikator zur

Evaluation von Informationen gibt, sondern dass nur eine Schlussfolgerung aus einer Anzahl von verschiedenen Anhaltspunkten und Indikatoren gezogen werden kann.

Jedem Kapitel folgt eine Reihe von Leitfragen, die dem Evaluator helfen sollen, Anhaltspunkte innerhalb der Quelle zu finden, um die einzelnen Aspekte der Evaluation in die Praxis umzusetzen.

4.3.1 Glaubwürdigkeit

Der wichtigste Punkt der Evaluation ist die Glaubwürdigkeit der Quelle, denn hiermit steht oder fällt die Informationsqualität (vgl. HARRIS 2000 : 99; AMBRE et al. 1997 : 2-3).

Das Ziel einer jeden Quelle muss es sein, gute und vor allem nachweisbare Gründe zu liefern, damit man dieser trauen kann, denn Vertrauen ist der Schlüssel zur Glaubwürdigkeit (vgl. HARRIS 2000 : 61). Wie ist dies erreichbar?

Die Merkmale einer glaubwürdigen Seite sind oft logisch und leicht zu erschließen. Zum einen ist dies die allgemeine Plausibilität der Quelle, die Kompetenz des Autors, Hinweise auf seriöse Institutionen oder Organisationen und der Hinweis auf Editoren oder Review-Verfahren. Diese Merkmale lassen sich auch bei anderen netzexternen Quellen anwenden. Eine Ausnahme macht hier nur das letzte Glaubwürdigkeitsmerkmal, die Internet-Domain.

4.3.1.1 Allgemeine Plausibilität der Quelle

HARRIS (2000 : 60) und MEIER (²1999b : 188 f.) empfehlen, sich erst einmal an der allgemeinen Plausibilität der Information zu orientieren. Anhand einfacher Leitfragen kann man auf diese Weise auf eine gewisse innere „Stimmigkeit“ der Quelle schließen, die zeigt, dass ein Autor sich ernsthaft mit dem jeweiligen Thema auseinandergesetzt hat.

Leitfragen:

- ✓ Existieren hinreichende Beweise für eine überzeugende Argumentation?
- ✓ Sind überzeugende Argumente und Gründe gegeben?
- ✓ Werden genügend Details für eine vernünftige Schlussfolgerung angegeben?
- ✓ Wird Fachvokabular richtig angewendet?
- ✓ Werden allgemein bekannte Sachverhalte, Probleme etc. richtig dargestellt?

4.3.1.2 Kompetenz des Autors

Die Frage nach dem Autor ist die zentrale Fragestellung bei einer Evaluation, da dieser für die Glaubwürdigkeit und Genauigkeit der Inhalte der Seite verantwortlich ist.

Erfahrung, Kompetenz und Verlässlichkeit des Autors lassen sich aus verschiedenen Angaben schließen, die auf der Webseite zu finden sein sollten: Zum einen biografische Informationen, wie beruflicher Werdegang, Titel, jetzige berufliche Position und Arbeitgeber, zum anderen Kontaktmöglichkeiten via E-Mail, Telefon oder Post, die im Zweifel auch genutzt werden sollten, um so auf einfache Art und Weise mehr Details zu erfahren oder Unklarheiten beseitigen zu können (vgl. ALEXANDER/TATE 1999 : 11; COOKE 1999 : 60 f.; HARRIS 2000 : 61; KIRK 2001).

Wenn der Autor Mitglied einer allgemein bekannten und respektierten Organisation ist, sollte dies auf der Webseite deutlich erkennbar sein, da dies automatisch zur Qualitätssicherung beiträgt (s.a. folgendes Kapitel).

Als exemplarisches Beispiel sei hier die Eingangsseite der Homepage von Dr. Oliver Obst genannt, der hier in kurzer Form alle wichtigen Angaben zu seiner Person zeigt (s. Abb. 13).

Abb. 13: Ausschnitt der Eingangsseite von Dr. Oliver Obst (medweb.uni-muenster.de/~obsto)
[Stand: 10.11.2001]

Sehr hilfreich kann auch das Wissen über die Reputation eines Autors unter Kollegen sein. Diese Angaben sind allerdings oft schwer zu erfahren. Gute Dienste können hierbei die schon erwähnten Organisationen wie „Quackwatch“ (www.quackwatch.com) und das „Center for Disease Control and Prevention (CDC)“ (www.cdc.gov) leisten. Sie führen Listen mit unseriösen Medizinern und Wissenschaftlern. Leider existieren solche Aufstellungen bisher nur im Bereich der Medizin.

Leitfragen:

- ✓ *Erfährt man etwas über die Kompetenz des Autors?*
- ✓ *Möglichkeiten der Kontaktaufnahme via E-Mail, Telefon etc. mit dem Autor?*
- ✓ *Ist der Autor Mitglied in einer anerkannten Organisation/Institution?*
- ✓ *Wie ist die Reputation des Autors?*
- ✓ *Veröffentlichungen des Autors auch in anerkannten Fachzeitschriften des Printbereiches?*

4.3.1.3 Hinweis auf Institution / Organisation

Viele Seiten im Internet haben ein Gegenstück im Bereich der Print- oder Fernsehmedien, wie z.B. die Zeitschrift „Der SPIEGEL“ und seine Online-Ausgabe „SPIEGEL Online“ (www.spiegel.de). Wenn die netzexterne Quelle als zuverlässig und vertrauenswürdig gilt, dann betrifft dies auch die entsprechende Website. Aus zwei Gründen ist dies der Fall: Zum einen muss die Website die Reputation der netzexternen Quelle aufrechterhalten, zum anderen wird das Online-Angebot aus denselben Ressourcen gespeist, d.h., dass Online-Redaktionen zumeist ihre Informationen aus den traditionellen Redaktionen bzw. denselben glaubwürdigen Quellen beziehen (vgl. NEUBERGER 2000 : 313 f.). Dasselbe gilt für Informationen, die auf Seiten von Universitäten oder von allgemein anerkannten und vertrauenswürdigen Organisationen liegen. (Vgl. COOKE 1999 : 60; HARRIS 2000 : 65, KIRK 2001)

Leitfragen:

- ✓ *Ist die Webseite Ableger einer Printausgabe?*
- ✓ *Gehören die Seiten zu einer Universität oder anerkannten Organisation?*

4.3.1.4 Hinweis auf Review-Verfahren

Wie schon erwähnt, müssen sich wissenschaftliche Artikel einem Review-Verfahren unterziehen, in dem Experten den Artikel untersuchen und überprüfen, um ihn dann erst zur Veröffentlichung freizugeben. Dieses Verfahren ist bei Texten im Internet bisher nur sehr selten anzutreffen (vgl. AMBRE et al. 1997 : 2-6; ALEXANDER/TATE 1999 : 12). Eine Ausnahme bildet das E-Journal „First Monday“ (www.firstmonday.org). Hier ist unter jedem veröffentlichten Artikel ein Hinweis des

Editors gegeben, wann der Text eingereicht, akzeptiert und überarbeitet wurde (s. Abb. 14).³³

Leitfragen:

- ✓ Werden die Texte von einem Editor oder einer Redaktion kontrolliert?
- ✓ Unterliegt der Text einem anerkannten Review-Verfahren?

4.3.1.5 Internet – Domain

Die Internetadresse einer Seite, auch „*Uniform Resource Locator (URL)*“ genannt, kann als Anhaltspunkt für Glaubwürdigkeit dienen. Eine URL wird durch drei Grundelemente gebildet (s. Abb. 15):

1. Protokollname : „http://“
2. Hostname : „www.uni-muenster.de“
3. Verzeichnis- und Dateiname : „.../Soziologie/veranstaltungen/kvv_ws01.htm“

³³ Näheres zum Prozess des Review-Verfahrens von „First Monday“ unter <http://www.firstmonday.org/idea.html> [Stand: 28.10.2001].

Abb. 15: Beispiel zum Aufbau einer Internetadresse (URL) [Stand: 10.11.2001]

Entscheidend für die Glaubwürdigkeit sind der Hostname samt der Top-Level-Domain (TLD). Aus dem Hostnamen lässt sich oftmals direkt die Institution oder Organisation ablesen, die den Web-Server betreibt, in diesem Falle die Universität Münster (s. Abb. 4.8). Und, wie oben bereits erwähnt, gilt: Wenn die Quelle auf einem Server einer glaubwürdigen Institution liegt, dann wird auch die Information als authentisch angesehen.

Auch die Top-Level-Domain kann Auskunft über die Glaubwürdigkeit von Quellen geben, denn neben den Länderkürzeln, wie z.B. „.de“ für Deutschland oder „.uk“ für Großbritannien, die bei der Evaluation nicht helfen, da sie keine Aussagekraft haben, existieren noch weitere TLDs, wie „.edu“ für Bildungseinrichtungen, „.gov“ für Regierungsstellen, „.mil“ für militärische Einrichtungen, „.net“ für Netzanbieter, „.org“ für nichtkommerzielle Organisationen und „.com“ für kommerzielle Anbieter.³⁴ Diese Domain-Bezeichnungen waren ursprünglich nur für den US-amerikanischen Raum bestimmt, werden aber mittlerweile weltweit genutzt. Die drei erstgenannten Top-Level Domains („.edu“, „.gov“ und „.mil“) werden nur an staatliche Organisationen vergeben und sind deshalb als autoritative Quellen für Wissenschaft und Forschung anzusehen, während „.net“ und „.com“ auf rein kommerzielle Anbieter hinweisen und deshalb mit Skepsis in Bezug auf die dargebotenen Informationen zu sehen sind. Schwierig ist es bei der Domain „.org“, da diese Endung sowohl von seriösen als auch unseriösen Institutionen getragen wird, so besitzen z.B. die „Vereinten Nationen“ die Adresse www.un.org, während das rechtsradikale „Institute for Historical Review“ ist unter www.ihr.org im Netz vertreten ist. (Vgl. GREER et al. 1999c; HENDERSON 2001)

³⁴ In diesem Kapitel werden die sieben neuen Top-Level-Domains (.aero / .biz / .coop / .info / .museum / .name / .pro) nicht berücksichtigt, da sie bisher so gut wie noch nicht im Internet in Erscheinung getreten sind und man deshalb zur Zeit noch keine näheren Aussagen über sie treffen kann. Informationen zu den neuen TLDs bei ICANN unter <http://www.icann.org/tlds/>. Ein Überblick über alle Top-Level-Domains bietet „Netplanet“ unter <http://www.netplanet.org/adressierung/-index.html?sub=tld.html> [beide Stand: 02.11.2001] an.

Leitfragen:

- ✓ Welche Top-Level-Domain beinhaltet die Adresse?
- ✓ Weist die Adresse auf eine Institution oder Organisation hin?

4.3.1.6 Indikatoren für Glaubwürdigkeitsdefizite

Ein deutlicher Indikator für mangelnde Glaubwürdigkeit ist die Anonymität, das Fehlen jeglicher Angaben über den Autor oder die Herkunft der Quelle. Weitere Anzeichen sind die mangelnde Sicherung der Informationsqualität durch Reviews oder Editoren und negative Metainformationen, d.h. kritische Besprechungen der Quelle auf Seiten, wie „Argus Clearinghouse“ oder „SOSIG“. Auch auffallend viele Rechtschreib- und Grammatikfehler weisen auf eine unglaubwürdige Quelle hin, da wissenschaftliche Texte vor der Veröffentlichung, wie jeder andere Text eigentlich auch, nach formalen Aspekten untersucht werden. (Vgl. HARRIS 2000 : 62)

4.3.2 Genauigkeit und Abdeckung

Das Ziel von Genauigkeit und Abdeckung in einer Quelle ist, dass die Informationen tatsächlich heute aktuell, sachlich, ausführlich, genau und umfassend sind, so dass sich eine wahrheitsgemäße und unverzerrte Darstellung der Fakten ergibt.

4.3.2.1 Aktualität

Die Aktualität einer Webseite beinhaltet zwei verschiedene Faktoren: die Aktualität der eigentlichen Quelle und die Pflege und Instandhaltung der Seite.

Aktualität stellt bei Webseiten oft ein Problem dar, weil man ihnen das Alter, im Gegensatz zu Büchern, die das Erscheinungsjahr im Impressum oder Vorwort führen, nicht auf Anhieb ansehen kann. Eine veraltete Information kann genauso nutzlos wie

eine ungenaue oder irreführende sein. Man sollte sich aber auch im klaren sein, welche Art von Information man sucht. „Alt“ bedeutet nicht gleich „schlecht“, da die Aktualität einer Quelle natürlich nicht immer eine Rolle spielt und somit nicht in jedem Fall wichtig sein muss. Manche Texte sind zeitlos, wie philosophische Schriften von Aristoteles oder auch die Werke von William Shakespeare, andere verlieren ihren Wert nur langsam, während Texte sehr schnell veralten, wenn es sich etwa um technologische oder medizinische Fakten handelt. So ist z.B. die sehr ausführliche Bibliographie zum Thema „Computers in K-12 Education“ (pixel.cs.vt.edu/%7Ermohn/k12/edbib.html) nutzlos, da der neueste Eintrag aus dem Jahre 1994 stammt und somit völlig veraltet ist.

Bei der Aktualität kommt es sehr auf den thematischen Bezug an. Nichtsdestotrotz sollte die Quelle das Alter der Information angeben und grundsätzlich nur zeitgemäße Angaben liefern. (Vgl. AMBRE et al. 1997 : 2-5 f.; COOKE 1999 : 63 f.; ALEXANDER/TATE 1999 : 13 f.; HARRIS 2000 : 63)

Wenn es keine Angaben über die Häufigkeit und Regelmäßigkeit von Updates gibt, weist oft die Funktionstüchtigkeit sämtlicher auf der Seite befindlichen Links auf den aktuellen Zustand hin (vgl. NIELSEN 1998a).

Leitfragen:

- ✓ *Wie alt ist die Information und von wann stammt das letzte Update der Seite?*
- ✓ *Wie häufig wird die Quelle einem Update unterzogen?*
- ✓ *Funktionieren die Links?*

4.3.2.2 Genauigkeit der Quelle

Mit der Genauigkeit ist die faktische Exaktheit bzw. die Korrektheit einer Informationsquelle gemeint, wobei diese Einschätzung von zwei Faktoren abhängig ist, nämlich von der Natur der Information und vom Wissensstand des Evaluators.

Während es in der Mathematik als Antwort in der Regel nur richtig oder falsch gibt, die Genauigkeit also eindeutig ist, existiert so eine Exaktheit bei Theorien insbesondere im geisteswissenschaftlichen Bereich nicht, da hier oft eine absolut richtige oder falsche

Antwort nicht möglich ist. Die Einschätzung der Genauigkeit kann der Evaluator entweder anhand des eigenen Wissens oder aber mit Hilfe einer zusätzlichen Informationsquelle erreichen. (Vgl. COOKE 1999 : 61)

Wichtig für den Leser ist die Wahrnehmung der Genauigkeit der Quelle. Diese kann sich darin widerspiegeln, dass der Text durch Editoren geprüft oder durch Hinweise auf die Voreingenommenheit von Autor, Verleger oder Sponsor deutlich gemacht wurden. Auch die formalen Aspekte, wie Rechtschreibung, Grammatik und Zeichensetzung sollten beachtet werden. (Vgl. ebd. : 61 f.)

Leitfragen:

- ✓ *Um welche Art von Information handelt es sich?*
- ✓ *Wurde die Quelle von Editoren, Redakteuren o.ä. überprüft?*
- ✓ *Existieren überdurchschnittlich viele formale Fehler?*

4.3.2.3 Abdeckung des Themas

Die Abdeckung des Themas stellt einen der wesentlichen Faktoren bei der Bewertung nach der Nützlichkeit einer Quelle dar. Die wichtigsten Aspekte sind die Bandbreite, die sich aus der Anzahl der angesprochenen Themen ergibt, der Umfang der Abdeckung innerhalb einer Quelle und der Detailgrad einer Information, der die Tiefe der angesprochenen Themen in der Quelle wiedergibt. Zusätzlich kann auch die zeitlich rückwirkende Abdeckung eines Themas die Nützlichkeit beeinflussen, also ein Thema nur den jetzt aktuellen Forschungsstand präsentiert oder aber die gesamte Entwicklung eines Forschungsgegenstandes. Durch all diese Faktoren entsteht ein Bild über die Vollständigkeit der Quelle. (Vgl. ALEXANDER / TATE 1999 : 14; COOKE 1999 : 54 f.)

Doch kein Thema kann wirklich komplett abgedeckt werden, dafür erscheinen zu viele Bücher, Fachzeitschriften etc.. Um jedoch kein falsches Bild aufkommenzulassen, dürfen nicht absichtlich Fakten oder Daten ausgelassen werden. Deshalb ist es auch

hier wichtig, auf eine möglichst große und „vollständige“ Sammlung von Quellenangabe zu achten. (Vgl. HARRIS 2000 : 63 f.)

Wie unterschiedlich die Abdeckung eines Themas sein kann, soll am Beispiel „Holocaust“ kurz erläutert werden. Die Website „Shoa.de“ (www.shoa.de/) bearbeitet dieses Thema sehr umfassend. Die Informationspalette reicht von allgemeinen Informationen zum Thema „Antisemitismus“ bis hin zu Artikeln über einzelne Personen, wie z.B. Anne Frank. Hinzu kommt eine umfangreiche Bibliographie und Linksammlung, die durch eine Quellensammlung, welche sowohl Video- als auch Audioquellen umfasst, abgerundet wird. Das genaue Gegenteil dieser Site stellt die private Homepage von Arthur R. Butz (pubweb.acns.nwu.edu/~abutz/) dar. Diese Seite beinhaltet kaum Informationen zum Thema und die wenigen Angaben sind auch noch falsch, da er als Revisionist den Holocaust verneint.

Leitfragen:

- ✓ *Wie groß ist die Bandbreite des Themas?*
- ✓ *Wie weit wird ins Detail gegangen?*
- ✓ *Wird das Thema umfassend behandelt?*
- ✓ *Existieren Hinweise zu anderen Quellen (Literatur, Links etc.)?*

4.3.2.4 Absicht und Zielgruppe

Da die Genauigkeit einer Quelle auch die unverzerrte Darstellung von Informationen umfasst, sind Fragen nach der Absicht und der Zielgruppe wichtig.

Die Quelle kann in ihrer Absicht sehr unterschiedlichen Beweggründen folgen. Sie kann z.B. politisch oder kommerziell motiviert sein und somit ein nicht objektives Bild vermitteln. Formulierungen über Absichten und Ziele einer Quelle befinden sich zumeist auf einer Website unter Punkten wie „About Us“ oder FAQ (Frequently Asked Questions).

Wie wichtig es ist, die Beweggründe zu kennen, verdeutlicht die „Zündelsite“ (www.zundelsite.org) als Beispiel für eine politisch motivierte Seite. Hier wird die rechtsradikale Einstellung der Autoren in der Einleitung zur Webseite sehr deutlich:

“The Zündelsite documents will chip away at a World War II propaganda monstrosity - the so-called "Holocaust". The Zündelsite web pages will prove in many different ways - statistically, forensically, and logically - that it is historically inaccurate, emotionally misleading and cruelly unfair to claim the "Holocaust" took place in the form portrayed by conventional media.” (www.zundelsite.org/english/misc/mission.html)

Durch die Absicht wird auch die Zielgruppe definiert. Die Identifizierung der in der Quelle angesprochenen Zielgruppe ist wichtig, da der User feststellen muss, ob die Informationen auf einem für ihn passenden Wissensstand präsentiert werden oder nicht. (Vgl. AMBRE et al. 2-9 f. ; COOKE 1999 : 53; HARRIS 2000 : 64)

Ein weiteres Beispiel ist die Website „OncoLink“ der Universität Pennsylvania, die in ihrer Rubrik „About Oncolink“ (www.oncolink.com/templates/about/index.cfm) sowohl die Ziele als auch die Zielgruppe genau definiert (s. Abb. 16).

The image shows a screenshot of the 'About OncoLink' page. The page title is 'About OncoLink'. The main text reads: 'OncoLink was founded in 1994 by Penn cancer specialists with a mission to help cancer patients, families, health care professionals and the general public get accurate cancer-related information at no charge. Recent changes have been made to OncoLink to update the look and feel of our site.' A red underline is drawn under the sentence: 'mission to help cancer patients, families, health care professionals and the general public get accurate cancer-related information at no charge.' To the right of the screenshot, there is a white arrow pointing left towards the underlined text, with the text 'Ziel und Zielgruppe von "OncoLink"' next to it.

Abb. 16: Ausschnitt aus der Webseite „OncoLink“ (www.oncolink.com/templates/about/index.cfm) [Stand: 10.11.2001]

Leitfragen:

- ✓ *Welches sind die Ziele und Absichten der Quelle?*
- ✓ *Werden diese vom Autor in einem FAQ o.ä. deutlich gemacht?*
- ✓ *Für wen ist diese Seite gemacht? (Schüler/Studenten/Experten/etc.)*

4.3.2.5 Indikatoren für mangelnde Genauigkeit und Abdeckung

Indikatoren für mangelnde Genauigkeit und Abdeckung einer Quelle sind das Fehlen des Datums auf einem Dokument oder ein überholtes Datum eines Themas, von dem allgemein bekannt ist, dass sich die Erkenntnisse ständig ändern. Weitere Indizien für Mängel sind Behauptungen, die vage sind oder denen es an Details fehlt, unqualifizierte Ausdrücke, eine einseitige und voreingenommene Betrachtung des Themas und das Fehlen neuer Erkenntnisse. Des Weiteren eine mangelnde Pflege der Webseite, die sich in „toten“ Links oder „Under Construction“-Seiten ausdrückt. (Vgl. HARRIS 2000 : 64)

4.3.3 Ausgewogenheit

Das Ziel von Ausgewogenheit ist es, dass die Quelle ihr Thema überlegt und sachgemäß präsentiert. Außerdem sollte ein ausgewogener Text um die Wahrheit bemüht sein. (Vgl. DEBATIN 1998; HARRIS 2000 : 70)

4.3.3.1 Objektivität

Eine absolute Objektivität gibt es nicht, aber ein Autor sollte seine Voreingenommenheit kontrollieren können, die Argumente sollten ausgeglichen und begründet sein. Das größte Problem hierbei ist der Konflikt mit dem eigenen Interesse. Viele Quellen haben ein finanzielles, politisches, emotionales oder psychologisches Interesse, einen Glauben zu machen, dass sie allein die Wahrheit vertreten. Die Objektivität lässt sich meistens schon an der Art und Weise des Tonfalls erkennen. Der

Stil muss sachlich und darf nicht manipulativ oder emotional sein. (Vgl. AMBRE et al. 1997 : 2-5 ; ALEXANDER/TATE 1999 : 13; HARRIS 2000 : 64 f., KIRK 2001)

Ein Beispiel für finanzielles Eigeninteresse zeigt Dr. Allen Buresz in seinem Artikel „Attention Deficit Disorder & Hyperactivity Success“ (www.all-natural.com/add.html). Hier weist er mit Hilfe wissenschaftlicher Studien auf die erfolgreiche Behandlung von ADHS (Aufmerksamkeitsdefizit-/Hyperaktivitäts-Syndrom) durch natürliche Nahrungsergänzungsmittel anstelle von Medikamenten hin. Die Objektivität ist deshalb anzuzweifeln, da diese Nahrungsergänzungen gleichzeitig auf der Website bestellt werden können und so ein eindeutiges finanzielles Interesse besteht. Ein objektiver Artikel zu diesem Thema wäre z.B. „ADHS: Das Zappel-Philipp-Syndrom“ von Astrid Deilmann aus dem Magazin „GEO“ (www.geo.de/themen/medizin_psychologie/-adhs/index.html).

Leitfragen:

- ✓ *Hat der Autor ein politisches, religiöser, kommerzielles o.ä. Interesse?*
- ✓ *Ist der Tonfall im Text eher sachlich oder emotional?*
- ✓ *Werden rhetorische Stil- und Manipulationsmittel eingesetzt?*

4.3.3.2 Folgerichtigkeit

Eine Information sollte nicht nur objektiv, sondern auch folgerichtig sein, denn nur dann kann man diese als ausgewogen bezeichnen. Diese Folgerichtigkeit ergibt sich aus einer geradlinigen Argumentation, in der keine Widersprüche auftauchen, so dass sich ein klarer thematischer Zusammenhang ergibt. Es darf innerhalb des Textes auch nicht zu einer Verdrehung von Tatsachen oder falschen Schlussfolgerungen kommen, so dass Unwahrheiten entstehen (vgl. HARRIS 2000 : 66).

Leitfragen:

- ✓ *Ist die Argumentation widersprüchlich?*
- ✓ *Kommt es zur Verdrehung von Tatsachen?*
- ✓ *Werden Fakten falsch bewertet oder interpretiert?*

4.3.3.3 Indikatoren für mangelnde Ausgewogenheit

Der Tonfall in einer Quelle ist beim Erkennen der Ausgewogenheit ein wichtiger Indikator. Ein Mangel ist zu erkennen, wenn der Autor aus eigenem Interesse sehr emotional schreibt und stark über- oder untertreibt und somit nicht mehr objektiv bleibt. Desweiteren müssen die Zusammenhänge in der Information einer klaren Argumentation folgen und in sich logisch und schlüssig sein. (Vgl. HARRIS 2000 : 66 f.)

4.3.4 Quellennachweise

Der Aspekt „Quellennachweis“ beinhaltet die direkten Kontaktmöglichkeiten mit dem Autor, ein Quellenverzeichnis und die Bestätigung der Quelle durch andere Ressourcen. Das Ziel der Nachweise ist, dass die Quelle belegbare Informationen enthält, die glaubwürdig und nachvollziehbar sind, denn nur dann kann sie Geltungsansprüche für den Wahrheitsgehalt einfordern.

4.3.4.1 Kontaktmöglichkeiten

Wie auch schon bei der Glaubwürdigkeit (s. Kapitel 4.3.1.2) spielt auch hier die Möglichkeit der direkten Kontaktaufnahme mit dem Autor eine wichtige Rolle. E-Mail Adresse, Postanschrift, Telefonnummer oder Anschrift der Institution sollten angegeben sein, da anonyme Quellen unseriös sind und unglaubhaft wirken.

Leitfragen:

- ✓ *Kann man den Autor per E-Mail, Telefon oder Post erreichen?*

4.3.4.2 Quellenverzeichnis

Egal, ob es sich um eine Internet- oder Printquelle handelt, ein Quellenverzeichnis ist immer elementarer Bestandteil des Textes. Nur hierdurch wird ein Text beleg- und nachweisbar, so dass er zuverlässig, glaub- und vertrauenswürdig wird.

Das Verzeichnis sollte gleichermaßen aus Print- und Online-Quellen bestehen. Links haben den Vorteil, dass der User schnellstmöglich zusätzliche Informationen findet. Hierbei muss allerdings verhindert werden, dass er sich im Netz verliert, da ein User nach etwa drei Hyperlinks vergisst, wo er davor gewesen ist (HOFER / ZIMMERMANN ²2000 : 29). Deshalb sollten externe Links als solche kenntlichgemacht werden. Zudem ist eine Kommentierung der Links sinnvoll, damit der User weiß, welche Informationen er über diese noch zusätzlich erreichen kann (vgl. AMBRE et al. 1997 : 2-11 f.).

Leitfragen:

- ✓ *Existieren Hinweise zu anderen Quellen (Literatur, Links etc.)?*
- ✓ *Sind diese kommentiert?*
- ✓ *Nach welchen Kriterien sind diese ausgewählt?*
- ✓ *Sind die zitierten Quellen populär- oder fachwissenschaftlich orientiert?*

4.3.4.3 Bestätigung durch Dritte

Eine Bestätigung durch Dritte kann insbesondere dann wichtig sein, wenn die Quelle wichtige Informationen enthält, die aber nicht allen Evaluationskriterien standhält. Dann muss die Information mit Hilfe anderer Quellen auf ihren Wahrheitsgehalt geprüft werden. Erst wenn mindestens zwei weitere Quellen mit den gefundenen Informationen übereinstimmen, kann die Information als glaubwürdig betrachtet werden. Wichtig hierbei zu beachten ist, dass die Kontrollquellen entweder von neutralen Dritten stammen, d.h. die Quellen nicht genauso beeinflusst sind, wie die zu untersuchende, oder aber positiv bei Review-Diensten wie „Argus Clearinghouse“ oder Portalen wie „SOSIG“ bewertet werden. (Vgl. MEIER ²1999b : 188; HARRIS 2000 : 68)

Auch eine Besprechung in anderen Medien, z.B. einer renommierten Zeitschrift, kann eine Bestätigung darstellen.

Leitfragen:

- ✓ *Wird die Quelle auf anderen Seiten verlinkt ?*
- ✓ *Gibt es Kommentare zu der Quelle (im WWW, in Zeitschriften etc.)?*

4.3.4.4 Indikatoren für mangelnde Quellennachweise

Quellen sind nur dann für den User nützlich, wenn sie belegbare Informationen enthalten, die durch Nachweise aus dem Internet oder den Printmedien gestützt werden. Deshalb sind Informationen ohne jegliche Quellennachweise für den wissenschaftlichen Gebrauch nicht von Nutzen. Dieser Mangel drückt sich in fehlenden Literaturverzeichnissen, Linksammlungen oder Kontaktmöglichkeiten aus. Die Quelle ist ebenso mit Skepsis zu betrachten, wenn überhaupt keine Bestätigung durch Dritte, in Form von Zeitschriften- oder Online-Reviews, vorliegt.

4.3.5 Benutzerfreundlichkeit

Jakob NIELSEN schreibt in seiner Kolumne „Alertbox“ (www.useit.com/alertbox/): „*The Web is all about content.*“ (1998b), dieser Leitspruch gilt auch für die Evaluation von Online-Quellen. Der Inhalt ist der primäre Faktor. Webspezifische Eigenschaften, wie Benutzerfreundlichkeit, Struktur, Zugang und multimediale Darbietung sind sekundär, da die User an den Informationen interessiert sind, egal auf welche Art und Weise diese präsentiert werden. Hinzu kommt, dass die optische und funktionelle Gestaltung subjektiv ist und vom persönlichen Empfinden („*Look and Feel*“) des einzelnen bestimmt wird. Eine Bewertung dieser Faktoren hängt deshalb vom individuellen Gesamteindruck der Seite ab. Dieser Punkt ist aber insofern wichtig, da eine gute Präsentation und klare Struktur dem User bei Suche, Auffinden, Anwenden und Verstehen der Informationen hilfreich sein kann. Hierbei gilt der Leitspruch der Bauhausarchitekten: „*Form follows Function*“, d.h. es wird erst der Zweck und die Funktion der Website definiert und daran die gestalterische Umsetzung angelehnt. Der Spruch wird im Bereich des Webdesign oft sogar noch, um die Bedürfnisse und Ansprüche des Websurfers, erweitert: „*Form follows Function follows User Demands.*“ (Vgl. McKELVEY 1999 : 11 ff.)

4.3.5.1 Struktur und Navigation

Für die Navigation auf einer Webseite existieren verschiedene Möglichkeiten: Site Maps, Inhaltsverzeichnisse, Menüs oder seiteninterne Suchmaschinen. Diese Features helfen zum einem dem User, die gewünschte Information zu finden, und zum anderen verschaffen sie einen Überblick über die Bandbreite der Informationen auf einer Website. Der Evaluator sollte alle Möglichkeiten des Auffindens von Informationen testen, um so die Effektivität der Seite zu bewerten, indem die Anzahl der Schritte bzw. „clicks“ bis zur benötigten Information gezählt werden. Geachtet werden sollte auch auf Kategorisierungen, also ob Themenbereiche sinnvoll zusammengefasst worden sind und ob es Shortcuts gibt (vgl. AMBRE et al. 1997 : 2-14; McKELVEY 1999 : 11 f.; HOFER / ZIMMERMANN ²2000 : 98 f.).

Aber allein schon die Präsentation und Anordnung der Information kann dem User helfen, die gewünschte Information zu finden, wie z.B. ein klares, ästhetisches und übersichtliches Screendesign, nicht zu viele verschiedene Informationen auf einer Seite und leicht verständliche Überschriften. Exemplarisch seien hier die Startseiten der Zeitschriften „GEO“ (Abb. 17) und „Scientific American“ (Abb. 18) verglichen. Die „GEO“-Seite lässt sich grob in drei Sektionen unterteilen: die Navigationszeile auf der linken Seite, aktuelle Nachrichten in der zentralen Spalte und Eigenwerbung und Hinweise auf der rechten Seite. Unterstützt wird das Layout durch die einfache Farbgebung (schwarz/weiß/grün), so dass ein sehr klares und übersichtliches Design entsteht. Anders ist dies bei der Seite von „Scientific American“, die sich in fünf Bereiche (von links nach rechts) untergliedern lässt: die Navigationszeile, aktuelle Nachrichten, Fragen und Antworten mit einer Umfrage, wieder eine Navigationszeile und Hinweise, Eigenwerbung. Aufgrund dieser Aufteilung und der vielen Überschriften wirkt die Seite unübersichtlich, was durch die bunte Farbgebung noch gesteigert wird.

Abb. 17: Ausschnitt der Startseite der Zeitschrift „GEO“ (www.geo.de) [Stand: 10.11.2001]

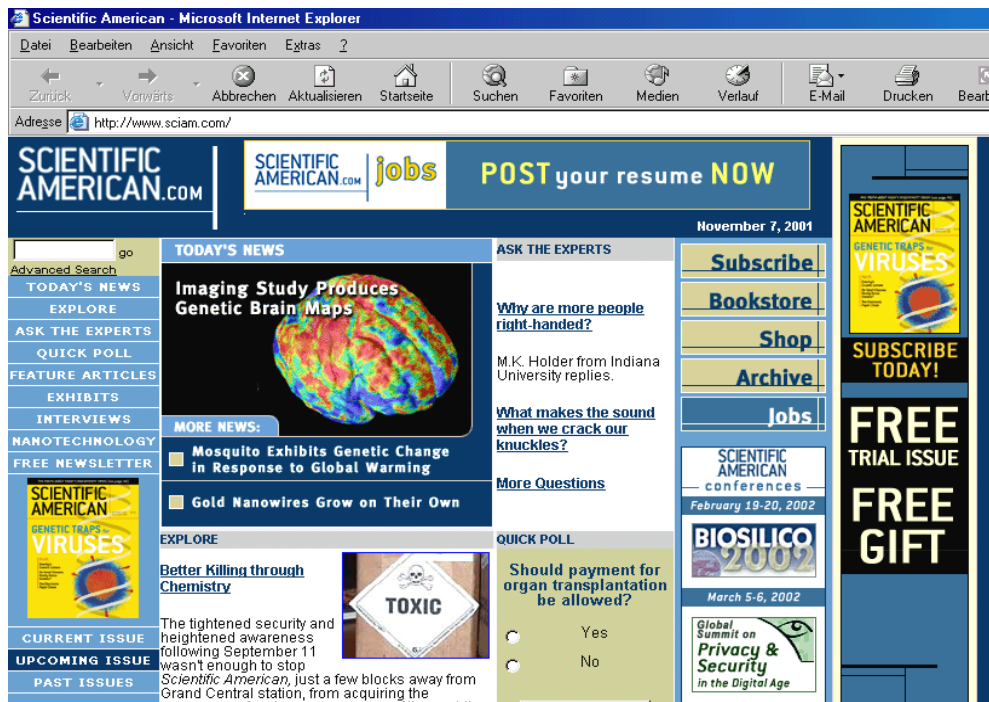

Abb. 18: Ausschnitt der Startseite der Zeitschrift „Scientific American“ (www.sciam.com) [Stand: 10.11.2001]

Aber auch die Navigation innerhalb einer Seite sollte bewertet werden. Extrem lange Seiten, bei denen der User viel scrollen muss, werden meist negativ bewertet, da lange Texte am Bildschirm schlecht zu lesen sind. Untersuchungen haben ergeben, dass nur 10% der User Seiten scrollen (vgl. HOFER / ZIMMERMANN ²2000 : 98). Umfangreiche Texte, die in kurze Sektionen unterteilt werden, so dass kurze, überschaubare Seiten entstehen, die sich per Mausklick „umblättern“ lassen, werden eher bevorzugt (vgl. COOKE 1999 : 72; HOFER / ZIMMERMANN ²2000 : 35 und 65 f.).

Leitfragen:

- ✓ *Wie schnell lassen sich gesuchte Informationen finden?*
- ✓ *Gibt es Site Maps, Navigationshilfen oder Suchmöglichkeiten?*
- ✓ *Werden die Informationen klar und deutlich präsentiert?*
- ✓ *Wie überschaubar sind die Seiten?*

4.3.5.2 Zugang

Der Zugang beeinflusst die Wahl einer Informationsquelle nicht unerheblich. Das Internet wird oft zur Informationssuche benutzt, da es dank vernetzter Computer mit Bedieneroberflächen sehr bequem ist. Dieser Weg ist schneller und leichter als der Gang zur Bibliothek. Zudem sind die meisten Informationen im Internet, im Gegensatz zu professionellen Datenbanken beispielsweise, kostenlos. Die User wollen also grundsätzlich einen einfachen, kostengünstigen und schnellen Zugang zu Informationen. Aber auch dies ist im Internet nicht immer gewährleistet, da verschiedene Faktoren die Bequemlichkeit des Zugriffs erschweren.

- **Allgemeine Zugangsschwierigkeiten**

Der Zugang zu Informationen kann durch Sprache, Registrierung, Passwort oder Mitgliedschaft erschwert werden.

Die erste Hürde stellt häufig die Sprache dar, denn ca. 78% aller Webseiten und sogar ca. 96% der E-Commerce-Seiten sind englischsprachig, aber nur 50% der User haben Englisch als Muttersprache (vgl. LYMANN/VARIAN 2001a).

Eine weitere Hürde stellt die Registrierung dar. Viele Webseiten, insbesondere Zeitschriften, geben nur einen Teil der Seiten frei. Erst nachdem der User sich registriert hat, wird der komplette Inhalt preisgegeben. Das Problem bei der Registrierung ist, dass dafür persönliche Daten (Name, Adresse, Geburtsdatum etc.) angegeben werden müssen, die zum Teil dann an Dritte weitergegeben werden, oder dass durch die Registrierung Kosten entstehen (s.u. Kapitel „Kosten“). Gleiches gilt für die Zugangsbeschränkung durch Passwörter oder Mitgliedschaften. (Vgl. COOKE 1999 : 67 f.)

Leitfragen:

- ✓ *In welcher Sprache ist die Website verfasst? Muttersprache?*
- ✓ *Gibt es eine Übersetzung der Seite? Zwei- oder mehrsprachig?*
- ✓ *Muss man sich registrieren, um an die Informationen zu gelangen?*

- **Zugriffsgeschwindigkeit**

Die Geschwindigkeit des Zugriffs auf Informationen kann durch viele Gründe gebremst werden. Das kann zum einen an der Technik liegen. Es kommt auf die eigene technische Ausstattung an, wie Modem, analoger oder digitaler Anschluss etc., oder aber auf die der Gegenseite, wo die entsprechende Information liegt. Durch langsame Server und geringe Bandbreite kann es zu Verzögerungen unterschiedlicher Stärke kommen. Um das Problem in den Griff zu bekommen, haben inzwischen viele Suchmaschinen und Portale Mirror-Sites angelegt, so dass der Zugriff auf lokale, länderspezifische Server erfolgen kann.

Es kann aber auch an der schlechten Gestaltung der Webseiten liegen, die zu viele und große Bilder enthalten und dadurch eine lange Ladezeit benötigen. Studienergebnisse belegen, dass ein User im Durchschnitt nicht länger als acht Sekunden auf den Aufbau einer Seiten wartet (vgl. HOFER / ZIMMERMANN ²2000 : 99). Um dieses Problem zu umgehen, benutzen viele Seiten inzwischen Thumbnails, dies sind kleine Vorschaubilder, die sich erst beim Anklicken vergrößern, oder aber auch alternative „Text-Only“ Seiten, die komplett ohne Grafiken auskommen. So bietet z.B. die deutsche Suchmaschine „Fireball.de“ (www.fireball.de) unter der Internet-Adresse <http://www.fireball.de/express.t.html> ein Interface ohne Grafiken und Werbeeinblendungen an. (Vgl. ALEXANDER / TATE 1999 : 16; COOKE 1999 : 66 f.)

Leitfragen:

- ✓ *Wie schnell ist der Zugriff auf den Server ?*
- ✓ *Bauen sich die Seiten schnell auf?*
- ✓ *Gibt es eine rein textbasierte Alternative?*
- ✓ *Wird die Website gespiegelt (Mirror-Server)?*

- **Einschränkungen durch Software**

Aber nicht nur die Hardware kann eine Problemquelle für den schnellen und einfachen Zugriff auf Informationen sein, sondern auch die Software. Dies beginnt schon bei der Wahl der Browser-Software, da der „Netscape Communicator“, der „Microsoft Internet Explorer“ und andere Browser nicht alle den gleichen Standards folgen, so dass immer Probleme bei der Darstellung bestimmter Seiten auftreten können.

Bei Ausnutzung aller multimedialer Möglichkeiten im Netz kommt das Problem der Plug-Ins zum Tragen, da es unzählige Formate zur Übertragung von Layout-, Audio- und Videodaten gibt und ebenso viele Programme existieren, die diese anzeigen und abspielen können. Da aber die Internetbrowser nur einen geringen Teil dieser Formate standardmäßig anzeigen können, werden entsprechende Plug-Ins benötigt, die herunterzuladen und zu installieren sind. Deshalb ist es wichtig, dass ein entsprechender Hinweis gegeben ist, wo man die entsprechende Software bekommt und wie man sie einsetzt. (Vgl. COOKE 1999 : 67; SCHROCK 1998)

Leitfragen:

- ✓ *Sind die Seiten mit jedem Browser problemlos darstellbar ?*
- ✓ *Werden Plug-Ins zur Darstellung bestimmter Inhalte benötigt?*
- ✓ *Werden Standard Plug-Ins (Flash, Quicktime o.ä.) oder eher „Exoten“ genutzt?*

- **Kosten**

Evaluatoren müssen feststellen, ob die Informationen frei zugänglich sind oder ob Kosten für die Benutzung der Quelle entstehen (vgl. SMITH 1997; COOKE 1999 : 69). Viele Zeitschriften, wie z.B. „Bild der Wissenschaft“ (www.wissenschaft.de), „The Lancet“ (www.lancet.com) oder „Science“ (www.sciencemag.org), erstellen kurze Zusammenfassungen ihrer Artikel und bringen nur wenige im Volltext. „Nature“ dagegen bietet verschiedene Möglichkeiten an, die Zeitschrift über das Internet im Volltext zu lesen. Erstens ist die Website für alle Abonnenten der Printausgabe

freigeschaltet, zweitens gibt es die Möglichkeit, einzelne Artikel zu kaufen, wobei hier die Kosten zwischen 15.- und 25.- US-\$ pro Artikel liegen.³⁵ Universitäten und Bibliotheken können Lizenzen für den freien Zugang kaufen (s. Abb. 19).

Abb. 19: Ausschnitt der Registrierungsseite der Zeitschrift „Nature“ (www.nature.com) [Stand: 10.11.2001]

Leitfragen:

- ✓ *Sind die Informationen kostenfrei ?*
- ✓ *Stimmt das Preis-Leistungsverhältnis?*
- ✓ *Welche Bedingungen müssen erfüllt werden, um an die kostenpflichtigen Informationen zu gelangen?*

³⁵ Übersicht der Kosten von „Nature“-Artikeln unter http://www.nature.com/help/purchasing_online/pricing_policy.html. [Stand: 03.11.2001]

4.3.5.3 Ausnutzung interaktiver und multimedialer Möglichkeiten

Wie eingangs erwähnt, ist der Inhalt das entscheidende Kriterium bei der Evaluation. Aber insbesondere interaktive und multimediale Features können dem User beim Verstehen und Anwenden von Informationen unterstützen. Diese vielfältigen Möglichkeiten bietet außer dem Web kein anderes Medium. Weiterhin spielen Bilder eine immer größere Rolle in der Bildung und Wissenschaft. William J. T. MITCHELL spricht sogar von einem *“Pictorial Turn”*, der einen Paradigmenwechsel von der schrift- zur bildorientierten Wissensvermittlung einläutet (vgl. MAAR 2000 : 11 f., MITCHELL 2000 : 206 f.).

- **Interaktive Möglichkeiten**

Das Internet ist eine Kommunikationsplattform, auf der viele Leute miteinander kommunizieren und Meinungen und Gedanken austauschen können. Diese Möglichkeit sollte von Webseiten genutzt und bei der Evaluation berücksichtigt werden, da die Kommentare zu Themen oder der Website allgemein bei der Bewertung von Glaubwürdigkeit oder Genauigkeit helfen können. Die Mittel hierzu sind Messageboards, wie sie z.B. die Zeitschrift „Telepolis“ (www.telepolis.de) anbietet, die es dem User erlauben, zu jedem Artikel seinen Kommentar abzugeben, der dann direkt unter dem Artikel erscheint oder Diskussionsforen, in denen aktuelle Themen diskutiert werden, so z.B. bei „National Geographic“ (www.nationalgeographic.com/-community/forums.html) oder „GEO“ (www.geo.de/interaktiv/index.html) oder Chatrooms, wo ein direktes Gespräch in Echtzeit mit einem Experten oder zwischen Usern untereinander geführt werden kann. (vgl. AMBRE 1997 : 2-14 f.)

- **Multimediale Möglichkeiten**

Einer der großen Vorteile von Internetseiten gegenüber Printmedien ist der Einsatz von Tönen (Abb. 20 a), Videos (Abb. 20 b), räumlichen, dreidimensionalen Darstellungen (Abb. 20 c) und Animationen (Abb. 20 d). Durch diese audio-visuellen Möglichkeiten

können Informationen aufgewertet und somit Themen besser und oft auch einfacher erläutert werden.

Audio

Abb. 20 a: Historische Reden von Martin Luther King, Jr. (www.archerveralerie.com/mlk.html)

Video

Abb. 20 b: Video Archiv der NASA (www.nasa.gov/gallery/video/index.html)

VRML

Abb. 20 c: VRML-Darstellung einer Ameise (www.ento.vt.edu/~sharov/3d/ant.wrl)

Animation

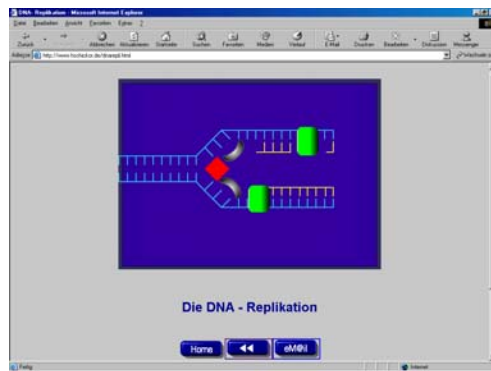

Abb. 20 d: Flash-Animation einer DNA - Replikation (www.hschockor.de/dnarepli.html)

Leitfragen:

- ✓ *Gibt es Möglichkeiten, eigene Kommentare zu Themen zu veröffentlichen?*
- ✓ *Werden die Informationen durch Bilder, Animationen, Audio- oder Videoaufnahmen unterstützt?*

4.3.5.4 Indikatoren für mangelnde Benutzerfreundlichkeit

Ein Mangel an Benutzerfreundlichkeit zeigt sich, wenn die gestalterischen und technischen Möglichkeiten einer Website gar nicht genutzt werden, und die Seite zu einer grauen „Textwüste“ verkommt. Im Gegensatz dazu führt aber auch eine übertriebene Verwendung dieser Mittel schnell zu diesem Resultat, denn dann wird die Seite oft unübersichtlich und langsam im Seitenaufbau. Weitere Indikatoren mangelnder Benutzerfreundlichkeit sind u.a. eine Zwangsregistrierung für den Zugang, keine Auswahlmöglichkeit der Sprache, schlechte Seitendarstellung durch bestimmte Browsertypen und keine Möglichkeit mit dem Autor zu interagieren.

4.3.6 Einschätzung der Gesamtqualität

Der letzte Schritt der Evaluation beinhaltet die abschließende Bewertung der Quelle. Hierzu muss vorher ein Vergleich mit anderen Quellen erfolgen, um so die Qualität in Relation zu setzen. Der Vergleich sollte anhand der aufgeführten Evaluationskriterien durchgeführt werden (vgl. BRANDT 1996; COOKE 1999 : 80).

Wichtig bei diesen Vergleichen sind auch die Fragen nach den Kosten, dem Wert in Bezug auf andere Medien und der Einzigartigkeit. Evaluatoren sollten, da nicht alle Informationen im Internet kostenfrei sind (s. Kapitel 4.3.5.2), immer den Kosten-Nutzen-Faktor berücksichtigen.

Insbesondere bei Zeitschriften im Internet sollte zudem ein Vergleich mit dem Print-Pendant durchgeführt werden. Die elektronische Variante hat u.a. die Vorteile der direkten Kommunikation via E-Mail mit der Redaktion oder auch der einfachen Suche nach Artikeln in Archiven. Für die Papierversion spricht u.a. die einfachere Lesbarkeit, verglichen mit dem Lesen am Monitor (vgl. COOKE 1999 : 82).

Ein weiterer wichtiger Faktor bei dem Vergleich ist die Einzigartigkeit einer Information oder Quelle. Entweder ist die Quelle so ausführlich, dass sie alle anderen bei weitem übertrifft, oder aber sie bietet ein einzigartiges Feature an, so z.B. die Website des „Visible Human Project“ (www.nlm.nih.gov/research/visible/visible_human.html), die Bilder und Videos eines Querschnitts durch den gesamten menschlichen Körper anbietet (vgl. SMITH 1997; COOKE 1999 : 82).

Nachdem auch diese letzten Schritte vollzogen worden sind, kann sich der Evaluator nun endgültig ein Gesamtbild der Quelle machen und den Wert und die Nützlichkeit ermitteln. Durch seine eigene Erfahrung und die Anwendung der Kriterien ist es ihm möglich, Websites verschiedener Kategorien entsprechenden Wertigkeiten zuzuordnen. Diese Abstufung kann z.B. von „sehr gut“ oder „sehr informativ“ bis hin zu „schlecht“ oder „nutzlos“ gehen.

Leitfragen:

- ✓ *Welche Qualität besitzt die Quelle im Vergleich zu anderen Quellen?*
- ✓ *Bei Zeitschriften: Besitzt die Webseite Vorteile zur Printausgabe?*
- ✓ *Beinhaltet die Quelle einzigartige Informationen?*

5. Resümee

Digitale Weltbibliothek, Datenautobahn, Cyberspace, Weltwissen online, Hyperspace, globales Gehirn und Docuverse sind nur einige der Metaphern, die zur Zeit für das Internet benutzt werden. Sie zeugen von den angeblich unbegrenzten Möglichkeiten im Netz, von der riesigen globalen Bibliothek, die das Wissen der Menschheit enthält. Dieser Datenpool von Informationen wird inzwischen von 27,3 Millionen Deutschen genutzt, von 11,3 Millionen sogar täglich (vgl. SCHMITT-WALTER 2001). Die Probleme, die diese Informationsflut mit sich bringt, werden dabei häufig übersehen. Zwei eigentlich gegensätzliche Bedrohungen stehen im Vordergrund: Erstens gibt es aufgrund der dezentralen Struktur des Internet keine Kontrollinstanzen, die die Inhalte auf den Wahrheitsgehalt überprüfen. Somit sind Propaganda, Fehl- und Desinformationen Tür und Tor geöffnet. Zweitens wird das Internet durch die wachsende Kommerzialisierung immer stärker von Industrie- und Medienkonzernen kontrolliert, dadurch gelangen nur noch von ihnen gefilterte Informationen zum Websurfer. (Vgl. GOLDMANN 1999 : 22)

Diese Problematik ist aber nur den wenigsten Usern wirklich bewusst. In unserem Alltag benutzen wir eine Fülle von Medien. Das Spektrum beinhaltet Fernsehen, Zeitungen, Zeitschriften, Radio, Comics, Flugblätter usw.. Durch diesen täglichen Umgang haben wir zwischen Werbung und Nachrichten zu unterscheiden gelernt. Die Kompetenz, Quellen zu selektieren und zu bewerten, haben wir zum großen Teil unbewusst erworben, sie ist ein Aspekt unseres Alltagswissens. Wir haben gelernt, bestimmten Quellen mehr als anderen zu vertrauen, da wir wissen, dass es kontrollierende und korrigierende Instanzen in der „offline“ Medienwelt gibt. In der digitalen Online-Welt ist die Situation aber ungleich komplizierter, so dass die Bewertungsmechanismen zum Teil nicht mehr greifen. Da das Internet beginnt, einen immer höheren Stellenwert in der Medienwelt einzunehmen, ist es umso wichtiger, sich mit Evaluationskriterien von Online-Quellen zu beschäftigen.

Der bisherige Schulungsansatz durch Kurse an Schulen und Universitäten oder mit Hilfe von Internet-Büchern und -Zeitschriften beschränkte sich meist auf technische Aspekte des Internet, wie die Bedienung von Internet-Browsern, den Umgang mit Suchmaschinen oder die Installation von Modems oder ISDN-Karten. Auch beim Webdesign geht es meist vorrangig um die optische und technische Umsetzung einer

Website. Inhaltliche Aspekte und der Umgang mit Online-Quellen werden dabei vernachlässigt. Aber nur durch die Auseinandersetzung mit diesen Themen kann der Websurfer zum „*mündigen Netzbürger*“ (GOLDMANN 1999 : 22) werden. Deshalb fordert Paul GILSTER:

„We need to set up content evaluation as part of the intellectual superstructure here and explain it to kids ... so we end up with students who can use the Web intelligently and know when to cast grave doubt on a particular Website. People have to be their own editors and take that upon themselves. Once you begin doing that, the habits become second nature.“ (zitiert nach KELLEY 1999)

Virtuelle Bibliotheken und Review-Dienste können dem Websurfer aufgrund der Informationsflut nur bedingt bei der Selektion und Bewertung von Webseiten weiterhelfen. Aus diesem Grund ist der User auf die Erlangung von Medienkompetenz angewiesen, wobei die Evaluation von Webseiten nur einen Aspekt darstellt, um den sicheren Umgang mit glaubwürdigen und unglaubwürdigen Dokumenten zu erlernen. Dabei sollen die in dieser Arbeit genannten Aspekte der Evaluation in der Praxis helfen:

An erster Stelle steht hierbei die Glaubwürdigkeit, da sie den wichtigsten Faktor für die Informationsqualität darstellt. Hier wird die Plausibilität der Quelle, die Kompetenz des Autors, die Zugehörigkeit zu Institutionen und Organisationen und das Vorhandensein von Review-Verfahren überprüft. Hinzu kommt noch die Untersuchung des webspezifischen Merkmals der Internet-Domain.

Zweitens wird die Genauigkeit und die Abdeckung der Online-Quelle getestet. Dies hat zum Ziel zu sehen, ob das Thema aktuell, genau, ausführlich und umfassend behandelt wird. Außerdem wird noch nach der Absicht und der Zielgruppe der Website gefragt.

Hierauf folgt drittens die Bewertung der Objektivität und Folgerichtigkeit, um festzustellen, ob die Informationen sachgemäß und unverfälscht präsentiert werden.

Punkt vier der Evaluation beinhaltet die Quellennachweise, denn nur dadurch kann der Text den Wahrheitsgehalt der dargebotenen Informationen beweisbar und nachvollziehbar machen. Dieses Verzeichnis sollte sowohl Printpublikationen als auch Internet-Links umfassen. Eine Bestätigung durch Dritte, etwa eines Review-Dienstes oder einer virtuellen Bibliothek, kann zusätzlich den Wahrheitsgehalt einer Online-Quelle stützen.

Der letzte Punkt der Bewertung umfasst schließlich die Benutzerfreundlichkeit der Website. Dieser Punkt beinhaltet nur rein webspezifische Elemente. Dabei handelt es

sich um die Struktur und Navigation innerhalb einer Seite, den Zugang zu der Quelle und die Ausnutzung der interaktiven und multimedialen Möglichkeiten.

Am Ende der Evaluation steht die Gesamtbeurteilung der Online-Quelle. Hierzu muss aber noch ein Vergleich mit anderen Webseiten erfolgen, so dass die dargebotene Informationsqualität in Relation gesetzt werden kann.

Solange im Internet keine Standards der Informationsaufbereitung und Qualitätssicherung herrschen, und dies wird aufgrund der dezentralen nicht-hierarchischen Struktur wohl sobald nicht geschehen, ist der User auf solche Evaluationskriterienkataloge angewiesen, wie ich sie in dieser Arbeit diskutiert habe.

6. Literatur

Die Internet-Quellenangabe werden bei einem Zeilenumbruch mit einem Bindestrich getrennt. Um Verwechslungen mit Adressbestandteilen zu vermeiden, erfolgt die Trennung immer direkt nach einem Schrägstrich „/“.

*„Das 20. Jahrhundert stand im Zeichen der
Technik. Das 21. Jahrhundert wird im Zeichen der Menschen
stehen, die mit Technologie umgehen
müssen.“* Klaus C. Hofer
(HOFER / ZIMMERMANN ²2000 : 5)

1. Einleitung

Durch die Entwicklung des Internet und spätestens seit Entstehung des World Wide Web (WWW) in den 90er Jahren des 20. Jahrhunderts ist die digitale Revolution nicht mehr aufzuhalten. Millionen von Usern kommunizieren heute täglich über das weltweite Datennetz, und noch in diesem Jahrzehnt wird die Milliardengrenze überschritten werden (vgl. TAPSCOTT 1999 : 13). Das Internet hat damit bereits jetzt schon eine Größenordnung erreicht, die zu weitreichenden Veränderungen und Auswirkungen in Wirtschaft, Politik, Unterhaltung und Gesellschaft führen. Die

Industriegesellschaft, deren ökonomisches Fundament materieller Natur ist und
einst
die Agrargesellschaft ersetzt, wird nun selbst von der Wissensgesellschaft,
deren
Fundament auf Bits und Bytes beruht und deren maßgeblicher
Produktionsfaktor
Wissen ist, abgelöst (vgl. BÜHL 1997 : 49). Wissen bekommt damit eine
zentrale
Bedeutung, weil es der Auslöser dieser gesellschaftlichen Veränderungen ist. Dass
wir
uns in dieser gesellschaftlichen Übergangsphase befinden, wird dadurch deutlich,
dass
sowohl geistes- als auch naturwissenschaftliches Wissen immer mehr an
Bedeutung
und Einfluss auf das tägliche Leben gewinnt. Der Soziologe Nico Stehr spricht
sogar
davon, dass die Abhängigkeit von Wissensberufen immer stärker wird, denn
schon
heute kämen die wichtigsten politischen, sozialen und
ökonomischen
Handlungskomplexe nicht mehr ohne eine wissenschaftliche Legitimation aus
(vgl.
BÜHL 1997 : 48). Die Zahl der zur Zeit auf der Welt arbeitenden Wissenschaftler ist
so
groß wie die Anzahl der Wissenschaftler der letzten 2000 Jahre
zusammengenommen.
Daraus resultiert, dass täglich 20.000 wissenschaftliche Publikationen erscheinen
und
sich das weltweit verfügbare Wissen alle fünf bis sieben Jahre verdoppelt
(vgl.
SCHIPANSKI
2001).
Diese Informationsflut ruft die Illusion eines Wissensparadieses hervor, kann aber
auch
schnell zur Wissensdürre werden (vgl. SCHIPANSKI 2001), da es sich
bei
Informationen noch lange nicht um Wissen handelt. Informationen stellen
eine

Teilmenge von Wissen dar, die aktuell in Handlungssituationen benötigt wird
und
demnach von Kontext und Nutzen abhängig ist (vgl.
KUHLEN
1999 : 410; KÜBLER 2001 : 159). Wissen bezeichnet damit etwas Übergeordnetes
und
Handlungsorientiertes und entsteht erst durch die Verarbeitung von Information
und
gewinnt somit an eigentlichem Wert. So heißt es auch im Anhang des
Schlussberichtes
der ENQUETE-KOMMISSION DES DEUTSCHEN
BUNDESTAGES:

„Information erhält ihre menschliche Dimension und damit

*„Die gesellschaftliche Bedeutung erst dann, wenn sie von Menschen aufgenom-
men die Information zu Wissen wird. Wissen macht handlungsfähig.
Zuverlässige Informationen sind die Voraussetzung dafür. Aber erst
Bedeutungsgerechte Beurteilung erweckt sie zum Leben“ (1998 :
114).*

Hier wird die Forderung deutlich, dass Informationen bewertet werden müssen, um sie in nutzbares Wissen, den Produktionsfaktor der Wissensgesellschaft, zu verwandeln.

Deshalb verlangt diese Gesellschaftsform Bildung, die eine Förderung der

Medienkompetenz beinhaltet, d.h. es muss ein verantwortungsbewusster und kritischer

Umgang mit den elektronischen Medien erlernt werden, da wir unser Wissen

„über

unsere Gesellschaft, ja über die Welt, in der wir leben, ... durch die

Massenmedien“

(LUHMANN ²1996 : 9) vermittelt bekommen. Aber was bedeutet dies nun

bezogen auf das ^{genau,} Massenmedium Internet

^{1?}

Mit der oben erwähnten Zunahme der Anschlüsse an das Internet wächst natürlich

auch die für den einzelnen Nutzer potentiell verfügbare Datenmenge.

Schätzungen

gehen heutzutage von über 2,5 Milliarden Webseiten weltweit aus. Die Internet Firma

Bright Planet schätzt in ihrem White Paper „The Deep Web: Surfacing Hidden Value“

die Zahl der Webseiten noch wesentlich höher ein. Unter Hinzunahme der Seiten

aus

Intranets, Internet gestützten Datenbanken und dynamisch generierten Seiten wird

die

Zahl auf über 550 Milliarden vermutet. Täglich kommen ungefähr 7,3 Millionen neue

Seiten im Internet hinzu. (Vgl. MURRAY / MOORE 2000 : 2; BERGMAN 2001 :

1)

Die Bandbreite der angebotenen Informationen im Internet ist entsprechend

weit

gestreut. Kaum eine Universität, Organisation, Institution, Behörde oder

ein

Unternehmen kann es sich heute leisten, keine Sach- oder Selbstdarstellung auf

einer

¹ Im September 2001 nutzten 42,9% (27,3 Mio.) der Deutschen das Internet (vgl. SCHMITT-WALTER 2001) und überschritten damit inzwischen die im Konzept der kritischen Masse genannte 10% Marke. Da der Anteil der Gesellschaft diesen Punkt überstiegen hat, kann demzufolge das Internet als Massenmedium in der BRD angesehen werden (vgl. SCHWEIGER 1999 : 89).

eigenen Homepage anzubieten. Aber auch unzählige Privatpersonen bieten Websites zu den verschiedensten Themen an. Hinzu kommen noch etliche Datenbanken und Tausende von Newsgroups und Foren. Dieses Bild schlägt sich auch in der Wissenschaft nieder. Über eine Million wissenschaftliche Artikel aus allen Fachbereichen sind zur Zeit online abrufbar (vgl. LAWRENCE 2001 : 521). Fachzeitschriften, die exklusiv im Internet erscheinen, spielen eine immer wichtigere Rolle, da die Informationen über das Netz schneller gefunden werden und zudem oft auch preiswerter sind. Hieraus folgt, dass online erhältliche Artikel inzwischen öfter zitiert werden als Artikel aus Printzeitschriften.

(Vgl. DÖRING 1999 : 28; LAWRENCE 2001 : 521). Das Netz ermöglicht einen schnellen Zugriff auf riesige Datenmengen, aber die dadurch gewonnenen Informationen müssen mit Vorsicht betrachtet werden und scheinen ohne zusätzliche Recherche mit herkömmlichen Hilfsmitteln nicht verwendbar zu sein (vgl. SONNLEITNER / STADTHAUS / WEICHERT 1999 : 252).

Gründe hierfür sind die Fülle an Fehl- und Desinformationen und Seiten mit propagandistischen, satirischen oder parodistischen Inhalten, die neben den vielen seriösen Quellen angeboten werden. Es bedarf also ganz offensichtlich eines Vor- und Erfahrungswissens für den Umgang mit Online-Informationen, da im Internet die Informationsbeschaffung unmittelbar mit der Bewertung aufgrund der Vielfalt,

Heterogenität und Glaubwürdigkeit der Quellen verbunden ist.

Damit wird die oben schon erwähnte Forderung nach Medienkompetenz für Internetquellen nochmals verdeutlicht. Es geht also nicht nur darum, technische Fähigkeiten und Fertigkeiten bei der Bedienung eines Computers zu erlangen, sondern vielmehr mit den angebotenen Informationen und der Informationsflut umgehen zu können. Paul GILSTER definiert Medienkompetenz ² auch als „... *the ability to*

understand information – more important – to evaluate and integrate information in multiple formats that the computer deliver“ (zitiert nach POOL 1997).

Vier zentrale Punkte sind bei der Online-Recherche und dem Umgang mit Internetquellen besonders wichtig, um das Informationspotential wirklich anzunutzen:

² Paul Gilster spricht hier wörtlich von „*digital literacy*“, dies ist aber in seiner Bedeutung durchaus mit

dem deutschen Wort „Medienkompetenz“ in Bezug auf das Internet gleichzusetzen.

1. Das Erkennen der chaotischen und dezentralen Struktur des Internet, da sie nicht auf inhaltlichen, sondern auf technischen Ordnungsprinzipien beruht. ³ Es ist ein
„Spielplatz der Entropie“ (DYSON 1999 : 172). Das Netz ist nicht für eine benutzerfreundliche Informationssuche entwickelt worden (vgl. MEIER 1999b : 165 f.).

2. Die Wahl der Suchhilfe (Suchmaschine, Katalog, Portal, virtuelle Bibliothek etc.), der genaue Umgang mit dieser und die Entwicklung entsprechender Suchstrategien, um Daten effektiv und schnell zu finden und nicht in den Weiten des Netzes verlorenzugehen: *„Lost in Cyberspace“* (BRAKE 1997 : 12).

3. Die Selektion der Informationen aus der Fülle der oft unzähligen Treffer und das Erkennen der Heterogenität der Informationen und Informationsanbieter:
„Im ‚Medium‘ World Wide Web präsentieren die unterschiedlichsten Anbieter aus unterschiedlichsten Motiven unterschiedlichsten Kriterien unterschiedlichste Inhalte für unterschiedlichste Zielgruppen.“ (RÖSSLER / OGNIANOVA 1999 : 110)

4. Die abschließende Einschätzung und Bewertung der gefundenen Quellen anhand von Evaluationskriterien. Die Evaluation stellt den zentralen Punkt beim Umgang mit Online-Quellen dar, denn erst danach kann der User die Quelle für seine Zwecke verwenden.

Der letzte Punkt, die Evaluation von Internetquellen, steht im Mittelpunkt dieser Arbeit. Der Begriff der Evaluation wird hierbei im wörtlichen Sinne verwendet: Bewertung und Beurteilung eines Sachverhaltes aufgrund festgelegter Kriterien und Wertmaßstäbe. (Vgl. REINHOLD ³ 1997 : 161; ⁸ 1998 : KROMREY 97)

Es wird erläutert, welche Aspekte bei der Bewertung von Internetquellen eine wichtige Rolle spielen und ebenso als Richtlinien bei der praktischen Umsetzung dienen. Das Ziel hierbei ist es, durch die Evaluation die Datenflut zu differenzieren und zu bewerten, so dass das Risiko von Fehl- oder Desinformationen minimiert und der zu ziehende Nutzen aus einer Quelle maximiert wird.

³ Die Visualisierung dieser dezentralen Struktur zeigt Martin Dodge sehr anschaulich auf seiner Seite „The Geography of Cyberspace Directory“ (www.geog.ucl.ac.uk/casa/martin/topology_maps. [Stand: 20.11.2001].

Da es viele verschiedene Arten der Informationsquellen und Themen im Netz gibt, werden hier aufgrund des Umfangs nur wissenschaftliche Webseiten berücksichtigt. Dies bedeutet, dass die hier diskutierten Aspekte der Evaluation sich auf Webseiten mit einem geistes- oder naturwissenschaftlichen Hintergrund beziehen, denn bei der Vermittlung von Wissen ist die Glaubwürdigkeit, Exaktheit und Objektivität der Quelle von elementarer Bedeutung. Somit werden kommerzielle Web-Angebote ohne wissenschaftlichen Bezug, Portale, Suchmaschinen, Datenbanken, FAQs, Newsgroups, Mailinglisten und FTP-Archive nicht berücksichtigt, da sich hier die Evaluationskriterien bzw. die Schwerpunkte der Evaluation wiederum ändern würden. (Vgl. COOKE 1999 : 85; ALEXANDER / TATE 1999 : 3)

Nachdem in der Einleitung auf die Bedeutung von Medienkompetenz im Umgang mit dem Internet hingewiesen wird, werden im zweiten Kapitel dieser Arbeit die Grundlagen des Mediums World Wide Web erklärt. Darin wird zuerst eine kurze historische Einführung über die Entstehung und Entwicklung des Internet und des WWW gegeben. Es folgt eine Übersicht über die sechs hauptsächlichen Informationsanbieter im Netz: Universitäten, Organisationen, Datenbanken, Unternehmen und Privatpersonen. Abschließend werden kurz die grundsätzlichen Unterschiede zwischen Webseiten und Printmedien

Medienarchive,

vorgestellt.

Das dritte Kapitel weist auf die Probleme mit Informationsquellen im Internet hin. Allein aufgrund des schnellen Wachstums des Netzes ergeben sich schon eine Reihe von Problemen. So stellt die Größe an sich und die dadurch bestehende Komplexität eine Schwierigkeit dar. Hierdurch entsteht wiederum das Problem der Selektion von Informationsquellen, das bisher auch nicht durch Suchmaschinen und Kataloge behoben werden konnte, da diese selbst für diese Lage mitverantwortlich sind. Ein weiteres Problem stellt die laufende Veränderung im Netz dar. Online-Quellen sind einer ständigen Modifikation ausgesetzt, so dass Informationen im WWW instabil und flüchtig sind. Das größte Problem insbesondere in Bezug auf die Wissensvermittlung via Internet ist die mangelnde Glaubwürdigkeit von Online-Quellen, da es neben seriösen Anbietern auch ebenso viele unsinnige und falsche Informationsangebote im Netz gibt. Hiermit wird verdeutlicht, warum eine Evaluation von Quellen im Internet vonnöten ist.

9

Das vierte Kapitel gibt zunächst einem Überblick über bereits bestehende Evaluationsdienste im Netz und ihre Vorgehensweise. Zu diesen Diensten gehören die privaten und redaktionellen Awards, Review-Dienste und die themen-basierten Portale, auch virtuelle Bibliotheken genannt. Danach werden die individuellen Kriterien der Evaluation näher erläutert. Die Hauptaspekte sind Glaubwürdigkeit, Genauigkeit, Abdeckung, Ausgewogenheit, Quellennachweise, Benutzerfreundlichkeit und eine abschließende Bewertung der Quelle.

Das Resümee fasst schließlich die wichtigsten Ergebnisse der Arbeit noch einmal zusammen.

2. Das Medium World Wide Web

In den sechziger Jahren wurde von einer Abteilung des US-Verteidigungsministeriums das ARPA-Net (Advanced Research Project Agency) entwickelt. Zwei Ideen standen

dabei im Vordergrund. Erstens sollten Forschungseinrichtungen, die über eine große räumliche Distanz voneinander getrennt waren, miteinander verbunden werden, da zu dieser Zeit Computer und damit Rechenleistung extrem teuer waren und eine Aufteilung der Kapazitäten auf verschiedene Institute eine kostengünstige und praktikable Lösung darstellte. Zweitens sollte gleichzeitig eine dezentrale Kommunikationsplattform entstehen, die auch bei Ausfall einzelner Teile, wie z.B. im Falle eines Krieges, weiterhin funktionsfähig bleiben sollte. Diese Idee wurde erstmals 1969 erfolgreich getestet, als die Rechner der kalifornischen Universitäten Berkeley, Santa Barbara und dem Stanford Research Institute miteinander vernetzt wurden. In den siebziger Jahren wurden die weiteren technischen Grundlagen durch die Entwicklung des TCP/IP Protokolls ⁴, der E-Mail und des BBS (Bulletin Board System) ⁵ gelegt. Das Netz weitete sich immer mehr auf staatliche, wissenschaftliche und universitäre Bereiche aus. In den achtziger Jahren entwickelte sich dann eine Struktur von eigenen Netzen und Unternetzen, die die heutige Grundlage des Internet bilden. Hierdurch entstand auch der Name, der den Namen „ARPA-Net“ ablösen sollte: „Internet“, eine Abkürzung für „interconnected networks“.

⁶ (Vgl.

LEINER et al.
2000)

Der endgültige Durchbruch des Internet hin zum Massenmedium erfolgte Anfang der 90er Jahre mit der Geburtsstunde des „multimedialen Zweig[s, T.A.] des Internet“ (HAFNER/² 2000 : 305), dem World Wide Web, auch WWW oder W3 genannt. ⁷ Das umständlich zu bedienende und rein textbasierte Internet erschloss sich plötzlich für den User ganz einfach durch ein paar Mausklicks und eine grafische Benutzeroberfläche, die neben einfachen Texten nun auch Bilder, Töne und

⁴ TCP/IP steht für „Transmission Control Protocol/Internet Protocol“ und ist der Oberbegriff für eine Reihe von Übertragungsprotokollen auf denen die Datenübermittlung im Internet beruht. Das Bulletin Board System ist eine Art elektronisches schwarzes Brett. Hier können User Nachrichten und von anderen abgelegte Nachrichten lesen.

⁶ Die Entstehungs- und Entwicklungsgeschichte des ARPA-Net, beginnend in den 60er bis in die 90er Jahre hinein, wird sehr detailliert bei HAFNER/² 2000 beschrieben. Entwickelt wurde das WWW von dem englischen Informatiker Timothy Berners-Lee am Kernforschungszentrum CERN (www.cern.ch) [Stand: 20.11.2001]. Daraufhin schuf Marc Andreessen mit „Mosaic“, dem späteren „Netscape Navigator“, den ersten Browser für die Öffentlichkeit.

Animationen darstellen konnte. Hinzu kam, dass sich alle bisherigen Internetdienste, wie E-Mail, FTP (File Transfer Protocol), Usenet, Telnet oder WAIS (Wide Area Information Service), zu einem einzigen Dienst verbanden. Diese Entwicklung führte zu einem wahren Internet-Boom, der bis heute anhält. (Vgl. WILKE 1999b : 753;

HAFNER/ LYON² 2000 : 305 f. ; ZIMMER 2000 : 189 f.)

2.1 Quellen im Internet

Bei dieser Masse an angebotenen Informationen muss man sich darüber klar werden, wer Informationen bereitstellt und welche Arten von Daten man im Internet überhaupt findet. MEIER (²1999b : 177) unterteilt die Informationsanbieter in sechs Bereiche:

- **Universitäten und Forschungseinrichtungen** waren die ersten, die das Internet zum Austausch von Informationen und Wissen nutzten. Wissenschaftler aller Fachbereiche, insbesondere der Naturwissenschaften, gebrauchen das WWW als Plattform, um Forschungsergebnisse zu publizieren und darüber zu diskutieren. (Vgl. ebd. : 178 f.)
- **Unternehmen** nutzen das Internet als Marketing- und Vertriebsinstrument. Es dient dem Vertrieb von Waren, aber auch der Selbstdarstellung. Das Informationsmaterial wird in Form einfacher Werbung bis hin zu Pressemitteilungen angeboten. (Vgl. ebd. : 179 f.)
- **Organisationen und staatliche Stellen**, zu denen u.a. politische Parteien und Non-Profit-Organisationen gehören, bieten häufig sehr umfassende Informationen über das Internet an, da die Verbreitung auf diesem Wege kostengünstiger ist als das Versenden von Broschüren und Faltblättern. Die Art der Information reicht von Gesetzestexten über Statistiken bis hin zu Reden und Stellungnahmen. (Vgl.

ebd. :
180
f.)

• **Medienarchive** umfassen sämtliche im Internet publizierte Zeitungen und Zeitschriften. Bei diesen Online-Archiven handelt es sich zumeist um Ableger von Printmedien, die teils kostenfrei, teils kostenpflichtig sind und zumeist bis Anfang/Mitte der 90er Jahre zurückgehen. Das Magazin „Focus“ (www.focus.de) ist beispielsweise seit dem 18.1.1993 und die Wochenzeitung „Die Zeit“ (www.zeit.de) seit dem 8.3.1995 online. Zudem erscheint inzwischen eine große Anzahl von reinen Online-Zeitschriften, die ausschließlich im WWW zu finden sind, so z.B. „First Monday“ (www.firstmonday.org) oder „Telepolis“ (www.telepolis.de). Für alle diese Archive gilt, dass es keine thematischen Beschränkungen gibt. (Vgl. ebd. : 182 f.)

• Nicht nur die Medien geben ihre **Archive und Datenbanken** frei, sondern auch Firmen und Organisationen stellen ihre Datenbestände in das Internet. Die Bandbreite reicht hier vom Verzeichnis lieferbarer Bücher (www.buchhandel.de) über das „CIA World Factbook“ (www.odci.gov/cia/publications/factbook/) bis hin zu kommerziellen wirtschaftlichen, juristischen und wissenschaftlichen Datenbanken, wie z.B. die Wirtschaftsdatenbank „Genios“ (www.genios.de) der Verlagsgruppe „Handelsblatt GmbH“, die allerdings oft nur gegen eine hohe Gebühr benutzt werden können. (Vgl. ebd. : 184 f.)

• **Privatpersonen** mit ihren Homepages bieten inzwischen einen nicht überschaubaren Pool von Informationen, Erfahrungen und Meinungen zu den verschiedensten Themen an. Nicht nur die thematische Bandbreite ist sehr

sondern auch die qualitative, da man im WWW alles, von privaten Urlaubsfotos bis hin zu wissenschaftlichen Aufsätzen, finden kann. (Vgl. ebd. : 186 f.)

2.2 Unterschiede zwischen Webseiten und Printmedien

Da sich diese Arbeit mit dem Medium World Wide Web beschäftigt, sollen hier kurz die wesentlichen Unterschiede zu den Printmedien, dem herkömmlichen Träger wissenschaftlicher Informationen, erläutert werden. Diese Unterschiede liegen in der

13

Hypertext-Technik, in multimedialen und interaktiven Elementen und der erhöhten Aktualität und der Verfügbarkeit
Das Wesen von Webseiten unterscheidet sich damit grundsätzlich in ihrem Nutzungs- und Wirkungspotential von herkömmlichen Medien, wobei die Gründe hierfür hauptsächlich in den technischen Möglichkeiten liegen (vgl. ZIPFEL 1998 : 26 f.; NIELSEN 1999a). Dieses Potential wird mit der fortschreitenden technischen Entwicklung noch weiter zunehmen, aber zur Zeit werden in der Praxis diese Möglichkeiten nur in einem geringen Maße ausgenutzt (vgl. NEUBERGER 2000 : 314 und 318; ZÜRN 2000 : 324).

2.2.1 Hypertext

Printdesign ist zweidimensional und folgt somit einer strengen Logik. Es wird, dies gilt zumindest für unseren westlichen Kulturkreis, von links nach rechts und von vorne

nach hinten gelesen. Die einzige Art der Navigation besteht im Umblättern der Seite.

Im Gegensatz dazu sind Webseiten durch die Hypertext-Technologie n-dimensional

(vgl. NIELSEN 1999a).

⁸ Die Leserichtung bleibt erhalten, aber die Erzählstruktur und

die Navigation ändert sich grundsätzlich (s. Abb.

1).

Durch diese nicht lineare Struktur und die Verknüpfungsmöglichkeiten ändert sich

die

Erzählweise, da Themenkomplexe unterteilt, zerlegt und neu angeordnet

werden

können. Hinzu kommt die Möglichkeit, zusätzlich andere Medienformen, wie

Video

und Audio, in diese Struktur einzufügen. Hierdurch lassen sich Sachverhalte

sehr

komplex und detailreich erläutern, so dass eine hohe Informationsdichte

erzeugt

werden kann, da Websites keinen Platzbeschränkungen wie gedruckte Zeitungen

und

Zeitschriften

unterliegen.

⁸ Die Idee des „Hypertextes“ stammt von Vannevar Bush aus dem Jahre 1945, der in der Theorie „Memex“ (Memory Extender) Maschine entwarf, die verschiedenste Text- und Bildquellen miteinander verknüpfen sollte (vgl. BUSH 1945). Der eigentliche Begriff „Hypertext“ wurde von Ted Nelson in den 60er Jahren geprägt. Er entwickelte die Idee, Texte durch Links zu verbinden, und arbeitete in den 70er Jahren an der konzeptionellen Umsetzung der Idee. (Vgl. ZIMMER 2000 : 306 f.)

Abb. 1 : Hypertext-Prinzip
(MEIER

² 1999 :
29)

2.2.2 Multimedia und Interaktivität

Webseiten sind im Gegensatz zu Printseiten nicht statisch, es können multimediale und interaktive Elemente mit in das Design einfließen. Die multimedialen Möglichkeiten reichen von Audio und Videoaufnahmen bis hin zur Darstellung von räumlichen-

virtuellen Welten, die man als künstlicher Avatar durchstreifen kann. Diese Mittel erlauben dem Autor der Website eine synästhetische Präsentation seiner Informationen.

(Vgl. NICKL 1996 : 391 ff.; ZIPFEL 1998 : 27; PÖPPEL 2000 : 39)

Durch interaktive Inhalte ist es möglich, dass Informationen in beide Kommunikationsrichtungen fließen können (vgl. McKELVEY 1999 : 6) und somit

kann der User Inhalte direkt und aktiv mit beeinflussen.

„The Internets communication forms can be understood as a continuum. Each point in the traditional model of communication process can, in fact, vary from a few to many on the Internet.” (MORRIS/ORGAN zitiert nach ZIPFEL 1998 : 27)

Webseiten, ergänzt durch E-Mail Adressen, Chatrooms, Messageboards, Newsgroups etc., werden somit zu vollständigen Kommunikationsplattformen. Die Grenzen

zwischen Massen-, Gruppen- und Individualkommunikation lösen sich im Internet auf

(vgl. DÖRING 1999 :
88).

2.2.3 Aktualität und Verfügbarkeit

Das World Wide Web stellt ein völlig neues Veröffentlichungs- und Vertriebsystem

dar, weil es ermöglicht, Informationen in Echtzeit zu publizieren und abzurufen.

Insbesondere Online-Zeitungen treten durch diese hohe Aktualität

und

Aktualisierbarkeit eher in Konkurrenz zu elektronischen Medien, wie Fernsehen

und

Radio, als zu Zeitungen und Zeitschriften. (Vgl. NEUBERGER 1997 :

657;

McKELVEY 1999 :

6)

Die allgemeine Verfügbarkeit ist bei beiden Medientypen sehr hoch. Allerdings ist

das

Verbreitungsgebiet von Tageszeitungen lokal begrenzt. Webseiten hingegen

sind

grenzenlos und ermöglichen somit einem globalen Publikum den Zugriff auf

ihre

Informationen. Die Nutzung wird allerdings stärker als bei Printmedien durch

die

eigenen Kapazitätsgrenzen determiniert, die sich im Know-how oder in

den

technischen Mitteln widerspiegeln. (Vgl. ZIPFEL 1998 : 27; McKELVEY 1999 :

6)

3. Probleme mit Informationsquellen im Internet

Das Internet ist, wie schon in den vorhergegangenen Kapiteln erwähnt, das jüngste und am schnellsten wachsende Massenmedium unserer Zeit. Allein in Deutschland hat sich die Anzahl der Nutzer seit 1997 vervierfacht (vgl. BMBF 2001 : 99). Der Direktor des Media Labs am Massachusetts Institute of Technology (MIT), Nicholas Negroponte, lobt diese Entwicklung mit den Worten:

„Das Internet ist nicht nur im Sinne eines überall vorhandenen, globalen Netzwerkes interessant, sondern auch als etwas, das sich ohne einen eindeutigen ~~Das~~ ~~sign~~ ~~orient~~ ~~lich~~ ~~h~~ ~~ok~~ ~~e~~ ~~l~~ ~~t~~ ~~hat~~ und dabei (wie der Vogelschwarm) seine Form beibehält. ~~Es~~ ~~g~~ ~~ibt~~ ~~ke~~ ~~inen~~ ~~Big~~ ~~Bro~~ ~~ther~~, und alle Teile fügen sich bislang auf bewundernswerte ~~W~~ ~~is~~ ~~en~~ ~~men~~.“ (NEGROPONTE 1997 : 221 f.)

Aber die Entwicklung des Netzes wird auch kritischer gesehen, so z.B. auch vom Bibliothekar Michael Gorman:

„The net is like a huge vandalized library. Someone has destroyed the catalog and removed the front matter, indexes, etc., from hundreds of thousands of books and ~~and~~ scattered remains ... ‘Surfing’ is the process of sifting through this disorganized mess in the hope of coming across some useful fragments of text and images that ~~be~~ ~~r~~ ~~e~~ ~~l~~ ~~a~~ ~~t~~ ~~e~~ ~~d~~ ~~to~~ ~~o~~ ~~t~~ ~~h~~ ~~e~~ ~~r~~ ~~fr~~ ~~a~~ ~~g~~ ~~m~~ ~~e~~ ~~n~~ ~~t~~ ~~s~~. The net is even worse than a vandalized library because thousands of additional unorganized fragments are added daily by the myriad ~~s~~ ~~a~~ ~~n~~ ~~g~~ ~~e~~ ~~r~~s, and persons with time on their hands who launch their unfiltered messages into cyberspace.“ (zitiert nach RETTIG 1995)

Diese beiden Zitate verdeutlichen, dass das Netz mit seiner riesigen Informationsmenge

sowohl positive als auch negative Aspekte in Bezug auf herkömmliche Medien beinhaltet. Die Vorteile sind u.a. ein von Ort und Zeit unabhängiger schneller und einfacher Zugriff speziell auf aktuelle Informationen, wie z.B. politische und wirtschaftliche Nachrichten des Tages (vgl. ZIPFEL 1998 : 26; HARRIS

INTERACTIVE 2001). Die Nachteile liegen insbesondere in der Komplexität des Netzes und der Glaubwürdigkeit der Informationen. Diese Problematik soll in

diesem
Kapitel näher erläutert
werden.

3.1 Komplexität und Größe des Internet

Mit der Erfindung des World Wide Web zu Beginn der 90er Jahre nahm das Wachstum

des Internet stetig zu, es war durch ein exponentielles Wachstum geprägt.

Besonders

die zahlenmäßig starke Zunahme von Internet-basierten Datenbanken und

des

wachsenden Bereiches des E-Commerces Mitte der 90er Jahre förderte

diese

Entwicklung, die dann bis Ende des letzten Jahrhunderts anhielt (s. Abb. 2).

Heute

verdoppelt sich die Anzahl der weltweiten Internet-Hosts

⁹ ungefähr alle 18
Monate

(vgl. BMBF 2001 :

96).

Abb. 2: Entwicklung der Internet Hosts : Dezember 1969 bis März 2001 (ZAKON 2001)

Die Struktur des WWW lässt sich nach neuesten Untersuchungen grob in zwei Bereiche unterteilen (vgl. BERGMAN 2001 : 1 f.): Zum einen in das oberflächliche Web (engl. „*Surface Web*“), das heute ca. 2,5 Milliarden Webseiten beinhaltet und der Teil ist, der von den bekannten Suchmaschinen bzw. Katalogen, wie z.B. „Lycos“ (www.lycos.de), „AltaVista“ (www.altavista.de), „HotBot“ (www.hotbot.com) oder „Yahoo“ (www.yahoo.de), erschlossen wird. Die Datenmenge dieses Teils des Web

⁹ „Host“ bezeichnet Großrechner und Server, die es Arbeitsstationen (Workstations) ermöglichen auf das Internet zu zugreifen.

18

umfasst 25 bis 50 Terabyte ¹⁰ Daten (Texte, Bilder, Videos etc.) bzw. 10 bis 20 Terabyte an reinem Text (vgl. BERGMAN 2001 : 1). Der andere Bereich ist das tiefe

Web (engl. „*Deep Web*“), das z.T. auch als unsichtbares Web (engl. „*Invisible Web*“) bezeichnet wird, da dieses für konventionelle Suchmaschinen und damit für die meisten User nicht sichtbar ist. Es besitzt ein viel größeres Informationspotential als das

Surface Web, da hier auch Webseiten aus Datenbanken, Intranets und dynamisch generierten Systemen auftauchen. Im tiefen Web ca. 550 Milliarden Webseiten gesammelt, was

einer Datenmenge von 7500 Terabytes entspricht. Nicht nur die Quantität ist wesentlich größer, sondern auch die Qualität ist höher, da zu diesem Teil des Internet insbesondere viele wissenschaftliche und staatliche Datenbanken gehören, so z.B. das

„National Climatic Data Center“ (NOAA) ¹¹ , die „National Aeronautics and Administration“ (NASA) ¹² und das Angebot der US-amerikanischen Finanzbehörde ¹³ .

Eine genaue Aufstellung der zur Zeit größten öffentlichen und nicht-

„Deep Websites“ ist bei BERGMAN (2001 : 6 f.) zu finden.

Die beiden einzigen kostenlosen Suchmaschinen zur Zeit, die Teile dieses Deep Web durchsuchen können, sind „Google“ (www.google.de) und „Direct Hit“ (www.directhit.com). Die Spezi­alsuchmaschinen „Bulls Eye Pro“ (www.intelliseek.com/prod/bullseye/pro.htm) und „Lexibot“ (www.lexibot.com) durchsuchen das tiefe Netz gegen eine monatliche Gebühr. (Vgl. SMITH 2001 : 17)

¹⁰ 1024 Bytes = 1 Kilobyte (KB); 1000 KB = 1 Megabyte (MB); 1000 MB = 1 Gigabyte (GB); 1000 GB = 1 Terabyte (TB)

¹¹ Ein öffentlicher Teil dieser Datenbank für Satellitenbilder ist unter <http://www.ncdc.noaa.gov/ol/satellite/satelliteresources.html> [Stand: 17.07.2001] zu finden. Geschätzte Größe 366.000 Gigabyte (vgl. BERGMAN 2001 : 6). Der Zugang zum EOS Data Gateway der NASA befindet sich unter <http://redhook.gsfc.nasa.gov/imswww/hidden/imswelcome/> [Stand: 17.07.2001]. Geschätzte Größe: 219.000 Gigabyte

¹³ Die oberste staatliche US Finanzbehörde ist unter <http://factfinder.census.gov> [Stand: 17.01.2001] zu finden. Sie vertritt die Interessen der US-Bürger. Geschätzte Größe 610 Gigabyte (ebd.).

3.2 Problem der Selektion

Die oben genannten Zahlen verdeutlichen das Problem der Größe und Komplexität des Internet. Eine daraus resultierende Schwierigkeit ist das der Selektion von Informationen. Deshalb sind Suchmaschinen „die wichtigsten Türen im Cyberspace“ (RÖTZER 1998), da sie Orientierung im Netz bieten. Die Wichtigkeit von

Suchdiensten für die Online-Gemeinde beweisen auch die Zugriffszahlen auf diese Webseiten. Allein vier Suchdienste werden im Oktober 2000 unter den Top 10 der weltweit meistbesuchtesten Seiten im Netz verzeichnet (vgl. MEDIA METRIX 2000):

Platz 2 „Yahoo“ (87,5 Mio. Unique Visitors ¹⁴)
Platz 4 „Lycos“ (50,1 Mio. Unique Visitors)
Platz 5 „Excite“ (38,1 Mio. Unique Visitors)
Platz 10 „AltaVista“ (19,7 Mio. Unique Visitors)

Aber auch Suchmaschinen bieten keine hundertprozentige Orientierung, im Gegenteil, es tauchen wiederum neue Fragen auf. Bei dieser maschinellen Selektion bleibt der Prozess, den die Suchmaschine bei einer Anfrage durchläuft, nicht transparent, so dass

man weder weiß, welche Teile des Netzes durchforstet worden sind noch wie es zu diesem Ergebnis bzw. zu dieser Rangliste gekommen ist. Florian RÖTZER (1998) spricht deshalb auch von der Suchmaschine als „*Black Box*“, da die genauen Funktionsmechanismen im dunkeln bleiben. Um diese Problemfelder zu verdeutlichen, muss man sich als erstes über die Technik und Funktionsweise von Suchdiensten klar werden.

3.2.1 Funktion von Suchdiensten

Hartmut WINKLER (1997) unterscheidet drei Typen von Suchmaschinen.

¹⁵ Da der

technische Fortschritt auch vor Suchmaschinen nicht haltgemacht hat, muss man diese Klassifizierung um einen Typus erweitern, so dass man heute von vier verschiedenen

¹⁴ Unique Visitors = Anzahl Besucher : Die hochgerechnete Anzahl der Besucher (basierend auf der IP-Adresse), die ein Angebot in einem bestimmten Zeitraum (meistens 30 Tage) mindestens einmal besucht haben. Wichtig dabei ist, dass mehrmalige Besuche einer Person nur einfach gezählt werden.
¹⁵ Die Überlegungen von Hartmut WINKLER basieren auf dem Text von STEINBERG (1996).

Arten von Suchmaschinen im WWW sprechen kann. Meta-Suchmaschinen, wie z.
B. „MetaGer“ (www.metager.de), werden hier nicht berücksichtigt, da sie nur auf bestehende Suchmaschinen zurückgreifen und keine eigenen Datenbanken oder Suchalgorithmen besitzen.

3.2.2 Typ 1 (Der Katalog)

Der erste Typ von Suchdiensten ist der Katalog, dessen erfolgreichster Vertreter der von Jerry Yang und David Filo im Jahr 1994 entwickelte Web-Katalog „Yahoo“ ist. Hier werden Schlagworte in ein vordefiniertes, hierarchisches System eingeordnet.

Dieser Prozess wird von menschlichen Redakteuren durchgeführt. Sie bewerten und katalogisieren die Webseiten per Hand, was zum Teil auch für die Suche nach neuen Webseiten gilt. Hier werden die Redakteure allerdings zusätzlich von einer Suchsoftware unterstützt. Der Faktor Mensch stellt das größte Problem bei diesem Suchdienst dar, da der Prozeß des Katalogisierens nur sehr langsam vonstatten geht und damit schnell auf quantitative

Grenzen stößt. „Yahoo“ hat weniger als 1% des gesamten Netzes katalogisiert (vgl. WINKLER 1997).

STEINBERG (1996) vergleicht deshalb Jerry Yang auch mit Charlie Chaplin in dem Filmklassiker „Moderne Zeiten“, der einem endlosen und immer schneller werdenden Strom neuer Arbeit entgegensieht, der nicht zu bewältigen ist.

Die Stärke dieses Typus liegt in der Kategorisierung, da der grobe Bezug zu bestimmten Inhalten schnell hergestellt werden kann. Als Beispiel sei hier die „Blue Ribbon Kampagne“ ¹⁶ genannt. Diese fällt bei „Yahoo.de“ unter die Kategorie

„Gesellschaft und Soziales“ Grundrechte Zensur Internet“. Die Einordnung macht sofort deutlich, dass die Website „Zensur im Internet“ zum Thema hat, und hilft somit dem User bei der Auswahl der Online-Quellen.

¹⁶ Zu finden unter http://members.aol.com/iqmm/blue_ribbon/index.html [Stand: 11.08.2001].

3.2.3 Typ 2 (Suchmaschine der 1. Generation)

Zum zweiten Typ gehören die Suchmaschinen der ersten Stunde des World Wide Web.

Diese führen eine Volltextsuche des gesamten Internet durch und erstellen einen sogenannten "inverted index", d.h. sie erstellen eine Tabelle mit allen auf der Webseite gefundenen Wörtern, auf die die einzelne Suchanfrage dann zugreift.

Die Suchmaschinen „AltaVista“ und „Lycos“ arbeiten nach diesem System. Der Vorteil dieser Methode ist, dass die Suchsoftware, sogenannte Web-Crawler, z.T. auch als Spinnen, Spiders oder Index-Roboter bezeichnet, selbständig das Netz durchforstet und es katalogisiert und damit kein menschlicher Redakteur vonnöten ist. „AltaVista“ indiziert auf diese Weise täglich 2,5 Millionen Dokumente und ist damit deutlich

schneller als der Katalog „Yahoo“ (vgl. WINKLER 1997).

Der Nachteil liegt bei dieser Methode besonders in der Quantität der Suchergebnisse, bei denen es nicht ungewöhnlich ist, wenn man Tausende von Hits für ein Suchwort bekommt. Hinzu kommt, dass die Ordnung der Ergebnislisten unklar bleibt.

3.2.4 Typ 3 (Suchmaschine der 1. Generation mit Clusteranalyse)

Der dritte Typus führt zwar auch eine Volltextsuche des WWW durch, arbeitet

aber zusätzlich mit einem semantischen Modell, das die gefundenen Wörter in Clustern zusammenfasst, so dass Stichworte automatisch zu Kategorien zusammengeführt werden. Dies geschieht durch die Auswertung von Synonymen und der Analyse des Kontextes, mit der Annahme, dass Wörter, die gemeinsam auf einer Webseite auftreten,

auch eine inhaltliche Beziehung zueinander haben (vgl. REIMANN 1999 : 24). Somit braucht das gesuchte Wort nicht zwangsläufig auf der Seite zu erscheinen, um in der Ergebnisliste aufzutauchen. Dieses System hat eine qualitative Steigerung der Rankinglisten zur Folge. „Excite“ und „Northern Light“ seien hier als Beispiele für diesen Typ genannt. Nichtsdestotrotz sind die Vor- und Nachteile ähnliche wie die des zweiten Typs.

3.2.5 Typ 4 (Suchmaschine der 2. Generation)

Der vierte Typ stellt die zweite (aktuelle) Generation von Suchmaschinen dar (vgl. LEMM 1999 : 106). Diese versuchen insbesondere das Problem der qualitativ schlechten Ergebnislisten zu lösen, indem sie auf die Erfahrungen der menschlichen Surfer zurückgreifen. „Direct Hit“ bezieht Informationen von herkömmlichen Suchmaschinen und wertet automatisch aus, welche Seiten wie oft und wie lange von Usern besucht worden sind. Daraus wird dann eine Ergebnisliste mit Webseiten generiert. Die Frage von Gary Cullis, dem Erfinder von „Direct Hit“, fasst den Sinn dieser Funktionsweise zusammen: *„Wer könnte besser beurteilen, ob ein Link etwas taugt, als die Nutzer selbst, die genau wissen, was sie suchen?“* (zitiert nach LEMM 1999 : 106). Jeder User wird damit zum Redakteur und die Schlussfolgerung dieses fragwürdigen Konzeptes lautet also, dass die beliebtesten Seiten auch automatisch die besten sind. ¹⁷

Die Suchmaschine „Google“ arbeitet mit der sogenannten PageRank-Technologie die Link-Struktur des WWW als Organisations- und Bewertungskriterium nutzt. Die

Leitfrage des Suchdienstes, ob eine Seite sinnvoll ist, wird durch die Anzahl der Links einer Seite führen, und deren Ursprung beantwortet. D.h. eine Seite ist wichtig, wenn zum einen viele Links zu ihr führen und zum anderen bekannte Institutionen auf sie verlinken. „Google“ unterscheidet dabei, ob der Link z.B. auf einer privaten Homepage oder auf der Seite einer Universität steht. MEDIA METRIX (2001) führt „Google“ mit 15.2 Millionen Unique Visits im Monat auf Platz 15 der in den USA beliebtesten Seiten im Netz. Dieser Erfolg zeigt, dass diese Methodik ein Schritt in die richtige Richtung ist, was die Suche nach einfachen, populären Stichworten angeht, da hier die große Stärke der Popularitätsbewertung liegt

(LEWANDOWSKI 2001 : 384). Das Auftauchen von Nachahmern in diesem Jahr, wie „WiseNut“ (www.wisenut.com) oder „Teoma“ (www.teoma.com), bestätigt den Erfolg dieses Systems ebenfalls.

¹⁷ Näheres zur Technik im White Paper von „Direct Hit“ unter http://www.directhit.com/about/products/technology_whitepaper.html [Stand: 15.08.2001].

¹⁸ Die Dissertation „The Anatomy of a Large-Scale Hypertextual Web Search Engine“ der „Google“-Erfinder Sergey Brin und Lawrence Page schildert Entstehung und Funktionsweise der Suchmaschine. Eine kürzte Fassung dieser Dissertation ist unter <http://www7.scu.edu.au/programme/fullpapers/1921/com1921.htm> [Stand: 17.07.2001] abgelegt. Die Seite http://www.google.de/intl/de/why_use.html [Stand: 17.07.2001] gibt einen kurzen deutschsprachigen Abriss über die Methodik

PageRank-Technologie.

3.3 Probleme durch Suchmaschinen

Wie oben schon angedeutet, bleiben bei der Arbeit mit Suchmaschinen einige Fragen offen. Die für die Selektion besonders kritischen Punkte sind zum einen die Abdeckung des WWW durch Suchmaschinen und zum anderen sowohl die Generierung als auch die Darstellung der Ergebnisse.

3.3.1 Abdeckung des WWW durch Suchmaschinen

Trotz automatischer Indexierung durch Web-Crawler ist es unmöglich, die gesamte

Datenmenge des Internet zu erfassen, da das Wachstum des Netzes zu schnell voranschreitet. Auch wenn von Seiten verschiedener Firmen und Institutionen versucht wird, „dem Problem der Quantität mit brutaler Rechenleistung zu begegnen“ (LEPSKY 1998 : 336), indem beispielweise rund 7000 Linux - PCs an fünf Standorten, an West- und Ostküste der USA verteilt, für „Google“ arbeiten, so scheint die komplette Katalogisierung des Internet ein Ding der Unmöglichkeit zu sein. Louis Monier, Chief Technical Officer bei „Alta Vista Software“, meint dazu: „*Nobody can afford enough hardware to index the whole Web and serve it back to the entire planet*“ (zitiert nach BRAKE 1997 : 12).

Die sechs bekanntesten, öffentlichen Suchmaschinen („AltaVista“, „Excite“, „HotBot“, „Infoseek“, „Lycos“ und „Northern Light“) erfassen zusammen nur etwa 60% des Web (vgl. LAWRENCE / GILES 1999 : 107). Die Suchmaschine mit dem größten Index ist zur Zeit „Google“ mit knapp 1,4 Mrd. Seiten, gefolgt mit großem Abstand von „FAST“ und „AltaVista“ (s. Abb. 3). Geht man von einer Größe des oberflächlichen Netzes von ca. 2,5 Mrd. Webseiten aus, erfasst selbst „Google“ nur knapp mehr als die Hälfte aller Seiten.

GG = „Google“ | FAST = „FAST“ | AV = „AltaVista“ | INK = „Inktomi“ | EX = „Excite“ | NL = „Northern Light“

Abb. 3: Anzahl der von Suchmaschinen erfassten Webseiten in Millionen. Stand: August 2001
(SULLIVAN 2001)

Aber nicht nur das immense Wachstum des Netzes ist Schuld an der geringen Erfassung der Datenmenge, die Gründe liegen auch bei der Software der Suchmaschinen. Wie folgende Beispiele zeigen, können Webcrawler längst nicht alle Arten von Informationen im WWW in die Datenbanken aufnehmen.

• **Kostenpflichtige Datenbanken oder Datenbankgateways** mit dynamisch-

generierten Seiten können von Crawlern nicht eingelesen werden, obwohl gerade diese von großem Interesse sind, da es sich hierbei oft um wissenschaftliche

Datenbanken handelt, die hochqualifiziertes Wissen beinhalten.

Die Ausnahme bildet momentan die Suchmaschine „Northern Light“. Sie bietet zusätzlich als Funktion die erweiterte Suche in den sogenannten „special collection documents“ an. Hierbei handelt es sich um eine Sammlung von kostenpflichtigen Dokumenten, die momentan gut 700 wissenschaftliche Zeitschriften

¹⁹ umfasst.

• **Nicht öffentliche und geschützte Dokumente**, die viele Server beinhalten sind für unerlaubte Zugriffe durch Passwörter, Registrierung oder Firewalls gesichert. Eine

¹⁹ Eine genaue Auflistung aller 700 Zeitschriften ist unter http://www.northernlight.com/docs/-specoll_help_overview.html [Stand: 20.11.2001] zu finden.

Suchanfrage durch einen Crawler wäre so ein Zugriff und wird deshalb von den jeweiligen Servern abgewiesen. (Vgl. LEWANDOWSKI 2001 : 381)

- **Video-, Bild- oder Toninformationen** können bisher nur anhand des Dateinamens oder des „ALT“-Tags ²⁰ im HTML-Code erkannt werden, da nur reine Textinformationen durchsucht werden. Doch es gibt intensive Bemühungen, dieses zu ändern. Das Programm „WebSEEK“ (www.ctr.columbia.edu/webseek/) der New Yorker Columbia-Universität verbindet Schlüsselwort- und Bildanalyse und ist somit imstande, Formen und Farben zu erkennen und zu unterscheiden. (Vgl. LYNCH 1998 : 27)
- Auch die meisten **nicht HTML-kompatiblen Textformate** bleiben bei einer Volltextsuche durch einen Webcrawler außen vor. Allein die Suchmaschine „Google“ durchsucht auch Dateien des von der Firma Adobe (www.adobe.com) entwickelten „Portable Document Formats“ (PDF), welches im Internet sehr weit verbreitet ist.
- Bei **neu erstellten und geänderten HTML-Dateien** dauert es zum Teil sehr lange, bis diese von einem Webcrawler indiziert werden. Neue Seiten, auf die keine Links verweisen, weil der Server z.B. noch neu ist, oder Webseiten die bei Suchmaschinen nicht direkt angemeldet worden sind, können von Suchmaschinen auch nicht gefunden werden. Geänderte Dokumente werden erst im nächsten Aktualisierungszyklus der jeweiligen Suchmaschine erkannt. Dieser Zyklus kann bis zu mehreren Wochen dauern. (Vgl. BABIAK 1999 : 107, FRIES et al. 2001 : 49)
- Seiten mit **Framesets, Java oder Javascript** können Crawlern Probleme bereiten. Das Problem bei Frames liegt darin, dass mehrere Inhalte unter einer URL verfügbar sind, was eine Zuordnung zwischen Suchbegriff und Treffer-URL

fast unmöglich macht. Java und Javascripts erschweren das Erfassen dadurch, dass sie für Menüs und Verweise verwendet werden, die aber von Suchmaschinen nicht

²⁰ Der „ALT“-Tag gibt dem Bild einen alternativen Text, falls das Bild im Internet-Browser angezeigt werden sollte. Beispiel: ``

erkannt werden, da es sich um eine Programmiersprache und nicht um reinen Text handelt. (Vgl. BABIAK 1999 : 108 f.)

3.3.2 Ergebnisse und Ergebnislisten

Das andere große Problem stellt das eigentlich Suchergebnis dar.

Suchmaschinen

produzieren bei einer einfachen Suche mit einem Schlagwort oft eine sehr große

Anzahl an Treffern. Sie werden auch oft „Hits“ oder „Matches“ genannt.

Diese

Suchergebnisse bestehen also häufig mehr durch Quantität als durch Qualität, Tabelle

1 veranschaulicht dies. Die einfache Suche mit den Wörtern „Evaluation“ und

„Website“ ergibt bei fast allen Suchmaschinen Treffer, deren Zahl in die Millionenhöhe

steigt. Selbst bei einer eingeschränkten Suche mit zwei Wörtern („Evaluation

UND

Website“) geht das Ergebnis in die Tausende. Doch User überprüfen selten mehr als die

ersten zehn bis 20 Treffer einer Ergebnisliste, der Rest der Links muss somit als

verloren angesehen werden. (Vgl. RÖTZER 1998; LEWANDOWSKI 2001 : 381)

Hierbei wird auch der Unterschied zum Katalog deutlich, den Jerry Yang mit den

treffenden Worten beschreibt: „*The difference between a catalog and an index is that a*

catalog provides context“ (zitiert nach STEINBERG 1996).

Schlagwort	Hits / Suchmaschine			
	Altavista (www.altavista.de)	Lycos (www.lycos.de)	Excite (www.excite.com)	Google (www.google.de)
Evaluation	3.402.820	5.962.116	493.400	9.580.000
Website	21.643.970	22.693.752	7.389.131	30.600.000
Evaluation	34.148	443.148	4.820	791.000
UND Website				

Tab. 1 : Beispiel für die Anzahl der Hits bei verschiedenen Suchmaschinen

[21](#)

²¹ Die Suche wurde am 14.08.2001 durchgeführt. Da es sich bei „Yahoo“ um einen Katalog handelt, ist dieser nicht in die Suche mit einbezogen worden.

27

Gleichzeitig zeigt dieses Beispiel, wie unterschiedlich die Ergebnisse der einzelnen Suchmaschinen sind und beweist den oben genannten heterogenen Abdeckungsgrad des Netzes durch die einzelnen Dienste. Die Funktionsweise der Suchmaschinen hilft zwar beim Verständnis von Suchergebnissen, weil aber technische Details und insbesondere die Methode des Rankingverfahrens der Ergebnisliste nicht bekanntgegeben werden, bleibt sie doch eine „Black Box“. Die Gründe dafür liegen im wirtschaftlichen Bereich, da die Suchalgorithmen letztendlich das Kapital der Firmen, die die Suchmaschinen betreiben, darstellen.

Wie schon erwähnt, ist die Reihenfolge der Auflistung der Suchergebnisse nicht unproblematisch. RÖTZER (1999b) weist eine direkte Manipulation der Ergebnisse zurück, deutet aber auf die Probleme der sehr unterschiedlichen Selektionskriterien der einzelnen Suchmaschinen hin. SCHULZKI-HADDOUTI (2001) geht weiter und sagt: „*Werbetreibende missbrauchen diesen Suchmechanismus und verfälschen die*

Ergebnisse der Suchmaschinen.“ Probleme bereitet somit die Vermarktung und der Verkauf von Ergebnissen. Die Suchmaschine „GoTo“ (www.goto.com) war der Vorreiter mit der 1997 entwickelten „Pay-for-Performance“ - Technologie, mit der Ergebnisse direkt vermarktet werden. Hierbei werden die Suchergebnisse nach der Höhe des gezahlten Geldbetrages angezeigt. Heute vermarkten alle größeren Suchmaschinen ihre Ergebnisse, zuletzt führte „Yahoo“ die „Sponsored Sites“ ein. Nur „Excite“ verwaltet zur Zeit noch keine bezahlten Listen (vgl. SCHULZKI-HADDOUTI 2001).

Aber auch die Popularitätsbewertung, wie sie „Google“ und „Direct Hit“ durchführen, beinhaltet Gefahren. Beide Suchmaschinen arbeiten mit der Idee, dass die Popularität einer Seite gleichbedeutend ist mit der inhaltlichen Güte. Ob dies wirklich so ist, sei hier in Frage gestellt, da diese Methode einen „Trendverstärker“ (RÖTZER 1999b) darstellt, der die Konzentrationsprozesse um bekannte Seiten im Netz nur noch verstärkt und kleine, unbekannte Sites benachteiligt. Verlierer hierbei sind Anbieter, Institutionen oder Firmen, die nur wenig Geld fürs Ranking bzw. für Werbung zur Förderung der Popularität aufbringen können und somit in eine Abwärtsspirale geraten.

3.4 Instabilität von Online-Quellen

McKELVEY schreibt in seinem Buch „Hypergraphics“, dass „Websites ... *evolutionäre Dokumente*“ (1999 : 65) sind. Mit dieser Aussage wird ein weiteres Problem deutlich, nämlich die Instabilität von Online-Quellen. Das Internet ist einer ständigen Modifikation unterworfen. Neue Sites entstehen oder verschwinden, neue Dokumente werden ins Netz gestellt, alte werden aktualisiert oder gelöscht. Webseiten besitzen ein durchschnittliches Alter zwischen 44 und 70 Tagen (vgl. ZIMMER 2000 :

184;
GROTE 2000 : 116; RÖTZER 2000), und 89 % aller Seiten im Web sind jünger als ein Jahr (s. Tab. 2).

Alter der Webseiten	< 1 Jahr	1 – 2 Jahre	2 – 3 Jahre	3 – 4 Jahre	4 - 5 Jahre	5 - 6 Jahre	> 6 Jahre
Prozent der Webseiten	89 %	6,5 %	2,5 %	1,1 %	0,4 %	0,1 %	0,1 %

Tab. 2 : Das Alter von Internet-Seiten (N.N. 2001 : 166)

Diese hohe Fluktuation im Netz lässt sich durch Veränderungen der Technik (Hard- und Software) und dem Wandel des Zeitgeistes erklären:

Heutzutage ist es sehr einfach, eine Webseite in kürzester Zeit zu verändern.

Dank

moderner HTML-Editoren, wie z.B. Microsofts „Frontpage“ oder

Macromedias

„Dreamweaver“, ist es möglich, ohne jede HTML- oder Programmierkenntnisse

eine

Seite zu erstellen oder in jeglicher Weise zu verändern, egal ob es sich um

das

Aussehen, die Form oder die Schriftarten handelt. Grafiken können

gelöscht,

hinzugefügt oder ausgetauscht werden, dasselbe gilt für Links. Der Charakter

einer

Seite ist in einem ständigen Fluss (vgl. ROBERTS

1999).

Hinzu kommt, dass Websites, genau wie z.B. auch die Mode, schnelllebigen

Trends

unterworfen sind. Webdesigner David SIEGEL (1997 : 26 f.) spricht von

drei

Generationen von Websites seit deren Entstehung Anfang der 90er Jahre. Aber auch die

dritte Generation ist laut Klaus HOFER und Hansjörg ZIMMERMANN (

²2000 :
16)

schon wieder passé. Was heute im Netz „in“ ist, kann morgen schon wieder „out“ sein.

Ständig werden Awards für das Design von Webseiten vergeben, aber „beständig

ist

allein der Wandel“ (HOFER /

ZIMMERMANN

²2000 :
16).

Websites der ersten Generation waren einfache Textseiten mit sehr wenigen Grafiken.

Die Seiten waren gut lesbar auf monochromen Bildschirmen und bauten sich auch bei einem langsamen Modem schnell auf. Die zweite Generation, ab ca. 1995, war dank der Weiterentwicklung des HTML-Standards als auch neuer Versionen der Browsersoftware wesentlich bunter und verspielter. Es wurden mehr Grafiken und vielfarbige Hintergründe eingefügt. Oft blieb bei soviel Design die Lesbarkeit auf der Strecke. Die Sites der dritten Generation sollten für den User „eine

ganzheitliche

Erfahrung, vom Eintritt bis zum Ausgang“ (SIEGEL 1997 : 29) werden. Das Design

wurde durch Metaphern und Modelle der Konsumentenpsychologie erweitert.

Die

aktuelle Generation von Websites ist auf bestimmte Nutzergruppen zugeschnitten. Es

werden spezielle technische Features, wie z.B. Macromedias Flash, eingesetzt und auch

keine Rücksicht mehr auf Browserkompatibilität genommen, da es zu viele Plattformen

neben dem PC gibt, wie z.B. Palmtops oder WAP-Handys. Seiten sollen

heute

unterhalten und gleichzeitig Themen multimedial transportieren (vgl. HOFER /

ZIMMERMANN ²2000 :

120).

Dieser Wandel wurde durch die Einführung neuer Techniken möglich, die den HTML

Standard ständig erweitern, wie z.B. XML (Extensible Markup Language)

zur

Erstellung dynamischer Webseiten, SMIL (Synchronized Multimedia

Integration

Language), um Audio- und Videosequenzen in Webseiten einzufügen oder

VRML

(Virtual Reality Modeling Language), mit der es möglich ist, dreidimensionale

Räume

und Landschaften in einem Browser darzustellen. Aber auch Programmiersprachen

wie

Java, Javascript, ActiveX oder Flash erweitern die Möglichkeiten der Darstellung

von

Inhalten

ständig.

Hinzu kommt die schnelle technische Weiterentwicklung der Hardware. Durch

die

Entwicklung immer schnellerer Computer, von Netzwerken und

umfangreicheren

Speichermedien erweitern sich automatisch die Möglichkeiten im Netz:

Webseiten

werden durch Chatrooms interaktiv, User treffen sich als Avatare in virtuellen

Welten,

Audio- und Videostreaming bringen Konzerte und Filme in digitaler Qualität in jedes

Wohnzimmer. Es kommt zu einer Konvergenz der

Medien.

Durch all diese Faktoren ist die Schnellebigkeit des Netzes zu erklären.

Firmen,

Organisationen und auch Privatleute wollen bzw. müssen immer up-to-date bleiben,

da

der wirtschaftliche Erfolg ausbleibt, wenn die Webseite nicht interessant für den Surfer

gestaltet ist.

Aufgrund dieser ständigen Veränderung gibt es Bestrebungen, das World Wide Web zu archivieren, wobei dies ein hoffnungsloser Wettlauf mit dem Wachstum des WWW und dem Verschwinden von Sites ist (vgl. RIEDER 1997 : 112 f.). Als „Deja.com“, Betreiber der umfassendsten Sammlung von alten Usenet-Diskussionen, seine Server aus Kostengründen vom Netz nahm, schrieb das Online-Magazin „Salon“ (www.salon.com) : „Wir verbrennen keine Bücher mehr, wir stöpseln nur die Server aus“ (zitiert nach DRÖSSER 2000). Mit einem Knopfdruck verschwanden Tausende

von Beiträgen zu verschiedensten Themen, die sich über fünf Jahre lang im Netz gesammelt hatten. Um diesen „drohenden Gedächtnisverlust“ (DRÖSSER 2000) des Netzes aufzuhalten, legt das „Internet Archive“ (www.archive.org) mit Hilfe der Software „Alexa“

(www.alexa.com) ständig Images des Netzes an, so dass Momentaufnahmen des WWW entstehen. Zur Zeit (Stand: März 2001) sind über 100 Terabyte an Daten bzw. elf Milliarden Webseiten gespeichert, und jede Woche kommen ca. 150 Millionen Seiten neu hinzu. Aber auch dieses Verfahren birgt einige Probleme, weil viele Fragen

unbeantwortet bleiben. Da nur Teile des Netzes archiviert werden, sowohl aus technischen als auch aus Kostengründen, stellt sich die Frage, welche Seiten wichtig oder unwichtig sind. Wer bestimmt über die Auswahl der zu archivierenden Seiten? Welche Seiten sind so interessant, dass sie der Nachwelt erhalten bleiben sollten?

Welche sollen dem Vergessen preisgegeben werden? Auch die Copyright-Frage bleibt offen, nämlich ob man ohne Wissen des Autors überhaupt private Websites archivieren darf. So bleibt dies zweifellos ein interessanter Versuch, das Netz der Nachwelt zu erhalten, aber mehr eben auch nicht. [22](#)

Das Problem der Archivierung bzw. der mangelnden Dokumentationsform spielt insbesondere bei wissenschaftlichen Inhalten im Netz eine Rolle. Im Gegensatz

Büchern, die materiell gebunden sind, gibt es im Netz keine Auflagen, sondern immer nur das aktuelle Update einer Webseite, das jederzeit überschrieben und erneuert werden kann. Diese immer weiter fortschreitende Digitalisierung führt dazu, dass das Buch als Leitmedium der Gegenwart durch den Computer abgelöst wird. BOLZ (1995)

²² Seit Oktober 2001 kann das „Internet Archive“ über eine kostenlose und freizugängliche Schnittstelle, die „Way Back Machine“ (web.archive.org/), durchsucht werden.

31

bezeichnet diesen Prozess, in Anlehnung an Marshall McLuhan, als Ende der Gutenberg-Galaxis. Das WWW ist immer aktuell, es existiert somit nur die Gegenwart. DEBATIN vertritt die Ansicht, dass Printmedien eine „zeitlich kodierte Selbstreferentialität im Hinblick auf den Wissens- und Erkenntnisstand“ (1998) erzeugen. Im Gegensatz dazu haben Dokumente im Internet eine „ahistorische und palimpsestische Struktur“ (ebd.). Es ist nie sicher, welche Version man vor sich hat, ob sie kopiert worden ist, und wer der tatsächliche Autor ist. Auch RIEDER vertritt diesen Standpunkt, wenn er sagt, dass „Webseiten ... kein Gedächtnis [haben, T.A.]: Durch ihre permanente, spurlose Erneuerung verlieren sie ihre eigene Geschichte“ (1997 : 112). Informationen sind auf Knopfdruck erhältlich, aber genauso schnell verflüchtigt sich diese Information auch wieder im Netz. Der Wissensspeicher des WWW ist vergänglich.

3.5 Glaubwürdigkeit von Onlinequellen

Das Informationsangebot im Internet ist unüberschaubar. Tausende von Fachzeitschriften sind inzwischen als Volltext abrufbar, Universitäten publizieren neueste Forschungsergebnisse auf ihren Seiten. Das MIT stellt neuerdings

Samtliche Vorlesungen und Seminare unter dem Titel „MIT Open Courseware“ (web.mit.edu/ocw/) online, gibt damit dem „Open Source“-Gedanken eine völlig neue Dimension und stellt sich gleichzeitig gegen die ständig wachsende Kommerzialisierung des Netzes. ²³

Aber es gibt ebenso viele unsinnige und falsche Informationsangebote im Netz.

Eine Untersuchung medizinischer Webseiten ergab, dass über die Hälfte aller untersuchten Seiten von Institutionen oder Privatpersonen dubiose und voreingenommene Inhalte verbreiten (vgl. OBST 1997). Daran sieht man, dass Authentizität und Glaubwürdigkeit von Online-Informationen das größte Problem darstellen. Dieser Umstand liegt vor allem an einem der größten Vorteile im Netz, der hier aber auch gleichzeitig zum Problem wird, nämlich dass jeder Nutzer die Freiheit hat, zu jedem Thema etwas zu publizieren, egal ob er
